2. The idea of international right presupposes the separate existence of many independent adjoining states. And such a state of affairs is essentially a state of war, unless there is a federal union to prevent hostilities breaking out. But in the light of the idea of reason, this state is still to be preferred to an amalgamation of the separate nations under a single power which has overruled the rest and created a universal monarchy. For the laws progressively lose their impact as the government increases its range, and a soulless despotism, after crushing the germs of goodness, will finally lapse into anarchy. It is nonetheless the desire of every state (or its ruler) to achieve lasting peace by thus dominating the whole world, if at all possible. But *nature* wills it otherwise, and uses two means to separate the nations and prevent them from intermingling—*linguistic* and *religious* differences. These may certainly

occasion mutual hatred and provide pretexts for wars, but as culture grows and men gradually move towards greater agreement over their principles, they lead to mutual understanding and peace. And unlike that universal despotism which saps all man's energies and ends in the graveyard of freedom, this peace is created and guaranteed by an equilibrium of forces and a most vigorous rivalry.

3. Thus nature wisely separates the nations, although the will of each individual state, even basing its arguments on international right, would gladly unite them under its own sway by force or by cunning. On the other hand, nature also unites nations which the concept of cosmopolitan right would not have protected from violence and war, and does so by means of their mutual self-interest. For the *spirit of commerce* sooner or later takes hold of every people, and it cannot exist side by side with war. And of all the powers (or means) at the disposal of the power of the state, *financial power* can probably be relied on most. Thus states find themselves compelled to promote the noble cause of peace, though not exactly from motives of morality. And wherever in the world there is a threat of war breaking out, they will try to prevent it by mediation, just as if they had entered into a permanent league for this purpose; for by the very nature of things, large military alliances can only rarely be formed, and will even more rarely be successful.

In this way, nature guarantees perpetual peace by the actual mechanism of human inclinations. And while the likelihood of its being attained is not sufficient to enable us to *prophecy* the future theoretically, it is enough for practical purposes. It makes it our duty to work our way towards this goal, which is more than an empty chimera.

SECOND SUPPLEMENT: SECRET ARTICLE OF A PERPETUAL PEACE

In transactions involving public right, a secret article (regarded objectively or in terms of its content) is a contradiction. But in subjective terms, i.e. in relation to the

sort of person who dictates it, an article may well contain a secret element, for the person concerned may consider it prejudicial to his own dignity to name himself publicly as its originator.

The only article of this kind is embodied in the following sentence: *'The maxims of the philosophers on the conditions under which public peace is possible shall be consulted by states which are armed for war.'*

Although it may seem humiliating for the legislative authority of a state, to which we must naturally attribute the highest degree of wisdom, to seek instruction from *subjects* (the philosophers) regarding the principles on which it should

act in its relations with other states, it is nevertheless extremely advisable that it should do so. The state will therefore invite their help *silently*, making a secret of it. In other words, it will *allow them to speak freely* and publicly on the universal maxims of warfare and peacemaking, and they will indeed do so of their own accord if no one forbids their discussions.

This does not, however, imply that the state must give the principles of the philosopher precedence over the pronouncements of the jurist (who represents the power of the state), but only that the philosopher should be given a *hearing*.

SMITH

The Industrial Revolution was a part—quite possibly the most important part—of the transformations that have shaped the modern age. The discovery of a New World and the rediscovery of antiquity both reflected and furthered the desire to create a more secular European civilization. The Protestant Reformation emphasized that individuals must be free to play more of a role in controlling their earthly, as well as their eternal, destiny. The times were ripe for change. In politics, change was represented in the English, American, and French Revolutions.

The traditional Christian outlook on economics was relatively to deprecate it. The focus was on the next world, not this one. As late as the 1700s, there were fervent disputes over the “just” prices of commodities and products. Advertising goods was often disallowed. The Protestant work ethic had not yet permeated western culture in proclaiming that earthly material rewards are the best guide to one’s likely status in the next life, and in exalting the value of earthly work. In a traditional—mostly agricultural—economy, jobs were often passed down from father to son, and relocating to other parts of a country was uncommon. In a general atmosphere of disparagement, the practice of economics became corrupt. Guilds, supposedly established for the benefit of all (along the lines of “just” prices), in fact protected the interests only of their members. A large aristocracy and nobility were able to feed off the land and the people of a country with relative ease; if the people complained, did this not just exemplify sinfulness and excessive desires for the things of this world?

The effect of the discovery of the New World truly should not be minimized. First, the ability to emigrate expanded the opportunities of individuals to leave their traditional societies, helping to free the minds of even the masses who remained, and also facilitating the creation of more open societies in Europe, particularly England. When the people can leave, ruling classes have more of an incentive to form societies that individuals like. Second, the discovery of the New World helped to fuel the rise of the national state, because nations had something worth fighting over—colonies around the globe. While the rise of the national state caused much destructiveness and while the loss of an earlier more porous (though feudal) European society was not without drawbacks,

separate national identities established national economies in which the progress of new economic ideas and practices was easier. Third, and perhaps most importantly, the discovery of the New World fired the imagination of Europeans and led to a general attitude of inquisitiveness and questioning of established truths. This general attitude, particularly when combined with questions requiring economic answers (such as, why did prices rise when gold and silver were imported from the New World to Spain and Portugal?) led to new economic outlooks.

The first economic response by Europe to the discovery of the New World was mercantilism. Under this system, the hoarding of gold and silver was the primary national economic goal, colonies were extremely valuable, the import of finished goods (which had to be paid for in gold and silver) was undesirable, and the export of finished goods (for which gold and silver would be received) was highly desirable. To facilitate these policies, nations adopted tariffs and bounties (subsidies to exports).

The period leading up to the Industrial Revolution was thus one of tremendous flux and change. Gradually, through Protestantism, a greater appreciation for the individual and this life had been attained. Freedom began to permeate society. Finally, because slavery (at least of Europeans) was illegal, if economic advances were to be achieved it would largely have to be through technical advances. There was no industrial revolution in ancient times because of the existence of slavery, which allowed the higher classes to have an affluent life-style without technical innovation. One has only to consider the example of the *ante-bellum* American South to appreciate that the existence of slavery tends to discourage practical science and material innovation. In a very real sense, machines are modern slaves—and machines (unlike slaves) can in time be made available to everyone, not just the rich.

The Industrial Revolution, then, was the product of a number of causes—some social and others technical. It is this revolution, furthermore, more than political ones, which has probably had the most significant impact on those whom it has affected, in terms of molding their day-to-day lives. Modernity came to have a very different culture than that of the Middle Ages. Wealth and its creation were looked upon as great social and personal goals.

Adam Smith (1723–90) is considered the apostle of capitalism. Before his *The Wealth of Nations* (1776), no systemic treatise existed that summed up and explained the economic order that was emerging. In this respect, Smith's primary contribution to political economy was not originality but systematization. While Locke and Smith's good friend David Hume (whose literary executor Smith was) had written on economic topics, no great mind had yet propounded a comprehensive and sustained outlook. The newness of the field, indeed, is shown by the fact that the first book in English to carry the words "political economy" in its title appeared just nine years before *The Wealth of Nations*: Sir James Steuart's *Principles of Political Economy*, published in 1767.

Smith was from Scotland, and at the then normal age of 14, he entered the University of Glasgow and met Frances Hutcheson. Three years later, Smith attended Balliol College in Oxford, and six years after this returned to Glasgow. In 1752, he became professor at the University of Glasgow in moral philosophy,

encompassing the fields of natural theology, ethics, jurisprudence, and political economy. In 1764, he became tutor to a young duke, and they travelled to France, when Smith met the physiocrats and began *The Wealth of Nations*. He returned to Britain two years later.

Smith was the archetypical absentminded professor. On one occasion, after getting up in the morning and smelling the air in his garden—and then pausing for a moment of reflection—he found himself fifteen miles away, still in his nightclothes. On another occasion, when showing a visitor a tannery and explaining the advantages of the division of labor, he fell into the tanning pit. Obviously, his mind was on more important things.

The essential element in Smith's philosophy is his concentration on the importance of a free market in ensuring the highest quality goods at the lowest prices. His assumptions about human nature are uncomplicated and representative of the British capitalist-utilitarian era. As he works out comprehensively in *The Theory of Moral Sentiments* (1759), his only other major work besides *The Wealth of Nations*, human beings are at root individualistic. The appropriate reference point is that of the sympathetic, impartial spectator. There is nothing in Smith that suggests an organic view of social life or a historicist approach. According to him, human beings are autonomous, independent entities who may interact either more or less successfully. Human life has no set, predetermined, or inescapable goal or purpose.

Humans will interact most successfully if they live in a society of economic freedom: Individualistic philosophies tend to emphasize what people can do as individuals, not what they can do as groups. Strictly political questions do not much occupy Smith's attention—he does not care so much whether a person may vote as whether he may trade, establish an enterprise, or enter an occupation. In Smith's mind, the latter types of questions are more important than the former. It is important to comment that in his day the major goal of social philosophers was to reduce the extent of government and custom in all areas. Government at that time produced much inefficiency and waste through poor taxation practices, misdirection of resources, and over-regulation of the economy and society generally. It had not yet occurred to political and economic thinkers that government might actually be able to do great positive good for people; it would be enough if government just did no harm. Political liberty and economic *laissez faire* are thus related.

In fact, in an almost Marxian analysis (in that Smith holds the economic structure of society to precede its political one), Smith states, "commerce and manufactures gradually introduced order and good government." It is when individuals have something worth preserving that they will institute a political system that will protect it.

Individuals, in Smith's conception, are largely, but not completely, motivated by self-interest. But because humans have within themselves a capacity for sympathy, they generally do not pillage at will. Nonetheless, humanity's sympathetic capacities are limited, and are socially more useful in restraining wicked actions than in compelling virtuous ones. For this reason, Smith notes that society is more likely to condemn a malicious character than it is to castigate merely a non-praiseworthy one. The appropriate role for government is to provide a stable social framework within which "the uniform,

constant, and uninterrupted effort of every man to better his condition" can be realized.

Smith's famous analogy for the thesis that people, if left alone, will produce not only their own greatest good, but the good of all, is "the invisible hand." He uses this analogy in both *The Theory of Moral Sentiments* and *The Wealth of Nations*. In the latter, he states that—in a free economic system—an individual is "led by an invisible hand to promote an end which was no part of his intention. . . . By pursuing his own interest, he frequently promotes that of the society more effectually than when he really intends to promote it." Because individuals constantly seek to better their condition, they will continually direct resources to higher and better uses, if they are allowed to do so. This will result not only in their personal advantage, but in the advantage of others.

A free market enables individuals' significant self-interest to exercise itself within the limits established by a government that restrains people from performing positively bad actions. Smith states: "man has almost constant occasion for the help of his brethren, and it is vain for him to expect it from their benevolence only. He will be more likely to prevail if he can interest their self-love in his favor, and show them that it is for their own advantage to do for him what he requires of them. . . . It is not from the benevolence of the butcher, the brewer, or the baker, that we expect our dinner, but from their regard to their own interest. We address ourselves, not to their humanity but to their self-love." Free markets allow all individuals in an economy to improve their conditions; this collective improvement by individuals equals national improvement—the wealth of nations.

In its emphasis on the wealth of a nation being nothing other than the wealth of the members who make up the nation, Smith's philosophy is individualistic. It furthers political theories that emphasize the individual, and proclaims the worth of each individual. Although in a very different way, Smith, like Marx, finds men and women's purpose in work.

The great advantage of free domestic and foreign markets is that they expand individuals' abilities to specialize, and it is through specialization that the wealth of persons and nations really increases. Among Smith's most important concepts, following his emphasis on the importance of free markets, is that as a productive enterprise becomes more complex, it generally can produce far more output. The example Smith uses is a pin-maker. He notes that if one person had to perform all of the functions required by that trade, he "could scarce . . . make one pin in a day, and certainly could not make twenty." But when this enterprise is divided into many branches, with each worker assigned a particular task, "ten persons . . . could make among them forty-eight thousand pins in a day." The *division of labor* is a fundamental component of economic growth to Smith, and it is this division which—more than any other single factor—allows the wealth of nations and persons to develop. In a primitive state of society, an individual's productive capabilities are extremely limited—to what a person can only directly produce.

The division of labor requires, further, a free market in order to be most effective. Where there is a closed market (either at home or abroad), or monopolies or guilds control productive practices, inefficiencies can result, and often do. Individuals' self-love will lead them to use the system for their personal

advantage to the detriment of all, if the system allows them to. A free market in labor and capital always directs resources to be used exclusively by those who manage them optimally and provides the rewards necessary to encourage innovation and technical advance. Inefficient practices and producers will lose work. If this means that some producers go out of business or some workers must shift occupations, "the interest of the producer ought to be attended to only so far as it may be necessary for promoting that of the consumer."

Following Locke, Smith sees labor as the ultimate source for all value: "Labor . . . is the real measure of the exchangeable value of all commodities." While there is a partial exception to this in goods that are naturally scarce, such as (in a celebrated example) diamonds, the rule generally holds true. Smith considers the wages of labor to vary based on five components: the agreeableness of the employment, the difficulty in learning it, the constancy of the employment, the amount of trust required by it, and the probability of success in it.

Anything that restricts individuals' abilities to conduct transactions of all sorts is a hindrance to production. If apprenticeship laws and customs restrict the number of producers in an economic endeavor, then this is a restriction on the market. Similarly, if trade between nations is curtailed, then specialization will not occur to the extent that it otherwise would, resulting in inefficiency.

Smith's great target of opposition was mercantilism. This pre-capitalist phase of economic development saw rivalry between nations—fostered by discovery and colonization of the New World—as inerradicable. Rivalry was both on a territorial and commercial basis. Each nation considered its own interest to be possession of as much gold and silver as possible because these commodities were readily exchangeable in time of war for mercenaries and materiel. This is why the central concept of mercantilism was balance of trade. It is a measure of the enduring attraction of mercantilist-like ideas that the balance of trade remains topical today. Nations continue to be concerned with exporting more than they import, and, as in Smith's time, engage in various practices to help bring this state of affairs about. Smith's appraisal of mercantilism was that "the interest of the consumer is almost continually sacrificed to that of the producers."

Smith was emphatically opposed to any restraints on foreign trade that were the result of mercantilism. He considered this to result in both a nation—and its competitor—being worse off. Wherever the market is restricted, there is not the same possibility for specialization, and this is what allows maximum economic production. For example, in a simple two-nation economy, if one nation makes cars better and the other is superior in producing food, both will be better off by allowing free trade between them. Otherwise, the one nation will have to devote a disproportionate amount of resources to food production, and the other to car manufactures, and neither will be as well off as it could be. Smith sees a natural harmony of interests that results when freedom is society's governing principle. This implies, broadly speaking, a pacific policy in foreign relations, as well as domestic policies of economic non-interference and political liberty.

Smith opposed restrictions on trade within nations and between them. He was, however, no defender of what would later be called "big business." Along these lines, he wrote, "People of the same trade seldom meet together, even for merriment and diversion, but the conversation ends in a conspiracy against the public, or in some contrivance to raise prices." His solution to monopolies

fostered by government was freer exchange through diminished government. He profoundly notes to those who might be tempted to use government for positive ends beyond the maintenance of free markets that, for example, "whenever the legislature attempts to regulate the differences between masters and their workmen, its counsellors are always the masters." In general, people will benefit more from a general principle of non-interference by government than from a principle that allows interference, because there is no telling what the interference will be or whom it will benefit.

Smith was not completely opposed to government, although he saw a limited role for it. The three functions that he allowed government were national defense; administration of an impartial system of justice; and facilitation of certain public works and institutions that are beneficial to society (particularly in furthering commerce), but whose nature does not lend themselves to being performed by individuals. Like Hume, Smith grounds justice in property: "Commerce and manufactures can seldom flourish long in any state which does not enjoy a regular administration of justice, in which the people do not feel themselves secure in the possession of their property, in which the faith of contracts is not supported by law, and in which the authority of the state is not supposed to be regularly employed in enforcing the payment of debts."

Concerning the non-defense and non-judicial functions of government, Smith saw these as essentially two: public works such as bridges, roads, and canals that are (or were) too expensive for individuals to construct; and some support for education. Even in these cases, though, he thought the government role should be as small as possible—the maintenance (if not the construction) of roads could be paid for by tolls; even if government provided the schoolhouse, students could still pay something toward the cost of teachers. Part of Smith's support for education was motivated by his observation that a mode of production, efficient as it might be, that restricted workers to just a "very few simple operations" could produce individuals who would be "as stupid and ignorant as it is possible for any human creature to become." Education would ward off some of the negative side effects of modernization. On taxation, Smith propounds four principles: taxation should be *proportionate* to income, its amount should be *certain* (and not arbitrary), its payment should be at a time when it is *convenient* for the payer, and it should be of a nature that is *uncostly* to administrate. Part of Smith's aversion to much government was that it would run up large debts: "Great nations are never impoverished by private, though they sometimes are by public, prodigality and misconduct."

Wisely, Smith observed that "it is not the actual greatness of national wealth, but its continual increase, which occasions a rise in the wages of labor." If the economic pie is fixed, then those who have the least social power may find their share continually reduced. It is when the national economic pie is growing that individuals have the greatest chance of increasing their standard of living.

Smith's approach to capital is that it is vital to the wealth of nations. Capital, in a very real sense, is stored labor. When capital exists, then people have the opportunity to innovate and experiment, as they are not living, literally, hand to mouth. The more capital that exists in a society, the more a society has the opportunity to enhance its future production. While the accumulation of capital results in a current diminution of standard of living, a higher standard of

living in the future is allowed by this. Smith thus praises "private frugality and [the] good conduct of individuals." His economic philosophy was compatible with Victorian morality as well as political liberty.

The Wealth of Nations is for the most part an economic text. It provided practical guidance on many pressing issues of the day, including the British corn and poor laws. The former were a remnant of mercantilism; the export of corn was subsidized by the government, thereby also keeping its price high to domestic consumers. The poor laws restricted the movement of the poor to different parishes. Partially under the influence of *The Wealth of Nations*, both of these sets of laws were eventually eliminated, and policies of *laissez faire* were generally adopted in nineteenth-century Britain.

Smith's influence on economic thought has been significant; he is the capitalist Marx in the same way that Lenin might be seen as the communist Locke (that is, Smith and Marx focusing on economic concerns, and Lenin and Locke concentrating on political ones). In a world in which what one person did might have little effect on another, Smith's principles have great significance. As, partially due to environmental factors, individuals find themselves living in a more and more inter-dependent world, pure capitalism may be less of an option than it once was.

SMITH

The Wealth of Nations

THE DIVISION OF LABOR*

The greatest improvement in the productive powers of labor, and the greater part of the skill, dexterity, and judgment with which it is any where directed, or applied, seem to have been the effects of the division of labor.

The effects of the division of labor, in the general business of society, will be more easily understood, by considering in what manner it operates in some particular manufactures. It is commonly supposed to be carried furthest in some very trifling ones; not perhaps that it really is carried further in them than in others of more importance: but in those trifling manufactures which are destined to supply the small wants of but a small number of people, the whole number of workmen must necessarily be small; and those employed in every different branch of the work can often be collected into the same workhouse, and placed at once under the view of the spectator. In those great manufactures, on the contrary, which are destined to supply the great wants of the great body of the people, every different branch of the work employs so great a number of workmen, that it is impossible to collect them all into the same workhouse. We can seldom see more, at one time, than those employed in one single branch. Though in such manufactures, therefore, the work may really be divided into a much greater number of parts, than in those of a more trifling nature, the division is not near so obvious, and has accordingly been much less observed.

*From Adam Smith, *The Wealth of Nations* (1776).

To take an example, therefore, from a very trifling manufacture; but one in which the division of labor has been very often taken notice of, the trade of the pin-maker; a workman not educated to this business (which the division of labor has rendered a distinct trade), nor acquainted with the use of the machinery employed in it (to the invention of which the same division of labor has probably given occasion), could scarce, perhaps, with his utmost industry, make one pin in a day, and certainly could not make twenty. But in the way in which this business is now carried on, not only the whole work is a peculiar trade, but it is divided into a number of branches, of which the greater part are likewise peculiar trades. One man draws out the wire, another straightens it, a third cuts it, a fourth points it, a fifth grinds it at the top for receiving the head; to make the head requires two or three distinct operations; to put it on, is a peculiar business, to whiten the pins is another; it is even a trade by itself to put them into the paper; and the important business of making a pin is, in this manner, divided into about eighteen distinct operations, which, in some manufactories, are all performed by distinct hands, though in others the same man will sometimes perform two or three of them. I have seen a small manufactory of this kind where ten men only were employed, and where some of them consequently performed two or three distinct operations. But though they were very poor, and therefore but indifferently accommodated with the necessary machinery, they could, when they exerted themselves, make among them about twelve pounds of pins in a day. There are in a pound upwards of four thousand pins of a middling size. Those ten

persons, therefore, could make among them upwards of forty-eight thousand pins in a day. Each person, therefore, making a tenth part of forty-eight thousand pins, might be considered as making four thousand eight hundred pins in a day. But if they had all wrought separately and independently, and without any of them having been educated to this peculiar business, they certainly could not each of them have made twenty, perhaps not one pin in a day; that is, certainly, not the two hundred and fortieth, perhaps not the four thousand eight hundredth part of what they are at present capable of performing, in consequence of a proper division and combination of their different operations.

It is the great multiplication of the productions of all the different arts, in consequence of the division of labor, which occasions, in a well-governed society, that universal opulence which extends itself to the lowest ranks of the people. Every workman has a great quantity of his own work to dispose of beyond what he himself has occasion for; and every other workman being exactly in the same situation, he is enabled to exchange a great quantity of his own goods for a great quantity, or, what comes to the same thing, for the price of a great quantity of theirs. He supplies them abundantly with what they have occasion for, and they accommodate him as amply with what he has occasion for, and a general plenty diffuses itself through all the different ranks of the society.

Observe the accommodation of the most common artificer or day-laborer in a civilized and thriving country, and you will perceive that the number of people of whose industry a part, though but a small part, has been employed in procuring him this accommodation, exceeds all computation. The woollen coat, for example, which covers the day-laborer, as coarse and rough as it may appear, is the produce of the joint labor of a great multitude of workmen. The shepherd, the sorter of the wool, the wool-comber or carder, the dyer, the scribbler, the spinner, the weaver, the fuller, the dresser, with many others, must all join

their different arts in order to complete even this homely production. How many merchants and carriers, besides, must have been employed in transporting the materials from some of those workmen to others who often live in a very distant part of the country! How much eommeree and navigation in particular, how many ship-builders, sailors, sail-makers, rope-makers, must have been employed in order to bring together the different drugs made use of by the dyer, which often come from the remotest corners of the world! What a variety of labor too is necessary in order to produce the tools of the meanest of those workmen! To say nothing of such complicated machines as the ship of the sailor, the mill of the fuller, or even the loom of the weaver, let us consider only what a variety of labor is requisite in order to form that very simple machine, the shears with which the shepherd clips the wool. The miner, the builder of the furnace of smelting the ore, the feller of the timber, the burner of the charcoal to be made use of in the smelting-house, the brick-maker, the brick-layer, the work-men who attend the furnace, the mill-wright, the forger, the smith, must all of them join their different arts in order to produce them. Were we to examine, in the same manner, all the different parts of his dress and household furniture, the coarse linen shirt which he wears next his skin, the shoes which cover his feet, the bed which he lies on, and all the different parts which compose it, the kitchen-grate at which he prepares his victuals, the coals which he makes use of for that purpose, dug from the bowels of the earth, and brought to him perhaps by a long sea and a long land carriage, all the other utensils of his kitchen, all the furniture of his table, the knives and forks, the earthen or pewter plates upon which he serves up and divides his victuals, the different hands employed in preparing his bread and his beer, the glass window which lets in the heat and the light, and keeps out the wind and the rain, with all the knowledge and art requisite for preparing that beautiful and happy invention, without which these northern parts of the world could scarce have afforded a very comfortable habitation, together with the tools of

all the different workmen employed in producing those different conveniencies; if we examine, I say, all these things, and consider what a variety of labour is employed about each of them, we shall be sensible that without the assistance and co-operation of many thousands, the very meanest person in a civilized country could not be provided, even according to, what we very falsely imagine, the easy and simple manner in which he is commonly accommodated. Compared, indeed, with the more extravagant luxury of the great, his accommodation must no doubt appear extremely simple and easy; and yet it may be true, perhaps, that the accommodation of an European prince does not always so much exceed that of an industrious and frugal peasant, as the accommodation of the latter exceeds that of many an African king, the absolute master of the lives and liberties of ten thousand naked savages.

As it is the power of exchanging that gives occasion to the division of labor, so the extent of this division must always be limited by the extent of that power, or, in other words, by the extent of the market. When the market is very small, no person can have an encouragement to dedicate himself entirely to one employment, for want of the power to exchange all that surplus part of the produce of his own labor, which is over and above his own consumption, for such parts of the produce of other men's labour as he has occasion for.

ECONOMIC VALUE

The word VALUE, it is to be observed, has two different meanings, and sometimes expresses the utility of some particular object, and sometimes the power of purchasing other goods which the possession of that object conveys. The one may be called "value in use;" the other, "value in exchange." The things which have the greatest value in use have frequently little or no value in exchange; and on the contrary, those which have the greatest value in exchange have frequently little or no value in use. Nothing is more useful than

water: but it will purchase scarce any thing; scarce any thing can be had in exchange for it. A diamond, on the contrary, has scarce any value in use; but a very great quantity of other goods may frequently be had in exchange for it.

In order to investigate the principles which regulate the exchangeable value of commodities, I shall endeavor to show,

First, what is the real measure of this exchangeable value; or, wherein consists the real price of all commodities.

Secondly, what are the different parts of which this real price is composed or made up.

And, lastly, what are the different circumstances which sometimes raise some or all of these different parts of price above, and sometimes sink them below their natural or ordinary rate; or, what are the causes which sometimes hinder the market price, that is, the actual price of commodities, from coinciding exactly with what may be called their natural price.

Every man is rich or poor according to the degree in which he can afford to enjoy the necessaries, conveniencies, and amusements of human life. But after the division of labor has once thoroughly taken place, it is but a very small part of these with which a man's own labor can supply him. The far greater part of them he must derive from the labor of other people, and he must be rich or poor according to the quantity of that labor which he can command, or which he can afford to purchase. The value of any commodity, therefore, to the person who possesses it, and who means not to use or consume it himself, but to exchange it for other commodities, is equal to the quantity of labor which it enables him to purchase or command. Labor, therefore, is the real measure of the exchangeable value of all commodities.

The real price of every thing, what every thing really costs to the man who wants to acquire it, is the toil and trouble of acquiring it. What everything is really worth to the man who has acquired it and who wants to dispose of it or exchange it for something else, is the toil and trouble

which it can save to himself, and which it can impose upon other people. What is bought with money or with goods is purchased by labor, as much as what we acquire by the toil of our own body. That money or those goods indeed save us this toil. They contain the value of a certain quantity of labor which we exchange for what is supposed at the time to contain the value of an equal quantity. Labor was the first price, the original purchase-money that was paid for all things. It was not by gold or by silver, but by labor, that all the wealth of the world was originally purchased; and its value, to those who possess it, and who want to exchange it for some new productions, is precisely equal to the quantity of labor which it can enable them to purchase or command.

But though labor be the real measure of the exchangeable value of all commodities, it is not that by which their value is commonly estimated. It is often difficult to ascertain the proportion between two different quantities of labor. The time spent in two different sorts of work will not always alone determine this proportion. The different degrees of hardship endured, and of ingenuity exercised, must likewise be taken into account. There may be more labor in an hour's hard work than in two hours easy business; or in an hour's application to a trade which it cost ten years labor to learn, than in a month's industry at an ordinary and obvious employment. But it is not easy to find any accurate measure either of hardship or ingenuity. In exchanging indeed the different productions of different sorts of labor for one another, some allowance is commonly made for both. It is adjusted, however, not by any accurate measure, but by the higgling and bargaining of the market, according to that sort of rough equality which, though not exact, is sufficient for carrying on the business of common life.

In that early and rude state of society which precedes both the accumulation of stock and the appropriation of land, the proportion between the quantities of labor necessary for acquiring different objects

seems to be the only circumstance which can afford any rule for exchanging them for one another. If among a nation of hunters, for example, it usually costs twice the labor to kill a beaver which it does to kill a deer, one beaver should naturally exchange for or be worth two deer. It is natural that what is usually the produce of two days or two hours labor, should be worth double of what is usually the produce of one day's or one hour's labor.

If the one species of labor should be more severe than the other, some allowance will naturally be made for this superior hardship; and the produce of one hour's labor in the one way may frequently exchange for that of two hours labor in the other.

Or if the one species of labor requires an uncommon degree of dexterity and ingenuity, the esteem which men have for such talents, will naturally give a value to their produce, superior to what would be due to the time employed about it. Such talents can seldom be acquired but in consequence of long application, and the superior value of their produce may frequently be no more than a reasonable compensation for the time and labor which must be spent in acquiring them. In the advanced state of society, allowances of this kind, for superior hardship and superior skill, are commonly made in the wages of labor; and something of the same kind must probably have taken place in its earliest and rudest period.

As soon as stock has accumulated in the hands of particular persons, some of them will naturally employ it in setting to work industrious people, whom they will supply with materials and subsistence, in order to make a profit by the sale of their work, or by what their labor adds to the value of the materials. In exchanging the complete manufacture either for money, for labor, or for other goods, over and above what may be sufficient to pay the price of the materials, and the wages of the workmen, something must be given for the profits of the undertaker of the work who hazards his stock in this adventure. The value which the workmen add to the materials, therefore, resolves itself in this case into two parts, of which the one pays

their wages, the other the profits of their employer upon the whole stock of materials and wages which he advanced. He could have no interest to employ them, unless he expected from the sale of their work something more than what was sufficient to replace his stock to him; and he could have no interest to employ a great stock rather than a small one, unless his profits were to bear some proportion to the extent of his stock.

As soon as the land of any country has all become private property, the landlords, like all other men, love to reap where they never sowed, and demand a rent even for its natural produce. The wood of the forest, the grass of the field, and all the natural fruits of the earth, which, when land was in common, cost the laborer only the trouble of gathering them, come, even to him, to have an additional price fixed upon them. He must give up to the landlord a portion of what his labor either collects or produces. This portion, or, what comes to the same thing, the price of this portion, constitutes the rent of land, and in the price of the greater part of commodities makes a third component part.

As the price or exchangeable value of every particular commodity, taken separately, resolves itself into some one or other, or all of those three parts; so that of all the commodities which compose the whole annual produce of the labor of every country, taken complexly, must resolve itself into the same three parts, and be parcelled out among different inhabitants of the country, either as the wages of their labor, the profits of their stock, or the rent of their land. The whole of what is annually either collected or produced by the labor of every society, or what comes to the same thing, the whole price of it, is in this manner originally distributed among some of its different members. Wages, profit, and rent, are the three original sources of all revenue as well as of all exchangeable value. All other revenue is ultimately derived from some one or other of these.

The actual price at which any commodity is commonly sold is called its market

price. It may either be above, or below, or exactly the same with its natural price.

The market price of every particular commodity is regulated by the proportion between the quantity which is actually brought to market, and the demand of those who are willing to pay the natural price of the commodity, or the whole value of the rent, labor, and profit, which must be paid in order to bring it thither. Such people may be called the effectual demanders, and their demand the effectual demand; since it may be sufficient to effectuate the bringing of the commodity to market. It is different from the absolute demand. A very poor man may be said in some sense to have a demand for a coach and six; he might like to have it; but his demand is not an effectual demand, as the commodity can never be brought to market in order to satisfy it.

When the quantity of any commodity which is brought to market falls short of the effectual demand, all those who are willing to pay the whole value of the rent, wages, and profit, which must be paid in order to bring it thither, cannot be supplied with the quantity which they want. Rather than want it altogether, some of them will be willing to give more. A competition will immediately begin among them, and the market price will rise more or less above the natural price, according as either the greatness of the deficiency, or the wealth and wanton luxury of the competitors, happen to animate more or less the eagerness of the competition. Among competitors of equal wealth and luxury the same deficiency will generally occasion a more or less eager competition, according as the acquisition of the commodity happens to be of more or less importance to them. Hence the exorbitant price of the necessaries of life during the blockade of a town or in a famine.

When the quantity brought to market exceeds the effectual demand, it cannot be all sold to those who are willing to pay the whole value of the rent, wages and profit, which must be paid in order to bring it thither. Some part must be sold to those who are willing to pay less, and the low price which they give for it must reduce the price of the whole. The market price will

sink more or less below the natural price, according as the greatness of the excess increases more or less the competition of the sellers, or according as it happens to be more or less important to them to get immediately rid of the commodity. The same excess in the importation of perishable, will occasion a much greater competition than in that of durable commodities; in the importation of oranges, for example, than in that of old iron.

MONOPOLY

A monopoly granted either to an individual or to a trading company has the same effect as a secret in trade or manufactures. The monopolists, by keeping the market constantly under-stocked, by never fully supplying the effectual demand, sell their commodities much above the natural price, and raise their emoluments, whether they consist in wages or profit, greatly above their natural rate.

The price of monopoly is upon every occasion the highest which can be got. The natural price, or the price of free competition, on the contrary, is the lowest which can be taken, not upon every occasion indeed, but for any considerable time together. The one is upon every occasion the highest which can be squeezed out of the buyers, or which, it is supposed, they will consent to give: The other is the lowest which the sellers can commonly afford to take, and at the same time continue their business.

The exclusive privileges of corporations, statutes of apprenticeship, and all those laws which restrain, in particular employments, the competition to a smaller number than might otherwise go into them, have the same tendency, though in a less degree. They are a sort of enlarged monopolies, and may frequently, for ages together, and in whole classes of employments, keep up the market price of particular commodities above the natural price, and maintain both the wages of the labor and the profits of the stock employed about them somewhat above their natural rate.

Such enhancements of the market price may last as long as the regulations of police which give occasion to them.

The market price of any particular commodity, though it may continue long above, can seldom continue long below, its natural price. Whatever part of it was paid below the natural rate, the persons whose interest it affected would immediately feel the loss, and would immediately withdraw either so much land, or so much labor, or so much stock, from being employed about it, that the quantity brought to market would soon be no more than sufficient to supply the effectual demand. Its market price, therefore, would soon rise to the natural price. This at least would be the case where there was perfect liberty.

The same statutes of apprenticeship and other corporation laws indeed, which, when a manufacture is in prosperity, enable the workman to raise his wages a good deal above their natural rate, sometimes oblige him, when it decays, to let them down a good deal below it. As in the one case they exclude many people from his employment, so in the other they exclude him from many employments. The effect of such regulations, however, is not near so durable in sinking the workman's wages below, as in raising them above, their natural rate. Their operation in the one way may endure for many centuries, but in the other it can last no longer than the lives of some of the workmen who were bred to the business in the time of its prosperity. When they are gone, the number of those who are afterwards educated to the trade will naturally suit itself to the effectual demand.

CAPITAL

The annual produce of the land and labor of any nation can be increased in its value by no other means, but by increasing either the number of its productive laborers, or the productive power of those laborers who had before been employed. The number of its productive laborers, it is evident, can never be much increased but in consequence of an increase of capital, or of the funds destined for maintaining them. The productive powers of the same number of laborers cannot be increased, but in consequence either of some addition and improvement to those machines and

instruments which facilitate and abridge labor; or of a more proper division and distribution of employment. In either case an additional capital is almost always required. It is by means of an additional capital only, that the undertaker of any work can either provide his workmen with better machinery, or make a more proper distribution of employment among them. When the work to be done consists of a number of parts, to keep every man constantly employed in one way, requires a much greater capital than where every man is occasionally employed in every different part of the work. When we compare, therefore, the state of a nation at two different periods, and find, that the annual produce of its land and labor is evidently greater at the latter than at the former, that its lands are better cultivated, its manufactures more numerous and more flourishing, and its trade more extensive, we may be assured that its capital must have increased during the interval between those two periods, and that more must have been added to it by the good conduct of some, than had been taken from it either by the private misconduct of others, or by the public extravagance of government. But we shall find this to have been the case of almost all nations, in all tolerably quiet and peaceful times, even of those who have not enjoyed the most prudent and parsimonious governments. To form a right judgment of it, indeed, we must compare the state of the country at periods somewhat distant from one another. The progress is frequently so gradual, that, at near periods, the improvement is not only not sensible, but from the declension either of certain branches of industry, or of certain districts of the country, things which sometimes happen though the country in general be in great prosperity, there frequently arises a suspicion, that the riches and industry of the whole are decaying.

GOVERNMENT

The first duty of the sovereign is that of protecting the society from the violence and invasion of other independent societies.

The second duty of the sovereign is that of protecting, as far as possible, every member of the society from the injustice or oppression of every other member of it, or the duty of establishing an exact administration of justice.

The third and last duty of the sovereign or commonwealth is that of erecting and maintaining those public institutions and those public works, which, though they may be in the highest degree advantageous to a great society, are, however, of such a nature, that the profit could never repay the expense to any individual or small number of individuals, and which it therefore cannot be expected that any individual or small number of individuals should erect or maintain.

After the public institutions and public works necessary for the defense of the society, and for the administration of justice, the other works and institutions of this kind are chiefly those for facilitating the commerce of the society, and those for promoting the instruction of the people.

It is necessary to premise the four following maxims with regard to taxes in general.

I. The subjects of every state ought to contribute towards the support of the government, as nearly as possible, in proportion to their respective abilities; that is, in proportion to the revenue which they respectively enjoy under the protection of the state. The expense of government to the individuals of a great nation, is like the expense of management to the joint tenants of a great estate, who are all obliged to contribute in proportion to their respective interests in the estate. In the observation or neglect of this maxim consists, what is called the equality or inequality of taxation.

II. The tax which each individual is bound to pay ought to be certain, and not arbitrary. The time of payment, the manner of payment, the quantity to be paid, ought all to be clear and plain to the contributor, and to every other person. Where it is otherwise, every person subject to the

tax is put more or less in the power of the tax-gatherer, who can either aggravate the tax upon any obnoxious contributor, or extort, by the terror of such aggravation, some present or perquisite to himself. The uncertainty of taxation encourages the insolence and favors the corruption of an order of men who are naturally unpopular, even where they are neither insolent nor corrupt. The certainty of what each individual ought to pay is, in taxation, a matter of so great importance, that a very considerable degree of inequality, it appears, I believe, from the experience of all nations, is not near so great an evil as a very small degree of uncertainty.

III. Every tax ought to be levied at the time, or in the manner in which it is most likely to be convenient for the contributor to pay it. A tax upon the rent of land or of houses, payable at the same term at which such rents are usually paid, is levied at the time when it is most likely to be convenient for the contributor to pay; or, when he is most likely to have wherewithal to pay. Taxes upon such consumable goods as are articles of luxury, are all finally paid by the consumer, and generally in a manner that is very convenient for him. He pays them by little and little, as he has occasion to buy the goods. As he is at liberty too, either to buy, or not to buy, as he pleases, it must be his own fault if he ever suffers any considerable inconveniency from such taxes.

IV. Every tax ought to be so contrived as both to take out and to keep out of the pockets of the people as little as possible, over and above what it brings into the public treasury of the state. A tax may either take out or keep out of the pockets of the people a great deal more than it brings into the public treasury, in the four following

ways. First, the levying of it may require a great number of officers, whose salaries may eat up the greater part of the produce of the tax, and whose perquisites may impose another additional tax upon the people. Secondly, it may obstruct the industry of the people, and discourage them from applying to certain branches of business which might give maintenance and employment to great multitudes. While it obliges the people to pay, it may thus diminish, or perhaps destroy, some of the funds which might enable them more easily to do so. Thirdly, by the forfeitures and other penalties which those unfortunate individuals incur who attempt unsuccessfully to evade the tax, it may frequently ruin them, and thereby put an end to the benefit which the community might have received from the employment of their capitals. An injudicious tax offers a great temptation to smuggling. But the penalties of smuggling must rise in proportion to the temptation. The law, contrary to all the ordinary principles of justice, first creates the temptation, and then punishes those who yield to it; and it commonly enhances the punishment too in proportion to the very circumstance which ought certainly to alleviate it, the temptation to commit the crime. Fourthly, by subjecting the people to the frequent visits and the odious examination of the tax-gatherers, it may expose them to much unnecessary trouble, vexation, and oppression; and though vexation is not, strictly speaking, expense, it is certainly equivalent to the expense at which every man would be willing to redeem himself from it. It is in some one or other of these four different ways that taxes are frequently so much more burdensome to the people than they are beneficial to the sovereign.

BURKE

The American Revolution was the second act in the drama of democratic revolution. The colonists derived their political heritage from the English experience of 1640 and 1688, and the Revolution was caused by the attempt of the English—doomed to failure from the beginning—to apply to British subjects in North America doctrines and practices of government that had been repudiated through revolution and civil war at home. Moreover, the American Revolution was not only a war of independence but also a conflict between rivaling social classes. The victory of the American Revolution meant the predominance of the middle classes in the development of the new nation, dedicated to the equalitarian ideals of life, liberty, and the pursuit of happiness for all. As in the English revolutions of the seventeenth century, neither extreme radicalism nor ultraconservatism prevailed in the American Revolution. Internally there was less resistance to the revolutionary achievement in the United States than there was to the Puritan successes of the 1640s in England, because even before the Revolution the absence of an aristocracy and the fuller acceptance of religious diversity in America allowed society to develop more freely than was possible in England before the Reform Act of 1832.

The example of the American Revolution was a standing challenge to the established order of Europe, dominated—from France to the Urals—by absolute monarchy, church, and aristocracy. The significance of the English Revolution of 1688 could not be so quickly discerned, because the monarchy continued as the symbol of traditional authority and the landowning classes still controlled both Houses of Parliament until 1832. As for the American Revolution, the absence of monarchy and aristocracy in the new society unmistakably underlined its belief in equality and opportunity. One of the main arguments of the antidemocratic side in the eighteenth century had been the impracticality of the democratic ideal, the insistence that unpopular government could never work in actuality, that it would quickly degenerate into chaos and anarchy. The sound sense and statesmanship of the American revolutionary leaders quickly turned the revolutionary experiment into a stable order, addressing itself, by its existence and success, to the oppressed everywhere as an invitation to rebellion. In 1824, Prince Metternich, the mouthpiece of European conservatism, said of the

United States that “in fostering revolutions wherever they show themselves, in regretting those which have failed, in extending a helping hand to those which seem to prosper, they lend new strength to the apostles of sedition, and reanimate the courage of every conspirator.”

The French Revolution, the third act in the drama of modern democratic revolution, began two years after the Constitution of the United States was framed. Peaceful reform would have been possible until the last minute, and the Anglophile, liberal-conservative element was at first in the ascendancy. But the *ancien régime* lacked the most elementary prudence and foresight, and thus made revolution inevitable. The Estates-General met, for the first time since 1614, on May 5, 1789, and on the following day the Third Estate assembled in separate session. The cleavage between the people on the one side, and church and aristocracy on the other, was thereby quickly revealed. Meeting separately, the Third Estate in effect declared itself to be the representative body of the whole nation: the Revolution had started.

No event in modern history so immediately and completely electrified the world as did the French Revolution, particularly after the storming of the Bastille on July 14, 1789. Charles James Fox, the leader of the English Whigs (or Liberals) called it the “greatest event” that had ever happened in the world, and “how much the best!” His remark reveals how, even when politics was mainly the business of a small aristocratic class, attitudes toward foreign countries were largely determined by ideological sympathies. Traditionally, the Tories (or Conservatives) had been the friends of France, although she was England’s principal rival for world hegemony, because the *ancien régime* upheld the influence of hierarchy in religion, class in society, and authority in government. Precisely for these reasons the Whigs were anti-French, and also because the Revolution of 1688 was directed against a monarch who was in French pay and in closest sympathy with the French court. But the French Revolution reversed the two traditional attitudes in England. The new anti-French position of the Tories expressed hostility, not to the French people, but to the Jacobin ideals of Liberty, Fraternity, and Equality; similarly, the sudden sympathy of the Whigs, or at least their more radical wing, for France expressed the satisfaction that she had finally done in 1789 what England had accomplished a century before.

In the early stage of the Revolution few understood its long-term impact and significance. Some of the conservative forces in Europe even welcomed the Revolution as a sign of French weakness and decay; they failed to perceive the fresh vitality and vigorous ability of the new democratic leaders, whose aim was to make France not only free but great. The first to raise the issues of the Revolution from the plane of immediate profit and policy to that of principle and philosophy was Edmund Burke (1729–1797), whose *Reflections on the Revolution in France* (1790) was an immediate literary success in England and on the Continent. Moreover, it was a political event of the first order, stemming the flood of sympathy and enthusiasm that until then had been rushing forth from the hearts of the inarticulate masses of Europe, as well as from philosophers and poets who saw in the Revolution the dawn of a new humanity.

Burke’s *Reflections* comforted the enemies of the Revolution (“Read it,” King George III said to all who came to see him. “It will do you good—do you good! Every gentleman should read it.”) as much as it antagonized its friends, and it

was at once answered by a mass of prorevolutionary books and pamphlets. The most important of those writings is Tom Paine's *Rights of Man* (1791–1792), a fiery answer to the *Reflections*, and—as a defense of French democracy—a worthy successor to his *Common Sense* (1776), one of the trail blazers of the Declaration of Independence.

Burke was born in Dublin in 1729, the son of a successful Irish-Protestant attorney. His mother was a Catholic who did not change her faith, and Burke's Catholic connection (his sister, too, was brought up as a Catholic) provided him with an early education in practical politics. Although Catholics formed the vast majority of the Irish population, they were cruelly oppressed by the ruling Protestant English aristocracy. A special "penal" code was used to exclude Catholics from property, public service, and the professions, reduce them to the state of second-class citizens in their own country, extirpate the Catholic religion, and destroy the sense, and very existence, of Irish nationality. Though Burke came to identify himself ultimately with England, his Irish background and experience always remained a powerful element in his outlook and sympathies.

In 1750 Burke went to London to prepare himself for the legal profession. But his heart was in literature and politics rather than in law, and he preferred the vagaries and uncertainties of the former to the security of the latter, even though his decision cost him his regular allowance from his father.

In 1756 Burke published his first work, *A Vindication of Natural Society*. A short essay, the *Vindication* contains nevertheless most of the key ideas of Burke, developed more exhaustively in his later, and more elaborate, writings. In the preface to the *Vindication* Burke expresses his lack of faith in the capacity of the ordinary person to think things out for himself, and asks, "what would become of the world if the practice of all moral duties, and the foundations of society, rested upon having their reasons made clear and demonstrative to every individual?" His supernatural approach to problems of politics becomes evident in the proposition that "civil government borrows a strength from ecclesiastical," and that in general the "ideas of religion and government are closely connected."

The chief purpose of the *Vindication* becomes evident—to discourage rational inquiry into political institutions as into religion, because the critical spirit of rationalism is bound to challenge, question, attack, and—finally—undermine the civil and religious foundations of society.

Underlying Burke's philosophy in the *Vindication*, published when he was only twenty-seven, is a deep feeling of *pessimism* that nourishes and colors all his thought: "On considering political societies, their origin, their constitution, and their effects, I have sometimes been in a good deal more than doubt whether the Creator did ever really intend man for a state of happiness. He has mixed in his cup a number of natural evils (in spite of the boasts of stoicism they are evils), and every endeavor which the art and policy of mankind has used from the beginning of the world to this day, in order to alleviate or cure them, has only served to introduce new mischiefs, or to aggravate and inflame the old."

Burke approached problems of society in the knowledge that "we owe an implicit reverence to all the institutions of our ancestors," and that we should consider such institutions "with all that modesty" in which a received opinion should be examined.

Burke was even more eager to get into politics than into literature, and he finally entered Parliament at thirty-seven, a comparatively late age in those days. Although he was one of the most brilliant political speakers and writers of his time, he was never able to attain cabinet office; his sincere and impassioned effort to dedicate his life to the English governing classes did not remove the obstacle of his being a newcomer in English politics. Burke's position was made still more vulnerable by his lifelong financial troubles. He lived above his means, purchased a large estate that he could not pay for, and incurred enormous debts that would have driven him into bankruptcy and disgrace had he not been saved by the generosity of his aristocratic benefactors. Burke's reputation also suffered from speculations, which generally failed, and from his associations with financial adventurers and other persons of doubtful standing. In addition, anti-Catholic bigotry affected his career adversely. His mother was known as a loyal Catholic, he married a Catholic, and he himself was suspected of Catholic sympathies and Jesuit beliefs and practices. In June, 1780, anti-Catholic rioting took place in London for ten days, and Burke's life was openly threatened by the mob.

Burke's *veneration of aristocracy* was not a matter of snobbery but of profound conviction that aristocracy was a part of the divinely ordained scheme of governing society, and he accepted his social inferiority with good cheer. Toward the end of his life he said of himself that he was not "swaddled and rocked and dandled" into a political career: "I possessed not one of the qualities, nor cultivated one of the arts, that recommend men to the favor and protection of the great. I was not made for a minion or a tool. As little did I follow the trade of winning the hearts, by imposing on the understandings of the people. At every step of my progress in life, for in every step was I traversed and opposed, and at every turnpike I met, I was obliged to show my passport, and again and again to prove my sole title to the honor of being useful to my country, by a proof that I was not wholly unacquainted with its laws and the whole system of its interests both abroad and at home; otherwise no rank, no toleration even for me." Although Burke was completely rational in the appraisal of individual members of the aristocracy, especially when they were his political opponents, he never challenged the collective right of the aristocratic class to govern Britain and her empire.

Burke's *Reflections on the Revolution in France* (1790) was the outstanding event in his literary as well as political career. Until the publication of the book, liberal sympathies for the Revolution had been expressed more often and more vigorously than criticisms; the *Reflections* (followed swiftly, in 1791, by *A Letter to a Member of the National Assembly, Thoughts on French Affairs, and An Appeal from the Old to the New Whigs*) turned the tables on the liberal sympathizers by enlarging the scope of the debate. What had started out as a discussion of the French Revolution became a searching inquiry into the nature of reform and revolution in general, and out of this inquiry emerged the bible of modern conservatism.

The impact of the *Reflections* was due as much to its subtlety of thought and moral elevation as to its style and language, an arresting mixture of poetry, philosophy, and religious mysticism, all suffused with a penetrating sense of practical wisdom. The French Revolution was, for Burke, not the result of deepscated historical conflicts and forces, but of wrong doctrines of philosophers who were

animated by fanatical atheism, and of vile ambitions of politicians who were driven by opportunist lust for power. Burke is particularly vehement in his denunciation of French philosophers and men of letters—"robbers and assassins: Never before, did a den of bravoos and banditti, assume the garb and tone of an academy of philosophers."

Burke was quick enough to realize that the French Revolution was more than an internal French affair, that it was a "revolution of doctrine and theoretic dogma," and he attacked the state that emerged from it as a "college of armed fanatics, for the propagation of the principles of assassination, robbery, fraud, faction, oppression, and impiety." Wisdom is most terrified by fanaticism, its worst enemy, against which it is the least able to furnish any kind of remedy, and Burke therefore called for a European crusade to crush the revolutionary spirit by force of arms. He was convinced that no monarchy would be safe "as long as this strange, nameless, wild, enthusiastic thing is established in the center of Europe." After England, in concert with other European powers, became involved in war with France, Burke emphasized that the war was directed, not against the French people, but against Jacobin democracy, which could not be shut out by fortresses and territorial limits. In the French Revolution Burke saw a tyranny of the multitude, which is but "a multiplied tyranny."

Against the individualist conception of society of Locke and the French philosophers Burke put forward the *organic theory*: "Society is indeed a contract. Subordinate contracts for objects of mere occasional interest may be dissolved at pleasure—but the state ought not to be considered as nothing better than a partnership agreement in a trade of pepper and coffee, calico or tobacco, or some other such low concern, to be taken up for a little temporary interest, and to be dissolved by the fancy of the parties. It is to be looked on with other reverence; because it is not a partnership in things subservient only to the gross animal existence of a temporary and perishable nature. It is a partnership in all science; a partnership in all art; a partnership in every virtue, and in all perfection. As the ends of such a partnership cannot be obtained in many generations, it becomes a partnership not only between those who are living, but between those who are living, those who are dead and those who are to be born." Because society is the product of a continuous stream of generation cooperating with generation, aiming at the good life in its fullest measure, the burden of proof lies on those "who tear to pieces the whole frame and contecture of their country."

Burke's ideal of statesmanship avoids extremes of tearing down blindly the existing order and of resisting change at all cost: "A disposition to preserve, and an ability to improve, taken together, would be my standard of a statesman." This formula may also be seen as the classical definition of the true conservative, as distinct from the stand-pat conservative or the reactionary. The stand-pat conservative is so content with the status quo that he is unwilling to make any changes or reforms. The reactionary wants to change and to move—but to move backward rather than forward. The true conservative possesses a balance between preservation and change, with a slight bias toward preservation. As Burke says, the spontaneous, emotional, unreflective "disposition" of the conservative is to preserve, but when the conservative is shown the need for change and improvement, he has the intellectual, reflective "ability" to make necessary

changes. By the same token, the liberal could be defined, in Burkean terms, as having "a disposition to improve and an ability to preserve."

Burke sharply distinguishes reform from innovation, which generally derives from a selfish temper and confined views. Whatever innovation, or "hot reformation," can accomplish is bound to be crude, harsh, indigested, mixed with imprudence and injustice, and contrary to human nature and human institutions. *True reform*, which can be brought about only by disinterested statesmen, must be *early* in the interest of government, and *temperate* in the interest of the people, because only temperate reforms are permanent and allow room for growth: "Whenever we improve, it is right to leave room for further improvement."

Every revolution contains some evil, Burke says, as it inevitably destroys part of the moral capital, the good will, of the community, and the moral capital of future generations should be considered as a trust that must not be treated lightly. The English Revolution of 1688 was "a revolution, not made, but prevented," because the nation was on the defensive, seeking to preserve its institutions rather than to subvert or destroy them. The monarchy was continued, and the nation kept "the same ranks, the same orders, the same privileges, the same franchises, the same rules for property, the same subordinations," and, above all, the Revolution was followed by a "happy settlement." Burke contrasts the English Revolution of 1688 with the French Revolution of 1789, in which he sees but destruction, anarchy, and terror.

Burke denies the validity of the central doctrine of democracy: that only the governed have the right to determine who is to govern them, and that all votes count equally. He opposes this democratic method as an "arithmetic" devoid of meaning and thinks of representation in terms of historic interests, such as the Lords, the Commons, the monarchy, the Established Church, rather than in terms of individual citizens. Burke adheres to the medieval idea that man is politically significant, not as an individual citizen, but solely as a member of a group to which he belongs socially or economically. This theory of *corporate representation* was later supported by Hegel and found a perverted expression in the "corporate state" of the fascist type.

Burke was liberal enough not to desire the oppression of persons of low station, like hairdressers and working tallow chandlers, provided that they stay in their places: "Such descriptions of men ought not to suffer oppression from the state; but the state suffers oppression, if such as they, either individually or collectively, are permitted to rule." Because of his firm conviction that wealth and aristocracy were the repositories of political wisdom and experience, he stubbornly resisted any widening of the suffrage. Under the then existing system of "rotten boroughs," small hamlets were represented in Parliament, whereas large urban communities were not represented at all or grossly under-represented. This system soon brought England to the brink of revolution, but it was adjudged by Burke to be "adequate to all the purposes for which a representation of the people can be desired or devised." In fact, Burke held that the suffrage ought to be further limited, rather than broadened, if any changes were to be made, because of the "prostitute and daring venality, the corruption of manners, the idleness and profligacy of the lower sort of voters."

Whereas Locke attached to *property* the qualification that it was originally equal, Burke frankly states the doctrine that the "characteristic essence of

property, formed out of the combined principles of its acquisition and conservation, is to be *unequal*." The inequality of property that Burke defended was closely related to his conception of society in which rank and privilege played such a large part. Similarly, Burke fully perceived and approved of political inequality as the concomitant of economic inequality. "Hereditary property and hereditary distinction" wholly composed the House of Lords, and he was pleased that the House of Commons was also made up (in his time) of large property owners.

As to the unpropertied masses, Burke wanted them to be content with *virtual representation*, under which, as he said in a letter to Sir Hercules Langrishe (January 3, 1792), "there is a communion of interests, and a sympathy in feelings and desires between those who act in the name of any description of people, and the people in whose name they act, though the trustees are not actually chosen by them. This is virtual representation. Such a representation I think to be, in many cases, even better than the actual."

Moreover, apart from the direct and explicit support that Burke gave to the sanctity of property and its privileges in government and society, his indirect and implicit support was even more important. What mattered most was that Burke emphasized the values of prescription, inheritance, rank, and distinction, all of which helped to buttress the cause of inequality of property and political rights.

Burke saw society, not in terms of equal individuals, but of unequal groups and historically recognized interests. Property is such an interest, founded on *prescription*, rather than on natural law or abstract reasoning. Aristocracy and monarchy are also institutions based on prescription. Though property is not the only criterion of the privileged classes and interests that Burke deems worthy to rule the nation, he is keenly conscious of the connections between property and the established order based on privilege and rank. The French Revolution was, for Burke, a direct threat to the traditional connection of property and political rule, and he defines Jacobinism as "the revolt of the enterprising talents of a country against its property." The attempt to level inequality never ends in equality, Burke says. Every society has various descriptions of citizens, and "some description must be uppermost." The levelers therefore merely pervert the natural order of society by their abstract schemes that interfere with its proper constitution.

The only time that Burke seems to relinquish his organic conceptions of man and society, when he talks the cold-blooded language of the profit-seeking entrepreneur, is in his discussion of labor, particularly in his *Thoughts and Details on Scarcity* (1795). There is little in this pamphlet that Herbert Spencer could not have wholeheartedly endorsed. Labor, Burke argues, is "a commodity" and as such an article of trade, subject to the fluctuations of supply and demand on the market: "The impossibility of the subsistence of a man, who carries his labor to a market, is totally beside the question in this way of viewing it. The only question is, what is it worth to the buyer?" The poverty of the laboring people, Burke held, was due to their large numbers: "Numbers in their nature imply poverty." Even if all the throats of the rich were cut, the distribution of their wealth would not yield enough bread and cheese for one night's supper of the laboring classes. But, Burke continues, the throats of the rich ought not to be cut,

because the rich are the trustees for those who labor, and their accumulated hoards are the banking houses of the poor. All that the rich receive for their office of trusteeship is a "very trifling commission and discount."

If the worker does not earn enough for his subsistence, the state has no right to interfere by guaranteeing minimum wages, and the worker then passes out of the jurisdiction of economic or political laws and becomes an object of mercy and charity. Burke concedes that the duty to practice charity toward the indigent is "imperfect," that is, it cannot be enforced, but he is unwilling to go beyond such voluntary provision for the helpless poor. Whereas Burke rejects the concept of natural law when discussing the Rights of Man, he thinks differently when it comes to the Rights of Commerce: "We, the people, ought to be made sensible, that it is not in breaking the laws of commerce, which are the laws of nature, and consequently the laws of God, that we are to place our hope of softening the divine displeasure to remove any calamity under which we suffer, or which hangs over us."

Burke never composed a systematic treatise of politics, like Hobbes' *Leviathan* or Locke's *Two Treatises of Government*, partly because he was a busy parliamentarian and partly because he needed a concrete issue around which he could develop his general principles. His political ideas cannot be found in one place but have to be gathered from his books, speeches, essays, and letters, although the *Reflections* will always occupy first place. Yet if Burke does not state anywhere a systematic theory of politics, his thought is always cast in forms which do not vary greatly. Above all, Burke distrusts metaphysics and a priori reasoning, and he constantly reiterates the plea that politics is a matter of prudence, expediency, circumstance, utility, experience, history, loyalty, and reverence, and not of abstract speculation: "The science of constructing a commonwealth, or renovating it, or reforming it, is, like every other experimental science, not to be taught *a priori*." Circumstances give to every principle its distinguishing color and discriminating effect: "The circumstances are what render every civil and political scheme beneficial or noxious to mankind." The world of contingency and political combination is always larger than we can imagine in advance, and no lines can be laid down for civil or political wisdom. They are incapable of exact definition.

Politics ought to be adjusted, not to reason, but to human nature, and Burke urges that the practical consequences of any political tenet "go a great way in deciding upon its value. Political problems do not primarily concern truth or falsehood. They relate to good or evil. What in the result is likely to produce evil, is politically false; that which is productive of good, politically true." Burke expresses this purely *utilitarian* and *pragmatic* viewpoint by saying that things that are not practicable are not desirable, and that the consequences of any assumed rights "are of great moment in deciding upon their validity." No universal statement can be made on moral and political subjects, and pure metaphysics does not apply to them. The lines of morality are not like those of mathematics: they admit exceptions and demand modifications, arrived at, not by the process of logic, but by the rules of prudence: "Prudence is not only the first in rank of the virtues political and moral, but she is the director, the regulator, the standard of them all. Metaphysics cannot live without definition; but prudence is cautious how she defines."

In discussing human *liberty* Burke is less interested in the right to freedom than in the aptitude for it. Men are qualified for civil liberty in exact proportion to their self-control, love of justice, sobriety, and soundness of understanding. Society must have a controlling power, and the less of it there is within the minds and hearts of men, the more there must be without: "It is ordained in the eternal constitution of things that men of intemperate minds cannot be free. Their passions forge their fetters." Similarly, Burke refuses to lay down an abstract and general definition of *rights* to which every man is entitled, because they are "a thing to be settled by convention." Government itself is not primarily designed to provide and protect rights but is "a contrivance of human wisdom to provide for human *wants*." The rights of men are their advantages and are in "a sort of *middle*, incapable of definition, but not impossible to be discerned." The balancing of conflicting rights and advantages is a most complex process of compromise, of "adding, subtracting, multiplying, and dividing, morally and not metaphysically or mathematically, true moral denominations."

In appraising the political judgment of Burke it ought to be remembered that he was on the side of the future of three of the principal political issues of his time: Ireland, India, and the American colonies. In all three instances his sympathies were magnanimous, his judgment farsighted, and for these reasons he will always be an abiding inspiration to liberal statesmen. In his attitude toward the French Revolution, Burke (who knew France firsthand from only one visit in 1773) was proved wrong in the light of the future, but he was also wrong from his own viewpoint. France did not degenerate into anarchy, as Burke claimed, and it more than regained its lost military strength and international influence under the impetus of the Revolution. Far from destroying the respect for property, as Burke feared, the French Revolution firmly established a new legal and political order that tenaciously protected the rights of property. Burke profoundly foresaw that the Revolution would end in a military dictatorship; yet it was not the original aims of the Revolution but the military coalition of Europe (including England) against France that paved the way for Napoleon. Moreover, the rule of Napoleon was only an interlude, and the liberating effect of the Revolution proved stronger than the temporary dictatorship.

In comparing the French with the English Revolution, Burke always pointed to the violent and radical character of the first, contrasted with the peaceable and conservative character of the second. Yet the obvious parallel to the French Revolution is not the Bloodless Revolution of 1688, but the very bloody revolution and Civil War of the 1640s, culminating in the execution of Charles I. In cutting off the head of their monarch the French were no more than good disciples of the English, and their Revolution was, at the start, much more peaceful than the Puritan Revolution.

Had there been no military coalition of Europe (for which Burke himself labored with utmost frenzy) against revolutionary France, no invasion of her soil by the Prussians and their allies, it is at least conceivable that France might have worked her passage from royal autocracy to popular government without so much violence and bloodshed. Whereas the English Civil War of the 1640s was wholly the product of irreconcilable domestic forces, the civil strife that developed in France after the outbreak of the Revolution was largely the result of foreign interference, in which the King himself was treacherously implicated.

Above all, Burke failed to see that revolution is not necessarily the result of metaphysical fanaticism but may spring from the soil of experience, the experience of protracted suffering. The breakdown and failure of social and political institutions are just as much a matter of experience as are their growth and development. As Burke himself said, political problems do not primarily concern truth or falsehood, but good or evil, and political principles must be judged by their results. Yet in the matter of the French Revolution, Burke was unwilling to await its consequences because he *knew*, without a shadow of his usual doubt and caution, that the French revolutionaries were no more than a band of robbers and assassins. In the same manner, he also idealized the conditions of prerevolutionary France and its basic institutions, the monarchy, church, and aristocracy. Disregarding the oppressions, humiliations, and frustrations of the French people before the Revolution, Burke was shocked and shaken by the sufferings of Queen Marie Antoinette in a "nation of men of honor, and of cavaliers." Tom Paine's famous reply in the *Rights of Man* to this passage in the *Reflections* is that Burke "pities the plumage, but forgets the dying bird."

Yet, when all is said and done, no reader of Burke, and of his *Reflections* in particular, can escape the impact of a mature, imaginative, and penetrating mind: "The nature of man is intricate; the objects of society are of the greatest possible complexity; and therefore no simple disposition or direction of power can be suitable either to man's nature, or to the quality of his affairs." Bismarck defined politics as the "art of the possible," and this is one of the guiding principles of Burke's approach to politics. Whether or not one accepts the tenets of his political creed, one finds on almost every page of the *Reflections* epigrammatic gems of wisdom and observation that make his thought a permanent inspiration even for those who feel more optimistic about the possibilities of democracy than Burke did.

BURKE

Reflections on the Revolution in France *

THE FRENCH REVOLUTION AND THE BRITISH CONSTITUTION

Our oldest reformation is that of Magna Charta. You will see that Sir Edward Coke, that great oracle of our law, and indeed all the great men who follow him, to Blackstone, are industrious to prove the pedigree of our liberties. They endeavour to prove, that the ancient charter, the Magna Charta of King John, was connected with another positive charter from Henry I, and that both the one and the other were nothing more than a reaffirmance of the still more ancient standing law of the kingdom. In the matter of fact, for the greater part, these authors appear to be in the right; perhaps not always; but if the lawyers mistake in some particulars, it proves my position still the more strongly; because it demonstrates the powerful prepossession towards antiquity, with which the minds of all our lawyers and legislators, and of all the people whom they wish to influence, have been always filled; and the stationary policy of this kingdom in considering their most sacred rights and franchises as an *inheritance*.

In the famous law of the 3rd of Charles I, called the *Petition of Right*, the parliament says to the king, "Your subjects have *inherited* this freedom,"

* From Edmund Burke, *Reflections on the Revolution in France* (1790). In form, it is addressed to a French correspondent of Burke.

claiming their franchises not on abstract principles "as the rights of men," but as the rights of Englishmen, and as a patrimony derived from their forefathers. Selden, and the other profoundly learned men, who drew this *Petition of Right*, were as well acquainted, at least, with all the general theories concerning the "rights of men," as any of the discourses in our pulpits, or on your tribune; full as well as Dr. Price, or as the Abbé Sieyès. But, for reasons worthy of that practical wisdom which superseded their theoretic science, they preferred this positive, recorded, *hereditary* title to all which can be dear to the man and the citizen, to that vague speculative right, which exposed their sure inheritance to be scrambled for and torn to pieces by every wild, litigious spirit.

The same policy pervades all the laws which have since been made for the preservation of our liberties. In the 1st of William and Mary, in the famous statute, called the Declaration of Right, the two Houses utter not a syllable of "a right to frame a government for themselves." You will see, that their whole care was to secure the religion, laws, and liberties, that had been long possessed, and had been lately endangered. "Taking into their most serious consideration the *best* means for making such an establishment, that their religion, laws, and liberties might not be in danger of being again subverted," they auspicate all their proceedings, by stating as some of those *best* means, "in the *first place*" to do "as their *ancestors in like cases have usually done*

for vindicating their *ancient* rights and liberties, to *declare*";—and then they pray the king and queen, "that it may be *declared* and enacted, that *all and singular* the rights and liberties *asserted and declared*, are the true *ancient* and indubitable rights and liberties of the people of this kingdom."

You will observe, that from Magna Charta to the Declaration of Right, it has been the uniform policy of our constitution to claim and assert our liberties, as an *entailed inheritance* derived to us from our forefathers, and to be transmitted to our posterity; as an estate specially belonging to the people of this kingdom, without any reference whatever to any other more general or prior right. By this means our constitution preserves a unity in so great a diversity of its parts. We have an inheritable crown; an inheritable peerage; and a House of Commons and a people inheriting privileges, franchises, and liberties, from a long line of ancestors.

This policy appears to me to be the result of profound reflection; or rather the happy effect of following nature, which is wisdom without reflection, and above it. A spirit of innovation is generally the result of a selfish temper and confined views. People will not look forward to posterity, who never look backward to their ancestors. Besides, the people of England well know, that the idea of inheritance furnishes a sure principle of conservation and a sure principle of transmission; without at all excluding a principle of improvement. It leaves acquisition free; but it secures what it acquires. Whatever advantages are obtained by a state proceeding on these maxims, are locked fast as in a sort of family settlement; grasped as in a kind of mortmain for ever. By a constitutional policy, working after the pattern of nature, we receive, we hold, we transmit our government and our privileges, in the same manner in which we enjoy and transmit our property and our lives. The institutions of policy, the goods of fortune, the gifts of providence, are handed down to

us, and from us, in the same course and order. Our political system is placed in a just correspondence and symmetry with the order of the world, and with the mode of existence decreed to a permanent body composed of transitory parts; wherein, by the disposition of a stupendous wisdom, moulding together the great mysterious incorporation of the human race, the whole, at one time, is never old, or middle-aged, or young, but, in a condition of unchangeable constancy, moves on through the varied tenor of perpetual decay, fall, renovation, and progression. Thus, by preserving the method of nature in the conduct of the state, in what we improve, we are never wholly new; in what we retain, we are never wholly obsolete. By adhering in this manner and on those principles to our forefathers, we are guided not by the superstition of antiquarians, but by the spirit of philosophic analogy. In this choice of inheritance we have given to our frame of polity the image of a relation in blood; binding up the constitution of our country with our dearest domestic ties; adopting our fundamental laws into the bosom of our family affections; keeping inseparable, and cherishing with the warmth of all their combined and mutually reflected charities, our state, our hearths, our sepulchres, and our altars.

Through the same plan of a conformity to nature in our artificial institutions, and by calling in the aid of her unerring and powerful instincts, to fortify the fallible and feeble contrivances of our reason, we have derived several other, and those no small benefits, from considering our liberties in the light of an inheritance. Always acting as if in the presence of canonized forefathers, the spirit of freedom, leading in itself to misrule and excess, is tempered with an awful gravity. This idea of a liberal descent inspires us with a sense of habitual native dignity, which prevents that upstart insolence almost inevitably adhering to and disgracing those who are the first acquirers of any distinction. By this means our liberty becomes a noble freedom. It carries an

imposing and majestic aspect. It has a pedigree and illustrating ancestors. It has its bearings, and its ensigns armorial. It has its gallery of portraits; its monumental inscriptions; its records, evidences, and titles. We procure reverence to our civil institutions on the principle upon which nature teaches us to revere individual men; on account of their age, and on account of those from whom they are descended. All your sophisters cannot produce anything better adapted to preserve a rational and manly freedom than the course that we have pursued, who have chosen our nature rather than our speculations, our breasts rather than our inventions, for the great conservatories and magazines of our rights and privileges.

You might, if you pleased, have profited of our example, and have given to your recovered freedom a correspondent dignity. Your privileges, though discontinued, were not lost to memory. Your constitution, it is true, whilst you were out of possession, suffered waste and dilapidation; but you possessed in some parts the walls, and, in all, the foundations, of a noble and venerable castle. You might have repaired those walls; you might have built on those old foundations. Your constitution was suspended before it was perfected; but you had the elements of a constitution very nearly as good as could be wished. In your old states you possessed that variety of parts corresponding with the various descriptions of which your community was happily composed; you had all that combination, and all that opposition of interests, you had that action and counteraction, which, in the natural and in the political world, from the reciprocal struggle of discordant powers, draws out the harmony of the universe. These opposed and conflicting interests, which you considered as so great a blemish in your old and in our present constitution, interpose a salutary check to all precipitate resolutions. They render deliberation a matter not of choice, but of necessity; they make all change a subject of *com-*

promise, which naturally begets moderation; they produce *temperaments* preventing the sore evil of harsh, crude, unqualified reformations; and rendering all the headlong exertions of arbitrary power, in the few or in the many, for ever impracticable. Through that diversity of members and interests, general liberty had as many securities as there were separate views in the several orders; whilst by pressing down the whole by the weight of a real monarchy, the separate parts would have been prevented from warping, and starting from their allotted places.

You had all these advantages in your ancient states; but you chose to act as if you had never been moulded into civil society, and had everything to begin anew. You began ill, because you began by despising everything that belonged to you. You set up your trade without a capital. If the last generations of your country appeared without much lustre in your eyes, you might have passed them by, and derived your claims from a more early race of ancestors. Under a pious predilection for those ancestors, your imaginations would have realized in them a standard of virtue and wisdom, beyond the vulgar practice of the hour: and you would have risen with the example to whose imitation you aspired. Respecting your forefathers, you would have been taught to respect yourselves. You would not have chosen to consider the French as a people of yesterday, as a nation of lowborn servile wretches until the emancipating year of 1789. In order to furnish, at the expense of your honour, an excuse to your apologists here for several enormities of yours, you would not have been content to be represented as a gang of Maroon slaves, suddenly broke loose from the house of bondage, and therefore to be pardoned for your abuse of the liberty to which you were not accustomed, and ill fitted. Would it not, my worthy friend, have been wiser to have you thought, what I, for one, always thought you, a generous and gallant nation, long misled to your disadvantage by your high

and romantic sentiments of fidelity, honour, and loyalty; that events had been unfavourable to you, but that you were not enslaved through any illiberal or servile disposition; that in your most devoted submission, you were actuated by a principle of public spirit, and that it was your country you worshipped, in the person of your king? Had you made it to be understood, that in the delusion of this amiable error you had gone farther than your wise ancestors; that you were resolved to resume your ancient privileges, whilst you preserved the spirit of your ancient and your recent loyalty and honour; or if, diffident of yourselves, and not clearly discerning the almost obliterated constitution of your ancestors, you had looked to your neighbours in this land, who had kept alive the ancient principles and models of the old common law of Europe meliorated and adapted to its present state—by following wise examples you would have given new examples of wisdom to the world. You would have rendered the cause of liberty venerable in the eyes of every worthy mind in every nation. You would have shamed despotism from the earth, by showing that freedom was not only reconcilable, but, as when well disciplined it is, auxiliary to law. You would have had an unoppressive but a productive revenue. You would have had a flourishing commerce to feed it. You would have had a free constitution; a potent monarchy; a disciplined army; a reformed and venerated clergy; a mitigated but spirited nobility, to lead your virtue, not to overlay it; you would have had a liberal order of commons, to emulate and to recruit that nobility; you would have had a protected, satisfied, laborious, and obedient people, taught to seek and to recognise the happiness that is to be found by virtue in all conditions; in which consists the true moral equality of mankind, and not in that monstrous fiction, which, by inspiring false ideas and vain expectations into men destined to travel in the obscure walk of laborious life, serves only to aggravate and embitter that real inequality, which it never

can remove; and which the order of civil life establishes as much for the benefit of those whom it must leave in a humble state, as those whom it is able to exalt to a condition more splendid, but not more happy. You had a smooth and easy career of felicity and glory laid open to you, beyond anything recorded in the history of the world; but you have shown that difficulty is good for man.

Compute your gains; see what is got by those extravagant and presumptuous speculations which have taught your leaders to despise all their predecessors, and all their contemporaries, and even to despise themselves, until the moment in which they became truly despicable. By following those false lights, France has bought undisguised calamities at a higher price than any nation has purchased the most unequivocal blessings! France has bought poverty by crime! France has not sacrificed her virtue to her interest, but she has abandoned her interest, that she might prostitute her virtue. All other nations have begun the fabric of a new government, or the reformation of an old, by establishing originally, or by enforcing with greater exactness, some rites or other of religion. All other people have laid the foundations of civil freedom in severer manners, and a system of a more austere and masculine morality. France, when she let loose the reins of regal authority, doubled the license of a ferocious dissoluteness in manners, and of an insolent irreligion in opinions and practices; and has extended through all ranks of life, as if she were communicating some privilege, or laying open some secluded benefit, all the unhappy corruptions that usually were the disease of wealth and power. This is one of the new principles of equality in France.

In the calling of the states-general of France, the first thing that struck me, was a great departure from the ancient course. I found the representation for the third estate composed of six hundred persons. They were equal in number to the representatives of both the other orders.

If the orders were to act separately, the number would not, beyond the consideration of the expense, be of much moment. But when it became apparent that the three orders were to be melted down into one, the policy and necessary effect of this numerous representation became obvious. A very small desertion from either of the other two orders must throw the power of both into the hands of the third. In fact, the whole power of the state was soon resolved into that body. Its due composition became therefore of infinitely the greater importance.

Judge, Sir, of my surprise, when I found that a very great proportion of the Assembly (a majority, I believe, of the members who attended) was composed of practitioners in the laws. It was composed, not of distinguished magistrates, who had given pledges to their country of their science, prudence, and integrity; not of leading advocates, the glory of the bar; not of renowned professors in universities;—but for the far greater part, as it must in such a number, of the inferior, unlearned, mechanical, merely instrumental members of the profession. There were distinguished exceptions; but the general composition was of obscure provincial advocates, of stewards of petty local jurisdictions, country attorneys, notaries, and the whole train of the ministers of municipal litigation, the fomenters and conductors of the petty war of village vexation. From the moment I read the list, I saw distinctly, and very nearly as it has happened, all that was to follow.

The degree of estimation in which any profession is held becomes the standard of the estimation in which the professors hold themselves. Whatever the personal merits of many individual lawyers might have been, and in many it was undoubtedly very considerable, in that military kingdom no part of the profession had been much regarded, except the highest of all, who often united to their professional offices great family splendour, and were invested with great power and authority. These certainly were highly re-

spected, and even with no small degree of awe. The next rank was not much esteemed; the mechanical part was in a very low degree of repute.

Whenever the supreme authority is vested in a body so composed, it must evidently produce the consequences of supreme authority placed in the hands of men not taught habitually to respect themselves; who had no previous fortune in character at stake; who could not be expected to bear with moderation, or to conduct with discretion, a power, which they themselves, more than any others, must be surprised to find in their hands. Who could flatter himself that these men, suddenly, and, as it were, by enchantment, snatched from the humblest rank of subordination, would not be intoxicated with their unprepared greatness? Who could conceive that men, who are habitually meddling, daring, subtle, active, of litigious dispositions and unquiet minds, would easily fall back into their old condition of obscure contention, and laborious, low, and unprofitable chicane? Who could doubt but that, at any expense to the state, of which they understood nothing, they must pursue their private interests which they understood but too well? It was not an event depending on chance, or contingency. It was inevitable; it was necessary; it was planted in the nature of things. They must *join* (if their capacity did not permit them to *lead*) in any project which could procure to them a *litigious constitution*; which could lay open to them those innumerable lucrative jobs, which follow in the train of all great convulsions and revolutions in the state, and particularly in all great and violent permutations of property. Was it to be expected that they would attend to the stability of property, whose existence had always depended upon whatever rendered property questionable, ambiguous, and insecure? Their objects would be enlarged with their elevation, but their disposition and habits, and mode of accomplishing their designs, must remain the same.

Well! but these men were to be tem-

pered and restrained by other descriptions, of more sober and more enlarged understandings. Were they then to be awed by the supereminent authority and awful dignity of a handful of country clowns, who have seats in that Assembly, some of whom are said not to be able to read and write? and by not a greater number of traders, who, though somewhat more instructed, and more conspicuous in the order of society, had never known anything beyond their counting-house. No! both these descriptions were more formed to be overborne and swayed by the intrigues and artifices of lawyers, than to become their counterpoise. With such a dangerous disproportion, the whole must needs be governed by them. To the faculty of law was joined a pretty considerable proportion of the faculty of medicine. This faculty had not, any more than that of the law, possessed in France its just estimation. Its professors, therefore, must have the qualities of men not habituated to sentiments of dignity. But supposing they had ranked as they ought to do, and as with us they do actually, the sides of sick beds are not the academies for forming statesmen and legislators. Then came the dealers in stocks and funds, who must be eager, at any expense, to change their ideal paper wealth for the more solid substance of land. To these were joined men of other descriptions, from whom as little knowledge of, or attention to, the interests of a great state was to be expected, and as little regard to the stability of any institution; men formed to be instruments, not controls. Such in general was the composition of the *Tiers Etat* in the National Assembly; in which was scarcely to be perceived the slightest traces of what we call the natural landed interest of the country.

We know that the British House of Commons, without shutting its doors to any merit in any class, is, by the sure operation of adequate causes, filled with everything illustrious in rank, in descent, in hereditary and in acquired opulence, in cultivated talents, in military, civil,

naval, and politic distinction, that the country can afford. But supposing, what hardly can be supposed as a case, that the House of Commons should be composed in the same manner with the *Tiers Etat* in France, would this dominion of chicane be borne with patience, or even conceived without horror? God forbid I should insinuate anything derogatory to that profession, which is another priesthood, administering the rights of sacred justice. But whilst I revere men in the functions which belong to them, and would do as much as one man can do to prevent their exclusion from any, I cannot, to flatter them, give the lie to nature. They are good and useful in the composition; they must be mischievous if they preponderate so as virtually to become the whole. Their very excellence in their peculiar functions may be far from a qualification for others. It cannot escape observation, that when men are too much confined to professional and faculty habits, and as it were inveterate in the recurrent employment of that narrow circle, they are rather disabled than qualified for whatever depends on the knowledge of mankind, on experience in mixed affairs, on a comprehensive, connected view of the various, complicated, external and internal interests, which go to the formation of that multifarious thing called a state.

REPRESENTATION OF PROPERTY

The Chancellor of France at the opening of the States, said, in a tone of oratorical flourish, that all occupations were honourable. If he meant only, that no honest employment was disgraceful, he would not have gone beyond the truth. But in asserting that anything is honourable, we imply some distinction in its favour. The occupation of a hair-dresser, or of a working tallow-chandler, cannot be a matter of honour to any person—to say nothing of a number of other more servile employments. Such descriptions of men ought not to suffer oppression from

the state; but the state suffers oppression, if such as they, either individually or collectively, are permitted to rule. In this you think you are combating prejudice. But you are at war with nature.¹

I do not, my dear Sir, conceive you to be of that sophistical, captious spirit, or of that uncandid dulness, as to require, for every general observation or sentiment, an explicit detail of the correctives and exceptions, which reason will presume to be included in all the general propositions which come from reasonable men. You do not imagine, that I wish to confine power, authority, and distinction to blood, and names, and titles. No, Sir. There is no qualification for government but virtue and wisdom, actual or presumptive. Wherever they are actually found, they have, in whatever state, condition, profession or trade, the passport of Heaven to human place and honour. Woe to the country which would madly and impiously reject the service of the talents and virtues, civil, military, or religious, that are given to grace and to serve it; and would condemn to obscurity everything formed to diffuse lustre and glory around a state! Woe to that coun-

¹ Ecclesiasticus, chap. xxxviii. verses 24, 25. "The wisdom of a learned man cometh by opportunity of leisure: and he that hath little business shall become wise."—"How can he get wisdom that holdeth the plough, and that glorieth in the goad; that driveth oxen; and is occupied in their labours; and whose talk is of bullocks?"

Ver. 27. "So every carpenter and work-master that laboureth night and day," etc.

Ver. 33. "They shall not be sought for in public counsel, nor sit high in the congregation; they shall not sit on the judge's seat, nor understand the sentence of judgment; they cannot declare justice and judgment, and they shall not be found where parables are spoken."

Ver. 34. "But they will maintain the state of the world."

I do not determine whether this book be canonical, as the Gallican church (till lately) has considered it, or apocryphal, as here it is taken. I am sure it contains a great deal of sense and truth.

try too, that, passing into the opposite extreme, considers a low education, a mean contracted view of things, a sordid, mercenary occupation, as a preferable title to command! Everything ought to be open; but not indifferently to every man. No rotation; no appointment by lot; no mode of election operating in the spirit of sortition, or rotation, can be generally good in a government conversant in extensive objects. Because they have no tendency, direct or indirect, to select the man with a view to the duty, or to accommodate the one to the other. I do not hesitate to say, that the road to eminence and power from obscure condition, ought not to be made too easy, nor a thing too much of course. If rare merit be the rarest of all rare things, it ought to pass through some sort of probation. The temple of honour ought to be seated on an eminence. If it be opened through virtue, let it be remembered too, that virtue is never tried but by some difficulty and some struggle.

