

## **PROJECT 7.1: Preventing Corporate Espionage**

Using one of the websites listed in this book (you can also choose from the preferred resources in Chapter 1) or other resources, find a set of guidelines on general computer security. Write a brief essay comparing and contrasting those guidelines against the ones given in this chapter. Keep in mind that the guidelines in this chapter relate specifically to corporate espionage and not to general computer security.

## **PROJECT 7.2: Handling Employees**

Write a brief essay describing steps regarding the handling of employees. These steps should include all steps that you believe any organization should take to prevent corporate espionage. It is important that you support your opinions with sources and reasons.

If possible, visit a company and talk with someone in either the IT or personnel departments to determine how that company handles issues such as employee termination, rotation of duties, control of access to data, and so forth. Compare and contrast your steps to those used by the company you visited.

## **PROJECT 7.3: Asset Identification in Your Organization**

Using the Asset Identification table found in this chapter or a similar table of your own design, identify the most valuable data in your organization (school or business) and what parties would most likely wish to access that data. Then write a brief guideline on how you might go about securing that data. In this project, you should tailor your security recommendations to the specific type of data you are trying to protect and against the most likely perpetrators of industrial espionage.