Nothing is a due and adequate representation of a state, that does not represent its ability, as well as its property. But as ability is a vigorous and active principle, and as property is sluggish, inert, and timid, it never can be safe from the invasions of ability, unless it be, out of all proportion, predominant in the representation. It must be represented too in great masses of accumulation, or it is not rightly protected. The characteristic essence of property, formed out of the combined principles of its acquisition and conservation, is to be *unequal*. The great masses therefore which excite envy, and tempt rapacity, must be put out of the possibility of danger. Then they form a natural rampart about the lesser properties in all their gradations. The same quantity of property, which is by the natural course of things divided among many, has not the same operation. Its defensive power is weakened as it is diffused. In this diffusion each man's portion is less than what, in the eagerness of his desires, he may flatter himself to obtain by dissipating the accumulations of others. The plunder of

the few would indeed give but a share inconceivably small in the distribution to the many. But the many are not capable of making this calculation; and those who lead them to rapine never intend this distribution.

The power of perpetuating our property in our families is one of the most valuable and interesting circumstances belonging to it, and that which tends the most to the perpetuation of society itself. It makes our weakness subservient to our virtue; it grafts benevolence even upon avarice. The possessors of family wealth, and of the distinction which attends hereditary possession (as most concerned in it), are the natural securities for this transmission. With us the House of Peers is formed upon this principle. It is wholly composed of hereditary property and hereditary distinction; and made therefore the third of the legislature; and, in the last event, the sole judge of all property in all its subdivisions. The House of Commons too, though not necessarily, yet in fact, is always so composed, in the far greater part. Let those large proprietors be what they will, and they have their chance of being amongst the best, they are, at the very worst, the ballast in the vessel of the commonwealth. For though hereditary wealth, and the rank which goes with it, are too much idolized by creeping sycophants, and the blind, abject admirers of power, they are too rashly slighted in shallow speculations of the petulant, assuming, short-sighted coxcombs of philosophy. Some decent, regulated pre-eminence, some preference (not exclusive appropriation) given to birth, is neither unnatural, nor unjust, nor impolitic.

It is said, that twenty-four millions ought to prevail over two hundred thousand. True; if the constitution of a kingdom be a problem of arithmetic. This sort of discourse does well enough with the lamp-post for its second: to men who may reason calmly, it is ridiculous. The will of the many and their interest must very often differ; and great will be the difference when they make an evil

choice. A government of five hundred country attorneys and obscure curates is not good for twenty-four millions of men, though it were chosen by eight-and-forty millions; nor is it the better for being guided by a dozen of persons of quality, who have betrayed their trust in order to obtain that power. At present, you seem in everything to have strayed out of the high road of nature. The property of France does not govern it. Of course property is destroyed, and rational liberty has no existence.

All this violent cry against the nobility I take to be a mere work of art. To be honoured and even privileged by the laws, opinions, and inveterate usages of our country, growing out of the prejudice of ages, has nothing to provoke horror and indignation in any man. Even to be too tenacious of those privileges is not absolutely a crime. The strong struggle in every individual to preserve possession of what he had found to belong to him, and to distinguish him, is one of the securities against injustice and despotism implanted in our nature. It operates as an instinct to secure property, and to preserve communities in a settled state. What is there to shock in this? Nobility is a graceful ornament to the civil order. It is the Corinthian capital of polished society. *Omnes boni nobilitati semper favemus*, was the saying of a wise and good man. It is indeed one sign of a liberal and benevolent mind to incline to it with some sort of partial propensity. He feels no ennobling principle in his own heart, who wishes to level all the artificial institutions which have been adopted for giving a body to opinion, and permanence to fugitive esteem. It is a sour, malignant, envious disposition, without taste for the reality, or for any image or representation of virtue, that sees with joy the unmerited fall of what had long flourished in splendour and in honour. I do not like to see anything destroyed; any void produced in society; any ruin on the face of the land. It was therefore with no disappointment or dissatisfaction that my inquiries and

observations did not present to me any incorrigible vices in the noblesse of France, or any abuse which could not be removed by a reform very short of abolition. Your noblesse did not deserve punishment: but to degrade is to punish.

With the National Assembly of France, possession is nothing, law and usage are nothing. I see the National Assembly openly reprobate the doctrine of prescription, which, one of the greatest of their own lawyers tells us, with great truth, is a part of the law of nature. He tells us, that the positive ascertainment of its limits, and its security from invasion, were among the causes for which civil society itself has been instituted. If prescription be once shaken, no species of property is secure, when it once becomes an object large enough to tempt the cupidity of indigent power. I see a practice perfectly correspondent to their contempt of this great fundamental part of natural law. I see the confiscators begin with bishops, and chapters, and monasteries; but I do not see them end there. I see the princes of the blood, who, by the oldest usages of that kingdom, held large landed estates (hardly with the compliment of a debate) deprived of their possessions, and, in lieu of their stable, independent property, reduced to the hope of some precarious, charitable pension, at the pleasure of an assembly, which of course will pay little regard to the rights of pensioners at pleasure, when it despises those of legal proprietors. Flushed with the insolence of their first inglorious victories, and pressed by the distresses caused by their lust of unhallowed lucre, disappointed but not discouraged, they have at length ventured completely to subvert all property of all descriptions throughout the extent of a great kingdom. They have compelled all men, in all transactions of commerce, in the disposal of lands, in civil dealing, and through the whole communion of life, to accept as perfect payment and good and lawful tender, the symbols of their speculations on a projected sale of their plunder. What vestiges

of liberty or property have they left? The tenant-right of a cabbage-garden, a year's interest in a hovel, the good-will of an ale-house or a baker's shop, the very shadow of a constructive property, are more ceremoniously treated in our parliament, than with you the oldest and most valuable landed possession, in the hands of the most respectable personages, or than the whole body of the monied and commercial interest of your country. We entertain a high opinion of the legislative authority; but we have never dreamt that parliaments had any right whatever to violate property, to overrule prescription, or to force a currency of their own fiction in the place of that which is real, and recognized by the law of nations. But you, who began with refusing to submit to the most moderate restraints, have ended by establishing an unheard-of despotism. I find the ground upon which your confiscators go is this; that indeed their proceedings could not be supported in a court of justice; but that the rules of prescription cannot bind a legislative assembly. So that this legislative assembly of a free nation sits, not for the security, but for the destruction, of property, and not of property only, but of every rule and maxim which can give it stability, and of those instruments which can alone give it circulation.

In every prosperous community something more is produced than goes to the immediate support of the producer. This surplus forms the income of the landed capitalist. It will be spent by a proprietor who does not labour. But this idleness is itself the spring of labour; this repose the spur to industry. The only concern of the state is, that the capital taken in rent from the land, should be returned again to the industry from whence it came; and that its expenditure should be with the least possible detriment to the morals of those who expend it, and to those of the people to whom it is returned.

Why should the expenditure of a great landed property, which is a dispersion of

the surplus product of the soil, appear intolerable to you or to me, when it takes its course through the accumulation of vast libraries, which are the history of the force and weakness of the human mind; through great collections of ancient records, medals, and coins, which attest and explain laws and customs; through paintings and statues, that, by imitating nature, seem to extend the limits of creation; through grand monuments of the dead, which continue the regards and connexions of life beyond the grave; through collections of the specimens of nature, which become a representative assembly of all the classes and families of the world, that by disposition facilitate, and, by exciting curiosity, open the avenues to science? If by great permanent establishments, all these objects of expense are better secured from the inconstant sport of personal caprice and personal extravagance, are they worse than if the same tastes prevailed in scattered individuals? Does not the sweat of the mason and carpenter, who toil in order to partake the sweat of the peasant, flow as pleasantly and as salubriously, in the construction and repair of the majestic edifices of religion, as in the painted booths and sordid sties of vice and luxury; as honourably and as profitably in repairing those sacred works, which grow hoary with innumerable years, as on the momentary receptacles of transient voluptuousness; in opera-houses, and brothels, and gaming-houses, and club-houses, and obelisks in the Champ de Mars? Is the surplus product of the olive and the vine worse employed in the frugal sustenance of persons, whom the fictions of a pious imagination raise to dignity by construing in the service of God, than in pampering the innumerable multitude of those who are degraded by being made useless domestics, subservient to the pride of man? Are the decorations of temples an expenditure less worthy a wise man, than ribbons, and laces, and national cockades, and petit maisons, and petit soupers, and all the innumerable fopperies and follies, in which opulence

sports away the burthen of its superfluity?

We tolerate even these; not from love of them, but for fear of worse. We tolerate them, because property and liberty, to a degree, require that toleration. But why proscribe the other, and surely, in every point of view, the more laudable use of estates? Why, through the violation of all property, through an outrage upon every principle of liberty, forcibly carry them from the better to the worse?

With us the king and the lords are several and joint securities for the equality of each district, each province, each city. When did you hear in Great Britain of any province suffering from the inequality of its representation; what district from having no representation at all? Not only our monarchy and our peerage secure the equality on which our unity depends, but it is the spirit of the House of Commons itself. The very inequality of representation, which is so foolishly complained of, is perhaps the very thing which prevents us from thinking or acting as members for districts. Cornwall elects as many members as all Scotland. But is Cornwall better taken care of than Scotland? Few trouble their heads about any of your bases, out of some giddy clubs.

Good order is the foundation of all good things. To be enabled to acquire, the people, without being servile, must be tractable and obedient. The magistrate must have his reverence, the laws their authority. The body of the people must not find the principles of natural subordination by art rooted out of their minds. They must respect that property of which they cannot partake. They must labour to obtain what by labour can be obtained; and when they find, as they commonly do, the success disproportioned to the endeavour, they must be taught their consolation in the final proportions of eternal justice. Of this consolation whoever deprives them, deadens their industry, and strikes at the root of all acquisition as of all conservation. He that does this is the

cruel oppressor, the merciless enemy of the poor and wretched; at the same time that by his wicked speculations he exposes the fruits of successful industry, and the accumulations of fortune, to the plunder of the negligent, the disappointed, and the unprosperous.

Too many of the financiers by profession are apt to see nothing in revenue but banks, and circulations, and annuities on lives, and tontines, and perpetual rents, and all the small wares of the ship. In a settled order of the state, these things are not to be slighted, nor is the skill in them to be held of trivial estimation. They are good, but then only good, when they assume the effects of that settled order, and are built upon it. But when men think that these beggarly contrivances may supply a resource for the evils which result from breaking up the foundations of public order, and from causing or suffering the principles of property to be subverted, they will, in the ruin of their country, leave a melancholy and lasting monument of the effect of preposterous politics, and presumptuous, shortsighted, narrow-minded wisdom.

WHY GOVERNMENT IS COMPLEX

I see that your example is held out to shame us. I know that we are supposed a dull, sluggish race, rendered passive by finding our situation tolerable, and prevented by a mediocrity of freedom from ever attaining to its full perfection. Your leaders in France began by affecting to admire, almost to adore, the British constitution; but as they advanced, they came to look upon it with a sovereign contempt. The friends of your National Assembly amongst us have full as mean an opinion of what was formerly thought the glory of their country. The Revolution Society has discovered that the English nation is not free. They are convinced that the inequality in our representation is a "defect in our constitution so gross and palpable, as to make it

excellent chiefly in form and theory."² That a representation in the legislature of a kingdom is not only the basis of all constitutional liberty in it, but of "all legitimate government; that without it a government is nothing but an usurpation";—that "when the representation is partial, the kingdom possess liberty only partially; and if extremely partial, it gives only a semblance; and if not only extremely partial, but corruptly chosen, it becomes a nuisance." Dr. Price considers this inadequacy of representation as our fundamental grievance; and though, as to the corruption of this semblance of representation, he hopes it is not yet arrived to its full perfection of depravity, he fears that "nothing will be done towards gaining for us this essential blessing, until some great abuse of power again provokes our resentment, or some great calamity again alarms our fears, or perhaps till the acquisition of a pure and equal representation by other countries, whilst we are mocked with the shadow, kindles our shame." To this he subjoins a note in these words: "A representation chosen chiefly by the treasury, and a few thousand of the dregs of the people, who are generally paid for their votes."

You will smile here at the consistency of those democratists, who, when they are not on their guard, treat the humbler part of the community with the greatest contempt, whilst, at the same time, they pretend to make them the depositories of all power. It would require a long discourse to point out to you the many fallacies that lurk in the generality and equivocal nature of the terms "inadequate representation." I shall only say here, in justice to that old-fashioned constitution, under which we have long prospered, that our representation has been found perfectly adequate to all the purposes for which a representation of the people can be desired or devised. I defy the enemies of our constitution to

² Discourse on the Love of our Country, 3rd ed., p. 39.

show the contrary. To detail the particulars in which it is found so well to promote its ends, would demand a treatise on our practical constitution. I state here the doctrine of the Revolutionists, only that you and others may see what an opinion these gentlemen entertain of the constitution of their country, and why they seem to think that some great abuse of power, or some great calamity, as giving a chance for the blessing of a constitution according to their ideas, would be much palliated to their feelings; you see why they are so much enamoured of your fair and equal representation, which being once obtained, the same effects might follow. You see they consider our House of Commons as only "a semblance," "a form," "a theory," "a shadow," "a mockery," perhaps "a nuisance."

These gentlemen value themselves on being systematic; and not without reason. They must therefore look on this gross and palpable defect of representation, this fundamental grievance (so they call it), as a thing not only vicious in itself, but as rendering our whole government absolutely illegitimate, and not at all better than a downright usurpation. Another revolution, to get rid of this illegitimate and usurped government, would of course be perfectly justifiable, if not absolutely necessary. Indeed their principle, if you observe it with any attention, goes much further than to an alteration in the election of the House of Commons; for, if popular representation, or choice, is necessary to the legitimacy of all government, the House of Lords is, at one stroke, bastardized and corrupted in blood. That house is no representative of the people at all, even in "semblance or in form." The case of the crown is altogether as bad. In vain the crown may endeavour to screen itself against these gentlemen by the authority of the establishment made on the Revolution. The Revolution which is resorted to for a title, on their system, wants a title itself. The Revolution is built, according to

their theory, upon a basis not more solid than our present formalities, as it was made by a House of Lords, not representing any one but themselves; and by a House of Commons exactly such as the present, that is, as they term it, by a mere "shadow and mockery" of representation.

Something they must destroy, or they seem to themselves to exist for no purpose. One set is for destroying the civil power through the ecclesiastical; another, for demolishing the ecclesiastical through the civil. They are aware that the worst consequences might happen to the public in accomplishing this double ruin of church and state; but they are so heated with their theories, that they give more than hints, that this ruin, with all the mischiefs that must lead to it and attend it, and which to themselves appear quite certain, would not be unacceptable to them, or very remote from their wishes. A man amongst them of great authority, and certainly of great talents, speaking of a supposed alliance between church and state, says, "perhaps we must wait for the fall of the civil powers before this most unnatural alliance be broken. Calamitous no doubt will that time be. But what convulsion in the political world ought to be a subject of lamentation, if it be attended with so desirable an effect?" You see with what a steady eye these gentlemen are prepared to view the greatest calamities which can befall their country.

It is no wonder therefore, that with these ideas of everything in their constitution and government at home, either in church or state, as illegitimate and usurped, or at best as a vain mockery, they look abroad with an eager and passionate enthusiasm. Whilst they are possessed by these notions, it is vain to talk to them of the practice of their ancestors, the fundamental laws of their country, the fixed form of a constitution, whose merits are confirmed by the solid test of long experience, and an increasing public strength and national prosperity. They despise experience as the wisdom of un-

lettered men; and as for the rest, they have wrought under ground a mine that will blow up, at one grand explosion, all examples of antiquity, all precedents, charters, and acts of parliament. They have "the rights of men." Against these there can be no prescription; against these no agreement is binding: these admit no temperament and no compromise: anything withheld from their full demand is so much of fraud and injustice. Against these their rights of men let no government look for security in the length of its continuance, or in the justice and lenity of its administration. The objections of these speculatists, if its forms do not quadrate with their theories, are as valid against such an old and beneficent government, as against the most violent tyranny, or the greenest usurpation. They are always at issue with governments, not on a question of abuse, but a question of competency, and a question of title. I have nothing to say to the clumsy subtlety of their political metaphysics. Let them be their amusement in the schools.—"Illa se jactat in aula—*Æolus, et clauso ventorum carcere regnet.*"—But let them not break prison to burst like a *Levanter*, to sweep the earth with their hurricane, and to break up the fountains of the great deep to overwhelm us.

Far am I from denying in theory, full as far is my heart from withholding in practice (if I were of power to give or to withhold), the *real* rights of men. In denying their false claims of right, I do not mean to injure those which are real, and are such as their pretended rights would totally destroy. If civil society be made for the advantage of man, all the advantages for which it is made become his right. It is an institution of beneficence; and law itself is only beneficence acting by a rule. Men have a right to live by that rule; they have a right to do justice, as between their fellows, whether their fellows are in public function or in ordinary occupation. They have a right to the fruits of their industry; and to the means of making their industry fruitful.

They have a right to the acquisitions of their parents; to the nourishment and improvement of their offspring; to instruction in life, and to consolation in death. Whatever each man can separately do, without trespassing upon others, he has a right to do for himself; and he has a right to a fair portion of all which society, with all its combinations of skill and force, can do in his favour. In this partnership all men have equal rights; but not to equal things. He that has but five shillings in the partnership, has as good a right to it, as he that has five hundred pounds has to his larger proportion. But he has not a right to an equal dividend in the product of the joint stock; and as to the share of power, authority, and direction which each individual ought to have in the management of the state, that I must deny to be amongst the direct original rights of man in civil society; for I have in my contemplation the civil social man, and no other. It is a thing to be settled by convention.

If civil society be the offspring of convention, that convention must be its law. That convention must limit and modify all the descriptions of constitution which are formed under it. Every sort of legislative, judicial, or executory power are its creatures. They can have no being in any other state of things; and how can any man claim under the conventions of civil society, rights which do not so much as suppose its existence? rights which are absolutely repugnant to it? One of the first motives to civil society, and which becomes one of its fundamental rules, is, *that no man should be judge in his own cause*. By this each person has at once divested himself of the first fundamental right of uncovenanted man, that is, to judge for himself, and to assert his own cause. He abdicates all right to be his own governor. He inclusively, in a great measure, abandons the right of self-defence, the first law of nature. Men cannot enjoy the rights of an uncivil and of a civil state together. That he may obtain justice, he gives up his right of determining what it is in points the most essential

to him. That he may secure some liberty, he makes a surrender in trust of the whole of it.

Government is not made in virtue of natural rights, which may and do exist in total independence of it; and exist in much greater clearness, and in a much greater degree of abstract perfection: but their abstract perfection is their practical defect. By having a right to everything they want everything. Government is a contrivance of human wisdom to provide for human *wants*. Men have a right that these wants should be provided for by this wisdom. Among these wants is to be reckoned the want, out of civil society, of a sufficient restraint upon their passions. Society requires not only that the passions of individuals should be subjected, but that even in the mass and body, as well as in the individuals, the inclinations of men should frequently be thwarted, their will controlled, and their passions brought into subjection. This can only be done *by a power out of themselves*; and not, in the exercise of its function, subject to that will and to those passions which it is its office to bridle and subdue. In this sense the restraints on men, as well as their liberties, are to be reckoned among their rights. But as the liberties and the restrictions vary with times and circumstances, and admit of infinite modifications, they cannot be settled upon any abstract rule; and nothing is so foolish as to discuss them upon that principle.

The moment you abate anything from the full rights of men, each to govern himself, and suffer any artificial, positive limitation upon those rights, from that moment the whole organization of government becomes a consideration of convenience. This it is which makes the constitution of a state, and the due distribution of its powers, a matter of the most delicate and complicated skill. It requires a deep knowledge of human nature and human necessities, and of the things which facilitate or obstruct the various ends, which are to be pursued by the mechanism of civil institutions. The state

is to have recruits to its strength, and remedies to its distempers. What is the use of discussing a man's abstract right to food or medicine? The question is upon the method of procuring and administering them. In that deliberation I shall always advise to call in the aid of the farmer and the physician, rather than the professor of metaphysics.

The science of constructing a commonwealth, or renovating it, or reforming it, is, like every other experimental science, not to be taught *a priori*. Nor is it a short experience that can instruct us in that practical science; because the real effects of moral causes are not always immediate; but that which in the first instance is prejudicial may be excellent in its remoter operation; and its excellence may arise even from the ill effects it produces in the beginning. The reverse also happens: and very plausible schemes, with very pleasing commencements, have often shameful and lamentable conclusions. In states there are often some obscure and almost latent causes, things which appear at first view of little moment, on which a very great part of its prosperity or adversity may most essentially depend. The science of government being therefore so practical in itself, and intended for such practical purposes, a matter which requires experience, and even more experience than any person can gain in his whole life, however sagacious and observing he may be, it is with infinite caution that any man ought to venture upon pulling down an edifice, which has answered in any tolerable degree for ages the common purposes of society, or on building it up again, without having models and patterns of approved utility before his eyes.

These metaphysic rights entering into common life, like rays of light which pierce into a dense medium, are, by the laws of nature, refracted from their straight line. Indeed in the gross and complicated mass of human passions and concerns, the primitive rights of men undergo such a variety of refractions and reflections, that it becomes absurd to talk

of them as if they continued in the simplicity of their original direction. The nature of man is intricate; the objects of society are of the greatest possible complexity: and therefore no simple disposition or direction of power can be suitable either to man's nature, or to the quality of his affairs. When I hear the simplicity of contrivance aimed at and boasted of in any new political constitutions, I am at no loss to decide that the artificers are grossly ignorant of their trade, or totally negligent of their duty. The simple governments are fundamentally defective, to say no worse of them. If you were to contemplate society in but one point of view, all these simple modes of polity are infinitely captivating. In effect each would answer its single end much more perfectly than the more complex is able to attain all its complex purposes. But it is better that the whole should be imperfectly and anomalously answered, than that, while some parts are provided for with great exactness, others might be totally neglected, or perhaps materially injured, by the overcare of a favourite member.

The pretended rights of these theorists are all extremes: and in proportion as they are metaphysically true, they are morally and politically false. The rights of men are in a sort of *middle*, incapable of definition, but not impossible to be discerned. The rights of men in governments are their advantages; and these are often in balances between differences of good; in compromises sometimes between good and evil, and sometimes between evil and evil. Political reason is a computing principle; adding, subtracting, multiplying, and dividing, morally and not metaphysically, or mathematically, true moral denominations.

By these theorists the right of the people is almost always sophistically confounded with their power. The body of the community, whenever it can come to act, can meet with no effectual resistance; but till power and right are the same, the whole body of them has no right inconsistent with virtue, and the

first of all virtues, prudence. Men have no right to what is not reasonable, and to what is not for their benefit, for though a pleasant writer said, *Liceat perire poetis*, when one of them, in cold blood, is said to have leaped into the flames of a volcanic revolution, *Ardentem frigidus Ætnam insiluit*, I consider such a frolic rather as an unjustifiable poetic licence, than as one of the franchises of Parnassus; and whether he were poet, or divine, or politician, that chose to exercise this kind of right, I think that more wise, because more charitable, thoughts would urge me rather to save the man, than to preserve his brazen slippers as the monuments of his folly.

The kind of anniversary sermons to which a great part of what I write refers, if men are not shamed out of their present course, in commemorating the fact, will cheat many out of the principles, and deprive them of the benefits, of the revolution they commemorate. I confess to you, Sir, I never liked this continual talk of resistance, and revolution, or the practice of making the extreme medicine of the constitution its daily bread. It renders the habit of society dangerously valetudinary; it is taking periodical doses of mercury sublimate, and swallowing down repeated provocatives of cantharides to our love of liberty.

SENTIMENT AND LOGIC IN POLITICS

We are not the converts of Rousseau; we are not the disciples of Voltaire; Helvetius has made no progress amongst us. Atheists are not our preachers; madmen are not our lawgivers. We know that we have made no discoveries, and we think that no discoveries are to be made, in morality; nor many in the great principles of government, nor in the ideas of liberty, which were understood long before we were born, altogether as well as they will be after the grave has heaped its mould upon our presumption, and the silent tomb shall have imposed its law on our pert loquacity. In England we have

not yet been completely embowelled of our natural entrails; we still feel within us, and we cherish and cultivate, those inbred sentiments which are the faithful guardians, the active monitors of our duty, the true supporters of all liberal and manly morals. We have not been drawn and trussed, in order that we may be filled, like stuffed birds in a museum, with chaff and rags and paltry blurred shreds of paper about the rights of man. We preserve the whole of our feelings still native and entire, unsophisticated by pedantry and infidelity. We have real hearts of flesh and blood beating in our bosoms. We fear God; we look up with awe to kings; with affection to parliaments; with duty to magistrates; with reverence to priests; and with respect to nobility. Why? Because when such ideas are brought before our minds, it is *natural* to be so affected; because all other feelings are false and spurious, and tend to corrupt our minds, to vitiate our primary morals, to render us unfit for rational liberty; and by teaching us a servile, licentious, and abandoned insolence, to be our low sport for a few holidays, to make us perfectly fit for, and justly deserving of, slavery, through the whole course of our lives.

You see, Sir, that in this enlightened age I am bold enough to confess, that we are generally men of untaught feelings; that instead of casting away all our old prejudices, we cherish them to a very considerable degree, and, to take more shame to ourselves, we cherish them because they are prejudices; and the longer they have lasted, and the more generally they have prevailed, the more we cherish them. We are afraid to put men to live and trade each on his own private stock of reason; because we suspect that this stock in each man is small, and that the individuals would do better to avail themselves of the general bank and capital of nations and of ages. Many of our men of speculation, instead of exploding general prejudices, employ their sagacity to discover the latent wisdom which prevails in them. If they find what they seek,

and they seldom fail, they think it more wise to continue the prejudice, with the reason involved, than to cast away the coat of prejudice, and to leave nothing but the naked reason; because prejudice, with its reason, has a motive to give action to that reason, and an affection which will give it permanence. Prejudice is of ready application in the emergency; it previously engages the mind in a steady course of wisdom and virtue, and does not leave the man hesitating in the moment of decision, sceptical, puzzled, and unresolved. Prejudice renders a man's virtue his habit; and not a series of unconnected acts. Through just prejudice, his duty becomes a part of his nature.

Your literary men, and your politicians, and so do the whole clan of the enlightened among us, essentially differ in these points. They have no respect for the wisdom of others; but they pay it off by a very full measure of confidence in their own. With them it is a sufficient motive to destroy an old scheme of things, because it is an old one. As to the new, they are in no sort of fear with regard to the duration of a building run up in haste; because duration is no object to those who think little or nothing has been done before their time, and who place all their hopes in discovery. They conceive, very systematically, that all things which give perpetuity are mischievous, and therefore they are at inexpiable war with all establishments. They think that government may vary like modes of dress, and with as little ill effect: that there needs no principle of attachment, except a sense of present conveniency, to any constitution of the state. They always speak as if they were of opinion that there is a singular species of compact between them and their magistrates, which binds the magistrate, but which has nothing reciprocal in it, but that the majesty of the people has a right to dissolve it without any reason, but its will. Their attachment to their country itself is only so far as it agrees with some of their fleeting projects; it begins and ends with that scheme of polity

which falls in with their momentary opinion.

These doctrines, or rather sentiments, seem prevalent with your new statesmen. But they are wholly different from those on which we have always acted in this country.

RELIGION, SOCIETY, POLITICS

We know, and what is better, we feel inwardly, that religion is the basis of civil society, and the source of all good and all comfort. In England we are so convinced of this, that there is no rust of superstition, with which the accumulated absurdity of the human mind might have crusted it over in the course of ages, that ninety-nine in a hundred of the people of England would not prefer to impiety. We shall never be such fools as to call in an enemy to the substance of any system to remove its corruptions, to supply its defects, or to perfect its construction. If our religious tenets should ever want a further elucidation, we shall not call on atheism to explain them. We shall not light up our temple from that unhallowed fire. It will be illuminated with other lights. It will be perfumed with other incense, than the infectious stuff which is imported by the smugglers of adulterated metaphysics. If our ecclesiastical establishment should want a revision, it is not avarice or rapacity, public or private, that we shall employ for the audit, or receipt, or application of its consecrated revenue. Violently condemning neither the Greek nor the Armenian, nor, since heats are subsided, the Roman system of religion, we prefer the Protestant; not because we think it has less of the Christian religion in it, but because, in our judgment, it has more. We are Protestants, not from indifference, but from zeal.

We know, and it is our pride to know, that man is by his constitution a religious animal; that atheism is against, not only our reason, but our instincts; and that it cannot prevail long. But if, in the moment of riot, and in a drunken delirium from

the hot spirit drawn out of the alembic of hell, which in France is now so furiously boiling, we should uncover our nakedness, by throwing off that Christian religion which has hitherto been our boast and comfort, and one great source of civilization amongst us and amongst many other nations, we are apprehensive (being well aware that the mind will not endure a void) that some uncouth, pernicious, and degrading superstition might take place of it.

For that reason, before we take from our establishment the natural, human means of estimation, and give it up to contempt, as you have done, and in doing it have incurred the penalties you well deserve to suffer, we desire that some other may be presented to us in the place of it. We shall then form our judgment.

On these ideas, instead of quarrelling with establishments, as some do, who have made a philosophy and a religion of their hostility to such institutions, we cleave closely to them. We are resolved to keep an established church, an established monarchy, an established aristocracy, and an established democracy, each in the degree it exists, and in no greater. I shall show you presently how much of each of these we possess.

It has been the misfortune (not, as these gentlemen think it, the glory) of this age, that everything is to be discussed, as if the constitution of our country were to be always a subject rather of altercation, than enjoyment. For this reason, as well as for the satisfaction of those among you (if any such you have among you) who may wish to profit of examples, I venture to trouble you with a few thoughts upon each of these establishments. I do not think they were unwise in ancient Rome, who, when they wished to new-model their laws, set commissioners to examine the best constituted republics within their reach.

First, I beg leave to speak of our church establishment, which is the first of our prejudices, not a prejudice desti-

tute of reason, but involving in it profound and extensive wisdom. I speak of it first. It is first, and last, and midst in our minds. For, taking ground on that religious system, of which we are now in possession, we continue to act on the early received and uniformly continued sense of mankind. That sense not only, like a wise architect, hath built up the august fabric of states, but like a provident proprietor, to preserve the structure from profanation and ruin, as a sacred temple purged from all the impurities of fraud, and violence, and injustice, and tyranny, hath solemnly and for ever consecrated the commonwealth, and all that officiate in it. This consecration is made, that all who administer in the government of men, in which they stand in the person of God Himself, should have high and worthy notions of their function and destination; that their hope should be full of immortality; that they should not look to the paltry pelf of the moment, nor to the temporary and transient praise of the vulgar, but to a solid, permanent exercise, in the permanent part of their nature, and to a permanent fame and glory, in the example they leave as a rich inheritance to the world.

Such sublime principles ought to be infused into persons of exalted situations; and religious establishments provided, that may continually revive and enforce them. Every sort of moral, every sort of civil, every sort of political institution, aiding the rational and natural ties that connect the human understanding and affections to the divine, are not more than necessary, in order to build up that wonderful structure, Man; whose prerogative it is, to be in a great degree a creature of his own making; and who, when made as he ought to be made, is destined to hold no trivial place in the creation. But whenever man is put over men, as the better nature ought ever to preside, in that case more particularly, he should as nearly as possible be approximated to his perfection.

The consecration of the state, by a state religious establishment, is necessary

also to operate with a wholesome awe upon free citizens; because, in order to secure their freedom, they must enjoy some determinate portion of power. To them therefore a religion connected with the state, and with their duty towards it, becomes even more necessary than in such societies, where the people, by the terms of their subjection, are confined to private sentiments, and the management of their own family concerns. All persons possessing any portion of power ought to be strongly and awfully impressed with an idea that they act in trust: and that they are to account for their conduct in that trust to the one great Master, Author, and Founder of society.

To avoid therefore the evils of inconstancy and versatility, ten thousand times worse than those of obstinacy and the blindest prejudice, we have consecrated the state, that no man should approach to look into its defects or corruptions but with due caution; that he should never dream of beginning its reformation by its subversion; that he should approach to the faults of the state as to the wounds of a father, with pious awe and trembling solicitude. By this wise prejudice we are taught to look with horror on those children of their country, who are prompt rashly to hack that aged parent in pieces, and put him into the kettle of magicians, in hopes that by their poisonous weeds, and wild incantations, they may regenerate the paternal constitution, and renovate their father's life.

Society is indeed a contract. Subordinate contracts for objects of mere occasional interest may be dissolved at pleasure—but the state ought not to be considered as nothing better than a partnership agreement in a trade of pepper and coffee, calico or tobacco, or some other such low concern, to be taken up for a little temporary interest, and to be dissolved by the fancy of the parties. It is to be looked on with other reverence; because it is not a partnership in things subservient only to the gross animal existence of a temporary and perishable na-

ture. It is a partnership in all science; a partnership in all art; a partnership in every virtue, and in all perfection. As the ends of such a partnership cannot be obtained in many generations, it becomes a partnership not only between those who are living, but between those who are living, those who are dead, and those who are to be born. Each contract of each particular state is but a clause in the great primæval contract of eternal society, linking the lower with the higher natures, connecting the visible and invisible world, according to a fixed compact sanctioned by the inviolable oath which holds all physical and all moral natures, each in their appointed place. This law is not subject to the will of those, who by an obligation above them, and infinitely superior, are bound to submit their will to that law. The municipal corporations of that universal kingdom are not morally at liberty at their pleasure, and on their speculations of a contingent improvement, wholly to separate and tear asunder the bands of their subordinate community, and to dissolve it into an unsocial, uncivil, unconnected chaos of elementary principles. It is the first and supreme necessity only, a necessity that is not chosen, but chooses, a necessity paramount to deliberation, that admits no discussion, and demands no evidence, which alone can justify a resort to anarchy. This necessity is no exception to the rule; because this necessity itself is a part too of that moral and physical disposition of things, to which man must be obedient by consent or force: but if that which is only submission to necessity should be made the object of choice, the law is broken, nature is disobeyed, and the rebellious are outlawed, cast forth, and exiled, from this world of reason, and order, and peace, and virtue, and fruitful penitence, into the antagonist world of madness, discord, vice, confusion, and unavailing sorrow.

These, my dear Sir, are, were, and, I think, long will be, the sentiments of not the least learned and reflecting part of this kingdom. They, who are included in

this description, form their opinions on such grounds as such persons ought to form them. The less inquiring receive them from an authority, which those whom Providence dooms to live on trust need not be ashamed to rely on. These two sorts of men move in the same direction, though in a different place. They both move with the order of the universe. They all know or feel this great ancient truth: "Quod illi principi et præpotenti Deo qui omnem hunc mundum regit, nihil eorum quæ quidem fiant in terris acceptius quam concilia et cætus hominum jure sociati quæ civitates appellantur." They take this tenet of the head and heart, not from the great name which it immediately bears, nor from the greater from whence it is derived; but from that which alone can give true weight and sanction to any learned opinion, the common nature and common relation of men. Persuaded that all things ought to be done with reference, and referring all to the point of reference to which all should be directed, they think themselves bound, not only as individuals in the sanctuary of the heart, or as congregated in that personal capacity, to renew the memory of their high origin and caste; but also in their corporate character to perform their national homage to the institutor, and author, and protector of civil society; without which civil society man could not by any possibility arrive at the perfection of which his nature is capable, nor even make a remote and faint approach to it. They conceive that He who gave our nature to be perfected by our virtue, willed also the necessary means of its perfection.—He willed therefore the state—He willed its connexion with the source and original archetype of all perfection. They who are convinced of this His will, which is the law of laws, and the sovereign of sovereigns, cannot think it reprehensible that this our corporate fealty and homage, that this our recognition of a signiory paramount, I had almost said this oblation of the state itself, as a worthy offering on the high altar of universal praise, should be

performed as all public, solemn acts are performed, in buildings, in music, in decoration, in speech, in the dignity of persons, according to the customs of mankind, taught by their nature; this is, with modest splendour and unassuming state, with mild majesty and sober pomp. For those purposes they think some part of the wealth of the country is as usefully employed as it can be in fomenting the luxury of individuals. It is the public ornament. It is the public consolation. It nourishes the public hope. The poorest man finds his own importance and dignity in it, whilst the wealth and pride of individuals at every moment makes the man of humble rank and fortune sensible of his inferiority, and degrades and vilifies his condition. It is for the man in humble life, and to raise his nature, and to put him in mind of a state in which the privileges of opulence will cease, when he will be equal by nature, and may be more than equal by virtue, that this portion of the general wealth of his country is employed and sanctified.

The English people are satisfied, that to the great the consolations of religion are as necessary as its instructions. They too are among the unhappy. They feel personal pain, and domestic sorrow. In these they have no privilege, but are subject to pay their full contingent to the contributions levied on mortality. They want this sovereign balm under their gnawing cares and anxieties, which, being less conversant about the limited wants of animal life, range without limit, and are diversified by infinite combinations, in the wild and unbounded regions of imagination. Some charitable dole is wanting to these, our often very unhappy brethren, to fill the gloomy void that reigns in minds which have nothing on earth to hope or fear; something to relieve in the killing languor and over-laboured lassitude of those who have nothing to do; something to excite an appetite to existence in the palled satiety which attends on all pleasures which may be bought, where nature is not left to her

own process, where even desire is anticipated, and therefore fruition defeated by meditated schemes and contrivances of delight; and no interval, no obstacle, is interposed between the wish and the accomplishment.

REFORM AND REVOLUTION

The errors and defects of old establishments are visible and palpable. It calls for little ability to point them out; and where absolute power is given, it requires but a word wholly to abolish the vice and the establishment together. The same lazy but restless disposition, which loves sloth and hates quiet, directs the politicians, when they come to work for supplying the place of what they have destroyed. To make everything the reverse of what they have seen is quite as easy as to destroy. No difficulties occur in what has never been tried. Criticism is almost baffled in discovering the defects of what has not existed; and eager enthusiasm and cheating hope have all the wide field of imagination, in which they may expatiate with little or no opposition.

At once to preserve and to reform is quite another thing. When the useful parts of an old establishment are kept, and what is superadded is to be fitted to what is retained, a vigorous mind, steady, persevering attention, various powers of comparison and combination, and the resources of an understanding fruitful in expedients, are to be exercised; they are to be exercised in a continued conflict with the combined force of opposite vices, with the obstinacy that rejects all improvement, and the levity that is fatigued and disgusted with everything of which it is in possession. But you may object—"A process of this kind is slow. It is not fit for an assembly, which glories in performing in a few months the work of ages. Such a mode of reforming, possibly, might take up many years." Without question it might; and it ought. It is one of the excellencies of a method in which time is amongst the assistants, that its operation is slow, and in some cases

almost imperceptible. If circumspection and caution are a part of wisdom, when we work only upon inanimate matter, surely they become a part of duty too, when the subject of our demolition and construction is not brick and timber, but sentient beings, by the sudden alteration of whose state, condition, and habits, multitudes may be rendered miserable. But it seems as if it were the prevalent opinion in Paris, that an unfeeling heart, and an undoubting confidence, are the sole qualifications for a perfect legislator. Far different are my ideas of that high office. The true lawgiver ought to have a heart full of sensibility. He ought to love and respect his kind, and to fear himself. It may be allowed to his temperament to catch his ultimate object with an intuitive glance; but his movements towards it ought to be deliberate. Political arrangement, as it is a work for social ends, is to be only wrought by social means. There mind must conspire with mind. Time is required to produce that union of minds which alone can produce all the good we aim at. Our patience will achieve more than our force. If I might venture to appeal to what is so much out of fashion in Paris, I mean to experience, I should tell you, that in my course I have known, and, according to my measure, have co-operated with great men; and I have never yet seen any plan which has not been mended by the observations of those who were much inferior in understanding to the person who took the lead in the business. By a slow but well-sustained progress, the effect of each step is watched; the good or ill success of the first gives light to us in the second; and so, from light to light, we are conducted with safety through the whole series. We see that the parts of the system do not clash. The evils latent in the most promising contrivances are provided for as they arise. One advantage is as little as possible sacrificed to another. We compensate, we reconcile, we balance. We are enabled to unite into a consistent whole the various anomalies and contending principles that are found in the

minds and affairs of men. From hence arises, not an excellence in simplicity, but one far superior, an excellence in composition. Where the great interests of mankind are concerned through a long succession of generations, that succession ought to be admitted into some share in the councils which are so deeply to affect them. If justice requires this, the work itself requires the aid of more minds than one age can furnish. It is from this view of things that the best legislators have been often satisfied with the establishment of some sure, solid, and ruling principle in government; a power like that which some of the philosophers have called a plastic nature; and having fixed the principle, they have left it afterwards to its own operation.

REVOLUTION AND MILITARY DESPOTISM

It is known, that armies have hitherto yielded a very precarious and uncertain obedience to any senate, or popular authority; and they will least of all yield it to an assembly which is only to have a continuance of two years. The officers must totally lose the characteristic disposition of military men, if they see with perfect submission and due admiration, the dominion of pleaders; especially when they find that they have a new court to pay to an endless succession of those pleaders; whose military policy, and the genius of whose command (if they should have any), must be as uncertain as their duration is transient. In the weakness of one kind of authority, and in the fluctuation of all, the officers of any army will remain for some time mutinous and full of faction, until some popular general, who understands the art of conciliating the soldiery, and who possesses the true spirit of command, shall draw the eyes of all men upon himself. Armies will obey him on his personal account. There is no other way of securing military obedience in this state of things. But the moment in which that event shall happen, the person who really commands

the army is your master; the master (that is little) of your king, the master of your assembly, the master of your whole republic.

How came the Assembly by their present power over the army? Chiefly, to be sure, by debauching the soldiers from their officers. They have begun by a most terrible operation. They have touched the central point, about which the particles that compose armies are at repose. They have destroyed the principle of obedience in the great, essential, critical link between the officer and the soldier, just where the chain of military subordination commences and on which the whole of that system depends. The soldier is told he is a citizen, and has the rights of man and citizen. The right of a man, he is told, is to be his own governor, and to be ruled only by those to whom he delegates that self-government. It is very natural he should think that he ought most of all to have his choice where he is to yield the greatest degree of obedience. He will therefore, in all probability, systematically do, what he does at present occasionally; that is, he will exercise at least a negative in the choice of his officers. At present the officers are known at best to be only permissive, and on their good behaviour. In fact, there have been many instances in which they have been cashiered by their corps. Here is a second negative on the choice of the king: a negative as effectual at least as the other of the Assembly. The soldiers know already that it has been a question, not ill received in the National Assembly, whether they ought not to have the direct choice of their officers, or some proportion of them? When such matters are in deliberation it is no extravagant supposition that they will incline to the opinion most favourable to their pretensions. They will not bear to be deemed the army of an imprisoned king, whilst another army in the same country, with whom too they are to feast and confed-

erate, is to be considered as the free army of a free constitution. They will cast their eyes on the other and more permanent army; I mean the municipal. That corps, they will know, does actually elect its own officers. They may not be able to discern the ground of distinction on which they are not to elect a Marquis de la Fayette (or what is his new name?) of their own. If this election of a commander-in-chief be a part of the rights of men, why not of theirs? They see elective justices of peace, elective judges, elective curates, elective bishops, elective municipalities, and elective commanders of the Parisian army. Why should they alone be excluded? Are the brave troops of France the only men in that nation who are not the fit judges of military merit, and of the qualifications necessary for a commander-in-chief? Are they paid by the state, and do they therefore lose the rights of men? They are a part of that nation themselves, and contribute to that pay. And is not the king, is not the National Assembly, and are not all who elect the National Assembly, likewise paid? Instead of seeing all these forfeit their rights by their receiving a salary, they perceive that in all these cases a salary is given for the exercise of those rights. All your resolutions, all your proceedings, all your debates, all the works of your doctors in religion and politics, have industriously been put into their hands; and you expect that they will apply to their own case just as much of your doctrines and examples as suits your pleasure.

Everything depends upon the army in such a government as yours; for you have industriously destroyed all the opinions, and prejudices, and, as far as in you lay, all the instincts which support government. Therefore the moment any difference arises between your National Assembly and any part of the nation, you must have recourse to force. Nothing else is left to you; or rather you have left nothing else to yourselves.

BENTHAM

Burke's political philosophy of conservatism, more particularly, his *Reflections on the Revolution of France*, was, with all its literary charm and persuasive poetry, ineffectual in stemming the course of events. Burke, like other writers and statesmen of his time, failed to see that the French Revolution was a symptom of something much more profound: the changing class structure in western Europe. The important fact in Burke's lifetime was not, as he thought, the opposition of rationalism to the traditional order of religion and prescription but a change of another kind, the implications of which largely escaped him: the *Industrial Revolution*.

From the middle of the eighteenth century, England experienced—as the first country in the modern world—a technological and industrial transformation whose impact was revolutionary from the viewpoint of new social ideas and a new material environment. Technologically, the new age was based on coal and iron, to be supplemented later by electricity and steel. Economically, the Industrial Revolution created the factory as its most characteristic institution, which replaced the farm or landed estate as the key unit of production and wealth. Socially, the Industrial Revolution was responsible for three complementary developments: first, the growth of new, and the rapid expansion of old, towns and cities; second, the increase in population, made possible by higher living standards and improved conditions of health; third, the destruction of the existing social hierarchy headed by the landed aristocracy, and its gradual replacement by the manufacturers, financiers, merchants, and professional men as the new dominant social class.

The most characteristic expression of the new outlook is to be found in the work of Jeremy Bentham (1748–1832), the principal expounder of Utilitarianism, or, as it was also called, Philosophical Radicalism. Bentham was born in 1748, only three years after the Jacobite rebellion of 1745 that sought to regain the throne for the Stuarts; he spent most of his life under King George III, who reigned from 1760 to 1820—the last British monarch of autocratic leanings. Bentham died the day before the Reform Bill of 1832 became law. His life thus spanned a long period of transition in British history; while experiencing eighteenth-century autocracy at its worst, he could perceive the firm outlines

of nineteenth-century democracy. His life reflects the transformation of his country: Bentham was a Tory until 1808, and he became a radical democrat at the age of sixty, when he was convinced that “the people in power” were against reform, whereas earlier he had assumed that “they only wanted to know what was good in order to embrace it.”

Bentham's father and grandfather were well-to-do attorneys, and Bentham was to enter upon the same career. At the comparatively early age of three Bentham was found poring over a big folio volume of Rapin's *History of England*; he read Latin before he was four, French at six, and took to Voltaire for light reading at eight. He entered Oxford at twelve, received his bachelor's degree at fifteen, and then studied the law. He was called to the bar in 1769, but he soon decided that he was more interested in reforming the law than in practicing it. A small annual income of a hundred pounds enabled him to live independently, though modestly; after his father's death in 1792, his financial situation greatly improved, and he was able to live comfortably in his house in London, called “Hermitage.” There he spent his life, unmarried, completely devoted to his literary and political activities.

Bentham's house became increasingly the center of international liberalism, and every cause of freedom, from Greece to South America, found in him a warm supporter, always willing to help, encourage, and serve. For Bentham no injustice was too small, no human being unimportant. He was particularly interested in “cases” of little-known victims of political or religious oppression, and political refugees from abroad turned to him as the voice of liberal humanity. Although he did not travel often, his viewpoint was never parochial and nationalistic, and he maintained a vast correspondence with political leaders and heads of state from countries as distant as Russia, Africa, and the Americas.

Bentham's first book, *Fragment on Government*, was directed against Sir William Blackstone, the oracle of English law. The *Fragment* was published in 1776, the year of James Watt's first successful steam engine, the *Declaration of Independence*, and the publication of another milestone of social thought, Adam Smith's *Wealth of Nations*. Bentham published the *Fragment* anonymously, and it was a tribute to the young author that the book was ascribed to leading legal minds of Great Britain, until Bentham's father, overcome by paternal pride, revealed the true author. In the *Fragment*, Bentham pragmatically describes the nature of political society in terms of the *habit of obedience*, and not of social contract, natural rights, and other “fictions.” He says that the indestructible prerogatives of mankind “have no need to be supported upon the sandy foundation of a fiction,” and that the “season of *Fiction* is now over.”

In this early work of Bentham there is more than a touch of Burke, because of the constant emphasis that government is not based on metaphysical generalities but on interest and advantage. Where Bentham differed even in his youth from Burke is his insistence that advantage be understood in relation to empirical needs of the individual and society, whereas Burke looked upon interest as the product of historic groups, the individual occupying a subordinate position by comparison. Bentham states that men ought to keep their promises and obey the law because it is in the interest of all to do so, and not because of rules of natural law or abstract reasoning. The question of political

obligation, the pivotal problem of politics, is a "question of fact," to be decided by "testimony, observation, and experience." Using strong language in 1776, under the reign of King George III, Bentham argues that subjects should obey "so long as the probable mischiefs of obedience are less than the probable mischiefs of resistance," and that it is the duty of subjects to obey "just as long as it is their *interest*, and no longer."

Bentham's most widely known book is his *Principles of Morals and Legislation* (printed in 1780 and published in 1789). The opening words of the book summarize one of the main assumptions of his outlook: "Nature has placed mankind under the governance of two sovereign masters, *pain* and *pleasure*. It is for them alone to point out what we ought to do, as well as to determine what we shall do. On the one hand the standard of right and wrong, on the other the chain of causes and effects, are fastened to their throne." The principle of *utility*, or the *greatest happiness of the greatest number*, is that quality in an act or object that produces benefit, advantage, pleasure, good, or happiness (assumed by Bentham to be identical), or prevents mischief, pain, evil, or unhappiness. Bentham's lack of sympathy for the organic theory of state and society comes out in his assertion that the "community is a fictitious body," and that the interest of the community is "the sum of the interests of the several members who compose it." There is no notion here of Rousseau's General Will, nor of Burke's view of society as an organic growth, a partnership of past, present, and future generations.

Yet it would be a fatal misunderstanding of Bentham to identify his interest with self-interest, and his happiness with happiness of the self only. In the *Principles of Morals and Legislation* Bentham distinguishes self-regarding from extra-regarding pleasures: the former relate to pleasure and happiness of one's self; the latter are an expression of benevolence and relate to happiness of others. Still more explicitly, Bentham states in his *Deontology, or Science of Morality* (1834) that immoral action is "a miscalculation of self-interest," and that it is the purpose of the "intelligent moralist" to show the erroneous estimate that the vicious man makes of pain and pleasure. Similarly, Bentham says in his *Theory of Legislation* (first published in French in 1802 and then in English in 1840) that the charge against Machiavelli does not spring from his having consulted the principle of utility, but from having applied it badly, because "bad faith is bad policy." Far from identifying utility with selfishness, Bentham says in the *Deontology* that the "first law of nature is to wish our own happiness; and the united voices of prudence and efficient benevolence add,—Seek the happiness of others,—seek your own happiness in the happiness of others."

Bentham is fully aware that personal happiness and the happiness of the greatest number are not always identical, and he sees two means by which the gulf between individual selfishness and communal good can be bridged. First, *education* can elevate men's minds so that they will understand that rationally conceived happiness of one's self includes good will, sympathy, and benevolence for others. Because of his strong belief in education—a belief he shares with other reformers—Bentham proposed, well ahead of his time, a system of public education; he was among the principal founders of the University of London. The second means of bridging the gap between individual selfishness and the greatest happiness of the greatest number is the creation of an institutional environment

in which persons' selfish impulses can be channeled into socially useful purposes, so that it will be contrary to their self-interest to harm others.

Bentham has the typical faith of the reformer that man's behavior is not static and set forever but can be changed through positive acts of *legislation*. Rejecting the "fictions" of natural law and inalienable rights, Bentham strongly believes in the sovereignty of the people, represented in a *one-chamber* legislature; he dismisses the doctrine of checks and balances, or of separation of powers, as concepts designed to prevent the full working of democracy. He pleaded for universal suffrage and republicanism and was one of the main forces working for the political changes finally consummated in the Reform Act of 1832.

Bentham was too critical to believe that any existing system was perfect or that any formula devised by man could meet all contingencies of real life. He did not invent the idea of utility and the greatest happiness of the greatest number; he merely put these principles to hitherto unknown uses and applications. After the gospel of reverence and veneration enunciated by Burke, Bentham's method of taking nothing for granted, of refusing to accept things just because they had existed for a long time, of exposing every institution to the sole test of its consequences, was like a breath of fresh air. Eighteenth-century England had become smug and complacent, bathing in the adulation and admiration showered on it by leading minds like Voltaire and Montesquieu.

Bentham thought that government—and social science—could be advanced by reducing differences of metaphysics into differences of a simpler, and more measurable, order. Problems of utility can more easily be boiled down to issues of fact, Bentham thought, than can problems of fundamental belief. "What happiness is every man knows, because what pleasure is every man knows, and what pain is every man knows. But what justice is—this is what on every occasion is the subject-matter of dispute." When two parties are at dispute, the failure to bring in the pertinent facts of past experience is the main cause that sets them at variance: "Here, then, we have a plain and open road, perhaps, to present reconciliation: at the worst to an intelligible and explicit issue, that is, to such a ground of difference as may, when thoroughly trodden and explored, be found to lead on to reconciliation at the last. Men, let them but once clearly understand one another, will not be long ere they agree." The progress of social science depends, according to Bentham, on its ability to *reduce questions of principle to questions of fact*, and his examination of ideas, acts, and institutions in terms of their practical consequences has been a pioneering contribution to the development of social science and social engineering.

Étienne Dumont—a Swiss Protestant minister and political exile from Geneva, who became Bentham's most faithful and devoted literary aide and collaborator—tirelessly put together Bentham's manuscripts into publishable books. He also corrected and edited some of Bentham's works written in French, later retranslated into English. Owing to Dumont's French editions and translations of Bentham's works, Bentham became the leading English name in France, Spain, Latin America, and wherever French was the recognized vehicle of literary intercourse. Through Dumont and Romilly, Bentham also became closely connected with some of the leading French revolutionary leaders; and in August 1792, the National Assembly conferred on Bentham (as well as Kant and George Washington) the title of Citizen of France.

Bentham's reply to the French Minister of the Interior in accepting French citizenship is typical of his personality and thought. Where other men of more conventional leanings might have accepted honorary French citizenship in a brief note of gratitude, Bentham composed a lengthy letter. Concerning the possible conflict between his British citizenship and the newly conferred French citizenship, Bentham observed that the different forms of the two governments presented no obstacle, because the general good is everywhere the true object of all political action: "Passions and prejudices divide men: great principles unite them." Though a royalist in London, he would gladly be a republican in Paris, and he notes that the British monarch was an Anglican in England, a Presbyterian in Scotland, and a Lutheran in Hanover. Bentham's humanitarian sentiments came out at the end of the letter where he states his opposition to the proscription of political refugees, though he does not share their political views, for "every punishment that is not needed is really a lawless punishment."

Bentham's attitude toward the French Revolution was never in line with prevailing fashions. On the one hand, he was opposed to revolution because he believed in progress through rational and peaceful persuasion (such as he thought possible in England through Parliament); on the other hand, he could not be enthusiastic over Burke's incantations of the glories of history because, in the light of Bentham's zeal for reform, history was little more than a record of crime and folly. At first, Bentham welcomed the opportunities for fresh legislation, unencumbered by tradition and custom, that the French Revolution offered to reformers, and he sent several reform proposals to his French friends and correspondents, but his proposals brought no tangible results. In any event, within a few years Bentham became increasingly disenchanted with the ideological fanaticism and excessive violence of the French Revolution. He became more and more convinced that whatever radical changes had to be made in England, the road to such changes was reform, not revolution.

Among many schemes, Bentham became deeply involved in the project of building a model prison, the Panopticon, a circular building so constructed that the governor of the prison, located in the center, could watch and direct every inmate. Bentham, who abhorred the cruel penalties current in his day, believed that criminals could be re-educated through work and understanding. The Panopticon was to revolutionize the physical layout of prisons as well as the moral approach to the treatment of prisoners. Bentham was engaged on the project for over twenty years and spent a fortune on it. The British Government was at first interested and then withdrew, but finally compensated Bentham for his expenditures. In his own country the Panopticon was to remain an ill-fated design, but in other countries it was more readily used; in the United States, Joliet Penitentiary (Joliet, Illinois) is an adaptation of Bentham's architectural ideas, as first envisaged in his Panopticon.

Bentham's failure to persuade the rulers of Britain of his reform proposals turned his mind from specific legal and administrative reforms to the more fundamental inquiry into the nature of political organization, the ends of government, and the means of attaining them. Until he was sixty years of age he was never closely allied with either Whigs or Tories, though he had been born and reared a Tory of the Tories. His philanthropic schemes were above party, and Bentham had hoped that the force of logic and reason would be sufficient to

bring about social change. Party meant passion, and Bentham distrusted passion. He thought that reason was universally human and nonpartisan. Although this belief may be philosophically right, Bentham failed to see that in politics reason itself is a party, and that it is always opposed by the party of irrationality, custom, and tradition.

Bentham's turn from philanthropy to radical political philosophy was greatly aided by his growing circle of disciples and collaborators, the most important of whom was James Mill, the father of John Stuart Mill. Moreover, after the defeat of Napoleon, democratic and radical ideas could again be expressed more freely in England. When the danger of Jacobinism and Napoleonic imperialism disappeared, it became difficult to brand any deviation from the *status quo* as dangerous and subversive.

In 1824 Bentham founded and financed the *Westminster Review*, the chief organ of Philosophical Radicalism and Utilitarianism, published until 1914 under a series of distinguished editors. In 1827 the foundation stone of University College was laid, Bentham being its chief promoter. Bentham was revolted by the hypocrisy and intellectual stagnation that he noted during his own student days in Oxford, and one of the main purposes of creating a new university in London was to get away from the strong clerical influence that prevailed at both Oxford and Cambridge. When Bentham entered Oxford at the age of twelve, he was forced to sign the Thirty-nine Articles of the Church of England. Other students were wont to subscribe to the Articles as a matter of formality. Not Bentham. He sat down and examined them, one by one. He found that some had no meaning and that others were contrary to reason and Scripture. A few fellow students shared Bentham's apprehensions about signing articles of faith they did not understand or believe in, but Bentham was the one to speak up. He was advised not to substitute his private judgment for the public judgment formed by wise men, and, Bentham said, "I signed: but by the view I found myself forced to take of the whole business, such an impression was made, as will never depart from me but with life."

Bentham never lost the view that the streets in Oxford were "paved with perjury," and if he could not change the two older universities, he was going to start a new university in the heart of London. From a small college with three hundred students, the University of London rapidly developed into the largest British university and the leader in many fields. The example of Bentham's successful effort in London inspired the establishment of universities and colleges in numerous other cities in the nineteenth and twentieth centuries. These newer universities expressed the educational emancipation of the middle and working classes following their political emancipation in the course of the nineteenth century. They recruit their students from all sections of the population, and devote considerable attention to science, technology, and the social studies.

Neither Oxford nor Cambridge had given an important impulse to the scientific revolution of the eighteenth century, nor did the Utilitarians win their way with the aid of a single major supporter from the two older institutions. A large proportion of scientists, inventors, engineers, moral philosophers, and political economists came from Scotland (such as Adam Smith and James Watt, to cite but two of the most outstanding names), and in England the academies of the dissenters (who were excluded from the universities) were the breeding ground

of modern physical and social science. London University was more than a new university in which distinctions of religion and social status were not recognized: it was a philosophical program, a bold venture into a new social philosophy. To this day the University of London represents the intellectual forces in England that are the product of industrial economics and democratic politics, and it does not have to live down burdensome traditions of royalism, theology, or political orthodoxy.

In celebrating the bicentennial of Bentham's birthday, the *London Times* wrote that "Bentham still exerts a posthumous despotism over English politics, and on the whole it is a benevolent despotism." There was hardly a major reform in British life for over a hundred years after his death that did not go back to Bentham. He did a great part of his writing in the field of law, and many reforms of antiquated procedures and methods of evidence, as well as changes in the law of marriage and divorce, property, business, and trade-unions (to mention but a few) were the result of his agitation or that of his disciples. In criminal law, owing to Bentham's and Romilly's efforts, the worst forms of cruel punishment, such as whipping of women, transportation of criminals from England to the colonies, and the pillory, were eliminated, and the supreme penalty of death confined to treason and murder, whereas before Bentham's time there had been over two hundred offenses punishable by death. He was also an early supporter of animals' rights; for him, the key question regarding animals was not, "can they talk, can they reason, but can they suffer?"

In government and administration, Bentham saw the same lack of rational order that he saw in the law. In his *Constitutional Code* (1830-1841), on which he labored during the last eight years of his life but which remained unfinished, he laid down principles of orderly and rational government that were gradually adopted. A public health service, a system of national education, the collection of social and economic statistics (including the periodic taking of the census, the first of which was in 1801), colonial self-government, the proper correlation between central and local government, open competition for entry into the civil service, the organization of government departments in relation to their functional tasks—these are but a few of the major practical reforms of government and administration that Bentham and his group initiated. In the field of working-class activity, labor organizations ceased to be criminal conspiracies after the repeal of the Combination Acts in 1824 and thereafter existed on a legal basis.

Bentham is skeptical with regard to religion because it hinders intellectual progress by supporting belief apart from experience, "its only safe ground." The clergy are, according to Bentham, no more than "the advance-guard of the law," a body of inspectors and moral instructors, and their pay ought to come from the same source as the administration of justice and the police, the clergy being a part of the machinery of "internal security" of the state. Religion also hurts society, Bentham thought, because it creates animosity against unbelievers and dissenters and subsidizes a standing army of "wonder-workers," the clergy, who deprave the intellect, surround themselves with mystery and superstition, and form an organized "array of human force and fraud." One of Bentham's main criticisms of religion was that it forms an "unholy alliance" with the "sinister

interests of the earth." Bentham published one of his books on religion, *Church of Englandism and Its Catechism Examined* (1818), under his own name, and two others under pseudonyms: *The Analysis of Natural Religion on the Temporal Happiness of Mankind* (1822), by "Philip Beauchamp," and *Not Paul, but Jesus* (1823), by "Gamaliel Smith." When the *Analysis of Natural Religion* came out, its publisher, Richard Carlile, was in jail for having committed offenses against religion and the established church.

Religious toleration is to a large extent the product of agnostic skepticism rather than of religious fanaticism, and Bentham and his disciples opposed all legal discriminations against dissenters and Roman Catholics. Unitarians were granted toleration in 1813, and Bentham lived to see the emancipation of Roman Catholics in 1829.

Bentham was not interested in the metaphysical or sentimental values of religion, but solely in its utility; from this standpoint he found that religion was useless at best, and positively harmful in its more sinister manifestations. His agnosticism at first impeded the progress of his ideas in England, where religion, particularly in the dissenting churches, has often been in the forefront of liberal reform. Where, as in Continental Europe and South America, religion is often synonymous with conservatism, and agnosticism with democracy, Bentham was the immediately avowed idol of secularist reformers, rationalists, and democrats.

One of Bentham's richest legacies to the science of government is his awareness that good government is more than a matter of tradition, common sense, and intuition, and that it therefore needs a foundation of preliminary *research* and *investigation*. In the twentieth century, investigation is increasingly becoming a fourth branch of government, without which the traditional three (the legislative, executive, and judicial) cannot properly function. Government has ceased to be a day-to-day affair of simple dimensions, confining itself to the maintenance of law and order, and now requires long-term planning, particularly in relation to national defense and social welfare. Bentham was the first modern writer to apply the investigative approach to problems of public policy, relating social facts to legal and administrative principles, a method that bore rich fruit in its later revival by Justice Brandeis and the sociological school of jurisprudence.

Bentham's main contribution to political science was not that he offered a novel principle of political philosophy—the principle of utility was well known to the Sophists in fifth-century Greece, and even the conception of the greatest happiness of the greatest number is no invention of Bentham—but that he steadily applied an *empirical* and *critical method* of investigation to concrete problems of law and government. He justly said of his own work that it was an attempt "to extend the experimental method of reasoning from the physical branch to the moral."

The principle of utility can be criticized for being uninspiring, not imaginative enough, and merely mechanical. Moreover, Bentham's style suffers from excessive Latinity, and his attempts at terminological precision—at times fruitful and suggestive—mar the readability of some of his writings. In general, his prose does not transport his readers into aesthetic ecstasy (he referred, for example, to his constitutionals before breakfast and after dinner as "anti-jentacular

and post-prandial circumambulations"). Yet despite such criticisms, to some extent justified, Bentham changed the character of British institutions more than any other person in the nineteenth century.

The British heirs of his investigative method, applying factual research to concrete and prosaic problems that affect the life of ordinary men and women, were the *Fabians*. As one looks over the list of publications of the Fabian Society (founded in 1884, and long under the influence of Sidney and Beatrice Webb), one finds little abstract theory but great concern for nursery education, parish councils, community feeding, and full employment. Like Bentham, the Fabians were willing to stake their political fate on a few simple assumptions: first, that facts do matter; second, that there is an intimate relation between facts and social rules and institutions; and, third, that individuals can be persuaded by reason rather than by force and fraud.

In his economic philosophy Bentham was a pronounced individualist, preferring security of property to equality. But he was not dogmatic, and was ready to abandon *laissez faire* if in a specific instance a case for governmental intervention could be made on the ground of utility. As a matter of general economic policy, he recognized that government was responsible for public health and education, for "subsistence and defense," and he was well ahead of his time in urging government activity in social welfare, as well as in the building of roads and canals. Bentham also saw that the question of the limitation of individual economic freedom and governmental intervention was not one of pure abstract speculation, but that it could be decided only on the basis of history and environment. He specifically mentions Russia under Peter the Great, in which the scope of spontaneous individual action was "a blank," whereas that of government activity "abundant."

Because Bentham was not committed to any dogma of a priori limitations of public action, and because his ultimate objective was the greatest happiness of the greatest number rather than a particular mechanism to ensure it, it was only a question of time—and changing social and economic circumstances—before Benthamism was directed into the channels of socialism. The second generation of Benthamites, like James Mill, was still committed to the creed of *laissez faire*. Contrasted with the petty regulation of trade and commerce in the eighteenth century, *laissez faire* was a liberating and energizing doctrine that seemed to possess the inner evidence of axiomatic truth. Yet the third generation of Benthamism, as characterized by John Stuart Mill, slowly began to perceive that if the state could suppress murder and theft, it could also eliminate, or at least mitigate, economic oppression as an obstacle to personal liberty and happiness. The generation of John Stuart Mill thus formed the link between Benthamism and Fabianism.

BENTHAM

Principles of Morals and Legislation *

OF THE PRINCIPLE OF UTILITY

1. Nature has placed mankind under the governance of two sovereign masters, *pain and pleasure*. It is for them alone to point out what we ought to do, as well as to determine what we shall do. On the one hand the standard of right and wrong, on the other the chain of causes and effects, are fastened to their throne. They govern us in all we do, in all we say, in all we think: every effort we can make to throw off our subjection, will serve but to demonstrate and confirm it. In words a man may pretend to abjure their empire: but in reality he will remain subject to it all the while. The *principle of utility*¹ recognizes this subjection, and assumes it for the foundation of that sys-

* From Jeremy Bentham, *An Introduction to the Principles of Morals and Legislation* (1789; rev. ed., 1823).

¹ Note by the Author, July 1822.

To this denomination has of late been added, or substituted, the *greatest happiness* or *greatest felicity* principle: this for shortness, instead of saying at length *that principle* which states the greatest happiness of all those whose interest in question, as being the right and proper, and only right and proper and universally desirable, end of human action: of human action in every situation, and in particular in that of a functionary or set of functionaries exercising the powers of Government. The word *utility* does not so clearly point to the ideas of *pleasure* and *pain* as the words *happiness* and *felicity* do: nor does it lead us to the consideration of the *number*, of the interests

tem, the object of which is to rear the fabric of felicity by the hands of reason and of law. Systems which attempt to question it, deal in sounds instead of senses, in caprice instead of reason, in darkness instead of light.

But enough of metaphor and declamation: it is not by such means that moral science is to be improved.

2. The principle of utility is the foundation of the present work: it will be proper therefore at the outset to give an explicit and determinate account of what is meant by it. By the principle of utility is meant that principle which approves or disapproves of every action whatsoever, according to the tendency which it appears to have to augment or diminish the happiness of the party whose interest is in question: or, what is the same thing in other words, to promote or to oppose that happiness. I say of every action whatsoever; and therefore not only of every action of a private individual, but of every measure of government.

3. By utility is meant that property in

affected; to the *number*, as being the circumstance, which contributes, in the largest proportion, to the formation of the standard here in question; the *standard of right and wrong*, by which alone the propriety of human conduct, in every situation, can with propriety be tried. This want of a sufficiently manifest connexion between the ideas of *happiness* and *pleasure* on the one hand, and the idea of *utility* on the other, I have every now and then found operating, and with but too much efficiency, as a bar to the acceptance, that might otherwise have been given, to this principle.

any object, whereby it tends to produce benefit, advantage, pleasure, good, or happiness (all this in the present case comes to the same thing) or (what comes again to the same thing) to prevent the happening of mischief, pain, evil, or unhappiness to the party whose interest is considered: if that party be the community in general, then the happiness of the community: if a particular individual, then the happiness of that individual.

4. The interest of the community is one of the most general expressions that can occur in the phraseology of morals: no wonder that the meaning of it is often lost. When it has a meaning, it is this. The community is a fictitious *body*, composed of the individual persons who are considered as constituting as it were its *members*. The interest of the community then is, what?—the sum of the interests of the several members who compose it.

5. It is in vain to talk of the interest of the community, without understanding what is the interest of the individual. A thing is said to promote the interest, or to be *for* the interest, of an individual, when it tends to add to the sum total of his pleasures: or, what comes to the same thing, to diminish the sum total of his pains.

6. An action then may be said to be conformable to the principle of utility, or, for shortness sake, to utility (meaning with respect to the community at large) when the tendency it has to augment the happiness of the community is greater than any it has to diminish it.

7. A measure of government (which is but a particular kind of action, performed by a particular person or persons) may be said to be conformable to or dictated by the principle of utility, when in like manner the tendency which it has to augment the happiness of the community is greater than any which it has to diminish it.

8. When an action, or in particular a measure of government, is supposed by a man to be conformable to the principle of utility, it may be convenient, for the

purposes of discourse, to imagine a kind of law or dictate, called a law or dictate of utility; and to speak of the action in question, as being conformable to such law or dictate.

9. A man may be said to be a partizan of the principle of utility, when the approbation or disapprobation he annexes to any action, or to any measure, is determined by and proportioned to the tendency which he conceives it to have to augment or to diminish the happiness of the community: or in other words, to its conformity or unconformity to the laws or dictates of utility.

10. Of an action that is conformable to the principle of utility one may always say either that it is one that ought to be done, or at least that it is not one that ought not to be done. One may say also, that it is right it should be done; at least that it is not wrong it should be done: that it is a right action; at least that it is not a wrong action. When thus interpreted, the words *ought*, and *right* and *wrong*, and others of that stamp, have a meaning: when otherwise, they have none.

11. Has the rectitude of this principle been ever formally contested? It should seem that it had, by those who have not known what they have been meaning. Is it susceptible of any direct proof? It should seem not: for that which is used to prove every thing else, cannot itself be proved: a chain of proofs must have their commencement somewhere. To give such proof is as impossible as it is needless.

12. Not that there is or ever has been that human creature breathing, however stupid or perverse, who has not on many, perhaps on most occasions of his life, deferred to it. By the natural constitution of the human frame, on most occasions of their lives men in general embrace this principle, without thinking of it: if not for the ordering of their own actions, yet for the trying of their own actions, as well as of those of other men. There have been, at the same time, not many, perhaps, even of the most intelligent, who have been disposed to embrace it purely

and without reserve. There are even few who have not taken some occasion or other to quarrel with it, either on account of their not understanding always how to apply it, or on account of some prejudice or other which they were afraid to examine into, or could not bear to part with. For such is the stuff that man is made of: in principle and in practice, in a right track and in a wrong one, the rarest of all human qualities is consistency.

13. When a man attempts to combat the principle of utility, it is with reasons drawn, without his being aware of it, from that very principle itself.² His argu-

²“The principle of utility (I have heard it said) is a dangerous principle: it is dangerous on certain occasions to consult it.” This is as much as to say, what? that it is not consonant to utility, to consult utility: in short, that it is *not* consulting it, to consult it.

Addition by the Author, July 1822.

Not long after the publication of the *Fragment on Government*, anno 1776, in which, in the character of an all-comprehensive and all-commanding principle, the principle of *utility* was brought to view, one person by whom observation to the above effect was made was *Alexander Wedderburn*, at that time Attorney or Solicitor General, afterwards successively Chief Justice of the Common Pleas, and Chancellor of England, under the successive titles of Lord Loughborough and Earl of Rosslyn. It was made—not indeed in my hearing, but in the hearing of a person by whom it was almost immediately communicated to me. So far from being self-contradictory, it was a shrewd and perfectly true one. By that distinguished functionary, the state of the Government was thoroughly understood: by the obscure individual, at that time not so much as supposed to be so: his disquisitions have not been as yet applied, with any thing like a comprehensive view, to the field of Constitutional Law, nor therefore to those features of the English Government, by which the greatest happiness of the ruling *one* with or without that of a favoured few, are now so plainly seen to be the only ends to which the course of it has at any time been directed. The *principle of utility* was an appellative, at that time

ments, if they prove any thing, prove not that the principle is *wrong*, but that, according to the applications he supposes to be made of it, it is *misapplied*. Is it possible for a man to move the earth? Yes; but he must first find out another earth to stand upon.

14. To disprove the propriety of it by arguments is impossible; but, from the causes that have been mentioned, or from some confused or partial view of it, a man may happen to be disposed not to relish it. Where this is the case, if he thinks the settling of his opinions on such a subject worth the trouble, let him take the following steps and at length, perhaps, he may come to reconcile himself to it.

employed—employed by me, as it had been by others, to designate that which in a more perspicuous and instructive manner, may, as above, be designated by the name of the *greatest happiness principle*. “This principle (said Wedderburn) is a dangerous one.” Saying so, he said that which, to a certain extent, is strictly true: a principle, which lays down, as the only *right* and justifiable end of Government, the greatest happiness of the greatest number—how can it be denied, to be a dangerous one? dangerous it unquestionably is, to every Government which has for its *actual* end or object, the greatest happiness of a certain *one*, with or without the addition of some comparatively small number of others, whom it is a matter of pleasure or accommodation to him to admit, each of them, to a share in the concern, on the footing of so many junior partners. *Dangerous* it therefore really was, to the interest—the sinister interest—of all those functionaries, himself included, whose interest it was, to maximize delay, vexation, and expense, in judicial and other modes of procedure, for the sake of the profit, extractible out of the expense. In a Government which had for its end in view the greatest happiness of the greatest number, Alexander Wedderburn might have been Attorney General and then Chancellor: but he would not have been Attorney General with £15,000 a year, nor Chancellor, with a peerage with a veto upon all justice, with £25,000 a year, and with 500 sinecures at his disposal, under the name of Ecclesiastical Benefices, besides *et coeteras*.

i. Let him settle with himself, whether he would wish to discard this principle altogether; if so, let him consider what it is that all his reasonings (in matters of politics especially) can amount to?

ii. If he would, let him settle with himself, whether he would judge and act without any principle, or whether there is any other he would judge and act by?

iii. If there be, let him examine and satisfy himself whether the principle he thinks he has found is really any separate intelligible principle; or whether it be not a mere principle in words, a kind of phrase, which at bottom expresses neither more nor less than the mere avowal of his own unfounded sentiments; that is, what in another person he might be apt to call caprice?

iv. If he is inclined to think that his own approbation or disapprobation, annexed to the idea of an act, without any regard to its consequences, is a sufficient foundation for him to judge and act upon, let him ask himself whether his sentiment is to be a standard of right and wrong, with respect to every other man, or whether every man's sentiment has the same privilege of being a standard to itself?

v. In the first case, let him ask himself whether his principle is not despotical, and hostile to all the rest of human race?

vi. In the second case, whether it is not anarchical, and whether at this rate there are not as many different standards of right and wrong as there are men? and whether even to the same man, the same thing, which is right to-day, may not (without the least change in its nature) be wrong tomorrow? and whether the same thing is not right and wrong in the same place at the same time? and in either case, whether all argument is not at an end? and whether, when two men have said, "I like this," and "I don't like it," they can (upon such a principle) have any thing more to say?

vii. If he should have said to himself, No: for that the sentiment which he proposes as a standard must be grounded on

reflection, let him say on what particulars the reflection is to turn? if on particulars having relation to the utility of the act, then let him say whether this is not deserting his own principle, and borrowing assistance from that very one in opposition to which he sets it up: or if not on those particulars, on what other particulars?

viii. If he should be for compounding the matter, and adopting his own principle in part, and the principle of utility in part, let him say how far he will adopt it?

ix. When he has settled with himself where he will stop, then let him ask himself how he justifies to himself the adopting it so far? and why he will not adopt it any farther?

x. Admitting any other principle than the principle of utility to be a right principle, a principle that it is right for a man to pursue; admitting (what is not true) that the word *right* can have a meaning without reference to utility, let him say whether there is any such thing as a *motive* that a man can have to pursue the dictates of it: if there is, let him say what that motive is, and how it is to be distinguished from those which enforce the dictates of utility: if not, then lastly let him say what it is this other principle can be good for?

OF PRINCIPLES ADVERSE TO THAT OF UTILITY

1. If the principle of utility be a right principle to be governed by, and that in all cases, it follows from what has been just observed, that whatever principle differs from it in any case must necessarily be a wrong one. To prove any other principle, therefore, to be a wrong one, there needs no more than just to show it to be what it is, a principle of which the dictates are in some point or other different from those of the principle of utility: to state it is to confute it.

2. A principle may be different from that of utility in two ways: 1. By being

constantly opposed to it: this is the case with a principle which may be termed the principle of *asceticism*.³ 2. By being sometimes opposed to it, and sometimes not, as it may happen: this is the case with another, which may be termed the principle of *sympathy* and *antipathy*.

3. By the principle of asceticism I mean that principle, which, like the principle of utility, approves or disapproves of any action, according to the tendency which it appears to have to augment or diminish the happiness of the party whose interest is in question; but in an inverse manner: approving of actions in as far as they tend to diminish his happiness; disapproving of them in as far as they tend to augment it.

4. It is evident that any one who rep-

³Ascetic is a term that has been sometimes applied to Monks. It comes from a Greek word which signifies *exercise*. The practices by which Monks sought to distinguish themselves from other men were called their Exercises. These exercises consisted in so many contrivances they had for tormenting themselves. By this they thought to ingratiate themselves with the Deity. For the Deity, said they, is a Being of infinite benevolence: now a Being of the most ordinary benevolence is pleased to see others make themselves as happy as they can: therefore to make ourselves as unhappy as we can is the way to please the Deity. If any body asked them, what motive they could find for doing all this? Oh! said they, you are not to imagine that we are punishing ourselves for nothing: we know very well what we are about. You are to know, that for every grain of pain it costs us now, we are to have a hundred grains of pleasure by and by. The case is, that God loves to see us torment ourselves at present: indeed he has as good as told us so. But this is done only to try us, in order just to see how we should behave: which it is plain he could not know, without making the experiment. Now then, from the satisfaction it gives him to see us make ourselves as unhappy as we can make ourselves in this present life, we have a sure proof of the satisfaction it will give him to see us as happy as he can make us in a life to come.

robates any the least particle of pleasure, as such, from whatever source derived, is *pro tanto* a partizan of the principle of asceticism. It is only upon that principle, and not from the principle of utility, that the most abominable pleasure which the vilest of malefactors ever reaped from his crime would be reprobated, if it stood alone. The case is, that it never does stand alone; but is necessarily followed by such a quantity of pain (or, what comes to the same thing, such a chance for a certain quantity of pain) that the pleasure in comparison of it, is as nothing: and this is the true and sole, but perfectly sufficient, reason for making it a ground for punishment.

5. There are two classes of men of very different complexions, by whom the principle of asceticism appears to have been embraced; the one a set of moralists, the other a set of religionists. Different accordingly have been the motives which appear to have recommended it to the notice of these different parties. Hope, that is the prospect of pleasure, seems to have animated the former: hope, the alimont of philosophic pride: the hope of honour and reputation at the hands of men. Fear, that is the prospect of pain, the latter: fear the offspring of superstitious fancy: the fear of future punishment at the hands of a splenetic and revengeful Deity. I say in this case fear: for of the invisible future, fear is more powerful than hope. These circumstances characterize the two different parties among the partizans of the principle of asceticism; the parties and their motives different, the principle the same.

6. The religious party, however, appear to have carried it farther than the philosophical: they have acted more consistently and less wisely. The philosophical party have scarcely gone farther than to reprobate pleasure: the religious party have frequently gone so far as to make it a matter of merit and of duty to court pain. The philosophical party have hardly gone farther than making pain a matter of indifference. It is no evil, they have said: they have not said, it is a

good. They have not so much as reprobated all pleasure in the lump. They have discarded only what they have called the gross; that is, such as are organical, or of which the origin is easily traced up to such as are organical: they have even cherished and magnified the refined. Yet this, however, not under the name of pleasure: to cleanse itself from the sources of its impure original, it was necessary it should change its name: the honourable, the glorious, the reputable, the becoming, the *honestum*, the *decorum*, it was to be called: in short, any thing but pleasure.

7. From these two sources have flowed the doctrines from which the sentiments of the bulk of mankind have all along received a tincture of this principle; some from the philosophical, some from the religious, some from both. Men of education more frequently from the philosophical, as more suited to the elevation of their sentiments: the vulgar more frequently from the superstitious, as more suited to the narrowness of their intellect, undiluted by knowledge: and to the abjectness of their condition, continually open to the attacks of fear. The tinctures, however, derived from the two sources, would naturally intermingle, inasmuch that a man would not always know by which of them he was most influenced: and they would often serve to corroborate and enliven one another. It was this conformity that made a kind of alliance between parties of a complexion otherwise so dissimilar: and disposed them to unite upon various occasions against the common enemy, the partizan of the principle of utility, whom they joined in branding with the odious name of Epicurean.

8. The principle of asceticism, however, with whatever warmth it may have been embraced by its partizans as a rule of private conduct, seems not to have been carried to any considerable length, when applied to the business of government. In a few instances it has been carried a little way by the philosophical party: witness the Spartan regimen.

Though then, perhaps, it may be considered as having been a measure of security: and an application, though a precipitate and perverse application, of the principle of utility. Scarcely in any instances, to any considerable length, by the religious: for the various monastic orders, and the societies of the Quakers, Dumplers, Moravians, and other religionists, have been free societies, whose regimen no man has been astricted to without the intervention of his own consent. Whatever merit a man may have thought there would be in making himself miserable, no such notion seems ever to have occurred to any of them, that it may be a merit, much less a duty, to make others miserable: although it should seem, that if a certain quantity of misery were a thing so desirable, it would not matter much whether it were brought by each man upon himself, or by one man upon another. It is true, that from the same source from whence, among the religionists, the attachment to the principle of asceticism took its rise, flowed other doctrines and practices, from which misery in abundance was produced in one man by the instrumentality of another: witness the holy wars, and the persecutions for religion. But the passion for producing misery in these cases proceeded upon some special ground: the exercise of it was confined to persons of particular descriptions: they were tormented, not as men, but as heretics and infidels. To have inflicted the same miseries of their fellow-believers and fellow-secretaries, would have been as blameable in the eyes even of these religionists, as in those of a partizan of the principle of utility. For a man to give himself a certain number of stripes was indeed meritorious: but to give the same number of stripes to another man, not consenting, would have been a sin. We read of saints, who for the good of their souls, and the mortification of their bodies, have voluntarily yielded themselves a prey to vermin: but though many persons of this class have wielded the reins of empire, we read of none who have set

themselves to work, and made laws on purpose, with a view of stocking the body politic with the breed of highwaymen, housebreakers, or incendiaries. If at any time they have suffered the nation to be preyed upon by swarms of idle pensioners, or useless placemen, it has rather been from negligence and imbecility, than from any settled plan for oppressing and plundering of the people. If at any time they have sapped the sources of national wealth, by cramping commerce, and driving the inhabitants into emigration, it has been with other views, and in pursuit of other ends. If they have declaimed against the pursuit of pleasure, and the use of wealth, they have commonly stopped at declamation: they have not, like Lycurgus, made express ordinances for the purpose of banishing the precious metals. If they have established idleness by a law, it has been not because idleness, the mother of vice and misery, is itself a virtue, but because idleness (say they) is the road to holiness. If under the notion of fasting, they have joined in the plan of confining their subjects to a diet, thought by some to be of the most nourishing and prolific nature, it has been not for the sake of making them tributaries to the nations by whom that diet was to be supplied, but for the sake of manifesting their own power, and exercising the obedience of the people. If they have established, or suffered to be established, punishments for the breach of celibacy, they have done no more than comply with the petitions of those deluded rigorists, who, dupes to the ambitious and deep-laid policy of their rulers, first laid themselves under that idle obligation by a vow.

9. The principle of asceticism seems originally to have been the reverie of certain hasty speculators, who having perceived, or fancied, that certain pleasures, when reaped in certain circumstances, have, at the long run, been attended with pains more than equivalent to them, took occasion to quarrel with every thing that offered itself under the name of pleasure. Having then got thus far, and having for-

got the point which they set out from, they pushed on, and went so much further as to think it meritorious to fall in love with pain. Even this, we see, is at bottom but the principle of utility misapplied.

10. The principle of utility is capable of being consistently pursued; and it is but tautology to say, that the more consistently it is pursued, the better it must ever be for humankind. The principle of asceticism never was, nor ever can be, consistently pursued by any living creature. Let but one tenth part of the inhabitants of this earth pursue it consistently, and in a day's time they will have turned it into a hell.

11. Among principles adverse to that of utility, that which at this day seems to have most influence in matters of government, is what may be called the principle of sympathy and antipathy. By the principle of sympathy and antipathy, I mean that principle which approves or disapproves of certain actions, not on account of their tending to augment the happiness, nor yet on account of their tending to diminish the happiness of the party whose interest is in question, but merely because a man finds himself disposed to approve or disapprove of them: holding up that approbation or disapprobation as a sufficient reason for itself, and disclaiming the necessity of looking out for any extrinsic ground. Thus far in the general department of morals: and in the particular department of politics, measuring out the quantum (as well as determining the ground) of punishment, by the degree of the disapprobation.

12. It is manifest, that this is rather a principle in name than in reality: it is not a positive principle of itself, so much as a term employed to signify the negation of all principle. What one expects to find in a principle is something that points out some external consideration, as a means of warranting and guiding the internal sentiments of approbation and disapprobation: this expectation is but ill fulfilled by a proposition, which does neither more nor less than hold up each of those

sentiments as a ground and standard for itself.

13. In looking over the catalogue of human actions (says a partizan of this principle) in order to determine which of them are to be marked with the seal of disapprobation, you need but to take counsel of your own feelings: whatever you find in yourself a propensity to condemn, is wrong for that very reason. For the same reason it is also meet for punishment: in what proportion it is adverse to utility, or whether it be adverse to utility at all, is a matter that makes no difference. In that same *proportion* also is it meet for punishment: if you hate much, punish much: if you hate little, punish little: punish as you hate. If you hate not at all, punish not at all: the fine feelings of the soul are not to be overborne and tyrannized by the harsh and rugged dictates of political utility.

14. The various systems that have been formed concerning the standard of right and wrong, may all be reduced to the principle of sympathy and antipathy. One account may serve for all of them. They consist all of them in so many contrivances for avoiding the obligation of appealing to any external standard, and for prevailing upon the reader to accept of the author's sentiment or opinion as a reason for itself. The phrases are different, but the principle is the same.⁴

⁴It is curious enough to observe the variety of inventions men have hit upon, and the variety of phrases they have brought forward, in order to conceal from the world, and, if possible, from themselves, this very general and therefore very pardonable self-sufficiency.

1. One man says, he has a thing made on purpose to tell him what is right and what is wrong; and that it is called a *moral sense*: and then he goes to work at his ease, and says, such a thing is right, and such a thing is wrong—why? “because my moral sense tells me it is.”

2. Another man comes and alters the phrase: leaving out *moral*, and putting in *common*, in the room of it. He then tells you, that his common sense teaches him what is right and wrong, as surely as the

15. It is manifest, that the dictates of this principle will frequently coincide with those of utility, though perhaps without intending any such thing. Probably more frequently than not: and hence it is that the business of penal justice is

other's moral sense did: meaning by common sense, a sense of some kind or other, which, he says, is possessed by all mankind: the sense of those, whose sense is not the same as the author's being struck out of the account as not worth taking. This contrivance does better than the other; for a moral sense, being a new thing, a man may feel about him a good while without being able to find it out: but common sense is as old as the creation; and there is no man but would be ashamed to be thought not to have as much of it as his neighbours. It has another great advantage: by appearing to share power, it lessens envy: for when a man gets up upon this ground, in order to anathematize those who differ from him, it is not by a *sic volo sic jubeo*, but by a *velitis jubeatis*.

3. Another man comes, and says, that as to a moral sense indeed, he cannot find that he has any such thing: that however he has an *understanding*, which will do quite as well. This understanding, he says, is the standard of right and wrong: it tells him so and so. All good and wise men understand as he does: if other men's understandings differ in any point from his, so much the worse for them: it is a sure sign they are either defective or corrupt.

4. Another man says, that there is an eternal and immutable Rule of Right: that the rule of right dictates so and so: and then he begins giving you his sentiments upon any thing that comes uppermost: and these sentiments (you are to take for granted) are so many branches of the eternal rule of right.

5. Another man, or perhaps the same man (it's no matter) says, that there are certain practices conformable, and others repugnant, to the Fitness of Things; and then he tells you, at his leisure, what practices are conformable and what repugnant: just as he happens to like a practice or dislike it.

6. A great multitude of people are continually talking of the Law of Nature; and then they go on giving you their sentiments about what is right and what is

carried on upon that tolerable sort of footing upon which we see it carried on in common at this day. For what more natural or more general ground of hatred to a practice can there be, than the mischievousness of such practice? What all men

wrong: and these sentiments, you are to understand, are so many chapters and sections of the Law of Nature.

7. Instead of the phrase, Law of Nature, you have sometimes, Law of Reason, Right Reason, Natural Justice, Natural Equity, Good Order. Any of them will do equally well. This latter is most used in politics. The three last are much more tolerable than the others, because they do not very explicitly claim to be any thing more than phrases: they insist but feebly upon the being looked upon as so many positive standards of themselves, and seem content to be taken, upon occasion, for phrases expressive of the conformity of the thing in question to the proper standard, whatever that may be. On most occasions, however, it will be better to say *utility*: *utility* is clearer, as referring more explicitly to pain and pleasure.

8. We have one philosopher, who says, there is no harm in any thing in the world but in telling a lie; and that if, for example, you were to murder your own father, this would only be a particular way of saying, he was not your father. Of course, when this philosopher sees any thing that he does not like, he says, it is a particular way of telling a lie. It is saying, that the act ought to be done, or may be done, when, *in truth*, it ought not to be done.

9. The fairest and openest of them all is that sort of man who speaks out, and says, I am of the number of the Elect: now God himself takes care to inform the Elect what is right: and that with so good effect, and let them strive ever so, they cannot help not only knowing it but practising it. If therefore a man wants to know what is right and what is wrong, he has nothing to do but to come to me.

It is upon the principle of antipathy that such and such acts are often reprobated on the score of their being *unnatural*: the practice of exposing children, established among the Greeks and Romans, was an unnatural practice. Unnatural, when it means any thing, means unfrequent: and there it means something; although nothing to the present

are exposed to suffer by, all men will be disposed to hate. It is far yet, however, from being a constant ground: for when a man suffers, it is not always that he knows what it is he suffers by. A man may suffer grievously, for instance, by a

purpose. But here it means no such thing: for the frequency of such acts is perhaps the great complaint. It therefore means nothing; nothing, I mean which there is in the act itself. All it can serve to express is, the disposition of the person who is talking of it: the disposition he is in to be angry at the thoughts of it. Does it merit his anger? Very likely it may: but whether it does or not is a question, which, to be answered rightly, can only be answered upon the principle of utility.

Unnatural, is as good a word as moral sense, or common sense; and would be as good a foundation for a system. Such an act is unnatural; that is, repugnant to nature: for I do not like to practice it: and, consequently, do not practice it. It is therefore repugnant to what ought to be the nature of every body else.

The mischief common to all these ways of thinking and arguing (which, in truth, as we have seen are but one and the same method, couched in different forms of words) is their serving as a cloak, and pretence, and alimant, to despotism: if not a despotism in practice, a despotism however in disposition: which is but too apt, when pretence and power offer, to show itself in practice. The consequence is, that with intentions very commonly of the purest kind, a man becomes a torment either to himself or his fellow-creatures. If he be of the melancholy cast, he sits in silent grief, bewailing their blindness and depravity: if of the irascible, he declaims with fury and virulence against all who differ from him; blowing up the coals of fanaticism, and branding with the charge of corruption and insincerity, every man who does not think, or profess to think, as he does.

If such a man happens to possess the advantages of style, his book may do a considerable deal of mischief before the nothingness of it is understood.

These principles, if such they can be called, it is more frequent to see applied to morals than to politics: but their influence extends itself to both. In politics, as well as morals, a man will be at least equally glad

new tax, without being able to trace up the cause of his sufferings to the injustice of some neighbour, who has eluded the payment of an old one.

16. The principle of sympathy and antipathy is most apt to err on the side of severity. It is for applying punishment in many cases which deserve none: in many cases which deserve some, it is for applying more than they deserve. There is no

of a pretence for deciding any question in the manner that best pleases him, without the trouble of inquiry. If a man is an infallible judge of what is right and wrong in the actions of private individuals, why not in the measures to be observed by public men in the direction of those actions? accordingly (not to mention other chimeras) I have more than once known the pretended law of nature set up in legislative debates, in opposition to arguments derived from the principle of utility.

"But is it never, then, from any other considerations than those of utility, that we derive our notions of right and wrong?" I do not know: I do not care. Whether a moral sentiment can be originally conceived from any other source than a view of utility, is one question: whether upon examination and reflection it can, in point of fact, be actually persisted in and justified on any other ground, by a person reflecting within himself, is another: whether in point of right it can properly be justified on any other ground, by a person addressing himself to the community, is a third. The two first are questions of speculation: it matters not, comparatively speaking, how they are decided. The last is a question of practice: the decision of it is of as much importance as that of any can be.

"I feel in myself," (say you) "a disposition to approve of such or such an action in a moral view: but this is not owing to any notions I have of its being a useful one to the community. I do not pretend to know whether it be an useful one or not: it may be, for aught I know, a mischievous one." "But is it then," (say I) "a mischievous one? examine: and if you can make yourself sensible that it is so, then, if duty means any thing, that is, moral duty, it is your *duty* at least to abstain from it: and more than that, if it is what lies in your power, and can be done without too great a sacrifice, to endeavour to prevent

incident imaginable, be it ever so trivial, and so remote from mischief, from which this principle may not extract a ground of punishment: any difference in taste: any difference in opinion: upon one subject as well as upon another: no disagreement so trifling which perseverance and altercation will not render serious. Each becomes in the other's eyes an enemy, and, if laws permit, a criminal.⁵

it. It is not your cherishing the notion of it in your bosom, and giving it the name of virtue, that will excuse you."

"I feel in myself," (say you again) "a disposition to detest such or such an action in a moral view; but this is not owing to any notions I have of its being a mischievous one to the community. I do not pretend to know whether it be a mischievous one or not: it may be not a mischievous one: it may be, for aught I know, an useful one."—"May it indeed," (say I) "be an useful one? but let me tell you then, that unless duty, and right and wrong, be just what you please to make them, if it really be not a mischievous one, and any body has a mind to do it, it is no duty of yours, but, on the contrary, it would be very wrong in you, to take upon you to prevent him: detest it within yourself as much as you please; that it may be a very good reason (unless it be also a useful one) for your not doing it yourself: but if you go about, by word or deed, to do any thing to hinder him, or make him suffer for it, it is you, and not he, that have done wrong: it is not your setting yourself to blame his conduct, or branding it with the name of vice, that will make him culpable, or you blameless. Therefore, if you can make yourself content that he shall be of one mind, and you of another, about this matter, and so continue, it is well: but if nothing will serve you, but that you and he must needs be of the same mind, I'll tell you what you have to do: it is for you to get the better of your antipathy, not for him to truckle to it."

⁵ King James the First of England had conceived a violent antipathy against Arians: two of whom he burnt. This gratification he procured himself without much difficulty: the notions of the times were favourable to it. He wrote a furious book against Vorstius, for being what was called an Arminian: for Vorstius was at a dis-

This is one of the circumstances by which the human race is distinguished (not much indeed to its advantage) from the brute creation.

17. It is not, however, by any means unexampled for this principle to err on the side of lenity. A near and perceptible mischief moves antipathy. A remote and imperceptible mischief, though no less real, has no effect. Instances in proof of this will occur in numbers in the course of the work. It would be breaking in upon the order of it to give them here.

18. It may be wondered, perhaps, that in all this while no mention has been made of the *theological* principle; meaning that principle which professes to re-

talence. He also wrote a furious book called *A Counterblast to Tobacco*, against the use of that drug, which Sir Walter Raleigh had then lately introduced. Had the notions of the times co-operated with him, he would have burnt the Anabaptist and the smoke of tobacco in the same fire. However, he had the satisfaction of putting Raleigh to death afterwards, though for another crime.

Disputes concerning the comparative excellence of French and Italian music have occasioned very serious bickerings at Paris. One of the parties would not have been sorry (says Mr. D'Alembert) to have brought government into the quarrel. Pretences were sought after and urged. Long before that, a dispute of like nature, and of at least equal warmth, had been kindled at London upon the comparative merits of two composers at London; where riots between the approvers and disapprovers of a new play are, at this day, not unfrequent. The ground of quarrel between the Bigendians and the Littleendians in the fable, was not more frivolous than many an one which has laid empires desolate. In Russia, it is said, there was a time when some thousands of persons lost their lives in a quarrel, in which the government had taken part, about the number of fingers to be used in making the sign of the cross. This was in days of yore: the ministers of Catherine II are better *instructed* than to take any other part in such disputes, than that of preventing the parties concerned from doing one another a mischief.

cur for the standard of right and wrong to the will of God. But the case is, this is not in fact a distinct principle. It is never any thing more or less than one or other of the three before-mentioned principles presenting itself under another shape. The *will* of God here meant cannot be his revealed will, as contained in the sacred writings: for that is a system which nobody ever thinks of recurring to at this time of day, for the details of political administration: and even before it can be applied to the details of private conduct, it is universally allowed, by the most eminent divines of all persuasions, to stand in need of pretty ample interpretations; else to what use are the works of those divines? And for the guidance of these interpretations, it is also allowed, that some other standard must be assumed. The will then which is meant on this occasion, is that which may be called the *presumptive* will: that is to say, that which is presumed to be his will on account of the conformity of its dictates to those of some other principle. What then may be this other principle? it must be one or other of the three mentioned above: for there cannot, as we have seen, be any more. It is plain, therefore, that setting revelation out of the question, no light can ever be thrown upon the standard of right and wrong, by any thing that can be said upon the question, what is God's will. We may be perfectly sure, indeed, that whatever is right is conformable to the will of God: but so far is that from answering the purpose of showing us what is right, that it is necessary to know first whether a thing is right, in order to know from thence whether it be conformable to the will of God.⁶

⁶The principle of theology refers every thing to God's pleasure. But what is God's pleasure? God does not, he confessedly does not now, either speak or write to us. How then are we to know what is his pleasure? By observing what is our own pleasure, and pronouncing it to be his. Accordingly what is called the pleasure of God, is and must necessarily be (revela-

19. There are two things which are very apt to be confounded, but which it imports us carefully to distinguish:—the motive or cause, which, by operating on the mind of an individual, is productive of any act: and the ground or reason which warrants a legislator, or other bystander, in regarding that act with an eye of approbation. When the act happens, in the particular instance in question, to be productive of effects which we approve of, much more if we happen to observe that the same motive may frequently be productive, in other instances, of the like effects, we are apt to transfer our approbation to the motive itself, and to assume, as the just ground for the approbation we bestow on the act, the circumstance of its originating from that motive. It is in this way that the sentiment of antipathy has often been considered as a just ground of action. Antipathy, for instance, in such or such a case, is the cause of an action which is attended with good effects: but this does not make it a right ground of action in that case, any more than in any other. Still farther. Not only the effects are good, but the agent sees beforehand that they will be so. This may make the action indeed a

tion apart) neither more nor less than the good pleasure of the person, whoever he be, who is pronouncing what he believes, or pretends, to be God's pleasure. How know you it to be God's pleasure that such or such an act should be abstained from? whence come you even to suppose as much? "Because the engaging in it would, I imagine, be prejudicial upon the whole to the happiness of mankind," says the partizan of the principle of utility: "Because the commission of it is attended with a gross and sensual, or at least with a trifling and transient satisfaction," says the partizan of the principle of asceticism: "Because I detest the thought of it; and I cannot, neither ought I to be called upon to tell why," says he who proceeds upon the principle of antipathy. In the words of one or other of these must that person necessarily answer (revelation apart) who professes to take for his standard the will of God.

perfectly right action: but it does not make antipathy a right ground of action. For the same sentiment of antipathy, if implicitly deferred to, may be, and very frequently is, productive of the very worst effects. Antipathy, therefore, can never be a right ground of action. No more, therefore, can resentment, which, as will be seen more particularly hereafter, is but a modification of antipathy. The only right ground of action, that can possibly subsist, is, after all, the consideration of utility, which if it is a right principle of action, and of approbation, in any one case, is so in every other. Other principles in abundance, that is, other motives, may be the reasons why such and such an act *has* been done: that is, the reasons or causes of its being done: but it is this alone that can be the reason why it might or ought to have been done. Antipathy or resentment requires always to be regulated, to prevent its doing mischief: to be regulated by what? always by the principle of utility. The principle of utility neither requires nor admits of any other regulator than itself.

OF THE FOUR SANCTIONS OR SOURCES OF PAIN AND PLEASURE

1. It has been shown that the happiness of the individuals, of whom a community is composed, that is their pleasures and their security, is the end and the sole end which the legislator ought to have in view: the sole standard, in conformity to which each individual ought, as far as depends upon the legislator, to be *made* to fashion his behaviour. But whether it be this or any thing else that is to be *done*, there is nothing by which a man can ultimately be *made* to do it, but either pain or pleasure. Having taken a general view of these two grand objects (*viz.*, pleasure, and what comes to the same thing, immunity from pain) in the character of *final* causes; it will be necessary to take a view of pleasure and pain itself, in the character of *efficient* causes or means.

2. There are four distinguishable sources from which pleasure and pain are in use to flow: considered separately, they may be termed the *physical*, the *political*, the *moral*, and the *religious*: and inasmuch as the pleasures and pains belonging to each of them are capable of giving a binding force to any law or rule of conduct, they may all of them be termed *sanctions*.

3. If it be in the present life, and from the ordinary course of nature, not purposely modified by the interposition of the will of any human being, nor by any extraordinary interposition of any superior invisible being, that the pleasure or the pain takes place or is expected, it may be said to issue from or to belong to the *physical sanction*.

4. If at the hands of a *particular* person or set of persons in the community, who under names correspondent to that of *judge*, are chosen for the particular purpose of dispensing it, according to the will of the sovereign or supreme ruling power in the state, it may be said to issue from the *political sanction*.

5. If at the hands of such *chance* persons in the community, as the party in question may happen in the course of his life to have concerns with, according to each man's spontaneous disposition, and not according to any settled or concerted rule, it may be said to issue from the *moral or popular sanction*.⁷

6. If from the immediate hand of a superior invisible being, either in the present life, or in a future, it may be said to issue from the *religious sanction*.

7. Pleasures or pains which may be

⁷ Better termed *popular*, as more directly indicative of its constituent cause; as likewise of its relation to the more common phrase *public opinion*, in French *opinion publique*, the name there given to that tutelary power, of which of late so much is said, and by which so much is done. The latter appellation is however unhappy and inexpressive; since if *opinion* is material, it is only in virtue of the influence it exercises over action, through the medium of the affections and the will.

expected to issue from the *physical, political, or moral* sanctions, must all of them be expected to be experienced, if ever, in the *present* life: those which may be expected to issue from the *religious* sanction, may be expected to be experienced either in the *present* life or in a *future*.

8. Those which can be experienced in the present life, can of course be no others than such as human nature in the course of the present life is susceptible of: and from each of these sources may flow all the pleasures or pains of which, in the course of the present life, human nature is susceptible. With regard to these then (with which alone we have in this place any concern) those of them which belong to any one of those sanctions, differ not ultimately in kind from those which belong to any one of the other three: the only difference there is among them lies in the circumstances that accompany their production. A suffering which befalls a man in the natural and spontaneous course of things, shall be styled, for instance, a *calamity*; in which case, if it be supposed to befall him through any imprudence of his, it may be styled a punishment issuing from the physical sanction. Now this same suffering, if inflicted by the law, will be what is commonly called a *punishment*; if incurred for want of any friendly assistance, which the misconduct, or supposed misconduct, of the sufferer has occasioned to be withholden, a punishment issuing from the *moral* sanction; if through the immediate interposition of a particular providence, a punishment issuing from the *religious* sanction.

9. A man's goods, or his person, are consumed by fire. If this happened to him by what is called an accident, it was a calamity: if by reason of his own imprudence (for instance, from his neglecting to put his candle out) it may be styled a punishment of the physical sanction: if it happened to him by the sentence of the political magistrate, a punishment belonging to the political sanction; that is, what is commonly called a punishment: if for want of any assistance

which his *neighbour* withheld from him out of some dislike to his *moral* character, a punishment of the *moral* sanction: if by an immediate act of *God's* displeasure, manifested an account of some *sin* committed by him, or through any distraction of mind, occasioned by the dread of such pleasure, a punishment of the *religious* sanction.⁸

10. As to such of the pleasures and pains belonging to the religious sanction, as regard a future life, of what kind these may be we cannot know. These lie not open to our observation. During the present life they are matters only of expectation: and, whether that expectation be derived from natural or revealed religion, the particular kind of pleasure or pain, if it be different from all those which lie open to our observation, is what we can have no idea of. The best ideas we can obtain of such pains and pleasures are altogether unliquidated in point of quality. In what other respects our ideas of them *may* be liquidated will be considered in another place.

11. Of these four sanctions the physical is altogether, we may observe, the groundwork of the political and the moral: so is it also of the religious, in as far as the latter bears relation to the present life. It is included in each of those other three. This may operate in any case (that is, any of the pains or pleasures belonging to it may operate) independently of *them*: none of *them* can operate but by means of this. In a word, the powers of nature may operate of themselves; but neither the magistrate, nor men at large, *can* operate, nor is God in the case in question *supposed* to operate, but through the powers of nature.

12. For these four objects, which in their nature have so much in common,

⁸ A suffering conceived to befall a man by the immediate act of God, as above, is often, for shortness' sake, called a *judgment*: instead of saying, a suffering inflicted on him in consequence of a special judgment formed, and resolution thereupon taken, by the Deity.

it seemed of use to find a common name. It seemed of use, in the first place, for the convenience of giving a name to certain pleasures and pains, for which a name equally eharacteristic could hardly otherwise have been found: in the second place, for the sake of holding up the efficacy of certain moral forces, the influence of which is apt not to be sufficiently attended to. Does the political sanction exert an influence over the conduct of mankind? The moral, the religious sanctions do so too. In every inch of his career are the operations of the political magistrate liable to be aided or impeded by these two foreign powers: who, one or other of them, or both, are sure to be either his rivals or his allies. Does it happen to him to leave them out of his calculations? he will be sure almost to find himself mistaken in the result. Of all this we shall find abundant proofs in the sequel of this work. It behoves him, therefore, to have them continually before his eyes; and that under such a name as exhibits the relation they bear to his own purposes and designs.

VALUE OF A LOT OF PLEASURE OR PAIN, HOW TO BE MEASURED

1. Pleasures then, and the avoidance of pains, are the *ends* which the legislator has in view: it behoves him therefore to understand their *value*. Pleasures and pains are the *instruments* he has to work with: it behoves him therefore to understand their force, which is again, in other words, their value.

2. To a person considered *by himself*, the value of a pleasure or pain considered *by itself*, will be greater or less, according to the four following circumstances:⁹

⁹ These circumstances have since been denominated *elements* or *dimensions* of *value* in a pleasure or a pain.

Not long after the publication of the first edition, the following memoriter verses were framed, in the view of lodging more effectually, in the memory, these points, on

- I. Its *intensity*.
- II. Its *duration*.
- III. Its *certainty* or *uncertainty*.
- IV. Its *propinquity* or *remoteness*.

3. These are the circumstances which are to be considered in estimating a pleasure or a pain considered each of them by itself. But when the value of any pleasure or pain is considered for the purpose of estimating the tendency of any *act* by which it is produced, there are two other circumstances to be taken into account; these are,

V. Its *fecundity*, or the chance it has of being followed by sensations of the *same* kind: that is, pleasures, if it be a pleasure: pains, if it be a pain.

VI. Its *purity*, or the chance it has of *not* being followed by sensations of the *opposite* kind: that is, pains, if it be a pleasure: pleasures, if it be a pain.

These two last, however, are in strictness scarcely to be deemed properties of the pleasure or the pain itself; they are not, therefore, in strictness to be taken into the account of the value of that pleasure or that pain. They are in strictness to be deemed properties only of the act, or other event, by which such pleasure or pain has been produced; and accordingly are only to be taken into the account of the tendency of such act or such event.

4. To a *number* of persons, with reference to each of whom the value of a pleasure or a pain is considered, it will be greater or less, according to seven circumstances: to wit, the six preceeding ones; *viz.*

- I. Its *intensity*.
- II. Its *duration*.
- III. Its *certainty* or *uncertainty*.

which the whole fabric of morals and legislation may be seen to rest.

Intense, long, certain, speedy, fruitful, pure—

Such marks in *pleasures* and in *pains* endure. Such pleasures seek if *private* be thy end: If it be *public*, wide let them *extend*. Such *pains* avoid, whichever be thy view: If pains *must* come, let them *extend* to few.

- IV. Its *propinquity* or *remoteness*.
- V. Its *fecundity*.
- VI. Its *purity*.

And one other; to wit:

VII. Its *extent*; that is, the number of persons to whom it *extends*; or (in other words) who are affected by it.

5. To take an exact account then of the general tendency of any act, by which the interests of a community are affected, proceed as follows. Begin with any one person of those whose interests seem most immediately to be affected by it: and take an account.

I. Of the value of each distinguishable *pleasure* which appears to be produced by it in the *first* instance.

II. Of the value of each *pain* which appears to be produced by it in the *first* instance.

III. Of the value of each pleasure which appears to be produced by it *after* the first. This constitutes the *fecundity* of the first *pleasure* and the *impurity* of the first *pain*.

IV. Of the value of each *pain* which appears to be produced by it after the first. This constitutes the *fecundity* of the first *pain*, and the *impurity* of the first *pleasure*.

V. Sum up all the values of all the *pleasures* on the one side, and those of all the *pains* on the other. The balance, if it be on the side of pleasure, will give the *good* tendency of the act upon the whole, with respect to the interests of that *individual* person; if on the side of pain, the *bad* tendency of it upon the whole.

VI. Take an account of the *number* of persons whose interests appear to be concerned; and repeat the above process with respect to each. *Sum up* the numbers expressive of the degrees of *good* tendency, which the act has, with respect to each individual, in regard to whom the tendency of it is *good* upon the whole: do this again with respect to each individual, in regard to whom the tendency of it is *bad* upon the whole. Take the *balance*; which, if on the side of *pleasure*, will give the general *good tendency* of the act, with respect to the total number or

community of individuals concerned; if on the side of pain, the general *evil tendency*, with respect to the same community.

6. It is not to be expected that this process should be strictly pursued previously to every moral judgment, or to every legislative or judicial operation. It may, however, be always kept in view: and as near as the process actually pursued on these occasions approaches to it, so near will such process approach to the character of an exact one.

7. The same process is alike applicable to pleasure and pain, in whatever shape they appear: and by whatever denomination they are distinguished: to pleasure, whether it be called *good* (which is properly the cause or instrument of pleasure) or *profit* (which is distant pleasure, or the cause or instrument of distant pleasure) or *convenience*, or *advantage*, *benefit*, *emolument*, *happiness*, and so forth: to pain, whether it be called *evil* (which corresponds to *good*) or *mischief*, or *inconvenience*, or *disadvantage*, or *loss*, or *unhappiness*, and so forth.

8. Nor is this a novel and unwarranted, any more than it is a useless theory.

In all this there is nothing but what the practice of mankind, wheresoever they have a clear view of their own interest, is perfectly conformable to. An article of property, an estate in land, for instance, is valuable, on what account? On account of the pleasures of all kinds which it enables a man to produce, and what comes to the same thing the pains of all kinds which it enables him to avert. But the value of such an article of property is universally understood to rise or fall according to the length or shortness of the time which a man has in it: the certainty or uncertainty of its coming into possession: and the nearness or remoteness of the time at which, if at all, it is to come into possession. As to the *intensity* of the pleasures which a man may derive from it, this is never thought of, because it depends upon the use which each particular person may come to make of it; which cannot be estimated till the particular pleasures he may come to derive from it, or the particular pains he may come to exclude by means of it, are brought to view. For the same reason, neither does he think of the *fecundity* or *purity* of those pleasures.

THE DILEMMA OF DEMOCRACY: LIBERTY AND EQUALITY

Every revolution contains a utopian element that inspires its makers and is indispensable to its success. The leaders of the English, American, and French revolutions in the seventeenth and eighteenth centuries looked upon democracy, not as a beginning, but as the end—the culmination of man's age-long struggle for freedom. As long as democracy was a dream, it was impossible to appraise it realistically, and the history of the discussions of democracy from Plato to Burke suffers from a sense of unreality and lack of sufficient experience. Defenders of democracy often saw in it a kind of paradise within the reach of man, whereas its opponents predicted that, if it were ever allowed to exist long enough, it would end in the destruction of society and the moral values that support it.

Various experiences in democracy had failed. The Puritan Revolution was democratic in inspiration, but it was unable to provide a true object lesson of democracy because it quickly turned into dictatorship. The Glorious Revolution of 1688, more successful than the Puritan Revolution in establishing itself as a lasting political regime, was liberal-conservative rather than radical-democratic. In the eighteenth century, England therefore attracted liberal aristocrats like Montesquieu but had little room for radical democrats like Tom Paine. The latter had to flee his native land to escape political persecution after he had vehemently defended the French Revolution in his controversy with Edmund Burke.

The French Revolution, too, which started with so little violence in 1789, ceased to be an experiment in democracy in 1799, when Napoleon set up a military dictatorship, and shortly thereafter his own brand of monarchy. Napoleon's regime was followed by the even less democratic restoration of the Bourbons, who attempted to go back to the prerevolutionary government of kingship by divine right, in alliance with the clergy and aristocracy. But the Bourbons, who had learned nothing and forgotten nothing, did not retain the

throne for long. The Revolution of July, 1830, ousted King Charles X and established a constitutional monarchy in which the middle class was the predominant political and social element. The way was again open for experiments in popular government.

The first major democracy in the modern world is that of the United States; only after its establishment and success could the issue of democracy be brought down from the clouds of subjunctive and hypothetical speculation to the firm ground of positive and empirical observation. The political writer in the nineteenth century first to perceive that democracy was the "irresistible" new form of society and government, and that the United States was the world's key laboratory of democracy, was an aristocratic Frenchman, Alexis de Tocqueville (1805-1859).

Tocqueville's family belonged to the oldest Norman nobility, and one of his ancestors had fought at the Battle of Hastings. Tocqueville's interest in politics came to him naturally. His family had long been active in the magistracy and public administration, and his father was prefect, the highest government authority, in several departments of France. Tocqueville thus had ample opportunity to see the big and little problems of government from the inside. During the Revolution, Tocqueville's maternal grandmother and an aunt were executed, and his parents narrowly escaped the same fate. His father's hair turned white at the age of twenty-one as a result of harassing experiences and imprisonments.

Tocqueville studied the law, as was the tradition of his family, and at the age of twenty-one he embarked on a judicial career. From 1839 to 1848 he was a member of the Chamber of Deputies, where he voted, slightly Left of Center, with the constitutional opposition. In 1849 he was Foreign Minister for a few months. After Louis Napoleon set up his dictatorship, Tocqueville retired from public life, despite the former's repeated attempts to secure his collaboration. Tocqueville was not an outstanding parliamentarian, and he lacked the knack of the practical politician in dealing with people. But the rigorous and uncompromising standards that kept him from being a successful party leader and vote getter also prevented him from participating in the public affairs of a dictatorship. His retirement from active politics gave him time to write a penetrating analysis, *The Old Regime and the Revolution* (1856). He broke new ground by emphasizing the elements of continuity in the French Revolution rather than those of sudden change: "The despot fell; but the most substantial portion of his work remained; his administrative system survived his government."

Tocqueville's most famous book, and his most enduring contribution to political thought, is his *Democracy in America* (1835-1840). It is generally conceded to be the greatest work on the United States written by a foreign observer, and it would be difficult to find a work of similar depth and penetration written by an American on his own country. Nothing dates as quickly as books on other countries, yet *Democracy in America* has retained its original freshness and appeal. What is equally astonishing is that Tocqueville was able to grasp so much of American civilization after a stay of only nine months, and that the first part of *Democracy in America* was published when the author was barely thirty years old (the second part came out five years later). His ability to forecast the future—which is little different from the ability to interpret the present correctly—is illustrated by the statement that the time would come when North America would be inhabited by one hundred and fifty million people, and that Russia

and the United States would each "sway the destinies of half the globe." There is some repetition in *Democracy in America*, which detracts from its readability and adds unnecessarily to its length, but its general impact is one of balance, reflection, sympathy, and—perhaps Tocqueville's most appealing quality—fairness.

Shortly after the July Revolution of 1830 introduced constitutional government into France, Tocqueville and a friend, Gustave de Beaumont, decided to visit America; officially, the purpose was to study the prison system in the United States, but in reality Tocqueville was eager to study democracy where he thought it was most firmly established. "I confess," Tocqueville says, "that in America I saw more than America; I sought the image of democracy itself, with its inclinations, its character, its prejudices, and its passions, in order to learn what we have to fear or to hope from its progress."

Tocqueville starts his introduction to *Democracy in America* with the very substance of his book: "Among the novel objects that attracted my attention during my stay in the United States, nothing struck me more forcibly than the general equality of conditions." Whereas students of politics have, in the twentieth century, frequently separated the study of government from the folkways of a people, its way of life, its social, educational, economic, and religious institutions, Tocqueville realized that equality of conditions, the "fundamental fact" of American life, extended "far beyond the political character and the laws of the country, and that it has no less empire over civil society than over the Government; it creates opinions, engenders sentiments, suggests the ordinary practices of life, and modifies whatever it does not produce."

Tocqueville was one of the first European political writers to see that the age of European mastery and leadership in political inventiveness was passing away, and that the United States was destined to be the world's great experiment in democracy. Intellectually, the United States of the early nineteenth century was little more than a province or colony of England, and it was treated as such by most visiting English writers and lecturers. They were amused by the crudities and banalities of American life but failed to see that below the surface a new social and political principle was struggling for recognition and realization. By contrast, Tocqueville perceived that the United States, in the past a dependency of Europe, was going to play an active, independent, and decisive part in the future. What few Americans themselves would believe before the middle of the twentieth century, Tocqueville saw early in the nineteenth: that the United States would cease to be the pupil of Europe and become its teacher, and that the Americanization of the world—not in the sense of imperialist conquest, but of ever-increasing equality of conditions—was inevitable.

Tocqueville understood that the American and French revolutions, like the upheavals in other parts of Europe and the Americas, were not isolated events but parts of a *world revolution*: "It is evident to all alike that a great democratic revolution is going on among us." Tocqueville saw that the French Revolution was not an event but a continuous *process*, and that the Revolution of 1830, which he himself witnessed, was only one act of a drama the end of which he knew he was not to behold. He was convinced that the United States was the most advanced nation in the world revolution of equality, and, he said, "it appears to me beyond a doubt that sooner or later we shall arrive, like the Americans, at an almost complete equality of conditions."

In the preface to the twelfth edition of *Democracy in America* (1848), Tocqueville writes that the principle of popular sovereignty, "enthroned in France but yesterday," had held undivided sway in the United States for sixty years in the most direct, unlimited, and absolute manner. While all the nations of Europe were devastated by war or torn by civil strife, the United States alone remained at peace, guaranteeing the rights of property and avoiding the pitfalls of both anarchy and despotism: "Where else could we find greater cause of hope, or more instructive lessons? Let us look to America, not in order to make a servile copy of the institutions that she has established, but to gain a clearer view of the polity that will be the best for us; let us look there less to find examples than instruction; let us borrow from her the principles, rather than the details, of her laws."

Tocqueville had no illusions about the future of his class. In a letter to Henry Reeve, the translator of *Democracy in America*, Tocqueville says (March 22, 1837) that aristocracy was dead when he was born, and that he could have no affection for it, since "one can be strongly attached only to the living." However, his realization that the age of government by privilege was gone did not lead him to embrace democracy unquestioningly and unhesitatingly. The real alternative was no longer between aristocracy and democracy, he felt. It was between "democracy without poetry and elevation indeed, but with order and morality, and an undisciplined and depraved democracy, subject to sudden frenzies, or to a yoke heavier than any that has galled mankind since the fall of the Roman Empire." Democracy—not only democratic government, but a way of life built on equality—was, Tocqueville saw, the "irresistible future."

What concerned him, however, was the difficulty of *reconciling individuality and liberty with democratic equality*. This is the central theme of *Democracy in America* and the major contribution of Tocqueville to modern political thought. He saw, more clearly than any of his contemporaries, that equality was not an invention of French and American revolutionary agitators, or of clever conspirators who managed to beguile the people and overthrow the established order of state and society. Approaching the issue of equality from an institutional rather than from a purely ideological viewpoint, Tocqueville found that the process of leveling and equalizing had been going on in Europe for seven hundred years, and that "absolute kings were the most efficient levellers of ranks among their subjects." The French and American Revolutions were not, Tocqueville thought, sharp breaks with the past as much as accelerations of trends that had already operated for centuries.

The human (as distinct from the administrative) problem of equality was nearer its solution in democracy than in monarchy and aristocracy, but the central issue of liberty still persisted. Whereas enthusiastic democrats assumed that liberty would cease to be a serious issue in democracy, Tocqueville pointed out that democracy, by the very fact of solving the issue of equality, created new problems of liberty that had not hitherto existed. Democracy demanded a "new science of politics indispensable to a new world," and the experience of the past could not sufficiently illuminate its difficulties, because there was no parallel to it in any age up to the "remotest antiquity."

Tocqueville saw—and his profound insight is still not fully grasped and acted upon in democratic societies—that the threat to liberty is potentially more real and menacing in a democracy than in a monarchy or an aristocracy:

"The authority of a king is purely physical, and it controls the actions of the subject without subduing his private will; but the majority possesses a power which is physical and moral at the same time; it acts upon the will as well as upon the actions of men, and it represses not only all contest, but all controversy." Tocqueville saw that democratic despotism would work differently from the classical forms of one-man or class tyranny: "It would be more extensive and more mild; it would degrade men without tormenting them."

Tocqueville emphasizes, in particular, one kind of despotism in a democracy that is not easy to discern because it does not work openly, through political or legal sanctions: the *power of public opinion to suppress unpopular views*. Without being exposed "to the terrors of an auto-da-fé," the individual of unorthodox views may find his political career closed, be ostracized, shunned, spurned, and scorned by his fellow citizens, and abandoned by his friends who are most persuaded of his innocence, "lest they should be shunned in their turn." Nothing disturbed Tocqueville more in his study of democracy than the "quiet and gentle" kind of terror and intimidation that does not destroy, but prevents, existence; that does not tyrannize, but compresses, enervates, extinguishes, and stupefies people "till each nation is reduced to be nothing better than a flock of timid and industrious animals, of which the government is the shepherd."

The concept of the "tyranny of the majority" was not invented by Tocqueville. From Locke to Madison, leaders of liberal thought and statesmanship had wrestled with the problem of how to combine the principle of majority rule with that of individual liberty—a theme which also dominated the framers of the American Constitution. Yet, this classical liberal fear of the tyranny of the majority was focused on government and politics, and the remedies therefore for preventing it were also political and institutional: bicameralism, checks and balances, separation of powers, an independent judiciary, bills of rights, federalism—all these institutional safeguards were designed to protect individual liberty against the potential tyranny of the majority. The fear of the tyranny of the numerical majority was largely based on the realistic understanding of inherent conflicts in society, most pungently and frankly expressed by Madison, who considered "the various and unequal distribution of property" the "most common and durable source of factions" (*The Federalist*, No. 10).

Tocqueville was fully aware of the political and institutional aspects of the potential tyranny of the majority, and he thoroughly discusses these aspects in *Democracy in America*. Yet his main interest—and in this he broke new ground—was in democratic despotism of *society* rather than of government. Such despotism was the result—and here Tocqueville differs again sharply from the classical liberals from Locke to Madison—of too much agreement in society about basic moral issues, and not of too much social conflict, as the classical liberals from Locke to Madison had thought. The remedy for this tyranny of public opinion over the individual was much more difficult to find than in the case of political majority tyranny. Institutional devices would not do, since the oppression of the individual by public opinion was not institutional but mental, making itself felt through subtle social pressure rather than through overt acts of government. Moreover, a major difficulty in coping with the tyranny of public opinion was the fact that many individuals cheerfully submitted to that tyranny because they sincerely believed that public opinion was right.

Tocqueville in the end pins his hope on the education of man, so he can attain independence of character and rational knowledge, both of which will make him understand the invisible chains of the tyranny of society over his mind and conduct. However, Tocqueville was never sure that the mass of mankind had the ability to attain such levels of character and rationality. He had enough realism and common sense to grasp the importance of institutional devices in seeking to harmonize the principles of liberty and equality. Yet he also possessed the depth of insight which made him aware of the supreme importance of the moral and intellectual qualities of the individuals who make up a democratic society and government.

Tocqueville felt a kind of "religious dread" in contemplating "so irresistible a revolution" as the spread of democracy, and his attitude toward it was never free from ambivalence. He was keenly sensitive to the values of the individual, the unique, the lofty in man, and was distressed by the mediocrity, greed, and triviality in democracies: "When I survey this countless multitude of beings, shaped in each other's likeness, amidst whom nothing rises and nothing falls, the sight of such universal uniformity saddens and chills me, and I am tempted to regret that state of society which has ceased to be." Yet, despite his fears and apprehensions, Tocqueville concludes *Democracy in America* with a note of hope: "A state of equality is perhaps less elevated, but it is more just; and its justice constitutes its greatness and beauty."

Rejecting the view that man is a helpless prisoner of blind and fatal forces—history, race, soil, and climate—Tocqueville asserts man's freedom by virtue of his moral essence: "Providence has not created mankind entirely independent or entirely free. It is true that around every man a fatal circle is traced, beyond which he cannot pass; but within the wide verge of that circle he is powerful and free: as it is with man, so with communities. The nations of our time cannot prevent the conditions of men from becoming equal: but it depends upon themselves whether the principle of equality is to lead them to servitude or freedom, to knowledge or barbarism, to prosperity or to wretchedness."

In November, 1841, Tocqueville wrote a note to himself, entitled "My Instinct, My Opinions," which expresses more strongly—and perhaps more frankly because not meant for publication—his profound apprehension, and even a certain antipathy, with regard to democracy. "Intellectually," Tocqueville says in this note, "I have an inclination for democratic institutions, but I am an aristocrat by instinct—that is to say, I despise and fear the mob. I love passionately liberty, law, and respect for rights, but not democracy. There is the ultimate truth of my soul." As on so many other occasions, Tocqueville insisted that he was neither revolutionary nor conservative, yet "when all is said and done, I hold more by the latter than the former. For I differ from the latter more as to means than as to end, while I differ from the former both as to means and end. Liberty is my first passion. This is the truth."

Tocqueville's intellectual acceptance of democracy was rooted in two feelings: first, that it is irresistible, and that to oppose it with blind, sterile hatred would therefore be futile; second, he was skeptical enough to tolerate democracy without embracing it passionately. In his *Recollections* (written in 1850), he says that "what we call necessary institutions are often no more than institutions to which we have grown accustomed," this referring to traditional forms of social

organization. Tocqueville's pragmatic attitude toward democracy was hesitant, fearful, and ambivalent, but he was willing to give it a fair chance.

This openness of mind, the attempt to build a political philosophy on empiricism and expediency, without the extremes of revolution and reaction, draws him into spiritual kinship with Bodin and Montesquieu. All three belong to the same spiritual family in France, though their backgrounds and ideas differed, and all three have contributed to an intellectual tradition of moderation, conciliation, and antifanaticism. In essence the tradition reflects a temper as much as a body of doctrine—the willingness to accept the second best rather than kill for the absolutely best.

One of the most prophetic passages in *Democracy in America* deals with the rise of an *aristocracy of manufacturers* in democratic societies. Tocqueville notes that democracy is favorable to the growth of industry for two reasons: first, there is the emphasis on material welfare for all, rather than for a small aristocratic class, so that the demand for goods is constantly increasing; second, equality of opportunity encourages talent to enter the field of business and industry and to acquire wealth without restrictions of birth, class, and estate. Inevitably, the expansion of manufacturing produces a new type of working class, highly specialized, and employed according to the principle of division of labor. But, while economically efficient, mass production has serious social effects because "in proportion as the workman improves, the man is degraded." The more the worker concentrates his effort and intelligence on a single detail, the more the employer has to survey an extensive whole, so that the mind of the latter is broadened in proportion as that of the former is narrowed. The *employer* resembles more and more the *administrator of a vast empire*, and the worker becomes more and more a brute. Between worker and employer there are frequent relations but "no real partnership." As industry becomes more settled, social relations become more rigid: the worker is continually dependent on the employer "and seems as much born to obey as that other is to command. What is that but aristocracy?"

As an aristocrat of preindustrial background, Tocqueville is keenly sensitive to the differences between the old landed and the new manufacturing aristocracy. In the first, the tie between the landlord and his men was one of shared experience rather than of weekly pay checks. In the age of manufacturing, the employer is not settled among those he employs, and his contact with them is confined to one aspect of life: he asks nothing of them but their labor, and they expect nothing but their wages. Between employer and workers there is thus no permanent tie of habit, duty, custom, or usage, whereas in the old landed aristocracy the master was obliged to protect, aid, and relieve his men, and they to defend and serve him. By contrast, the manufacturing aristocracy first impoverishes the men who serve it and then abandons them to public charity. It has no sense of public responsibility, and its aim is not to govern the population but to use it.

Because of its lack of responsibility the new industrial aristocracy is, Tocqueville predicts, the harshest that ever existed. He advises friends of democracy to "keep their eyes anxiously fixed in this direction; for if ever a permanent inequality of conditions and aristocracy again penetrate into the world, it may be predicted that this is the channel by which they will enter."

But Tocqueville did not think that the *discrepancy between political equality and economic inequality* would be indefinitely accepted by a democratic people. He saw that the first phase of the democratic world revolution, political in nature, would inevitably lead to a second phase, which would be primarily social and economic: "Those who believe that complete equality can be established in a permanent way in the political world without introducing at the same time a certain equality in civil society, seem to me to commit a dangerous error." The July Revolution of 1830 was the last purely political revolution in France, Tocqueville thought, and he foresaw that the next upheaval would result from economic grievances.

The February Revolution of 1848 was the first in which the industrial working class played a major role, and Tocqueville predicted before the Revolution on what issue the major battles of the future would be fought: "Before long, the political struggle will be restricted to those who have and those who have not; property will form the great field of battle." Only a few weeks before the outbreak of the February Revolution of 1848, Tocqueville said in a speech in the Chamber of Deputies that the passions of the working classes had turned from political to social questions, and that they were forming ideas and opinions destined "not only to upset this or that law, ministry, or even form of government, but society itself, until it totters upon the foundations on which it rests today."

The people are bound to discover, Tocqueville reflects in his *Recollections*, that, having destroyed all other obstacles to equality, the privilege of property remains the only obstacle. Yet he did not think that the people would necessarily use their legislative sovereignty to abolish altogether the institution of property, "the foundation of our social order." He hesitated to predict what specific form popular control of property in a democracy would eventually take because "in matters of social constitution the field of possibilities is much more extensive than men living in their various societies are ready to imagine."

Tocqueville was one of the first political thinkers in the nineteenth century to perceive the long-term pressure of economic inequality on political democracy. He understood, with consummate clarity, the paradoxical relation between democracy and the Industrial Revolution: on the one hand, democracy favors the growth of an industrial economy with its rising living standards for the people; and on the other hand, the process of industrialization creates new problems of inequality that threaten the very foundations of democracy.

Democracy in America, translated into English almost immediately after publication, aroused considerable attention on both sides of the Atlantic. One of the most enthusiastic English reviewers of the work was John Stuart Mill (1806–1873), who compared Tocqueville to Montesquieu and thought that nothing equally profound had yet been written on the subject of democracy. Tocqueville seemed to Mill to have "changed the face of political philosophy" by posing new questions that went to the core of democracy as a system of government and a way of life.

Mill was impressed by the fact that the tendencies which Tocqueville had noted in America—the drive toward equality of conditions with its new problems and pressures—were also gradually permeating England. He shared

Tocqueville's concern about the possibility of the tyranny of the majority in democracy, and he added that "it is not from the separate interests, real or imaginary, that minorities are in danger; but from its antipathies of religion, political party, or race." The more perfectly each knows himself the equal of any other individual, "the more helpless he feels against the aggregate mass; and the more incredible it appears to him that the opinions of all the world can possibly be erroneous."

In his *Autobiography*, too, Mill avows how much he owes to Tocqueville from whom he learned the specific virtues and defects of democracy. In turn, Tocqueville wrote to Mill that of all reviewers of *Democracy in America* he was the one who best understood the meaning of the work; the two met during Tocqueville's second visit to England in 1835, and their friendly association lasted until Tocqueville's death in 1859.

Mill's *Autobiography* (1873), one of the most fascinating autobiographies of a political philosopher, is remarkable for several reasons. It provides a lifelike, and occasionally intimate, account of the Benthamite circle, Mill's father, James Mill, being the leading disciple of the master. The *Autobiography* also spans an important era of nineteenth-century intellectual history. Mill's interest was not confined to England, and he was particularly conversant with developments in France and the United States. Above all, the *Autobiography* is noteworthy for its account of the intellectual development of Mill himself.

For the generation of Bentham as for that of James Mill democracy was still an objective to aim at, a goal to work for. John Stuart Mill, who belongs to the third generation of Utilitarianism, lived in a world in which middle-class reform had attained a high degree of realization and—gradually shedding the magic of the envisioned future—had begun to reveal its own shortcomings and imperfections. The heyday of middle-class democracy heralded the first dawn of the next phase of social and political development, pointing toward the welfare state and socialism.

Mill typifies in his own life history the evolution of nineteenth-century liberalism. Born and reared as an orthodox and uncontaminated Benthamite, he ended as a "qualified socialist." From a personal viewpoint, moreover, the *Autobiography* is a remarkable record of human endurance. James Mill had definite ideas on how to educate John Stuart from the moment he was born. At the age of three John began to learn Greek, and Latin at the much later age of seven. By that time he had already acquired a solid knowledge of Greek literature and philosophy, including Plato, Herodotus, and Xenophon. He also learned arithmetic and ancient and modern history. When he came to the American war, Mill recalls, he took the side of England, but he was quickly set right by his father who, like all Philosophical Radicals, regarded the United States as the advance guard of democracy and the model of future developments in England.

From his eighth year on, Mill went thoroughly through Latin literature and broadened his knowledge of Greek literature by reading Thucydides, Homer, Euripides, Sophocles, and Polybius. At the same time, he delved into algebra, geometry, the differential calculus, and other portions of high mathematics. He also read books on experimental science and, at the age of twelve, began a course of study in logic, from Aristotle to Hobbes. At thirteen Mill's primary study was political economy, particularly Adam Smith and David Ricardo, the

latter being a close friend of Mill's father. At fourteen Mill went to France for a year, spending part of his time with the family of General Sir Samuel Bentham, Jeremy Bentham's brother. Mill fell in love with France, returned there later for prolonged visits, and died in Avignon in 1873.

At the age of seventeen Mill joined the staff of the East India Company as a clerk, became head of his department in 1856, and retired two years later. Most of his immense literary output was accomplished while he held a full-time and absorbing job. In 1865 Mill was asked by a body of voters in Westminster to stand for Parliament. He was convinced that no numerous or influential body of any constituency would wish to be represented by a person of his opinions. He also held the fixed conviction that a candidate should neither incur election expenses nor canvass his constituency. He nevertheless won with a small majority over his Conservative opponent, but he stayed in the House of Commons for only three years. In the election of 1868 he was defeated, but he confesses in his *Autobiography* that he was less surprised by his defeat than by his having been elected the first time.

In his teens Mill wrote and published essays on various political and philosophical topics and contributed to the *Westminster Review*, the official organ of Philosophical Radicalism from its foundation in 1824. In 1834 he published the *System of Logic*, his principal work on philosophy. In 1848 he brought out his *Political Economy*, next to Adam Smith's *Wealth of Nations* the most authoritative work in its field for several generations, and long the most popular textbook in economics in England and the United States.

Yet Mill's claim to enduring fame derives from *On Liberty* (1859); he predicted that of all his writings *On Liberty* was likely to survive longest, and his prediction has come true. Mill says in the *Autobiography* that he wrote *On Liberty* at a time when there may have seemed comparatively little need for it. But he foresaw that illiberal forces in modern industrial society would gain in weight, and he hoped that men would then turn to the teachings of *On Liberty*. Though Mill modestly disclaimed originality other than that which "every thoughtful mind gives to its own mode of conceiving and expressing truths which are common property," *On Liberty* has long been held to be, together with Milton's *Areopagitica*, the finest and most moving essay on liberty in English, perhaps in any language. As time goes on, *On Liberty* grows in stature and meaning because its predictions have come to life more realistically, and more tragically, than seemed possible in the middle of the nineteenth century, when belief in the progress of liberty was well-nigh universal.

Mill explodes the illusion that the evolution of government from tyranny to popular self-rule necessarily solves the problem of liberty. Like Tocqueville, he sees that *society* may practice a social tyranny more formidable than many kinds of political oppression, because social tyranny leaves fewer means of escape, "penetrating much more deeply into the details of life, and enslaving the soul itself." Protection against political tyranny is therefore not enough; it must be supplemented by protection against the tyranny of prevailing opinion and feeling. Unless *absolute freedom* of opinion and sentiment—scientific, moral, and theological—is guaranteed, a society is not completely free. Mill makes the point, seldom made in the optimistic nineteenth century, that the natural disposition of man is to impose his views, as ruler or fellow citizen, on others, and that want of power is often the cause of toleration of dissent.

However, the issue of liberty is one not only of power but of right and obligation, and it makes little difference how numerous the dissenting minority is: "If all mankind minus one, were of one opinion, and only one person were of the contrary opinion, mankind would be no more justified in silencing that one person, than he, if he had the power, would be justified in silencing mankind." Silencing an unorthodox opinion is not only wrong but harmful, because it robs mankind of an opportunity to become acquainted with ideas that may possibly be true, or partly true: "All silencing of discussion is an assumption of infallibility."

Mill recognizes that each individual can grasp no more than some aspects of truth, and that the imperfection of truth is due to the partial knowledge that man is able to attain in his limited experience of the world. Not only is society no infallible judge of truth, but even "ages are no more infallible than individuals." History is full of opinions held by one age to be the ultimate truth and considered by subsequent ages to be false and absurd.

Just as liberty is not complete unless it is absolute, so discussion must be completely unhampered, and free discussion must not be ruled out when "pushed to an extreme," because the arguments for a case are not good unless they are good for an extreme case. Mill is aware of the favorite argument that some opinions must be protected from public discussion and attack because of their usefulness to society, and he retorts that the "usefulness of an opinion is itself a matter of opinion."

Mill does not believe in the "pleasant falsehood" that truth inevitably triumphs over persecution; history "teems with instances of truth put down by persecution." He cites numerous examples of successful persecution in religion in support of his view that "persecution has always succeeded, save where the heretics were too strong a party to be effectually persecuted." The greatest harm of persecution is not done to those who are heretics but to those who are not, because the mental development of the latter is stifled by the fear of heresy. In an atmosphere of cowed conformity and slavish submission there may be a few exceptional great individual thinkers, but not an intellectually active people: "No one can be a great thinker who does not recognize, that as a thinker it is his first duty to follow his intellect to whatever conclusions it may lead."

Mill warns particularly against the blind acceptance of dead formulas as truth, without the challenge of discussion. For its own vitality and survival, truth needs to be "fully, frequently, and fearlessly" discussed, and Mill adds the not unimportant point that the opposing opinion be presented by someone who really believes in it. Only in the constant process of being challenged and assailed can truth grow and establish itself: "Both teachers and learners go to sleep at their post, as soon as there is no enemy in the field."

In summary, says Mill, the necessity of freedom of opinion, and freedom of expression, may be based on three grounds. First, any opinion we silence may be true, and in silencing it we assume our own *infallibility*. Second, though the *silenced opinion* be on the whole erroneous, it may be *partly true*, and because the prevailing opinion on any subject is rarely the complete truth, "it is only by the collision of adverse opinions that the remainder of the truth has any chance of being supplied." Third, even if the prevailing opinion be the *complete truth*, it will inevitably become dogma, prejudice, and formula unless it is exposed to the *challenge of free discussion*.

In his *Autobiography*, Mill says that his father felt himself more indebted for his mental culture to Plato than to any other writer. He shares his father's high esteem for Plato, not because of any sympathy with Plato's specific political or social views, but because of his admiration for the Socratic method, "unsurpassed" in correcting errors and clearing up confusions through relentless exposure of generalities, the "perpetual testing of all general statements by particular instances." Long before instrumentalism made its formal contribution to philosophy, Mill was an instrumentalist in his approach to the problem of truth. He recognized that truth is never finished, certain, and timeless, but that it is always unfinished, tentative, and temporary, subject to new data and experiences; that the quest for truth is an endless road; and that the free debate between opposite viewpoints is more likely to result in an approximation of truth than is the one-sided assertion of dogma and creed, which are beyond dispute. In this concept of truth as a dynamic process of colliding opposites, Mill sacrifices the certainty that is devoid of mental freedom to the uncertainty that is the pride of intellectual liberty.

In championing liberty, Mill has a broad goal in mind: the "Greek ideal of self-development." It is the privilege of every human being to use and interpret experience in his own way, and the act of choosing between alternatives brings man's moral faculties into play. A person who acts according to custom and tradition makes no choice, and he who lets others choose his plan of life for him has no need of any faculty other than ape-like imitation. Different persons should be permitted to lead different lives; and the plea for *variety* in *On Liberty* is as strong as that for *freedom*. The very progress of industrial civilization creates a uniformity of conditions that makes it difficult for persons to remain individuals, because "they now read the same things, listen to the same things, go to the same places, have their hopes and fears directed to the same objects, have the same rights and liberties, and the same means of asserting them." Moreover, Mill feels that "genius" is an absolutely indispensable ingredient in social progress: "there are but few persons, in comparison with the whole of mankind, whose experiments, if adopted by others, would be likely to be any improvement on established practice," and "genius can only breathe freely in an atmosphere of freedom." Liberty, therefore, is essential not just to individual advancement but to societal progression.

Mill reminds those who are willing to repress individual liberty for the sake of a strong state that the worth of a state is no more than the worth of the individuals composing it. The concluding words of *On Liberty* contain a message that is always timely: "A state which dwarfs its men, in order that they may be more docile instruments in its hands even for beneficial purposes—will find that with small men no great thing can really be accomplished; and that the perfection of machinery to which it has sacrificed everything, will in the end avail it nothing, for want of the vital power which, in order that the machine might work smoothly, it has preferred to banish."

Mill understood that the issue of liberty is closely related to the larger question of social power and organization. Bred as an orthodox Benthamite, his faith in *laissez faire* was originally stronger than that of Bentham himself; but as time went on, Mill gradually abandoned what was dogmatic in the economic philosophy of *laissez faire*. Although in the first edition of his *Political Economy* (1848) his general view of socialism was that it was neither desirable nor

practicable, in subsequent editions he revised his attitude. As a utilitarian and pragmatist, Mill was unwilling to commit himself to any economic doctrine without qualifications. He felt that the decision between capitalism and socialism would ultimately be based on one chief consideration: "which of the two systems is consistent with the greatest amount of human liberty and spontaneity." It would be rash to predict that socialism is unable to realize a great part of its aspirations, and the best way to find out, Mill thought, was to give socialists an opportunity of trial.

With regard to individual property, Mill held that the aim of an enlightened social policy should be not to destroy it, but to improve it, and to enable every member of the community to own property. The ultimate form of ownership of the means of production would not be, Mill says in the *Political Economy*, that of capitalist chiefs, with the workers deprived of any voice in the management, but the "association of the laborers themselves on terms of equality, collectively owning the capital with which they carry on their operations, and working under managers elected and removable by themselves."

In 1869 Mill began a book on socialism but did not finish it. *Chapters on Socialism*, published in 1879 by his stepdaughter, contains further important additions to Mill's previously held ideas. Avoiding an extreme position, Mill asserts, on the one hand, that the present system is "not hurrying us into a state of general indigence and slavery from which only socialism can save us." Though the evils and injustices of capitalism are great, they are not increasing but generally decreasing. On the other hand, Mill foresees that individual property is only of provisional existence, though it still has a long term before it, and that the nature of property would change in the course of time. Property denotes in every state of society the largest power of exclusive control over things, "and sometimes, unfortunately, over persons," but these powers vary greatly in accordance with the conceptions of right and justice held in different countries. In his *Autobiography*, Mill sums up most succinctly the problem of socialism as he saw it: how to "unite the greatest individual liberty of action with a common ownership in the raw material of the globe, and an equal participation of all in the benefits of combined labor."

In his analysis of socialist ideas and proposals, Mill does not mention Marx and Engels—probably because he was not familiar with their writings—and relies most heavily on Robert Owen, Charles Fourier, Saint-Simon, and Louis Blanc. Mill foresaw that socialism would run into a dead end if it gave up its liberal heritage and embraced the philosophy of the all-powerful state. He was therefore solely interested in French and British socialists, who stressed the cooperative, individualistic, and fraternal elements in socialism as a new way of life. He ignored the doctrines of revolution and dictatorship.

Mill felt that socialism was more than a legal problem of transferring productive property from private to public ownership and also more than a purely economic problem of organizing the economy on the foundations of new principles of the common good rather than entrepreneurial profits. He thought that socialism would demand a higher moral and intellectual level of the people than did capitalism. He therefore emphasized that socialist experiments along cooperative lines should be tried first among "elite groups" of workers before such experiments of a broader scope would be justified. In particular, he opposed wholesale transfer of private property to public ownership, because he

seriously doubted whether in a collectivized economy "there would be any asylum left for individuality of character; whether public opinion would not be a tyrannical yoke; whether the absolute dependence of each on all, and surveillance of each by all, would not grind all down into a tame uniformity of thoughts, feelings, and actions."

Mill was aware that many democratic socialists of his time felt unconcerned about possible deleterious political effects of large-scale public ownership and operation of the economy by the state as long as the government would be elected by democratic procedures and as long as a free press would continue. Mill did not share this optimistic expectation, and argued that under a fully collectivized economy "not all the freedom of the press and popular constitution would make this or any other country free otherwise than in name." The abandonment of large-scale nationalization as a major goal by most socialist parties in recent years clearly vindicates Mill's conviction that an economically all-powerful state cannot be politically liberal in relation to the individual. Conversely, where socialism has not emphasized nationalization but has stressed voluntary cooperatives and welfare, as in Scandinavian countries, it has been more successful.

Another area of great interest to Mill was that of women's rights. His interest in this area was furthered by his wife, the former Harriet Taylor. While it seems almost inconceivable today, less than one hundred years ago women almost everywhere were denied the suffrage. In the fifth chapter of *Utilitarianism* (1861), on justice, Mill prophetically noted:

The entire history of social improvement has been a series of transitions by which one custom or institution after another . . . has passed into the rank of a universally stigmatized injustice and tyranny. So it has been with the distinctions of slaves and freemen, nobles and serfs, patricians and plebeians; and so it will be, and in part already is, with the aristocracies of color, race, and sex.

Mill turned to the topic of women's rights in *The Subjection of Women* (1869). There, he took the position, exceedingly controversial for his time, that "the principle which regulates the existing social relations between the two sexes—the legal subordination of one sex to the other—is wrong in itself, and . . . ought to be replaced by a principle of perfect equality." The argument of *The Subjection of Women* follows that of *On Liberty*. Human individuality and mental, moral, and spiritual development require freedom. Denying women liberty harms not just them, but all of society: women are unable to live up to their potentials, and men, too (because of the social attitudes that structural inequality require), are unable to live up to theirs. Mill was particularly concerned about legal equality in marriage. "The moral regeneration of mankind will only really commence," he holds, "when the most fundamental of social relations is placed under the rule of equal justice."

Mill attempted to advance the cause of women's rights while he was a member of Parliament. He introduced legislation to give women the right to vote fifty years before similar legislation finally passed, indicating not just the depth of his conviction, but the extent to which he was ahead of his time.

I TOCQUEVILLE

Democracy in America *

TYRANNY OF THE MAJORITY

I hold it to be an impious and an execrable maxim that, politically speaking, a people has a right to do whatsoever it pleases; and yet I have asserted that all authority originates in the will of the majority. Am I, then, in contradiction with myself?

A general law—which bears the name of Justice—has been made and sanctioned, not only by a majority of this or that people, but by a majority of mankind. The rights of every people are consequently confined within the limits of what is just. A nation may be considered in the light of a jury which is empowered to represent society at large, and to apply the great and general law of Justice. Ought such a jury, which represents society, to have more power than the society in which the laws it applies originate?

When I refuse to obey an unjust law, I do not contest the right which the majority has of commanding, but I simply appeal from the sovereignty of the people to the sovereignty of mankind. It has been asserted that a people can never entirely outstep the boundaries of justice and of reason in those affairs which are more peculiarly its own; and that consequently full power may fearlessly be given to the majority by which it is represented. But this language is that of a slave.

A majority taken collectively may be regarded as a being whose opinions, and

most frequently whose interests, are opposed to those of another being, which is styled a minority. If it be admitted that a man, possessing absolute power, may misuse that power by wronging his adversaries, why should a majority not be liable to the same reproach? Men are not apt to change their characters by agglomeration; nor does their patience in the presence of obstacles increase with the consciousness of their strength.¹ And for these reasons I can never willingly invest any number of my fellow-creatures with that unlimited authority which I should refuse to any one of them.

I do not think that it is possible to combine several principles in the same government, so as at the same time to maintain freedom, and really to oppose them to one another. The form of government which is usually termed *mixed* has always appeared to me to be a mere chimera. Accurately speaking there is no such thing as a mixed government (with the meaning usually given to that word), because in all communities some one principle of action may be discovered, which preponderates over the others. England in the last century, which has been more especially cited as an example of this form of government, was in point of

¹ No one will assert that a people cannot forcibly wrong another people: but parties may be looked upon as lesser nations within a greater one, and they are aliens to each other: if therefore it be admitted that a nation can act tyrannically towards another nation, it cannot be denied that a party may do the same towards another party.

* From Alexis de Tocqueville, *Democracy in America* (1835–1840; trans. Henry Reeve, 1835–1840).

fact an essentially aristocratic state, although it comprised very powerful elements of democracy: for the laws and customs of the country were such, that the aristocracy could not but preponderate in the end, and subject the direction of public affairs to its own will. The error arose from too much attention being paid to the actual struggle which was going on between the nobles and the people, without considering the probable issue of the contest, which was in reality the important point. When a community really has a mixed government, that is to say, when it is equally divided between two adverse principles, it must either pass through a revolution, or fall into complete dissolution.

I am therefore of opinion that some one social power must always be made to predominate over the others; but I think that liberty is endangered when this power is checked by no obstacles which may retard its course, and force it to moderate its own vehemence.

Unlimited power is in itself a bad and dangerous thing; human beings are not competent to exercise it with discretion; and God alone can be omnipotent, because his wisdom and his justice are always equal to his power. But no power upon earth is so worthy of honor for itself, or of reverential obedience to the rights which it represents, that I would consent to admit its uncontrolled and all-predominant authority. When I see that the right and the means of absolute command are conferred on a people or upon a king, upon an aristocracy or a democracy, a monarchy or a republic, I recognize the germ of tyranny, and I journey onwards to a land of more hopeful institutions.

In my opinion the main evil of the present democratic institutions of the United States does not arise, as is often asserted in Europe, from their weakness, but from their overpowering strength; and I am not so much alarmed at the excessive liberty which reigns in that country, as at the very inadequate securities which exist against tyranny.

When an individual or a party is wronged in the United States, to whom can he apply for redress? If to public opinion, public opinion constitutes the majority; if to the legislature, it represents the majority; and implicitly obeys its injunctions; if to the executive power, it is appointed by the majority and remains a passive tool in its hands; the public troops consist of the majority under arms; the jury is the majority invested with the right of hearing judicial cases; and in certain States even the judges are elected by the majority. However iniquitous or absurd the evil of which you complain may be, you must submit to it as well as you can.²

² A striking instance of the excesses which may be occasioned by the despotism of the majority occurred at Baltimore in the year 1812. At that time the war was very popular in Baltimore. A journal which had taken the other side of the question excited the indignation of the inhabitants by its opposition. The populace assembled, broke the printing presses, and attacked the houses of the newspaper editors. The militia was called out, but no one obeyed the call; and the only means of saving the poor wretches who were threatened by the frenzy of the mob, was to throw them into prison as common malefactors. But even this precaution was ineffectual; the mob collected again during the night; the magistrates again made a vain attempt to call out the militia; the prison was forced, one of the newspaper editors was killed upon the spot, and the others were left for dead: the guilty parties were acquitted by the jury when they were brought to trial.

I said one day to an inhabitant of Pennsylvania, "Be so good as to explain to me how it happens, that in a State founded by Quakers, and celebrated for its toleration, freed Blacks are not allowed to exercise civil rights. They pay the taxes: is it not fair that they should have a vote?"

"You insult us," replied my informant, "if you imagine that our legislators could have committed so gross an act of injustice and intolerance."

"What, then, the Blacks possess the right of voting in this country?"

"Without the slightest doubt."

"How comes it, then, that at the polling-

If, on the other hand, a legislative power could be so constituted as to represent the majority without necessarily being the slave of its passions; an executive, so as to retain a certain degree of uncontrolled authority; and a judiciary, so as to remain independent of the two other powers; a government would be formed which would still be democratic, without incurring any risk of tyrannical abuse.

I do not say that tyrannical abuses frequently occur in America at the present day; but I maintain that no sure barrier is established against them, and that the causes which mitigate the government are to be found in the circumstances and the manners of the country more than in its laws.

POWER OF THE MAJORITY OVER PUBLIC OPINION

It is in the examination of the display of public opinion in the United States, that we clearly perceive how far the power of the majority surpasses all the powers with which we are acquainted in Europe. Intellectual principles exercise an influence which is so invisible and often so inappreciable, that they baffle the toils of oppression. At the present time the most absolute monarchs in Europe are unable

booth this morning I did not perceive a single Negro in the whole meeting?"

"This is not the fault of the law; the Negroes have an undisputed right of voting: but they voluntarily abstain from making their appearance."

"A very pretty piece of modesty on their parts!" rejoined I.

"Why, the truth is, that they are not disinclined to vote, but they are afraid of being maltreated; in this country the law is sometimes unable to maintain its authority without the support of the majority. But in this case the majority entertains very strong prejudices against the Blacks, and the magistrates are unable to protect them in the exercise of their legal privileges."

"What, then, the majority claims the right not only of making the laws, but of breaking the laws it has made?"

to prevent certain notions, which are opposed to their authority, from circulating in secret throughout their dominions, and even in their courts. Such is not the case in America; as long as the majority is still undecided, discussion is carried on; but as soon as its decision is irrevocably pronounced, a submissive silence is observed; and the friends, as well as the opponents of the measure, unite in assenting to its propriety. The reason of this is perfectly clear: no monarch is so absolute as to combine all the powers of society in his own hands, and to conquer all opposition, with the energy of a majority, which is invested with the right of making and of executing the laws.

The authority of a king is purely physical, and it controls the actions of the subject without subduing his private will; but the majority possesses a power which is physical and moral at the same time; it acts upon the will as well as upon the actions of men, and it represses not only all contest, but all controversy.

I know no country in which there is so little true independence of mind and freedom of discussion as in America. In any constitutional state in Europe every sort of religious and political theory may be advocated and propagated abroad; for there is no country in Europe so subdued by any single authority, as not to contain citizens who are ready to protect the man who raises his voice in the cause of truth, from the consequences of his hardihood. If he is unfortunate enough to live under an absolute government, the people is upon his side; if he inhabits a free country, he may find a shelter behind the authority of the throne, if he require one. The aristocratic part of society supports him in some countries, and the democracy in others. But in a nation where democratic institutions exist, organized like those of the United States, there is but one sole authority, one single element of strength and of success, with nothing beyond it.

In America, the majority arises very formidable barriers to the liberty of opinion: within these barriers an author may

write whatever he pleases, but he will repent it if he ever step beyond them. Not that he is exposed to the terrors of an auto-da-fé, but he is tormented by the slights and persecutions of daily obloquy. His political career is closed for ever, since he has offended the only authority which is able to promote his success. Every sort of compensation, even that of celebrity, is refused to him. Before he published his opinions, he imagined that he held them in common with many others; but no sooner has he declared them openly than he is loudly censured by his overbearing opponents, whilst those who think, without having the courage to speak, like him, abandon him in silence. He yields at length, oppressed by the daily efforts he has been making, and he subsides into silence as if he was tormented by remorse for having spoken the truth.

Fetters and headmen were the coarse instruments which tyranny formerly employed; but the civilization of our age has refined the arts of despotism, which seemed however to have been sufficiently perfected before. The excesses of monarchical power had devised a variety of physical means of oppression; the democratic republics of the present day have rendered it as entirely an affair of the mind, as that will which it is intended to coerce. Under the absolute sway of an individual despot, the body was attacked in order to subdue the soul; and the soul escaped the blows which were directed against it, and rose superior to the attempt; but such is not the course adopted by tyranny in democratic republics; there the body is left free, and the soul is enslaved. The sovereign can no longer say, "You shall think as I do on pain of death": but he says, "You are free to think differently from me, and to retain your life, your property, and all that you possess; but if such be your determination, you are henceforth an alien among your people. You may retain your civil rights, but they will be useless to you, for you will never be chosen by your fellow-citizens, if you solicit their

suffrages; and they will affect to scorn you, if you solicit their esteem. You will remain among men, but you will be deprived of the rights of mankind. Your fellow-creatures will shun you like an impure being; and those who are most persuaded of your innocence will abandon you too, lest they should be shunned in their turn. Go in peace! I have given you your life, but it is an existence incomparably worse than death."

Absolute monarchies have thrown an odium upon despotism; let us beware lest democratic republics should restore oppression, and should render it less odious and less degrading in the eyes of the many, by making it still more onerous to the few.

Works have been published in the proudest nations of the Old World, expressly intended to censure the vices and deride the follies of the time: Labruyère inhabited the palace of Louis XIV when he composed his chapter upon the Great, and Molière criticized the courtiers in the very pieces which were acted before the Court. But the ruling power in the United States is not to be made game of; the smallest reproach irritates its sensibility, and the slightest joke which has any foundation in truth renders it indignant; from the style of its language to the more solid virtues of its character, everything must be made the subject of encomium. No writer, whatever be his eminence, can escape from this tribute or adulation to his fellow-citizens. The majority lives in the perpetual practice of self-applause; and there are certain truths which the Americans can only learn from strangers or from experience.

If great writers have not at present existed in America, the reason is very simply given in these facts; there can be no literary genius without freedom of opinion, and freedom of opinion does not exist in America. The Inquisition has never been able to prevent a vast number of antireligious books from circulating in Spain. The empire of the majority succeeds much better in the United States, since it actually removes the wish of pub-

lishing them. Unbelievers are to be met with in America, but, to say the truth, there is no public organ of infidelity. Attempts have been made by some governments to protect the morality of nations by prohibiting licentious books. In the United States no one is punished for this sort of works, but no one is induced to write them; not because all the citizens are immaculate in their manners, but because the majority of the community is decent and orderly.

In these cases the advantages derived from the exercise of this power are unquestionable; and I am simply discussing the nature of the power itself. This irresistible authority is a constant fact, and its judicial exercise is an accidental occurrence.

WHY DEMOCRATIC NATIONS LOVE EQUALITY MORE THAN LIBERTY

The first and most intense passion which is engendered by the equality of conditions is, I need hardly say, the love of that same equality. My readers will therefore not be surprised that I speak of it before all others.

Everybody has remarked, that in our time, and especially in France, this passion for equality is every day gaining ground in the human heart. It has been said a hundred times that our contemporaries are far more ardently and tenaciously attached to equality than to freedom; but, as I do not find that the causes of the fact have been sufficiently analyzed, I shall endeavour to point them out.

It is possible to imagine an extreme point at which freedom and equality would meet and be confounded together. Let us suppose that all the members of the community take a part in the government, and that each one of them has an equal right to take a part in it. As none is different from his fellows, none can exercise a tyrannical power; men will be perfectly free, because they will all be en-

tirely equal; and they will all be perfectly equal, because they will be entirely free. To this ideal state democratic nations tend. Such is the completest form that equality can assume upon earth; but there are a thousand others which, without being equally perfect, are not less cherished by those nations.

The principle of equality may be established in civil society, without prevailing in the political world. Equal rights may exist of indulging in the same pleasures, of entering the same professions, of frequenting the same places—in a word, of living in the same manner and seeking wealth by the same means, although all men do not take an equal share in the government.

A kind of equality may even be established in the political world, though there should be no political freedom there. A man may be the equal of all his countrymen save one, who is the master of all without distinction, and who selects equally from among them all the agents of his power.

Several other combinations might be easily imagined, by which very great equality would be united to institutions more or less free, or even to institutions wholly without freedom.

Although men cannot become absolutely equal unless they be entirely free, and consequently equality, pushed to its furthest extent, may be confounded with freedom, yet there is good reason for distinguishing the one from the other. The taste which men have for liberty, and that which they feel for equality, are, in fact, two different things; and I am not afraid to add, that, among democratic nations, they are two unequal things.

Upon close inspection, it will be seen that there is in every age some peculiar and preponderating fact with which all others are connected; this fact almost always gives birth to some pregnant idea or some ruling passion, which attracts to itself, and bears away in its course, all the feelings and opinions of the time: it is like a great stream, toward which each of the surrounding rivulets seems to flow.

Freedom has appeared in the world at different times and under various forms; it has not been exclusively bound to any social condition, and it is not confined to democracies. Freedom cannot, therefore, form the distinguishing characteristic of democratic ages. The peculiar and preponderating fact which marks those ages as its own is the equality of conditions; the ruling passion of men in those periods is the love of this equality. Ask not what singular charm the men of democratic ages find in being equal, or what special reasons they may have for clinging so tenaciously to equality rather than to the other advantages which society holds out to them: equality is the distinguishing characteristic of the age they live in; that, of itself, is enough to explain that they prefer it to all the rest.

But independently of this reason there are several others, which will at all times habitually lead men to prefer equality to freedom.

If a people could ever succeed in destroying, or even diminishing, the equality which prevails in its own body, this could only be accomplished by long and laborious efforts. Its social condition must be modified, its laws abolished, its opinions superseded, its habits changed, its manners corrupted. But political liberty is more easily lost; to neglect to hold it fast, is to allow it to escape.

Men therefore not only cling to equality because it is dear to them; they also adhere to it because they think it will last for ever.

That political freedom may compromise in its excesses the tranquillity, the property, the lives of individuals, is obvious to the narrowest and most unthinking minds. But, on the contrary, none but attentive and clear-sighted men perceive the perils with which equality threatens us, and they commonly avoid pointing them out. They know that the calamities they apprehend are remote, and flatter themselves that they will only fall upon future generations, for which the present generation takes but little thought. The evils which freedom sometimes brings with it are immediate; they are apparent

to all, and all are more or less affected by them. The evils which extreme equality may produce are slowly disclosed; they creep gradually into the social frame; they are only seen at intervals, and at the moment at which they become most violent, habit already causes them to be no longer felt.

The advantages which freedom brings are only shown by length of time; and it is always easy to mistake the cause in which they originate. The advantages of equality are instantaneous, and they may constantly be traced from their source.

Political liberty bestows exalted pleasures, from time to time, upon a certain number of citizens. Equality every day confers a number of small enjoyments on every man. The charms of equality are every instant felt, and are within the reach of all; the noblest hearts are not insensible to them, and the most vulgar souls exult in them. The passion which equality engenders must therefore be at once strong and general. Men cannot enjoy political liberty unpurchased by some sacrifices, and they never obtain it without great exertions. But the pleasures of equality are self-proffered: each of the petty incidents of life seems to occasion them, and in order to taste them nothing is required but to live.

Democratic nations are at all times fond of equality, but there are certain epochs at which the passion they entertain for it swells to the height of fury. This occurs at the moment when the old social system, long menaced, completes its own destruction after a last intestine struggle, and when the barriers of rank are at length thrown down. At such times men pounce upon equality as their booty, and they cling to it as to some precious treasure which they fear to lose. The passion for equality penetrates on every side into men's hearts, expands there, and fills them entirely. Tell them not that by this blind surrender of themselves to an exclusive passion, they risk their dearest interests: they are deaf. Show them not freedom escaping from their grasp, while they are looking another way: they are blind—or rather, they can discern but

one sole object to be desired in the universe.

What I have said is applicable to all democratic nations: what I am about to say concerns the French alone. Among most modern nations, and especially among all those of the continent of Europe, the taste and the idea of freedom only began to exist and to extend itself at the time when social conditions were tending to equality, and as a consequence of that very equality. Absolute kings were the most efficient levellers of ranks among their subjects. Among these nations equality preceded freedom: equality was therefore a fact of some standing, when freedom was still a novelty: the one had already created customs, opinions, and laws belonging to it, when the other, alone and for the first time, came into actual existence. Thus the latter was till only recently an affair of opinion and of taste, while the former had already crept into the habits of the people, possessed itself of their manners, and given a particular turn to the smallest actions in their lives. Can it be wondered that the men of our own time prefer the one to the other?

I think that democratic communities have a natural taste for freedom: left to themselves, they will seek it, cherish it, and view any privation of it with regret. But for equality, their passion is ardent, insatiable, incessant, invincible: they call for equality in freedom; if they cannot obtain that, they still call for equality in slavery. They will endure poverty, servitude, barbarism—but they will not endure aristocracy.

This is true at all times, and especially true in our own. All men and all powers seeking to cope with this irresistible passion, will be overthrown and destroyed by it. In our age, freedom cannot be established without it, and despotism itself cannot reign without its support.

ARISTOCRACY OF MANUFACTURERS

I have shown that democracy is favourable to the growth of manufactures, and

that it increases without limit the numbers of the manufacturing classes: we shall now see by what side-road manufactures may possibly in their turn bring men back to aristocracy.

It is acknowledged, that when a workman is engaged every day upon the same detail, the whole commodity is produced with greater ease, promptitude, and economy. It is likewise acknowledged, that the cost of the production of manufactured goods is diminished by the extent of the establishment in which they are made, and by the amount of capital employed or of credit. These truths had long been imperfectly discerned, but in our time they have been demonstrated. They have been already applied to many very important kinds of manufactures, and the humblest will gradually be governed by them. I know of nothing in politics which deserves to fix the attention of the legislator more closely than these two new axioms of the science of manufactures.

When a workman is unceasingly and exclusively engaged in the fabrication of one thing, he ultimately does his work with singular dexterity; but at the same time he loses the general faculty of applying his mind to the direction of the work. He every day becomes more adroit and less industrious; so that it may be said of him, that in proportion as the workman improves, the man is degraded. What can be expected of a man who has spent twenty years of his life in making heads for pins? And to what can that mighty human intelligence, which has so often stirred the world, be applied in him, except it be to investigate the best method of making pins' heads? When a workman has spent a considerable portion of his existence in this manner, his thoughts are for ever set upon the object of his daily toil; his body has contracted certain fixed habits, which it can never shake off: in a word, he no longer belongs to himself, but to the calling which he has chosen. It is in vain that laws and manners have been at pains to level all barriers round such a man, and to open to him on every side a thousand different paths

to fortune; a theory of manufactures more powerful than manners and laws binds him to a craft, and frequently to a spot, which he cannot leave: it assigns to him a certain place in society, beyond which he cannot go: in the midst of universal movement, it has rendered him stationary.

In proportion as the principle of the division of labour is more extensively applied, the workman becomes more weak, more narrow-minded and more dependent. The art advances, the artisan recedes. On the other hand, in proportion as it becomes more manifest that the productions of manufactures are by so much the cheaper and better as the manufacture is larger and the amount of capital employed more considerable, wealthy and educated men come forward to embark in manufactures which were heretofore abandoned to poor or ignorant handicraftsmen. The magnitude of the efforts required, and the importance of the results to be obtained, attract them. Thus at the very time at which the science of manufactures lowers the class of workmen, it raises the class of masters.

Whereas the workman concentrates his faculties more and more upon the study of a single detail, the master surveys a more extensive whole, and the mind of the latter is enlarged in proportion as that of the former is narrowed. In a short time the one will require nothing but physical strength without intelligence; the other stands in need of science, and almost of genius, to ensure success. This man resembles more and more the administrator of a vast empire—that man, a brute.

The master and the workman have then here no similarity, and their differences increase every day. They are only connected as the two rings at the extremities of a long chain. Each of them fills the station which is made for him, and out of which he does not get: the one is continually, closely, and necessarily dependent upon the other, and seems as much born to obey as that other is to

command. What is this but aristocracy?

As the conditions of men constituting the nation become more and more equal, the demand for manufactured commodities becomes more general and more extensive; and the cheapness which places these objects within the reach of slender fortunes becomes a great element of success. Hence there are every day more men of great opulence and education who devote their wealth and knowledge to manufactures; and who seek, by opening large establishments, and by a strict division of labour, to meet the fresh demands which are made on all sides. Thus, in proportion as the mass of the nation turns to democracy, that particular class which is engaged in manufactures becomes more aristocratic. Men grow more alike in the one—more different in the other; and inequality increases in the less numerous class, in the same ratio in which it decreases in the community.

Hence it would appear, on searching to the bottom, that aristocracy should naturally spring out of the bosom of democracy.

But this kind of aristocracy by no means resembles those kinds which preceded it. It will be observed at once, that, as it applies exclusively to manufactures and to some manufacturing callings, it is a monstrous exception in the general aspect of society. The small aristocratic societies which are formed by some manufacturers in the midst of the immense democracy of our age, contain, like the great aristocratic societies of former ages, some men who are very opulent, and a multitude who are wretchedly poor. The poor have few means of escaping from their condition and becoming rich; but the rich are constantly becoming poor, or they give up business when they have realized a fortune. Thus the elements of which the class of the poor is composed, are fixed; but the elements of which the class of the rich is composed are not so. To say the truth, though there are rich men, the class of rich men does not exist; for these rich individuals have no feelings

or purposes in common, no mutual traditions or mutual hopes: there are therefore members, but no body.

Not only are the rich not compactly united among themselves, but there is no real bond between them and the poor. Their relative position is not a permanent one; they are constantly drawn together or separated by their interests. The workman is generally dependent on the master, but not on any particular master; these two men meet in the factory, but know not each other elsewhere; and while they come into contact on one point, they stand very wide apart on all others. The manufacturer asks nothing of the workman but his labour; the workman expects nothing from him but his wages. The one contracts no obligation to protect, nor the other to defend; and they are not permanently connected either by habit or by duty.

The aristocracy created by business rarely settles in the midst of the manufacturing population which it directs: the object is not to govern that population, but to use it. An aristocracy thus constituted can have no great hold upon those whom it employs; and even if it succeed in retaining them at one moment, they escape the next: it knows not how to will, and it cannot act.

The territorial aristocracy of former ages was either bound by law, or thought itself bound by usage, to come to the relief of its serving-men, and to succour their distresses. But the manufacturing aristocracy of our age first impoverishes and debases the men who serve it, and then abandons them to be supported by the charity of the public. This is a natural consequence of what has been said before. Between the workman and the master there are frequent relations, but no real partnership.

I am of opinion, upon the whole, that the manufacturing aristocracy which is growing up under our eyes, is one of the harshest which ever existed in the world; but at the same time it is one of the most confined and least dangerous. Nevertheless the friends of democracy should keep

their eyes anxiously fixed in this direction; for if ever a permanent inequality of conditions and aristocracy again penetrate into the world, it may be predicted that this is the channel by which they will enter.

EQUALITY AND FREE INSTITUTIONS

The principle of equality, which makes men independent of each other, gives them a habit and a taste for following, in their private actions, no other guide but their own will. This complete independence, which they constantly enjoy toward their equals and in the intercourse of private life, tends to make them look upon all authority with a jealous eye, and speedily suggests to them the notion and the love of political freedom. Men living at such times have a natural bias to free institutions. Take any one of them at a venture, and search if you can his most deep-seated instincts; you will find that of all governments he will soonest conceive and most highly value that government, whose head he has himself elected, and whose administration he may control.

Of all the political effects produced by the equality of conditions, this love of independence is the first to strike the observing, and to alarm the timid; nor can it be said that their alarm is wholly misplaced, for anarchy has a more formidable aspect in democratic countries than elsewhere. As the citizens have no direct influence on each other, as soon as the supreme power of the nations fails, which kept them all in their several stations, it would seem that disorder must instantly reach its utmost pitch, and that, every man drawing aside in a different direction, the fabric of society must at once crumble away. I am however persuaded that anarchy is not the principal evil which democratic ages have to fear, but the least. For the principle of equality begets two tendencies; the one leads men straight to independence, and may suddenly drive them into anarchy; the other conducts them by a longer, more

secret, but more certain road, to servitude. Nations readily discern the former tendency, and are prepared to resist it; they are led away by the latter, without perceiving its drift; hence it is peculiarly important to point it out.

For myself, I am so far from urging as a reproach to the principle of equality that it renders men untractable, that this very circumstance principally calls forth my approbation. I admire to see how it deposits in the mind and heart of man the dim conception and instinctive love of political independence, thus preparing the remedy for the evil which it engenders: it is on this very account that I am attached to it.

CENTRALIZATION OF POLITICAL POWER

As in ages of equality no man is compelled to lend his assistance to his fellow-men, and none has any right to expect much support from them, every one is at once independent and powerless. These two conditions, which must never be either separately considered or confounded together, inspire the citizen of a democratic country with very contrary propensities. His independence fills him with self-reliance and pride among his equals; his debility makes him feel from time to time the want of some outward assistance, which he cannot expect from any of them, because they are all impotent and unsympathizing. In this predicament he naturally turns his eyes to that imposing power which alone rises above the level of universal depression. Of that power his wants and especially his desires continually remind him, until he ultimately views it as the sole and necessary support of his own weakness.³

³ In democratic communities nothing but the central power has any stability in its position or any permanence in its undertakings. All the members of society are in ceaseless stir and transformation. Now it is in the nature of all governments to seek constantly to enlarge their sphere of action: hence it is almost impossible that such a

This may more completely explain what frequently takes place in democratic countries, where the very men who are so impatient of superiors patiently submit to a master, exhibiting at once their pride and their servility.

The hatred which men bear to privilege increases in proportion as privileges become more scarce and less considerable, so that democratic passions would seem to burn most fiercely at the very time when they have least fuel. I have already given the reason of this phenomenon. When all conditions are unequal, no inequality is so great as to offend the eye; whereas the slightest dissimilarity is odious in the midst of general uniformity: the more complete is this uniformity, the more insupportable does the sight of

government should not ultimately succeed, because it acts with a fixed principle and a constant will, upon men, whose position, whose notions, and whose desires are in continual vacillation.

It frequently happens that the members of the community promote the influence of the central power without intending it. Democratic ages are periods of experiment, innovation, and adventure. At such times there are always a multitude of men engaged in difficult or novel undertakings, which they follow alone, without caring for their fellow-men. Such persons may be ready to admit, as a general principle, that the public authority ought not to interfere in private concerns; but, by an exception to that rule, each of them craves for its assistance in the particular concern on which he is engaged, and seeks to draw upon the influence of the government for his own benefit, though he would restrict it on all other occasions. If a large number of men apply this particular exception to a great variety of different purposes, the sphere of the central power extends insensibly in all directions, although each of them wishes it to be circumscribed.

Thus a democratic government increases its power simply by the fact of its permanence. Time is on its side; every incident befriends it; the passions of individuals unconsciously promote it; and it may be asserted, that the older a democratic community is, the more centralized will its government become.

such a difference become. Hence it is natural that the love of equality should constantly increase together with equality itself, and that it should grow by what it feeds upon.

This never-dying, ever-kindling hatred, which sets a democratic people against the smallest privileges, is peculiarly favourable to the gradual concentration of all political rights in the hands of the representative of the state alone. The sovereign, being necessarily and incontestably above all the citizens, excites not their envy, and each of them thinks that he strips his equals of the prerogative which he concedes to the crown.

The man of a democratic age is extremely reluctant to obey his neighbour who is his equal; he refuses to acknowledge in such a person ability superior to his own; he mistrusts his justice, and is jealous of his power; he fears and he contemns him; and he loves continually to remind him of the common dependence in which both of them stand to the same master.

Every central power which follows its natural tendencies courts and encourages the principle of equality; for equality singularly facilitates, extends, and secures the influence of a central power.

In like manner it may be said that every central government worships uniformity: uniformity relieves it from inquiry into an infinite number of small details which must be attended to if rules were to be adapted to men, instead of indiscriminately subjecting men to rules; thus the government likes what the citizens like, and naturally hates what they hate. These common sentiments which, in democratic nations, constantly unite the sovereign and every member of the community in one and the same conviction, establish a secret and lasting sympathy between them. The faults of the government are pardoned for the sake of its tastes; public confidence is only reluctantly withdrawn in the midst even of its excesses and its errors, and it is restored at the first call. Democratic nations often hate those in whose hands the central

power is vested; but they always love that power itself.

Thus, by two separate paths, I have reached the same conclusion. I have shown that the principle of equality suggests to men the notion of a sole, uniform, and strong government: I have now shown that the principle of equality imparts to them a taste for it. To governments of this kind the nations of our age are therefore tending. They are drawn thither by the natural inclination of mind and heart; and in order to reach that result, it is enough that they do not check themselves in their course.

I am of opinion, that, in the democratic ages which are opening upon us, individual independence and local liberties will ever be the produce of artificial contrivance; that centralization will be the natural form of government.⁴

DEMOCRACY AND DESPOTISM

I had remarked during my stay in the United States, that a democratic state of society, similar to that of the Americans, might offer singular facilities for the establishment of despotism; and I perceived, upon my return to Europe, how much use had already been made by most of our rulers, of the notions, the sentiments, and the wants engendered by this same social condition, for the pur-

⁴ A democratic people is not only led by its own tastes to centralize its government, but the passions of all the men by whom it is governed constantly urge it in the same direction. It may easily be foreseen that almost all the able and ambitious members of a democratic community will labour without ceasing to extend the powers of government, because they all hope at some time or other to wield those powers. It is a waste of time to attempt to prove to them that extreme centralization may be injurious to the State, since they are centralizing for their own benefit. Among the public men of democracies there are hardly any but men of great disinterestedness or extreme mediocrity who seek to oppose the centralization of government: the former are scarce, the latter powerless.

pose of extending the circle of their power. This led me to think that the nations of Christendom would perhaps eventually undergo some sort of oppression like that which hung over several of the nations of the ancient world.

A more accurate examination of the subject, and five years of further meditations, have not diminished my apprehensions, but they have changed the object of them.

No sovereign ever lived in former ages so absolute or so powerful as to undertake to administer by his own agency, and without the assistance of intermediate powers, all the parts of a great empire: none ever attempted to subject all his subjects indiscriminately to strict uniformity of regulation, and personally to tutor and direct every member of the community. The notion of such an undertaking never occurred to the human mind; and if any man had conceived it, the want of information, the imperfection of the administrative system, and above all, the natural obstacles caused by the inequality of conditions, would speedily have checked the execution of so vast a design.

When the Roman emperors were at the height of their power, the different nations of the empire still preserved manners and customs of great diversity; although they were subject to the same monarch, most of the provinces were separately administered; they abounded in powerful and active municipalities; and although the whole government of the empire was centered in the hands of the emperor alone, and he always remained, upon occasions, the supreme arbiter in all matters, yet the details of social life and private occupations lay for the most part beyond his control. The emperors possessed, it is true, an immense and unchecked power, which allowed them to gratify all their whimsical tastes, and to employ for that purpose the whole strength of the State. They frequently abused that power arbitrarily to deprive their subjects of property or of

life: their tyranny was extremely onerous to the few, but it did not reach the greater number; it was fixed to some few main objects, and neglected the rest; it was violent, but its range was limited.

But it would seem that if despotism were to be established among the democratic nations of our days, it might assume a different character; it would be more extensive and more mild; it would degrade men without tormenting them. I do not question, that in an age of instruction and equality like our own, sovereigns might more easily succeed in collecting all political power into their hands, and might interfere more habitually and decidedly within the circle of private interests, than any sovereign of antiquity could ever do. But this same principle of equality which facilitates despotism, tempers its rigour. We have seen how the manners of society become more humane and gentle in proportion as men become more equal and alike. When no member of the community has much power or much wealth, tyranny is, as it were, without opportunities and a field of action. As all fortunes are scanty, the passions of men are naturally circumscribed—their imagination limited, their pleasures simple. This universal moderation moderates the sovereign himself, and checks within certain limits the inordinate stretch of his desires.

Independently of these reasons drawn from the nature of the state of society itself, I might add many others arising from causes beyond my subject; but I shall keep within the limits I have laid down to myself.

Democratic governments may become violent and even cruel at certain periods of extreme effervescence or of great danger; but these crises will be rare and brief. When I consider the petty passions of our contemporaries, the mildness of their manners, the extent of their education, the purity of their religion, the gentleness of their morality, their regular and industrious habits, and the restraint which they almost all observe in their

vices no less than in their virtues, I have no fear that they will meet with tyrants in their rulers, but rather guardians.⁵

I think then that the species of oppression by which democratic nations are menaced is unlike anything which ever before existed in the world: our contemporaries will find no prototype of it in their memories. I am trying myself to choose an expression which will accurately convey the whole of the idea I have formed of it, but in vain; the old words *despotism* and *tyranny* are inappropriate: the thing itself is new; and since I cannot name it, I must attempt to define it.

I seek to trace the novel features under which despotism may appear in the world. The first thing that strikes the observation is an innumerable multitude of men all equal and alike, incessantly endeavouring to procure the petty and paltry pleasures with which they glut their lives. Each of them, living apart, is as a stranger to the fate of all the rest—his children and his private friends constitute to him the whole of mankind; as for the rest of his fellow-citizens, he is close to them, but he sees them not;—he touches them, but he feels them not; he exists but in himself and for himself alone; and if

⁵ I have often asked myself what would happen if, amid the relaxation of democratic manners, and as a consequence of the restless spirit of the army, a military government were ever to be founded among any of the nations of the present age. I think that even such a government would not differ very much from the outline I have drawn, and that it would retain none of the fierce characteristics of a military oligarchy. I am persuaded that, in such a case, a sort of fusion would take place between the habits of official men, and those of the military service. The administration would assume something of a military character, and the army some of the usages of the civil administration. The result would be a regular, clear, exact, and absolute system of government: the people would become the reflection of the army, and the community be drilled like a garrison.

his kindred still remain to him, he may be said at any rate to have lost his country.

Above this race of men stands an immense and tutelary power, which takes upon itself alone to secure their gratifications, and watch over their fate. That power is absolute, minute, regular, provident, and mild. It would be like the authority of a parent, if, like that authority, its object was to prepare men for manhood; but it seeks on the contrary to keep them in perpetual childhood: it is well content that the people should rejoice, provided they think of nothing but rejoicing. For their happiness such a government willingly labours, but it chooses to be the sole agent and the only arbiter of that happiness: it provides for their security, foresees and supplies their necessities, facilitates their pleasures, manages their principal concerns, directs their industry, regulates the descent of property, and subdivides their inheritances—what remains, but to spare them all the care of thinking and all the trouble of living?

Thus it every day renders the exercise of the free agency of man less useful and less frequent; it circumscribes the will within a narrower range, and gradually robs a man of all the uses of himself. The principle of equality has prepared men for these things: it has predisposed men to endure them, and oftentimes to look on them as benefits.

After having thus successively taken each member of the community in its powerful grasp, and fashioned them at will, the supreme power then extends its arm over the whole community. It covers the surface of society with a network of small complicated rules, minute and uniform, through which the most original minds and the most energetic characters cannot penetrate, to rise above the crowd. The will of man is not shattered, but softened, bent, and guided; men are seldom forced by it to act, but they are constantly restrained from acting: such a power does not destroy, but it prevents

existence; it does not tyrannize, but it compresses, enervates, extinguishes, and stupefies a people, till each nation is reduced to be nothing better than a flock of timid and industrious animals, of which the government is the shepherd.

I have always thought that servitude of the regular, quiet, and gentle kind which I have just described, might be combined more easily than is commonly believed with some of the outward forms of freedom; and that it might even establish itself under the wing of the sovereignty of the people.

Our contemporaries are constantly excited by two conflicting passions; they want to be led, and they wish to remain free: as they cannot destroy either one or the other of these contrary propensities, they strive to satisfy them both at once. They devise a sole, tutelary, and all-powerful form of government, but elected by the people. They combine the principle of centralization and that of popular sovereignty; this gives them a respite: they console themselves for being in tutelage by the reflection that they have chosen their own guardians. Every man allows himself to be put in leading-strings, because he sees that it is not a person or a class of persons, but the people at large that hold the end of his chain.

By this system the people shake off their state of dependence just long enough to select their master, and then relapse into it again. A great many persons at the present day are quite contented with this sort of compromise between administrative despotism and the sovereignty of the people; and they think they have done enough for the protection of individual freedom when they have surrendered it to the power of the nation at large. This does not satisfy me: the nature of him I am to obey signifies less to me than the fact of extorted obedience.

I do not however deny that a constitution of this kind appears to me to be infinitely preferable to one, which, after having concentrated all the powers of government, should vest them in the

hands of an irresponsible person or body of persons. Of all the forms which democratic despotism could assume, the latter would assuredly be the worst.

When the sovereign is elective, or narrowly watched by a legislature which is really elective and independent, the oppression which he exercises over individuals is sometimes greater, but it is always less degrading; because every man, when he is oppressed and disarmed, may still imagine, that while he yields obedience it is to himself he yields it, and that it is to one of his own inclinations that all the rest give way. In like manner I can understand that when the sovereign represents the nation, and is dependent upon the people, the rights and the power of which every citizen is deprived, not only serve the head of the state, but the state itself; and that private persons derive some return from the sacrifice of their independence which they have made to the public. To create a representation of the people in a very centralized country is, therefore, to diminish the evil which extreme centralization may produce, but not to get rid of it.

I admit that by this means room is left for the intervention of individuals in the more important affairs; but it is not the less suppressed in the smaller and more private ones. It must not be forgotten that it is especially dangerous to enslave men in the minor details of life. For my own part, I should be inclined to think freedom less necessary in great things than in little ones, if it were possible to be secure of the one without possessing the other.

Subjection in minor affairs breaks out every day, and is felt by the whole community indiscriminately. It does not drive men to resistance, but it crosses them at every turn, till they are led to surrender the exercise of their will. Thus their spirit is gradually broken and their character enervated; whereas that obedience, which is exacted on a few important but rare occasions, only exhibits servitude at certain intervals, and throws the burden of it upon a small number of men. It is

vain to summon a people, which has been rendered so dependent on the central power, to choose from time to time the representatives of that power; this rare and brief exercise of their free choice, however important it may be, will not prevent them from gradually losing the faculties of thinking, feeling, and acting for themselves, and thus gradually falling below the level of humanity.⁶

I add that they will soon become incapable of exercising the great and only privilege which remains to them. The democratic nations which have introduced freedom into their political constitution, at the very time when they were augmenting the despotism of their administrative constitution, have been led into strange paradoxes. To manage those minor affairs in which good sense is all that is wanted—the people are held to be unequal to the task; but when the government of the country is at stake, the people are invested with immense powers; they are alternately made the playthings of their ruler, and his masters—more than kings, and less than men. After having exhausted all the different

modes of election, without finding one to suit their purpose, they are still amazed, and still bent on seeking further; as if the evil they remark did not originate in the constitution of the country far more than in that of the electoral body.

It is, indeed, difficult to conceive how men who have entirely given up the habit of self-government should succeed in making a proper choice of those by whom they are to be governed; and no one will ever believe that a liberal, wise, and energetic government can spring from the suffrages of a subservient people.

A constitution, which should be republican in its head and ultra-monarchical in all its other parts, has ever appeared to me to be a shortlived monster. The vices of rulers and the ineptitude of the people would speedily bring about its ruin; and the nation, weary of its representatives and of itself, would create freer institutions, or soon return to stretch itself at the feet of a single master.

THE COMING ERA OF WORLD DEMOCRACY

Before I close for ever the theme that has detained me so long, I would fain take a parting survey of all the various characteristics of modern society, and appreciate at last the general influence to be exercised by the principle of equality upon the fate of mankind; but I am stopped by the difficulty of the task, and in presence of so great an object my sight is troubled, and my reason fails.

The society of the modern world which I have sought to delineate, and which I seek to judge, has but just come into existence. Time has not yet shaped it into perfect form: the great revolution by which it has been created is not yet over; and amid the occurrences of our time, it is almost impossible to discern what will pass away with the revolution itself, and what will survive its close. The world which is rising into existence is still half encumbered by the remains of the world which is waning into decay; and amid

⁶It cannot be absolutely or generally affirmed that the greatest danger of the present age is license or tyranny, anarchy or despotism. Both are equally to be feared; and the one may as easily proceed as the other from the self-same cause, namely, that *general apathy*, which is the consequence of what I have termed Individualism: it is because this apathy exists, that the executive government, having mustered a few troops, is able to commit acts of oppression one day, and the next day a party, which has mustered some thirty men in its ranks, can also commit acts of oppression. Neither one nor the other can find anything to last; and the causes which enable them to succeed easily, prevent them from succeeding long: they rise because nothing opposes them, and they sink because nothing supports them. The proper object therefore of our most strenuous resistance, is far less either anarchy or despotism, than that apathy which may almost indifferently beget either the one or the other.

the vast perplexity of human affairs, none can say how much of ancient institutions and former manners will remain, or how much will completely disappear.

Although the revolution which is taking place in the social condition, the laws, the opinions and the feelings of men, is still very far from being terminated, yet its results already admit of no comparison with anything that the world has ever before witnessed. I go back from age to age up to the remotest antiquity: but I find no parallel to what is occurring before my eyes: as the past has ceased to throw its light upon the future, the mind of man wanders in obscurity.

Nevertheless, in the midst of a prospect so wide, so novel, and so confused, some of the more prominent characteristics may already be discerned and pointed out. The good things and the evils of life are more equally distributed in the world: great wealth tends to disappear, the number of small fortunes to increase; desires and gratifications are multiplied, but extraordinary prosperity and irremediable penury are alike unknown. The sentiment of ambition is universal, but the scope of ambition is seldom vast. Each individual stands apart in solitary weakness; but society at large is active, provident, and powerful: the performances of private persons are insignificant, those of the State immense.

There is little energy of character; but manners are mild, and laws humane. If there be few instances of exalted heroism or of virtues of the highest, brightest, and purest temper, men's habits are regular, violence is rare, and cruelty almost unknown. Human existence becomes longer, and property more secure: life is not adorned with brilliant trophies, but it is extremely easy and tranquil. Few pleasures are either very refined or very coarse; and highly polished manners are as uncommon as great brutality of tastes. Neither men of great learning, nor extremely ignorant communities, are to be met with; genius becomes more rare, information more diffused. The human mind is impelled by the small efforts of

all mankind combined together, not by the strenuous activity of certain men. There is less perfection, but more abundance, in all the productions of the arts. The ties of race, of rank, and of country are relaxed; the great bond of humanity is strengthened.

If I endeavour to find out the most general and the most prominent of all these different characteristics, I shall have occasion to perceive, that what is taking place in men's fortunes manifests itself under a thousand other forms. Almost all extremes are softened or blunted: all that was most prominent is superseded by some mean term, at once less lofty and less low, less brilliant and less obscure, than what before existed in the world.

When I survey this countless multitude of beings, shaped in each other's likeness, amidst whom nothing rises and nothing falls, the sight of such universal uniformity saddens and chills me, and I am tempted to regret that state of society which has ceased to be. When the world was full of men of great importance and extreme insignificance, of great wealth and extreme poverty, of great learning and extreme ignorance, I turned aside from the latter to fix my observation on the former alone, who gratified my sympathies. But I admit that this gratification arose from my own weakness; it is because I am unable to see at once all that is around me, that I am allowed thus to select and separate the objects of my predilection from among so many others. Such is not the case with that Almighty and Eternal Being, whose gaze necessarily includes the whole of created things, and who surveys distinctly, though at once, mankind and man.

We may naturally believe that it is not the singular prosperity of the few, but the greater well-being of all, which is most pleasing in the sight of the Creator and Preserver of men. What appears to me to be man's decline, is to His eye advancement; what afflicts me is acceptable to Him. A state of equality is perhaps less elevated, but is more just; and its justice

constitutes its greatness and its beauty. I would strive then to raise myself to this point of the Divine contemplation, and thence to view and to judge the concerns of men.

No man, upon the earth, can as yet affirm absolutely and generally, that the new state of the world is better than its former one; but it is already easy to perceive that this state is different. Some vices and some virtues were so inherent in the constitution of an aristocratic nation, and are so opposite to the character of a modern people, that they can never be infused into it; some good tendencies and some bad propensities which were unknown to the former, are natural to the latter; some ideas suggest themselves spontaneously to the imagination of the one, which are utterly repugnant to the mind of the other. They are like two distinct orders of human beings, each of which has its own merits and defects, its own advantages and its own evils. Care must therefore be taken not to judge the state of society, which is now coming into existence, by notions derived from a state of society which no longer exists; for as these states of society are exceedingly different in their structure, they cannot be submitted to a just or fair comparison.

It would be scarcely more reasonable to require of our own contemporaries the peculiar virtues which originated in the social condition of their forefathers, since that social condition is itself fallen, and has drawn into one promiscuous ruin the good and evil which belonged to it.

But as yet these things are imperfectly understood. I find that a great number of my contemporaries undertake to make a certain selection from among the institutions, the opinions, and the ideas which originated in the aristocratic constitution of society as it was: a portion of these elements they would willingly relinquish, but they would keep the remainder and

transplant them into their new world. I apprehend that such men are wasting their time and their strength in virtuous but unprofitable efforts.

The object is not to retain the peculiar advantages which the inequality of conditions bestows upon mankind, but to secure the new benefits which equality may supply. We have not to seek to make ourselves like our progenitors, but to strive to work out that species of greatness and happiness which is our own.

For myself, who now look back from this extreme limit of my task, and discover from afar, but at once, the various objects which have attracted my more attentive investigation upon my way, I am full of apprehensions and of hopes. I perceive mighty dangers which it is possible to ward off—mighty evils which may be avoided or alleviated; and I cling with a firmer hold to the belief, that for democratic nations to be virtuous and prosperous they require but to will it.

I am aware that many of my contemporaries maintain that nations are never their own masters here below, and that they necessarily obey some insurmountable and unintelligent power, arising from anterior events, from their race, or from the soil and climate of their country. Such principles are false and cowardly; such principles can never produce aught but feeble men and pusillanimous nations. Providence has not created mankind entirely independent or entirely free. It is true that around every man a fatal circle is traced, beyond which he cannot pass; but within the wide verge of that circle he is powerful and free: as it is with man, so with communities. The nations of our time cannot prevent the conditions of men from becoming equal: but it depends upon themselves whether the principle of equality is to lead them to servitude or freedom, to knowledge or barbarism, to prosperity or to wretchedness.

II MILL

I *On Liberty**

LIBERTY AND AUTHORITY

The subject of this Essay is not the so-called Liberty of the Will, so unfortunately opposed to the misnamed doctrine of Philosophical Necessity; but Civil, or Social Liberty: the nature and limits of the power which can be legitimately exercised by society over the individual. A question seldom stated, and hardly ever discussed, in general terms, but which profoundly influences the practical controversies of the age by its latent presence, and is likely soon to make itself recognized as the vital question of the future. It is so far from being new, that, in a certain sense, it has divided mankind, almost from the remotest ages; but in the stage of progress into which the more civilized portions of the species have now entered, it presents itself under new conditions, and requires a different and more fundamental treatment.

The struggle between Liberty and Authority is the most conspicuous feature in the portions of history with which we are earliest familiar, particularly in that of Greece, Rome, and England. But in old times this contest was between subjects, or some classes of subjects, and the Government. By liberty, was meant protection against the tyranny of the political rulers. The rulers were conceived (except in some of the popular governments of Greece) as in a necessarily antagonistic position to the people whom they ruled. They consisted of a governing One, or a

* From John Stuart Mill, *On Liberty* (1859).

governing tribe or caste, who derived their authority from inheritance or conquest, who, at all events, did not hold it at the pleasure of the governed, and whose supremacy men did not venture, perhaps did not desire, to contest, whatever precautions might be taken against its oppressive exercise. Their power was regarded as necessary, but also as highly dangerous; as a weapon which they would attempt to use against their subjects, no less than against external enemies. To prevent the weaker members of the community from being preyed upon by innumerable vultures, it was needful that there should be an animal of prey stronger than the rest, commissioned to keep them down. But as the king of the vultures would be no less bent upon preying on the flock than any of the minor harpies, it was indispensable to be in a perpetual attitude of defense against his beak and claws. The aim, therefore, of patriots was to set limits to the power which the ruler should be suffered to exercise over the community; and this limitation was what they meant by liberty. It was attempted in two ways. First, by obtaining a recognition of certain immunities, called political liberties or rights, (which it was to be regarded as a breach of duty in the ruler to infringe, and which, if he did infringe, specific resistance, or general rebellion, was held to be justifiable). A second, and generally a later expedient, was the establishment of constitutional checks, (by which the consent of the community, or of a body of some sort, supposed to represent its interests, was made a necessary condition

to some of the more important acts of the governing power). To the first of these modes of limitation, the ruling power, in most European countries, was compelled, more or less, to submit. It was not so with the second; and, to attain this, or when already in some degree possessed, to attain it more completely, became everywhere the principal object of the lovers of liberty. And so long as mankind were content to combat one enemy by another, and to be ruled by a master, on condition of being guaranteed more or less efficaciously against his tyranny, they did not carry their aspirations beyond this point.

A time, however, came, in the progress of human affairs, when men ceased to think it a necessity of nature that their governors should be an independent power, opposed in interest to themselves. It appeared to them much better that the various magistrates of the State should be their tenants or delegates, revocable at their pleasure. In that way alone, it seemed, could they have complete security that the powers of government would never be abused to their disadvantage. By degrees this new demand for elective and temporary rulers became the prominent object of the exertions of the popular party, wherever any such party existed; and superseded, to a considerable extent, the previous efforts to limit the power of rulers. As the struggle proceeded for making the ruling power emanate from the periodical choice of the ruled, some persons began to think that too much importance had been attached to the limitation of the power itself. *That* (it might seem) was a resource against rulers whose interests were habitually opposed to those of the people. What was now wanted was, that the rulers should be identified with the people; that their interest and will should be the interest and will of the nation. The nation did not need to be protected against its own will. There was no fear of tyrannizing over itself. Let the rulers be effectually responsible to it, promptly removable by it, and it could afford to trust them with

power of which it could itself dictate the use to be made. Their power was but the nation's own power, concentrated, and in a form convenient for exercise. This mode of thought, or rather perhaps of feeling, was common among the last generation of European liberalism, in the Continental section of which it still apparently predominates. Those who admit any limit to what a government may do, except in the case of such governments as they think ought not to exist, stand out as brilliant exceptions among the political thinkers of the Continent. A similar tone of sentiment might by this time have been prevalent in our own country, if the circumstances which for a time encouraged it, had continued unaltered.

But, in political and philosophical theories, as well as in persons, success discloses faults and infirmities which failure might have concealed from observation. The notion, that the people have no need to limit their power over themselves, might seem axiomatic, when popular government was a thing only dreamed about, or read of as having existed at some distant period of the past. Neither was that notion necessarily disturbed by such temporary aberrations as those of the French Revolution, the worst of which were the work of an usurping few, and which, in any case, belonged, not to the permanent working of popular institutions, but to a sudden and convulsive outbreak against monarchical and aristocratic despotism. In time, however, a democratic republic came to occupy a large portion of the earth's surface, and made itself felt as one of the most powerful members of the community of nations; and elective and responsible government became subject to the observations and criticisms which wait upon a great existing fact. It was now perceived that such phrases as "self-government," and "the power of the people over themselves," do not express the true state of the case. The "people" who exercise the power are not always the same people with those over whom it is exercised; and the "self-government" spoken of is not

the government of each by himself, but of each by all the rest. The will of the people, moreover, practically means the will of the most numerous or the most active *part* of the people: the majority, or those who succeed in making themselves accepted as the majority; the people, consequently, *may* desire to oppress a part of their number; and precautions are as much needed against this as against any other abuse of power. The limitation, therefore, of the power of government over individuals loses none of its importance when the holders of power are regularly accountable to the community, that is, to the strongest party therein. This view of things, recommending itself equally to the intelligence of thinkers and to the inclination of those important classes in European society to whose real or supposed interests democracy is adverse, has had no difficulty in establishing itself; and in political speculations "the tyranny of the majority" is now generally included among the evils against which society requires to be on its guard.

Like other tyrannies, the tyranny of the majority was at first, and is still vulgarly, held in dread, chiefly as operating through the acts of the public authorities. But reflecting persons perceived that when society is itself the tyrant—society collectively, over the separate individuals who compose it—its means of tyrannizing are not restricted to the acts which it may do by the hands of its political functionaries. Society can and does execute its own mandates: and if it issues wrong mandates instead of right, or any mandates at all in things with which it ought not to meddle, it practices a social tyranny more formidable than many kinds of political oppression, since, though not usually upheld by such extreme penalties, it leaves fewer means of escape, penetrating much more deeply into the details of life, and enslaving the soul itself. Protection, therefore, against the tyranny of the magistrate is not enough: there needs protection also against the tyranny of the prevailing opinion and feeling; against the tendency of society to impose, by

other means than civil penalties, its own ideas and practices as rules of conduct on those who dissent from them; to fetter the development, and, if possible, prevent the formation, of any individuality not in harmony with its ways, and compel all characters to fashion themselves upon the model of its own. There is a limit to the legitimate interference of collective opinion with individual independence: and to find that limit, and maintain it against encroachment, is as indispensable to a good condition of human affairs, as protection against political despotism.

But though this proposition is not likely to be contested in general terms, the practical question, where to place the limit—how to make the fitting adjustment between individual independence and social control—is a subject on which nearly everything remains to be done.

The object of this Essay is to assert one very simple principle, as entitled to govern absolutely the dealings of society with the individual in the way of compulsion and control, whether the means used be physical force in the form of legal penalties, or the moral coercion of public opinion. That principle is, that the sole end for which mankind are warranted, individually or collectively, in interfering with the liberty of action of any of their number, is self-protection. That the only purpose for which power can be rightfully exercised over any member of a civilized community, against his will, is to prevent harm to others. His own good, either physical or moral, is not a sufficient warrant. He cannot rightfully be compelled to do or forbear because it will be better for him to do so, because it will make him happier, because, in the opinions of others, to do so would be wise, or even right. These are good reasons for remonstrating with him, or reasoning with him, or persuading him, or entreating him, but not for compelling him, or visiting him with any evil in case he do otherwise. To justify that, the conduct from which it is desired to deter him, must be calculated to produce evil to

some one else. The only part of the conduct of any one, for which he is amenable to society, is that which concerns others. In the part which merely concerns himself, his independence is, of right, absolute. Over himself, over his own body and mind, the individual is sovereign.

It is, perhaps, hardly necessary to say that this doctrine is meant to apply only to human beings in the maturity of their faculties. We are not speaking of children, or of young persons below the age which the law may fix as that of manhood or womanhood. Those who are still in a state to require being taken care of by others, must be protected against their own actions as well as against external injury. For the same reason, we may leave out of consideration those backward states of society in which the race itself may be considered as in its nonage. The early difficulties in the way of spontaneous progress are so great, that there is seldom any choice of means for overcoming them; and a ruler full of the spirit of improvement is warranted in the use of any expedients that will attain an end, perhaps otherwise unattainable. Despotism is a legitimate mode of government in dealing with barbarians, provided the end be their improvement, and the means justified by actually effecting that end. Liberty, as a principle, has no application to any state of things anterior to the time when mankind have become capable of being improved by free and equal discussion. Until then, there is nothing for them but implicit obedience to an Akbar or a Charlemagne, if they are so fortunate as to find one. But as soon as mankind have attained the capacity of being guided to their own improvement by conviction or persuasion (a period long since reached in all nations with whom we need here concern ourselves), compulsion, either in the direct form or in that of pains and penalties for non-compliance, is no longer admissible as a means to their own good, and justifiable only for the security of others.

It is proper to state that I forego any advantage which could be derived to my

argument from the idea of abstract right, as a thing independent of utility. I regard utility as the ultimate appeal on all ethical questions; but it must be utility in the largest sense, grounded on the permanent interests of man as a progressive being. Those interests, I contend, authorize the subjection of individual spontaneity to external control, only in respect to those actions of each, which concern the interest of other people. If any one does an act hurtful to others, there is a *prima facie* case for punishing him, by law, or, where legal penalties are not safely applicable, by general disapprobation. There are also many positive acts for the benefit of others, which he may rightfully be compelled to perform; such as, to give evidence in a court of justice; to bear his fair share in the common defense, or in any other joint work necessary to the interest of the society of which he enjoys the protection; and to perform certain acts of individual beneficence, such as saving a fellow creature's life, or interposing to protect the defenseless against ill-usage, things which whenever it is obviously a man's duty to do, he may rightfully be made responsible to society for not doing. A person may cause evil to others not only by his actions but by his inaction, and in either case he is justly accountable to them for the injury. The latter case, it is true, requires a much more cautious exercise of compulsion than the former. To make any one answerable for doing evil to others, is the rule; to make him answerable for not preventing evil, is, comparatively speaking, the exception. Yet there are many cases clear enough and grave enough to justify that exception. In all things which regard the external relations of the individual, he is *de jure* amenable to those whose interests are concerned, and if need be, to society as their protector. There are often good reasons for not holding him to the responsibility; but these reasons must arise from the special expediencies of the case: either because it is a kind of case in which he is on the whole likely to act better, when left to his own discretion, than when controlled in

any way in which society have it in their power to control him; or because the attempt to exercise control would produce other evils, greater than those which it would prevent. When such reasons as these preclude the enforcement of responsibility, the conscience of the agent himself should step into the vacant judgment-seat, and protect those interests of others which have no external protection; judging himself all the more rigidly, because the case does not admit of his being made accountable to the judgment of his fellow creatures.

But there is a sphere of action in which society, as distinguished from the individual, has, if any, only an indirect interest: comprehending all that portion of a person's life and conduct which affects only himself, or if it also affects others, only with their free, voluntary, and undeceived consent and participation. When I say only himself, I mean directly, and in the first instance: for whatever affects himself, may affect others through himself; and the objection which may be grounded on this contingency will receive consideration in the sequel. This, then, is the appropriate region of human liberty. It comprises, first, the inward domain of consciousness; demanding liberty of conscience, in the most comprehensive sense; liberty of thought and feeling; absolute freedom of opinion and sentiment on all subjects, practical or speculative, scientific, moral, or theological. The liberty of expressing and publishing opinions may seem to fall under a different principle, since it belongs to that part of the conduct of an individual which concerns other people; but, being almost of as much importance as the liberty of thought itself, and resting in great part on the same reasons, is practically inseparable from it. Secondly, the principle requires liberty of tastes and pursuits; of framing the plan of our life to suit our own character; of doing as we like, subject to such consequences as may follow: without impediment from our fellow creatures, so long as what we do does not harm them, even though they should think our conduct foolish, per-

verse, or wrong. Thirdly, from this liberty of each individual, follows the liberty, within the same limits, of combination among individuals; freedom to unite, for any purpose not involving harm to others: the persons combining being supposed to be of full age, and not forced or deceived.

No society in which these liberties are not, on the whole, respected, is free, whatever may be its form of government; and none is completely free in which they do not exist absolute and unqualified. The only freedom which deserves the name, is that of pursuing our own good in our own way, so long as we do not attempt to deprive others of theirs, or impede their efforts to obtain it. Each is the proper guardian of his own health, whether bodily, or mental and spiritual. Mankind are greater gainers by suffering each other to live as seems good to themselves, than by compelling each to live as seems good to the rest.

LIBERTY OF THOUGHT AND DISCUSSION

The time, it is to be hoped, is gone by, when any defense would be necessary of the "liberty of the press" as one of the securities against corrupt or tyrannical government. No argument, we may suppose, can now be needed, against permitting a legislature or an executive, not identified in interest with the people, to prescribe opinions to them, and determine what doctrines or what arguments they shall be allowed to hear. This aspect of the question, besides, has been so often and so triumphantly enforced by preceding writers, that it needs not be specially insisted on in this place. Though the law of England, on the subject of the press, is as servile to this day as it was in the time of the Tudors, there is little danger of its being actually put in force against political discussion, except during some temporary panic, when fear of insurrection drives ministers and judges from their propriety; and, speaking generally, it is not, in constitutional countries, to be apprehended, that

the government, whether completely responsible to the people or not, will often attempt to control the expression of opinion, except when in doing so it makes itself the organ of the general intolerance of the public. Let us suppose, therefore, that the government is entirely at one with the people, and never thinks of exerting any power of coercion unless in agreement with what it conceives to be their voice. But I deny the right of the people to exercise such coercion, either by themselves or by their government. The power itself is illegitimate. The best government has no more title to it than the worst. It is as noxious, or more noxious, when exerted in accordance with public opinion, than when in opposition to it. If all mankind minus one, were of one opinion, and only one person were of the contrary opinion, mankind would be no more justified in silencing that one person, than he, if he had the power, would be justified in silencing mankind. Were an opinion a personal possession of no value except to the owner; if to be obstructed in the enjoyment of it were simply a private injury, it would make some difference whether the injury was inflicted only on a few persons or on many. But the peculiar evil of silencing the expression of an opinion is, that it is robbing the human race; posterity as well as the existing generation; those who dissent from the opinion, still more than those who hold it. If the opinion is right, they are deprived of the opportunity of exchanging error for truth: if wrong, they lose, what is almost as great a benefit, the clearer perception and livelier impression of truth, produced by its collision with error.

It is necessary to consider separately these two hypotheses, each of which has a distinct branch of the argument corresponding to it. We can never be sure that the opinion we are endeavoring to stifle is a false opinion; and if we were sure, stifling it would be an evil still.

First: the opinion which it is attempted to suppress by authority may possibly be true. Those who desire to suppress it, of

course deny its truth; but they are not infallible. They have no authority to decide the question for all mankind, and exclude every other person from the means of judging. To refuse a hearing to an opinion, because they are sure that it is false, is to assume that *their* certainty is the same thing as *absolute* certainty. All silencing of discussion is an assumption of infallibility. Its condemnation may be allowed to rest on this common argument, not the worse for being common.

Unfortunately for the good sense of mankind, the fact of their fallibility is far from carrying the weight in their practical judgment, which is always allowed to it in theory; for while every one well knows himself to be fallible, few think it necessary to take any precautions against their own fallibility, or admit the supposition that any opinion, of which they feel very certain, may be one of the examples of the error to which they acknowledge themselves to be liable. Absolute princes, or others who are accustomed to unlimited deference, usually feel this complete confidence in their own opinions on nearly all subjects. People more happily situated, who sometimes hear their opinions disputed, and are not wholly unused to be set right when they are wrong, place the same unbounded reliance only on such of their opinions as are shared by all who surround them, or to whom they habitually defer: for in proportion to a man's want of confidence in his own solitary judgment, does he usually repose, with implicit trust, on the infallibility of "the world" in general. And the world, to each individual, means the part of it with which he comes in contact; his party, his sect, his church, his class of society: the man may be called, by comparison, almost liberal and large-minded to whom it means anything so comprehensive as his own country or his own age. Nor is his faith in this collective authority at all shaken by his being aware that other ages, countries, sects, churches, classes, and parties have thought, and even now think, the exact reverse. He devolves upon his own world

the responsibility of being in the right against the dissentient worlds of other people; and it never troubles him that mere accident has decided which of these numerous worlds is the object of his reliance, and that the same causes which make him a Churchman in London, would have made him a Buddhist or a Confucian in Pekin. Yet it is as evident in itself, as any amount of argument can make it, that ages are no more infallible than individuals; every age having held many opinions which subsequent ages have deemed not only false but absurd; and it is as certain that many opinions, now general, will be rejected by future ages, as it is that many, once general, are rejected by the present.

The objection likely to be made to this argument would probably take some such form as the following. There is no greater assumption of infallibility in forbidding the propagation of error, than in any other thing which is done by public authority on its own judgment and responsibility. Judgment is given to men that they may use it. Because it may be used erroneously, are men to be told that they ought not to use it at all? To prohibit what they think pernicious, is not claiming exemption from error, but fulfilling the duty incumbent on them, although fallible, of acting on their conscientious conviction. If we were never to act on our opinions, because those opinions may be wrong, we should leave all our interests uncared for, and all our duties unperformed. An objection which applies to all conduct, can be no valid objection to any conduct in particular. It is the duty of governments, and of individuals, to form the truest opinions they can; to form them carefully, and never impose them upon others unless they are quite sure of being right. But when they are sure (such reasoners may say), it is not conscientiousness but cowardice to shrink from acting on their opinions, and allow doctrines which they honestly think dangerous to the welfare of mankind, either in this life or in another, to be scattered abroad without restraint, be-

cause other people, in less enlightened times, have persecuted opinions now believed to be true. Let us take care, it may be said, not to make the same mistake: but governments and nations have made mistakes in other things, which are not denied to be fit subjects for the exercise of authority: they have laid on bad taxes, made unjust wars. Ought we therefore to lay on no taxes, and, under whatever provocation, make no wars? Men, and governments, must act to the best of their ability. There is no such thing as absolute certainty, but there is assurance sufficient for the purposes of human life. We may, and must, assume our opinion to be true for the guidance of our own conduct: and it is assuming no more when we forbid bad men to pervert society by the propagation of opinions which we regard as false and pernicious.

I answer, that it is assuming very much more. There is the greatest difference between presuming an opinion to be true, because, with every opportunity for contesting it, it has not been refuted, and assuming its truth for the purpose of not permitting its refutation. Complete liberty of contradicting and disproving our opinion, is the very condition which justifies us in assuming its truth for purposes of action; and on no other terms can a being with human faculties have any rational assurance of being right.

When we consider either the history of opinion, or the ordinary conduct of human life, to what is it to be ascribed that the one and the other are no worse than they are? Not certainly to the inherent force of the human understanding; for, on any matter not self-evident, there are ninety-nine persons totally incapable of judging of it, for one who is capable; and the incapacity of the hundredth person is only comparative; for the majority of the eminent men of every past generation held many opinions now known to be erroneous, and did or approved numerous things which no one will now justify. Why is it, then, that there is on the whole a preponderance among mankind of ra-

tional opinions and rational conduct? If there really is this preponderance—which there must be unless human affairs are, and have always been, in an almost desperate state—it is owing to a quality of the human mind, the source of everything respectable in man either as an intellectual or as a moral being, namely, that his errors are corrigible. He is capable of rectifying his mistakes, by discussion and experience. Not by experience alone. There must be discussion, to show how experience is to be interpreted. Wrong opinions and practices gradually yield to fact and argument: but facts and arguments, to produce any effect on the mind, must be brought before it. Very few facts are able to tell their own story, without comments to bring out their meaning. The whole strength and value, then, of human judgment, depending on the one property, that it can be set right when it is wrong, reliance can be placed on it only when the means of setting it right are kept constantly at hand. In the case of any person whose judgment is really deserving of confidence, how has it become so? Because he has kept his mind open to criticism of his opinions and conduct. Because it has been his practice to listen to all that could be said against him; to profit by as much of it as was just, and expound to himself, and upon occasion to others, the fallacy of what was fallacious. Because he has felt, that the only way in which a human being can make some approach to knowing the whole of a subject, is by hearing what can be said about it by persons of every variety of opinion, and studying all modes in which it can be looked at by every character of mind. No wise man ever acquired his wisdom in any mode but this; nor is it in the nature of human intellect to become wise in any other manner. The steady habit of correcting and completing his own opinion by collating it with those of others, so far from causing doubt and hesitation in carrying it into practice, is the only stable foundation for a just reliance on it: for, being cognizant of all that can, at least obvi-

ously, be said against him, and having taken up his position against all gainsayers—knowing that he has sought for objections and difficulties, instead of avoiding them, and has shut out no light which can be thrown upon the subject from any quarter—he has a right to think his judgment better than that of any person, or any multitude, who have not gone through a similar process.

It is not too much to require that what the wisest of mankind, those who are best entitled to trust their own judgment, find necessary to warrant their relying on it, should be submitted to by that miscellaneous collection of a few wise and many foolish individuals, called the public. The most intolerant of churches, the Roman Catholic Church, even at the canonization of a saint, admits, and listens patiently to, a “devil’s advocate.” The holiest of men, it appears, cannot be admitted to posthumous honors, until all that the devil could say against him is known and weighed. If even the Newtonian philosophy were not permitted to be questioned, mankind could not feel as complete assurance of its truth as they now do. The beliefs which we have most warrant for, have no safeguard to rest on, but a standing invitation to the whole world to prove them unfounded. If the challenge is not accepted, or is accepted and the attempt fails, we are far enough from certainty still; but we have done the best that the existing state of human reason admits of; we have neglected nothing that could give the truth a chance of reaching us: if the lists are kept open, we may hope that if there be a better truth, it will be found when the human mind is capable of receiving it; and in the meantime we may rely on having attained such approach to truth, as is possible in our own day. This is the amount of certainty attainable by a fallible being, and this the sole way of attaining it.

Strange it is, that men should admit the validity of the arguments for free discussion, but object to their being “pushed to an extreme”; not seeing that unless the

reasons are good for an extreme case, they are not good for any case. Strange that they should imagine that they are not assuming infallibility, when they acknowledge that there should be free discussion on all subjects which can possibly be *doubtful*, but think that some particular principle or doctrine should be forbidden to be questioned because it is so *certain*, that is, because *they are certain* that it is certain. To call any proposition certain, while there is any one who would deny its certainty if permitted, but who is not permitted, is to assume that we ourselves, and those who agree with us, are the judges of certainty, and judges without hearing the other side.

In the present age—which has been described as “destitute of faith, but terrified at scepticism”—in which people feel sure, not so much that their opinions are true, as that they should not know what to do without them—the claims of an opinion to be protected from public attack are rested not so much on its truth, as on its importance to society. There are, it is alleged, certain beliefs, so useful, not to say indispensable to well-being, that it is as much the duty of governments to uphold those beliefs, as to protect any other of the interests of society. In a case of such necessity, and so directly in the line of their duty, something less than infallibility may, it is maintained, warrant, and even bind, governments, to act on their own opinion, confirmed by the general opinion of mankind. It is also often argued, and still oftener thought, that none but bad men would desire to weaken these salutary beliefs; and there can be nothing wrong, it is thought, in restraining bad men, and prohibiting what only such men would wish to practice. This mode of thinking makes the justification of restraints on discussion not a question of the truth of doctrines, but of their usefulness; and flatters itself by that means to escape the responsibility of claiming to be an infallible judge of opinions. But those who thus satisfy themselves, do not perceive that the assumption of infallibility is merely shifted

from one point to another. The usefulness of an opinion is itself matter of opinion: as disputable, as open to discussion, and requiring discussion as much, as the opinion itself. There is the same need of an infallible judge of opinions to decide an opinion to be noxious, as to decide it to be false, unless the opinion condemned has full opportunity of defending itself. And it will not do to say that the heretic may be allowed to maintain the utility or harmlessness of his opinion, though forbidden to maintain its truth. The truth of an opinion is part of its utility. If we would know whether or not it is desirable that a proposition should be believed, is it possible to exclude the consideration of whether or not it is true? In the opinion, not of bad men, but of the best men, no belief which is contrary to truth can be really useful: and can you prevent such men from urging that plea, when they are charged with culpability for denying some doctrine which they are told is useful, but which they believe to be false? Those who are on the side of received opinions, never fail to take all possible advantage of this plea; you do not find *them* handling the question of utility as if it could be completely abstracted from that of truth: on the contrary, it is, above all, because their doctrine is the “truth,” that the knowledge or the belief of it is held to be so indispensable. There can be no fair discussion of the question of usefulness, when an argument so vital may be employed on one side, but not on the other. And in point of fact, when law or public feeling do not permit the truth of an opinion to be disputed, they are just as little tolerant of a denial of its usefulness. The utmost they allow is an extenuation of its absolute necessity, or of the positive guilt of rejecting it.

In order more fully to illustrate the mischief of denying a hearing to opinions because we, in our own judgment, have condemned them, it will be desirable to fix down the discussion to a concrete case; and I choose, by preference, the cases which are least favorable to me—in

which the argument against freedom of opinion, both on the score of truth and on that of utility, is considered the strongest. Let the opinions impugned be the belief in a God and in a future state, or any of the commonly received doctrines of morality. To fight the battle on such ground, gives a great advantage to an unfair antagonist; since he will be sure to say (and many who have no desire to be unfair will say it internally), Are these the doctrines which you do not deem sufficiently certain to be taken under the protection of the law? Is the belief in a God one of the opinions, to feel sure of which, you hold to be assuming infallibility? But I must be permitted to observe, that it is not the feeling sure of a doctrine (be it what it may) which I call an assumption of infallibility. It is the undertaking to decide that question *for others*, without allowing them to hear what can be said on the contrary side. And I denounce and reprobate this pretension not the less, if put forth on the side of my most solemn convictions. However positive any one's persuasion may be, not only of the falsity but of the pernicious consequences—not only of the pernicious consequences, but (to adopt expressions which I altogether condemn) the immorality and impiety of an opinion; yet if, in pursuance of that private judgment, though backed by the public judgment of his country or his contemporaries, he prevents the opinion from being heard in its defense, he assumes infallibility. And so far from the assumption being less objectionable or less dangerous because the opinion is called immoral or impious, this is the case of all others in which it is most fatal. These are exactly the occasions on which the men of one generation commit those dreadful mistakes, which excite the astonishment and horror of posterity. It is among such that we find the instances memorable in history, when the arm of the law has been employed to root out the best men and the noblest doctrines; with deplorable success as to the men, though some of the doctrines have sur-

vived to be (as if in mockery) invoked, in defense of similar conduct towards those who dissent from *them*, or from their received interpretation.

Mankind can hardly be too often reminded, that there was once a man named Socrates, between whom and the legal authorities and public opinion of his time, there took place a memorable collision. Born in an age and country abounding in individual greatness, this man has been handed down to us by those who best knew both him and the age, as the most virtuous man in it; while we know him as the head and prototype of all subsequent teachers of virtue, the source equally of the lofty inspiration of Plato and the judicious utilitarianism of Aristotle, *i maestri di color che sanno*, the two headsprings of ethical as of all other philosophy. This acknowledged master of all the eminent thinkers who have since lived—whose fame, still growing after more than two thousand years, all but outweighs the whole remainder of the names which make his native city illustrious—was put to death by his countrymen, after a judicial conviction, for impiety and immorality. Impiety, in denying the gods recognized by the State; indeed his accuser asserted (see the *Apologia*) that he believed in no gods at all. Immorality, in being, by his doctrines and instructions, a “corruptor of youth.” Of these charges the tribunal, there is every ground for believing, honestly found him guilty, and condemned the man who probably of all then born had deserved best of mankind, to be put to death as a criminal.

To pass from this to the only other instance of judicial iniquity, the mention of which, after the condemnation of Socrates, would not be an anti-climax: the event which took place on Calvary rather more than eighteen hundred years ago. The man who left on the memory of those who witnessed his life and conversation, such an impression of his moral grandeur, that eighteen subsequent centuries have done homage to him as the Almighty in person, was ignominiously

put to death, as what? As a blasphemer. Men did not merely mistake their benefactor; they mistook him for the exact contrary of what he was, and treated him as that prodigy of impiety, which they themselves are now held to be, for their treatment of him. The feelings with which mankind now regard these lamentable transactions, especially the later of the two, render them extremely unjust in their judgment of the unhappy actors. These were, to all appearance, not bad men—not worse than men commonly are, but rather the contrary: men who possessed in a full, or somewhat more than a full measure, the religious, moral, and patriotic feelings of their time and people: the very kind of men who, in all times, our own included, have every chance of passing through life blameless and respected. The high-priest who rent his garments when the words were pronounced, which, according to all the ideas of his country, constituted the blackest guilt, was in all probability quite as sincere in his horror and indignation, as the generality of respectable and pious men now are in the religious and moral sentiments they profess; and most of those who now shudder at his conduct, if they had lived in his time, and been born Jews, would have acted precisely as he did. Orthodox Christians who are tempted to think that those who stoned or death the first martyrs must have been worse men than they themselves are, ought to remember that one of those persecutors was Saint Paul.

Let us add one more example, the most striking of all, if the impressiveness of an error is measured by the wisdom and virtue of him who falls into it. If ever any one, possessed of power, had grounds for thinking himself the best and most enlightened among his contemporaries, it was the Emperor Marcus Aurelius. Absolute monarch of the whole civilized world, he preserved through life not only the most unblemished justice, but what was less to be expected from his Stoical breeding, the tenderest heart. The few failings which

are attributed to him, were all on the side of indulgence: while his writings, the highest ethical product of the ancient mind, differ scarcely perceptibly, if they differ at all, from the most characteristic teachings of Christ. This man, a better Christian in all but the dogmatic sense of the word, than almost any of the ostensibly Christian sovereigns who have since reigned, persecuted Christianity. Placed at the summit of all the previous attainments of humanity, with an open, unfettered intellect, and a character which led him of himself to embody in his moral writings the Christian ideal, he yet failed to see that Christianity was to be a good and not an evil to the world, with his duties to which he was so deeply penetrated. Existing society he knew to be in a deplorable state. But such as it was, he saw, or thought he saw, that it was held together, and prevented from being worse, by belief and reverence of the received divinities. As a ruler of mankind, he deemed it his duty not to suffer society to fall in pieces; and saw not how, if its existing ties were removed, any others could be formed which could again knit it together. The new religion openly aimed at dissolving these ties: unless, therefore, it was his duty to adopt that religion, it seemed to be his duty to put it down. Inasmuch then as the theology of Christianity did not appear to him true or of divine origin; inasmuch as this strange history of a crucified God was not credible to him, and a system which purported to rest entirely upon a foundation to him so wholly unbelievable, could not be foreseen by him to be that renovating agency which, after all abatements, it has in fact proved to be; the gentlest and most amiable of philosophers and rulers, under a solemn sense of duty, authorized the persecution of Christianity. To my mind this is one of the most tragical facts in all history. It is a bitter thought, how different a thing the Christianity of the world might have been, if the Christian faith had been adopted as the religion of the empire under the auspices of Marcus Aurelius instead of those of Constantine.

But it would be equally unjust to him and false to truth, to deny, that no one plea which can be urged for punishing anti-Christian teaching, was wanting to Marcus Aurelius for punishing, as he did, the propagation of Christianity. No Christian more firmly believes that Atheism is false, and tends to the dissolution of society, than Marcus Aurelius believed the same things of Christianity; he who, of all men then living, might have been thought the most capable of appreciating it. Unless any one who approves of punishment for the promulgation of opinions, flatters himself that he is a wiser and better man than Marcus Aurelius—more deeply versed in the wisdom of his time, more elevated in his intellect above it—more earnest in his search for truth, or more singleminded in his devotion to it when found;—let him abstain from that assumption of the joint infallibility of himself and the multitude, which the great Antoninus made with so unfortunate a result.

Aware of the impossibility of defending the use of punishment for restraining irreligious opinions, by any argument which will not justify Marcus Antoninus, the enemies of religious freedom, when hard pressed, occasionally accept this consequence, and say, with Dr. Johnson, that the persecutors of Christianity were in the right; that persecution is an ordeal through which truth ought to pass, and always passes successfully, legal penalties being, in the end, powerless against truth, though sometimes beneficially effective against mischievous errors. This is a form of the argument for religious intolerance, sufficiently remarkable not to be passed without notice.

A theory which maintains that truth may justifiably be persecuted because persecution cannot possibly do it any harm, cannot be charged with being intentionally hostile to the reception of new truths; but we cannot commend the generosity of its dealing with the persons to whom mankind are indebted for them. To discover to the world something which deeply concerns it, and of which it

was previously ignorant; to prove to it that it had been mistaken on some vital point of temporal or spiritual interest, is as important a service as a human being can render to his fellow creatures, and in certain cases, as in those of the early Christians and of the Reformers, those who think with Dr. Johnson believe it to have been the most precious gift which could be bestowed on mankind. That the authors of such splendid benefits should be requited by martyrdom; that their reward should be to be dealt with as the vilest of criminals, is not, upon this theory, a deplorable error and misfortune, for which humanity should mourn in sackcloth and ashes, but the normal and justifiable state of things. The propounder of a new truth, according to this doctrine, should stand, as stood, in the legislation of the Locrians, the proposer of a new law, with a halter round his neck, to be instantly tightened if the public assembly did not, on hearing his reasons, then and there adopt his proposition. People who defend this mode of treating benefactors, cannot be supposed to set much value on the benefit; and I believe this view of the subject is mostly confined to the sort of persons who think that new truths may have been desirable once, but that we have had enough of them now.

But, indeed, the dictum that truth always triumphs over persecution, is one of those pleasant falsehoods which men repeat after one another till they pass into commonplaces, but which all experience refutes. History teems with instances of truth put down by persecution. If not suppressed for ever, it may be thrown back for centuries. To speak only of religious opinions: the Reformation broke out at least twenty times before Luther, and was put down. Arnold of Brescia was put down. Fra Dolcino was put down. Savonarola was put down. The Albigeois were put down. The Vaudois were put down. The Lollards were put down. The Hussites were put down. Even after the era of Luther, wherever persecution was persisted in, it was successful. In Spain,

Italy, Flanders, the Austrian empire, Protestantism was rooted out; and, most likely, would have been so in England, had Queen Mary lived, or Queen Elizabeth died. Persecution has always succeeded, save where the heretics were too strong a party to be effectually persecuted. No reasonable person can doubt that Christianity might have been extirpated in the Roman Empire. It spread, and became predominant, because the persecutions were only occasional, lasting but a short time, and separated by long intervals of almost undisturbed propagandism. It is a piece of idle sentimentality that truth, merely as truth, has any inherent power denied to error, of prevailing against the dungeon and the stake. Men are not more zealous for truth than they often are for error, and a sufficient application of legal or even of social penalties will generally succeed in stopping the propagation of either. The real advantage which truth has, consists in this, that when an opinion is true, it may be extinguished once, twice, or many times, but in the course of ages there will generally be found persons to rediscover it, until some one of its reappearances falls on a time when from favorable circumstances it escapes persecution until it has made such head as to withstand all subsequent attempts to suppress it.

What is boasted of at the present time as the revival of religion, is always, in narrow and uncultivated minds, at least as much the revival of bigotry; and where there is the strong permanent leaven of intolerance in the feelings of a people, which at all times abides in the middle classes of this country, it needs but little to provoke them into actively persecuting those whom they have never ceased to think proper objects of persecution. For it is this—it is the opinions men entertain, and the feelings they cherish, respecting those who disown the beliefs they deem important, which makes this country not a place of mental freedom. For a long time past, the chief mischief of the legal penalties is that they

strengthen the social stigma. It is that stigma which is really effective, and so effective is it, that the profession of opinions which are under the ban of society is much less common in England, than is, in many other countries, the avowal of those which incur risk of judicial punishment. In respect to all persons but those whose pecuniary circumstances make them independent of the goodwill of other people, opinion, on this subject, is as efficacious as law; men might as well be imprisoned, as excluded from the means of earning their bread. Those whose bread is already secured, and who desire no favors from men in power, or from bodies of men, or from the public, have nothing to fear from the open avowal of any opinions, but to be ill-thought of and ill-spoken of, and this it ought not to require a very heroic mold to enable them to bear. There is no room for any appeal *ad misericordiam* in behalf of such persons. But though we do not now inflict so much evil on those who think differently from us, as it was formerly our custom to do, it may be that we do ourselves as much evil as ever by our treatment of them. Socrates was put to death, but the Socratic philosophy rose like the sun in heaven, and spread its illumination over the whole intellectual firmament. Christians were cast to the lions, but the Christian church grew up a stately and spreading tree, overtopping the older and less vigorous growths, and stifling them by its shade. Our merely social intolerance kills no one, roots out no opinions, but induces men to disguise them, or to abstain from any active effort for their diffusion. With us, heretical opinions do not perceptibly gain, or even lose, ground in each decade or generation; they never blaze out far and wide, but continue to smolder in the narrow circles of thinking and studious persons among whom they originate, without ever lighting up the general affairs of mankind with either a true or a deceptive light. And thus is kept up a state of things very satisfactory to some minds, because, without the unpleasant process

of fining or imprisoning anybody, it maintains all prevailing opinions outwardly undisturbed, while it does not absolutely interdict the exercise of reason by dissentients afflicted with the malady of thought. A convenient plan for having peace in the intellectual world, and keeping all things going on therein very much as they do already. But the price paid for this sort of intellectual pacification, is the sacrifice of the entire moral courage of the human mind. A state of things in which a large portion of the most active and inquiring intellects find it advisable to keep the general principles and grounds of their convictions within their own breasts, and attempt, in what they address to the public, to fit as much as they can of their own conclusions to premises which they have internally renounced, cannot send forth the open, fearless characters, and logical, consistent intellects who once adorned the thinking world. The sort of men who can be looked for under it, are either mere conformers to commonplace, or time-servers for truth, whose arguments on all great subjects are meant for their hearers, and are not those which have convinced themselves. Those who avoid this alternative, do so by narrowing their thoughts and interest to things which can be spoken of without venturing within the region of principles, that is, to small practical matters, which would come right of themselves, if but the minds of mankind were strengthened and enlarged, and which will never be made effectually right until then: while that which would strengthen and enlarge men's minds, free and daring speculation on the highest subjects, is abandoned.

Those in whose eyes this reticence on the part of heretics is no evil, should consider in the first place, that in consequence of it there is never any fair and thorough discussion of heretical opinions; and that such of them as could not stand such a discussion, though they may be prevented from spreading, do not disappear. But it is not the minds of heretics that are deteriorated most, by the ban

placed on all inquiry which does not end in the orthodox conclusions. The greatest harm done is to those who are not heretics, and whose whole mental development is cramped, and their reason cowed, by the fear of heresy. Who can compute what the world loses in the multitude of promising intellects combined with timid characters, who dare not follow out any bold, vigorous, independent train of thought, lest it should land them in something which would admit of being considered irreligious or immoral? Among them we may occasionally see some man of deep conscientiousness, and subtle and refined understanding, who spends a life in sophisticating with an intellect which he cannot silence, and exhausts the resources of ingenuity in attempting to reconcile the promptings of his conscience and reason with orthodoxy, which yet he does not, perhaps, to the end succeed in doing. No one can be a great thinker who does not recognize, that as a thinker it is his first duty to follow his intellect to whatever conclusions it may lead. Truth gains more even by the errors of one who, with due study and preparation, thinks for himself, than by the true opinions of those who only hold them because they do not suffer themselves to think. Not that it is solely, or chiefly, to form great thinkers, that freedom of thinking is required. On the contrary, it is as much and even more indispensable, to enable average human beings to attain the mental stature which they are capable of. There have been, and may again be, great individual thinkers, in a general atmosphere of mental slavery. But there never has been, nor ever will be, in that atmosphere, an intellectually active people. When any people has made a temporary approach to such a character, it has been because the dread of heterodox speculation was for a time suspended. Where there is a tacit convention that principles are not to be disputed; where the discussion of the greatest questions which can occupy humanity is considered to be closed, we cannot hope to find that generally high scale of

mental activity which has made some periods of history so remarkable. Never when controversy avoided the subjects which are large and important enough to kindle enthusiasm, was the mind of a people stirred up from its foundations, and the impulse given which raised even persons of the most ordinary intellect to something of the dignity of thinking beings. Of such we have had an example in the condition of Europe during the times immediately following the Reformation; another, though limited to the Continent and to a more cultivated class, in the speculative movement of the latter half of the eighteenth century; and a third, of still briefer duration, in the intellectual fermentation of Germany during the Goethian and Fichteian period. These periods differed widely in the particular opinions which they developed; but were alike in this, that during all three the yoke of authority was broken. In each, an old mental despotism had been thrown off, and no new one had yet taken its place. The impulse given at these three periods has made Europe what it now is. Every single improvement which has taken place either in the human mind or in institutions, may be traced distinctly to one or other of them. Appearances have for some time indicated that all three impulses are wellnigh spent; and we can expect no fresh start, until we again assert our mental freedom.

Let us now pass to the second division of the argument, and dismissing the supposition that any of the received opinions may be false, let us assume them to be true, and examine into the worth of the manner in which they are likely to be held, when their truth is not freely and openly canvassed. However unwillingly a person who has a strong opinion may admit the possibility that his opinion may be false, he ought to be moved by the consideration that however true it may be, if it is not fully, frequently, and fearlessly discussed, it will be held as a dead dogma, not a living truth.

There is a class of persons (happily not quite so numerous as formerly) who

think it enough if a person assents undoubtingly to what they think true, though he has no knowledge whatever of the grounds of the opinion, and could not make a tenable defense of it against the most superficial objections. Such persons, if they can once get their creed taught from authority, naturally think that no good, and some harm, comes of its being allowed to be questioned. Where their influence prevails, they make it nearly impossible for the received opinion to be rejected wisely and considerately, though it may still be rejected rashly and ignorantly; for to shut out discussion entirely is seldom possible and, when it once gets in, beliefs not grounded on conviction are apt to give way before the slightest semblance of an argument. Waiving, however, this possibility—assuming that the true opinion abides in the mind, but abides as a prejudice, a belief independent of, and proof against, argument—this is not the way in which truth ought to be held by a rational being. This is not knowing the truth. Truth, thus held, is but one superstition the more accidentally clinging to the words which enunciate a truth.

If the intellect and judgment of mankind ought to be cultivated, a thing which Protestants at least do not deny, on what can these faculties be more appropriately exercised by any one, than on the things which concern him so much that it is considered necessary for him to hold opinions on them? If the cultivation of the understanding consists in one thing more than in another, it is surely in learning the grounds of one's own opinions. Whatever people believe, on subjects on which it is of the first importance to believe rightly, they ought to be able to defend against at least the common objections. But, some one may say, "Let them be *taught* the grounds of their opinions. It does not follow that opinions must be merely parroted because they are never heard controverted. Persons who learn geometry do not simply commit the theorems to memory, but understand and learn likewise the demonstra-

tions; and it would be absurd to say that they remain ignorant of the grounds of geometrical truths, because they never hear any one deny, and attempt to disprove them." Undoubtedly: and such teaching suffices on a subject like mathematics, where there is nothing at all to be said on the wrong side of the question. The peculiarity of the evidence of mathematical truths is, that all the argument is on one side. There are no objections, and no answers to objections. But on every subject on which difference of opinion is possible, the truth depends on a balance to be struck between two sets of conflicting reasons. Even in natural philosophy, there is always some other explanation possible of the same facts; some geocentric theory instead of heliocentric, some phlogiston instead of oxygen; and it has to be shown why that other theory cannot be the true one; and until this is shown, and until we know how it is shown, we do not understand the grounds of our opinion. But when we turn to subjects infinitely more complicated, to morals, religion, politics, social relations, and the business of life, three-fourths of the arguments for every disputed opinion consist in dispelling the appearances which favor some opinion different from it. The greatest orator, save one, of antiquity, has left it on record that he always studied his adversary's case with as great, if not with still greater, intensity than even his own. What Cicero practiced as the means of forensic success, requires to be imitated by all who study any subject in order to arrive at the truth. He who knows only his own side of the case, knows little of that. His reasons may be good, and no one may have been able to refute them. But if he is equally unable to refute the reasons on the opposite side; if he does not so much as know what they are, he has no ground for preferring either opinion. The rational position for him would be suspension of judgment, and unless he contents himself with that, he is either led by authority, or adopts, like the generality of the world, the side to which he

feels most inclination. Nor is it enough that he should hear the arguments of adversaries from his own teachers, presented as they state them, and accompanied by what they offer as refutations. That is not the way to do justice to the arguments, or bring them into real contact with his own mind. He must be able to hear them from persons who actually believe them; who defend them in earnest, and do their very utmost for them. He must know them in their most plausible and persuasive form; he must feel the whole force of the difficulty which the true view of the subject has to encounter and dispose of; else he will never really possess himself of the portion of truth which meets and removes that difficulty. Ninety-nine in a hundred of what are called educated men are in this condition; even of those who can argue fluently for their opinions. Their conclusion may be true, but it might be false for anything they know: they have never thrown themselves into the mental position of those who think differently from them, and considered what such persons may have to say; and consequently they do not, in any proper sense of the word, know the doctrine which they themselves profess. They do not know those parts of it which explain and justify the remainder; the considerations which show that a fact which seemingly conflicts with another is reconcilable with it, or that, of two apparently strong reasons, one and not the other ought to be preferred. All that part of the truth which turns the scale, and decides the judgment of a completely informed mind, they are strangers to; nor is it ever really known, but to those who have attended equally and impartially to both sides, and endeavored to see the reasons of both in the strongest light. So essential is this discipline to a real understanding of moral and human subjects, that if opponents of all important truths do not exist, it is indispensable to imagine them, and supply them with the strongest arguments which the most skillful devil's advocate can conjure up.

To abate the force of these considerations, an enemy of free discussion may be supposed to say, that there is no necessity for mankind in general to know and understand all that can be said against or for their opinions by philosophers and theologians. That it is not needful for common men to be able to expose all the misstatements or fallacies of an ingenious opponent. That it is enough if there is always somebody capable of answering them, so that nothing likely to mislead uninstructed persons remains unrefuted. That simple minds, having been taught the obvious grounds of the truths inculcated on them, may trust to authority for the rest, and being aware that they have neither knowledge nor talent to resolve every difficulty which can be raised, may repose in the assurance that all those which have been raised have been or can be answered, by those who are specially trained to the task.

Conceding to this view of the subject the utmost that can be claimed for it by those most easily satisfied with the amount of understanding of truth which ought to accompany the belief of it; even so, the argument for free discussion is no way weakened. For even this doctrine acknowledges that mankind ought to have a rational assurance that all objections have been satisfactorily answered; and how are they to be answered if that which requires to be answered is not spoken? or how can the answer be known to be satisfactory, if the objectors have no opportunity of showing that it is unsatisfactory? If not the public, at least the philosophers and theologians who are to resolve the difficulties, must make themselves familiar with those difficulties in their most puzzling form; and this cannot be accomplished unless they are freely stated, and placed in the most advantageous light which they admit of. The Catholic Church has its own way of dealing with this embarrassing problem. It makes a broad separation between those who can be permitted to receive its doctrines on conviction, and those who

must accept them on trust. Neither, indeed, are allowed any choice as to what they will accept; but the clergy, such at least can be fully confided in, may admissibly and meritoriously make themselves acquainted with the arguments of opponents, in order to answer them, and may, therefore, read heretical books; the laity, not unless by special permission, hard to be obtained. This discipline recognizes a knowledge of the enemy's case as beneficial to the teachers, but finds means, consistent with this, of denying it to the rest of the world: thus giving to the *élite* more mental culture, though not more mental freedom, than it allows to the mass. By this device it succeeds in obtaining the kind of mental superiority which its purposes require; for though culture without freedom never made a large and liberal mind, it can make a clever *nisi prius* advocate of a cause. But in countries professing Protestantism, this resource is denied; since Protestants hold, at least in theory, that the responsibility for the choice of a religion must be borne by each for himself, and cannot be thrown off upon teachers. Besides, in the present state of the world, it is practically impossible that writings which are read by the instructed can be kept from the uninstructed. If the teachers of mankind are to be cognizant of all that they ought to know, everything must be free to be written and published without restraint.

If, however, the mischievous operation of the absence of free discussion, when the received opinions are true, were confined to leaving men ignorant of the grounds of those opinions, it might be thought that this, if an intellectual, is no moral evil, and does not affect the worth of the opinions, regarded in their influence on the character. The fact, however, is, that not only the grounds of the opinion are forgotten in the absence of discussion, but too often the meaning of the opinion itself. The words which convey it, cease to suggest ideas, or suggest only a small portion of those they were originally employed to communicate. Instead of a vivid conception and a living belief,

there remain only a few phrases retained by rote; or, if any part, the shell and husk only of the meaning is retained, the finer essence being lost. The great chapter in human history which this fact occupies and fills, cannot be too earnestly studied and meditated on.

It is illustrated in the experience of almost all ethical doctrines and religious creeds. They are all full of meaning and vitality to those who originate them, and to the direct disciples of the originators. Their meaning continues to be felt in undiminished strength, and is perhaps brought out into even fuller consciousness, so long as the struggle lasts to give the doctrine or creed an ascendancy over other creeds. At last it either prevails, and becomes the general opinion, or its progress stops; it keeps possession of the ground it has gained, but ceases to spread further. When either of these results has become apparent, controversy on the subject flags, and gradually dies away. The doctrine has taken its place, if not as a received opinion, as one of the admitted sects or divisions of opinion: those who hold it have generally inherited, not adopted it; and conversion from one of these doctrines to another, being now an exceptional fact, occupies little place in the thoughts of their professors. Instead of being, as at first, constantly on the alert either to defend themselves against the world, or to bring the world over to them, they have subsided into acquiescence, and neither listen, when they can help it, to arguments against their creed, nor trouble dissentients (if there be such) with arguments in its favor. From this time may usually be dated the decline in the living power of the doctrine. We often hear the teachers of all creeds lamenting the difficulty of keeping up in the minds of believers a lively apprehension of the truth which they nominally recognize, so that it may penetrate the feelings, and acquire a real mastery over the conduct. No such difficulty is complained of while the creed is still fighting for its existence: even the weaker combatants then know and feel what they are

fighting for, and the difference between it and other doctrines; and in that period of every creed's existence, not a few persons may be found, who have realized its fundamental principles in all the forms of thought, have weighed and considered them in all their important bearings, and have experienced the full effect on the character, which belief in that creed ought to produce in a mind thoroughly imbued with it. But when it has come to be an hereditary creed, and to be received passively, not actively—when the mind is no longer compelled, in the same degree as at first, to exercise its vital powers on the questions which its belief presents to it, there is a progressive tendency to forget all of the belief except the formularies, or to give it a dull and torpid assent, as if accepting it on trust dispensed with the necessity of realizing it in consciousness, or testing it by personal experience; until it almost ceases to connect itself at all with the inner life of the human being. Then are seen the cases, so frequent in this age of the world as almost to form the majority, in which the creed remains as it were outside the mind, encrusting and petrifying it against all other influences addressed to the higher parts of our nature; manifesting its power by not suffering any fresh and living conviction to get in, but itself doing nothing for the mind or heart, except standing sentinel over them to keep them vacant.

To what an extent doctrines intrinsically fitted to make the deepest impression upon the mind may remain in it as dead beliefs, without being ever realized in the imagination, the feelings, or the understanding, is exemplified by the manner in which the majority of believers hold the doctrines of Christianity. By Christianity I here mean what is accounted such by all churches and sects—the maxims and precepts contained in the New Testament. These are considered sacred, and accepted as laws, by all professing Christians. Yet it is scarcely too much to say that not one Christian in a thousand guides or tests his individual conduct by

reference to those laws. The standard to which he does refer it, is the custom of his nation, his class, or his religious profession. He has thus, on the one hand, a collection of ethical maxims, which he believes to have been vouchsafed to him by infallible wisdom as rules for his government; and on the other, a set of everyday judgments and practices, which go a certain length with some of those maxims, not so great a length with others, stand in direct opposition to some, and are, on the whole, a compromise between the Christian creed and the interests and suggestions of worldly life. To the first of these standards he gives his homage; to the other his real allegiance. All Christians believe that the blessed are the poor and humble, and those who are ill-used by the world; that it is easier for a camel to pass through the eye of a needle than for a rich man to enter the kingdom of heaven; that they should judge not, lest they be judged; that they should swear not at all; that they should love their neighbor as themselves; that if one take their cloak, they should give him their coat also; that they should take no thought for the morrow; that if they would be perfect, they should sell all that they have and give it to the poor. They are not insincere when they say that they believe these things. They do believe them, as people believe what they have always heard lauded and never discussed. But in the sense of that living belief which regulates conduct, they believe these doctrines just up to the point to which it is usual to act upon them. The doctrines in their integrity are serviceable to pelt adversaries with; and it is understood that they are to be put forward (when possible) as the reasons for whatever people do that they think laudable. But any one who reminded them that the maxims require an infinity of things which they never even think of doing, would gain nothing but to be classed among those very unpopular characters who affect to be better than other people. The doctrines have no hold on ordinary believers—are not a power

in their minds. They have an habitual respect for the sound of them, but no feeling which spreads from the words of the things signified, and forces the mind to take *them* in, and make them conform to the formula. Whenever conduct is concerned, they look round for Mr. A and B to direct them how far to go in obeying Christ.

Now we may be well assured that the case was not thus, but far otherwise, with the early Christians. Had it been thus, Christianity never would have expanded from an obscure sect of the despised Hebrews into the religion of the Roman empire. When their enemies said, "See how these Christians love one another" (a remark not likely to be made by anybody now), they assuredly had a much livelier feeling of the meaning of their creed than they have ever had since. And to this cause, probably, it is chiefly owing that Christianity now makes so little progress in extending its domain, and after eighteen centuries, is still nearly confined to Europeans and the descendants of Europeans. Even with the strictly religious, who are much in earnest about their doctrines, and attach a greater amount of meaning to many of them than people in general, it commonly happens that the part which is thus comparatively active in their minds is that which was made by Calvin, or Knox, or some such person much nearer in character to themselves. The sayings of Christ co-exist passively in their minds, producing hardly any effect beyond what is caused by mere listening to words so amiable and bland. There are many reasons, doubtless, why doctrines which are the badge of a sect retain more of their vitality than those common to all recognized sects, and why more pains are taken by teachers to keep their meaning alive; but one reason certainly is, that the peculiar doctrines are more questioned, and have to be oftener defended against open gainsayers. Both teachers and learners go to sleep at their post, as soon as there is no enemy in the field.

The same thing holds true, generally

speaking, of all traditional doctrines—those of prudence and knowledge of life, as well as morals or religion. All languages and literatures are full of general observations on life, both as to what it is, and how to conduct oneself in it; observations which everybody knows, which everybody repeats, or hears with acquiescence, which are received as truisms, yet of which most people first truly learn the meaning, when experience, generally of a painful kind, has made it a reality to them. How often, when smarting under some unforeseen misfortune or disappointment, does a person call to mind some proverb or common saying, familiar to him all his life, the meaning of which, if he had ever before felt it as he does now, would have saved him from the calamity. There are indeed reasons for this, other than the absence of discussion: there are many truths of which the full meaning *cannot* be realized, until personal experience has brought it home. But much more of the meaning even of these would have been understood, and what was understood would have been far more deeply impressed on the mind, if the man had been accustomed to hear it argued *pro* and *con* by people who did understand it. The fatal tendency of mankind to leave off thinking about a thing when it is no longer doubtful, is the cause of half their errors. A contemporary author has well spoken of "the deep slumber of a described opinion."

But what! (it may be asked) Is the absence of unanimity an indispensable condition of true knowledge? Is it necessary that some part of mankind should persist in error, to enable any to realize the truth? Does a belief cease to be real and vital as soon as it is generally received—and is a proposition never thoroughly understood and felt unless some doubt of it remains? As soon as mankind have unanimously accepted a truth, does the truth perish within them? The highest aim and best result of improved intelligence, it has hitherto been thought, is to unite mankind more and more in the acknowledgment of all important truths:

and does the intelligence only last as long as it has not achieved its object? Do the fruits of conquest perish by the very completeness of the victory?

I affirm no such thing. As mankind improve, the number of doctrines which are no longer disputed or doubted will be constantly on the increase: and the well-being of mankind may almost be measured by the number and gravity of the truths which have reached the point of being uncontested. The cessation, on one question after another, of serious controversy, is one of the necessary incidents of the consolidation of opinion; a consolidation as salutary in the case of true opinions, as it is dangerous and noxious when the opinions are erroneous. But though this gradual narrowing of the bounds of diversity of opinion is necessary in both senses of the term, being at once inevitable and indispensable, we are not therefore obliged to conclude that all its consequences must be beneficial. The loss of so important an aid to the intelligent and living apprehension of a truth, as is afforded by the necessity of explaining it to, or defending it against, opponents, though not sufficient to outweigh, is no trifling drawback from, the benefit of its universal recognition. Where this advantage can no longer be had, I confess I should like to see the teachers of mankind endeavoring to provide a substitute for it; some contrivance for making the difficulties of the question as present to the learner's consciousness, as if they were pressed upon him by a dissentient champion, eager for his conversion.

But instead of seeking contrivances for this purpose, they have lost those they formerly had. The Socratic dialectics, so magnificently exemplified in the dialogues of Plato, were a contrivance of this description. They were essentially a negative discussion of the great questions of philosophy and life, directed with consummate skill to the purpose of convincing any one who had merely adopted the commonplaces of received opinion, that he did not understand the subject—that he as yet attached no definite mean-

ing to the doctrines he professed; in order that, becoming aware of his ignorance, he might be put in the way to attain a stable belief, resting on a clear apprehension both of the meaning of doctrines and of their evidence. The school disputations of the Middle Ages had a somewhat similar object. They were intended to make sure that the pupil understood his own opinion, and (by necessary correlation) the opinion opposed to it, and could enforce the grounds of the one and confute those of the other. These last-mentioned contests had indeed the incurable defect, that the premises appealed to were taken from authority, not from reason; and, as a discipline to the mind, they were in every respect inferior to the powerful dialectics which formed the intellects of the "Socratici viri": but the modern mind owes far more to both than it is generally willing to admit, and the present modes of education contain nothing which in the smallest degree supplies the place either of the one or of the other. A person who derives all his instruction from teachers or books, even if he escape the besetting temptation of contenting himself with cram, is under no compulsion to hear both sides; accordingly it is far from a frequent accomplishment, even among thinkers, to know both sides; and the weakest part of what everybody says in defense of his opinion, is what he intends as a reply to antagonists. It is the fashion of the present time to disparage negative logic—that which points out weaknesses in theory or errors in practice, without establishing positive truths. Such negative criticism would indeed be poor enough as an ultimate result; but as a means to attaining any positive knowledge or conviction worthy the name, it cannot be valued too highly; and until people are again systematically trained to it, there will be few great thinkers, and a low general average of intellect, in any but the mathematical and physical departments of speculation. On any other subject no one's opinions deserve the name of knowledge, except so far as he has either

had forced upon him by others, or gone through of himself, the same mental process which would have been required of him in carrying on an active controversy with opponents. That, therefore, which when absent, it is so indispensable, but so difficult, to create, how worse than absurd it is to forego, when spontaneously offering itself! If there are any persons who contest a received opinion, or who will do so if law or opinion will let them, let us thank them for it, open our minds to listen to them, and rejoice that there is some one to do for us what we otherwise ought, if we have any regard for either the certainty or the vitality of our convictions, to do with much greater labor for ourselves.

It still remains to speak of one of the principal causes which make diversity of opinion advantageous, and will continue to do so until mankind shall have entered a stage of intellectual advancement which at present seems at an incalculable distance. We have hitherto considered only two possibilities: that the received opinion may be false, and some other opinion, consequently, true; or that, the received opinion being true, a conflict with the opposite error is essential to a clear apprehension and deep feeling of its truth. But there is a commoner case than either of these; when the conflicting doctrines, instead of being one true and the other false, share the truth between them; and the nonconforming opinion is needed to supply the remainder of the truth, of which the received doctrine embodies only a part. Popular opinions, on subjects not palpable to sense, are often true, but seldom or never the whole truth. They are a part of the truth; sometimes a greater, sometimes a smaller part, but exaggerated, distorted, and disjointed from the truths by which they ought to be accompanied and limited. Heretical opinions, on the other hand, are generally some of these suppressed and neglected truths, bursting the bonds which kept them down, and either seeking reconciliation with the truth contained in the com-

mon opinion, or fronting it as enemies, and setting themselves up, with similar exclusiveness, as the whole truth. The latter case is hitherto the most frequent, as, in the human mind, one-sidedness has always been the rule, and many-sidedness the exception. Hence, even in revolutions of opinion, one part of the truth usually sets while another rises. Even progress, which ought to superadd, for the most part only substitutes, one partial and incomplete truth for another; improvement consisting chiefly in this, that the new fragment of truth is more wanted, more adapted to the needs of the time, than that which it displaces. Such being the partial character of prevailing opinions, even when resting on a true foundation, every opinion which embodies somewhat of the portion of truth which the common opinion omits, ought to be considered precious, with whatever amount of error and confusion that truth may be blended. No sober judge of human affairs will feel bound to be indignant because those who force on our notice truths which we should otherwise have overlooked, overlook some of those which we see. Rather, he will think that so long as popular truth is one-sided, it is more desirable than otherwise that unpopular truth should have one-sided asserters too; such being usually the most energetic, and the most likely to compel reluctant attention to the fragment of wisdom which they proclaim as if it were the whole.

Thus, in the eighteenth century, when nearly all the instructed, and all those of the uninstructed who were led by them, were lost in admiration of what is called civilization, and of the marvels of modern science, literature, and philosophy, and while greatly overrating the amount of unlikeness between the men of modern and those of ancient times, indulged the belief that the whole of the difference was in their own favor; with what a salutary shock did the paradoxes of Rousseau explode like bombshells in the midst, dislocating the compact mass of one-sided opinion, and forcing its elements to recombine in a better form and with addi-

tional ingredients. Not that the current opinions were on the whole farther from the truth than Rousseau's were; on the contrary, they were nearer to it; they contained more of positive truth, and very much less of error. Nevertheless there lay in Rousseau's doctrine, and has floated down the stream of opinion along with it, a considerable amount of exactly those truths which the popular opinion wanted; and these are the deposit which was left behind when the flood subsided. The superior worth of simplicity of life, the enervating and demoralizing effect of the trammels and hypocrisies of artificial society, are ideas which have never been entirely absent from cultivated minds since Rousseau wrote; and they will in time produce their due effect, though at present needing to be asserted as much as ever, and to be asserted by deeds, for words, on this subject, have nearly exhausted their power.

In politics, again, it is almost a commonplace, that a party of order or stability, and a party of progress or reform, are both necessary elements of a healthy state of political life; until the one or the other shall have so enlarged its mental grasp as to be a party equally of order and of progress, knowing and distinguishing what is fit to be preserved from what ought to be swept away. Each of these modes of thinking derives its utility from the deficiencies of the other; but it is in a great measure the opposition of the other that keeps each within the limits of reason and sanity. Unless opinions favorable to democracy and to aristocracy, to property and to equality, to co-operation and to competition, to luxury and to abstinence, to sociality and individuality, to liberty and discipline, and all the other standing antagonisms of practical life, are expressed with equal freedom, and enforced and defended with equal talent and energy, there is no chance of both elements obtaining their due; one scale is sure to go up, and the other down. Truth, in the great practical concerns of life, is so much a question of the reconciling and combining of opposites,

that very few have minds sufficiently capacious and impartial to make the adjustment with an approach to correctness, and it has to be made by the rough process of a struggle between combatants fighting under hostile banners. On any of the great open questions just enumerated, if either of the two opinions has a better claim than the other, not merely to be tolerated, but to be encouraged and countenanced, it is the one which happens at the particular time and place to be in a minority. That is the opinion which, for the time being, represents the neglected interests, the side of human well-being which is in danger of obtaining less than its share. I am aware that there is not, in this country, any tolerance of differences of opinion on most of these topics. They are adduced to show, by admitted and multiplied examples, the universality of the fact, that only through diversity of opinion is there, in the existing state of human intellect, a chance of fair play to all sides of the truth. When there are persons to be found, who form an exception to the apparent unanimity of the world on any subject, even if the world is in the right, it is always probable that dissentients have something worth hearing to say for themselves, and that truth would lose something by their silence.

It may be objected, "But *some* received principles, especially on the highest and most vital subjects, are more than half-truths. The Christian morality, for instance, is the whole truth on that subject, and if any one teaches a morality which varies from it, he is wholly in error." As this is of all cases the most important in practice, none can be fitter to test the general maxim. But before pronouncing what Christian morality is or is not, it would be desirable to decide what is meant by Christian morality. If it means the morality of the New Testament, I wonder that any one who derives his knowledge of this from the book itself, can suppose that it was announced, or intended, as a complete doctrine of morals. The Gospel always refers to a pre-

existing morality, and confines its precepts to the particulars in which that morality was to be corrected, or superseded by a wider and higher; expressing itself, moreover, in terms most general, often impossible to be interpreted literally, and possessing rather the impressiveness of poetry or eloquence than the precision of legislation. To extract from it a body of ethical doctrine, has never been possible without eking it out from the Old Testament, that is, from a system elaborate indeed, but in many respects barbarous, and intended only for a barbarous people. St. Paul, a declared enemy to this Judaical mode of interpreting the doctrine and filling up the scheme of his Master, equally assumes a pre-existing morality, namely that of the Greeks and Romans; and his advice to Christians is in a great measure a system of accommodation to that; even to the extent of giving an apparent sanction to slavery. What is called Christian, but should rather be termed theological, morality, was not the work of Christ or the Apostles, but is of much later origin, having been gradually built up by the Catholic Church of the first five centuries, and though not implicitly adopted by moderns and Protestants, has been much less modified by them than might have been expected. For the most part, indeed, they have contented themselves with cutting off the additions which had been made to it in the Middle Ages, each sect supplying the place by fresh additions, adopted to its own character and tendencies. That mankind owe a great debt to this morality, and to its early teachers, I should be the last person to deny; but I do not scruple to say of it, that it is, in many important points, incomplete and one-sided, and that unless ideas and feelings, not sanctioned by it, had contributed to the formation of European life and character, human affairs would have been in a worse condition than they now are. Christian morality (so called) has all the characters of a reaction; it is, in great part, a protest against Paganism. Its ideal is negative rather than positive; passive

rather than active; Innocence rather than Nobleness; Abstinence from Evil, rather than energetic Pursuit of Good: in its precepts (as has been well said) "thou shalt not" predominates unduly over "thou shalt." In its horror of sensuality, it made an idol of asceticism, which has been gradually compromised away into one of legality. It holds out the hope of heaven and the threat of hell, as the appointed and appropriate motives to a virtuous life: in this falling far below the best of the ancients, and doing what lies in it to give to human morality an essentially selfish character, by disconnecting each man's feelings of duty from the interests of his fellow-creatures, except so far as a self-interested inducement is offered to him for consulting them. It is essentially a doctrine of passive obedience; it inculcates submission to all authorities found established; who indeed are not to be actively obeyed when they command what religion forbids, but who are not to be resisted, far less rebelled against, for any amount of wrong to ourselves. And while, in the morality of the best Pagan nations, duty to the State holds even a disproportionate place, infringing on the just liberty of the individual; in purely Christian ethics, that grand department of duty is scarcely noticed or acknowledged. It is in the Koran, not the New Testament, that we read the maxim—"A ruler who appoints any man to an office, when there is in his dominions another man better qualified for it, sins against God and against the State." What little recognition the idea of obligation to the public attains in modern morality, is derived from Greek and Roman sources, not from Christian; as, even in the morality of private life, whatever exists of magnanimity, high-mindedness, personal dignity, even the sense of honor, is derived from the purely human, not the religious part of our education, and never could have grown out of a standard of ethics in which the only worth, professionally recognized, is that of obedience.

I am as far as any one from pretending that these defects are necessarily inherent

in the Christian ethics, in every manner in which it can be conceived, or that the many requisites of a complete moral doctrine which it does not contain, do not admit of being reconciled with it. Far less would I insinuate this of the doctrines and precepts of Christ himself. I believe that the sayings of Christ are all, that I can see any evidence of their having been intended to be; that they are irreconcilable with nothing which a comprehensive morality requires; that everything which is excellent in ethics may be brought within them, with no greater violence to their language than has been done to it by all who have attempted to deduce from them any practical system of conduct whatever. But it is quite consistent with this, to believe that they contain, and were meant to contain, only a part of the truth; that many essential elements of the highest morality are among the things which are not provided for, nor intended to be provided for, in the recorded deliverances of the Founder of Christianity, and which have been entirely thrown aside in the system of ethics erected on the basis of those deliverances by the Christian Church. And this being so, I think it a great error to persist in attempting to find in the Christian doctrine that complete rule for our guidance, which its author intended it to sanction and enforce, but only partially to provide. I believe, too, that this narrow theory is becoming a grave practical evil, detracting greatly from the value of the moral training and instruction, which so many well-meaning persons are now at length exerting themselves to promote. I much fear that by attempting to form the mind and feelings on an exclusively religious type, and discarding those secular standards (as for want of a better name they may be called) which heretofore co-existed with and supplemented the Christian ethics, receiving some of its spirit, and infusing into it some of theirs, there will result, and is even now resulting, a low, abject, servile type of character, which, submit itself as it may to what it deems the Supreme Will, is incapable of

rising to or sympathizing in the conception of Supreme Goodness. I believe that other ethics than any which can be evolved from exclusively Christian sources, must exist side by side with Christian ethics to produce the moral regeneration of mankind; and that the Christian system is no exception to the rule, that in an imperfect state of the human mind, the interests of truth require a diversity of opinions. It is not necessary that in ceasing to ignore the moral truths not contained in Christianity, men should ignore any of those which it does contain. Such prejudice, or oversight, when it occurs, is altogether an evil; but it is one from which we cannot hope to be always exempt, and must be regarded as the price paid for an inestimable good. The exclusive pretension made by a part of the truth to be the whole, must and ought to be protested against; and if a reactionary impulse should make the protestors unjust in their turn, this one-sidedness, like the other, may be lamented, but must be tolerated. If Christians would teach infidels to be just to Christianity, they should themselves be just to infidelity. It can do truth no service to blink the fact, known to all who have the most ordinary acquaintance with literary history, that a large portion of the noblest and most valuable moral teaching has been the work, not only of men who did not know, but of men who knew and rejected, the Christian faith.

I do not pretend that the most unlimited use of the freedom of enunciating all possible opinions would put an end to the evils of religious or philosophical sectarianism. Every truth which men of narrow capacity are in earnest about, is sure to be asserted, inculcated, and in many ways even acted on, as if no other truth existed in the world, or at all events none that could limit or qualify the first. I acknowledge that the tendency of all opinions to become sectarian is not cured by the freest discussion, but is often heightened and exacerbated thereby; the truth which ought to have been, but was not,

seen, being rejected all the more violently because proclaimed by persons regarded as opponents. But it is not on the impassioned partisan, it is on the calmer and more disinterested bystander, that this collision of opinions works its salutary effect. Not the violent conflict between parts of the truth, but the quiet suppression of half of it, is the formidable evil; there is always hope when people are forced to listen to both sides; it is when they attend only to one that errors harden into prejudices, and truth itself ceases to have the effect of truth, by being exaggerated into falsehood. And since there are few mental attributes more rare than that judicial faculty which can sit in intelligent judgment between two sides of a question, of which only one is represented by an advocate before it, truth has no chance but in proportion as every side of it, every opinion which embodies any fraction of the truth, not only finds advocates, but is so advocated as to be listened to.

We have now recognized the necessity to the mental well-being of mankind (on which all their other well-being depends) of freedom of opinion, and freedom of the expression of opinion, on four distinct grounds; which we will now briefly recapitulate.

First, if any opinion is compelled to silence, that opinion may, for aught we can certainly know, be true. To deny this is to assume our own infallibility.

Secondly, though the silenced opinion be an error, it may, and very commonly does, contain a portion of truth; and since the general or prevailing opinion on any subject is rarely or never the whole truth, it is only by the collision of adverse opinions that the remainder of the truth has any chance of being supplied.

Thirdly, even if the received opinion be not only true, but the whole truth; unless it is suffered to be, and actually is, vigorously and earnestly contested, it will, by most of those who receive it, be held in the manner of a prejudice, with little comprehension or feeling of its ra-

tional grounds. And not only this, but, fourthly, the meaning of the doctrine itself will be in danger of being lost, or enfeebled, and deprived of its vital effect on the character and conduct: the dogma

becoming a mere formal profession, inefficacious for good, but cumbering the ground, and preventing the growth of any real and heartfelt conviction, from reason or personal experience.

II *The Subjection of Women**

THE OBJECT OF THIS ESSAY is to explain as clearly as I am able, the grounds of an opinion which I have held from the very earliest period when I had formed any opinions at all on social or political matters, and which, instead of being weakened or modified, has been constantly growing stronger by the progress of reflection and the experience of life: That the principle which regulates the existing social relations between the two sexes—the legal subordination of one sex to the other—is wrong in itself, and now one of the chief hindrances to human improvement; and that it ought to be replaced by a principle of perfect equality, admitting no power or privilege on the one side, nor disability on the other.

The generality of a practice is in some cases a strong presumption that it is, or at all events once was, conducive to laudable ends. This is the case, when the practice was first adopted, or afterwards kept up, as a means to such ends, and was grounded on experience of the mode in which they could be most effectually attained. If the authority of men over women, when first established, had been the result of a conscientious comparison between different modes of constituting the government of society; if, after trying various other modes of social organization—the government of women over men, equality between the two, and such mixed and divided modes of government as might be invented—it had been decided, on the

* From John Stuart Mill, *The Subjection of Women* (1869).

testimony of experience, that the mode in which women are wholly under the rule of men, having no share at all in public concerns, and each in private being under the legal obligation of obedience to the man with whom she has associated her destiny, was the arrangement most conducive to the happiness and well being of both; its general adoption might then be fairly thought to be some evidence that, at the time when it was adopted, it was the best: though even then the considerations which recommended it may, like so many other primeval social facts of the greatest importance, have subsequently, in the course of ages, ceased to exist. But the state of the case is in every respect the reverse of this. In the first place, the opinion in favor of the present system, which entirely subordinates the weaker sex to the stronger, rests upon theory only; for there never has been trial made of any other: so that experience, in the sense in which it is vulgarly opposed to theory, cannot be pretended to have pronounced any verdict. And in the second place, the adoption of this system of inequality never was the result of deliberation, or forethought, or any social ideas, or any notion whatever of what conduced to the benefit of humanity or the good order of society. It arose simply from the fact that from the very earliest twilight of human society, every woman (owing to the value attached to her by men, combined with her inferiority in muscular strength) was found in a state of bondage to some man. Laws and systems of polity always begin by recognizing the relations they find already existing between individuals. They convert what was a mere physical fact into a legal right, give it the sanction of society,

and principally aim at the substitution of public and organized means of asserting and protecting these rights, instead of the irregular and lawless conflict of physical strength. Those who had already been compelled to obedience became in this manner legally bound to it. Slavery, from being a mere affair of force between the master and the slave, became regularized and a matter of compact among the masters, who, binding themselves to one another for common protection, guaranteed by their collective strength the private possessions of each, including his slaves. In early times, the great majority of the male sex were slaves, as well as the whole of the female. And many ages elapsed, some of them ages of high cultivation, before any thinker was bold enough to question the rightfulness, and the absolute social necessity, either of the one slavery or of the other. By degrees such thinkers did arise: and (the general progress of society assisting) the slavery of the male sex has, in all the countries of Christian Europe at least (though, in one of them, only within the last few years) been at length abolished, and that of the female sex has been gradually changed into a milder form of dependence. But this dependence, as it exists at present, is not an original institution, taking a fresh start from considerations of justice and social expediency—it is the primitive state of slavery lasting on, through successive mitigations and modifications occasioned by the same causes which have softened the general manners, and brought all human relations more under the control of justice and the influence of humanity. It has not lost the taint of its brutal origin. No presumption in its favor, therefore, can be drawn from the fact of its existence. The only such presumption which it could be supposed to have, must be grounded on its having lasted till now, when so many other things which came down from the same odious source have been done away with. And this, indeed, is what makes it strange to ordinary ears, to hear it asserted that the inequality of rights between men and women has no other source than the law of the strongest.

That this statement should have the effect of a paradox, is in some respects creditable to the progress of civilization, and the improvement of the moral sentiments of mankind. We now live—that is to say, one or two of the most advanced nations of the world now live—in a state in which the law of the strongest seems to be entirely abandoned as the regulating principle of the world's affairs: nobody professes it, and, as regards most of the relations between human beings, nobody is permitted to practice it. When any one succeeds in doing so, it is under cover of some pretext which gives him the semblance of having some general social interest on his side. This being the ostensible state of things, people flatter themselves that the rule of mere force is ended; that the law of the strongest cannot be the reason of existence of anything which has remained in full operation down to the present time. However any of our present institutions may have begun, it can only, they think, have been preserved to this period of advanced civilization by a well-grounded feeling of its adaptation to human nature, and conduciveness to the general good. They do not understand the great vitality and durability of institutions which place right on the side of might; how intensely they are clung to; how the good as well as the bad propensities and sentiments of those who have power in their hands, become identified with retaining it; how slowly these bad institutions give way, one at a time, the weakest first, beginning with those which are least interwoven with the daily habits of life; and how very rarely those who have obtained legal power because they first had physical, have ever lost their hold of it until the physical power had passed over to the other side. Such shifting of the physical force not having taken place in the case of women; this fact, combined with all the peculiar and characteristic features of the particular case, made it certain from the first that this branch of the system of right founded on might, though softened in its most atrocious features at an earlier period than several of the others, would be the very last to disappear. It

The Subjection of Women

was inevitable that this one case of a social relation grounded on force, would survive through generations of institutions grounded on equal justice, an almost solitary exception to the general character of their laws and customs; but which, so long as it does not proclaim its own origin, and as discussion has not brought out its true character, is not felt to jar with modern civilization, any more than domestic slavery among the Greeks jarred with their notion of themselves as a free people.

We must consider, too, that the possessors of the power have facilities in this case, greater than in any other, to prevent any uprising against it. Every one of the subjects lives under the very eye, and almost, it may be said, in the hands, of one of the masters—in closer intimacy with him than with any of her fellow-subjects; with no means of combining against him, no power of even locally overmastering him, and, on the other hand, with the strongest motives for seeking his favor and avoiding to give him offense. In struggles for political emancipation, everybody knows how often its champions are bought off by bribes, or daunted by terrors. In the case of women, each individual of the subject-class is in a chronic state of bribery and intimidation combined. In setting up the standard of resistance, a large number of the leaders, and still more of the followers, must make an almost complete sacrifice of the pleasures or the alleviations of their own individual lot. If ever any system of privilege and enforced subjection had its yoke tightly riveted on the necks of those who are kept down by it, this has. I have not yet shown that it is a wrong system: but every one who is capable of thinking on the subject must see that even if it is, it was certain to outlast all other forms of unjust authority. And when some of the grossest of the other forms still exist in many civilized countries, and have only recently been got rid of in others, it would be strange if that which is so much the deepest-rooted had yet been perceptibly shaken anywhere. There is more reason to wonder that the protests and testimonies

against it should have been so numerous and so weighty as they are.

Some will object, that a comparison cannot fairly be made between the government of the male sex and forms of unjust power, since these are arbitrary, and the effect of mere usurpation, while it on the contrary is natural. But was there ever any domination which did not appear natural to those who possessed it? There was a time when the division of mankind into two classes, a small one of masters and a numerous one of slaves, appeared, even to the most cultivated minds, to be a natural, and the only natural, condition of the human race. No less an intellect, and one which contributed no less to the progress of human thought, than Aristotle, held this opinion without doubt or misgiving; and rested it on the same premises on which the same assertion in regard to the dominion of men over women is usually based, namely that there are different natures among mankind, free natures, and slave natures; that the Greeks were of a free nature, the barbarian races of Thracians and Asiatics of a slave nature. But why need I go back to Aristotle? Did not the slaveowners of the Southern United States maintain the same doctrine, with all the fanaticism with which men cling to the theories that justify their passions and legitimate their personal interests? Did they not call heaven and earth to witness that the dominion of the white man over the black is natural, that the black race is by nature incapable of freedom, and marked out for slavery? some even going so far as to say that the freedom of manual laborers is an unnatural order of things anywhere. Again, the theorists of absolute monarchy have always affirmed it to be the only natural form of government; issuing from the patriarchal, which was the primitive and spontaneous form of society, framed on the model of the paternal, which is anterior to society itself, and, as they contend, the most natural authority of all. Nay, for that matter, the law of force itself, to those who could not plead any other, has always seemed the most natural of all grounds for the exercise of authority. Conquering races hold it to be Nature's

own dictate that the conquered should obey the conquerors, or, as they euphronously paraphrase it, that the feebler and more unwarlike races should submit to the braver and manlier. The smallest acquaintance with human life in the middle ages, shows how supremely natural the dominion of the feudal nobility over men of low condition appeared to the nobility themselves, and how unnatural the conception seemed, of a person of the inferior class claiming equality with them, or exercising authority over them. It hardly seemed less so to the class held in subjection. The emancipated serfs and burgesses, even in their most vigorous struggles, never made any pretension to a share of authority; they only demanded more or less of limitation to the power of tyrannizing over them. So true is it that unnatural generally means only uncustomary, and that everything which is usual appears natural. The subjection of women to men being a universal custom, any departure from it quite naturally appears unnatural. But how entirely, even in this case, the feeling is dependent on custom, appears by ample experience. Nothing so much astonishes the people of distant parts of the world, when they first learn anything about England, as to be told that it is under a queen: the thing seems to them so unnatural as to be almost incredible. To Englishmen this does not seem in the least degree unnatural, because they are used to it; but they do feel it unnatural that women should be soldiers or members of Parliament. In the feudal ages, on the contrary, war and politics were not thought unnatural to women, because not unusual; it seemed natural that women of the privileged classes should be of manly character, inferior in nothing but bodily strength to their husbands and fathers. The independence of women seemed rather less unnatural to the Greeks than to other ancients, on account of the fabulous Amazons (whom they believed to be historical), and the partial example afforded by the Spartan women; who, though no less subordinate by law than in other Greek states, were more free in fact, and being trained to bodily exercises in the same manner with

men, gave ample proof that they were not naturally disqualified for them. There can be little doubt that Spartan experience suggested to Plato, among many other of his doctrines, that of the social and political equality of the two sexes.

But, it will be said, the rule of men over women differs from all these others in not being a rule of force: it is accepted voluntarily; women make no complaint, and are consenting parties to it. In the first place, a great number of women do not accept it. Ever since there have been women able to make their sentiments known by their writings (the only mode of publicity which society permits to them), an increasing number of them have recorded protests against their present social condition: And recently many thousands of them, headed by the most eminent women known to the public, have petitioned Parliament for their admission to the Parliamentary Suffrage. The claim of women to be educated as solidly, and in the same branches of knowledge, as men, is urged with growing intensity, and with a great prospect of success; while the demand for their admission into professions and occupations hitherto closed against them, becomes every year more urgent. Though there are not in this country, as there are in the United States, periodical Conventions and an organized party to agitate for the Rights of Women, there is a numerous and active Society organized and managed by women, for the more limited object of obtaining the political franchise. Nor is it only in our own country and in America that women are beginning to protest, more or less collectively, against the disabilities under which they labor. France, and Italy, and Switzerland, and Russia now afford examples of the same thing. How many more women there are who silently cherish similar aspirations, no one can possibly know; but there are abundant tokens how many *would* cherish them, were they not so strenuously taught to repress them as contrary to the proprieties of their sex. It must be remembered, also, that no enslaved class ever asked for complete liberty at once. When Simon de Montfort called the deputies of the commons to sit for the first

time in Parliament, did any of them dream of demanding that an assembly, elected by their constituents, should make and destroy ministries, and dictate to the king in affairs of state? No such thought entered into the imagination of the most ambitious of them. The nobility had already these pretensions; the commons pretended to nothing but to be exempt from arbitrary taxation, and from the gross individual oppression of the king's officers. It is a political law of nature that those who are under any power of ancient origin, never begin by complaining of the power itself, but only of its oppressive exercise. There is never any want of women who complain of ill usage by their husbands. There would be infinitely more, if complaint were not the greatest of all provocatives to a repetition and increase of the ill usage. It is this which frustrates all attempts to maintain the power but protect the woman against its abuses. In no other case (except that of a child) is the person who has been proved judicially to have suffered an injury, replaced under the physical power of the culprit who inflicted it. Accordingly wives, even in the most extreme and protracted cases of bodily ill usage, hardly ever dare avail themselves of the laws made for their protection: and if, in a moment of irrepressible indignation, or by the interference of neighbors, they are induced to do so, their whole effort afterwards is to disclose as little as they can, and to beg off their tyrant from his merited chastisement.

All causes, social and natural, combine to make it unlikely that women should be collectively rebellious to the power of men. They are so far in a position different from all other subject classes, that their masters require something more from them than actual service. Men do not want solely the obedience of women, they want their sentiments. All men, except the most brutish, desire to have, in the woman most nearly connected with them, not a forced slave but a willing one, not a slave merely, but a favorite. They have therefore put everything in practice to enslave their minds. The masters of all other slaves rely, for maintaining obedience, on fear; either fear of themselves, or religious fears. The

masters of women wanted more than simple obedience, and they turned the whole force of education to effect their purpose. All women are brought up from the very earliest years in the belief that their ideal of character is the very opposite to that of men; not self-will, and government by self-control, but submission, and yielding to the control of others. All the moralities tell them that it is the duty of women, and all the current sentimentalities that it is their nature, to live for others; to make complete abnegation of themselves, and to have no life but in their affections. And by their affections are meant the only ones they are allowed to have—those to the men with whom they are connected, or to the children who constitute an additional and indefeasible tie between them and a man. When we put together three things—first, the natural attraction between opposite sexes; secondly, the wife's entire dependence on the husband, every privilege or pleasure she has being either his gift, or depending entirely on his will; and lastly, that the principal object of human pursuit, consideration, and all objects of social ambition, can in general be sought or obtained by her only through him, it would be a miracle if the object of being attractive to men had not become the polar star of feminine education and formation of character. And, this great means of influence over the minds of women having been acquired, an instinct of selfishness made men avail themselves of it to the utmost as a means of holding women in subjection, by representing to them meekness, submissiveness, and resignation of all individual will into the hands of a man, as an essential part of sexual attractiveness. Can it be doubted that any of the other yokes which mankind have succeeded in breaking, would have subsisted till now if the same means had existed, and had been as sedulously used, to bow down their minds to it? If it had been made the object of the life of every young plebeian to find personal favor in the eyes of some patrician, of every young serf with some seigneur; if domestication with him, and a share of his personal affections, had been held out as the prize which they all should look out for, the

most gifted and aspiring being able to reckon on the most desirable prizes; and if, when this prize had been obtained, they had been shut out by a wall of brass from all interests not centering in him, all feelings and desires but those which he shared or inculcated; would not serfs and seigneurs, plebeians and patricians, have been as broadly distinguished at this day as men and women are? and would not all but a thinker here and there, have believed the distinction to be a fundamental and unalterable fact in human nature?

Neither does it avail anything to say that the *nature* of the two sexes adapts them to their present functions and position, and renders these appropriate to them. Standing on the ground of common sense and the constitution of the human mind, I deny that any one knows, or can know, the nature of the two sexes, as long as they have only been seen in their present relation to one another. If men had ever been found in society without women, or women without men, or if there had been a society of men and women in which the women were not under the control of the men, something might have been positively known about the mental and moral differences which may be inherent in the nature of each. What is now called the nature of women is an eminently artificial thing—the result of forced repression in some directions, unnatural stimulation in others. It may be asserted without scruple, that no other class of dependents have had their character so entirely distorted from its natural proportions by their relation with their masters; for, if conquered and slave races have been, in some respects, more forcibly repressed, whatever in them has not been crushed down by an iron heel has generally been let alone, and if left with any liberty of development, it has developed itself according to its own laws; but in the case of women, a hot-house and stove cultivation has always been carried on of some of the capabilities of their nature, for the benefit and pleasure of their masters. Then, because certain products of the general vital force sprout luxuriantly and reach a great development

in this heated atmosphere and under this active nurture and watering, while other shoots from the same root, which are left outside in the wintry air, with ice purposely heaped all round them, have a stunted growth, and some are burnt off with fire and disappear; men, with that inability to recognize their own work which distinguishes the unanalytic mind, indolently believe that the tree grows of itself in the way they have made it grow, and that it would die if one half of it were not kept in a vapor bath and the other half in the snow.

Of all difficulties which impede the progress of thought, and the formation of well-grounded opinions on life and social arrangements, the greatest is now the unspeakable ignorance and inattention of mankind in respect to the influences which form human character. Whatever any portion of the human species now are, or seem to be, such, it is supposed, they have a natural tendency to be: even when the most elementary knowledge of the circumstances in which they have been placed, clearly points out the causes that made them what they are. Because a cottier deeply in arrears to his landlord is not industrious, there are people who think that the Irish are naturally idle. Because constitutions can be overthrown when the authorities appointed to execute them turn their arms against them, there are people who think the French incapable of free government. Because the Greeks cheated the Turks, and the Turks only plundered the Greeks, there are persons who think that the Turks are naturally more sincere: and because women, as is often said, care nothing about politics except their personalities, it is supposed that the general good is naturally less interesting to women than to men. History, which is now so much better understood than formerly, teaches another lesson: if only by showing the extraordinary susceptibility of human nature to external influences, and the extreme variability of those of its manifestations which are supposed to be most universal and uniform. But in history, as in travelling, men usually see only what they already had in their own minds; and few learn much

from history, who do not bring much with them to its study.

I am far from pretending that wives are in general no better treated than slaves; but no slave is a slave to the same lengths, and in so full a sense of the word, as a wife is. Hardly any slave, except one immediately attached to the master's person, is a slave at all hours and all minutes; in general he has, like a soldier, his fixed task, and when it is done, or when he is off duty, he disposes, within certain limits, of his own time, and has a family life into which the master rarely intrudes. "Uncle Tom" under his first master had his own life in his "cabin," almost as much as any man whose work takes him away from home, is able to have in his own family. But it cannot be so with the wife. Above all, a female slave has (in Christian countries) an admitted right, and is considered under a moral obligation, to refuse to her master the last familiarity. Not so the wife: however brutal a tyrant she may unfortunately be chained to—though she may know that he hates her, though it may be his daily pleasure to torture her, and though she may feel it impossible not to loathe him—he can claim from her and enforce the lowest degradation of a human being, that of being made the instrument of an animal function contrary to her inclinations. While she is held in this worst description of slavery as to her own person, what is her position in regard to the children in whom she and her master have a joint interest? They are by law *his* children. He alone has any legal rights over them. Not one act can she do towards or in relation to them, except by delegation from him. Even after he is dead she is not their legal guardian, unless he by will has made her so. He could even send them away from her, and deprive her of the means of seeing or corresponding with them, until this power was in some degree restricted by Serjeant Talfourd's Act. This is her legal state. And from this state she has no means of withdrawing herself. If she leaves her husband, she can take nothing with her, neither her children nor anything which is rightfully her own. If he chooses, he can

compel her to return, by law, or by physical force; or he may content himself with seizing for his own use anything which she may earn, or which may be given to her by her relations. It is only legal separation by a decree of a court of justice, which entitles her to live apart, without being forced back into the custody of an exasperated jailer—or which empowers her to apply any earnings to her own use, without fear that a man whom perhaps she has not seen for twenty years will pounce upon her some day and carry all off. This legal separation, until lately, the courts of justice would only give at an expense which made it inaccessible to any one out of the higher ranks. Even now it is only given in cases of desertion, or of the extreme of cruelty; and yet complaints are made every day that it is granted too easily. Surely, if a woman is denied any lot in life but that of being the personal body-servant of a despot, and is dependent for everything upon the chance of finding one who may be disposed to make a favorite of her instead of merely a drudge, it is a very cruel aggravation of her fate that she should be allowed to try this chance only once. The natural sequel and corollary from this state of things would be, that since her all in life depends upon obtaining a good master, she should be allowed to change again and again until she finds one. I am not saying that she ought to be allowed this privilege. That is a totally different consideration. The question of divorce, in the sense involving liberty of remarriage, is one into which it is foreign to my purpose to enter. All I now say is, that to those to whom nothing but servitude is allowed, the free choice of servitude is the only, though a most insufficient, alleviation. Its refusal completes the assimilation of the wife to the slave—and the slave under not the mildest form of slavery: for in some slave codes the slave could, under certain circumstances of ill usage, legally compel the master to sell him. But no amount of ill usage, without adultery superadded, will in England free a wife from her tormentor.

I have no desire to exaggerate, nor does the case stand in any need of exaggeration. I have described the wife's legal position,

nor her actual treatment. The laws of most countries are far worse than the people who execute them, and many of them are only able to remain laws by being seldom or never carried into effect. If married life were all that it might be expected to be, looking to the laws alone, society would be a hell upon earth. Happily there are both feelings and interests which in many men exclude, and in most, greatly temper, the impulses and propensities which lead to tyranny: and of those feelings, the tie which connects a man with his wife affords, in a normal state of things, incomparably the strongest example. The only tie which at all approaches to it, that between him and his children, tends, in all save exceptional cases, to strengthen, instead of conflicting with, the first. Because this is true; because men in general do not inflict, nor women suffer, all the misery which could be inflicted and suffered if the full power of tyranny with which the man is legally invested were acted on; the defenders of the existing form of the institution think that all its iniquity is justified, and that any complaint is merely quarrelling with the evil which is the price paid for every great good. But the mitigations in practice, which are compatible with maintaining in full legal force this or any other kind of tyranny, instead of being any apology for despotism, only serve to prove what power human nature possesses of reacting against the vilest institutions, and with what vitality the seeds of good as well as those of evil in human character diffuse and propagate themselves.

When we consider how vast is the number of men, in any great country, who are little higher than brutes, and that this never prevents them from being able, through the law of marriage, to obtain a victim, the breadth and depth of human misery caused in this shape alone by the abuse of the institution swells to something appalling. Yet these are only the extreme cases. They are the lowest abysses, but there is a sad succession of depth after depth before reaching them. In domestic

as in political tyranny, the case of absolute monsters chiefly illustrates the institution by showing that there is scarcely any horror which may not occur under it if the despot pleases, and thus setting in a strong light what must be the terrible frequency of things only a little less atrocious.

But how, it will be asked, can any society exist without government? In a family, as in a state, some one person must be the ultimate ruler. Who shall decide when married people differ in opinion? Both cannot have their way, yet a decision one way or the other must be come to.

It is not true that in all voluntary association between two people, one of them must be absolute master: still less that the law must determine which of them it shall be. The most frequent case of voluntary association, next to marriage, is partnership in business: and it is not found or thought necessary to enact that in every partnership, one partner shall have entire control over the concern, and the others shall be bound to obey his orders. No one would enter into partnership on terms which would subject him to the responsibilities of a principal, with only the powers and privileges of a clerk or agent. If the law dealt with other contracts as it does with marriage, it would ordain that one partner should administer the common business as if it was his private concern; that the others should have only delegated powers; and that this one should be designated by some general presumption of law, for example as being the eldest. The law never does this: nor does experience show it to be necessary that any theoretical inequality of power should exist between the partners, or that the partnership should have any other conditions than what they may themselves appoint by their articles of agreement. Yet it might seem that the exclusive power might be conceded with less danger to the rights and interests of the inferior, in the case of partnership than in that of marriage, since he is free to cancel the power by withdrawing from the connection. The wife

has no such power, and even if she had, it is almost always desirable that she should try all measures before resorting to it.

The equality of married persons before the law, is not only the sole mode in which that particular relation can be made consistent with justice to both sides, and conducive to the happiness of both, but it is the only means of rendering the daily life of mankind, in any high sense, a school of moral cultivation. Though the truth may not be felt or generally acknowledged for generations to come, the only school of genuine moral sentiment is society between equals. The moral education of mankind has hitherto emanated chiefly from the law of force, and is adapted almost solely to the relations which force creates. In the less advanced states of society, people hardly recognize any relation with their equals. To be an equal is to be an enemy. Society, from its highest place to its lowest, is one long chain, or rather ladder, where every individual is either above or below his nearest neighbor, and wherever he does not command he must obey. Existing moralities, accordingly, are mainly fitted to a relation of command and obedience. Yet command and obedience are but unfortunate necessities of human life: society in equality is its normal state. Already in modern life, and more and more as it progressively improves, command and obedience become exceptional facts in life, equal association its general rule. The morality of the first ages rested on the obligation to submit to power; that of the ages next following, on the right of the weak to the forbearance and protection of the strong. How much longer is one form of society and life to content itself with the morality made for another? We have had the morality of submission, and the morality of chivalry and generosity; the time is now come for the morality of justice. Whenever, in former ages, any approach has been made to society in equality, Justice has asserted its claims as the foundation of virtue. It was thus in the free republics of antiquity. But

even in the best of these, the equals were limited to the free male citizens; slaves, women, and the unenfranchised residents were under the law of force. The joint influence of Roman civilization and of Christianity obliterated these distinctions, and in theory (if only partially in practice) declared the claims of the human being, as such, to be paramount to those of sex, class, or social position. The barriers which had begun to be levelled were raised again by the northern conquests; and the whole of modern history consists of the slow process by which they have since been wearing away. We are entering into an order of things in which justice will again be the primary virtue; grounded as before on equal, but now also on sympathetic association; having its root no longer in the instinct of equals for self-protection, but in a cultivated sympathy between them; and no one being now left out, but an equal measure being extended to all. It is no novelty that mankind do not distinctly foresee their own changes, and that their sentiments are adapted to past, not to coming ages. To see the futurity of the species has always been the privilege of the intellectual élite, or of those who have learnt from them; to have the feelings of that futurity has been the distinction, and usually the martyrdom, of a still rarer élite. Institutions, books, education, society, all go on training human beings for the old, long after the new has come; much more when it is only coming. But the true virtue of human beings is fitness to live together as equals; claiming nothing for themselves but what they as freely concede to every one else; regarding command of any kind as an exceptional necessity, and in all cases a temporary one; and preferring, whenever possible, the society of those with whom leading and following can be alternate and reciprocal. To these virtues, nothing in life as at present constituted gives cultivation by exercise. The family is a school of despotism, in which the virtues of despotism, but also its vices, are largely nourished. Citizenship, in free countries, is partly a school of society in equality;

but citizenship fills only a small place in modern life, and does not come near the daily habits or inmost sentiments. The family, justly constituted, would be the real school of the virtues of freedom. It is sure to be a sufficient one of everything else. It will always be a school of obedience for the children, of command for the parents. What is needed is, that it should be a school of sympathy in equality, of living together in love, without power on one side or obedience on the other. This it ought to be between the parents. It would then be an exercise of those virtues which each requires to fit them for all other association, and a model to the children of the feelings and conduct which their temporary training by means of obedience is designed to render habitual, and therefore natural, to them. The moral training of mankind will never be adapted to the conditions of the life for which all other human progress is a preparation, until they practice in the family the same moral rule which is adapted to the normal constitution of human society.

...

The moral regeneration of mankind will only really commence, when the most fundamental of the social relations is placed under the rule of equal justice, and when human beings learn to cultivate their strongest sympathy with an equal in rights and in cultivation.

Thus far, the benefits which it has appeared that the world would gain by ceasing to make sex a disqualification for privileges and a badge of subjection, are social rather than individual; consisting in an increase of the general fund of thinking and acting power, and an improvement in the general conditions of the association of men with women. But it would be a

grievous understatement of the case to omit the most direct benefit of all, the unspeakable gain in private happiness to the liberated half of the species; the difference to them between a life of subjection to the will of others, and a life of rational freedom. After the primary necessities of food and raiment, freedom is the first and strongest want of human nature. While mankind are lawless, their desire is for lawless freedom. When they have learnt to understand the meaning of duty and the value of reason, they incline more and more to be guided and restrained by these in the exercise of their freedom; but they do not therefore desire freedom less; they do not become disposed to accept the will of other people as the representative and interpreter of those guiding principles. On the contrary, the communities in which the reason has been most cultivated, and in which the idea of social duty has been most powerful, are those which have most strongly asserted the freedom of action of the individual—the liberty of each to govern his conduct by his own feelings of duty, and by such laws and social restraints as his own conscience can subscribe to.

He who would rightly appreciate the worth of personal independence as an element of happiness, should consider the value he himself puts upon it as an ingredient of his own.

...

Every restraint on the freedom of conduct of any of their human fellow creatures, (otherwise than by making them responsible for any evil actually caused by it), dries up *pro tanto* the principal fountain of human happiness, and leaves the species less rich, to an inappreciable degree, in all that makes life valuable to the individual human being.

HEGEL

The French Revolution accentuated the political and intellectual divisions of Europe. It everywhere made democrats more radical and conservatives more reactionary. In England reform was delayed for a generation, but the war with revolutionary and, later, Napoleonic France could not permanently alter the spread of liberalism, because English liberalism derived its vitality from the twin roots of 1649 and 1689, and not from the French Revolution of 1789. Having made their peace with constitutionalism and parliamentary sovereignty a century before the French Revolution, the English governing classes were more afraid of Napoleon than of Rousseau.

By contrast, on the Continent the philosophy of French individualism and the Rights of Man, more than French power, seemed to threaten the foundations of the established order. Napoleon's armies brought to the masses of the Continent deliverance from social and political oppression by native ruling classes. As time proceeded, however, the French struggle with England for world hegemony turned the whole Continent into a base of operations the cost of which had to be borne by Continental nations. The French objective of conquering England, the last bulwark of resistance to Napoleon, led to the dislocation of the European economy and to the control of the European nations by a regime of tyranny. The principle of liberty, engendered by the French Revolution itself, became the secret weapon that eventually defeated Napoleonic France in 1815.

The Napoleonic wars had a particularly disastrous effect on Germany. In England and France, democracy and liberalism had sprung up as native movements against internal oppressors and exploiters. In addition, democracy in both countries, as in the United States, proved successful because it promoted material welfare at home and enhanced national power and prestige abroad. By contrast, the German people first learned of democracy through the invasions of the French revolutionary armies. The enthusiasm for the French Revolution—and later for Napoleon—was sincere and exuberant in many parts of Germany, especially among the middle classes and peasants. If the victorious Napoleonic armies had followed up the annihilation of a feudal order in Germany with the creation of a free German republic, the history of Europe would have taken a new turn, and the Elbe, rather than the Rhine, would have become the frontier of democracy.

As it was, the temporary destruction of feudalism and absolutism in Germany was followed by a French regime of economic and military control in the service of Napoleon's drive for world empire. Whereas the French armies had entered Germany as the torchbearers of liberty and human brotherhood, they left it as the enemies of the German people. The German ruling classes were thus able to discredit "the West"—democracy, liberty, parliamentarism, self-government—in the eyes of the German people by identifying democracy as the symbol of Germany's national enemy. Later, Germany looked upon democracy as its national enemy in World Wars I and II.

Because the political experience of Germany has been preponderantly authoritarian, its orthodox tradition of political theory has been chiefly, though not wholly, antidemocratic. In this tradition the philosophy of G. W. F. Hegel (1770–1831) towers over the rest in more than one way. Hegel's system encompasses philosophy, metaphysics, religion, art, ethics, history, and politics. In its range alone his work is impressive and of a truly encyclopedic character. His position in Germany was so powerful that even the most ferocious attack against orthodox German philosophy, that of Karl Marx, sprang largely from Hegelian assumptions.

As a student, Hegel's major interest was theology, but he soon gravitated toward philosophy. In 1801 he began to lecture at the University of Jena. In 1806 the French armies defeated Prussia at the decisive battle of Jena, and Hegel saw Napoleon (the "world-soul," as he called him) ride through Jena. During the French Revolution he was an ardent sympathizer of Jacobin radicalism. As Napoleon's star rose, Hegel profoundly admired him for his genius and power. In 1818, three years after the defeat of Napoleon, Hegel was invited to come to the University of Berlin, and he stayed there until his death in 1831. He became the dominant figure at the University, and his influence extended over all Germany. In this last phase of his life, Hegel was a follower and admirer of the Prussian police state, just as he had previously admired Jacobinism and Napoleon.

The best statement of Hegel's political ideas is to be found in his *Philosophy of Law* (1821). It expresses his conception of freedom, natural and social, which provides the key to an understanding of his political thought. Hegel starts with the assertion that in the physical world nature as it is, is the proper object of knowledge and philosophy. What knowledge has to investigate in nature, Hegel argues, is its "eternal harmony" and "inherent rationality." Proceeding from nature to ethics, Hegel attacks those who believe that the ethical world, actualized in the state, should be approached differently from nature, the physical world. Just as reason becomes "actual" in nature, Hegel says, so it becomes actual in the state. In both instances the observer does not, and cannot, *make* the laws expressing reason but can merely understand them. There is no "chance and caprice" in rationality as it may be apprehended in either the physical world or in the ethical world—the state.

Because some philosophers of the state (Hegel here denounces some German liberal philosophers of his time) have followed the principle that every thinker is authorized "to take his own road," political philosophy has earned for itself all kinds of "scorn and discredit." This has led to the worst kind of scorn, namely, that "everyone is convinced that his mere birthright puts him in a position to pass judgment on philosophy in general and to condemn it."

Because philosophy in Germany is "in the service of the state," Hegel accords to the state the right to defend itself against those who "indulge in subjective feeling and particular conviction," from which evil follows "the ruin of public order and the law of the land."

This discouragement to freedom of thought came from Hegel at a time when antiliberal, authoritarian government in Prussia had become more ruthless than ever before. The Prussian absolute state appeared to Hegel as the historically most complete realization of political rationality. "What is rational is actual and what is actual is rational"—this most famous of all Hegelian phrases has been interpreted in many ways. Whatever the phrase meant to Hegel himself, its practical impact has been in one direction: to sanctify the existing as the good. Hegel himself might personally have rejected the excessive abuses to which his rationalization of existing institutions lent itself in the hands of others, but the historical effect of Hegel was to strengthen the habit of obedience to the existing state and society, which has long characterized German life and thought.

The intimate inner connection between Hegelianism and *militarism* is evident in his conception that "in duty the individual finds his liberation." This concept of freedom is the product of a society that honors militarism as a way of life, as becomes evident in Hegel's further statement that "self-sacrifice" is the "real existence of one's freedom." Hegel also considers the readiness to sacrifice oneself for the state the "intrinsic worth of courage." The courage of resistance is unknown to him. Whereas Locke sees the indestructible essence of man in his act of resisting, Hegel sees man's fulfillment in obedience. Life, liberty, and the pursuit of happiness are thus the exact opposites of the Hegelian concept of citizenship as *self-sacrifice, duty, and discipline*.

If the individual in Hegel's world is nothing, the state is all. In his *Philosophy of History* (published posthumously in 1837), Hegel defines the state as the "realization of Freedom." The state is the actually existing, realized moral life, and "all the worth which the human being possesses—all spiritual reality—he possesses only through the State." The individual has moral value only because he is part of the state, which is the complete actualization of reason. Hegel's state idolatry reaches its peak in his famous phrase that the state is "the Divine Idea as it exists on Earth."

In the Judeo-Christian tradition, the Earthly City can never take the place of the City of God, and no man-made law or institution can therefore command the complete allegiance of man. According to this tradition, man's spiritual reality, based on reason, nature, God, is prior, and superior, to law and the state; the latter are, at best, means of serving the fulfillment of man's moral aspirations. Hegel doubly rejects the Judeo-Christian outlook by regarding the state as the divine idea on earth, the way of God in this world, and by asserting that *man derives all spiritual reality from the state*. With all his devout Lutheran theology, Hegel in actuality rejects the most fundamental philosophical principle of Judeo-Christian monotheism: that there is a sphere of conscience in each human being that is exempt from the claims of political authority, and that the state must not fully absorb the spiritual resources and selfhood of the individual.

Because the state is actualized reason and spirit, Hegel says, the law of the state is a manifestation of objective spirit, and "only that which obeys law, is free," for it obeys itself. Hegel rejects the liberal concept of freedom as absence

of constraint and calls such freedom formal, subjective, abstracted from its essential objects and aims. Constraints put on the impulses, desires, and passions of the individual are not, Hegel maintains, a limitation of freedom but its indispensable condition, because such compulsion forces man to adjust his behavior to the higher reason of the state. Man's real, substantive freedom (as distinct from mere formal freedom) thus consists in his submitting to, and identifying himself with, the higher rationality of state and law.

Whether man submits voluntarily to the state or has to be constrained, makes little difference, as the Hegelian concept of freedom refers, not to the *mode* of action—free personal choice between existing alternatives, or forcible adaptation of conduct to prescribed rules—but to the *object* of action. If man acts in harmony with the goals of the state, regardless how the harmony is attained, he is free, because his action partakes of the highest form of actualized freedom—the state. On the basis of this assumption, when “the subjective will of man submits to laws, the contradiction between Liberty and Necessity vanishes.”

In the democratic tradition of political thought, society means choice and alternative, not submission. According to Hegel, society is a man-made copy of nature with its laws of necessity, in which liberty can be found only by voluntary submission. By contrast, the democratic tradition accepts necessity in physical nature but not in human relations. The reasoning of democrats is that, though one must accept the validity of the law of gravity, one may challenge the validity of any man-made law. Submission to laws of physical nature but defiance of human controls is the distinction that democratic political philosophy carefully draws. Hegel rejects social revolution, just as there is no revolution in nature, whereas democrats, though accepting *evolution* as the only process of change in *nature*, nevertheless accept the possibility, and in some instances even the desirability, of *revolution* as a method of *social change*. In the Hegelian approach to this problem the physical conception of necessity is transferred from the mechanism of nature to the organization of society. The political effects of this transfer are fundamental: just as we are relatively free in nature by knowing, and voluntarily submitting to, the laws of nature, rather than by uselessly trying to change them, we are free in society, the Hegelian argument runs, if we willingly accept the laws imposed upon us.

In both his *Philosophy of Law* and *Philosophy of History* Hegel takes up the question of who ought to determine the laws. He attacks the doctrine that all should participate in the business of the state as a “ridiculous notion.” To permit all persons to share in public decisions because affairs of state are the concern of its members is “tantamount to a proposal to put the democratic element without any rational form into the organism of the state.” Hegel puts forward the *corporate* organization of the state by his emphasis that the individual should be politically articulate only as a member of a social group or class, and not just as a citizen *qua* citizen, as in the liberal democracies.

The fundamental law of the state is the constitution. Hegel opposes the democratic idea of the constitution as an instrument of government, a charter and compact consciously framed for desired ends. The constitution, Hegel says, “should not be regarded as something made, even though it has come into being in time. It must be treated rather as something simply existent in and by itself, as divine therefore, and constant, and as so exalted above the sphere of things

that are made.” Because the state is “the way of God in the world,” the constitution of the state is not something to be tampered with by ordinary mortals.

Going back into the history of the state, Hegel finds that its origin “involves imperious lordship on the one hand, instinctive submission on the other.” This *leadership principle* is also stressed by Hegel in his discussion of the merits of the different types of constitutions—democracy, aristocracy, and monarchy. The advantage of the monarchical form of government lies in the fact, Hegel argues, that leadership is always clearly present, whereas in aristocracy, and even more in democracy, leaders *may* rise to the top. Because of his preference for monarchy, Hegel rejects the sovereignty of the people, especially if the term implies opposition to the sovereignty of the monarch: “So opposed to the sovereignty of the monarch, the sovereignty of the people is one of the confused notions based on the wild idea of the ‘people.’ Taken without its monarch and the articulation of the whole which is the indispensable and direct concomitant of monarchy, the people is a formless mass and no longer a state.” The democratic doctrine that the people are the state is rejected by Hegel as a “perversity” and a “ruse.”

One of the paradoxical phenomena of political philosophy is that those who demand absolute law and order within the state, at the same time often propound *anarchy* as the normal, and a *desirable*, relation *between states*. On the one hand, Hegel advocates the strong state—on the model of the Prussian police state of the nineteenth century. Yet, when it comes to the question of how states are to live together, Hegel is an enthusiastic anarchist. In fact, he is nihilistic enough to deny that relations between states have anything in common with morality, such as regulates conduct between individuals. There is a pagan note to Hegel's claim that “the nation state is mind in its substantive rationality and immediate actuality and is therefore the absolute power on earth.” The whole Stoic-Jewish-Christian tradition which affirms that there is a higher law than the commands of the state—a law of reason, nature, God—is flatly rejected by Hegel. If the state is the absolute power on earth, what happens when several absolutes clash? Hegel cheerfully answers as follows: “If states disagree and their particular wills cannot be harmonized, the matter can only be settled by war.”

However, this consequence does not alarm him. On the contrary. Wars are wholesome, he argues, for a number of reasons. First, “corruption in nations would be the product of prolonged, let alone ‘perpetual’ peace.” The trouble with peace, Hegel thinks, is that men stagnate in it. Their idiosyncrasies become more fixed and ossified, and war is desirable to keep the body politic healthy through proper stimulation. In addition, Hegel stresses the salutary impact of war on national unity: “As a result of war, nations are strengthened, but peoples involved in civil strife also require peace at home through making war abroad.”

Later in the nineteenth century, Bismarck emphasized in his memoirs that war would be the only means to revive and maintain the loyalty of the people. In the twentieth century, the aggressions of fascist and communist totalitarian dictatorships also corroborated Hegel's conception of war as an instrument of national policy. Totalitarian states justify repression in the present by promises of grandeur and prosperity in the future; they continually raise political cash (in good will and popular assent) by issuing postdated checks payable in future glory, until aggressive war finally seems the only way out of the accumulated moral debts.

Just as Hegel exalts leaders in the life of nations—exempting heroes from the ordinary rules of ethics—so he views the relations between states in terms of leadership. Hegel regards world history, not as a series of unconnected and meaningless events, but as the progressive unfolding of Reason. In each epoch of history one nation is charged by the world spirit with the supreme mission of giving complete effect to the “advance of the self-developing self-consciousness of the world-mind.” The nation thus charged by the world spirit is dominant during a whole epoch, and the other nations “are without rights” and “count no longer in world history.”

How is it known whom the world spirit appoints from time to time to the office of world leader? Hegel's answer is that the history of the world is “the world's court of judgment.” Victory in war indicates where the world spirit is taking up residence, and the nation that loses in war thereby proves that the world spirit is no longer in harmony with it.

Because Hegel denies that there is any law or morality governing relations between states, he resorts to war as the means of deciding which of the conflicting nations and values possesses greater excellence. Applying his theory of periodic assignments of world leadership to specific nations, Hegel finds that the world spirit has progressively unfolded itself in four major epochs, each representing a principle of its own: first comes the Oriental realm, then the Greek, then the Roman, until the highest principle of the world spirit is reached with the Germanic peoples, who represent the “reconciliation of objective truth and freedom.”

Though garbed in high-sounding philosophical terms, Hegel's political theory thus contains nationalism, the leadership principle, government by authority rather than consent, and, above all, the idolization of power as the supreme test of human values. The last point is perhaps the most important in the whole system of political Hegelianism, and Hegel by no means confined his idealization of power to his later writings. As early as 1802, he wrote in his *Constitution of Germany* that in their idealistic concern for freedom of conscience and political liberty, men are foolish enough to overlook the “truth which lies in power,” for power is of the “higher justice of nature and truth” and may therefore forcibly bring men under its sway, in spite of their inner convictions and theories. Even Machiavelli had refrained from identifying power with morality and had held that they were two separate modes of behavior, each possessing its own code of rules, and each independent of the other. Hegel went further than Machiavelli by *identifying power—the state—with morality*. Two heirs of Hegelianism, fascism and communism, also abandoned old-fashioned ethics, substituting for it Race, State, or Class.

Shortly before Hegel died he wrote a detailed analysis of the *English Reform Bill* (1831). He found that England was behind the “glorious and fortunate” progress of Germany because it lacked the “great sense of princes,” and because its monarchical power was too weak and powerless against the “thoughtless mob,” which was given too much influence. Hegel predicted that the Reform Bill, if enacted, would amount to revolution rather than reform. He penetratingly observed that in unreformed England new ministries represented the same class interests as the old, but that after the broadening of the suffrage new governments would represent new class interests. He concluded that the enactment

of the Reform Bill into law might threaten the stability of the English political system, and that the proposed reforms might degenerate into subversion and revolution, particularly as the English monarchy lacked the power, possessed by other monarchies, to decide political conflicts and prevent them from turning into violence, robbery, and revolution.

The doctrine of democracy as the first step to anarchy is the staple argument of all authoritarian political thinkers, from Plato to present-day opponents of democracy, and Hegel shared the classical authoritarian doctrine that society needs a strong monarchy as a balancing force between contending economic and political interests. Democratic theory denies that there is any one individual or class that can view conflicts of human values and interests from an olympic height of absolute justice and disinterestedness; it believes that such conflicts can be adjusted peacefully through processes of discussion and persuasion. The antidemocratic theory of politics holds, by contrast, that social conflicts must not be decided by the haphazard and approximate methods of a system in which the “thoughtless mob” is the final source of authority, but only by those who know what absolute justice is. Because they know, they must be obeyed.

HEGEL

Philosophy of Law *

FREEDOM IN NATURE AND SOCIETY

At the present time, the idea that freedom of thought, and of mind generally, evinces itself only in divergence from, indeed in hostility to, what is publicly recognized, might seem to be most firmly rooted in connection with the state, and it is chiefly for this reason that a philosophy of the state might seem essentially to have the task of discovering and promulgating still another theory, and a special and original one at that. In examining this idea and the activity in conformity with it, we might suppose that no state or constitution had ever existed in the world at all or was even in being at the present time, but that nowadays—and this “nowadays” lasts for ever—we had to start all over again from the beginning, and that the ethical world had just been waiting for such present-day projects, proofs, and investigations. So far as nature is concerned, people grant that it is nature as it is which philosophy has to bring within its ken, that the philosopher’s stone lies concealed somewhere within nature itself, that nature is inherently rational and that what knowledge has to investigate and grasp in concepts is this actual reason present in it; not the formations and accidents evident to the superficial observer, but nature’s

eternal harmony, its harmony however, in the sense of the law and essence immanent within it. The ethical world, on the other hand, the state (i.e. reason as it actualizes itself in the element of self-consciousness), is not allowed to enjoy the good fortune which springs from the fact that it is reason which has achieved power and mastery within that element and which maintains itself and has its home there. The universe of mind is supposed rather to be left to the mercy of chance and caprice, to be God-forsaken, and the result is that if the ethical world is Godless, truth lies outside it, and at the same time, since even so reason is supposed to be in it as well, truth becomes nothing but a problem. But it is this also that is to authorize, nay to oblige, every thinker to take his own road, though not in search of the philosopher’s stone, for he is saved this search by the philosophizing of our contemporaries, and everyone nowadays is assured that he has this stone in his grasp as his birthright. Now admittedly it is the case that those who live their lives in the state as it actually exists here and now and find satisfaction there for their knowledge and volition (and of these there are many, more in fact than think or know it, because ultimately this is the position of everybody), or those at any rate who *consciously* find their satisfaction in the state, laugh at these operations and affirmations and regard them as an empty game, sometimes rather funny, sometimes rather serious, now amusing, now dangerous. Thus this restless activity of empty reflection, to-

* From G. W. F. Hegel, *Philosophy of Law* (1821); trans. T. M. Knox as *Philosophy of Right*, Oxford University Press, 1942). By permission.

gether with its popularity and the welcome it has received, would be a thing on its own, developing in privacy in its own way, were it not that it is philosophy itself which has earned all kinds of scorn and discredit by its indulgence in this occupation. The worst of these kinds of scorn is this, that, as I said just now, everyone is convinced that his mere birthright puts him in a position to pass judgment on philosophy in general and to condemn it. No other art or science is subjected to this last degree of scorn, to the supposition that we are masters of it without ado.

At the present time, the pettifoggery of caprice has usurped the name of philosophy and succeeded in giving a wide public the opinion that such triflings are philosophy. The result of this is that it has now become almost a disgrace to go on speaking in philosophical terms about the nature of the state, and law-abiding men cannot be blamed if they become impatient so soon as they hear mention of a philosophical science of the state. Still less is it a matter for surprise that governments have at last directed their attention to this kind of philosophy, since, apart from anything else, philosophy with us is not, as it was with the Greeks for instance, pursued in private like an art, but has an existence in the open, in contact with the public, and especially, or even only, in the service of the state. Governments have proved their trust in their scholars who have made philosophy their chosen field by leaving entirely to them the construction and contents of philosophy—though here and there, if you like, it may not have been so much confidence that has been shown as indifference to learning itself, and professorial chairs of philosophy have been retained only as a tradition (in France, for instance, to the best of my knowledge, chairs of metaphysics at least have been allowed to lapse). Their confidence, however, has very often been ill repaid, or alternatively, if you preferred to see indifference, you would have to regard

the result, the decay of thorough knowledge, as the penalty of this indifference. Prima facie, superficiality seems to be extremely accommodating, one might say, at least in relation to public peace and order, because it fails to touch or even to guess at the substance of the things; no action, or at least no police action, would thus have been taken against it in the first instance, had it not been that there still existed in the state a need for a deeper education and insight, a need which the state required philosophical science to satisfy. On the other hand, superficial thinking about the ethical order, about right and duty in general, starts automatically from the maxims which constitute superficiality in this sphere, i.e. from the principles of the Sophists which are so clearly outlined for our information in Plato. What is right these principles locate in subjective aims and opinions, in subjective feeling and particular conviction, and from them there follows the ruin of the inner ethical life and a good conscience, of love and right dealing between private persons, no less than the ruin of public order and the law of the land. The significance which such phenomena must acquire for governments is not likely to suffer any diminution as a result of the pretentiousness which has used that very grant of confidence and the authority of a professorial chair to support the demand that the state should uphold and give scope to what corrupts the ultimate source of achievement, namely universal principles, and so even to the defiance of the state as if such defiance were what it deserved. “If God gives a man an office, he also gives him brains” is an old joke which in these days surely no one will take wholly in earnest.

What is rational is actual and what is actual is rational. On this conviction the plain man like the philosopher takes his stand, and from it philosophy starts in its study of the universe of mind as well as the universe of nature. If reflection, feeling, or whatever form subjective consciousness may take, looks upon the pres-

ent as something vacuous and looks beyond it with the eyes of superior wisdom, it finds itself in a vacuum, and because it is actual only in the present, it is itself mere vacuity. If on the other hand the Idea passes for "only an Idea," for something represented in an opinion, philosophy rejects such a view and shows that nothing is actual except the Idea. Once that is granted, the great thing is to apprehend in the show of the temporal and transient the substance which is immanent and the eternal which is present. For since rationality (which is synonymous with the Idea) enters upon external existence simultaneously with its actualization, it emerges with an infinite wealth of forms, shapes and appearances. Around its heart it throws a motley covering with which consciousness is at home to begin with, a covering which the concept has first to penetrate before it can find the inward pulse and feel it still beating in the outward appearances. But the infinite variety of circumstance which is developed in this externality by the light of the essence glinting in it—this endless material and its organization—this is not the subject matter of philosophy.

It is the fact that the ethical order is the system of these specific determinations of the Idea which constitutes rationality. Hence the ethical order is freedom or the absolute will as what is objective, a circle of necessity whose moments are the ethical powers which regulate the life of individuals. To these powers individuals are related as accidents to substance, and it is in individuals that these powers are represented, have the shape of appearance, and become actualized.

The bond of duty can appear as a restriction only on indeterminate subjectivity or abstract freedom, and on the impulses either of the natural will or of the moral will which determines its indeterminate good arbitrarily. The truth is, however, that in duty the individual finds his liberation; first, liberation from dependence on mere natural impulse and

from the depression which as a particular subject he cannot escape in his moral reflections on what ought to be and what might be; secondly, liberation from the indeterminate subjectivity which, never reaching reality or the objective determinacy of action, remains self-enclosed and devoid of actuality. In duty the individual acquires his substantive freedom.

Virtue is the ethical order reflected in the individual character so far as that character is determined by its natural endowment. When virtue displays itself solely as the individual's simple conformity with the duties of the station to which he belongs, it is rectitude.

But when individuals are simply identified with the actual order, ethical life (*das Sittliche*) appears as their general mode of conduct, i.e. as custom (*Sitte*), while the habitual practice of ethical living appears as a second nature which, put in the place of the initial, purely natural will, is the soul of custom permeating it through and through, the significance and the actuality of its existence. It is mind living and present as a world, and the substance of mind thus exists now for the first time as mind.

In this way the ethical substantial order has attained its right, and its right its validity. That is to say, the self-will of the individual has vanished together with his private conscience which had claimed independence and opposed itself to the ethical substance. For, when his character is ethical, he recognizes as the end which moves him to act the universal which is itself unmoved but is disclosed in its specific determinations as rationality actualized. He knows that his own dignity and the whole stability of his particular ends are grounded in this same universal, and it is therein that he actually attains these. Subjectivity is itself the absolute form and existent actuality of the substantial order and the distinction between subject on the one hand and substance on the other, as the object, end, and controlling power of the subject, is the same as, and has vanished directly

along with, the distinction between them in form.

The state is the actuality of concrete freedom. But concrete freedom consists in this, that personal individuality and its particular interests not only achieve their complete development and gain explicit recognition for their right (as they do in the sphere of the family and civil society) but, for one thing, they also pass over of their own accord into the interest of the universal, and, for another thing, they even recognize it as their own substantive mind; they take it as their end and aim and are active in its pursuit. The result is that the universal does not prevail or achieve completion except along with particular interests and through the co-operation of particular knowing and willing; and individuals likewise do not live as private persons for their own ends alone, but in the very act of willing these they will the universal in the light of the universal and their activity is consciously aimed at none but the universal end. The principle of modern states has prodigious strength and depth because it allows the principle of subjectivity to progress to its culmination in the extreme of self-subsistent personal particularity, and yet at the same time brings it back to the substantive unity and so maintains this unity in the principle of subjectivity itself.

In contrast with the spheres of private rights and private welfare (the family and civil society), the state is from one point of view an external necessity and their higher authority; its nature is such that their laws and interests are subordinate to it and dependent on it. On the other hand, however, it is the end immanent within them, and its strength lies in the unity of its own universal end and aim with the particular interest of individuals, in the fact that individuals have duties to the state in proportion as they have rights against it.

To hold that every single person should share in deliberating and deciding on political matters of general concern

on the ground that all individuals are members of the state, that its concerns are their concerns, and that it is their right that what is done should be done with their knowledge and volition, is tantamount to a proposal to put the democratic element without any rational form into the organism of the state, although it is only in virtue of the possession of such a form that the state is an organism at all. This idea comes readily to mind because it does not go beyond the abstraction of "being a member of the state," and it is superficial thinking which clings to abstractions. The rational consideration of a topic, the consciousness of the Idea, is concrete and to that extent coincides with a genuine practical sense. Such a sense is itself nothing but the sense of rationality or the Idea, though it is not to be confused with mere business routine or the horizon of a restricted sphere. The concrete state is the whole, articulated into its particular groups. The member of a state is a member of such a group, i.e. of a social class, and it is only as characterized in this objective way that he comes under consideration when we are dealing with the state. His mere character as universal implies that he is at one and the same time both a private person and also a thinking consciousness, a will which wills the universal. This consciousness and will, however, lose their emptiness and acquire a content and a living actuality only when they are filled with particularity, and particularity means determinacy as particular and a particular class-status; or to put the matter otherwise, abstract individuality is a generic essence, but has its immanent universal actuality as the generic essence next higher in the scale. Hence the single person attains his actual and living destiny for universality only when he becomes a member of a Corporation, a society, &c., and thereby it becomes open to him on the strength of his skill, to enter any class for which he is qualified, the class of civil servants included.

Another presupposition of the idea that all should participate in the business of the state is that everyone is at home in

this business—a ridiculous notion, however commonly we may hear it sponsored. Still, in public opinion a field is open to everyone where he can express his purely personal political opinions and make them count.

Since the laws and institutions of the ethical order make up the concept of freedom, they are the substance or universal essence of individuals, who are thus related to them as accidents only. Whether the individual exists or not is all one to the objective ethical order. It alone is permanent and is the power regulating the life of individuals. Thus the ethical order has been represented by mankind as eternal justice, as gods absolutely existent, in contrast with which the empty business of individuals is only a game of see-saw.

Duty is a restriction only on the self-will of subjectivity. It stands in the way only of that abstract good to which subjectivity adheres. When we say: "We want to be free," the primary meaning of the words is simply: "We want abstract freedom," and every institution and every organ of the state passes as a restriction on freedom of that kind. Thus duty is not a restriction on freedom, but only on freedom in the abstract, i.e. on unfreedom. Duty is the attainment of our essence, the winning of positive freedom.

The intrinsic worth of courage as a disposition of mind is to be found in the genuine, absolute, final end, the sovereignty of the state. The work of courage is to actualize this final end, and the means to this end is the sacrifice of personal actuality. This form of experience thus contains the harshness of extreme contradictions: a self-sacrifice which yet is the real existence of one's freedom; the maximum self-subsistence of individuality, yet only as a cog playing its part in the mechanism of an external organization; absolute obedience, renunciation of personal opinions and reasonings, in fact complete *absence* of mind, coupled with the most intense and comprehensive *presence* of mind and decision in the mo-

ment of acting; the most hostile and so most personal action against individuals, coupled with an attitude of complete indifference or even liking towards them as individuals.

MONARCHICAL VERSUS POPULAR GOVERNMENT

The state is the actuality of the ethical Idea. It is ethical mind *qua* the substantial will manifest and revealed to itself, knowing and thinking itself, accomplishing what it knows and in so far as it knows it. The state exists immediately in custom, immediately in individual self-consciousness, knowledge, and activity, while self-consciousness in virtue of its sentiment towards the state finds in the state, as its essence and the end and product of its activity, its substantive freedom.

The *Penates* are inward gods, gods of the underworld; the mind of a nation (Athene for instance) is the divine, knowing and willing itself. Family piety is feeling, ethical behavior directed by feeling; political virtue is the willing of the absolute end in terms of thought.

The state is absolutely rational inasmuch as it is the actuality of the substantial will which it possesses in the particular self-consciousness once that consciousness has been raised to consciousness of its universality. This substantial unity is an absolute unmoved end in itself, in which freedom comes into its supreme right. On the other hand this final end has supreme right against the individual, whose supreme duty is to be a member of the state.

If the state is confused with civil society, and if its specific end is laid down as the security and protection of property and personal freedom, then the interest of the individuals as such becomes the ultimate end of their association, and it follows that membership of the state is something optional. But the state's relation to the individual is quite different from this. Since the state is mind objectified, it is only as one of its members that

the individual himself has objectivity, genuine individuality, and an ethical life. Unification pure and simple is the true content and aim of the individual, and the individual's destiny is the living of a universal life. His further particular satisfaction, activity, and mode of conduct have this substantive and universally valid life as their starting point and their result.

Rationality, taken generally and in the abstract, consists in the thoroughgoing unity of the universal and the single. Rationality, concrete in the state, consists (a) so far as its content is concerned, in the unity of objective freedom (i.e. freedom of the universal or substantial will) and subjective freedom (i.e. freedom of everyone in his knowing and in his volition of particular ends); and consequently (b) so far as its form is concerned, in self-determining action on laws and principles which are thoughts and so universal. This Idea is the absolutely eternal and necessary being of mind.

The state in and by itself is the ethical whole, the actualization of freedom; and it is an absolute end of reason that freedom should be actual. The state is mind on earth and consciously realizing itself there. In nature, on the other hand, mind actualizes itself only as its own other, as mind asleep. Only when it is present in consciousness, when it knows itself as a really existent object, is it the state. In considering freedom, the starting-point must be not individuality, the single self-consciousness, but only the essence of self-consciousness; for whether man knows it or not, this essence is externally realized as a self-subsistent power in which single individuals are only moments. The march of God in the world, that is what the state is. The basis of the state is the power of reason actualizing itself as will. In considering the Idea of the state, we must not have our eyes on particular states or on particular institutions. Instead we must consider the Idea, this actual God, by itself. On some prin-

ciple or other, any state may be shown to be bad, this or that defect may be found in it; and yet, at any rate if one of the mature states of our epoch is in question, it has in it the moments essential to the existence of the state. But since it is easier to find defects than to understand the affirmative, we may readily fall into the mistake of looking at isolated aspects of the state and so forgetting its inward organic life. The state is no ideal work of art; it stands on earth and so in the sphere of caprice, chance, and error, and bad behavior may disfigure it in many respects. But the ugliest of men, or a criminal, or an invalid, or a cripple, is still always a living man. The affirmative, life, subsists despite his defects, and it is this affirmative factor which is our theme here.

We should desire to have in the state nothing except what is an expression of rationality. The state is the world which mind has made for itself; its march, therefore, is on lines that are fixed and absolute. How often we talk of the wisdom of God in nature! But we are not to assume for that reason that the physical world of nature is a loftier thing than the world of mind. As high as mind stands above nature, so high does the state stand above physical life. Man must therefore venerate the state as a secular deity, and observe that if it is difficult to comprehend nature, it is infinitely harder to understand the state. It is a fact of the highest importance that nowadays we have gained a clearcut intuition into the state in general and have been so much engaged in discussing and making constitutions. But by getting so far we have not yet settled everything. In addition, it is necessary to bring to bear on a rational topic the reason underlying intuition, to know what the essence of the matter is and to realize that the obvious is not always the essential.

Another question readily presents itself here: "Who is to frame the constitution?" This question seems clear, but closer

inspection shows at once that it is meaningless, for it presupposes that there is no constitution there, but only an agglomeration of atomic individuals. How an agglomeration of individuals could acquire a constitution, whether automatically or by someone's aid, whether as a present or by force or by thought, it would have to be allowed to settle for itself, since with an agglomeration the concept has nothing to do. But if the question presupposes an already existent constitution, then it is not about framing, but only about altering the constitution and the very presupposition of a constitution directly implies that its alteration may come about only by constitutional means. In any case, however, it is absolutely essential that the constitution should not be regarded as something made, even though it has come into being in time. It must be treated rather as something simply existent in and by itself, as divine therefore, and constant, and so as exalted above the sphere of things that are made.

The conception of the monarch is therefore of all conceptions the hardest of ratiocination, i.e. for the method of reflection employed by the Understanding. This method refuses to move beyond isolated categories and hence here again knows only *raisonnement*, finite points of view, and deductive argumentation. Consequently it exhibits the dignity of the monarch as something deduced, not only in its form, but in its essence. The truth is, however, that to be something not deduced but purely self-originating is precisely the conception of monarchy. Akin, then, to this reasoning is the idea of treating the monarch's right as grounded in the authority of God, since it is in its divinity that its unconditional character is contained. We are familiar, however, with the misunderstandings connected with this idea, and it is precisely this "divine" element which it is the task of a philosophic treatment to comprehend.

We may speak of the "sovereignty of the people" in the sense that any people whatever is self-subsistent *vis-à-vis* other

peoples, and constitutes a state of its own, like the British people for instance. But the peoples of England, Scotland, or Ireland, or the peoples of Venice, Genoa, Ceylon, &c., are not sovereign peoples at all now that they have ceased to have rulers or supreme governments of their own.

We may also speak of sovereignty in home affairs residing in the people, provided that we are speaking generally about the whole state and meaning only what was shown above, namely, that it is to the state that sovereignty belongs.

The usual sense, however, in which men have recently begun to speak of the "sovereignty of the people" is that it is something opposed to the sovereignty existent in the monarch. So opposed to the sovereignty of the monarch, the sovereignty of the people is one of the confused notions based on the wild idea of the "people." Taken without its monarch and the articulation of the whole which is the indispensable and direct concomitant of monarchy, the people is a formless mass and no longer a state. It lacks every one of those determinate characteristics—sovereignty, government, judges, magistrates, class-divisions, &c.,—which are to be found only in a whole which is inwardly organized. By the very emergence into a people's life of moments of this kind which have a bearing on an organization, on political life, a people ceases to be that indeterminate abstraction which, when represented in a quite general way, is called the "people."

At the stage at which constitutions are divided, as above mentioned, into democracy, aristocracy, and monarchy, the point of view taken is that of a still substantial unity, abiding in itself, without having yet embarked on its infinite differentiation and the plumbing of its own depths. At that stage, the moment of the final, self-determining, decision of the will does not come on the scene explicitly in its own proper actuality as an organic moment immanent in the state. None the less, even in those comparatively im-

mature constitutional forms, there must always be individuals at the head. Leaders must either be available already, as they are in monarchies of that type, or, as happens in aristocracies, but more particularly in democracies, they may rise to the top, as statesmen or generals, by chance and in accordance with the particular needs of the hour. This must happen since everything done and everything actual is inaugurated and brought to completion by the single decisive act of a leader.

It is often alleged against monarchy that it makes the welfare of the state dependent on chance, for, it is urged, the monarch may be ill educated, he may perhaps be unworthy of the highest position in the state, and it is senseless that such a state of affairs should exist because it is supposed to be rational. But all this rests on a presupposition which is nugatory, namely that everything depends on the monarch's *particular* character. In a completely organized state, it is only a question of the culminating point of formal decision (and a natural bulwark against passion). It is wrong therefore to demand objective qualities in a monarch; he has only to say "yes" and dot the "i," because the throne should be such that the significant thing in its holder is not his particular make-up. (Monarchy in this sense is rational because it corresponds with the concept, but since this is hard to grasp, we often fail to notice the rationality of monarchy.) Monarchy must be inherently stable and whatever else the monarch may have in addition to this power of final decision is part and parcel of his private character and should be of no consequence. Of course there may be circumstances in which it is this private character alone which has prominence, but in that event the state is either not fully developed, or else is badly constructed. In a well-organized monarchy, the objective aspect belongs to law alone, and the monarch's part is merely to set to the law the subjective "I will."

If we are to grasp the Idea of the monarch, we cannot be content with saying that God has appointed kings to rule over us, since God has made everything, even the worst of things. The point of view of utility does not get us very far either, and it is always possible to point out counter-balancing disadvantages. Still less does it help to regard monarchy as a *positive* right. That I should hold property is necessary, but my holding of this particular property is contingent; and in the same way, the right that there must be one man at the head of affairs seems contingent too if it is treated as abstract and as posited. This right, however, is inevitably present both as a felt want and as a requirement of the situation. Monarchs are not exactly distinguished for bodily prowess or intellectual gifts, and yet millions submit to their rule. Now to say that men allow themselves to be ruled counter to their own interests, ends, and intentions is preposterous. Men are not so stupid. It is their need, it is the inner might of the Idea, which, even against what they appear to think, constrains them to obedience and keeps them in that relation.

To define freedom of the press as freedom to say and write whatever we please is parallel to the assertion that freedom as such means freedom to do as we please. Talk of this kind is due to wholly uneducated, crude, and superficial ideas. Moreover, it is in the very nature of the thing that abstract thinking should nowhere be so stubborn, so unintelligent, as in this matter of free speech, because what it is considering is the most fleeting, the most contingent, and the most personal side of opinion in its infinite diversity of content and tergiversation. Beyond the direct incitation to theft, murder, rebellion, &c., there lies its artfully constructed expression—an expression which seems in itself quite general and vague, while all the time it conceals a meaning anything but vague, or else is compatible with inferences which are not actually expressed, and it is impossible to

determine whether they rightly follow from it, or whether they were meant to be inferred from it. This vagueness of matter and form precludes laws on these topics from attaining the requisite determinacy of law, and since the trespass, wrong, and injury here are so extremely personal and subjective in form, judgement on them is reduced equally to a wholly subjective verdict. Such an injury is directed against the thoughts, opinions, and wills of others, but apart from that, these form the element in which alone it is actually anything. But this element is the sphere of the freedom of others, and it therefore depends on them whether the injurious expression of opinion is or is not actually an effective act.

Laws then may be criticized by exhibiting their indeterminacy as well as by arguing that they leave it open to the speaker or writer to devise turns of phrase or tricks of expression, and so evade the laws or claim that judicial decisions are mere subjective verdicts. Further, however, against the view that the expression of opinion is an act with injurious effects, it may be maintained that it is not an act at all, but only opining and thinking, or only talking. And so we have before us a claim that mere opining and talking is to go unpunished because it is of a purely subjective character both in form and content, because it does not mean anything and is of no importance. And yet in the same breath we have the claim that this same opining and talking should be held in high esteem and respect—the opining because it is personal property and in fact pre-eminently the property of mind; the talking because it is only this same property being expressed and used.

But the substance of the matter is and remains that traducing the honour of anyone, slander, abuse, the contemptuous caricature of government, its ministers, officials, and in particular the person of the monarch, defiance of the laws, incitement to rebellion, &c., &c., are all crimes or misdemeanours in one or other

of their numerous gradations. The rather high degree of indeterminability which such actions acquire on account of the element in which they are expressed does not annul this fundamental character of theirs. Its only effect is that the subjective field in which they are committed also determines the nature and form of the reaction to the offence. It is the field in which the offence was committed which itself necessitates subjectivity of view, contingency, &c., in the reaction to the offence, whether the reaction takes the form of punishment proper or of police action to prevent crimes. Here, as always, abstract thinking sets itself to explain away the fundamental and concrete nature of the thing by concentrating on isolated aspects of its external appearance and on abstractions drawn therefrom.

The sciences, however, are not to be found anywhere in the field of opinion and subjective views, provided of course that they be sciences in other respects. Their exposition is not a matter of clever turns of phrase, allusiveness, half-utterances, and semi-reticences, but consists in the unambiguous, determinate, and open expression of their meaning and purport. It follows that they do not fall under the category of public opinion. Apart from this, however, as I said just now, the element in which views and their expression become actions in the full sense and exist effectively, consists of the intelligence, principles, and opinions of others. Hence this aspect of these actions, i.e. their effectiveness proper and their danger to individuals, society, and the state, depends on the character of the ground on which they fall, just as a spark falling on a heap of gunpowder is more dangerous than if it falls on hard ground where it vanishes without trace. Thus, just as the right of science to express itself depends on and is safeguarded by its subject-matter and content, so an illegitimate expression may also acquire a measure of security, or at least sufferance, in the scorn which it has brought

upon itself. An offence of this sort is punishable on its own account too, but part of it may be accounted that kind of nemesis which inner impotence, feeling itself oppressed by the preponderating abilities and virtues of others, is impelled to vent in order to come to itself again in face of such superiority, and to restore some self-consciousness to its own nullity. It was a nemesis of a more harmless type which Roman soldiers vented against their generals when they sang scurrilous songs about them in triumphal processions in order in a way to get even with them for all the hard service and discipline they had undergone, and especially for the omission of their names from the triumphal honours. The former type of nemesis, the bad and hateful type, is deprived of its effect by being treated with scorn, and hence, like the public, which perhaps forms a circle of spectators of scurrility, it is restricted to futile malice and to the self-condemnation which it implicitly contains.

PEACE AND WAR

War is not to be regarded as an absolute evil and as a purely external accident, which itself therefore has some accidental cause, be it injustices, the passions of nations or the holders of power, &c., or in short, something or other which ought not to be. It is to what is by nature accidental that accidents happen, and the fate whereby they happen is thus a necessity. Here as elsewhere, the point of view from which things seem pure accidents vanishes if we look at them in the light of the concept and philosophy, because philosophy knows accident for a show and sees in it its essence, necessity. It is necessary that the finite—property and life—should be definitely established as accidental, because accidentality is the concept of the finite. From one point of view this necessity appears in the form of the power of nature, and everything is mortal and transient. But in the ethical substance, the state, nature is robbed of

this power, and the necessity is exalted to be the work of freedom, to be something ethical. The transience of the finite becomes a willed passing away, and the negativity lying at the roots of the finite becomes the substantive individuality proper to the ethical substance.

War is the state of affairs which deals in earnest with the vanity of temporal goods and concerns—a vanity at other times a common theme of edifying sermonizing. This is what makes it the moment in which the ideality of the particular attains its right and is actualized. War has the higher significance that by its agency, as I have remarked elsewhere, “the ethical health of peoples is preserved in their indifference to the stabilization of finite institutions; just as the blowing of the winds preserves the sea from the foulness which would be the result of a prolonged calm, so also corruption in nations would be the product of prolonged, let alone ‘perpetual,’ peace.” This, however, is said to be only a philosophic idea, or, to use another common expression, a “justification of Providence,” and it is maintained that actual wars require some other justification.

The ideality which is in evidence in war, i.e. in an accidental relation of a state to a foreign state, is the same as the ideality in accordance with which the domestic powers of the state are organic moments in a whole. This fact appears in history in various forms, e.g. successful wars have checked domestic unrest and consolidated the power of the state at home. Other phenomena illustrate the same point: e.g. peoples unwilling or afraid to tolerate sovereignty at home have been subjugated from abroad, and they have struggled for their independence with the less glory and success the less they have been able previously to organize the powers of the state in home affairs—their freedom has died from the fear of dying; states whose autonomy has been guaranteed not by their armed forces but in other ways (e.g. by their disproportionate smallness in compari-

son with their neighbours) have been able to subsist with a constitution of their own which by itself would not have assured peace in either home or foreign affairs.

In peace civil life continually expands; all its departments wall themselves in, and in the long run men stagnate. Their idiosyncrasies become continually more fixed and ossified. But for health the unity of the body is required, and if its parts harden themselves into exclusiveness, that is death. Perpetual peace is often advocated as an ideal towards which humanity should strive. With that end in view, Kant proposed a league of monarchs to adjust differences between states, and the Holy Alliance was meant to be a league of much the same kind. But the state is an individual, and individuality essentially implies negation. Hence even if a number of states make themselves into a family, this group as an individual must engender an opposite and create an enemy. As a result of war, nations are strengthened, but peoples involved in civil strife also acquire peace at home through making wars abroad. To be sure, war produces insecurity of property, but this insecurity of things is nothing but their transience—which is inevitable. We hear plenty of sermons from the pulpit about the insecurity, vanity, and instability of temporal things, but everyone thinks, however much he is moved by what he hears, that he at least will be able to retain his own. But if this insecurity now comes on the scene in the form of hussars with shining sabres and they actualize in real earnest what the preachers have said, then the moving and edifying discourses which foretold all these events turn into curses against the invader. Be that as it may, the fact remains that wars occur when the necessity of the case requires. The seeds burgeon once more, and harangues are silenced by the solemn cycles of history.

States are not private persons but completely autonomous totalities in

themselves, and so the relation between them differs from a moral relation and a relation involving private rights. Attempts have often been made to regard the state as a person with the rights of persons and as a moral entity. But the position with private persons is that they are under the jurisdiction of a court which gives effect to what is right in principle. Now a relation between states ought also to be right in principle, but in mundane affairs a principle ought also to have power. Now since there is no power in existence which decides in face of the state what is right in principle and actualizes this decision, it follows that so far as international relations are concerned we can never get beyond an "ought." The relation between states is a relation between autonomous entities which make mutual stipulations but which at the same time are superior to these stipulations.

The nation-state is mind in its substantive rationality and immediate actuality and is therefore the absolute power on earth. It follows that every state is sovereign and autonomous against its neighbours. It is entitled in the first place and without qualification to be sovereign from their point of view, i.e. to be recognized by them as sovereign. At the same time, however, this title is purely formal, and the demand for this recognition of the state, merely on the ground that it is a state, is abstract. Whether a state is in fact something absolute depends on its content, i.e. on its constitution and general situation; and recognition, implying as it does an identity of both form and content, is conditional on the neighbouring state's judgement and will.

If states disagree and their particular wills cannot be harmonized, the matter can only be settled by war. A state through its subjects has widespread connexions and many-sided interests, and these may be readily and considerably injured; but it remains inherently indeterminable which of these injuries is to

be regarded as a specific breach of treaty or as an injury to the honour and autonomy of the state. The reason for this is that a state may regard its infinity and honour as a stake in each of its concerns, however minute, and it is all the more inclined to susceptibility to injury the more its strong individuality is impelled as a result of long domestic peace to seek and create a sphere of activity abroad.

Apart from this, the state is in essence mind and therefore cannot be prepared to stop at just taking notice of an injury *after* it has actually occurred. On the contrary, there arises in addition as a cause of strife the *idea* of such an injury as the idea of a danger *threatening* from another state, together with calculations of degrees of probability on this side and that, guessing at intentions, &c., &c.

At one time the opposition between morals and politics, and the demand that the latter should conform to the former, were much canvassed. On this point only a general remark is required here. The welfare of a state has claims to recognition totally different from those of the welfare of the individual. The ethical substance, the state, has its determinate being, i.e. its right, directly embodied in something existent, something not abstract but concrete, and the principle of its conduct and behaviour can only be this concrete existent and not one of the many universal thoughts supposed to be moral commands. When politics is alleged to clash with morals and so to be always wrong, the doctrine propounded rests on superficial ideas about morality, the nature of the state, and the state's relation to the moral point of view.

REVOLUTIONARY COMMUNISM

In the nineteenth century, democracy seemed the goal toward which the whole world was inevitably moving. In some countries it was more cheerfully welcomed and more faithfully practiced than in others, but even politically backward states like Russia and Germany had to pay homage to political virtue by gradually broadening, in form, though not always in substance, the range of self-government. In the twentieth century, political hypocrisy, like other expressions of nineteenth-century politeness and formality, became no longer obligatory, and attacks on democracy were carried on in the open, without the protective facade of apparent concessions to the principle of democracy. In the two decades between World Wars I and II, fascism (merged with the imperial ambitions of Germany, Japan, and Italy), was the main challenge to the democratic way of life; for a time it was so successful that it was openly hailed even in democratic states as "the wave of the future" by its sympathizers, or by those who felt that democracy was done for in a vain attempt to stem the tide of fascism.

World War II destroyed the military ambitions of the fascist Axis. The strains and stresses of war revealed the hollowness of fascism's claim to have inaugurated a new way of life that combined scientific and industrial efficiency with youthful and dynamic heroism. Yet World War II was hardly over when communism emerged as the new menace of democracy. At the end of World War I, when Russia was the only communist state in the world, and when its industrial and military power seemed to be low, communism was interpreted as a specifically Russian phenomenon without much practical applicability elsewhere. But the defeat of Nazi Germany by the Russian armies in World War II revealed the extent to which the strength of Communist Russia had been underrated. When the war was over, Russia was the dominant military power in Europe, and it quickly communized Poland, Rumania, Bulgaria, Hungary, Czechoslovakia, and Eastern Germany.

Though the Russian armies were the principal instrument in spreading communism, the force of communist ideology was of vital significance. Whereas

fascism did not possess a single creative or constructive idea that went beyond crass national egotism and lust for power, communism—unhampered, in particular, by the deadly burden of fascist racism—addressed itself to the world as the true heir of the libertarian, equalitarian democratic tradition. Also, whereas fascism proudly proclaimed its "pagan" character in relation to the democratic way of life, which it rejected *in toto*, communism is more "heretical" in terms of the democratic tradition: it accepts the democratic ideals of liberty, equality, and fraternity, and its charge against democracy is not, as was the charge of fascism, that democracy is too faithful to its ideals, but that it has, in fact, betrayed them. Just as in religion paganism has generally been less ruinous than heresy, because the former rejects the perceived truth in its entirety, whereas the latter mingles the true with the false, so communism has, in the long run, proved more dangerous than fascism, precisely because communism contains important elements of the democratic tradition, distorted as they may appear in practice.

In Europe, communism represented itself with considerable success, even in the eyes of many conservatives, as the authentic fighter against social and economic injustice. In Asia, communism was hunger become articulate, longing for faith and action. Whereas the western democracies taught Asia the right to be happy, without giving it the means to achieve happiness, communism promised the masses of landless, destitute, and forgotten Asians a new life of equality and abundance. In Europe as in Asia, Africa, and the Americas, communism is more than an idealistic movement of innocent liberal land reformers; yet the existence of serious unsolved agrarian and industrial problems in these countries prepares the proper soil for the growth of communism.

The greatest single influence in the development of revolutionary communism was Karl Marx (1818–1883). He was born in the Rhineland, which more than any other part of Germany had been strongly permeated with democratic ideas by the French Revolution. Marx attended the University of Berlin for several years, where he studied jurisprudence, philosophy, and history. But he quickly became engaged in political activities and in 1842 joined the staff of the *Rheinische Zeitung*, a democratic newspaper in Cologne. In the following year the paper was suppressed by the Prussian Government, and Marx went to Paris, then the European headquarters of radical movements.

In Paris, Marx met Proudhon, the leading French socialist thinker, Bakunin, the Russian anarchist, and Friedrich Engels (1820–1895), a Rhineland like Marx, and soon to become his lifelong companion and close collaborator. Engels was the son of a German textile manufacturer with business interests in Germany and England, and he was sent by his father to Manchester in 1842. His *Condition of the Working Class in England* (1844) was a remarkably penetrating study of squalor, drabness, and poverty in the midst of luxurious wealth, and Engels was the first to draw Marx's attention to England as a laboratory in which industrial capitalism could be most accurately observed.

In 1845 Marx was expelled from France through the intervention of the Prussian Government, and he went to Brussels, another center of political refugees from all over Europe. There Marx composed, with the aid of Engels, the *Communist Manifesto* (1848), the most influential of all his writings, a pamphlet that has made history, inspired devotion and hatred, and divided mankind more profoundly than any other political document. Marx participated in the revolutions

of 1848 in France and Germany, and early in 1849 he was expelled again by the Prussian Government, and forbidden to return to his native land.

He went to London in the late summer of 1849, soon followed by Engels. Marx had planned to stay in England for only a few weeks, but he stayed there until his death in 1883. He spent most of his time in the British Museum, digging up obscure sources throwing light on the history and working of industrial capitalism. The first volume of *Das Kapital*, his monumental analysis of the capitalist system, was published in 1867; the second and third volumes appeared posthumously in 1885–1895, edited by Engels.

Marx's writings show little penetration of English *political* ideas and ways of thought, and his lack of insight into the forces and motivations of English politics would have been little better or worse had he stayed in Germany all his life. By contrast, his writings demonstrate a profound knowledge of the English *economic* system, based on detailed and painstaking research. Marx was one of the first social scientists to use neglected government reports and statistical materials as a basic tool of research in the study of social and economic problems. Yet it never occurred to him that the self-analysis of English capitalism, to which he owed the documentary sources of his grand indictment, might eventually evolve into peaceful self-improvement and change.

Marx's analysis of the capitalist system has influenced the making of history even more than the writing of history. Regardless of what one accepts or rejects of Marx's social, economic, political, and philosophical ideas, it is impossible to bypass him. He said of himself that he was not a "Marxist," and those who insist on all or nothing in relation to his ideas, betray Marx in his own painful and long search for a philosophy that he did not receive ready-made from any master but gathered, and added to his own life experience, from diverse sources: German philosophy, French revolutionary politics, and English economics.

In German philosophy, it was above all Hegel who greatly influenced Marx. Although Marx very early criticized Hegel, he never abandoned the basic categories of Hegel's thought. Like Hegel, Marx felt that history had meaning, and that it moved in a set pattern toward a known goal. In a rationalized version of the religious conception of history, in which history derives meaning from God and moves toward the kingdom of God, Hegel replaced God with the concept of Spirit or Reason, and history was seen by Hegel as the progressive unfolding of Reason. Marx held that history had both a meaning and a goal, and the historical process was dominated by the struggles between social classes; each phase of the struggle, as in Hegel, represented a higher phase of human evolution than the preceding one. The goal of history was predetermined for Marx: the classless society, leading to full human freedom.

This philosophy of history has, in Hegel, a conscious religious connotation, and in Marx, too, there is a quasi-religious element. As in religion, Hegel and Marx both view history as a perpetual struggle between lower and higher forces; however, the outcome of the struggle is predetermined. In religion, God triumphs when mankind finally turns toward him and abandons the false idols of lust and greed. In Hegel, the outcome is certain: the final victory of Reason and Spirit over enslavement to caprice and passion. In Marx, the outcome is the abolition of capitalism, and the destruction of all forms of injustice and exploitation in a new society based on freedom and fraternal cooperation.

Many who embrace Marxism come from the ranks of persons who have lost faith in traditional forms of supernatural religion, but who still need the psychic support often derived from religious beliefs. Marxists find comfort in the feeling that man is not alone in this world, that there is meaning in the cosmos and in human history, and that mankind is inexorably moving toward a noble goal, compared with which one's temporary and individual sufferings and frustrations are not too important.

Thus, while Marx was personally a convinced atheist and insisted that his thought was guided by strictly scientific criteria, the historical influence of Marxism was not so much in the realm of scientific analysis as in its popular appeal as a *new religion* of the dispossessed and oppressed. The devout follower of the Marxian faith has an unshakable conviction that he knows what the meaning of history is, the goal toward which it is moving, that he has joined the forces that in the end must win, and that opposing the coming of communism is not only wrong but also futile, since "the march of history" cannot be stopped by any "reactionary" individual or group. In underdeveloped countries in particular, in which literacy is low, the spread of Marxism was overwhelmingly a quasi-religious phenomenon rather than a sign of expanding science.

French *revolutionary politics* was another important source for Marx's intellectual development. With his instinct of genius, Marx realized that, if revolution was the principal method of destroying a capitalist society, France and her revolutionary experience served as the best laboratory. France was among the most advanced major western nations because its revolutions were most clearly based on social antagonisms. Marx fully understood that the English Puritan revolution in the 1640s was a war between the middle class and the existing order based on landed property, but this social aspect of the Puritan revolution was too commingled with religious and political issues to serve as a pure, or almost pure, case of a social revolution. Moreover, the Puritan revolution was finally brought to a conclusion by the moderate settlement of the Glorious (and bloodless) Revolution of 1688, a conclusion which had little appeal for Marx. Similarly, the American Revolution was not the perfect case of a class war that Marx looked for. In Marx's mind, the American Revolution was a class war between the rising bourgeoisie and the aristocratic order in the American colonies. Yet the political issue of independence befuddled the class issue, and once the revolutionary struggle was won, the United States seemed to show few symptoms of intense conflict between its social classes.

In France, Marx felt, the historical development was different. The French Revolution of 1789 was by common agreement a purely social revolution of the peasants and urban middle classes against the aristocratic order. However, whereas revolutionary activity came to an end in England in 1688 and in the United States in the 1780s, the French Revolution of 1789 was merely the beginning of a series of revolutionary upheavals the end of which was not in sight. France experienced major revolutionary upheavals in 1830 and 1848, experiences which both England and the United States were spared. Finally, France was the scene of the short-lived proletarian dictatorship of the Paris Commune in 1871, the first of its kind in modern history. For Marx, both England and the United States had become too conservative after their successful revolutions; on the European continent, there was no other major nation in which

social revolution was as much an integral part of the national experience as was France. As to Germany, Marx considered it intellectually and politically provincial, held back by feudal anachronisms and national disunity; Italy was economically backward and politically disunited, and until these two issues were resolved, there was little chance for a social revolution. Russia seemed to Marx more Asian than European, and although he sensed that Russia was a sleeping giant, he nevertheless shared the prejudices of many Germans that Russia, and Slavdom in general, was not culturally, socially, and economically in the same league with the more advanced nations of the West.

Finally, Marx perceptively saw that industrial capitalism and economic science could best be studied in England. Since Marx viewed economic forces as the main driving force in history, and since he felt that industrial civilization was irresistibly spreading throughout the whole world, he was convinced that England was the country to live in if one wanted to study industrial capitalism firsthand, and that English (and Scottish) economic analysis was the most advanced of any country. While Marx had no doubt that English economic doctrines were no more than a rationalization and justification of the capitalist system, they nevertheless supplied him with the basic concepts and tools of economic analysis which could also be used in demonstrating that capitalism was both wasteful and exploitative.

Above all, Marx shares with English classical economics basic presuppositions and tacit assumptions which are as important as his explicit rejection of specific doctrines of its leading representatives. For example, Marx looks upon *work* as man's most creative and noblest form of personal self-fulfillment. His quarrel with English classical economic theory and capitalist practice is not that they, too, take such a high view of work, but that under capitalism work becomes a mechanism of exploitation, degrading the worker to a soulless robot, enslaved to the "fetishism of commodities."

In Marx's thought, the classless communist society of the future was by no means to abolish the duty to work. The first stage of communism, Marx argued, would be guided by the principle of "from each according to his ability, to each according to his work." In the second, and higher, phase of communism, the principle of "from each according to his ability, to each according to his needs" would prevail. Most students of Marx concentrate on the difference of awards for work in the second as compared with the first stage of communism, but they often overlook that even in the second stage man is still expected to contribute to the best of his ability, that is, to perform socially useful work. Even in the second stage of communism, when the new man of communist society has become cooperative and has lost the competitive and acquisitive vices of capitalism and when production creates abundance, work is still, Marx says, "the primary necessity of life."

This Marxian worship of work is strictly adhered to by communists today. Communist states, for example, have not provided monetary relief for the unemployed, since an unemployed person is expected to work in any job he can find, regardless of pay, skill, or location. Interestingly, in noncommunist countries the religion of work has been greatly weakened in recent years, and liberal thinkers have attacked the idea of work as the main channel of personal self-fulfillment. In communist countries the duty to work is still an article of faith

that must not be challenged. Though they rarely quote from the Bible, on this particular issue communists like to cite the Biblical injunction that "he who does not work, neither shall he eat"—although in communist literature this is often called a "socialist principle."

Marx's conception of *property* is closely related to that held by classical English liberal thinkers from Locke on. Locke and later English economists assumed that private property was a *relation of man to things*, and not a power relation between men—provided government does not meddle in the economy, thus injecting an element of compulsion into the property relation. Marx retains the basic concept of English classical economics of property as a relation of man to things, but according to Marx such property without power can exist only under public ownership, whereas private property is by definition a power relation. Marx thought that he completely rejected classical economic thought on property, since he reversed the roles of public and private property as viewed by the classical economists. Yet he still shares with them the belief—or illusion—that *any* form of productive property (private in the case of the classical economists, public in the case of Marx) can be interpreted as being a purely technical relationship between man and things, or as the "administration of things," as Marx referred to public ownership in a communist society.

The three major sources of Marx's intellectual development—German philosophy, French revolutionary politics, English political economy—nourished his thought from his youth to his old age. Early in his life, however, Marx was influenced by another powerful movement that was particularly strong in Germany: *romanticism*. From a purely literary viewpoint, romanticism was a movement of protest against the classical literary traditions of reason, order, measure, and form, as represented above all by the great age of French cultural predominance in the eighteenth century. In its social outlook, romanticism was a protest against the rising industrialization. The romantics felt that industrial civilization was destroying the natural and organic bonds of life that characterized preindustrial Europe, and that, as a result, man in an industrial society was becoming estranged or "alienated" from his fellow men, from nature, and—most important of all—from himself. The romantics had no positive program to cope with the evils of industrialism. Some romantics felt that the only solution was to abandon industrialism altogether and to return to the agrarian life of the preindustrial age—a highly impractical program quickly overtaken by events, since masses of propertyless farm workers kept on streaming into the cities. Other romantics withdrew from the ugly world of industrialism into a philosophy of extreme individualism—a solution which was purely literary rather than social, and which could only be adopted by a few individuals, but which provided no answer to problems affecting society as a whole.

In his *Economic and Philosophical Manuscripts*, written by Marx in 1844, at the age of twenty-six, Marx reflects the romantics' concern about alienation, but under a different perspective. Whereas the romantics saw the evil in industrialism as a new way of life, Marx perceived alienation as the result of *capitalist* industrialism. Under capitalism, Marx said in his *Economic and Philosophical Manuscripts*, man is alienated from his work, the objects he produces, his employers, other workers, nature, and from himself. Under capitalism, Marx argues, the worker does not work in order to fulfill himself as a person, for his

work "is not voluntary but imposed, *forced labor*." His work does not satisfy his own needs, but is merely a means to satisfy the needs of others, the capitalist employers who use the worker as an instrument of profit making. The worker thus "sinks to the level of a commodity," producing palaces for the rich, but hovels for the poor. The worker is also alienated from the capitalist employer, who appropriates the products of labor and enjoys pleasures and privileges denied to the worker. Being alienated from the product of his labor, the worker is also alienated from other men. Marx vehemently attacks the role of money in the new capitalist economy. Money is the "highest good, and so its possessor is good." Money is the "visible deity" of capitalist industrialism, transforming all natural human relations into monetary relations. Since in a capitalist society everything can be bought with money, Marx affirms the need for a society in which man is related to his fellow men as an individual human being, in which love cannot be bought, but can "only be exchanged for love."

Marx showed in his *Economic and Philosophical Manuscripts* that man's predicament had economic, as well as ethical and psychological facets. However, in a crucial change of outlook Marx quickly abandoned the ethical element in his conception of communism, and in *The German Ideology*, written jointly with Frederick Engels in 1846, the Left Hegelians were subjected to a strong attack for talking of "human nature, of Man in general" rather than of man as a member of a particular class. The individualistic leanings of the *Manuscripts* were replaced by the concept of class, to which Marx adhered for the rest of his life, and the ideal of love and fellowship was replaced by that of class struggle and hatred. In the *Communist Manifesto* he specifically ridicules and attacks philosophical socialists who talk about the "alienation of humanity" or about the "philosophical foundation of socialism." Marx also attacks ethically oriented socialists as "utopians," because they reject revolutionary action and "wish to attain their ends by peaceful means, and endeavor, by small experiments, necessarily doomed to failure, and by the force of example, to pave the way for the new social gospel."

Since Marx himself had expressed, in the *Economic and Philosophical Manuscripts* of 1844, ideas which were akin to those of the philosophical and ethical socialists, he decided not to publish what he later considered a juvenile aberration. In fact, the *Manuscripts* were not published during his lifetime, and even after his death Engels, his literary executor, refrained from publishing them. In 1932, the *Manuscripts* were finally published for the first time in German, followed by translation into English nearly three decades later. Since then, the *Manuscripts*—with their fashionable doctrine of "human alienation"—have been used in communist and noncommunist countries for diverse purposes. In communist countries, particularly in Eastern Europe, the *Manuscripts* have served as a weapon used by liberal elements who sought to discredit totalitarian attitudes and ideas of orthodox communism. While more liberally minded thinkers in Eastern Europe could not propagate liberalism by name, they could advocate some of its substance under the protective shield of the "Young Marx." In noncommunist countries, by contrast, the *Manuscripts* have served the opposite goal of making *Marxism* respectable, since Marx has been presented as a humanist socialist and liberal individualist primarily concerned with man's need for self-fulfillment through love and free cooperation.

Whatever the merits of these two *political* efforts in communist and noncommunist countries—to make liberalism respectable in the former and Marxism in the latter—from the purely analytical and historical viewpoint the middle-aged and mature Marx cannot be turned into a liberal humanist, since from *The German Ideology* on, he saw in the liberal, humanist brand of socialism the most dangerous enemy of communism. This attitude of Marx was later faithfully emulated by communists, who have consistently considered democratic socialists of the British Labor party type as more dangerous and damaging to the cause of communism than the openly conservative parties of a capitalist society.

As Marx became involved in practical political activities in his early life, he criticized the philosophical socialists, and philosophers in general, for analyzing society rather than actively trying to change it. Marx believed as he expressed it in one of his early writings (*Theses on Feuerbach*, 1845), "in practice man must prove the truth"; thus the easier method of discovering truth through revelation and authority, whether based on Marx or any other god or prophet, is excluded. The *Theses on Feuerbach* were written by Marx when he was only twenty-seven, and his conception of the task of philosophy is clearly indicated by his charge that "the philosophers have only *interpreted* the world, the point however is to *change* it." This activist approach to philosophy is distinctly un-Hegelian, and Marx's life was dedicated to the anti-Hegelian proposition that the actual was far from rational, and that the rational would finally be imposed upon actuality, not by a mystical world spirit, but by the new social class that was the heir of bourgeois science and rationalism: the proletariat.

Marx's philosophy of history and politics has to be gathered from many incidental remarks and comments in his writings and letters, as he never wrote a systematic statement on the basic assumptions of his thought. In the preface to his *Critique of Political Economy* (1859), Marx briefly states his general philosophy of history, based on the thesis that "the anatomy of civil society is to be found in political economy." Pre-Marxian social analysis had emphasized law and politics as the determining factors in society and social change. Marx reverses the scale of importance and considers the "productive forces" of society as the basis, whereas legal relations and forms of government are the "superstructure." Marx puts it in this fashion: "The mode of production of the material means of existence conditions the whole process of social, political, and intellectual life."

One of Marx's most famous sayings is that *men's social existence determines their consciousness*, and not, as had been generally accepted before Marx, that the "consciousness of men determines their existence." What Marx stresses here is that men's ideas are not accidental and haphazard, or freely left to their choice. Thus the legal, political, and religious ideas of a pastoral civilization will fundamentally differ from those of an agricultural, feudal society, and both will have little in common with the social, political, religious, and intellectual outlook of modern capitalist society.

Turning to the question of what causes historical change, Marx renounces the study of monarchs and their relations with court ladies and fellow dynasts, and he is equally dissatisfied with the study of history as a long list of battles and wars. Instead, Marx attempts to find the deeper causes of historical change in forces that go beyond the power of individual rulers and victorious war

leaders: "At a certain stage of their development the material productive forces of society come into contradiction with the existing productive relationships, or, what is but a legal expression for these, with the property relationships within which they have moved before. From forms of development of the productive forces these relationships are transformed into their fetters. Then an epoch of social revolution opens. With the change in the economic foundation the whole vast superstructure is more or less rapidly transformed." Thus, when new *productive forces* developed within the *productive relationships* of the feudal system, social revolution was, according to Marx, inevitable, because the productive relationships of the feudal system (property relations, market controls, internal customs and tariffs, monetary instability) did not permit the utilization of the newly developing productive forces of industrial capitalism. What has doomed all historically known economic systems is the fact, according to Marx, that when new productive forces develop, the existing productive relationships stand in the way of their proper utilization. Each system thus becomes eventually wasteful in terms of the potentialities that have developed in its womb but that are not permitted to be born and to grow.

The capitalist system, too, shows the same tendency, according to Marx, and is due to undergo the same fate when the *productive forces* (the capacity to produce) have *outstripped* the *productive relationships* (law of property, production for private profit). The capitalist system as a system of social, economic, and legal relations thus eventually stands in the way of the scientific resources and technological know-how that are not permitted to be fully utilized. Only the public ownership of the means of production will, according to Marx, bring into existence a new system of productive relationships (production for common use rather than private profit) that will match the tremendous forces of production actually or potentially existent and known to man.

In the *Communist Manifesto*, Marx and Engels explain how social change through revolution actually occurs. When the forces of production begin to outstrip the methods of production (or productive relationships), the owners of the means of production do not step aside and thus accelerate the inevitable course of history. Bound by the limitations of their ideology (which, in turn, reflects the existing modes of production), they sincerely believe that the existing system is economically the most efficient, socially the most equitable, and generally in harmony with the laws of nature and the will of whatever god they venerate. It is not a question of the greed of the individual feudal landowner (who obstructs the birth of the more productive capitalist system) or of the selfishness of the individual capitalist (who impedes the nationalization of the means of production). The owners of the means of production will utilize all the instruments of the legal, political, and ideological superstructure to block the growth of the forces that represent the potentially more progressive economic system. For this reason Marx and Engels state early in the *Communist Manifesto* that the "history of all hitherto existing society is the history of class struggles." In the nineteenth century, the bourgeoisie liked to think of itself as conservative, law-abiding, and antirevolutionary—once it had won its class struggle. Yet Marx and Engels remind the bourgeoisie that, historically, it "has played a most revolutionary part."

The end of capitalism will be brought about, according to the *Communist Manifesto*, not by "subversive" conspiracies of professional agitators and revolutionaries, but by the same inexorable laws of social change that destroyed previous systems. Just as feudalism, for example, prepared its own grave by developing these forces—the urban bourgeoisie—which eventually destroyed it, capitalism does the same thing: "The essential condition for the existence and for the sway of the bourgeois class is the formation and augmentation of capital; the condition for capital is wage-labor. Wage-labor rests exclusively on competition between the laborers. The advance of industry, whose involuntary promoter is the bourgeoisie, replaces the isolation of the laborers, due to competition, by their revolutionary combinations, due to association. The development of modern industry, therefore, cuts from under its feet the very foundation on which the bourgeoisie produces and appropriates products. What the bourgeoisie therefore produces, above all, are its own grave-diggers. Its fall and the victory of the proletariat are equally inevitable."

As Marx and Engels look at history, they can find no instance where a major social and economic system has freely abdicated to its successor. Therefore the communists "openly declare that their ends can be attained only by the forcible overthrow of all existing social conditions." This is one of the crucial tenets of Marxist revolutionary communism, and the one that most clearly opposed it irreconcilably to democracy, be it capitalist or socialist democracy.

Marx had no clear-cut theory as to how the political transformation from capitalist to proletarian rule could come about. Though in the *Communist Manifesto* he believed in the need for revolution, he was less dogmatic later. Speaking in 1872 at a public meeting in Amsterdam following the Congress of the International, Marx declared that the means of attaining power for the working class are not everywhere the same: "We know that we must take into consideration the institutions, the habits and customs of different regions, and we do not deny that there are countries like America, England, and—if I knew your institutions better I would perhaps add Holland—where the workers can attain their objective by peaceful means. But such is not the case in all other countries."

Marx never fully pursued the implications of this distinction, and the generally accepted doctrine of communist Marxism is the impossibility of fundamental social and economic change except by class war, violence, and revolution. If Marx had accorded the political factor its due weight, if he had studied the implications of the Reform Act of 1832—a bloodless revolution in which the governing class peacefully ceded its position to the new middle class—he might have foreseen that socialism, too, might be accomplished without violence in countries whose democratic tradition was strong enough to absorb far-reaching social and economic changes without civil war.

A full recognition of the cultural and political factors in the equation of social change would have amounted to a virtual abandonment, however, of the central position of Marx: that history is the history of class wars, and that ruling classes defend their position to the last, not because of selfish greed, but because their ideological framework, the superstructure of the economic system, compels them to identify their privileged position with that of the whole community. Conversely, the proletariat attacks the capitalist system, and finally overthrows it, according to Marx, not because of some abstract ideals of justice, but because

the inevitable evolution of capitalism puts the proletariat in a position of misery and exploitation, while men, knowledge, and resources lie idle.

In Hegel, *war between nations* is the vehicle of historical decision and progress, and the World Spirit assigns to different nations special missions at particular times. In Marx, social change and progress are attained by *war between classes*, and in each historical epoch one particular class is assigned the mission of representing the idea of progress. For Hegel, world history culminates in the Germanic peoples, which embody the finest flowering of freedom and spirit. Hegel thought in dynamic terms until he arrived at the Prussian state. For Marx, history culminates in the proletariat, which embodies the highest social principles of progress and rational ordering of society. Just as Hegel assumed that the process of the fulfillment of spirit and freedom was consummated in Prussianized Germany, Marx assumed that the process of history, the record of class wars, would be consummated in the final victory of the proletariat, after which the dynamics of class war would be followed by the *statics of the classless society*.

No one before Marx saw as clearly as he did the *intimate relationship between private property and power*. In particular, Marx demonstrated that the link between power and property was heightened to its extreme in the capitalist system, inasmuch as its scientific, technological, and managerial forces made possible an accumulation of economic power in the hands of the few, such as would have been impossible before the Industrial Revolution. Yet, realistic as Marx was in his appraisal of *private property* as a system of private government and power of man over man, he was utopian in assuming that property lost the character of power merely by being collectivized. The Marx-Engels doctrine of the "withering away of the state" in the classless society is based on the hypothesis that property in a socialist or communist society ceases to be a system of power when owned by the whole community. Whereas private ownership of the means of production under capitalism, Marx and Engels argue, entails the domination of man over man, public ownership of the means of production under socialism or communism will lead to the "administration of things," so that the state (in its historical meaning as a system of force) would wither away by itself, as there would no longer be any need for it.

The *administration of things* is a matter of technical *knowledge* and not of political *will*. Government as an agency of settling disputes between men by force would be replaced in the classless society by administration as a scientific method of using resources in the best way in accordance with verifiable procedures of science and technology. Locke was the first modern writer to define property as a relationship of man to things, inasmuch as he saw the origin of property in the admixture of human effort to natural resources. Marx's concept of *publicly owned property as a relationship between man and things* closely follows Locke's concept of private property.

The ideal of classical liberalism and that of Marx-Engels have a common utopian element: both assume that human nature can be so improved and perfected by the right kind of institutional changes that government as a mechanism of force becomes superfluous. In the classical doctrine of liberal democracy, the equitable distribution of private property seemed to point to such a state of harmony; in the doctrine of Marx-Engels, the transformation of individual work into collective work in the capitalist factory pointed to the

practical conclusion that collective ownership of the means of production would assure a basic equality of men that would make government in the traditional sense unnecessary. Both classical democracy and Marxism suffer from an excessive optimism with regard to the perfectibility of man, and both wrongly assume that any system of society can be devised that can achieve perfect harmony of interests. Nevertheless, the liberal doctrine of "the less government, the better" and the Marxian doctrine of the "withering away of the state" can be valuable as permanent reminders that the state exists for man, and not man for the state. Whereas a society without force and government is humanly unattainable, the ideal at least of a civilized community should be that of the lowest possible amount of force and compulsion in human relations.

The main difference between the theory of classical democracy and that of Marx-Engels is that the former envisaged a free, harmoniously ordered society as the result of peaceful, gradual growth, whereas Marx-Engels saw in revolution, civil war, and the dictatorship of the proletariat the preparatory stages of peace and harmony. Experience has shown since Marx-Engels that revolution and dictatorship are less likely to induce the state to wither away, or even decrease the use of force and violence, than the slower and more difficult methods of peaceful persuasion and consent. The failure to see the fatal relationship between means and ends is one of the most striking philosophical and practical weaknesses of Marxism, and the one that fundamentally separates it from liberal democracy.

The doctrines of Marx and Engels made a profound impression on social thinkers, reformers, and revolutionaries everywhere. In Western Europe and the United States, Marxism was not too successful because the liberal tradition in these countries kept the way open for social reform and progress by peaceful, constitutional means. However, many critics of the injustices and abuses of capitalism accepted a large measure of the Marxian *economic* analysis and indictment of capitalism without embracing Marx's remedy of despair—the revolutionary dictatorship of the proletariat. In Western Europe and the United States, the political rights of the people were constantly enlarged through the widening of the franchise at the very time when Marx claimed that a ruling class would never abdicate peacefully. Forward-looking democrats and social reformers felt that, if the political position of the people could be radically improved by constitutional means, social and economic issues would ultimately be solved in the same manner. In France, the ideals of the French Revolution, Liberty, Equality, Fraternity, and not the Marxian doctrine of class war and hatred, provided the abiding inspiration for the socialist movement.

In England, parliamentary government, accepted as supreme by all social classes since 1688, made it possible for the working class to use the existing machinery of government for purposes of social reform, just as the middle class had used it earlier for political reform. Whereas the working classes in many countries of continental Europe and elsewhere had to agitate simultaneously for political democracy *and* social democracy, the English workers had the immense benefit of operating within the premises of parliamentary government from the start.

In the United States, Marxian doctrines have found little resonance because the vast opportunities of a new world have generated hope, prosperity, and

optimism, which belie the Marxian prognosis of the progressive impoverishment of the masses. Also, Marxism had made little headway in the United States because it has attacked the political foundations of American *democracy* as well as the economic foundations of American *capitalism*.

There were two major countries in the nineteenth century in which the ideas of Marx and Engels became important ideological and political forces: Germany and Russia. Despite the facade of the legislative Reichstag, Germany was in fact a political autocracy that did not permit the development of genuine representative government. Philosophically, Marxism may be Hegelianism put upside down (as Marx claimed), but Hegel upside down is still Hegel, and the fixed determinism and closed system of Marxism appealed to much that was deeply rooted in the German philosophical tradition. Just as Hegel had asserted that the *state* was an *objective reality*, and its laws, like those of nature, beyond the whim and caprice of the individual, Marx now claimed that the *laws of society* followed an inexorable course, possessing the same *scientific validity* that Hegel had claimed for the laws of the state. By contrast, the liberal philosophical tradition of the West has always rejected the Hegel-Marx conception that human reason can only *understand* the laws of the state or society, and has affirmed the possibility of rational control and creative change of social and political institutions. The experience of free government forms the psychological foundation of the western conceptions of state and society, just as the experience of autocratic government in Germany provides the psychological background for the determinism of Hegel and Marx.

In actual practice, the original extremism of Marxism was gradually transformed into more evolutionary views in the German labor movement, because the Second Reich (1871–1918) provided some measure of legal political activity, supplemented by a considerable amount of paternalistic social-welfare legislation. In phraseology, however, German Marxism continued revolutionary and “scientific,” disdainful of the “utopian,” that is, ethical and peaceful outlook of western socialists. It is particularly striking that anarchism, the extreme ideal of individualism, never took root in the German labor movement, because Marxism expressed more satisfactorily the need for strong collective action and discipline. In one sense, the political theory of Marx was a form of inverted Prussianism: before the revolution, the Junkers and capitalists sit on top, and rule with an iron hand over the masses of the people. Come the revolution, the roles are reversed: the people control the state through customary authoritarian methods, and the erstwhile oppressors and exploiters are put in their place.

The other major country in which Marx's and Engels' ideas were widely accepted by radical thinkers and political action groups was czarist Russia. In Russia the conditions for the acceptance of Marx were even more favorable than in imperial Germany. Whereas Germany made the pretense of bowing to democracy and parliamentary government, czarism long recoiled from committing itself even to the formalities of liberalism and democracy, on the ground that pretenses, if practiced long enough, might too easily develop into reality. Of all major European states, czarist Russia was first in illiteracy, economic backwardness, religious obscurantism, oppression of minorities, political despotism, and social inequality. Marx's ideas, particularly the prospect of inevitable liberation

of the working classes from bondage and oppression through revolutionary action, made a strong impression on Russian radicals, and Russian was the language into which *Das Kapital* was first translated. The Russian censorship permitted the publication of the work on the ground that it would not be read by many because of its difficult style and its scholarly method of argumentation.

The spread of Marxist ideas in Russia supplied a new focus of ideology for the disunited anticzarist opposition. It ranged from extreme terrorists, who saw in individual acts of assassination and destruction the road to Russia's liberation, to dedicated populists, who “went to the people,” that is, lived and worked with the peasants, hoping that Russia would pass from serfdom to a free and modern peasant community without having to go through the painful process of capitalist industrialization and all its accompanying evils.

In the last quarter of the nineteenth century, industry in Russia made rapid headway, often with the aid of foreign engineers and financiers, and an urban proletariat began to fill the big factory towns. A sense of acute class consciousness developed in the new proletariat, which was without political protection, without hope of social equality, and which was working at a wage level below the bare necessities of life.

The class consciousness of the Russian proletariat was, however, not only a product of oppression and degradation. Because industry came so late to Russia, it skipped the stage of the small workshop and the small factory and adopted the latest methods of technology, which meant large enterprises from the outset. Though the absolute size of the industrial proletariat in Russia was much smaller than that in England, Germany, or the United States, the proportion of workers employed in enterprises of more than one thousand employees was considerably higher in Russia before World War I than even in the United States, not to speak of Germany, France, and England. In cities like Petersburg and Moscow, about half of all industrial workers were concentrated in large factories of more than one thousand employees, a fact that made it easy to awaken in the workers a sense of solidarity and the need for united action.

Because industry was so concentrated in Russia, it lacked a strong intermediary social class between capitalist and worker. In Western Europe and the United States, capitalism had largely grown out of already existing middle classes, and their liberal tradition reduced the inevitable tensions between capital and labor. Because such a middle class was largely lacking in Russia, the gulf between employer and employee was well-nigh unbridgeable. Marxism appealed to the rank and file of Russian labor as well as to its leaders, because it seemed an answer to the misery and degradation of the proletariat, inasmuch as the czarist autocracy provided no alternative for revolutionary change.

The man who made of Marxism a political reality in Russia was Vladimir Ilyich Ulyanov, or Lenin, as he later called himself (1870–1924). Lenin came from a middle-class family, both his father and mother having been teachers with progressive views. Their five surviving children became revolutionaries, and Lenin's eldest brother, Alexander, was hanged at the age of nineteen for complicity in an amateurish and abortive plot against Czar Alexander III. Lenin had a typical middle-class education, first attending the secondary school at Simbirsk, and then the law school of the University of Kazan. Because of his early political activities and the circumstances of his brother's execution, Lenin

found himself under constant police supervision. However, the czarist police was not nearly so efficient as the later Soviet police, and Lenin managed to maintain political contacts and join illegal groups.

In December, 1895, Lenin was arrested in Petersburg and spent fourteen months in prison. From his prison cell he guided a revolutionary organization he had formed, and he also found the time and means to write letters and pamphlets that he managed to smuggle out of prison. He was able to obtain the books and magazines he needed, and he began in prison to work on *The Development of Capitalism in Russia*. Although in January, 1897, he was sentenced to three years' exile in Siberia, he continued his political and philosophical studies there, received illegal literature, and maintained contacts with illegal revolutionary groups. In 1898 Lenin married Nadezhda Krupskaya, a fellow revolutionary, in his Siberian exile, and their home became the headquarters for the political exiles in that territory. Lenin also found time for recreation, hunting, ice skating, hiking, and chess. His exile provided him with a new name, "Lenin," derived from the river Lena, which flowed through the region of Siberia where he was exiled.

After his release from Siberia in 1900, Lenin went abroad; he spent the next seventeen years with but few interruptions in various European countries, organizing from abroad the illegal revolutionary movement in Russia that was to culminate in the seizure of power in 1917. He returned to Russia after the first Revolution in the spring of 1917, and it was a liberal government that permitted him to return. In seven months he managed to overthrow the Kerensky government, the only free government Russia had known in its history.

Lenin's most important contribution to the theory of Marxism is the doctrine of the *professional revolutionary*, as first developed in *What Is to Be Done?* (1902). Lenin drew a distinction between an organization of workers and an organization of revolutionaries. The former must be essentially trade-union in character, as large as possible, and as public as political conditions will allow. By contrast, the organization of revolutionaries must consist exclusively of professional revolutionaries, must be small, and "as secret as possible."

Whereas Marx had assumed that the working class would inevitably develop its class consciousness in the daily struggle for its economic existence, Lenin had much less confidence in the ability of the workers to develop politically by their own effort and experience: "Class political consciousness can be brought to the workers *only from without*, that is, only outside of the economic struggle, outside of the sphere of relations between workers and employers." Lenin did not care whether the professional revolutionaries destined to lead the proletariat were of working-class origin or not (he, like Marx and Engels, was middle class), as long as the professional revolutionary did his job well. But because of the difficulties of the work to be done, Lenin insisted that the professional revolutionary must be "no less professionally trained than the police," and, like the police, the organization of professional revolutionaries must be highly centralized and able to supervise and control the open organizations of workers that are legally permitted.

Lenin's views of the extreme concentration of power in the hands of a few leaders of professional revolutionaries led Trotsky in 1904 to assert that Lenin's doctrine of the dictatorship of the proletariat really meant the *dictatorship over*

the proletariat, and the struggle of centralism versus democracy became one of the major issues of communist party organization before and after 1917. Trotsky also predicted in 1904 that if Lenin ever took power, "the leonine head of Marx would be the first to fall under the guillotine."

Lenin's most influential political work is *State and Revolution* (1918), written in the late summer of 1917; Lenin was hiding near the Finnish border part of the time, as the Kerensky government had issued an order for his arrest. *State and Revolution* consists of six chapters; as Lenin explains in a postscript (dated December 13, 1917), he planned to add a seventh chapter on the Russian revolutions of 1905 and 1917, but was "interrupted" by the November revolution of 1917, and, as he puts it: "It is more pleasant and useful to go through the 'experience of revolution' than to write about it."

In the literature of Marxism and communism, *State and Revolution* is of immense importance. Where Marx and Engels (in typically nineteenth-century liberal fashion) neglected the factor of *political power*, Lenin, the master strategist of one of the half-dozen great revolutions in history, was keenly interested in the anatomy of the state. Lenin fully accepts the Marxian thesis that the transitional state between capitalism and communism "can be only the revolutionary dictatorship of the proletariat." He denies that capitalism and democracy are compatible, and affirms that under capitalism democracy always remains "a democracy for the minority, only for the possessing classes, only for the rich." Lenin then describes the techniques that the capitalist state employs in order to maintain itself in power. In the words of the *Communist Manifesto*, the "executive of the modern State is but a committee for managing the common affairs of the whole bourgeoisie."

Behind the formalities of *capitalist democracy*, Lenin sees, in effect, the *dictatorship of the bourgeoisie*. He also denies that the transition from capitalism to communism can be accomplished simply, smoothly, and directly, "as the liberal professors and petty-bourgeois opportunists would have us believe. No, development—toward communism—proceeds through the dictatorship of the proletariat; it cannot be otherwise, for the *resistance* of the capitalist exploiters cannot be *broken* by anyone else or in any other way." Whereas Marx had left open the possibility for peaceful social change from capitalism to socialism in politically advanced countries like England, the United States, and the Netherlands, Lenin claims that, by 1917, "this exception made by Marx is no longer valid," because England and the United States had developed bureaucratic institutions "to which everything is subordinated and which trample everything under foot." Far from admitting that both England and the United States had moved steadily in the direction of social reform since Marx, Lenin maintains that both countries had become more repressive, authoritarian, and plutocratic in the meantime. In 1884, Sir William Harcourt, a Liberal leader in the British Parliament, made the statement, "We are all socialists now," indicating the general acceptance of far-reaching social and economic reform by all parties. Yet, according to Lenin, Sir William should have said, "We are all bloodthirsty militaristic capitalists now."

In the transitional stage between capitalism and communism the state will continue to exist, Lenin holds, because machinery for the suppression of the capitalist exploiters will still be required in the dictatorship of the proletariat.

But Lenin points out that in this phase the state is already beginning to "wither away," because the task of the majority (the victorious proletariat) in suppressing the minority (the defeated capitalists) is different, in quantitative and qualitative terms, from the previous capitalist state, in which a minority (of capitalists) suppressed the majority (of the exploited). Finally, once communism is fully established, the state becomes "absolutely unnecessary, for there is *no one* to be suppressed—'no one' in the sense of a *class*, in the sense of a systematic struggle against a definite section of the population." With the causes of exploitation of class by class removed, with the abolition of classes, the state will therefore inevitably "wither away." There will be true freedom for all, and "when freedom exists, there will be no state."

Lenin cautiously adds that he leaves the question of length of time, or of "the concrete withering away, quite open." Without indicating the time it will take to transform the "lower phase" of communist society (the dictatorship of the proletariat) into the "higher phase" (the withering away of the state), Lenin describes the conditions of such transformation: "The state will be able to wither away completely when society can apply the rule: 'From each according to his ability, to each according to his needs,' that is, when people have become so accustomed to observing the fundamental rules of social life and when their labor is so productive that they will voluntarily work *according to their ability*." Lenin, like Marx, denies that the vision of a society without a machinery of force and power ("the state") is utopian. Yet Marxism shares with religion, pacifism, and anarchy the faith that man is so perfectible that one day he will no longer need the corrective force of government. In religion, the trouble is the Adam in man; in Marx and Lenin, the Adam is capitalism.

In his *Theses and Report on Bourgeois Democracy and the Dictatorship of the Proletariat*, submitted to the First Congress of the Communist International (March 4, 1919), Lenin—now at the helm of the communist dictatorship—reiterates his belief that there is no "democracy in general" or "dictatorship in general," and that all bourgeois democracies are, in fact, dictatorships of the capitalists over the exploited masses of the people. He vehemently attacks democratic socialists who believe that there is a middle course between capitalist dictatorship and proletarian dictatorship: "All dreams about some third course are merely the reactionary lamentations of the petty bourgeois." In support of his argument, Lenin cites the persecution of communists in even the freest bourgeois democracies, such as Switzerland and the United States, while in Germany working-class leaders like Karl Liebknecht and Rosa Luxemburg had just been murdered: "Nor can it be otherwise as long as capitalism exists, because the development of democracy does not blunt but sharpens the class struggle, which has been brought to the boiling point by the results and influences of the war and its consequences."

In his *Theses on the Fundamental Tasks of the Second Congress of the Communist International* (dated July 4, 1920), Lenin elaborates his belief in the right of the minority to lead, and rule, the majority, even after the dictatorship of the proletariat is established. Just as in *What Is to Be Done?* Lenin had stressed in 1902 that a small minority of professional revolutionaries was necessary to win power for the proletariat, he now stresses the central importance of the minority after power has been conquered. Lenin argues that under the

conditions of capitalist domination and its mental enslavement the majority of the workers *cannot* acquire socialist convictions, first, because the capitalists control all mediums of thought and opinion, and, second, because workers in a capitalist society honestly accept many of the prevailing ideas and ideologies, the "superstructure" of capitalism, which is so effective precisely because it operates unconsciously. Lenin therefore says that the majority of the workers will acquire the proper proletarian ideology only after the objective conditions of their lives have been changed, that is, after the communist vanguard of the proletariat has overthrown the capitalist exploiters and the institutions of capitalism. Only a revolutionary change of this kind, Lenin argues, will rid the workers of the "selfishness, disunity, the vices and weaknesses engendered by private property."

Whereas democratic socialists assume that, as has been shown in a number of countries, workers in a liberal capitalist regime can be peacefully converted to socialism, although the mediums of communication are predominantly controlled by capitalist interests, Lenin is more pessimistic. Under capitalism, he maintains, the majority of the workers are incapable of ridding themselves of the capitalist mentality, and only a minority of class-conscious revolutionaries, the communist vanguard of the proletariat, can correctly analyze the situation and map an appropriate plan of action. The dictatorship of the proletariat is necessary to protect communism from the danger of reviving capitalism; the dictatorship over the proletariat by the communist vanguard is necessary until the majority of the workers have rid themselves of the capitalist ideology.

Lenin's justification of dictatorship rests ultimately, like all other apologies of authoritarianism, on the profound conviction that the majority of the people is incapable of understanding and acting "correctly." Possessing the "correct" knowledge of the laws of history and society, communists have the right—and duty—to lead the masses into a new world, though the corrupting influences of the old world may make forcible leadership necessary. In Rousseauian terms, Lenin asserts that *communists*, because of their scientific analysis of society, represent the *General Will of the proletariat*, although the Wills of All in the proletariat may be ignorant or unwilling to admit it, for they can only think of their private, individual interests and advantages. The General Will of the proletariat is therefore, for Lenin, not what the majority of the proletarians actually think, but what they would think if they were familiar with the "correct" Marxian analysis of social and economic development.

Because Lenin realizes that communists may not be able to conquer power in open discussion and propaganda, he advises communists to form cells or nuclei in all political, industrial, military, cooperative, educational, and athletic organizations. Such communist cells should be either open or secret, depending on the circumstances of the particular group or organization. The activities of the cells should be closely supervised and coordinated from the center of the communist parties, and the specific psychology of each stratum, group, or profession into which communists have infiltrated should be taken into account.

Even where capitalist democracy seems to be "freest" in the formal and legal sense communists should *combine*, Lenin argues, *legal with illegal work*, legal with illegal organization, because bourgeois governments always prepare for violence against communists, and the guarantees of democratic constitutions

cannot be trusted when the rights of communists are at issue. Although he stresses that "illegal work is particularly necessary in the army, the navy and police," he warns against exclusive illegal work by communists and urges them to exhaust at all times the available opportunities of legal work, "forming legal organs of the press and legal organizations under the most varied titles, which may often be changed in the event of necessity." Because communists are engaged in ceaseless war, and class war is a form of ruthless conflict, they should use all possible tactical and strategic means to reach their objective: the revolutionary seizure of power.

These organizational principles of Leninist communism—secrecy, minority leadership, centralized authority, and the use of illegal means—are also characteristic of other organizations, civil and military, that are geared to war.

In comparing Lenin with Marx, one is struck by the differences of temperament, background, and outlook. Marx was above all the scholar and thinker, whereas Lenin was primarily the master organizer and practical politician and leader. Marx sought to change the whole world by his new ideas, whereas Lenin had one fixed, and more limited, goal: to seize power in his own country, Russia, and remake it according to the principles of communism. Yet the most important difference between the two men is not based on fundamental doctrine but on the fact that both reflected the inarticulate and implicit premises of their times. Marx was the product of the nineteenth century, and though he tried to envision, and help create, the society of the future, he always retained elements of the typically nineteenth-century world view. By contrast, Lenin, though born in the nineteenth century, developed to maturity and stature in the twentieth century, and his deepest attitudes were typical of the twentieth rather than of the nineteenth century.

Marx's belief in the *primacy of economics over politics* was not only the result of his economic interpretation of history, but also reflected a nineteenth-century prejudice. The dominant view in the nineteenth century was one of almost infinite faith in economic forces as the main engines of social and political progress. Thus, liberals in the nineteenth century confidently expected that the right economic policies would ensure domestic stability and progress, solve the problem of poverty, and lead to universal peace. Free trade within and between nations was the magic economic formula that would lead to a world without force and oppression. While Marx's economic formula was different from that of his liberal contemporaries, it was nevertheless an economic formula.

By contrast, Lenin believed, in typically twentieth-century fashion, in the *primacy of politics over economics*, although in explicit terms of pure doctrine he considered himself a faithful follower of Marx's economic interpretation of history. Because of his deep belief in the overriding importance of politics, Lenin spent most of his revolutionary energy in building up an organizational apparatus in czarist Russia. Although he spent seventeen years before the revolution abroad, mostly in Switzerland, he kept in close touch with the day-to-day activities of the Bolshevik group in Russia of which he was the undisputed leader.

Because Marx was so committed to nineteenth-century economic thinking, he thought that the communist revolution would first occur after capitalism had matured in the advanced countries of Western Europe. Marx took it for granted that the laws of economic development could not be interfered with,

and that each country had to go through the various stages of capitalism before it was ripe for communist revolution. By contrast, Lenin looked at the problem of communist revolution from a more political viewpoint. The task of the communist leadership, Lenin thought, was to attack and destroy the existing social and political system where it was weakest—in the economically undeveloped areas of Europe, Asia, and Africa.

As a Russian, Lenin had a profound insight into the basic weakness of backward nations, their lack of strong social forces. In economically underdeveloped countries, the mass of the population consists of poor peasants, living in isolated villages, with inadequate means of communication. There are few or no independent labor unions and only a small urban middle class—the backbone of anticommunist resistance in developed countries. Where society lacks this kind of social cohesion, Lenin's concept of the professional revolutionary is crucial in the communist goal of seizure of power. In his own country, Russia, Lenin noticed that a comparatively small force of army and police could keep control over a vast—but unorganized—mass of people. Lenin therefore believed that with a relatively small, but highly disciplined and well organized counter-force power could be wrested from the apparatus of the existing system, and the success of his revolution in November of 1917 proved him to be right.

Closely related to Lenin's concept of the professional revolutionary and the primacy of politics over economics was his deep understanding of the importance of the underdeveloped areas in the balance of world power. Marx had the common European prejudice of the nineteenth century that Europe was the center of the world and that the underdeveloped areas were mere colonial appendages of the leading European imperial powers. As a Russian, with more than one foot therefore also in Asia, Lenin had none of this European conceit. He was the first important political figure who saw early in this century that the world was more than Europe, and that, above all, the underdeveloped (or "colonial") areas would increasingly become a decisive factor in world affairs. Since many people in the west still do not fully realize the importance of the underdeveloped countries, it is remarkable that Lenin—with his genius for political analysis and political action—saw at such an early date that communism would first be established in Asia, Africa, and Latin America before the hard core of anticommunist resistance—Western Europe and North America—could be tackled. A master strategist, Lenin also hoped that, once the "soft underbelly" of world capitalism would be conquered by communism, the Western European and North American citadels of capitalism might not put up too much resistance, seeing the irresistible force of communism.

The different approaches of Marx and Lenin can also be seen in their views of the communist proletarian revolution. Marx expected that a communist revolution would lead to the *dictatorship of the proletariat*, an essentially economic entity, *over the bourgeoisie*, also a basically economic category. Marx even hoped that in such a temporary dictatorship of the proletariat there would be a variety of parties and groups, all united in the common goal of destroying the last remnants of capitalism but differing on lesser issues. By contrast, Lenin's concept of proletarian dictatorship meant, in more political terms, the *dictatorship of the Communist party over the proletariat*, since he had no faith

that the proletariat had the political understanding or ability to secure the existence and expansion of a communist state.

Both Marx and Lenin believed in the inevitable triumph of communism throughout the world. Yet, here too, there are important differences. Marx believed that communism in each country would be preceded by internal economic crises, and that each country would develop its own revolutionary movements and forces when the condition would be "objectively ripe." By contrast, Lenin took a more activist, and worldwide, view. He saw, after the victory of communism in Russia, that it would become the base and nerve center from which communist revolutions in other countries could be instigated and engineered.

Because Marx believed that communist revolutions would spontaneously develop in each country in line with its own economic crises and upheavals, he never formulated any master plan or strategy for communist revolution. Marx spoke and wrote a great deal of "proletarian consciousness," of the role of the proletariat as the "grave-digger of capitalism," and he coined the famous phrase, "Workers of all countries, unite," but such phrases are hardly concrete strategies for communist seizure of power by force. By contrast, Lenin formulated several great strategic conceptions which communists have sought to put into practice with varying degrees of success. First, in its quest for power the Communist party must present itself to the public as a broadly based people's party, dedicated to liberty, democracy, and justice. In predominantly agrarian countries—and all underdeveloped countries are by definition predominantly agrarian—the Communist party must above all stress the need for agrarian reform by the distribution of the land to the landless peasants, although ultimate communist policy aims at collectivization of farming, the state becoming the single landlord of the nation. This Leninist strategy worked in Russia to an amazing extent before and during 1917, and the Chinese communists also used it with considerable success before their ultimate victory in the civil war that ended in 1949.

Whereas Marx believed in—and often enjoyed—vigorous polemics with communist, socialist, and anarchist groups with whom he disagreed, Lenin's strategy was different. He believed in infiltrating other political parties, labor unions, and local government authorities. In 1917, for example, Lenin's Bolshevik followers infiltrated and gradually disrupted the Social Revolutionaries, Russia's largest political party, dedicated to both political democracy and socialist economic reform. The same technique of infiltration was again used by communist parties during and after World War II, when they sought to take over socialist parties through infiltration in a number of countries. Even when the communists did not fully succeed in that objective, they often managed to weaken the local socialist party, as in Czechoslovakia before the communist takeover in 1948, so that there was little or no effective socialist resistance to communist seizure of power.

In addition to these strategies for ordinary times, Lenin formulated a special strategy to be used by communists in wartime: *revolutionary defeatism*. Lenin, like Marx, thought that under capitalism the workers cannot be expected to feel any genuine loyalty or patriotism, since capitalist exploitation and patriotism do not mix. However, Lenin went a step further. He saw that modern war imposed heavy strains on the stability of society and government, particularly

if a country suffers military setbacks. But why wait for the opportunities provided by military setbacks? Why not bring about defeat of one's country through sabotage, exhorting soldiers to desert, and undermining its will to fight through defeatist propaganda? Lenin's Bolsheviks followed the strategy of revolutionary defeatism with considerable results in World War I, and in World War II the French communists did all they could to hasten the defeat of France by the German army in 1940. In Yugoslavia, the communists under Tito's leadership helped to destroy the nationalist forces of resistance to the German conquerors in World War II, seeing in their destruction the golden opportunity for eventual communist seizure of power. In China, too, the communist armed groups did not join the government in fighting against Japan before and during World War II, correctly anticipating that China's defeat by Japan would weaken the government, making a communist victory through revolution and civil war a certainty. Later, during the Korean war in the early 1950s, communist leaders in various countries publicly announced that in case of war with the Soviet Union they would do everything in their power to bring about the defeat of their own countries.

Finally, Marx and Lenin viewed international politics under different perspectives. In nineteenth-century fashion, Marx took comparatively little interest in international politics, since economic forces and tendencies were presumed to determine domestic as well as world politics. By contrast, Lenin saw every problem in its global perspective, both before he seized power in Russia and after he had become its ruler. Even while Russia was still reeling under the devastating impact of military defeat, revolution, and civil war, while millions of Russians were starving, Lenin devoted much of his thought and political activity to organizing centers of communist activity and infiltration throughout the world, particularly in Asia, Latin America, and Africa. Lenin agreed with Marx that, in the long run, the internal economic contradictions of capitalism would bring about its doom in every country. But unlike Marx, Lenin felt that communism, particularly after the establishment of the Soviet Union as the base of worldwide revolutionary activity, could shorten the long run by hastening the demise of noncommunist social and political systems through the strategies and tactics which he planned and put into practice.

The collapse of communism in the Soviet Union, Eastern Europe, and elsewhere in the world in 1989 indicates the bankruptcy of Leninist—but also of Marxist—thought. History obviously has not moved, and is not moving, in the direction foretold by Marx; outside of China and a few other states, no one today is willing to organize a society along Leninist principles. As has happened with many revolutionary systems over time, it is probable that what is of value in (particularly) Marx will be incorporated into strains of thought more capable of simultaneously containing divergent viewpoints. Lenin, on the other hand, is more likely to be consigned to "the dustbin of history."

I MARX

Economic and Philosophical Manuscripts *

ALIENATED LABOUR

We have begun from the presuppositions of political economy. We have accepted its terminology and its laws. We presupposed private property; the separation of labour, capital and land, as also of wages, profit and rent; the division of labour; competition; the concept of exchange value, etc. From political economy itself, in its own words, we have shown that the worker sinks to the level of a commodity, and to a most miserable commodity; that the misery of the worker increases with the power and volume of his production; that the necessary result of competition is the accumulation of capital in a few hands, and thus a restoration of monopoly in a more terrible form; and finally that the distinction between capitalist and landlord, and between agricultural labourer and industrial worker, must disappear, and the whole of society divide into the two classes of property owners and propertyless workers.

Political economy begins with the fact of private property; it does not explain it. It conceives the material process of private property, as this occurs in reality, in general and abstract formulas which then serve it as laws. It does not comprehend these laws; that is, it does not show how

they arise out of the nature of private property. Political economy provides no explanation of the basis for the distinction of labour from capital, of capital from land. When, for example, the relation of wages to profits is defined, this is explained in terms of the interests of capitalists; in other words, what should be explained is assumed. Similarly, competition is referred to at every point and is explained in terms of external conditions. Political economy tells us nothing about the extent to which these external and apparently accidental conditions are simply the expression of a necessary development. We have seen how exchange itself seems an accidental fact. The only motive forces which political economy recognizes are *avarice* and the *war between the avaricious, competition*.

Just because political economy fails to understand the interconnexions within this movement it was possible to oppose the doctrine of competition to that of monopoly, the doctrine of freedom of the crafts to that of the guilds, the doctrine of the division of landed property to that of the great estates; for competition, freedom of crafts, and the division of landed property were conceived only as accidental consequences brought about by will and force, rather than as necessary, inevitable and natural consequences of monopoly, the guild system and feudal property.

Thus we have now to grasp the real connexion between this whole system of alienation—private property, acquisitiveness, the separation of labour, capital

and land, exchange and competition, value and the devaluation of man, monopoly and competition—and the system of *money*.

Let us not begin our explanation, as does the economist, from a legendary primordial condition. Such a primordial condition does not explain anything; it merely removes the question into a grey and nebulous distance. It asserts as a fact or event what it should deduce, namely, the necessary relation between two things; for example, between the division of labour and exchange. In the same way theology explains the origin of evil by the fall of man; that is, it asserts as a historical fact what it should explain.

We shall begin from a *contemporary* economic fact. The worker becomes poorer the more wealth he produces and the more his production increases in power and extent. The worker becomes an ever cheaper commodity the more goods he creates. The *devaluation* of the human world increases in direct relation with the *increase in value* of the world of things. Labour does not only create goods; it also produces itself and the worker as a *commodity*, and indeed in the same proportion as it produces goods.

This fact simply implies that the object produced by labour, its product, now stands opposed to it as an *alien* being, as a *power independent* of the producer. The product of labour is labour which has been embodied in an object and turned into a physical thing; this product is an *objectification* of labour. The performance of work is at the same time its objectification. The performance of work appears in the sphere of political economy as a vitiation of the worker, objectification as a *loss* and as *servitude to the object*, and appropriation as *alienation*.

So much does the performance of work appear as vitiation that the worker is vitiated to the point of starvation. So much does objectification appear as loss of the object that the worker is deprived of the most essential things not only of life but also of work. Labour itself be-

comes an object which he can acquire only by the greatest effort and with unpredictable interruptions. So much does the appropriation of the object appear as alienation that the more objects the worker produces the fewer he can possess and the more he falls under the domination of his product, of capital.

All these consequences follow from the fact that the worker is related to the *product of his labour* as to an *alien* object. For it is clear on this presupposition that the more the worker expends himself in work the more powerful becomes the world of objects which he creates in face of himself, the poorer he becomes in his inner life, and the less he belongs to himself. It is just the same as in religion. The more of himself man attributes to God the less he has left in himself. The worker puts his life into the object, and his life then belongs no longer to himself but to the object. The greater his activity, therefore, the less he possesses. What is embodied in the product of his labour is no longer his own. The greater this product is, therefore, the more he is diminished. The *alienation* of the worker in his product means not only that his labour becomes an object, assumes an *external existence*, but that it exists independently, *outside himself*, and alien to him, and that it stands opposed to him as an autonomous power. The life which he has given to the object sets itself against him as an alien and hostile force.

Let us now examine more closely the phenomenon of *objectification*; the worker's production and the *alienation* and *loss* of the object it produces, which is involved in it. The worker can create nothing without *nature*, without the *sensuous external world*. The latter is the material in which his labour is realized, in which it is active, out of which and through which it produces things.

But just as nature affords the *means of existence* of labour, in the sense that labour cannot *live* without objects upon which it can be exercised, so also it provides the *means of existence* in a narrower sense; namely the means of physi-

* From *Karl Marx: Early Writings* (translated and edited by T. B. Bottomore. © T. B. Bottomore, 1963). By permission of McGraw-Hill Book Company and C. A. Watts & Co., Ltd.

cal existence for the *worker* himself. Thus, the more the worker *appropriates* the external world of sensuous nature by his labour the more he deprives himself of *means of existence*, in two respects: first, that the sensuous external world becomes progressively less an object belonging to his labour or a means of existence of his labour, and secondly, that it becomes progressively less a means of existence in the direct sense, a means for the physical subsistence of the worker.

In both respects, therefore, the worker becomes a slave of the object; first, in that he receives an *object of work*, i.e. receives *work*, and secondly, in that he receives *means of subsistence*. Thus the object enables him to exist, first as a *worker* and secondly, as a *physical subject*. The culmination of this enslavement is that he can only maintain himself as a *physical subject* so far as he is a *worker*, and that it is only as a *physical subject* that he is a worker.

(The alienation of the worker in his object is expressed as follows in the laws of political economy: the more the worker produces the less he has to consume; the more value he creates the more worthless he becomes; the more refined his product the more crude and misshapen the worker; the more civilized the product the more barbarous the worker; the more powerful the work the more feeble the worker; the more the work manifests intelligence the more the worker declines in intelligence and becomes a slave of nature.)

Political economy conceals the alienation in the nature of labour in so far as it does not examine the direct relationship between the worker (work) and production. Labour certainly produces marvels for the rich but it produces privation for the worker. It produces palaces, but hovels for the worker. It produces beauty, but deformity for the worker. It replaces labour by machinery, but it casts some of the workers back into a barbarous kind of work and turns the others into machines. It produces intelligence,

but also stupidity and cretinism for the workers.

The direct relationship of labour to its products is the relationship of the worker to the objects of his production. The relationship of property owners to the objects of production and to production itself is merely a *consequence* of this first relationship and confirms it. We shall consider this second aspect later.

Thus, when we ask what is the important relationship of labour, we are concerned with the relationship of the *worker* to production.

So far we have considered the alienation of the worker only from one aspect; namely, *his relationship with the products of his labour*. However, alienation appears not merely in the result but also in the *process of production*, within *productive activity* itself. How could the worker stand in an alien relationship to the product of his activity if he did not alienate himself in the act of production itself? The product is indeed only the *résumé* of activity, of production. Consequently, if the product of labour is alienation, production itself must be active alienation—the alienation of activity and the activity of alienation. The alienation of the object of labour merely summarizes the alienation in the work activity itself.

What constitutes the alienation of labour? First, that the work is *external* to the worker, that it is not part of his nature; and that, consequently, he does not fulfil himself in his work but denies himself, has a feeling of misery rather than well-being, does not develop freely his mental and physical energies but is physically exhausted and mentally debased. The worker, therefore, feels himself at home only during his leisure time, whereas at work he feels homeless. His work is not voluntary but imposed, *forced labour*. It is not the satisfaction of a need, but only a *means* for satisfying other needs. Its alien character is clearly shown by the fact that as soon as there is no physical or other compulsion it is avoided like the

plague. External labour, labour in which man alienates himself, is a labour of self-sacrifice, of mortification. Finally, the external character of work for the worker is shown by the fact that it is not his own work but work for someone else, that in work he does not belong to himself but to another person.

Just as in religion the spontaneous activity of human fantasy, of the human brain and heart, reacts independently as an alien activity of gods or devils upon the individual, so the activity of the worker is not his own spontaneous activity. It is another's activity and a loss of his own spontaneity.

We arrive at the result that man (the worker) feels himself to be freely active only in his animal functions—eating, drinking and procreating, or at most also in his dwelling and in personal adornment—while in his human functions he is reduced to an animal. The animal becomes human and the human becomes animal.

Eating, drinking and procreating are of course also genuine human functions. But abstractly considered, apart from the environment of human activities, and turned into final and sole ends, they are animal functions.

We have now considered the act of alienation of practical human activity, labour, from two aspects: (1) the relationship of the worker to the *product of labour* as an alien object which dominates him. This relationship is at the same time the relationship to the sensuous external world, to natural objects, as an alien and hostile world; (2) the relationship of labour to the *act of production* within *labour*. This is the relationship of the worker to his own activity as something alien and not belonging to him, activity as suffering (passivity), strength as powerlessness, creation as emasculation, the *personal* physical and mental energy of the worker, his personal life (for what is life but activity?), as an activity which is directed against himself, independent of him and not belonging to

him. This is *self-alienation* as against the above-mentioned alienation of the *thing*.

We have now to infer a third characteristic of *alienated labour* from the two we have considered.

Man is a species-being not only in the sense that he makes the community (his own as well as those of other things) his object both practically and theoretically, but also (and this is simply another expression for the same thing) in the sense that he treats himself as the present, living species, as a *universal* and consequently free being.

Species-life, for man as for animals, has its physical basis in the fact that man (like animals) lives from inorganic nature, and since man is more universal than an animal so the range of inorganic nature from which he lives is more universal. Plants, animals, minerals, air, light, etc. constitute, from the theoretical aspect, a part of human consciousness as objects of natural science and art; they are man's spiritual inorganic nature, his intellectual means of life, which he must first prepare for enjoyment and perpetuation. So also, from the practical aspect, they form a part of human life and activity. In practice man lives only from these natural products, whether in the form of food, heating, clothing, housing, etc. The universality of man appears in practice in the universality which makes the whole of nature into his inorganic body: (1) as a direct means of life; and equally (2) as the material object and instrument of his life activity. Nature is the inorganic body of man; that is to say nature, excluding the human body itself. To say that man *lives* from nature means that nature is his *body* with which he must remain in a continuous interchange in order not to die. The statement that the physical and mental life of man, the nature, are interdependent means simply that nature is interdependent with itself, for man is a part of nature.

Since alienated labour: (1) alienates nature from man; and (2) alienates man

from himself, from his own active function, his life activity; so it alienates him from the species. It makes *species-life* into a means of individual life. In the first place it alienates species-life and individual life, and secondly, it turns the latter, as an abstraction, into the purpose of the former, also in its abstract and alienated form.

For labour, *life activity*, *productive life*, now appear to man only as *means* for the satisfaction of a need, the need to maintain his physical existence. Productive life is, however, *species-life*. It is life creating life. In this type of life activity resides the whole character of a species, its *species-character*; and free, conscious life activity is the *species-character* of human beings. Life itself appears only as a *means of life*.

The animal is one with its life activity. It does not distinguish the activity from itself. It is *its activity*. But man makes his life activity itself an object of his will and consciousness. He has a conscious life activity. It is not a determination with which he is completely identified. Conscious life activity distinguishes man from the life activity of animals. Only for this reason is he a *species-being*. Or rather, he is only a self-conscious being, i.e. his own life is an object for him, because he is a *species-being*. Only for this reason is his activity free activity. Alienated labour reverses the relationship, in that man because he is a self-conscious being makes his life activity, his *being*, only a means for his *existence*.

The practical construction of an *objective world*, the *manipulation* of inorganic nature, is the confirmation of man as a conscious *species-being*, i.e. a being who treats the species as his own being or himself as a *species-being*. Of course, animals also produce. They construct nests, dwellings, as in the case of bees, beavers, ants, etc. But they only produce what is strictly necessary for themselves or their young. They produce only in a single direction, while man produces universally. They produce only under the compulsion of direct physical needs,

while man produces when he is free from physical need and only truly produces in freedom from such need. Animals produce only themselves, while man reproduces the whole of nature. The products of animal production belong directly to their physical bodies, while man is free in face of his product. Animals construct only in accordance with the standards and needs of the species to which they belong, while man knows how to produce in accordance with the standards of every species and knows how to apply the appropriate standard to the object. Thus man constructs also in accordance with the laws of beauty.

It is just in his work upon the objective world that man really proves himself as a *species-being*. This production is his active *species-life*. By means of it nature appears as *his work* and his reality. The object of labour is, therefore, the *objectification of man's species-life*; for he no longer reproduces himself merely intellectually, as in consciousness, but actively and in a real sense, and he sees his own reflection in a world which he has constructed. While, therefore, alienated labour takes away the object of production from man, it also takes away his *species-life*, his real objectivity as a *species-being*, and changes his advantage over animals into a disadvantage in so far as his inorganic body, nature, is taken from him.

Just as alienated labour transforms free and self-directed activity into a means, so it transforms the *species-life* of man into a means of physical existence.

Consciousness, which man has from his species, is transformed through alienation so that *species-life* becomes only a means for him. (3) Thus alienated labour turns the *species-life of man*, and also nature as his mental *species-property*, into an *alien* being and into a *means* for his *individual existence*. It alienates from man his own body, external nature, his mental life and his *human life*. (4) A direct consequence of the alienation of man from the product of his labour, from his life activity and

from his *species-life*, is that *man* is *alienated* from other *men*. When man confronts himself he also confronts *other men*. What is true of man's relationship to his work, to the product of his work and to himself, is also true of his relationship to other men, to their labour and to the objects of their labour.

In general, the statement that man is alienated from his *species-life* means that each man is alienated from others, and that each of the others is likewise alienated from human life.

Human alienation, and above all the relation of man to himself, is first realized and expressed in the relationship between each man and other men. Thus in the relationship of alienated labour every man regards other men according to the standards and relationships in which he finds himself placed as a worker.

We began with an economic fact, the alienation of the worker and his production. We have expressed this fact in conceptual terms as *alienated labour*, and in analysing the concept we have merely analysed an economic fact.

Let us now examine further how this concept of alienated labour must express and reveal itself in reality. If the product of labour is alien to me and confronts me as an alien power, to whom does it belong? If my own activity does not belong to me but is an alien, forced activity, to whom does it belong? To a being *other than myself*. And who is this being? The *gods*? It is apparent in the earliest stages of advanced production, e.g. temple building, etc. in Egypt, India, Mexico, and in the service rendered to gods, that the product belonged to the gods. But the gods alone were never the lords of labour. And no more was *nature*. What a contradiction it would be if the more man subjugates nature by his labour, and the more the marvels of the gods are rendered superfluous by the marvels of industry, the more he should abstain from his joy in producing and his enjoyment of the product for love of these powers.

The *alien* being to whom labour and the product of labour belong, to whose

service labour is devoted, and to whose enjoyment the product of labour goes, can only be *man* himself. If the product of labour does not belong to the worker, but confronts him as an alien power, this can only be because it belongs to a *man other than the worker*. If his activity is a torment to him it must be a source of *enjoyment* and pleasure to another. Not the gods, nor nature, but only man himself can be this alien power over men.

Consider the earlier statement that the relation of man to himself is first *realized*, *objectified*, through his relation to other men. If he is related to the product of his labour, his objectified labour, as to an *alien*, hostile, powerful and independent object, he is related in such a way that another alien, hostile, powerful and independent man is the lord of this object. If he is related to his own activity as to unfree activity, then he is related to it as activity in the service, and under the domination, coercion and yoke, of another man.

Every self-alienation of man, from himself and from nature, appears in the relation which he postulates between other men and himself and nature. Thus religious self-alienation is necessarily exemplified in the relation between laity and priest, or, since it is here a question of the spiritual world, between the laity and a mediator. In the real world of practice this self-alienation can only be expressed in the real, practical relation of man to his fellow men. The medium through which alienation occurs is itself a *practical* one. Through alienated labour, therefore, man not only produces his relation to the object and to the process of production as to alien and hostile men; he also produces the relation of other men to his production and his product, and the relation between himself and other men. Just as he creates his own production as a vitiation, a punishment, and his own product as a loss, as a product which does not belong to him, so he creates the domination of the non-producer over production and its product. As he alienates his own activity,

so he bestows upon the stranger an activity which is not his own.

We have so far considered this relation only from the side of the worker, and later on we shall consider it also from the side of the non-worker.

Thus, through alienated labour the worker creates the relation of another man, who does not work and is outside the work process, to this labour. The relation of the worker to work also produces the relation of the capitalist (or whatever one likes to call the lord of labour) to work. *Private property* is, therefore, the product, the necessary result, of *alienated labour*, of the external relation of the worker to nature and to himself.

Private property is thus derived from the analysis of the concept of *alienated labour*; that is, alienated man, alienated labour, alienated life, and estranged man.

We have, of course, derived the concept of *alienated labour* (*alienated life*) from political economy, from an analysis of the *movement of private property*. But the analysis of this concept shows that although private property appears to be the basis and cause of alienated labour, it is rather a consequence of the latter, just as the gods are *fundamentally* not the cause but the product of confusions of human reason. At a later stage, however, there is a reciprocal influence.

Only in the final stage of the development of private property is its secret revealed, namely, that it is on one hand the *product* of alienated labour, and on the other hand the *means* by which labour is alienated, *the realization of this alienation*.

This elucidation throws light upon several unresolved controversies—

1. Political economy begins with labour as the real soul of production and then goes on to attribute nothing to labour and everything to private property. Proudhon, faced by this contradiction, has decided in favour of labour against private property. We perceive, however, that this apparent contradiction

is the contradiction of *alienated labour* with itself and that political economy has merely formulated the laws of alienated labour.

We also observe, therefore, that *wages* and *private property* are identical, for wages, like the product or object of labour, labour itself remunerated, are only a necessary consequence of the alienation of labour. In the wage system labour appears not as an end in itself but as the servant of wages. We shall develop this point later on and here only bring out some of the consequences.

An enforced *increase in wages* (disregarding the other difficulties, and especially that such an anomaly could only be maintained by force) would be nothing more than a *better remuneration of slaves*, and would not restore, either to the worker or to the work, their human significance and worth.

Even the *equality of incomes* which Proudhon demands would only change the relation of the present-day worker to his work into a relation of all men to work. Society would then be conceived as an abstract capitalist.

2. From the relation of alienated labour to private property it also follows that the emancipation of society from private property, from servitude, takes the political form of the *emancipation of the workers*; not in the sense that only the latter's emancipation is involved, but because this emancipation includes the emancipation of humanity as a whole. For all human servitude is involved in the relation of the worker to production, and all the types of servitude are only modifications or consequences of this relation.

As we have discovered the concept of *private property* by an analysis of the concept of *alienated labour*, so with the aid of these two factors we can evolve all the *categories* of political economy, and in every category, e.g. trade, competition, capital, money, we shall discover only a particular and developed expression of these fundamental elements.

However, before considering this

structure let us attempt to solve two problems.

1. To determine the general nature of *private property* as it has resulted from alienated labour, in its relation to *genuine human and social property*.

2. We have taken as a fact and analysed the *alienation of labour*. How does it happen, we may ask, that *man alienates his labour*? How is this alienation founded in the nature of human development? We have already done much to solve the problem in so far as we have transformed the question concerning the *origin of private property* into a question about the relation between *alienated labour* and the process of development of mankind. For in speaking of private property one believes oneself to be dealing with something external to mankind. But in speaking of labour one deals directly with mankind itself. This new formulation of the problem already contains its solution.

ad (1) *The general nature of private property and its relation to genuine human property.*

We have resolved alienated labour into two parts, which mutually determine each other, or rather, which constitute two different expressions of one and the same relation. *Appropriation* appears as *alienation* and *alienation* as *appropriation*, alienation as genuine acceptance in the community.

We have considered one aspect, *alienated labour*, in its bearing upon the worker himself, i.e. *the relation of alienated labour to itself*. And we have found as the necessary consequence of this relation the *property relation* of the *non-worker* to the worker and to labour. *Private property* as the material, summarized expression of alienated labour includes both relations; *the relation of the worker to labour, to the product of his labour and to the non-worker*, and the relation of the *non-worker to the worker and to the product of the latter's labour*.

We have already seen that in relation to the worker, who *appropriates* nature by his labour, appropriation appears as alienation, self-activity as activity for another and of another, living as the sacrifice of life, and production of the object as loss of the object to an alien power, an alien man. Let us now consider the relation of this *alien* man to the worker, to labour, and to the object of labour.

It should be noted first that everything which appears to the worker as an *activity of alienation*, appears to the non-worker as a *condition of alienation*. Secondly, the *real, practical* attitude (as a state of mind) of the worker in production and to the product appears to the non-worker who confronts him as a *theoretical* attitude.

Thirdly, the non-worker does everything against the worker which the latter does against himself, but he does not do against himself what he does against the worker.

Let us examine these three relationships more closely.¹

MONEY

If man's *feelings*, passions, etc. are not merely anthropological characteristics in the narrower sense, but are true *ontological* affirmations of being (nature), and if they are only really affirmed in so far as their *object* exists as an object of sense, then it is evident—

1. that their mode of affirmation is not one and unchanging, but rather that the diverse modes of affirmation constitute the distinctive character of their existence, of their life. The manner in which the object exists for them is the distinctive mode of their *gratification*;

2. where the sensuous affirmation is a direct annulment of the object in its independent form (as in drinking, eating,

¹The manuscript breaks off unfinished at this point. [Editor's note.]

working up of the object, etc.) this is the affirmation of the object;

3. in so far as man, and hence also his feelings, etc. are *human*, the affirmation of the object by another person is also his own gratification;

4. only through developed industry, i.e. through the mediation of private property, does the ontological essence of human passions, in its totality and its humanity, come into being; the science of man itself is a product of man's self-formation through practical activity;

5. the meaning of private property—released from its alienation—is the *existence of essential objects* for man, as objects of enjoyment and activity.

Money, since it has the *property* of purchasing everything, of appropriating objects to itself, is, therefore, the *object par excellence*. The universal character of this *property* corresponds to the omnipotence of money, which is regarded as an omnipotent being . . . money is the *pander* between need and object, between human life and the means of subsistence. But *that which* mediates my life mediates also the existence of other men for me. It is for me the *other person*.

What, man! confound it, hands and feet
And head and backside, all are yours!
And what we take while life is sweet,
Is that to be declared not ours?
Six stallions, say, I can afford,
Is not their strength my property?
I tear along, a sporting lord,
As if their legs belonged to me.
(Goethe, *Faust*—Mephistopheles)

Shakespeare in *Timon of Athens*—

Gold? yellow, glittering, precious gold?
No, gods,
I am no idle votarist: roots, you
clear heavens!
Thus much of this will make
black, white; foul, fair;
Wrong, right; base, noble; old, young;
coward, valiant.
. . . Why this

Will lug your priests and servants from
your sides;
Pluck stout men's pillows from below
their heads:
This yellow slave
Will knit and break religions; bless
th'accurst;
Make the hoar leprosy ador'd; place
thieves,
And give them title, knee, and appro-
bation,
With senators on the bench: this is it
That makes the wappen'd widow wed
again;
She whom the spital-house and
ulcerous sores
Would cast the gorge at, this embalms
and spices
To th'April day again. Come, damned
earth,
Thou common whore of mankind,
that putt'st odds
Among the rout of nations, I will
make thee
Do thy right nature.

And later on—

O thou sweet king-killer, and dear
divorce
'Twi'xt natural son and sire! Thou
bright defiler
Of Hymen's purest bed! Thou valiant
Mars!
Thou ever young, fresh, loved and
delicate wooer,
Whose blush doth thaw the
consecrated snow
That lies on Dian's lap! thou visible
god,
That solder'st close impossibilities,
And mak'st them kiss! that speak'st
with every tongue,
To every purpose! O thou touch of
hearts!
Think, thy slave man rebels; and
by thy virtue
Set them into confounding odds, that
beasts
May have the world in empire!

Shakespeare portrays admirably the
nature of *money*. To understand him, let

us begin by expounding the passage from Goethe.

That which exists for me through the medium of *money*, that which I can pay for (i.e. which money can buy), that *I am*, the possessor of the money. My own power is as great as the power of money. The properties of money are my own (the possessor's) properties and faculties. What *I am* and *can do* is, therefore, not at all determined by my individuality. *I am* ugly, but I can buy the most beautiful woman for myself. Consequently, *I am* not ugly, for the effect of ugliness, its power to repel, is annulled by money. As an individual *I am lame*, but money provides me with twenty-four legs. Therefore, *I am* not lame. *I am* a detestable, dishonourable, unscrupulous and stupid man, but money is honoured and so also is its possessor. Money is the highest good, and so its possessor is good. Besides, money saves me the trouble of being dishonest; therefore, *I am* presumed honest. *I am stupid*, but since money is *the real mind* of all things, how should its possessor be stupid? Moreover, he can buy talented people for himself, and is not he who has power over the talented more talented than they? *I* who can have, through the power of money, *everything* for which the human heart longs, do *I* not possess all human abilities? Does not my money, therefore, transform all my incapacities into their opposites.

If *money* is the bond which binds me to *human* life, and society to me, and which links me with nature and man, is it not the bond of all *bonds*? Is it not, therefore, also the universal agent of separation? It is the real means of both *separation* and *union*, the galvanic-chemical power of society.

Shakespeare emphasizes particularly two properties of money: (1) it is the visible deity, the transformation of all human and natural qualities into their opposites, the universal confusion and inversion of things; it brings incompatibles into fraternity; (2) it is the universal whore, the universal pander between men and nations.

The power to confuse and invert all human and natural qualities, to bring about fraternization of incompatibles, the *divine* power of money, resides in its *character* as the alienated and self-alienating species-life of man. It is the alienated *power of humanity*.

What *I* as a *man* am unable to do, and thus what all my individual faculties are unable to do, is made possible for me by *money*. Money, therefore, turns each of these faculties into something which it is not, into its *opposite*.

If *I* long for a meal, or wish to take the mail coach because *I* am not strong enough to go on foot, money provides the meal and the mail coach; i.e. it transforms my desires from representations into *realities*, from imaginary being into *real being*. In mediating thus money is a *genuinely creative* power.

Demand also exists for the individual who has no money, but his demand is a mere creature of the imagination which has no effect, no existence for me, for a third party, for . . .² and which thus remains *unreal* and *without object*. The difference between effective demand, supported by money, and ineffective demand, based upon my need, my passion, my desire, etc. is the difference between *being* and *thought*, between the merely inner representation and the representation which exists outside myself as a *real object*.

If *I* have no money for travel *I* have no *need*—no real and self-realizing need—for travel. If *I* have a *vocation* for study but no money for it, then *I* have no vocation, i.e. no *effective*, genuine vocation. Conversely, if *I* really have no vocation for study, but have money and the urge for it, then *I* have an *effective* vocation. *Money* is the external, universal means and power (not derived from man as man nor from human society as society) to change *representation* into *reality* and *reality* into *mere representation*. It transforms *real human* and

² Marx omitted a word here in the manuscript. [Editor's note.]

natural faculties into mere abstract representations, i.e. *imperfections* and tormenting chimeras; and on the other hand, it transforms *real imperfections and fancies*, faculties which are really impotent and which exist only in the individual's imagination, into *real faculties and powers*. In this respect, therefore, money is the general inversion of *individualities*, turning them into their opposites and associating contradictory qualities with their qualities.

Money, then, appears as a *disruptive* power for the individual and for the social bonds, which claim to be self-subsistent *entities*. It changes fidelity into infidelity, love into hate, hate into love, virtue into vice, vice into virtue, servant into master, stupidity into intelligence and intelligence into stupidity.

Since money, as the existing and active concept of value, confounds and exchanges everything, it is the universal *confusion and transposition* of all things, the inverted world, the confusion and transposition of all natural and human qualities.

He who can purchase bravery is brave,

though a coward. Money is not exchanged for a particular quality, a particular thing, or a specific human faculty, but for the whole objective world of man and nature. Thus, from the standpoint of its possessor, it exchanges every quality and object for every other, even though they are contradictory. It is the fraternization of incompatibles; it forces contraries to embrace.

Let us assume *man* to be *man*, and his relation to the world to be a human one. Then love can only be exchanged for love, trust for trust, etc. If you wish to enjoy art you must be an artistically cultivated person; if you wish to influence other people you must be a person who really has a stimulating and encouraging effect upon others. Every one of your relations to man and to nature must be a *specific expression*, corresponding to the object of your will, of your *real individual* life. If you love without evoking love in return, i.e. if you are not able, by the *manifestation* of yourself as a loving person, to make yourself a *beloved person*, then your love is impotent and a misfortune.

II MARX AND ENGELS

The Communist Manifesto *

A spectre is haunting Europe—the spectre of Communism. All the powers of old Europe have entered into a holy alliance to exorcise this spectre: Pope and Czar, Metternich and Guizot, French Radicals and German police-spies.

Where is the party in opposition that has not been decried as communistic by its opponents in power? Where the Opposition that has not hurled back the branding reproach of Communism, against the more advanced opposition parties, as well as against its reactionary adversaries?

Two things result from this fact:

I. Communism is already acknowledged by all European powers to be itself a power.

II. It is high time that Communists should openly, in the face of the whole world, publish their views, their aims, their tendencies, and meet this nursery tale of the spectre of Communism with a manifesto of the party itself.

To this end, Communists of various nationalities have assembled in London, and sketched the following manifesto, to be published in the English, French, German, Italian, Flemish and Danish languages.

BOURGEOIS AND PROLETARIANS

The history of all hitherto existing society is the history of class struggles.

Freeman and slave, patrician and

plebeian, lord and serf, guild-master and journeyman, in a word, oppressor and oppressed, stood in constant opposition to one another, carried on an uninterrupted, now hidden, now open fight, a fight that each time ended, either in a revolutionary reconstitution of society at large, or in the common ruin of the contending classes.

In the earlier epochs of history, we find almost everywhere a complicated arrangement of society into various orders, a manifold gradation of social rank. In ancient Rome we have patricians, knights, plebeians, slaves; in the Middle Ages, feudal lords, vassals, guild-masters, journeymen, apprentices, serfs; in almost all of these classes, again, subordinate gradations.

The modern bourgeois society that has sprouted from the ruins of feudal society, has not done away with class antagonisms. It has but established new classes, new conditions of oppression, new forms of struggle in place of the old ones.

Our epoch, the epoch of the bourgeoisie, possesses, however, this distinctive feature: It has simplified the class antagonisms. Society as a whole is more and more splitting up into two great hostile camps, into two great classes directly facing each other—bourgeoisie and proletariat.

From the serfs of the Middle Ages sprang the chartered burghers of the earliest towns. From these burgesses the first elements of the bourgeoisie were developed.

The discovery of America, the rounding of the Cape, opened up fresh ground

* (1848; English trans. of 1888, ed. Friedrich Engels.)

for the rising bourgeoisie. The East-Indian and Chinese markets, the colonisation of America, trade with the colonies, the increase in the means of exchange and in commodities generally, gave to commerce, to navigation, to industry, an impulse never before known, and thereby, to the revolutionary element in the tottering feudal society at rapid development.

The feudal system of industry, in which industrial production was monopolised by closed guilds, now no longer sufficed for the growing wants of the new markets. The manufacturing system took its place. The guild-masters were pushed aside by the manufacturing middle class; division of labour between the different corporate guilds vanished in the face of division of labour in each single workshop.

Meantime the markets kept ever growing, the demand ever rising. Even manufacture no longer sufficed. Thereupon, steam and machinery revolutionised industrial production. The place of manufacture was taken by the giant, modern industry, the place of the industrial middle class, by industrial millionaires—the leaders of whole industrial armies, the modern bourgeoisie.

Modern industry has established the world market, for which the discovery of America paved the way. This market has given an immense development to commerce, to navigation, to communication by land. This development has, in its turn, reacted on the extension of industry; and in proportion as industry, commerce, navigation, railways extended, in the same proportion the bourgeoisie developed, increased its capital, and pushed into the background every class handed down from the Middle Ages.

We see, therefore, how the modern bourgeoisie is itself the product of a long course of development, of a series of revolutions in the modes of production and of exchange.

Each step in the development of the bourgeoisie was accompanied by a corresponding political advance of that class.

An oppressed class under the sway of the feudal nobility, it became an armed and self-governing association in the mediæval commune; here independent urban republic (as in Italy and Germany), there taxable "third estate" of the monarchy (as in France); afterwards, in the period of manufacture proper, serving either the semi-feudal or the absolute monarchy as a counterpoise against the nobility, and, in fact, cornerstone of the great monarchies in general—the bourgeoisie has at last, since the establishment of modern industry and of the world market, conquered for itself, in the modern representative state, exclusive political sway. The executive of the modern state is but a committee for managing the common affairs of the whole bourgeoisie.

The bourgeoisie has played a most revolutionary rôle in history.

The bourgeoisie, wherever it has got the upper hand, has put an end to all feudal, patriarchal, idyllic relations. It has pitilessly torn asunder the motley feudal ties that bound man to his "natural superiors," and has left no other bond between man and man than naked self-interest, than callous "cash payment." It has drowned the most heavenly ecstasies of religious fervour, of chivalrous enthusiasm, of philistine sentimentalism, in the icy water of egotistical calculation. It has resolved personal worth into exchange value, and in place of the numberless, indefeasible chartered freedoms, has set up that single, unconscionable freedom—Free Trade. In one word, for exploitation, veiled by religious and political illusions, it has substituted naked, shameless, direct, brutal exploitation.

The bourgeoisie has stripped of its halo every occupation hitherto honoured and looked up to with reverent awe. It has converted the physician, the lawyer, the priest, the poet, the man of science, into its paid wage-labourers.

The bourgeoisie has torn away from the family its sentimental veil, and has reduced the family relation to a mere money relation.

The bourgeoisie has disclosed how it came to pass that the brutal display of vigour in the Middle Ages, which reactionaries so much admire, found its fitting complement in the most slothful indolence. It has been the first to show what man's activity can bring about. It has accomplished wonders far surpassing Egyptian pyramids, Roman aqueducts, and Gothic cathedrals; it has conducted expeditions that put in the shade all former migrations of nations and crusades.

The bourgeoisie cannot exist without constantly revolutionising the instruments of production, and thereby the relations of production, and with them the whole relations of society. Conservation of the old modes of production in unaltered form, was, on the contrary, the first condition of existence for all earlier industrial classes. Constant revolutionising of production, uninterrupted disturbance of all social conditions, everlasting uncertainty and agitation distinguish the bourgeois epoch from all earlier ones. All fixed, fast-frozen relations, with their train of ancient and venerable prejudices and opinions, are swept away, all new-formed ones become antiquated before they can ossify. All that is solid melts into air, all that is holy is profaned, and man is at last compelled to face with sober senses his real conditions of life and his relations with his kind.

The need of a constantly expanding market for its products chases the bourgeoisie over the whole surface of the globe. It must nestle everywhere, settle everywhere, establish connections everywhere.

The bourgeoisie has through its exploitation of the world market given a cosmopolitan character to production and consumption in every country. To the great chagrin of reactionaries, it has drawn from under the feet of industry the national ground on which it stood. All old-established national industries have been destroyed or are daily being destroyed. They are dislodged by new

industries, whose introduction becomes a life and death question for all civilised nations, by industries that no longer work up indigenous raw material, but raw material drawn from the remotest zones; industries whose products are consumed, not only at home, but in every quarter of the globe. In place of the old wants, satisfied by the production of the country, we find new wants, requiring for their satisfaction the products of distant lands and climes. In place of the old local and national seclusion and self-sufficiency, we have intercourse in every direction, universal inter-dependence of nations. And as in material, so also in intellectual production. The intellectual creations of individual nations become common property. National one-sidedness and narrow-mindedness become more and more impossible, and from the numerous national and local literatures there arises a world literature.

The bourgeoisie, by the rapid improvement of all instruments of production, by the immensely facilitated means of communication, draws all nations, even the most barbarian, into civilisation. The cheap prices of its commodities are the heavy artillery with which it batters down all Chinese walls, with which it forces the barbarians' intensely obstinate hatred of foreigners to capitulate. It compels all nations, on pain of extinction, to adopt the bourgeois mode of production; it compels them to introduce what it calls civilisation into their midst, *i.e.*, to become bourgeois themselves. In a word, it creates a world after its own image.

The bourgeoisie has subjected the country to the rule of the towns. It has created enormous cities, has greatly increased the urban population as compared with the rural, and has thus rescued a considerable part of the population from the idiocy of rural life. Just as it has made the country dependent on the towns, so it has made barbarian and semi-barbarian countries dependent on the civilised ones, nations of peasants on nations of bourgeois, the East on the West.

The bourgeoisie keeps more and more doing away with the scattered state of the population, of the means of production, and of property. It has agglomerated population, centralised means of production, and has concentrated property in a few hands. The necessary consequence of this was political centralisation. Independent, or but loosely connected provinces, with separate interests, laws, governments and systems of taxation, became lumped together into one nation, with one government, one code of laws, one national class interest, one frontier and one customs tariff.

The bourgeoisie, during its rule of scarce one hundred years, has created more massive and more colossal productive forces than have all preceding generations together. Subjection of nature's forces to man, machinery, application of chemistry to industry and agriculture, steam-navigation, railways, electric telegraphs, clearing of whole continents for cultivation, canalisation of rivers, whole populations conjured out of the ground—what earlier century had even a presentiment that such productive forces slumbered in the lap of social labour?

We see then that the means of production and of exchange, which served as the foundation for the growth of the bourgeoisie, were generated in feudal society. At a certain stage in the development of these means of production and of exchange, the conditions under which feudal society produced and exchanged, the feudal organisation of agriculture and manufacturing industry, in a word, the feudal relations of property became no longer compatible with the already developed productive forces; they became so many fetters. They had to be burst asunder; they were burst asunder.

Into their place stepped free competition, accompanied by a social and political constitution adapted to it, and by the economic and political sway of the bourgeois class.

A similar movement is going on before our own eyes. Modern bourgeois society with its relations of production, of ex-

change and of property, a society that has conjured up such gigantic means of production and of exchange, is like the sorcerer who is no longer able to control the powers of the nether world whom he has called up by his spells. For many a decade past the history of industry and commerce is but the history of the revolt of modern productive forces against modern conditions of production, against the property relations that are the conditions for the existence of the bourgeoisie and of its rule. It is enough to mention the commercial crises that by their periodical return put the existence of the entire bourgeois society on trial, each time more threateningly. In these crises a great part not only of the existing products, but also of the previously created productive forces, are periodically destroyed. In these crises there breaks out an epidemic that, in all earlier epochs, would have seemed an absurdity—the epidemic of over-production. Society suddenly finds itself put back into a state of momentary barbarism; it appears as if a famine, a universal war of devastation had cut off the supply of every means of subsistence; industry and commerce seem to be destroyed. And why? Because there is too much civilization, too much industry, too much commerce. The productive forces at the disposal of society no longer tend to further the development of the conditions of bourgeois property; on the contrary, they have become too powerful for these conditions, by which they are fettered, and no sooner do they overcome these fetters than they bring disorder into the whole of bourgeois society, endanger the existence of bourgeois property. The conditions of bourgeois society are too narrow to comprise the wealth created by them. And how does the bourgeoisie get over these crises? On the one hand by enforced destruction of a mass of productive forces; on the other, by the conquest of new markets, and by the more thorough exploitation of the old ones. That is to say, by paving the way for

more extensive and more destructive crises, and by diminishing the means whereby crises are prevented.

The weapons with which the bourgeoisie felled feudalism to the ground are now turned against the bourgeoisie itself. But not only has the bourgeoisie forged the weapons that bring death to itself; it has also called into existence the men who are to wield those weapons—the modern working class—the proletarians.

In proportion as the bourgeoisie, i.e., capital, is developed, in the same proportion is the proletariat, the modern working class, developed—a class of labourers, who live only so long as they find work, and who find work only so long as their labour increases capital. These labourers, who must sell themselves piecemeal, are a commodity, like every other article of commerce, and are consequently exposed to all the vicissitudes of competition, to all the fluctuations of the market.

Owing to the extensive use of machinery and to division of labour, the work of the proletarians has lost all individual character, and, consequently, all charm for the workman. He becomes an appendage of the machine, and it is only the most simple, most monotonous, and most easily acquired knack, that is required of him. Hence, the cost of production of a workman is restricted, almost entirely, to the means of subsistence that he requires for his maintenance, and for the propagation of his race. But the price of a commodity, and therefore also of labour, is equal to its cost of production. In proportion, therefore, as the repulsiveness of the work increases, the wage decreases. Nay more, in proportion as the use of machinery and division of labour increases, in the same proportion the burden of toil also increases, whether by prolongation of the working hours, by increase of the work exacted in a given time, or by increased speed of the machinery, etc.

Modern industry has converted the little workshop of the patriarchal master

into the great factory of the industrial capitalist. Masses of labourers, crowded into the factory, are organised like soldiers. As privates of the industrial army they are placed under the command of a perfect hierarchy of officers and sergeants. Not only are they slaves of the bourgeoisie class, and of the bourgeois state; they are daily and hourly enslaved by the machine, by the overseer, and, above all, by the individual bourgeois manufacturer himself. The more openly this despotism proclaims gain to be its end and aim, the more petty, the more hateful and the more embittering it is.

The less the skill and exertion of strength implied in manual labour, in other words, the more modern industry develops, the more is the labour of men superseded by that of women. Differences of age and sex have no longer any distinctive social validity for the working class. All are instruments of labour, more or less expensive to use, according to their age and sex.

No sooner has the labourer received his wages in cash, for the moment escaping exploitation by the manufacturer, than he is set upon by the other portions of the bourgeoisie, the landlord, the shopkeeper, the pawnbroker, etc.

The lower strata of the middle class—the small tradespeople, shopkeepers, and retired tradesmen generally, the handicraftsmen and peasants—all these sink gradually into the proletariat, partly because their diminutive capital does not suffice for the scale on which modern industry is carried on, and is swamped in the competition with the large capitalists, partly because their specialised skill is rendered worthless by new methods of production. Thus the proletariat is recruited from all classes of the population.

The proletariat goes through various stages of development. With its birth begins its struggle with the bourgeoisie. At first the contest is carried on by individual labourers, then by the work people of a factory, then by the operatives of one trade, in one locality, against the individual bourgeois who directly exploits

them. They direct their attacks not against the bourgeois conditions of production, but against the instruments of production themselves; they destroy imported wares that compete with their labour, they smash machinery to pieces, they set factories ablaze, they seek to restore by force the vanished status of the workman of the Middle Ages.

At this stage the labourers still form an incoherent mass scattered over the whole country, and broken up by their mutual competition. If anywhere they unite to form more compact bodies, this is not yet the consequence of their own active union, but of the union of the bourgeoisie, which class, in order to attain its own political ends, is compelled to set the whole proletariat in motion, and is moreover still able to do so for a time. At this stage, therefore, the proletarians do not fight their enemies, but the enemies of their enemies, the remnants of absolute monarchy, the landowners, the nonindustrial bourgeois, the petty bourgeoisie. Thus the whole historical movement is concentrated in the hands of the bourgeoisie; every victory so obtained is a victory for the bourgeoisie.

But with the development of industry the proletariat not only increases in number; it becomes concentrated in greater masses, its strength grows, and it feels that strength more. The various interests and conditions of life within the ranks of the proletariat are more and more equalised, in proportion as machinery obliterates all distinctions of labour and nearly everywhere reduces wages to the same low level. The growing competition among the bourgeois, and the resulting commercial crises, makes the wages of the workers ever more fluctuating. The unceasing improvement of machinery, ever more rapidly developing, makes their livelihood more and more precarious; the collisions between individual workmen and individual bourgeois take more and more the character of collisions between two classes. Thereupon the workers begin to form combinations (trade unions) against the bourgeoisie;

they club together in order to keep up the rate of wages; they found permanent associations in order to make provision beforehand for these occasional revolts. Here and there the contest breaks out into riots.

Now and then the workers are victorious, but only for a time. The real fruit of their battles lies, not in the immediate result, but in the ever expanding union of the workers. This union is furthered by the improved means of communication which are created by modern industry and which place the workers of different localities in contact with one another. It was just this contact that was needed to centralise the numerous local struggles, all of the same character, into one national struggle between classes. But every class struggle is a political struggle. And that union, to attain which the burghers of the Middle Ages, with their miserable highways, required centuries, the modern proletarians, thanks to railways, achieve in a few years.

This organisation of the proletariat into a class, and consequently into a political party, is continually being upset again by the competition between the workers themselves. But it ever rises up again, stronger, firmer, mightier. It compels legislative recognition of particular interests of the workers, by taking advantage of the divisions among the bourgeoisie itself. Thus the ten-hour bill in England was carried.

Altogether, collisions between the classes of the old society further the course of development of the proletariat in many ways. The bourgeoisie finds itself involved in a constant battle. At first with the aristocracy; later on, with those portions of the bourgeoisie itself whose interests have become antagonistic to the progress of industry; at all times with the bourgeoisie of foreign countries. In all these battles it sees itself compelled to appeal to the proletariat, to ask for its help, and thus, to drag it into the political arena. The bourgeoisie itself, therefore, supplies the proletariat with its own elements of political and general education,

in other words, it furnishes the proletariat with weapons for fighting the bourgeoisie.

Further, as we have already seen, entire sections of the ruling classes are, by the advance of industry, precipitated into the proletariat, or are at least threatened in their conditions of existence. These also supply the proletariat with fresh elements of enlightenment and progress. Finally, in times when the class struggle nears the decisive hour, the process of dissolution going on within the ruling class, in fact within the whole range of old society, assumes such a violent, glaring character, that a small section of the ruling class cuts itself adrift, and joins the revolutionary class, the class that holds the future in its hands. Just as, therefore, at an earlier period, a section of the nobility went over to the bourgeoisie, so now a portion of the bourgeoisie goes over to the proletariat, and in particular, a portion of the bourgeois ideologists, who have raised themselves to the level of comprehending theoretically the historical movement as a whole.

Of all the classes that stand face to face with the bourgeoisie today, the proletariat alone is a really revolutionary class. The other classes decay and finally disappear in the face of modern industry: the proletariat is its special and essential product.

The lower middle class, the small manufacturer, the shopkeeper, the artisan, the peasant, all these fight against the bourgeoisie, to save from extinction their existence as fractions of the middle class. They are therefore not revolutionary, but conservative. Nay more, they are reactionary, for they try to roll back the wheel of history. If by chance they are revolutionary, they are so only in view of their impending transfer into the proletariat; they thus defend not their present, but their future interests; they desert their own standpoint to adopt that of the proletariat.

The "dangerous class," the social scum (*Lumpenproletariat*), that passively rotting mass thrown off by the lowest layers

of old society, may, here and there, be swept into the movement by a proletarian revolution; its conditions of life, however, prepare it far more for the part of a bribed tool of reactionary intrigue.

The social conditions of the old society no longer exist for the proletariat. The proletarian is without property; his relation to his wife and children has no longer anything in common with bourgeois family relations; modern industrial labour, modern subjection to capital, the same in England as in France, in America as in Germany, has stripped him of every trace of national character. Law, morality, religion, are to him so many bourgeois prejudices, behind which lurk in ambush just as many bourgeois interests.

All the preceding classes that got the upper hand, sought to fortify their already acquired status by subjecting society at large to their conditions of appropriation. The proletarians cannot become masters of the productive forces of society, except by abolishing their own previous mode of appropriation, and thereby also every other previous mode of appropriation. They have nothing of their own to secure and to fortify; their mission is to destroy all previous securities for, and insurances of, individual property.

All previous historical movements were movements of minorities, or in the interest of minorities. The proletarian movement is the self-conscious, independent movement of the immense majority, in the interest of the immense majority. The proletariat, the lowest stratum of our present society, cannot stir, cannot raise itself up, without the whole superincumbent strata of official society being sprung into the air.

Though not in substance, yet in form, the struggle of the proletariat with the bourgeoisie is at first a national struggle. The proletariat of each country must, of course, first of all settle matters with its own bourgeoisie.

In depicting the most general phases of the development of the proletariat, we traced the more or less veiled civil war,

raging within existing society, up to the point where that war breaks out into open revolution, and where the violent overthrow of the bourgeoisie lays the foundation for the sway of the proletariat.

Hitherto, every form of society has been based, as we have already seen, on the antagonism of oppressing and oppressed classes. But in order to oppress a class, certain conditions must be assured to it under which it can, at least, continue its slavish existence. The serf, in the period of serfdom, raised himself to membership in the commune, just as the petty bourgeois, under the yoke of feudal absolutism, managed to develop into a bourgeois. The modern labourer, on the contrary, instead of rising with the progress of industry, sinks deeper and deeper below the conditions of existence of his own class. He becomes a pauper, and pauperism develops more rapidly than population and wealth. And here it becomes evident, that the bourgeoisie is unfit any longer to be the ruling class in society, and to impose its conditions of existence upon society as an over-riding law. It is unfit to rule because it is incompetent to assure an existence to its slave within his slavery, because it cannot help letting him sink into such a state, that it has to feed him, instead of being fed by him. Society can no longer live under this bourgeoisie, in other words, its existence is no longer compatible with society.

The essential condition for the existence and sway of the bourgeois class, is the formation and augmentation of capital; the condition for capital is wage-labour. Wage-labour rests exclusively on competition between the labourers. The advance of industry, whose involuntary promoter is the bourgeoisie, replaces the isolation of the labourers, due to competition, by their revolutionary combination, due to association. The development of modern industry, therefore, cuts from under its feet the very foundation on which the bourgeoisie produces and appropriates products. What the bourgeoisie therefore produces, above all, are its own grave-diggers. Its fall and the vic-

tory of the proletariat are equally inevitable.

PROLETARIANS AND COMMUNISTS

In what relation do the Communists stand to the proletarians as a whole?

The Communists do not form a separate party opposed to other working class parties.

They have no interests separate and apart from those of the proletariat as a whole.

They do not set up any sectarian principles of their own, by which to shape and mould the proletarian movement.

The Communists are distinguished from the other working class parties by this only: 1. In the national struggles of the proletarians of the different countries, they point out and bring to the front the common interests of the entire proletariat, independently of all nationality. 2. In the various stages of development which the struggle of the working class against the bourgeoisie has to pass through, they always and everywhere represent the interests of the movement as a whole.

The Communists, therefore, are on the one hand, practically, the most advanced and resolute section of the working class parties of every country, that section which pushes forward all others; on the other hand, theoretically, they have over the great mass of the proletariat the advantage of clearly understanding the line of march, the conditions, and the ultimate general results of the proletarian movement.

The immediate aim of the Communists is the same as that of all the other proletarian parties: Formation of the proletariat into a class, overthrow of bourgeois supremacy, conquest of political power by the proletariat.

The theoretical conclusions of the Communists are in no way based on ideas or principles that have been invented, or discovered, by this or that would-be universal reformer.

They merely express, in general terms, actual relations springing from an exist-

ing class struggle, from a historical movement going on under our very eyes. The abolition of existing property relations is not at all a distinctive feature of Communism.

All property relations in the past have continually been subject to historical change consequent upon the change in historical conditions.

The French Revolution, for example, abolished feudal property in favour of bourgeois property.

The distinguishing feature of Communism is not the abolition of property generally, but the abolition of bourgeois property. But modern bourgeois private property is the final and most complete expression of the system of producing and appropriating products that is based on class antagonisms, on the exploitation of the many by the few.

In this sense, the theory of the Communists may be summed up in the single sentence: Abolition of private property.

We Communists have been reproached with the desire of abolishing the right of personally acquiring property as the fruit of a man's own labour, which property is alleged to be the groundwork of all personal freedom, activity and independence.

Hard-won, self-acquired, self-earned property! Do you mean the property of the petty artisan and of the small peasant, a form of property that preceded the bourgeois form? There is no need to abolish that; the development of industry has to a great extent already destroyed it, and is still destroying it daily.

Or do you mean modern bourgeois private property?

But does wage-labour create any property for the labourer? Not a bit. It creates capital, *i.e.*, that kind of property which exploits wage-labour, and which cannot increase except upon condition of begetting a new supply of wage-labour for fresh exploitation. Property, in its present form, is based on the antagonism of capital and wage-labour. Let us examine both sides of this antagonism.

To be a capitalist, is to have not only a purely personal, but a social *status* in

production. Capital is a collective product, and only by the united action of many members, nay, in the last resort, only by the united action of all members of society, can it be set in motion.

Capital is therefore not a personal, it is a social, power.

When, therefore, capital is converted into common property, into the property of all members of society, personal property is not thereby transformed into social property. It is only the social character of the property that is changed. It loses its class character.

Let us now take wage-labour.

The average price of wage-labour is the minimum wage, *i.e.*, that quantum of the means of subsistence which is absolutely requisite to keep the labourer in bare existence as a labourer. What, therefore, the wage-labourer appropriates by means of his labour, merely suffices to prolong and reproduce a bare existence. We by no means intend to abolish this personal appropriation of the products of labour, an appropriation that is made for the maintenance and reproduction of human life, and that leaves no surplus wherewith to command the labour of others. All that we want to do away with is the miserable character of this appropriation, under which the labourer lives merely to increase capital, and is allowed to live only insofar as the interest of the ruling class requires it.

In bourgeois society, living labour is but a means to increase accumulated labour. In Communist society, accumulated labour is but a means to widen, to enrich, to promote the existence of the labourer.

In bourgeois society, therefore, the past dominates the present; in Communist society, the present dominates the past. In bourgeois society capital is independent and has individuality, while the living person is dependent and has no individuality.

And the abolition of this state of things is called by the bourgeois, abolition of individuality and freedom! And rightly so. The abolition of bourgeois individuality, bourgeois independence,

and bourgeois freedom is undoubtedly aimed at.

By freedom is meant, under the present bourgeois conditions of production, free trade, free selling and buying.

But if selling and buying disappears, free selling and buying disappears also. This talk about free selling and buying, and all the other "brave words" of our bourgeoisie about freedom in general, have a meaning, if any, only in contrast with restricted selling and buying, with the fettered traders of the Middle Ages, but have no meaning when opposed to the Communist abolition of buying and selling, of the bourgeois condition of production, and of the bourgeoisie itself.

You are horrified at our intending to do away with private property. But in your existing society, private property is already done away with for nine-tenths of the population; its existence for the few is solely due to its non-existence in the hands of those nine-tenths. You reproach us, therefore, with intending to do away with a form of property, the necessary condition for whose existence is the non-existence of any property for the immense majority of society.

In a word, you reproach us with intending to do away with your property. Precisely so; that is just what we intend.

From the moment when labour can no longer be converted into capital, money, or rent, into a social power capable of being monopolised, *i.e.*, from the moment when individual property can no longer be transformed into bourgeois property, into capital, from that moment, you say, individuality vanishes.

You must, therefore, confess that by "individual" you mean no other person than the bourgeois, than the middle class owner of property. This person must, indeed, be swept out of the way, and made impossible.

Communism deprives no man of the power to appropriate the products of society; all that it does is to deprive him of the power to subjugate the labour of others by means of such appropriation.

It has been objected, that upon the

abolition of private property all work will cease, and universal laziness will overtake us.

According to this, bourgeois society ought long ago to have gone to the dogs through sheer idleness; for those of its members who work, acquire nothing, and those who acquire anything, do not work. The whole of this objection is but another expression of the tautology: There can no longer be any wage-labour when there is no longer any capital.

All objections urged against the Communist mode of producing and appropriating material products, have, in the same way, been urged against the Communist modes of producing and appropriating intellectual products. Just as, to the bourgeois, the disappearance of class property is the disappearance of production itself, so the disappearance of class culture is to him identical with the disappearance of all culture.

That culture, the loss of which he laments, is, for the enormous majority, a mere training to act as a machine.

But don't wrangle with us so long as you apply, to our intended abolition of bourgeois property, the standard of your bourgeois notions of freedom, culture, law, etc. Your very ideas are but the outgrowth of the conditions of your bourgeois production and bourgeois property, just as your jurisprudence is but the will of your class made into a law for all, a will whose essential character and direction are determined by the economic conditions of existence of your class.

The selfish misconception that induces you to transform into eternal laws of nature and of reason, the social forms springing from your present mode of production and form of property—historical relations that rise and disappear in the progress of production—this misconception you share with every ruling class that has preceded you. What you see clearly in the case of ancient property, what you admit in the case of feudal property, you are of course forbidden to admit in the case of your own bourgeois form of property.

Abolition of the family! Even the most radical flare up at this infamous proposal of the Communists.

On what foundation is the present family, the bourgeois family, based? On capital, on private gain. In its completely developed form this family exists only among the bourgeoisie. But this state of things finds its complement in the practical absence of the family among the proletarians, and in public prostitution.

The bourgeois family will vanish as a matter of course when its complement vanishes, and both will vanish with the vanishing of capital.

Do you charge us with wanting to stop the exploitation of children by their parents? To this crime we plead guilty.

But, you will say, we destroy the most hallowed of relations, when we replace home education by social.

And your education! Is not that also social, and determined by the social conditions under which you educate, by the intervention of society, direct or indirect, by means of schools, etc.? The Communists have not invented the intervention of society in education; they do but seek to alter the character of that intervention, and to rescue education from the influence of the ruling class.

The bourgeois claptrap about the family and education, about the hallowed co-relation of parent and child, becomes all the more disgusting, the more, by the action of modern industry, all family ties among the proletarians are torn asunder, and their children transformed into simple articles of commerce and instruments of labour.

But you Communists would introduce community of women, screams the whole bourgeoisie in chorus.

The bourgeois sees in his wife a mere instrument of production. He hears that the instruments of production are to be exploited in common, and, naturally, can come to no other conclusion than that the lot of being common to all will likewise fall to the women.

He has not even a suspicion that the real point aimed at is to do away with the

status of women as mere instruments of production.

For the rest, nothing is more ridiculous than the virtuous indignation of our bourgeois at the community of women which, they pretend, is to be openly and officially established by the Communists. The Communists have no need to introduce community of women; it has existed almost from time immemorial.

Our bourgeois, not content with having the wives and daughters of their proletarians at their disposal, not to speak of common prostitutes, take the greatest pleasure in seducing each other's wives.

Bourgeois marriage is in reality a system of wives in common and thus, at the most, what the Communists might possibly be reproached with is that they desire to introduce, in substitution for a hypocritically concealed, an openly legalised community of women. For the rest, it is self-evident, that the abolition of the present system of production must bring with it the abolition of the community of women springing from that system, *i.e.*, of prostitution both public and private.

The Communists are further reproached with desiring to abolish countries and nationality.

The workingmen have no country. We cannot take from them what they have not got. Since the proletariat must first of all acquire political supremacy, must rise to be the leading class of the nation, must constitute itself *the* nation, it is, so far, itself national, though not in the bourgeois sense of the word.

National differences and antagonisms between peoples are vanishing gradually from day to day, owing to the development of the bourgeoisie, to freedom of commerce, to the world market, to uniformity in the mode of production and in the conditions of life corresponding thereto.

The supremacy of the proletariat will cause them to vanish still faster. United action, of the leading civilised countries at least, is one of the first conditions for the emancipation of the proletariat.

In proportion as the exploitation of

one individual by another is put an end to, the exploitation of one nation by another will also be put an end to. In proportion as the antagonism between classes within the nation vanishes, the hostility of one nation to another will come to an end.

The charges against Communism made from a religious, a philosophical, and, generally, from an ideological standpoint, are not deserving of serious examination.

Does it require deep intuition to comprehend that man's ideas, views, and conceptions, in one word, man's consciousness, changes with every change in the conditions of his material existence, in his social relations and in his social life?

What else does the history of ideas prove, than that intellectual production changes its character in proportion as material production is changed? The ruling ideas of each age have ever been the ideas of its ruling class.

When people speak of ideas that revolutionise society, they do but express the fact that within the old society the elements of a new one have been created, and that the dissolution of the old ideas keeps even pace with the dissolution of the old conditions of existence.

When the ancient world was in its last throes, the ancient religions were overcome by Christianity. When Christian ideas succumbed in the 18th century to rationalist ideas, feudal society fought its death-battle with the then revolutionary bourgeoisie. The ideas of religious liberty and freedom of conscience, merely gave expression to the sway of free competition within the domain of knowledge.

"Undoubtedly," it will be said, "religion, moral, philosophical and juridical ideas have been modified in the course of historical development. But religion, morality, philosophy, political science, and law, constantly survived this change."

"There are, besides, eternal truths, such as Freedom, Justice, etc., that are common to all states of society. But Communism abolishes eternal truths, it

abolishes all religion, and all morality, instead of constituting them on a new basis; it therefore acts in contradiction to all past historical experience."

What does this accusation reduce itself to? The history of all past society has consisted in the development of class antagonisms, antagonisms that assumed different forms at different epochs.

But whatever form they may have taken, one fact is common to all past ages, viz., the exploitation of one part of society by the other. No wonder, then, that the social consciousness of past ages, despite all the multiplicity and variety it displays, moves within certain common forms, or general ideas, which cannot completely vanish except with the total disappearance of class antagonisms.

The Communist revolution is the most radical rupture with traditional property relations; no wonder that its development involves the most radical rupture with traditional ideas.

But let us have done with the bourgeois objections to Communism.

We have seen above, that the first step in the revolution by the working class, is to raise the proletariat to the position of ruling class, to establish democracy.

The proletariat will use its political supremacy to wrest, by degrees, all capital from the bourgeoisie, to centralise all instruments of production in the hands of the state, i.e., of the proletariat organised as the ruling class; and to increase the total of productive forces as rapidly as possible.

Of course, in the beginning, this cannot be effected except by means of despotic inroads on the rights of property, and on the conditions of bourgeois production; by means of measures, therefore, which appear economically insufficient and untenable, but which, in the course of the movement, outstrip themselves, necessitate further inroads upon the old social order, and are unavoidable as a means of entirely revolutionising the mode of production.

These measures will of course be different in different countries.

Nevertheless in the most advanced countries, the following will be pretty generally applicable.

1. Abolition of property in land and application of all rents of land to public purposes.

2. A heavy progressive or graduated income tax.

3. Abolition of all right of inheritance.

4. Confiscation of the property of all emigrants and rebels.

5. Centralisation of credit in the hands of the state, by means of a national bank with state capital and an exclusive monopoly.

6. Centralisation of the means of communication and transport in the hands of the state.

7. Extension of factories and instruments of production owned by the state; the bringing into cultivation of waste lands, and the improvement of the soil generally in accordance with a common plan.

8. Equal obligation of all to work. Establishment of industrial armies, especially for agriculture.

9. Combination of agriculture with manufacturing industries; gradual abolition of the distinction between town and country, by a more equitable distribution of the population over the country.

10. Free education for all children in public schools. Abolition of child factory labour in its present form. Combination of education with industrial production, etc.

When, in the course of development, class distinctions have disappeared, and all production has been concentrated in the hands of a vast association of the whole nation, the public power will lose its political character. Political power, properly so called, is merely the organised power of one class for oppressing another. If the proletariat during its contest with the bourgeoisie is compelled, by the force of circumstances, to organise itself as a class; if, by means of a revolution, it makes itself the ruling class, and, as such sweeps away by force the old conditions of production, then it will,

along with these conditions, have swept away the conditions for the existence of class antagonisms, and of classes generally, and will thereby have abolished its own supremacy as a class.

In place of the old bourgeois society, with its classes and class antagonisms, we shall have an association, in which the free development of each is the condition for the free development of all.

SOCIALIST AND COMMUNIST LITERATURE

REACTIONARY SOCIALISM

Feudal Socialism Owing to their historical position, it became the vocation of the aristocracies of France and England to write pamphlets against modern bourgeois society. In the French revolution of July, 1830, and in the English reform agitation, these aristocracies again succumbed to the hateful upstart. Thenceforth, a serious political struggle was altogether out of the question. A literary battle alone remained possible. But even in the domain of literature the old cries of the restoration period had become impossible.

In order to arouse sympathy, the aristocracy was obliged to lose sight, apparently, of its own interests, and to formulate its indictment against the bourgeoisie in the interest of the exploited working class alone. Thus the aristocracy took its revenge by singing lampoons against its new master, and whispering in his ears sinister prophecies of coming catastrophe.

In this way arose Feudal Socialism: Half lamentation, half lampoon; half echo of the past, half menace of the future; at times, by its bitter, witty and incisive criticism, striking the bourgeoisie to the very heart's core, but always ludicrous in its effect through total incapacity to comprehend the march of modern history.

The aristocracy, in order to rally the people to them, waved the proletarian almsbag in front for a banner. But the

people, as often as it joined them, saw on their hindquarters the old feudal coats of arms, and deserted with loud and irreverent laughter.

One section of the French Legitimists, and "Young England," exhibited this spectacle.

In pointing out that their mode of exploitation was different from that of the bourgeoisie, the feudalists forget that they exploited under circumstances and conditions that were quite different, and that are now antiquated. In showing that, under their rule, the modern proletariat never existed, they forget that the modern bourgeoisie is the necessary offspring of their own form of society.

For the rest, so little do they conceal the reactionary character of their criticism, that their chief accusation against the bourgeoisie amounts to this, that under the bourgeois regime a class is being developed, which is destined to cut up root and branch the old order of society.

What they upraid the bourgeoisie with is not so much that it creates a proletariat, as that it creates a *revolutionary* proletariat.

In political practice, therefore, they join in all coercive measures against the working class; and in ordinary life, despite their high-falutin phrases, they stoop to pick up the golden apples dropped from the tree of industry, and to barter truth, love, and honour for traffic in wool, beetroot-sugar, and potato spirits.

As the parson has ever gone hand in hand with the landlord, so has Clerical Socialism with Feudal Socialism.

Nothing is easier than to give Christian asceticism a Socialist tinge. Has not Christianity declaimed against private property, against marriage, against the state? Has it not preached in the place of these, charity and poverty, celibacy and mortification of the flesh, monastic life and Mother Church? Christian Socialism is but the holy water with which the priest consecrates the heart-burnings of the aristocrat.

Petty Bourgeois Socialism The feudal aristocracy was not the only class that was ruined by the bourgeoisie, not the only class whose conditions of existence pined and perished in the atmosphere of modern bourgeois society. The mediæval burgesses and the small peasant proprietors were the precursors of the modern bourgeoisie. In those countries which are but little developed, industrially and commercially, these two classes still vegetate side by side with the rising bourgeoisie.

In countries where modern civilisation has become fully developed, a new class of petty bourgeois has been formed, fluctuating between proletariat and bourgeoisie, and ever renewing itself as a supplementary part of bourgeois society. The individual members of this class, however, are being constantly hurled down into the proletariat by the action of competition, and, as modern industry develops, they even see the moment approaching when they will completely disappear as an independent section of modern society, to be replaced, in manufactures, agriculture and commerce, by overseers, bailiffs and shopmen.

In countries, like France, where the peasants constitute far more than half of the population, it was natural that writers who sided with the proletariat against the bourgeoisie, should use, in their criticism of the bourgeois regime, the standard of the peasant and petty bourgeois, and from the standpoint of these intermediate classes should take up the cudgels for the working class. Thus arose petty bourgeois Socialism. Sismondi was the head of this school, not only in France but also in England.

This school of Socialism dissected with great acuteness the contradictions in the conditions of modern production. It laid bare the hypocritical apologies of economists. It proved, incontrovertibly, the disastrous effects of machinery and division of labour; the concentration of capital and land in a few hands; overproduction and crises; it pointed out the inevitable ruin of the petty bourgeois and

peasant, the misery of the proletariat, the anarchy in production, the crying inequalities in the distribution of wealth, the industrial war of extermination between nations, the dissolution of old moral bonds, of the old family relations, of the old nationalities.

In its positive aims, however, this form of Socialism aspires either to restoring the old means of production and of exchange, and with them the old property relations, and the old society, or to cramping the modern means of production and of exchange within the framework of the old property relations that have been, and were bound to be, exploded by those means. In either case, it is both reactionary and utopian.

Its last words are: Corporate guilds for manufacture; patriarchal relations in agriculture.

Ultimately, when stubborn historical facts had dispersed all intoxicating effects of self-deception, this form of Socialism ended in a miserable fit of the blues.

German or "True" Socialism The Socialist and Communist literature of France, a literature that originated under the pressure of a bourgeoisie in power, and that was the expression of the struggle against this power, was introduced into Germany at a time when the bourgeoisie, in that country, had just begun its contest with feudal absolutism.

German philosophers, would-be philosophers, and men of letters eagerly seized on this literature, only forgetting that when these writings immigrated from France into Germany, French social conditions had not immigrated along with them. In contact with German social conditions, this French literature lost all its immediate practical significance, and assumed a purely literary aspect. Thus, to the German philosophers of the 18th century, the demands of the first French Revolution were nothing more than the demands of "Practical Reason" in general, and the utterance of the will of the revolutionary French bourgeoisie signified in their eyes the

laws of pure will, of will as it was bound to be, of true human will generally.

The work of the German *literati* consisted solely in bringing the new French ideas into harmony with their ancient philosophical conscience, or rather, in annexing the French ideas without deserting their own philosophic point of view.

This annexation took place in the same way in which a foreign language is appropriated, namely by translation.

It is well known how the monks wrote silly lives of Catholic saints *over* the manuscripts on which the classical works of ancient heathendom had been written. The German *literati* reversed this process with the profane French literature. They wrote their philosophical nonsense beneath the French original. For instance, beneath the French criticism of the economic functions of money, they wrote "alienation of humanity," and beneath the French criticism of the bourgeois state, they wrote, "dethronement of the category of the general," and so forth.

The introduction of these philosophical phrases at the back of the French historical criticisms they dubbed "Philosophy of Action," "True Socialism," "German Science of Socialism," "Philosophical Foundation of Socialism," and so on.

The French Socialist and Communist literature was thus completely emasculated. And, since it ceased in the hands of the German to express the struggle of one class with the other, he felt conscious of having overcome "French one-sidedness" and of representing, not true requirements, but the requirements of truth; not the interests of the proletariat, but the interests of human nature, of man in general, who belongs to no class, has no reality, who exists only in the misty realm of philosophical phantasy.

This German Socialism, which took its school-boy task so seriously and solemnly, and extolled its poor stock-in-trade in such mountebank fashion, meanwhile gradually lost its pedantic innocence.

The fight of the German and especially of the Prussian bourgeoisie against feudal aristocracy and absolute monarchy, in other words, the liberal movement, became more earnest.

By this, the long-wished-for opportunity was offered to "True" Socialism of confronting the political movement with the Socialist demands, of hurling the traditional anathemas against liberalism, against representative government, against bourgeois competition, bourgeois freedom of the press, bourgeois legislation, bourgeois liberty and equality, and of preaching to the masses that they had nothing to gain, and everything to lose, by this bourgeois movement. German Socialism forgot, in the nick of time, that the French criticism, whose silly echo it was, presupposed the existence of modern bourgeois society, with its corresponding economic conditions of existence, and the political constitution adapted thereto, the very things whose attainment was the object of the pending struggle in Germany.

To the absolute governments, with their following of parsons, professors, country squires and officials, it served as a welcome scarecrow against the threatening bourgeoisie.

It was a sweet finish after the bitter pills of floggings and bullets, with which these same governments, just at that time, dosed the risings of the German working class.

While this "True" Socialism thus served the governments as a weapon for fighting the German bourgeoisie, it, at the same time, directly represented a reactionary interest, the interest of the German Philistines. In Germany the petty bourgeois class, a relic of the 16th century, and since then constantly cropping up again under various forms, is the real social basis of the existing state of things.

To preserve this class, is to preserve the existing state of things in Germany. The industrial and political supremacy of the bourgeoisie threatens it with certain destruction—on the one hand, from the concentration of capital; on the other,

from the rise of a revolutionary proletariat. "True" Socialism appeared to kill these two birds with one stone. It spread like an epidemic.

The robe of speculative cobwebs, embroidered with flowers of rhetoric, steeped in the dew of sickly sentiment, this transcendental robe in which the German Socialists wrapped their sorry "eternal truths," all skin and bone, served to increase wonderfully the sale of their goods amongst such a public.

And on its part, German Socialism recognised, more and more, its own calling as the bombastic representative of the petty bourgeois Philistine.

It proclaimed the German nation to be the model nation, and the German petty Philistine to be the typical man. To every villainous meanness of this model man it gave a hidden, higher, socialistic interpretation, the exact contrary of his real character. It went to the extreme length of directly opposing the "brutally destructive" tendency of Communism, and of proclaiming its supreme and impartial contempt of all class struggles. With very few exceptions, all the so-called Socialist and Communist publications that now (1847) circulate in Germany belong to the domain of this foul and enervating literature.

CONSERVATIVE OR BOURGEOIS SOCIALISM

A part of the bourgeoisie is desirous of redressing social grievances, in order to secure the continued existence of bourgeois society.

To this section belong economists, philanthropists, humanitarians, improvers of the condition of the working class, organisers of charity, members of societies for the prevention of cruelty to animals, temperance fanatics, hole-and-corner reformers of every imaginable kind. This form of Socialism has, moreover, been worked out into complete systems.

We may cite Proudhon's *Philosophy of Poverty* as an example of this form.

The socialistic bourgeois want all the

CRITICAL-UTOPIAN SOCIALISM AND COMMUNISM

We do not here refer to that literature which, in every great modern revolution, has always given voice to the demands of the proletariat, such as the writings of Babeuf and others.

The first direct attempts of the proletariat to attain its own ends—made in times of universal excitement, when feudal society was being overthrown—necessarily failed, owing to the then undeveloped state of the proletariat, as well as to the absence of the economic conditions for its emancipation, conditions that had yet to be produced, and could be produced by the impending bourgeois epoch alone. The revolutionary literature that accompanied these first movements of the proletariat had necessarily a reactionary character. It inculcated universal asceticism and social levelling in its crudest form.

The Socialist and Communist systems properly so called, those of St. Simon, Fourier, Owen and others, spring into existence in the early undeveloped period, described above, of the struggle between proletariat and bourgeoisie (see Section 1. Bourgeois and Proletarians).

The founders of these systems see, indeed, the class antagonisms, as well as the action of the decomposing elements in the prevailing form of society. But the proletariat, as yet in its infancy, offers to them the spectacle of a class without any historical initiative or any independent political movement.

Since the development of class antagonism keeps even pace with the development of industry, the economic situation, as such Socialists find it, does not as yet offer to them the material conditions for the emancipation of the proletariat. They therefore search after a new social science, after new social laws, that are to create these conditions.

Historical action is to yield to their personal inventive action; historically created conditions of emancipation to phantastic ones; and the gradual, spontaneous class organisation of the prole-

advantages of modern social conditions without the struggles and dangers necessarily resulting therefrom. They desire the existing state of society minus its revolutionary and disintegrating elements. They wish for a bourgeoisie without a proletariat. The bourgeoisie naturally conceives the world in which it is supreme to be the best; and bourgeois Socialism develops this comfortable conception into various more or less complete systems. In requiring the proletariat to carry out such a system, and thereby to march straightway into the social New Jerusalem, it but requires in reality, that the proletariat should remain within the bounds of existing society, but should cast away all its hateful ideas concerning the bourgeoisie.

A second and more practical, but less systematic, form of this Socialism sought to depreciate every revolutionary movement in the eyes of the working class, by showing that no mere political reform, but only a change in the material conditions of existence, in economic relations, could be of any advantage to them. By changes in the material conditions of existence, this form of Socialism, however, by no means understands abolition of the bourgeois relations of production, an abolition that can be effected only by a revolution, but administrative reforms, based on the continued existence of these relations; reforms, therefore, that in no respect affect the relations between capital and labour, but at the best, lessen the cost, and simplify the administrative work of bourgeois government.

Bourgeois Socialism attains adequate expression, when, and only when, it becomes a mere figure of speech.

Free trade: For the benefit of the working class. Protective duties: For the benefit of the working class. Prison reform: For the benefit of the working class. These are the last words and the only seriously meant words of bourgeois Socialism.

It is summed up in the phrase: the bourgeois are bourgeois—for the benefit of the working class.

tariat to an organisation of society specially contrived by these inventors. Future history resolves itself, in their eyes, into the propaganda and the practical carrying out of their social plans.

In the formulation of their plans they are conscious of caring chiefly for the interests of the working class, as being the most suffering class. Only from the point of view of being the most suffering class does the proletariat exist for them.

The undeveloped state of the class struggle, as well as their own surroundings, causes Socialists of this kind to consider themselves far superior to all class antagonisms. They want to improve the condition of every member of society, even that of the most favoured. Hence, they habitually appeal to society at large, without distinction of class; nay, by preference, to the ruling class. For how can people, when once they understand their system, fail to see in it the best possible plan of the best possible state of society?

Hence, they reject all political, and especially all revolutionary action; they wish to attain their ends by peaceful means, and endeavour, by small experiments, necessarily doomed to failure, and by the force of example, to pave the way for the new social gospel.

Such phantastic pictures of future society, painted at a time when the proletariat is still in a very undeveloped state and has but a phantastic conception of its own position, correspond with the first instinctive yearnings of that class for a general reconstruction of society.

But these Socialist and Communist writings contain also a critical element. They attack every principle of existing society. Hence they are full of the most valuable materials for the enlightenment of the working class. The practical measures proposed in them—such as the abolition of the distinction between town and country; abolition of the family, of private gain and of the wage-system; the proclamation of social harmony; the

conversion of the functions of the state into a mere superintendence of production—all these proposals point solely to the disappearance of class antagonisms which were, at that time, only just cropping up, and which, in these publications, are recognised in their earliest, indistinct and undefined forms only. These proposals, therefore, are of a purely utopian character.

The significance of Critical-Utopian Socialism and Communism bears an inverse relation to historical development. In proportion as the modern class struggle develops and takes definite shape, this phantastic standing apart from the contest, these phantastic attacks on it, lose all practical value and all theoretical justification. Therefore, although the originators of these systems were, in many respects, revolutionary, their disciples have, in every case, formed mere reactionary sects. They hold fast by the original views of their masters, in opposition to the progressive historical development of the proletariat. They, therefore, endeavour, and that consistently, to deaden the class struggle and to reconcile the class antagonisms. They still dream of experimental realisation of their social utopias, of founding isolated *phalanstères*, of establishing "Home Colonies," or setting up a "Little Icaria"—pocket editions of the New Jerusalem—and to realise all these castles in the air, they are compelled to appeal to the feelings and purses of the bourgeois. By degrees they sink into the category of the reactionary conservative Socialists depicted above, differing from these only by more systematic pedantry, and by their fanatical and superstitious belief in the miraculous effects of their social science.

They, therefore, violently oppose all political action on the part of the working class; such action, according to them, can only result from blind unbelief in the new gospel.

The Owenites in England, and the Fourierists in France, respectively, oppose the Chartist and the *Réformistes*.

POSITION OF THE COMMUNISTS IN RELATION TO THE VARIOUS EXISTING OPPOSITION PARTIES

Section 2 has made clear the relations of the Communists to the existing working class parties, such as the Chartists in England and the Agrarian Reformers in America.

The Communists fight for the attainment of the immediate aims, for the enforcement of the momentary interests of the working class; but in the movement of the present, they also represent and take care of the future of that movement. In France the Communists ally themselves with the Social-Democrats, against the conservative and radical bourgeoisie, reserving, however, the right to take up a critical position in regard to phrases and illusions traditionally handed down from the great Revolution.

In Switzerland they support the Radicals, without losing sight of the fact that this party consists of antagonistic elements, partly of Democratic Socialists, in the French sense, partly of radical bourgeois.

In Poland they support the party that insists on an agrarian revolution as the prime condition for national emancipation, that party which fomented the insurrection of Cracow in 1846.

In Germany they fight with the bourgeoisie whenever it acts in a revolutionary way, against the absolute monarchy, the feudal squirearchy, and the petty bourgeoisie.

But they never cease, for a single instant, to instil into the working class the clearest possible recognition of the hostile antagonism between bourgeoisie and

proletariat, in order that the German workers may straightway use, as so many weapons against the bourgeoisie, the social and political conditions that the bourgeoisie must necessarily introduce along with its supremacy, and in order that, after the fall of the reactionary classes in Germany, the fight against the bourgeoisie itself may immediately begin.

The Communists turn their attention chiefly to Germany, because that country is on the eve of a bourgeois revolution that is bound to be carried out under more advanced conditions of European civilisation and with a much more developed proletariat than what existed in England in the 17th and in France in the 18th century, and because the bourgeois revolution in Germany will be but the prelude to an immediately following proletarian revolution.

In short, the Communists everywhere support every revolutionary movement against the existing social and political order of things.

In all these movements they bring to the front, as the leading question in each case, the property question, no matter what its degree of development at the time.

Finally, they labour everywhere for the union and agreement of the democratic parties of all countries.

The Communists disdain to conceal their views and aims. They openly declare that their ends can be attained only by the forcible overthrow of all existing social conditions. Let the ruling classes tremble at a Communist revolution. The proletarians have nothing to lose but their chains. They have a world to win.

Workingmen of all countries, unite!

III LENIN

Selected Works

PROFESSIONAL REVOLUTIONARIES *

I assert: (1) that no movement can be durable without a stable organisation of leaders to maintain continuity; (2) that the more widely the masses are spontaneously drawn into the struggle and form the basis of the movement and participate in it, the more necessary is it to have such an organisation, and the more stable must it be (for it is much easier for demagogues to side-track the more backward sections of the masses); (3) that the organisation must consist chiefly of persons engaged in revolutionary activities as a profession; (4) that in a country with an autocratic government, the more we restrict the membership of this organisation to persons who are engaged in revolutionary activities as a profession and who have been professionally trained in the art of combating the political police, the more difficult will it be to catch the organisation, and (5) the wider will be the circle of men and women of the working class or of other classes of society able to join the movement and perform active work in it.

We can never give a mass organisation that degree of secrecy which is essential for the persistent and continuous struggle against the government. But to concen-

* From V. I. Lenin, *What Is to Be Done?* (1902) from *Selected Works*, Vol. II, pp. 138-140, 146-148. Reprinted by permission of International Publishers Co. Copyright © 1936.

trate all secret functions in the hands of as small a number of professional revolutionaries as possible does not mean that the latter will "do the thinking for all" and that the crowd will not take an active part in the *movement*. On the contrary, the crowd will advance from its ranks increasing numbers of professional revolutionaries, for it will know that it is not enough for a few students and workingmen, waging economic war, to gather together and form a "committee," but that it takes years to train professional revolutionaries; the crowd will "think" not of primitive ways but of training professional revolutionaries. The centralisation of the secret functions of the *organisation* does not mean the centralisation of all the functions of the movement. The active participation of the broad masses in the dissemination of illegal literature will not diminish because a dozen professional revolutionaries centralise the secret part of the work; on the contrary, it will *increase tenfold*. Only in this way will the reading of illegal literature, the contribution to illegal literature and to some extent even the distribution of illegal literature *almost cease to be secret work*, for the police will soon come to realise the folly and futility of setting the whole judicial and administrative machine into motion to intercept every copy of a publication that is being broadcast in thousands. This applies not only to the press, but to every function of the movement, even to demonstrations. The active and widespread participation of the masses will not suffer; on the contrary, it will benefit by the fact that a "dozen" experi-

enced revolutionaries, no less professionally trained than the police, will centralise all the secret side of the work—prepare leaflets, work out approximate plans and appoint bodies of leaders for each urban district, for each factory district and for each educational institution, etc. (I know that exception will be taken to my "undemocratic" views, but I shall reply to this altogether unintelligent objection later on.) The centralisation of the more secret functions in an organisation of revolutionaries will not diminish, but rather increase the extent and the quality of the activity of a large number of other organisations intended for wide membership and which, therefore, can be as loose and as public as possible, for example, trade unions, workers' circles for self-education and the reading of illegal literature, and socialist and also democratic circles for *all other sections of the population*, etc., etc.

In order to be fully prepared for his task, the working class revolutionary must also become a professional revolutionary. Hence B—v is wrong when he says that as the worker is engaged for eleven and a half hours a day in the factory, therefore, the brunt of all the other revolutionary functions (apart from agitation) "*must necessarily* fall mainly upon the shoulders of an extremely small intellectual force." It need not "*necessarily*" be so. It is so because we are backward, because we do not recognise our duty to assist every capable worker to become a *professional* agitator, organiser, propagandist, literature distributor, etc. In this respect, we waste our strength in a positively shameful manner; we lack the ability to husband that which should be tended and reared with special care. Look at the Germans: they have a hundred times more forces than we have. But they understand perfectly well that the "average" does not too frequently promote really capable agitators, etc., from its ranks.

Hence they immediately try to place every capable workingman in such condi-

tions as will enable him to develop and apply his abilities to the utmost: he is made a professional agitator, he is encouraged to widen the field of his activity, to spread it from one factory to the whole of his trade, from one locality to the whole country. He acquires experience and dexterity in his profession, his outlook becomes wider, his knowledge increases, he observes the prominent political leaders from other localities and other parties, he strives to rise to their level and combine within himself the knowledge of working class environment and freshness of socialist convictions with professional skill, without which the proletariat *cannot* carry on a stubborn struggle with the excellently trained enemy. Only in this way can men of the stamp of Bebel and Auer be promoted from the ranks of the working class. But what takes place very largely automatically in a politically free country must in Russia be done deliberately and systematically by our organisations. A workingman agitator who is at all talented and "promising" *must not be left* to work eleven hours day in a factory. We must arrange that he be maintained by the Party, that he may in due time go underground, that he change the place of his activity, otherwise he will not enlarge his experience, he will not widen his outlook, and will not be able to stay in the fight against the gendarmes for at least a few years. As the spontaneous rise of the working class masses becomes wider and deeper, they not only promote from their ranks an increasing number of talented agitators, but also of talented organisers, propagandists and "practical workers" in the best sense of the term (of whom there are so few among our intelligentsia who, in the majority of cases, are somewhat careless and sluggish in their habits, so characteristic of Russians). When we have detachments of specially trained working class revolutionaries who have gone through long years of preparation (and, of course, revolutionaries "of all arms"), no political police in the world will be able to

contend against them, for these detachments of men absolutely devoted and loyal to the revolution will themselves enjoy the absolute confidence and devotion of the broad masses of the workers. The *sin* we commit is that we do not sufficiently "stimulate" the workers to take this path, "common" to them and to the "intellectuals," of professional revolutionary training, and that we too frequently drag them back by our silly speeches about what "can be understood" by the masses of the workers, by the "average workers," etc.

CLASS SOCIETY AND THE STATE *

THE STATE AS THE PRODUCT OF THE IRRECONCILABILITY OF CLASS ANTAGONISMS

What is now happening to Marx's doctrine has, in the course of history, often happened to the doctrines of other revolutionary thinkers and leaders of oppressed classes struggling for emancipation. During the lifetime of great revolutionaries, the oppressing classes have visited relentless persecution on them and received their teaching with the most savage hostility, the most furious hatred, the most ruthless campaign of lies and slanders. After their death, attempts are made to turn them into harmless icons, canonise them, and surround their names with a certain halo for the "consolation" of the oppressed classes and with the object of duping them, while at the same time emasculating and vulgarising the *real essence* of their revolutionary theories and blunting their revolutionary edge. At the present time, the bourgeoisie and the opportunists within the labour movement are cooperating in this work of adulterating Marxism. They omit,

* From V. I. Lenin, *State and Revolution* (1917), pp. 7-20. Reprinted by permission of International Publishers Co. Copyright © 1936.

obliterate, and distort the revolutionary side of its teaching, its revolutionary soul. They push to the foreground and extol what is, or seems, acceptable to the bourgeoisie. All the social-chauvinists are now "Marxists"—joking aside! And more and more do German bourgeois professors, erstwhile specialists in the demolition of Marx, speak now of the "national-German" Marx, who, they aver, has educated the labour unions which are so splendidly organised for conducting the present predatory war!

In such circumstances, the distortion of Marxism being so widespread, it is our first task to *resuscitate* the real teachings of Marx on the state. For this purpose it will be necessary to quote at length from the works of Marx and Engels themselves. Of course, long quotations will make the text cumbersome and in no way help to make it popular reading, but we cannot possibly avoid them. All, or at any rate, all the most essential passages in the works of Marx and Engels on the subject of the state must necessarily be given as fully as possible, in order that the reader may form an independent opinion of all the views of the founders of scientific Socialism and of the development of those views, and in order that their distortions by the present predominant "Kautskyism" may be proved in black and white and rendered plain to all.

Let us begin with the most popular of Engels' works, *Der Ursprung der Familie, des Privateigentums und des Staats*,¹ the sixth edition of which was published in Stuttgart as far back as 1894. We must translate the quotations from the German originals, as the Russian translations, although very numerous, are for the most part either incomplete or very unsatisfactory.

Summarising his historical analysis Engels says:

¹ Friedrich Engels, *The Origin of the Family, Private Property, and the State*, London and New York, 1933.

The state is therefore by no means a power imposed on society from the outside; just as little is it "the reality of the moral idea," "the image and reality of reason," as Hegel asserted. Rather, it is a product of society at a certain stage of development; it is the admission that this society has become entangled in an insoluble contradiction with itself, that it is cleft into irreconcilable antagonisms which it is powerless to dispel. But in order that these antagonisms, classes with conflicting economic interests, may not consume themselves and society in sterile struggle, a power apparently standing above society becomes necessary, whose purpose is to moderate the conflict and keep it within the bounds of "order"; and this power arising out of society, but placing itself above it, and increasingly separating itself from it, is the state.²

Here we have, expressed in all its clearness, the basic idea of Marxism on the question of the historical rôle and meaning of the state. The state is the product and the manifestation of the *irreconcilability* of class antagonisms. The state arises when, where, and to the extent that the class antagonisms *cannot* be objectively reconciled. And, conversely, the existence of the state proves that the class antagonisms *are* irreconcilable.

It is precisely on this most important and fundamental point that distortions of Marxism arise along two main lines.

On the one hand, the bourgeois, and particularly the petty-bourgeois, ideologists, compelled under the pressure of indisputable historical facts to admit that the state only exists where there are class antagonisms and the class struggle, "correct" Marx in such a way as to make it appear that the state is an organ for *reconciling* the classes. According to Marx, the state could neither arise nor maintain itself if a reconciliation of classes were possible. But with the petty-bourgeois and philistine professors and

² Engels, *The Origin of the Family, Private Property, and the State*.

publicists, the state—and this frequently on the strength of benevolent references to Marx!—becomes a conciliator of the classes. According to Marx, the state is an organ of class *domination*, an organ of *oppression* of one class by another; its aim is the creation of "order" which legalises and perpetuates this oppression by moderating the collisions between the classes. But in the opinion of the petty-bourgeois politicians, order means reconciliation of the classes, and not oppression of one class by another; to moderate collisions does not mean, they say, to deprive the oppressed classes of certain definite means and methods of struggle for overthrowing the oppressors, but to practice reconciliation.

For instance, when, in the Revolution of 1917, the question of the real meaning and rôle of the state arose in all its vastness as a practical question demanding immediate action on a wide mass scale, all the Socialist-Revolutionaries and Mensheviks suddenly and completely sank to the petty-bourgeois theory of "reconciliation" of the classes by the "state." Innumerable resolutions and articles by politicians of both these parties are saturated through and through with this purely petty-bourgeois and philistine theory of "reconciliation." That the state is an organ of domination of a definite class which *cannot* be reconciled with its antipode (the class opposed to it)—this petty-bourgeois democracy is never able to understand. Its attitude towards the state is one of the most telling proofs that our Socialist-Revolutionaries and Mensheviks are not Socialists at all (which we Bolsheviks have always maintained), but petty-bourgeois democrats with a near-Socialist phraseology.

On the other hand, the "Kautskyist" distortion of Marx is far more subtle. "Theoretically," there is no denying that the state is the organ of class domination, or that class antagonisms are irreconcilable. But what is forgotten or glossed over is this: if the state is the product of the irreconcilable character of class

antagonisms, if it is a force standing above society and "increasingly separating itself from it," then it is clear that the liberation of the oppressed class is impossible not only without a violent revolution, but also without the destruction of the apparatus of state power, which was created by the ruling class and in which this "separation" is embodied. As we shall see later, Marx drew this theoretically self-evident conclusion from a concrete historical analysis of the problems of revolution. And it is exactly this conclusion which Kautsky—as we shall show fully in our subsequent remarks—has "forgotten" and distorted.

SPECIAL BODIES OF ARMED MEN, PRISONS, ETC.

Engels continues:

In contrast with the ancient organisation of the *gens*, the first distinguishing characteristic of the state is the grouping of the subjects of the state on a territorial basis. . . .

Such a grouping seems "natural" to us, but it came after a prolonged and costly struggle against the old form of tribal or gentile society.

. . . The second is the establishment of a public force, which is no longer absolutely identical with the population organising itself as an armed power. This special public force is necessary, because a self-acting armed organisation of the population has become impossible since the cleavage of society into classes. . . . This public force exists in every state; it consists not merely of armed men, but of material appendages, prisons and repressive institutions of all kinds, of which gentile society knew nothing. . . .³

³ Engels, *The Origin of the Family, Private Property, and the State*.

Engels develops the conception of that "power" which is termed the state—a power arising from society, but placing itself above it and becoming more and more separated from it. What does this power mainly consist of? It consists of special bodies of armed men who have at their disposal prisons, etc.

We are justified in speaking of special bodies of armed men, because the public power peculiar to every state is not "absolutely identical" with the armed population, with its "self-acting armed organisation."

Like all the great revolutionary thinkers, Engels tries to draw the attention of the class-conscious workers to that very fact which to prevailing philistinism appears least of all worthy of attention, most common and sanctified by solid, indeed, one might say, petrified prejudices. A standing army and police are the chief instruments of state power. But can this be otherwise?

From the point of view of the vast majority of Europeans at the end of the nineteenth century whom Engels was addressing, and who had neither lived through nor closely observed a single great revolution, this cannot be otherwise. They cannot understand at all what this "self-acting armed organisation of the population" means. To the question, whence arose the need for special bodies of armed men, standing above society and becoming separated from it (police and standing army), the Western European and Russian philistines are inclined to answer with a few phrases borrowed from Spencer or Mikhailovsky, by reference to the complexity of social life, the differentiation of functions, and so forth.

Such a reference seems "scientific" and effectively dulls the senses of the average man, obscuring the most important and basic fact, namely, the break-up of society into irreconcilably antagonistic classes.

Without such a break-up, the "self-acting armed organisation of the population" might have differed from the primi-

tive organisation of a herd of monkeys grasping sticks, or of primitive men, or men united in a tribal form of society, by its complexity, its high technique, and so forth, but would still have been possible.

It is impossible now, because society, in the period of civilisation, is broken up into antagonistic and, indeed, irreconcilably antagonistic classes, which, if armed in a "self-acting" manner, would come into armed struggle with each other. A state is formed, a special power is created in the form of special bodies of armed men, and every revolution, by shattering the state apparatus, demonstrates to us how the ruling class aims at the restoration of the special bodies of armed men at its service, and how the oppressed class tries to create a new organisation of this kind, capable of serving not the exploiters, but the exploited.

In the above observation, Engels raises theoretically the very same question which every great revolution raises practically, palpably, and on a mass scale of action, namely, the question of the relation between special bodies of armed men and the "self-acting armed organisation of the population." We shall see how this is concretely illustrated by the experience of the European and Russian revolutions.

But let us return to Engels' discourse.

He points out that sometimes, for instance, here and there in North America, this public power is weak (he has in mind an exception that is rare in capitalist society, and he speaks about parts of North America in its pre-imperialist days, where the free colonist predominated), but that in general it tends to become stronger:

It [the public power] grows stronger, however, in proportion as the class antagonisms within the state grow sharper, and with the growth in size and population of the adjacent states. We have only to look at our present-day Europe, where class struggle and rivalry in conquest

have screwed up the public power to such a pitch that it threatens to devour the whole of society and even the state itself.⁴

This was written as early as the beginning of the 'nineties of the last century, Engels' last preface being dated June 16, 1891. The turn towards imperialism, understood to mean complete domination of the trusts, full sway of the large banks, and a colonial policy on a grand scale, and so forth, was only just beginning in France, and was even weaker in North America and in Germany. Since then the "rivalry in conquest" has made gigantic progress—especially as, by the beginning of the second decade of the twentieth century, the whole world had been finally divided up between these "rivals of conquest," i.e., between the great predatory powers. Military and naval armaments since then have grown to monstrous proportions, and the predatory war of 1914–1917 for the domination of the world by England or Germany, for the division of the spoils, has brought the "swallowing up" of all the forces of society by the rapacious state power nearer to a complete catastrophe.

As early as 1891 Engels was able to point to "rivalry in conquest" as one of the most important features of the foreign policy of the great powers, but in 1914–1917, when this rivalry, many times intensified, has given birth to an imperialist war, the rascally social-chauvinists cover up their defence of the predatory policy of "their" capitalist classes by phrases about the "defence of the fatherland," or the "defence of the republic and the revolution," etc.!

THE STATE AS AN INSTRUMENT FOR THE EXPLOITATION OF THE OPPRESSED CLASS

For the maintenance of a special public force standing above society, taxes and state loans are needed.

⁴ Engels, *The Origin of the Family, Private Property, and the State*.

Having at their disposal the public force and the right to exact taxes, the officials now stand as organs of society *above* society. The free, voluntary respect which was accorded to the organs of the gentile form of government does not satisfy them, even if they could have it. . . .

Special laws are enacted regarding the sanctity and the inviolability of the officials. "The shabbiest police servant . . . has more authority" than the representative of the clan, but even the head of the military power of a civilised state "may well envy the least among the chiefs of the clan the unconstrained and uncontested respect which is paid to him."⁵

Here the question regarding the privileged position of the officials as organs of the state power is clearly stated. The main point is indicated as follows: what is it that places them *above* society? We shall see how this theoretical problem was solved in practice by the Paris Commune in 1871 and how it was slurred over in a reactionary manner by Kautsky in 1912.

As the state arose out of the need to hold class antagonisms in check; but as it, at the same time, arose in the midst of the conflict of these classes, it is, as a rule, the state of the most powerful, economically dominant class, which by virtue thereof becomes also the dominant class politically, and thus acquires new means of holding down and exploiting the oppressed class. . . .

Not only the ancient and feudal states were organs of exploitation of the slaves and serfs, but

the modern representative state is the instrument of the exploitation of wage-labour by capital. By way of exception, however, there are periods when the war-

⁵ Engels, *The Origin of the Family, Private Property, and the State*.

ring classes so nearly attain equilibrium that the state power, ostensibly appearing as a mediator, assumes for the moment a certain independence in relation to both. . . .⁶

Such were, for instance, the absolute monarchies of the seventeenth and eighteenth centuries, the Bonapartism of the First and Second Empires in France, and the Bismarck régime in Germany.

Such, we may add, is now the Kerensky government in republican Russia after its shift to persecuting the revolutionary proletariat, at a moment when the Soviets, thanks to the leadership of the petty-bourgeois democrats, have already become impotent, while the bourgeoisie is *not yet* strong enough to disperse them outright.

In a democratic republic, Engels continues, "wealth wields its power indirectly, but all the more effectively," first, by means of "direct corruption of the officials" (America); second, by means of "the alliance of the government with the stock exchange" (France and America).

At the present time, imperialism and the domination of the banks have "developed" to an unusually fine art both these methods of defending and asserting the omnipotence of wealth in democratic republics of all descriptions. If, for instance, in the very first months of the Russian democratic republic, one might say during the honeymoon of the union of the "socialists"—Socialist-Revolutionaries and Mensheviks—with the bourgeoisie, Mr. Palchinsky obstructed every measure in the coalition cabinet, restraining the capitalists and their war profiteering, their plundering of the public treasury by means of army contracts; and if, after his resignation, Mr. Palchinsky (replaced, of course, by an exactly similar Palchinsky) was "rewarded" by the capitalists with a "soft" job carrying a salary of 120,000 rubles per annum,

⁶ Engels, *The Origin of the Family, Private Property, and the State*.

what was this? Direct or indirect bribery? A league of the government with the capitalist syndicates, or "only" friendly relations? What is the rôle played by the Chernovs, Tseretelis, Avksentyevs and Skobelevs? Are they the "direct" or only the indirect allies of the millionaire treasury looters?

The omnipotence of "wealth" is thus more *secure* in a democratic republic, since it does not depend on the poor political shell of capitalism. A democratic republic is the best possible political shell for capitalism, and therefore, once capital has gained control (through the Palchinskys, Chernovs, Tseretelis and Co.) of this very best shell, it establishes its power so securely, so firmly that *no* change, either of persons, or institutions, or parties in the bourgeois republic can shake it.

We must also note that Engels quite definitely regards universal suffrage as a means of bourgeois domination. Universal suffrage, he says, obviously summing up the long experience of German Social-Democracy, is "an index of the maturity of the working class; it cannot, and never will, be anything else but that in the modern state."

The petty-bourgeois democrats, such as our Socialist-Revolutionaries and Mensheviks, and also their twin brothers, the social-chauvinists and opportunists of Western Europe, all expect "more" from universal suffrage. They themselves share, and instil into the minds of the people, the wrong idea that universal suffrage "in the *modern* state" is really capable of expressing the will of the majority of the toilers and of assuring its realisation.

We can here only note this wrong idea, only point out that this perfectly clear, exact and concrete statement by Engels is distorted at every step in the propaganda and agitation of the "official" (*i.e.*, opportunist) Socialist parties. A detailed analysis of all the falseness of this idea, which Engels brushes aside, is given in our further account of the views of Marx and Engels on the "modern" state.

A general summary of his views is given by Engels in the most popular of his works in the following words:

The state, therefore, has not existed from all eternity. There have been societies which managed without it, which had no conception of the state and state power. At a certain stage of economic development, which was necessarily bound up with the cleavage of society into classes, the state became a necessity owing to this cleavage. We are now rapidly approaching a stage in the development of production at which the existence of these classes has not only ceased to be a necessity, but is becoming a positive hindrance to production. They will disappear as inevitably as they arose at an earlier stage. Along with them, the state will inevitably disappear. The society that organises production anew on the basis of a free and equal association of the producers will put the whole state machine where it will then belong: in the museum of antiquities, side by side with the spinning wheel and the bronze axe.⁷

It is not often that we find this passage quoted in the propaganda and agitation literature of contemporary Social-Democracy. But even when we do come across it, it is generally quoted in the same manner as one bows before an icon, *i.e.*, it is done merely to show official respect for Engels, without any attempt to gauge the breadth and depth of revolutionary action presupposed by this relegating of "the whole state machine . . . to the museum of antiquities." In most cases we do not even find an understanding of what Engels calls the state machine.

THE "WITHERING AWAY" OF THE STATE AND VIOLENT REVOLUTION

Engels' words regarding the "withering away" of the state enjoy such popularity,

⁷ Engels, *The Origin of the Family, Private Property, and the State*.

they are so often quoted, and they show so clearly the essence of the usual adulteration by means of which Marxism is made to look like opportunism, that we must dwell on them in detail. Let us quote the whole passage from which they are taken.

The proletariat seizes state power, and then transforms the means of production into state property. But in doing this, it puts an end to itself as the proletariat, it puts an end to all class differences and class antagonisms, it puts an end also to the state as the state. Former society, moving in class antagonisms, had need of the state, that is, an organisation of the exploiting class at each period for the maintenance of its external conditions of production; therefore, in particular, for the forcible holding down of the exploited class in the conditions of oppression (slavery, bondage or serfdom, wage-labour) determined by the existing mode of production. The state was the official representative of society as a whole, its embodiment in a visible corporate body; but it was this only in so far as it was the state of that class which itself, in its epoch, represented society as a whole: in ancient times, the state of the slave-owning citizens; in the Middle Ages, of the feudal nobility; in our epoch, of the bourgeoisie. When ultimately it becomes really representative of society as a whole, it makes itself superfluous. As soon as there is no longer any class of society to be held in subjection; as soon as, along with class domination and the struggle for individual existence based on the former anarchy of production, the collisions and excesses arising from these have also been abolished, there is nothing more to be repressed, and a special repressive force, a state, is no longer necessary. The first act in which the state really comes forward as the representative of society as a whole—the seizure of the means of production in the name of society—is at the same time its last independent act as a state. The interference of a state power in social relations becomes superfluous in one sphere after

another, and then becomes dormant of itself. Government over persons is replaced by the administration of things and the direction of the processes of production. The state is not “abolished,” it *withers away*. It is from this standpoint that we must appraise the phrase “people’s free state”—both its justification at times for agitational purposes, and its ultimate scientific inadequacy—and also the demand of the so-called Anarchists that the state should be abolished overnight.⁸

Without fear of committing an error, it may be said that of this argument by Engels so singularly rich in ideas, only one point has become an integral part of Socialist thought among modern Socialist parties, namely, that, unlike the Anarchist doctrine of the “abolition” of the state, according to Marx the state “withers away.” To emasculate Marxism in such a manner is to reduce it to opportunism, for such an “interpretation” only leaves the hazy conception of a slow, even, gradual change, free from leaps and storms, free from revolution. The current popular conception, if one may say so, of the “withering away” of the state undoubtedly means a slurring over, if not a negation, of revolution.

Yet, such an “interpretation” is the crudest distortion of Marxism, which is advantageous only to the bourgeoisie; in point of theory, it is based on a disregard for the most important circumstances and considerations pointed out in the very passage summarising Engels’ ideas, which we have just quoted in full.

In the first place, Engels at the very outset of his argument says that, in assuming state power, the proletariat by that very act “puts an end to the state as the state.” One is “not accustomed” to reflect on what this really means. Generally, it is either ignored altogether, or it is considered as a piece of “Hegelian weakness” on Engels’ part. As a matter of

⁸ Friedrich Engels, *Anti-Dühring*, London and New York, 1933.

fact, however, these words express succinctly the experience of one of the greatest proletarian revolutions—the Paris Commune of 1871, of which we shall speak in greater detail in its proper place. As a matter of fact, Engels speaks here of the destruction of the bourgeois state by the proletarian revolution, while the words about its withering away refer to the remains of *proletarian* statehood after the Socialist revolution. The bourgeois state does not “wither away,” according to Engels, but is “put an end to” by the proletariat in the course of the revolution. What withers away after the revolution is the proletarian state or semi-state.

Secondly, the state is a “special repressive force.” This splendid and extremely profound definition of Engels’ is given by him here with complete lucidity. It follows from this that the “special repressive force” of the bourgeoisie for the suppression of the proletariat, of the millions of workers by a handful of the rich, must be replaced by a “special repressive force” of the proletariat for the suppression of the bourgeoisie (the dictatorship of the proletariat). It is just this that constitutes the destruction of “the state as the state.” It is just this that constitutes the “act” of “the seizure of the means of production in the name of society.” And it is obvious that such a substitution of one (proletarian) “special repressive force” for another (bourgeois) “special repressive force” can in no way take place in the form of a “withering away.”

Thirdly, as to the “withering away” or, more expressively and colourfully, as to the state “becoming dormant,” Engels refers quite clearly and definitely to the period after “the seizure of the means of production [by the state] in the name of society,” that is, after the Socialist revolution. We all know that the political form of the “state” at that time is complete democracy. But it never enters the head of any of the opportunists who shamelessly distort Marx that when Engels speaks here of the state “withering

away,” or “becoming dormant,” he speaks of *democracy*. At first sight this seems very strange. But it is “unintelligible” only to one who has not reflected on the fact that democracy is *also* a state and that, consequently, democracy will *also* disappear when the state disappears. The bourgeois state can only be “put an end to” by a revolution. The state in general, *i.e.*, most complete democracy, can only “wither away.”

Fourthly, having formulated his famous proposition that “the state withers away,” Engels at once explains concretely that this proposition is directed equally against the opportunists and the Anarchists. In doing this, however, Engels puts in the first place that conclusion from his proposition about the “withering away” of the state which is directed against the opportunists.

One can wager that out of every 10,000 persons who have read or heard about the “withering away” of the state, 9,990 do not know at all, or do not remember, that Engels did not direct his conclusions from this proposition against the Anarchists *alone*. And out of the remaining ten, probably nine do not know the meaning of a “people’s free state” nor the reason why an attack on this watchword contains an attack on the opportunists. This is how history is written! This is how a great revolutionary doctrine is imperceptibly adulterated and adapted to current philistinism! The conclusion drawn against the Anarchists has been repeated thousands of times, vulgarised, harangued about in the crudest fashion possible until it has acquired the strength of a prejudice, whereas the conclusion drawn against the opportunists has been hushed up and “forgotten”!

The “people’s free state” was a demand in the programme of the German Social-Democrats and their current slogan in the ‘seventies. There is no political substance in this slogan other than a pompous middle-class circumlocution of the idea of democracy. In so far as it referred in a lawful manner to a democratic republic, Engels was prepared to

"justify" its use "at times" from a propaganda point of view. But this slogan was opportunist, for it not only expressed an exaggerated view of the attractiveness of bourgeois democracy, but also a lack of understanding of the Socialist criticism of every state in general. We are in favour of a democratic republic as the best form of the state for the proletariat under capitalism, but we have no right to forget that wage slavery is the lot of the people even in the most democratic bourgeois republic. Furthermore, every state is a "special repressive force" for the suppression of the oppressed class. Consequently, no state is either "free" or a "people's state." Marx and Engels explained this repeatedly to their party comrades in the 'seventies.

Fifthly, in the same work of Engels, from which every one remembers his argument on the "withering away" of the state, there is also a disquisition on the significance of a violent revolution. The historical analysis of its rôle becomes, with Engels, a veritable panegyric on violent revolution. This, of course, "no one remembers"; to talk or even to think of the importance of this idea is not considered good form by contemporary Socialist parties, and in the daily propaganda and agitation among the masses it plays no part whatever. Yet it is indissolubly bound up with the "withering away" of the state in one harmonious whole.

Here is Engels' argument:

... That force, however, plays another rôle (other than that of a diabolical power) in history, a revolutionary rôle; that, in the words of Marx, it is the midwife of every old society which is pregnant with the new; that it is the instrument with whose aid social movement forces its way through and shatters the dead, fossilised political forms—of this there is not a word in Herr Dühring. It is only with sighs and groans that he admits the possibility that force will perhaps be necessary for the overthrow of the economic system of exploitation—unfortunately! because all use of force, for-

sooth, demoralises the person who uses it. And this in spite of the immense moral and spiritual impetus which has resulted from every victorious revolution! And this in Germany, where a violent collision—which indeed may be forced on the people—would at least have the advantage of wiping out the servility which has permeated the national consciousness as a result of the humiliation of the Thirty Years' War. And this parson's mode of thought—lifeless, insipid and impotent—claims to impose itself on the most revolutionary party which history has known?*

How can this panegyric on violent revolution, which Engels insistently brought to the attention of the German Social-Democrats between 1878 and 1894, *i.e.*, right to the time of his death, be combined with the theory of the "withering away" of the state to form one doctrine?

Usually the two views are combined by means of eclecticism, by an unprincipled, sophistic, arbitrary selection (to oblige the powers that be) of either one or the other argument, and in ninety-nine cases out of a hundred (if not more often), it is the idea of the "withering away" that is specially emphasised. Eclecticism is substituted for dialectics—this is the most usual, the most widespread phenomenon to be met with in the official Social-Democratic literature of our day in relation to Marxism. Such a substitution is, of course, nothing new; it may be observed even in the history of classic Greek philosophy. When Marxism is adulterated to become opportunism, the substitution of eclecticism for dialectics is the best method of deceiving the masses; it gives an illusory satisfaction; it seems to take into account all sides of the process, all the tendencies of development, all the contradictory factors and so forth, whereas in reality it offers no consistent and revolutionary view of the process of social development at all.

* Engels, *Anti-Dühring*.

We have already said above and shall show more fully later that the teaching of Marx and Engels regarding the inevitability of a violent revolution refers to the bourgeois state. It *cannot* be replaced by the proletarian state (the dictatorship of the proletariat) through "withering away," but, as a general rule, only through a violent revolution. The panegyric sung in its honour by Engels and fully corresponding to the repeated declarations of Marx (remember the concluding passages of the *Poverty of Philosophy* and the *Communist Manifesto*, with its proud and open declaration of the inevitability of a violent revolution; remember Marx's *Critique of the Gotha Programme* of 1875 in which, almost thirty years later, he mercilessly castigates the opportunist character of that programme)—this praise is by no means a mere "impulse," a mere declamation, or a polemical sally. The necessity of systematically fostering among the masses *this* and just this point of view about violent revolution lies at the root of the *whole* of Marx's and Engels' teaching. The neglect of such propaganda and agitation by both the present predominant social-chauvinist and the Kautskyst currents brings their betrayal of Marx's and Engels' teaching into prominent relief.

The replacement of the bourgeois by the proletarian state is impossible without a violent revolution. The abolition of the proletarian state, *i.e.*, of all states, is only possible through "withering away."

Marx and Engels gave a full and concrete exposition of these views in studying each revolutionary situation separately, in analysing the lessons of the experience of each individual revolution.

BOURGEOIS DEMOCRACY AND PROLETARIAN DICTATORSHIP *

History teaches that not a single oppressed class has ever come into power,

* From V. I. Lenin, *Theses and Report on Bourgeois Democracy and the Dic-*

or could come into power, without passing through the period of dictatorship, *i.e.*, the conquest of political power and the violent suppression of the desperate, furious and unscrupulous resistance which the exploiters always put up. The bourgeoisie, whose rule the Socialists who oppose "dictatorship in general" and who bow down before "democracy in general" now defend, achieved power in the advanced countries by means of a number of rebellions, by civil wars, by the violent suppression of kings, feudal barons and slave-owners, and their attempts at restoration. In their books and pamphlets, in the resolutions of their congresses and in their agitational speeches, the Socialists of all countries have explained to the people the class character of these bourgeois revolutions, of this bourgeois dictatorship, a thousand and a million times. Hence, the present defence of bourgeois democracy cloaked in speeches about "democracy in general" and the present howling and shouting against the dictatorship of the proletariat cloaked by cries about "dictatorship in general" are a downright betrayal of socialism, the practical desertion to the side of the bourgeoisie, the denial of the right of the proletariat to make its own proletarian revolution, and defence of bourgeois reformism at the very historical moment when bourgeois reformism is bankrupt all over the world, and when the war has created a revolutionary situation.

In explaining the class character of bourgeois civilisation, of bourgeois democracy and of bourgeois parliamentarism, all Socialists express the idea which was most scientifically expressed by Marx and Engels when they said that even the most democratic bourgeois republic is nothing more than a machine for the suppression of the working class

tatorship of the Proletariat (Submitted to the First Congress of the Communist International, March 4, 1919) from *Selected Works*, Vol. VII, pp. 223–231. Reprinted by permission of International Publishers Co. Copyright © 1937.

by the bourgeoisie, of the masses of the toilers by a handful of capitalists. Every one of the revolutionaries, every one of the Marxists who is now shouting against dictatorship and for democracy has sworn and assured the workers that he recognises this fundamental truth of socialism; but now, when the revolutionary proletariat is in a state of ferment and motion, which are directed towards the destruction of this machine of oppression and towards the achievement of the proletarian dictatorship, these traitors to socialism try to make it appear that the bourgeoisie granted the toilers "pure democracy," that the bourgeoisie has ceased to resist and is prepared to submit to the majority of the toilers, and that no state machine for the suppression of labour by capital exists, or has ever existed, in a democratic republic.

"The right of assembly" may be taken as an example of the demands of "pure democracy." Every class conscious worker who has not broken connections with his class will understand at once that it would be absurd to promise the right of assembly to the exploiters in the period and in the circumstances in which the exploiters are resisting their overthrow and are defending their privileges. Neither in England in 1649 nor in France in 1793 did the bourgeoisie, when it was revolutionary, grant "the right of assembly" to the monarchists and nobles who called for the intervention of foreign troops and who "assembled" for the purpose of organising attempts at restoration. If the modern bourgeoisie, which became reactionary long ago, demands that the proletariat give it guarantees beforehand that it will give "the right of assembly" to the exploiters—irrespective of the resistance the capitalists put up to their expropriation—the proletariat will only laugh at the hypocrisy of the bourgeoisie.

On the other hand, the workers know perfectly well that even in the most democratic bourgeois republics "the right of assembly" is but an empty phrase, because the rich own all the best public

and private buildings and sufficient leisure to attend meetings, which are protected by the bourgeois state apparatus. The proletarians of town and country and the small peasants, *i.e.*, the overwhelming majority of the population, do not enjoy either the first, the second or the third of these privileges. As long as this situation prevails, "equality," *i.e.*, "pure democracy" is a sham. In order to achieve real equality, in order to realise democracy for the toilers in fact, it is first of all necessary to deprive the exploiters of all public and luxurious private buildings, it is first of all necessary to give leisure to the toilers, and to have the freedom of their assemblies protected by the armed workers and not by the sons of the aristocracy or capitalist officers commanding brow-beaten soldiers.

Only after this change has taken place will it be possible, without mocking at the workers, the toilers and the poor, to speak of freedom of assembly, of equality. And nobody but the vanguard of the toilers, *viz.*, the proletariat, which overthrows the exploiters, the bourgeoisie, can bring about this change.

"Freedom of the press" is another of the principal slogans of "pure democracy." Here, too, the workers know, and the Socialists of all countries have admitted a million times, that this freedom is a sham as long as the best printing plants and the huge stocks of paper are in the possession of the capitalists, and as long as the press is ruled by capital—which rule manifests itself the more strikingly, more sharply and more cynically, the more democracy and the republican system are developed, as for example in America. In order to achieve real equality and real democracy for the toilers, for the workers and peasants, it is first of all necessary to deprive capital of the opportunity of hiring writers, of buying up publishing houses and bribing newspapers, and it is necessary to overthrow the yoke of capital, to overthrow the exploiters and to suppress their resistance. By "freedom" the capitalists have always meant the freedom of the rich to accumulate profits, and the freedom of

the workers to die of starvation. By freedom of the press the capitalists mean the freedom of the rich to bribe the press, freedom to utilise wealth for the purposes of fabricating and manipulating so-called public opinion. Here, too, the champions of "pure democracy" prove in fact to be champions of the filthy and venal system by which the rich control the means for the education of the masses, they prove to be deceivers of the people who, by means of plausible, eloquent and absolutely false phrases, turn the people away from the concrete historical tasks of liberating the press from its bondage to capital. Real freedom and equality will exist under the system which the Communists are building and under which it will be impossible for anyone to enrich himself at another's expense, under which it will be objectively impossible, either directly or indirectly, to subject the press to the power of money, and under which there will be nothing to prevent every toiler (or group of toilers in any number) from having and exercising an equal right to use the public printing plants and public stocks of paper.

The history of the nineteenth and twentieth centuries, even before the war, showed what this notorious "pure democracy" really is under capitalism. The Marxists have always said that the more developed, the "purer" democracy is, the more naked, sharp and ruthless becomes the class struggle, the more "purely" the oppression of capital and the dictatorship of the bourgeoisie stand forth. The Dreyfus case in republican France, the sanguinary shooting down of strikers by mercenaries armed by the capitalists in the free and democratic republic of America—these and thousands of similar facts reveal the truth which the bourgeoisie vainly tries to conceal, *viz.*, that even in the most democratic republics it is the terror and dictatorship of the bourgeoisie which rule and which openly manifest themselves as soon as it begins to seem to the exploiters that the power of capital is tottering.

The main thing the Socialists fail to understand and what constitutes their

theoretical shortsightedness, their captivity to bourgeois prejudices and their political treachery to the proletariat, is that in capitalist society, as soon as there is any serious intensification of the class struggle on which it is based, there cannot be any middle course between the dictatorship of the bourgeoisie and the dictatorship of the proletariat. All dreams about some third course are merely the reactionary lamentations of the petty bourgeois. This is confirmed by the experience of more than a hundred years of development of bourgeois democracy and of the labour movement in all the advanced countries, and particularly by the experience of the past five years. It is also confirmed by the whole science of political economy, by the whole content of Marxism, which explains that under any system of commodity production the dictatorship of the bourgeoisie is economically inevitable and that nothing can take the place of the latter except the class that is developed, multiplied, organised and consolidated by the very development of capitalism, *viz.*, the proletarian class.

The other theoretical and political mistake Socialists commit is their failure to understand that for thousands of years, from the embryonic form of the age of antiquity, the forms of democracy underwent inevitable change as one ruling class took the place of another. In the ancient republics of Greece, in the cities of the Middle Ages and in the advanced capitalist countries, democracy has different forms and different degrees of application. It would be very absurd to think that the most profound revolution in the history of mankind, that the first transference of power from the exploiting minority to the exploited majority that has ever occurred in the world, could proceed within the old framework of the old bourgeois parliamentary democracy, that it could proceed without extremely sharp changes, without creating new forms of democracy, new institutions embodying the new conditions for its application, etc.

The dictatorship of the proletariat is

similar to the dictatorship of other classes in that, like all dictatorships, it was called forth by the necessity of suppressing the violent resistance of the class that was being deprived of political rule. The fundamental difference between the dictatorship of the proletariat and the dictatorship of other classes—the dictatorship of the landlords in the Middle Ages, the dictatorship of the bourgeoisie in all civilised capitalist countries—is that the dictatorship of the landlords and of the bourgeoisie meant the violent suppression of the resistance of the overwhelming majority of the population, *viz.*, the toilers. The dictatorship of the proletariat, on the contrary, means the violent suppression of the resistance of the exploiters, *i.e.*, the insignificant minority of the population, the landlords and capitalists.

Hence, it follows from this that the dictatorship of the proletariat must inevitably lead, not only to a change in the forms and institutions of democracy, speaking generally, but to such a change as will lead to the extension of the actual enjoyment of democracy to those who are oppressed by capitalism, to the toiling classes, to a degree hitherto unprecedented in world history.

COMMUNIST MINORITY DICTATORSHIP AND ILLEGAL WORK *

The victory of Socialism (as the first stage of Communism) over capitalism requires that the proletariat, as the only really revolutionary class, shall fulfil the three following tasks. First,—overthrow the exploiters, primarily the bourgeoisie as the principal economic and political representatives of the latter; utterly rout them; suppress their resistance; make it

* From V. I. Lenin, *Theses on the Fundamental Tasks of the Second Congress of the Communist International* (July 4, 1920) from *Selected Works*, Vol. X, pp. 163–165, 169–170, 172–174. Reprinted by permission of International Publishers Co. Copyright © 1938.

utterly impossible for them to attempt to restore the yoke of capital and wage slavery. Second—win over and bring under the leadership of the revolutionary vanguard of the proletariat, of its Communist Party, not only the whole of the proletariat, or the overwhelming, the enormous majority of the latter, but also the whole mass of toilers and those exploited by capital; educate, organise, train and discipline them in the very process of the supremely bold and ruthlessly firm struggle against the exploiters; tear this overwhelming majority of the population in all capitalist countries from its dependence on the bourgeoisie; imbue it by means of its practical experience with confidence in the leading role of the proletariat and of its revolutionary vanguard. Third—neutralise, or render harmless, the inevitable vacillation between the bourgeoisie and the proletariat, between bourgeois democracy and Soviet power, of the class of small proprietors in agriculture, industry and commerce—which is still fairly numerous in nearly all advanced countries, although it comprises the minority of the population—as well as the stratum of intellectuals, office employees, etc., which corresponds to this class.

The first and second tasks are independent tasks, each requiring its own special methods of action toward the exploiters and toward the exploited. The third task emerges from the first two and merely requires the skilful, timely and flexible combination of the first and second types of method in accordance with the concrete circumstances in each separate case of vacillation.

In the concrete situation which has been created by militarism, imperialism, all over the world, and most of all in the most advanced, powerful, most enlightened and free capitalist countries, the strangulation of colonies and weak countries, the world imperialist butchery and the Versailles "Peace"—the very thought of peacefully subordinating the capitalists to the will of the majority of the exploited, of the peaceful, reformist transi-

tion to Socialism is not only extreme philistine stupidity, but also downright deception of the workers, the embellishment of capitalist wage slavery, concealment of the truth. The truth is that the bourgeoisie, even the most educated and democratic, now no longer hesitates to resort to any fraud or crime, to massacre millions of workers and peasants in order to save the private ownership of the means of production. Only the violent overthrow of the bourgeoisie, the confiscation of its property, the destruction of the whole of the bourgeois state apparatus from top to bottom—parliamentary, judicial, military, bureaucratic, administrative, municipal, etc., right up to the very wholesale deportation or internment of the most dangerous and stubborn exploiters—putting them under strict surveillance in order to combat inevitable attempts to resist and to restore capitalist slavery—only such measures can ensure the real subordination of the whole class of exploiters.

On the other hand, the common idea prevailing among the old parties and the old leaders of the Second International that the majority of the toilers and the exploited can acquire complete clarity of Socialist consciousness and firm Socialist convictions and character under the conditions of capitalist slavery, under the yoke of the bourgeoisie (which assumes an infinite variety of forms, the more subtle and also more fierce and ruthless the more cultured the given country is) is also the embellishment of capitalism and bourgeois democracy, is also the deception of the workers. As a matter of fact, only after the vanguard of the proletariat, supported by the whole of this, the only revolutionary, class, or the majority of it, overthrows the exploiters, suppresses them, emancipates the exploited from their state of slavery, improves their conditions of life immediately at the expense of the expropriated capitalists, only after this, and in the very process of the acute class struggle, is it possible to educate, train and organise the broadest masses of the toilers and the exploited

around the proletariat, and under its influence and guidance, to rid them of the selfishness, disunity, the vices and weaknesses engendered by private property, and to transform them into a free union of free workers.

The victory over capitalism requires a proper correlation between the leading, Communist, Party, the revolutionary class—the proletariat—and the masses, *i.e.*, all the toilers and exploited. The Communist Party alone, if it is really the vanguard of the revolutionary class, if it really contains all its best representatives, if it consists of fully conscious and loyal Communists who have been educated and hardened by the experience of the persistent revolutionary struggle, if this Party has succeeded in linking itself inseparably with the whole life of its class, and through it, with the whole mass of exploited, and if it has succeeded in completely winning the confidence of this class and this mass—such a Party alone is capable of leading the proletariat in the most ruthless, decisive and final struggle against all the forces of capitalism. On the other hand, only under the leadership of such a Party can the proletariat display the full force of its revolutionary onslaught and neutralise the inevitable apathy and sometimes resistance of the small minority of the aristocracy of labour, the old trade union and cooperative leaders, etc., who have been corrupted by capitalism—only then will it be able to display its whole might, which is immeasurably greater than the proportion of the population it represents owing to the very economic structure of capitalist society. Finally, only after they have been actually emancipated from the yoke of the bourgeoisie and of the bourgeois state apparatus, only after they have obtained the opportunity of organising in their Soviets in a really free (from the exploiters) manner, can the masses, *i.e.*, all the toilers and the exploited, for the first time in history, display all the initiative and energy of tens of millions of people who have been crushed by capitalism. Only when the

Soviets have become the sole state apparatus is it possible really to secure the participation in the work of administration of the whole mass of exploited, ninety-nine hundredths of whom even under the most enlightened and free bourgeois democracy were actually debarred from taking part in the work of administration. Only in the Soviets do the masses of exploited really begin to learn, not from booklets, but from their own practical experience, the work of Socialist construction, of creating a new social discipline, a free union of free workers.

The dictatorship of the proletariat is the exercise of the fullest leadership of all the toilers and exploited, who are oppressed, downtrodden, crushed, intimidated, disunited and deceived by the capitalist class, by the only class that has been trained by the whole history of capitalism for such a leading role. Hence, preparation for the dictatorship of the proletariat must be started everywhere and immediately with the following method among others.

In all organisations without exception—unions and associations, primarily proletarian, and also organisations of the non-proletarian, toiling and exploited masses (political, industrial, military, cooperative, educational, sports, etc., etc.), groups or nuclei of Communists should be formed—mainly open groups, but also secret groups, which should be obligatory in every case when their suppression, or the arrest or deportation of their members by the bourgeoisie may be expected—and these nuclei, closely connected with each other and with the Party centre, interchanging their experiences, carrying on work of agitation, propaganda and organisation, adapting themselves to absolutely all spheres of public life, absolutely to all varieties and subdivisions of the toiling masses, must systematically train themselves, and the Party, and the class, and the masses, by means of this diversified work.

In this it is extremely important to work out in a practical manner the vari-

ous necessary methods of work, on the one hand, in relation to the "leaders" or to the "responsible representatives," who, very often, are hopelessly corrupted by petty-bourgeois and imperialist prejudices; these "leaders" must be ruthlessly exposed and driven out of the working class movement; and on the other hand, in relation to the masses, who, particularly after the imperialist slaughter, are for the most part inclined to pay heed to and assimilate the doctrine that the leadership of the proletariat is necessary as the only way out of capitalist slavery; we must learn to approach the masses with special patience and caution in order to be able to understand the specific and peculiar features of the psychology of every stratum, profession, etc., of these masses.

In all countries, even the freest, "legal" and "peaceful" in the sense that the class struggle is least acute in them, the time has fully matured when it is absolutely necessary for every Communist Party systematically to combine legal with illegal work, legal with illegal organisation. For in the most enlightened and free countries, those with the most "stable" bourgeois-democratic system, the governments already, notwithstanding their false and hypocritical declarations, systematically resort to secret blacklists of Communists, to endless violations of their own constitutions in order to render semi-secret and secret support to the White Guards and to assassinations of Communists in all countries, to secret preparations for the arrest of Communists, to placing provocateurs among the Communists, etc., etc. Only the most reactionary philistinism, no matter what beautiful, "democratic" and pacifist phrases it may be cloaked in, can deny this fact, or the imperative conclusion that follows from it, *viz.*, that it is necessary, immediately, for all legal Communist Parties to form illegal organisations for the purpose of systematically carrying on illegal work, and of fully preparing for the moment when the bourgeoisie

resorts to persecution. Illegal work is particularly necessary in the army, the navy and police; for after the great imperialist butchery all the governments in the world began to fear a people's army which is open to the workers and peasants, and began secretly to resort to all possible methods of forming military units especially picked from the ranks of the bourgeoisie and especially supplied with all technical improvements.

On the other hand, it is also necessary, in all cases without exception, not to restrict oneself to illegal work, but also to carry on legal work, overcoming all obstacles that stand in the way of this, forming legal organs of the press and legal organisations under the most varied titles, which may often be changed in the event of necessity. This is what is now being done by the illegal Communist Parties in Finland, in Hungary, partly in Germany, in Poland, in Latvia, etc. This is what the Industrial Workers of the

World in America should do, and this should also be done by all the at present legal Communist Parties when the public prosecutors see fit to take proceedings against them on the basis of the resolutions of the congresses of the Communist International, etc.

The absolute necessity in principle of combining illegal with legal work is determined, not only by the sum total of the specific features of the present period, the period of the eve of the proletarian dictatorship, but also by the necessity of proving to the bourgeoisie that there is not, nor can there be, a sphere or field of work that cannot be won by the Communists; and above all it is determined by the fact that everywhere there are broad strata of the proletariat, and still broader non-proletarian toiling and exploited masses, who still believe in bourgeois-democratic legality and whose awakening is a matter of extreme importance for us.

THE LIMITS OF REASON

The western traditions of rationalism, faith, and love have never in the past, and are not now, consistently or completely enunciated. At any point in time, western civilization seems a rich kaleidoscope of motley colors, shapes, and figures. First one root of western culture and thought, and then another, plays a more dominant role.

Almost all modern political theorists have emphasized aspects of the western tradition (albeit to different extents and in various ways), and in so doing have helped to guide and configure it for future generations. Utilitarianism, for example, is certainly a rationalist philosophy, and its emphasis on the greatest happiness of the greatest number is reflective of the Christian love ethic. Further, utilitarianism's emphasis on individuals' equality is ultimately based on Jewish monotheism, to the extent that the fatherhood of God makes all men and women equal brothers and sisters.

Marxism, too, draws much from the western tradition. Like utilitarianism, Marxism emphasizes equality, although—also like utilitarianism—it no longer bases this equality in a religious outlook of the world. Marxism, further, emphasizes reason; indeed, it claims to be “scientific.” And, Marxism even draws from the Christian conception of love, to the extent that the ideal society of Marxian thinkers were able to be realized, though it must be admitted that in practice Marxist activists have at times appeared to be as much motivated by hatred of the bourgeoisie as love of their fellowman.

It is unusual, then, for the western traditions to be completely absent from a thinker's or school's work. It is even more unusual for them to be renounced. Yet, particularly during the last part of the nineteenth, and first part of the twentieth, centuries, thinkers arose who repudiated all of the western traditions, with grievous implications.

The tangled thought of Friedrich Nietzsche (1844–1900) is best unravelled starting from his famous statement, “God is dead.” Nietzsche saw western

society at a full stop, and sought the “revaluation of all values”—a new moral order. What had come before was worthless, partially because of Darwinian theories showing man's descent not from Adam, but from animals. What was needed were new moral concepts to fill the gap left by the departure of the old. Nietzsche tried to fill this gap.

It is important when approaching Nietzsche to separate the myths that have sprung up about him from his actual thought, although it is the myths that have had the most practical significance. He was born in Prussia and named after King Friedrich Wilhelm IV of Prussia, as he was born on the same birthday. Nietzsche was raised in a pious Protestant background as the only male in a home comprised of his grandmother, mother, two aunts, and sister, as well as himself; his father having gone insane and then died in 1849. Nietzsche was a brilliant student. As a young man, at school away from his family, he became an atheist. At the University of Bonn and then at Leipzig, he studied philology—in his case, emphasizing ancient Greek literature. Though a philologist, he was no philogynist—i.e., lover of women.

In 1869, before he had even received his doctorate, Nietzsche was appointed a professor of classical philology at the University of Basel. He served in this position for ten years, before ill health forced him to resign. For much of his tortured existence, he suffered from migraine headaches and vomiting, and used drugs (including opium) to relieve the pain. In 1889, he went insane—most probably from syphilis—while watching a horse being flogged, though he had shown signs of significant mental instability for some time before this. He pitifully lasted eleven years before dying.

Nietzsche's attitude toward the great German composer Richard Wagner is indicative of his outlook on life as well as his unstable personality. At first, Nietzsche thought Wagner was the salvation of German culture, and became an intimate friend of his. Later, he thought Wagner had become corrupted by fame, and in opposition to proclaiming the will to power of the true, atheistic aristocrat, settled for the approbation of the world through more Christian, renunciative, decadent, and romantic work. Nietzsche ended the relationship.

Nietzsche myths were started in part by Nietzsche himself. While he sought a new sort of aristocracy of supermen or overmen who were better than others not by birth but by being, he found it necessary himself to attempt to identify with the older aristocracy. He (untruthfully) claimed descent from Polish nobility, and even his great, handle-bar mustache has been held to be an affectation of his desire to elevate his origins, presumably emphasizing a Polish and noble appearance.

The Nietzsche legend was started in earnest following his insanity, primarily by his sister. Elisabeth Forster-Nietzsche had been married to a virulent anti-Semite, and she edited and arranged her brother's substantial unpublished work in line with the philosophy of her late husband. In her compilation of Nietzsche's notes which were published as *The Will to Power* (1906, second edition), for example, Elisabeth chose a four-line draft to organize the writings which included a heading referring to “Breeding,” although her brother had discarded this draft.

All philosophers are subject to interpretation, and Nietzsche more than most. He was a superb writing stylist and sometimes chose form over content. Much

of his writing is in aphorisms, and these, too, conceal as much as reveal his thought. Moreover, Nietzsche considered himself to have had three stages in his thought, and he wrote on a wide variety of topics—from ancient Greece to Richard Wagner to the revaluation of all values. Finally, his last works were written when he was approaching insanity, and their reliability is therefore sometimes questioned: His intellectual autobiography—*Ecce Homo* (1908)—for example, written in his final sane months, contains the chapter headings, “Why I Am So Wise,” “Why I Am So Clever,” and “Why I Write Such Excellent Books,” surely indicating impending collapse.

Three core Nietzschean concepts based on the proposition that God is dead are *eternal recurrence*, the *superman or overman*, and the *will to power*. By eternal recurrence, Nietzsche means that—as the energy in the universe is finite—every possible configuration of reality must have been experienced in the past and will be experienced again in the future. Life, thus, is part of a cosmic drama that will be played over and over again. In a way, eternal recurrence is Nietzsche’s substitute for the death of God and the closing of heaven’s gates. Although humans may not live forever, they do gain a measure of immortality through time’s endless cycles. The influence of eastern thought, transmitted to Nietzsche through Arthur Schopenhauer, is evident here.

The superman or overman is the ultimate goal of man’s civilized existence. The term “superman” or “overman” is a translation of the German “*übermensch*,” which can have several meanings, including the ruling man and the higher man. Nietzsche means by *übermensch* also the man who overcomes the insignificant man within himself. The sources for superman or overman are several. Darwin’s theory of evolution suggested to Nietzsche the notion of mankind as an evolving species, although Nietzsche emphatically rejected the superman or overman as being the end result of a biological process, but rather of a civilizing one. Another source for the superman or overman was the traditional aristocratic ideal. A final source was Nietzsche’s focus on the individual, albeit a focus on only a very few individuals—the superior beings. In a sense, the superman or overman is a spiritualized form of Darwinism, where the focus is not on the biological.

Supermen or overmen are worth incomparably more than the mass of mere insignificant men. Indeed, the difference between the superman or overman and the ordinary man is greater than the difference between ordinary men and animals. Because of this gap, there is no morality that can or will bind the superman or overman. Nietzsche is scornful of religions or philosophies that hold the equality of men—rather, inherently men are absolutely unequal. He, thus, despises Christianity (though not necessarily Christ) and considers the utilitarian formula of the greatest happiness for the greatest number ridiculous, implying, as it does, that the equal interests of all should be counted equally. John Stuart Mill receives his special wrath; Nietzsche calls him, “that blockhead.” The superman or overman does not hesitate to look reality straight in the eye, and to separate the chaff of common-place opinion from the wheat of truth. “Wherever I found a living thing, there found I the Will to Power.” This is a strong statement, if not a true one, and follows from the death of God and the existence of superior beings. In a universe bereft of absolute moral purpose, inhabited by supermen or overmen, what transitory goal can there be other

than the imposition of the will of higher ones on lesser ones? Will is what gives such a universe purpose. This may not be most people’s moral value, but it was Nietzsche’s.

Nietzsche was against most preceding thinkers. He opposed Kant and Hegel, for example, because, in his opinion, they perverted reason to attempt to reconcile it with Christian principles, which Nietzsche thought impossible, as well as undesirable. He opposed Rousseau and the entire romantic movement because of their emphasis on the nobility of the brute: Nietzsche believed right culture was essential to producing the superman or overman—the one who makes humanity and life worthwhile.

In the early twentieth century, Nietzsche was used, whether fairly or not, as a spiritual progenitor of “the children of darkness” (to use Reinhold Niebuhr’s famous title). Nietzsche’s criticism is directed against not just this or that detail of his age, but against the assumptions and values of rationalism and liberalism in whatever form they appeared—politics, religion, economics, philosophy. As such, it is important to consider in depth this aspect of his thought. Nietzsche disdained the human race in general, which he contemptuously calls “slaves,” or “herd,” or “mass.” In democracy (mere majority rule), in particular, he sees nothing but the triumph of slave morality, which had started with the Jews and was transmitted to the modern world through Christianity.

Democracy is, according to Nietzsche, the destruction of the aristocratic values of power, beauty, and authority through a mass conspiracy of moralizing weaklings who erect a new, and contrary, set of values—that “the poor, the weak, the lowly, are alone the good.” This contempt for democracy, however, should not be interpreted as support for a conservative status-quo, for he as much opposes a conservative order that panders to the masses or stifles the individuality of superior men as a democracy that smothers supermen or overmen.

Nietzsche’s *Genealogy of Morals* (1887) contains a famous description of the kind of men whom he provisionally admired as the true aristocrats. In dealing with each other, these individuals display consideration, loyalty, self-control, delicacy, and friendship. Outside of their own country, however, they behave: “not much better than beasts of prey which have been let loose. They enjoy their freedom from all social control, they feel that in the wilderness they can give vent with impunity to that tension which is produced by the enclosure and imprisonment in the peace of society, they *revert* to the innocence of the beast-of-prey conscience, like jubilant monsters, who perhaps come from a ghostly bout of murder, arson, rape, and torture, with bravado and a moral equanimity, as though merely some wild student’s prank had been played, perfectly convinced that the poets have now an ample theme to sing and celebrate. It is impossible not to recognize at the core of all these aristocratic races the beast of prey; the magnificent *blond beast*, avidly rampant for spoil and victory.”

The “decline of humanity” is seen by Nietzsche in the attempt to tame and civilize the beast of prey in those men in whom the beast exists. Democracy is the rule of the slaves over the masters, and is the political consummation of the disease which destroys those who “still say ‘yes’ to life,” and elevates those who constantly say “nay” to life—the lowly, the cunning, the weak. Nietzsche’s exaltation of the beast of prey should not be taken as support for the “natural man,” as Rousseau’s noble savage lacks the civilized qualities which are necessary for

the true aristocrat. In Nietzsche's terms, both the Dionysian (natural) and Apollonian (civilized) elements in human nature are required.

Nietzsche's political philosophy is essentially anarchical regarding the state. He opposes any rule of law, whether imposed by many or few, which constrains the will of the chosen few. At the same time, he primarily vents his spleen against rule by the many, for rule by the few has at least the possibility of being on the right track (though it rarely is in practice). Although he was no German nationalist, and in fact considered himself a "good European," Nietzsche thought that of all German social groups, the Prussian officer was the least affected by the infiltrating poisons of Christianity, democracy, rationalism, liberalism, and socialism. "The future of German culture rests with the sons of Prussian officers," he holds.

The influence of Nietzsche on the Nazis is disputed, and it is undoubtedly the case that his influence was as much indirect as direct, and fostered more by others (particularly his sister) than by what he himself intended. Nonetheless, a work of his that cultivated the growth of the Nazi mentality in Germany was *The Antichrist* (1902). Nietzsche's attack on Christianity was the first in modern times to aim at the morals of Christianity rather than its religion and theology, as had been done by so many opponents of Christianity. Unlike many modern thinkers who were opposed, or indifferent, to religious faith in Christianity—yet fully accepted its moral teachings—Nietzsche is relatively indifferent to the religious aspects of Christianity and concentrates all his opposition to Christian ethics and morals. Of all the creeds that have sought to undermine the natural order of things (the few strong ruling the many weak) none has had, according to Nietzsche, such disastrous effects as Christianity. "The weak and the failures shall perish: first principle of *our* love of man": this Nietzschean ethic is completely antithetical to Christian ethics. He seeks an ethic that is, as he states in the title of another of his books, "beyond good and evil," that is, beyond traditional good and evil.

While he was not particularly or consistently a racist from a biological perspective (he calls anti-Semitism the "German disease"), what arouses Nietzsche's ire about Christianity above all was that it was able to corrupt the most aristocratic of races, the peoples of northern Europe. Nietzsche could not forgive the Nordics that they were unable to resist Christian monotheism, "this hybrid creature of decay, nonentity, concept and contradiction, in which all the instincts of decadence, all the cowardices and languors of the soul find their sanction." Earlier, the Christians ("bloodsuckers," "parasites") had succeeded in demolishing another great race and empire, the Roman Empire. In both cases, Nietzsche claims, Christianity merely destroyed, without showing a capacity to build anything new.

All of these sentiments were incorporated into the process of moral disintegration that raged through Germany in the first half of the twentieth century. Nazi propagandists integrally accepted the Nietzschean interpretation of Christianity as a revolt of what is low and unlovely in the herd against the aristocratic virtues of power, war, and honor. Nietzsche also supplied German anti-Christianism with a new argument: Christianity was in fact a Jewish conspiracy to dominate the world through the doctrines of monotheism, immortality of the soul, and equality before God. St. Paul particularly attracts the wrath of Nietzsche; he was the "eternal Jew," who recognized how, by the help of Christianity, a "universal

conflagration could be kindled." In the Middle Ages, Jews were persecuted because they rejected Christianity. Though not an anti-Semite, Nietzsche established in Germany the tradition of anti-Jewish persecution on the grounds that the Jews had created Christianity.

In Nietzsche's most famous work—*Thus Spake Zarathustra* (1883–1885)—he develops the concept of superman or overman as the new type. Without giving a very exact picture of this new breed of man who was to surpass the man hitherto known, Nietzsche makes it clear that his coming would make a clean slate of all the traditional values of the herd men. Supermen or overmen would form a new class of masters who would rule over the lowly herd.

The conception of superman or overman was intended partially by Nietzsche to indicate the need for more individuality and personality in the face of increasing standardization. There is value in the Nietzschean ideal of someone who becomes supremely himself by overcoming what is weak or low in himself. Yet, to the average German of his time and for some time afterward, the Nietzschean view of superior beings heralded the coming of the German master race—the new race of superior beings—to world power. Nietzsche himself would no doubt have abhorred the mass of any nation, perhaps especially the Germans, collectively aggrandizing themselves. But he who preached the revaluation of all values could hardly have complained if those who came after him revalued his master man into the master race.

In the sense of helping to create an attitude, Nietzsche more than any other single German thinker aided the preparation of the era of nihilism in which the code of the beast of prey was to prevail over the morality of the west. Twice within fifty years of his death the Germans went to war against the world, and the second time almost succeeded. German soldiers took Nietzsche's books to war with them as an American or British soldier might have taken the Bible. During the Nazi era, a huge (and hideous) museum was built in his honor, and Hitler for a number of years had his picture taken with a bust of Nietzsche in the background. Nietzsche's sister lived to know Hitler, and his insanity was seen by some Nazis as a kind of apotheosis.

Nietzsche's writings are mostly non-political, though of immense political consequence. He was essentially a moralist, though a perverse one (indeed, he calls himself an "immoralist"). The superman or overman was *not* a political leader or hero. One of Nietzsche's few goals that could be termed political was a united Europe, a goal that appears possible today for the first time. Prophetically, Nietzsche suggested that Europe would experience the bloodiest wars before it obtained a united form. His prophecy of European wars added to his appeal among militarists, as well as cultivated the mystique that grew up around him; he held that wars were inevitable because of the loss of values that follow the death of God. Neither liberal nor conservative, Nietzsche's political thought might best be characterized as Machiavellian. Some of the Nazis' glomping on to Nietzsche was the result of their desire to establish intellectual credibility for their program; few other philosophers could do.

Nietzsche writes in brilliant poetic imagery, enriched by years of suffering and struggle: This gives to his work a force and vigor that makes it appeal to readers everywhere sheerly as literature. He had substantial impact on psychoanalysis and existentialism, and continues to exert huge impact on recent (especially French) postmodernist and poststructuralist thought. One of his books

—*The Twilight of the Idols* (1889)—is subtitled *How One Philosophizes with a Hammer*. Ultimately, he was more a destroyer than a builder, and whether his destructions may yet lead to more positive reconstructions remains to be seen.

The expansion of democracy in the nineteenth and twentieth centuries inevitably intensified the antidemocratic reaction of conservative authoritarianism. Starting first in Italy as an antidemocratic and antisocialist movement after World War I, *fascism* is in essence the twentieth-century version of age-old tendencies in politics. Like democracy, it is a universal phenomenon, and it appears in different forms and varieties in accordance with national traditions and circumstances. Like democracy, fascism, or the tendency toward fascism, is firmly entrenched in the ideas and institutions of some countries, and only an ephemeral phenomenon in others.

Unlike the authoritarianism of the seventeenth and eighteenth centuries, fascism is a *postdemocratic* political system and cannot be understood save as a reaction to democracy. Fascism is impossible in countries with no democratic experience at all: in such countries dictatorship may be based on the army, bureaucracy, and church, but it will lack the element of mass enthusiasm and participation characteristic of fascism. Conversely, fascism never succeeded in a country whose democratic experience had been prolonged and generally shared by the people. Fascism learned from democracy the value of popular support for national policies, and it sought to manufacture popular consent by a mixture of propaganda and terror.

In its social background, fascism particularly appealed to two groups: first, a numerically small group of industrialists and landowners who were willing to finance fascist parties in the hope of thereby getting rid of free labor unions and radical political movements; second, the numerically much more important lower middle classes that dreaded the prospect of proletarianization and looked to fascism for the salvation of their status and prestige in society. Typically, it was the employee rather than the worker who was susceptible to fascism, and the small marginal businessman who was afraid of Big Business and Big Labor. In times of depression, fascism appealed to the unemployed, hopeless, cheerless—the forgotten men of society: by putting them into uniforms, and incorporating them into an organized movement, fascism made them feel that they “belonged,” that they were not outcasts, as existing society may have seemed to consider them.

There is no Locke, Marx, or Lenin in the theory of fascism; it cannot be gathered from one systematic treatise but must be culled from various sources that express thought and opinion as much as political philosophy. One of the most authoritative brief statements of fascist theory is Mussolini's *Doctrine of Fascism* (1932), which he contributed, with the aid of the Italian philosopher Giovanni Gentile, to the *Italian Encyclopedia* in his capacity as *Duce* of fascism and of Italy.

Benito Mussolini (1883–1945) started his political career as a journalist; for some time he edited the socialist daily, *Avanti*. When World War I broke out, the majority of the Socialist party favored neutrality. Mussolini, who had previously belonged to the revolutionary, syndicalist wing of the Socialist party, suddenly reversed his stand and favored intervention on the side of the

Allies, for which he was expelled from the party in November, 1914. In the same month he started his own paper, *Popolo d'Italia*, later to become the official organ of Italian fascism. In the first issue of his paper Mussolini explained why he favored intervention: “If the Prussian reaction triumphs in Europe tomorrow, and the destruction of Belgium and the annihilation of France cause the level of European civilization to sink, those who have not attempted to hinder the catastrophe will be traitors and apostates.”

In March, 1919, Mussolini and his interventionist friends and associates formed “combat groups” (*Fasci di Combattimento*), the program of which was a mixture of ultrarevolutionary and ultranationalist slogans. At first Mussolini tried to woo the working classes away from the Socialist party (the Communist party, formed in 1921, which was not important at the time), but he soon had to admit failure. He then steadily courted political support from the middle classes and financial support from big landowners and industrialists. Realizing the futility of achieving power by legal means, the Fascists began to terrorize opponents, not refraining from arson and assassination. A new feature of Fascist methods emerged in “punitive expeditions” against numerous communities, in which the police allowed the Fascists to terrorize and virtually take over whole towns.

In the national elections of 1921, the Fascists obtained only 35 of 535 seats in Parliament, and Mussolini became more determined than ever to seize the government by force. On October 28, 1922, the Fascists converged on Rome from all parts of Italy, and the following day Mussolini was asked by the King to form a new administration. Mussolini quickly consolidated his power by ruthless persecution of his opponents; the assassination in 1924 of Giacomo Matteotti, a Socialist Deputy, showed that murder was an officially sanctioned weapon of the new regime.

Until 1933 Mussolini was comparatively isolated; but with the advent of the Nazi regime in Germany, a new fascist international was gradually being formed, later joined by Japan and lesser powers. His hatred of democracy and the democratic nations drove Mussolini—all his life anti-German—into the arms of Hitler, and he entered the war on the side of Nazi Germany in June, 1940, when the war, after the defeat of France, seemed to be over. Yet the long years of preparation for war were of no avail, and the military weakness of the Fascist regime became evident from the first operations. Even after Italy surrendered in September, 1943, Mussolini continued to head a German puppet regime in northern Italy. In April, 1945, seeing that all was lost, he sought to escape to Switzerland, where he had spent several years in his youth as a penniless worker and agitator. On his way to the border he was captured by Italian partisans operating behind enemy lines, sentenced to death by an improvised partisan court, and executed. His dead body was publicly hung from a lamppost in Milan—the city in which the Fascist movement was born. Only a few days later, Hitler committed suicide in the Reich Chancellery in Berlin.

The most characteristic feature of the fascist temper and outlook is *irrationalism*, the distrust of reason, and the stress on the irrational, sentimental, uncontrollable parts of man. Fascism opposes the whole western tradition of rationalism that stems from Greece. The psychological mood of fascism is fanaticism, not skeptical reflection. Because of its basic irrationalism, fascism

has "taboo issues" (such as race, the dogma of the party, or the personality of the "leader") that must not be critically discussed. During the Fascist regime in Italy, Mussolini's picture was in all schoolrooms, and it had the caption, "Mussolini is always right."

Fascism denies in principle the basic human equality of the western tradition, and not only accepts *inequality* as a fact but affirms it as an ideal. Though democratic societies do not always live up to their ideal of human equality, they at least accept it as a long-term goal of public policy.

The code of fascist behavior affirms the values of *violence* and the *lie*. Because it distrusts reason and rejects universally valid standards of conduct, fascism does not hesitate to use any means in pursuing its aims. For the same reason, fascism is ready to sacrifice the individual to the state: in the fascist view, the *state* is the *end* and the *individual* the *means*—the exact opposite of the democratic philosophy. "For the Fascist," Mussolini says, "everything is in the State, and nothing human or spiritual exists, much less has value, outside the State." Mussolini therefore also candidly admits that the fascist state is necessarily *totalitarian*, allowing no competing values or social associations besides itself. By contrast, the democratic state is pluralistic: it must recognize the fact that in a free society the loyalty of the individual to the state may conflict with his loyalties to the family, church, or his own conscience as a free person.

The fascist acceptance of inequality and violence naturally results in the theory and practice of government by an *elite*: Some men are born to rule, and others to obey. Fascist regimes are undemocratic, not because they always lack the support of the people (in some instances this support may be wholehearted), but because they rule *independently* of popular consent, without a free party system, and without free elections and a free press. The leadership principle is the extreme form of the fascist elite concept, and it fully expresses the irrational character of fascist politics: The leader is considered infallible, endowed with mystical gifts and insight, and he personifies the nation. In a conflict of opinion between leader and people, the will of the leader prevails, because his is the General Will, whereas that of the people is only the Will of All.

The fascist emphasis on leadership collides with the simultaneous enforcement of orthodoxy and conformity—the totalitarian uniformity of fascist society. Leaders of fascism like Mussolini and Hitler were formed in nonfascist societies with considerable free competition. The relatively short duration of the main fascist regimes in Italy and Germany has made it impossible for the student of comparative political systems and philosophies to appraise the leadership qualities of a generation born and bred under conditions of fascist uniformity and orthodoxy.

Because fascism is not only a political system but a way of life, it employs *authority* rather than discussion in all spheres of social activity, including the nonpolitical ones. Fascism is typically antifeminist in public life and also supports strong paternal authority in the family, over both wife and children. The father is the "leader of the family." In the schools, discipline is the supreme value inculcated into the minds and hearts of children, and the educational program is little more than a prelude to military training and indoctrination. In industry, authority takes the place of free bargaining between capital and labor. Officially, the fascist state is impartial between capitalists and workers;

yet the cemeteries of fascist countries are filled with victimized bodies of trade-unionists rather than bankers and industrialists. Relying on authority and obedience, fascism attracts not only those who want to command but also those who long to obey. In every society there are those who would rather follow and obey than think for themselves and assume responsibilities, and the "escape from freedom" is one of the chief psychological conditions of the spread of fascism.

The *corporate state* is another feature of fascism that expresses its lack of faith in the people: in the corporate system, the economy is organized in state-controlled associations of capital and labor, all working harmoniously for the common good, with the aid and guidance of the dictatorial one-party state. The underlying assumption of corporatism is that man (except for the elite in power) should not be politically articulate in his capacity as a citizen, but as a member of a social or economic group; general political issues are too complicated for him, whereas he is familiar with his work and profession.

In the international field, racialism and imperialism express the two fundamental fascist principles of inequality and violence. Just as within the nation the elite is superior to the rest and may impose its will by violence, so between nations the "elite nation" is considered superior to the others and entitled to rule them by force. As a result, fascism is opposed to international organization and world peace: It "believes neither in the possibility nor in the utility of perpetual peace," Mussolini says, because "war alone brings up to their highest tension all human energies and puts the stamp of nobility upon the peoples who have the courage to meet it." Moreover, fascism is opposed to international organizations for two other reasons: they recognize in some measure the principle of equality among nations, and, second, they seek to institute government by discussion on an international plane. Neither aim is compatible with a fascist theory of politics.

I NIETZSCHE

*Thus Spake Zarathustra**

WHEN Zarathustra was thirty years old, he left his home and the lake of his home, and went into the mountains. There he enjoyed his spirit and his solitude, and for ten years did not weary of it. But at last his heart changed,—and rising one morning with the rosy dawn, he went before the sun, and spake thus unto it:

Thou great star! What would be thy happiness if thou hadst not those for whom thou shinest!

For ten years hast thou climbed hither unto my cave: thou wouldst have wearied of thy light and of the journey, had it not been for me, mine eagle, and my serpent.

But we awaited thee every morning, took from thee thine overflow, and blessed thee for it.

Lo! I am weary of my wisdom, like the bee that hath gathered too much honey; I need hands outstretched to take it.

I would fain bestow and distribute, until the wise have once more become joyous in their folly, and the poor happy in their riches.

Therefore must I descend into the deep: as thou doest in the evening, when thou goest behind the sea, and givest light also to the nether-world, thou exuberant star!

Like thee must I go down, as men say, to whom I shall descend.

Bless me, then, thou tranquil eye, that canst behold even the greatest happiness without envy!

Bless the cup that is about to overflow, that the water may flow golden out of it,

and carry everywhere the reflection of thy bliss!

Lo! This cup is again going to empty itself, and Zarathustra is again going to be a man.

Thus began Zarathustra's down-going.

Zarathustra went down the mountain alone, no one meeting him. When he entered the forest, however, there suddenly stood before him an old man, who had left his holy cot to seek roots. And thus spake the old man to Zarathustra:

"No stranger to me is this wanderer: many years ago passed he by. Zarathustra he was called; but he hath altered.

Then thou carriedst thine ashes into the mountains: wilt thou now carry thy fire into the valleys? Fearest thou not the incendiary's doom?

Yea, I recognize Zarathustra. Pure is his eye, and no loathing lurketh about his mouth. Goeth he not along like a dancer?

Altered is Zarathustra; a child hath Zarathustra become; an awakened one is Zarathustra: what will thou do in the land of the sleepers?

As in the sea hast thou lived in solitude, and it hath borne thee up. Alas, wilt thou now go ashore? Alas, wilt thou again drag thy body thyself?"

Zarathustra answered: "I love mankind." "Why," said the saint, "did I go into the forest and the desert? Was it not because I loved men far too well?"

Now I love God: Men, I do not love. Man is a thing too imperfect for me. Love to man would be fatal to me."

Zarathustra answered: "What spake I of love! I am bringing gifts unto men."

"Give them nothing," said the saint.

"Take rather part of their load, and carry it along with them—that will be most agreeable unto them: if only it be agreeable unto thee!

If, however, thou wilt give unto them, give them no more than an alms, and let them also beg for it!"

"No," replied Zarathustra, "I give no alms. I am not poor enough for that."

The saint laughed at Zarathustra, and spake thus: "Then see to it that they accept thy treasures! They are distrustful of anchorites, and do not believe that we come with gifts.

The fall of our footsteps ringeth too hollow through their streets. And just as at night, when they are in bed and hear a man abroad long before sunrise, so they ask themselves concerning us: Where goeth the thief?"

Go not to men, but stay in the forest! Go rather to the animals! Why not be like me—a bear amongst bears, a bird amongst birds?"

"And what doeth the saint in the forest?" asked Zarathustra.

The saint answered: "I make hymns and sing them; and in making hymns I laugh and weep and mumble: thus do I praise God.

With singing, weeping, laughing, and mumbling do I praise the God who is my God. But what dost thou bring us as a gift?"

When Zarathustra had heard these words, he bowed to the saint and said: "What should I have to give thee! Let me rather hurry hence lest I take aught away from thee!"—And thus they parted from one another, the old man and Zarathustra, laughing like schoolboys.

When Zarathustra was alone, however, he said to his heart: "Could it be possible! This old saint in the forest hath not yet heard of it, that *God is dead!*"

When Zarathustra arrived at the nearest town which adjoineth the forest, he found many people assembled in the market-place; for it had been announced that a rope-dancer would give a performance. And Zarathustra spake thus unto the people:

I teach you the Superman. Man is some-

thing that is to be surpassed. What have ye done to surpass man?

All beings hitherto have created something beyond themselves: and ye want to be the ebb of that great tide, and would rather go back to the beast than surpass man?

What is the ape to man? A laughing-stock, a thing of shame. And just the same shall man be to the Superman: a laughing-stock, a thing of shame.

Ye have made your way from the worm to man, and much within you is still worm. Once were ye apes, and even yet man is more of an ape than any of the apes.

Even the wisest among you is only a disharmony and hybrid of plant and phantom. But do I bid you become phantoms or plants?

Lo, I teach you the Superman!

The Superman is the meaning of the earth. Let your will say: The Superman *shall be* the meaning of the earth!

I conjure you, my brethren, *remain true to the earth*, and believe not those who speak unto you of superearthy hopes! Poisoners are they, whether they know it or not.

Despisers of life are they, decaying ones and poisoned ones themselves, of whom the earth is weary: so away with them!

Once blasphemy against God was the greatest blasphemy; but God died, and therewith also those blasphemers. To blaspheme the earth is now the dreadfulest sin, and to rate the heart of the unknowable higher than the meaning of the earth!

Once the soul looked contemptuously on the body, and then that contempt was the supreme thing—the soul wished the body meagre, ghastly, and famished. Thus it thought to escape from the body and the earth.

Oh, that soul was itself meagre, ghastly, and famished; and cruelty was the delight of that soul!

But ye, also, my brethren, tell me: What doth your body say about your soul? Is your soul not poverty and pollution and wretched self-complacency?

Verily, a polluted stream is man. One must be a sea, to receive a polluted stream without becoming impure.

Lo, I teach you the Superman: he is that

* From Friedrich Nietzsche, *Thus Spake Zarathustra* (1883; trans. Thomas Common, The Modern Library, 1941). By permission.

sea; in him can your great contempt be submerged.

What is the greatest thing ye can experience? It is the hour of great contempt. The hour in which even your happiness becometh loathsome unto you, and so also your reason and virtue.

The hour when ye say: "What good is my happiness! It is poverty and pollution and wretched self-complacency. But my happiness should justify existence itself!"

The hour when ye say: "What good is my reason! Doth it long for knowledge as the lion for his food? It is poverty and pollution and wretched self-complacency!"

The hour when ye say: "What good is my virtue! As yet it hath not made me passionate. How weary I am of my good and my bad! It is all poverty and pollution and wretched self-complacency!"

The hour when ye say: "What good is my justice! I do not see that I am fervor and fuel. The just, however, are fervor and fuel!"

The hour when we say: "What good is my pity! Is not pity the cross on which he is nailed who loveth man? But my pity is not a crucifixion."

Have ye ever spoken thus? Have ye ever cried thus? Ah! would that I had heard you crying thus!

It is not your sin—it is your self-satisfaction that crieth unto heaven; your very sparingness in sin crieth unto heaven!

Where is the lightning to lick you with its tongue? Where is the frenzy with which ye should be inoculated?

Lo, I teach you the Superman: He is that lightning, he is that frenzy!

When Zarathustra had thus spoken, one of the people called out: "We have now heard enough of the rope-dancer; it is time now for us to see him!" And all the people laughed at Zarathustra. But the rope-dancer, who thought the words applied to him, began his performance.

Zarathustra, however, looked at the people and wondered. Then he spake thus:

Man is a rope stretched between the animal and the Superman—a rope over an abyss.

A dangerous crossing, a dangerous way-faring, a dangerous looking-back, a dangerous trembling and halting.

What is great in man is that he is a bridge and not a goal: what is lovable in man is that he is an *over-going* and a *down-going*.

I love those that know not how to live except as down-goers, for they are the over-goers.

I love the great despisers, because they are the great adorers, and arrows of longing for the other shore.

I love those who do not first seek a reason beyond the stars for going down and being sacrifices, but sacrifice themselves to the earth, that the earth of the Superman may hereafter arrive.

I love him who liveth in order to know, and seeketh to know in order that the Superman may hereafter live. Thus seeketh he his own down-going.

I love him who laboreth and inventeth, that he may build the house for the Superman, and prepare for him earth, animal, and plant: for thus seeketh he his own down-going.

I love him who loveth his virtue: for virtue is the will to down-going, and an arrow of longing.

I love him who reserveth no share of spirit for himself, but wanteth to be wholly the spirit of his virtue: thus walketh he as spirit over the bridge.

I love him who maketh his virtue his inclination and destiny: thus, for the sake of his virtue, he is willing to live on, or live no more.

I love him who desireth not too many virtues. One virtue is more of a virtue than two, because it is more of a knot for one's destiny to cling to.

I love him whose soul is lavish, who wanteth no thanks and doth not give back: for he always bestoweth, and desireth not to keep for himself.

I love him who is ashamed when the dice fall in his favor, and who then asketh: "Am I a dishonest player?"—for he is willing to succumb.

I love him who scattereth golden words in advance of his deeds, and always doeth more than he promiseth: for he seeketh his own down-going.

I love him who justifieth the future ones, and redeemeth the past ones: for he is willing to succumb through the present ones.

I love him who chasteneth his God, because he loveth his God: for he must succumb through the wrath of his God.

I love him whose soul is deep even in the wounding, and may succumb through a small matter: thus goeth he willingly over the bridge.

I love him whose soul is so overfull that he forgetteth himself, and all things are in

him: Thus all things become his down-going.

I love him who is of a free spirit and a free heart: thus is his head only the bowels of his heart; his heart, however, causeth his down-going.

I love all who are like heavy drops falling one by one out of the dark cloud that low-ereth over man: They herald the coming of the lightning, and succumb as heralds.

Lo, I am a herald of the lightning, and a heavy drop out of the cloud: the lightning, however, is the *Superman*.—

The Antichrist*

REVALUATION OF ALL VALUES

This book belongs to the very few. Perhaps not one of them is even living yet. Maybe they will be the readers who understand my *Zarathustra*: How could I mistake myself for one of those for whom there are ears even now? Only the day after tomorrow belongs to me. Some are born posthumously.

The conditions under which I am understood, and then of *necessity*—I know them only too well. One must be honest in matters of the spirit to the point of hardness before one can even endure my seriousness and my passion. One must be skilled in living on mountains—seeing the wretched ephemeral babble of politics and national self-seeking *beneath* oneself. One must have become indifferent; one must never ask if the truth is useful or if it may prove our undoing. The predilection of strength for questions for which no one today has the courage; the courage for the *forbidden*; the predestination to the labyrinth. An experience of seven solitudes. New ears for new music. New eyes for what is most distant. A new conscience for truths that have so far remained mute. *And* the will to the economy of the great style: keeping our

* From Friedrich Nietzsche, *The Antichrist* (1895; trans. Walter Kaufman in *The Portable Nietzsche*, Viking Penguin, 1982). By permission.

strength, our *enthusiasm* in harness. Reverence for oneself; love of oneself; unconditional freedom before oneself.

Well then! Such men alone are my readers, my right readers, my predestined readers: what matter the *rest*? The *rest*—that is merely mankind. One must be above mankind in strength, in *loftiness* of soul—in contempt.

ATTEMPT AT A CRITIQUE OF CHRISTIANITY

Let us face ourselves. We are Hyperboreans; we know very well how far off we live. "Neither by land nor by sea will you find the way to the Hyperboreans"—Pindar already knew this about us. Beyond the north, ice, and death—*our* life, *our* happiness. We have discovered happiness, we know the way, we have found the exit out of the labyrinth of thousands of years. Who *else* has found it? Modern man perhaps? "I have got lost; I am everything that has got lost," sighs modern man.

This modernity was our sickness: lazy peace, cowardly compromise, the whole virtuous uncleanness of the modern Yes and No. This tolerance and *largeur* of the heart, which "forgives" all because it "understands" all, is *sirocco* for us. Rather live in the ice than among modern virtues and other south winds!

We were intrepid enough, we spared

neither ourselves nor others; but for a long time we did not know where to turn with our intrepidity. We became gloomy, we were called fatalists. *Our fatum*—the abundance, the tension, the damming of strength. We thirsted for lightning and deeds and were most remote from the happiness of the weakling, "resignation." In our atmosphere was a thunderstorm; the nature we are became dark—for we saw no way. Formula for our happiness: a Yes, a No, a straight line, a goal.

What is good? Everything that heightens the feeling of power in man, the will to power, power itself.

What is bad? Everything that is born of weakness.

What is happiness? The feeling that power is *growing*, that resistance is overcome.

Not contentedness but more power; not peace but war; not virtue but fitness (Renaissance virtue, *virtù*, virtue that is moraline-free).

The weak and the failures shall perish: first principle of *our* love of man. And they shall even be given every possible assistance.

What is more harmful than any vice? Active pity for all the failures and all the weak: Christianity.

The problem I thus pose is not what shall succeed mankind in the sequence of living beings (man is an *end*), but what type of man shall be *bred*, shall be *willed*, for being higher in value, worthier of life, more certain of a future.

Even in the past this higher type has appeared often—but as a fortunate accident, as an exception, never as something *willed*. In fact, this has been the type most dreaded—almost *the* dreadful—and from dread the opposite type was willed, bred, and *attained*: the domestic animal, the herd animal, the sick human animal—the Christian.

Mankind does *not* represent a development toward something better or stronger or higher in the sense accepted today. "Progress" is merely a modern idea, that is, a false idea. The European of today is

vastly inferior in value to the European of the Renaissance: further development is altogether *not* according to any necessity in the direction of elevation, enhancement, or strength.

In another sense, success in individual cases is constantly encountered in the most widely different places and cultures: Here we really do find a *higher type*, which is, in relation to mankind as a whole, a kind of overman. Such fortunate accidents of great success have always been possible and *will* perhaps always be possible. And even whole families, tribes, or peoples may occasionally represent such a *bull's eye*.

Christianity should not be beautified and embellished: It has waged deadly war against this higher type of man; it has placed all the basic instincts of this type under the ban; and out of these instincts it has distilled evil and the Evil One: The strong man as the typically reprehensible man, the "reprobate." Christianity has sided with all that is weak and base, with all failures; it has made an ideal of whatever *contradicts* the instinct of the strong life to preserve itself; it has corrupted the reason even of those strongest in spirit by teaching men to consider the supreme values of the spirit as something sinful, as something that leads into error—as temptations. The most pitiful example: The corruption of Pascal, who believed in the corruption of his reason through original sin when it had in fact been corrupted only by his Christianity.

It is a painful, horrible spectacle that has dawned on me: I have drawn back the curtain from the *corruption* of man. In my mouth, this word is at least free from one suspicion: that it might involve a moral accusation of man. It is meant—let me emphasize this once more—*moraline-free*. So much so that I experience this corruption most strongly precisely where men have so far aspired most deliberately to "virtue" and "godliness." I understand corruption, as you will guess, in the sense of decadence: it is my contention that all the values in which mankind now sums up its supreme desiderata are *decadence-values*.

I call an animal, a species, or an

individual corrupt when it loses its instincts, when it chooses, when it prefers, what is disadvantageous for it. A history of "lofty sentiments," of the "ideals of mankind"—and it is possible that I shall have to write it—would almost explain too *why* man is so corrupt. Life itself is to my mind the instinct for growth, for durability, for an accumulation of forces, for *power*: Where the will to power is lacking there is decline. It is my contention that all the supreme values of mankind *lack* this will—that the values which are symptomatic of decline, *nihilistic* values, are lording it under the holiest names.

It is necessary to say whom we consider our antithesis: It is the theologians and whatever has theologians' blood in its veins—and that includes our whole philosophy.

Whoever has seen this catastrophe at close range or, better yet, been subjected to it and almost perished of it, will no longer consider it a joking matter (the free-thinking of our honorable natural scientists and physiologists is, to my mind, a joke: They lack passion in these matters, they do not suffer them as their passion and martyrdom). This poisoning is much more extensive than is generally supposed: I have found the theologians' instinctive arrogance wherever anyone today considers himself an "idealist"—wherever a right is assumed, on the basis of some higher origin, to look at reality from a superior and foreign vantage point.

The idealist, exactly like the priest, holds all the great concepts in his hand (and not only in his hand!); he plays them out with a benevolent contempt for the "understanding," the "senses," "honors," "good living," and "science"; he considers all that *beneath* him, as so many harmful and seductive forces over which "the spirit" hovers in a state of pure for-itselfness—as if humility, chastity, poverty, or, in one word, *holiness*, had not harmed life immeasurably more than any horrors or vices. The pure spirit is the pure lie.

As long as the priest is considered a *higher type* of man—this *professional*

negator, slanderer, and poisoner of life—there is no answer to the question: What is truth? For truth has been stood on its head when the conscious advocate of nothingness and negation is accepted as the representative of "truth."

Against this theologians' instinct I wage war: I have found its traces everywhere. Whoever has theologians' blood in his veins, sees all things in a distorted and dishonest perspective to begin with. The pathos which develops out of this condition calls itself *faith*: Closing one's eyes to oneself once and for all, lest one suffer the sight of incurable falsehood. This faulty perspective on all things is elevated into a morality, a virtue, a holiness; the good conscience is tied to faulty vision; and no *other* perspective is conceded any further value once one's own has been made sacrosanct with the names of "God," "redemption," and "eternity." I have dug up the theologians' instinct everywhere: It is the most widespread, really *subterranean*, form of falsehood found on earth.

Whatever a theologian feels to be true *must* be false: This is almost a criterion of truth. His most basic instinct of self-preservation forbids him to respect reality at any point or even to let it get a word in. Wherever the theologians' instinct extends, *value judgments* have been stood on their heads and the concepts of "true" and "false" are of necessity reversed: Whatever is most harmful to life is called "true"; whatever elevates it, enhances, affirms, justifies it, and makes it triumphant, is called "false." When theologians reach out for *power* through the "conscience" of princes (or of peoples), we need never doubt what really happens at bottom: the will to the end, the *nihilistic* will, wants power.

A critique of the *Christian conception of God* forces us to the same conclusion. A people that still believes in itself retains its own god. In him it reveres the conditions which let it prevail, its virtues: It projects its pleasure in itself, its feeling of power, into a being to whom one may offer thanks. Whoever is rich wants to give of

his riches; a proud people needs a god: it wants to *sacrifice*. Under such conditions, religion is a form of thankfulness. Being thankful for himself, man needs a god. Such a god must be able to help and to harm, to be friend and enemy—he is admired whether good or destructive. The *anti-natural* castration of a god, to make him a god of the good alone, would here be contrary to everything desirable. The evil god is needed no less than the good god: After all, we do not owe our own existence to tolerance and humanitarianism.

What would be the point of a god who knew nothing of wrath, revenge, envy, scorn, cunning, and violence? who had perhaps never experienced the delightful *ardeurs* of victory and annihilation? No one would understand such a god: Why have him then?

To be sure, when a people is perishing, when it feels how its faith in the future and its hope of freedom are waning irrevocably, when submission begins to appear to it as the prime necessity and it becomes aware of the virtues of the subjugated as the conditions of self-preservation, then its god *has to* change too. Now he becomes a sneak, timid and modest; he counsels "peace of soul," hate-no-more, forbearance, even "love" of friend and enemy. He moralizes constantly, he crawls into the cave of every private virtue, he becomes god for everyman, he becomes a private person, a cosmopolitan.

Formerly, he represented a people, the strength of a people, everything aggressive and power-thirsty in the soul of a people; now he is merely the good god.

Indeed, there is no other alternative for gods: *either* they are the will to power, and they remain a people's gods, *or* the *incapacity* for power, and then they necessarily become *good*.

Wherever the will to power declines in any form, there is invariably also a physiological retrogression, decadence. The deity of decadence, gelded in his most virile virtues and instincts, becomes of necessity the god of the physiologically retrograde, of the weak. Of course, they do not

call themselves the weak; they call themselves "the good."

No further hint is required to indicate the moments in history at which the dualistic fiction of a good and an evil god first became possible. The same instinct which prompts the subjugated to reduce their god to the "good-in-itself" also prompts them to eliminate all the good qualities from the god of their conquerors; they take revenge on their masters by turning their god into the *devil*. The *good* god and the *devil*—both abortions of decadence.

How can anyone today still submit to the simplicity of Christian theologians to the point of insisting with them that the development of the conception of God from the "God of Israel," the god of a people, to the Christian God, the quintessence of everything good, represents *progress*? Yet even Renan does this. As if Renan had the right to be simple-minded! After all, the opposite stares you in the face. When the presuppositions of *ascending* life, when everything strong, brave, masterful, and proud is eliminated from the conception of God; when he degenerates step by step into a mere symbol, a staff for the weary, a sheet-anchor for the drowning; when he becomes the god of the poor, the sinners, and the sick par excellence, and the attribute "Savior" or "Redeemer" remains in the end as the one essential attribute of divinity—just *what* does such a transformation signify? what, such a *reduction* of the divine?

To be sure, "the kingdom of God" has thus been enlarged. Formerly he had only his people, his "chosen" people. Then he, like his people, became a wanderer and went into foreign lands; and ever since, he has not settled down anywhere—until he finally came to feel at home anywhere, this great cosmopolitan—until "the great numbers" and half the earth were on his side. Nevertheless, the god of "the great numbers," the democrat among the gods, did not become a proud pagan god: He remained a Jew, he remained a god of nooks, the god of all the dark corners and places, of all the unhealthy quarters the world over!

His world-wide kingdom is, as ever, an underworld kingdom, a hospital, a

southern kingdom, a ghetto kingdom. And he himself: So pale, so weak, so decadent. Even the palest of the pale were able to master him: our honorable metaphysicians, those concept-albinos. They spun their webs around him until, hypnotized by their motions, he himself became a spider, another metaphysician. Now he, in turn, spun the world out of himself—*sub specie Spinozae*. Now he transfigured himself into something ever thinner and paler; he became an "ideal," he became "pure spirit," the "Absolute," the "thing-in-itself." The deterioration of a god: God became the "thing-in-itself."

The Christian conception of God—God as god of the sick, God as a spider, God as spirit—is one of the most corrupt conceptions of the divine ever attained on earth. It may even represent the low-water mark in the descending development of divine types. God degenerated into the *contradiction* of life, instead of being its transfiguration and eternal Yes! God as the declaration of war against life, against nature, against the will to live! God—the formula for every slander against "this world," for every lie about the "beyond"! God—the deification of nothingness, the will to nothingness pronounced holy!

That the strong races of northern Europe did not reject the Christian God certainly does no credit to their religious genius—not to speak of their taste. There is no excuse whatever for their failure to dispose of such a sickly and senile product of decadence. But a curse lies upon them for this failure: They have absorbed sickness, old age, and contradiction into all their instincts—and since then they have not *created* another god. Almost two thousand years—and not a single new god! But still, as if his existence were justified, as if he represented the ultimate and the maximum of the god-creating power, of the *creator spiritus* in man, this pitiful god of Christian monotonous-theism! This hybrid product of decay, this mixture of zero, concept, and contradiction, in which all the instincts of decadence, all

cowardices and wearinesses of the soul, find their sanction!

Here I merely touch on the problem of the *genesis* of Christianity. The *first* principle for its solution is: Christianity can be understood only in terms of the soil out of which it grew—it is *not* a counter-movement to the Jewish instinct, it is its very consequence, one inference more in its awe-inspiring logic. In the formula of the Redeemer: "Salvation is of the Jews." The *second* principle is: The psychological type of the Galilean is still recognizable; but only in its complete degeneration (which is at the same time a mutilation and an overloading with alien features) could it serve as that for which it has been used—as the type of a redeemer of mankind.

The Jews are the strangest people in world history because, confronted with the question whether to be or not to be, they chose, with a perfectly uncanny deliberateness, to be *at any price*: this price was the radical *falsification* of all nature, all naturalness, all reality, of the whole inner world as well as the outer. They defined themselves sharply *against* all the conditions under which a people had hitherto been able to live, been *allowed* to live; out of themselves they created a counter-concept to *natural* conditions: they turned religion, cult, morality, history, psychology, one after the other, into an incurable *contradiction to their natural values*. We encounter this same phenomenon once again and in immeasurably enlarged proportions, yet merely as a copy: The Christian church cannot make the slightest claim to originality when compared with the "holy people." That precisely is why the Jews are the *most catastrophic* people of world history: By their aftereffect they have made mankind so thoroughly false that even today the Christian can feel anti-Jewish without realizing that he himself is *the ultimate Jewish consequence*.

One should not be deceived: Great spirits are skeptics. Zarathustra is a skeptic. Strength, *freedom* which is born of the strength and overstrength of the spirit, all

proves itself by skepticism. Men of conviction are not worthy of the least consideration in fundamental questions of value and disvalue. Convictions are prisons. Such men do not look far enough, they do not look *beneath* themselves: but to be permitted to join in the discussion of value and disvalue, one must see five hundred convictions *beneath* oneself—*behind* oneself.

A spirit who wants great things, who also wants the means to them, is necessarily a skeptic. Freedom from all kinds of convictions, to be able to see freely, is part of strength. Great passion, the ground and the power of his existence, even more enlightened, even more despotic than he is himself, employs his whole intellect; it makes him unhesitating; it gives him courage even for unholy means; under certain circumstances it does not begrudge him convictions. Conviction as a *means*: many things are attained only by means of a conviction. Great passion uses and uses up convictions, it does not succumb to them—it knows itself sovereign.

Conversely: The need for faith, for some kind of unconditional Yes and No, this Carlylism, if one will forgive me this word, is a need born of *weakness*. The man of faith, the "believer" of every kind, is necessarily a dependent man—one who cannot posit *himself* as an end, one who cannot posit any end at all by himself. The "believer" does not belong to *himself*, he can only be a means, he must be *used up*, he requires somebody to use him up. His instinct gives the highest honor to a

Genealogy of Morals*

The really great haters in the history of the world have always been priests, who are also the cleverest haters—in comparison with the cleverness of priestly revenge, every other piece of cleverness is practically negligible. Human history would be too fatuous for anything were it not for the

* From Friedrich Nietzsche, *Genealogy of Morals* (1887; trans. Oscar Levy, 1910).

morality of self-abnegation; everything persuades him in this direction: his prudence, his experience, his vanity. Every kind of faith is itself an expression of self-abnegation, of self-alienation.

If one considers how necessary most people find something regulatory, which will bind them from without and tie them down; how compulsion, *slavery* in a higher sense, is the sole and ultimate condition under which the more weak-willed human being, woman in particular, can prosper—then one will also understand conviction, "faith." The man of conviction has his backbone in it. *Not* to see many things, to be impartial at no point, to be party through and through, to have a strict and necessary perspective in all questions of value—this alone makes it possible for this kind of human being to exist at all. But with this they are the opposite, the antagonists, of what is truthful—of truth.

The believer is not free to have any conscience at all for questions of "true" and "untrue": To have integrity on *this* point would at once destroy him. The pathological condition of his perspective turns the convinced into fanatics—Savonarola, Luther, Rousseau, Robespierre, Saint-Simon: the opposition-type of the strong spirit who has *become* free. Yet, the grand pose of these *sick* spirits, these epileptics of the concept, makes an impression on the great mass: the fanatics are picturesque; mankind prefers to see gestures rather than to hear *reasons*.

cleverness imported into it by the weak—take at once the most important instance. All the world's efforts against the "aristocrats," the "mighty," the "masters," the "holders of power," are negligible by comparison with what has been accomplished against those classes by *the Jews*—the Jews, that priestly nation which eventually realized that the one method of effecting satisfaction on its enemies and

tyrants was by means of a radical transvaluation of values, which was at the same time an act of the *cleverest revenge*. Yet, the method was only appropriate to a nation of priests, to a nation of the most jealously nursed priestly revengefulness. It was the Jews who, in opposition to the aristocratic equation (good = aristocratic = beautiful = happy = loved by the gods), dared with a terrifying logic to suggest the contrary equation, and indeed to maintain with the teeth of the most profound hatred (the hatred of weakness) this contrary equation, namely, "the wretched are alone the good; the poor, the weak, the lowly, are alone the good; the suffering, the needy, the sick, the loathsome, are the only ones who are pious, the only ones who are blessed, for them alone is salvation—but you, on the other hand, you aristocrats, you men of power, you are to all eternity the evil, the horrible, the covetous, the insatiate, the godless; eternally also shall you be the unblessed, the cursed, the damned!" We know who it was who reaped the heritage of this Jewish transvaluation. In the context of the monstrous and inordinately fateful initiative which the Jews have exhibited in connection with this most fundamental of all declarations of war, I remember the passage which came to my pen on another occasion (*Beyond Good and Evil*, Aph. 195)—that it was, in fact, with the Jews that the *revolt of the slaves* begins in the sphere of *morals*; that revolt which has behind it a history of two millennia, and which at the present day has only moved out of our sight, because it—has achieved victory.

While the aristocratic man lived in confidence and openness with himself the resentful man, on the other hand, is neither sincere nor naive, nor honest and candid with himself. His *soul squints*; his mind loves hidden crannies, tortuous paths and backdoors, everything secret appeals to him as *his* world, *his* safety, *his* balm; he is past master in silence, in not forgetting, in waiting, in provisional self-depreciation and self-abasement. A race of such *resentful* men will of necessity eventually prove more *prudent* than any

aristocratic race, it will honour prudence on quite a distinct scale, as, in fact, a paramount condition of existence, while prudence among aristocratic men is apt to be tinged with a delicate flavor of luxury and refinement; so among them it plays nothing like so integral a part as that complete certainty of function of the governing *unconscious* instincts, or as indeed a certain lack of prudence, such as a vehement and valiant charge, whether against danger or the enemy, or as those ecstatic bursts of rage, love, reverence, gratitude, by which at all times noble souls have recognized each other. When the resentment of the aristocratic man manifests itself, it fulfills and exhausts itself in an immediate reaction, and consequently instills no *venom*: on the other hand, it never manifests itself at all in countless instances, when in the case of the feeble and weak it would be inevitable. An inability to take seriously for any length of time their enemies, their disasters, their *misdeeds*—that is the sign of the full strong natures who possess a superfluity of moulding plastic force, that heals completely and produces forgetfulness: a good example of this in the modern world is Mirabeau, who had no memory for any insults and meannesses which were practiced on him, and who was only incapable of forgiving because he forgot. Such a man indeed shakes off with a shrug many a worm which would have buried itself in another; it is only in characters like these that we see the possibility (supposing, of course, that there is such a possibility in the world) of the real "*love of one's enemies*." What respect for his enemies is found, forsooth, in an aristocratic man—and such a reverence is already a bridge to love! He insists on having his enemy to himself as his distinction. He tolerates no other enemy but a man in whose character there is nothing to despise and *much* to honor! On the other hand, imagine the "enemy" as the resentful man conceives him—and it is here exactly that we see his work, his creativeness; he has conceived "the evil enemy," the "evil one," and indeed that is the root idea from which he now evolves as a contrasting and

corresponding figure a "good one," himself—his very self!

The method of this man is quite contrary to that of the aristocratic man, who conceives the root idea "good" spontaneously and straight away, that is to say, out of himself, and from that material then creates for himself a concept of "bad"! This "bad" of aristocratic origin and that "evil" out of the cauldron of unsatisfied hatred—the former an imitation, an "extra," an additional nuance; the latter, on the other hand, the original, the beginning, the essential act in the conception of a slave morality—these two words "bad" and "evil," how great a difference do they mark, in spite of the fact that they have an identical contrary in the idea "good." But the idea "good" is *not* the same: much rather let the question be asked, "Who is really evil according to the meaning of the morality of resentment?" In all sternness let it be answered thus:—*just* the good man of the other morality, just the aristocrat, the powerful one, the one who rules, but who is distorted by the venomous eye of resentment, into a new colour, a new signification, a new appearance. This particular point we would be the last to deny: the man who learnt to know those "good" ones only as enemies, learnt at the same time not to know them only as "evil enemies," and the same men who *inter pares* were kept so rigorously in bounds through convention, respect, custom, and gratitude, though much more through mutual vigilance and jealousy *inter pares*, these men who in their relations with each other find so many new ways of manifesting consideration, self-control, delicacy, loyalty, pride, and friendship, these men are in reference to what is outside their circle (where the foreign element, a *foreign* country, begins), not much better than beasts of prey, which have been let loose. They enjoy there freedom from all social control, they feel that in the wilderness they can give vent with impunity to that tension which is produced by enclosure and imprisonment in the peace of society, they *revert* to the innocence of the beast-of-prey conscience, like jubilant monsters, who perhaps come from a ghostly bout of murder, arson, rape, and

torture, with bravado and a moral equanimity, as though merely some wild student's prank had been played, perfectly convinced that the poets have now an ample theme to sing and celebrate. It is impossible not to recognize at the core of all these aristocratic races the beast of prey; the *magnificent blond beast*, avidly rampant for spoil and victory; this hidden core needed an outlet from time to time, the beast must get loose again, must return into the wilderness—the Roman, Arabic, German, and Japanese nobility, the Homeric heroes, the Scandinavian Vikings, are all alike in this need. It is the aristocratic races who have left the idea "Barbarian" on all the tracks in which they have marched; nay, a consciousness of this very barbarianism, and even a pride in it, manifests itself even in their highest civilization (for example, when Pericles says to his Athenians in that celebrated funeral oration, "Our audacity has forced a way over every land and sea, rearing everywhere imperishable memorials of itself for *good* and for *evil*").

Granted the truth of the theory now believed to be true, that the very *essence* of all civilization is to *train* out of man, the beast of prey, a tame and civilized animal, a domesticated animal, it follows indubitably that we must regard as the real *tools of civilization* all those instincts of reaction and resentment, by the help of which the aristocratic races, together with their ideals, were finally degraded and overpowered; though that has not yet come to be synonymous with saying that the bearers of those tools also *represented* the civilization. It is rather the contrary that is not only probable—nay, it is *palpable* today; these bearers of vindictive instincts that have to be bottled up, these descendants of all European and non-European slavery, especially of the pre-Aryan population—these people, I say, represent the *decline* of humanity! These "tools of civilization" are a disgrace to humanity, and constitute in reality more of an argument against civilization, more of a reason why civilization should be suspected. One may be perfectly justified

in being always afraid of the blond beast that lies at the core of all aristocratic races, and in being on one's guard: but who would not a hundred times prefer to be afraid, when one at the same time admires, than to be immune from fear, at the cost of being perpetually obsessed with the loathsome spectacle of the distorted, the dwarfed, the stunted, the envenomed? And is that not our fate? What produces today our repulsion towards "man"?—for we *suffer* from "man," there is no doubt about it. It is not fear; it is rather that we have nothing more to fear from men; it is that the worm "man" is in the foreground and pullulates; it is that the "tame man," the wretched mediocre and unedifying creature, has learnt to consider himself a goal and a pinnacle, an inner meaning, an historic principle, a "higher man"; yes, it is that he has a certain right so to consider himself, in so far as he feels that in contrast to that excess of deformity, disease, exhaustion, and effeteness whose odor is beginning to pollute present-day Europe,

he at any rate has achieved a relative success, he at any rate still says "yes" to life.

The future of German culture rests with the sons of Prussian officers.

Parliaments may be very useful to a strong and versatile statesman: He has something there to rely upon (every such thing must, however, be able to resist!)—upon which he can throw a great deal of responsibility. On the whole, however, I could wish that the counting mania and the superstitious belief in majorities were not established in Germany, as with the Latin races, and that one could finally invent something new even in politics! It is senseless and dangerous to let the custom of universal suffrage—which is still but a short time under cultivation, and could easily be uprooted—take a deeper root: whilst, of course, its introduction was merely an expedient to steer clear of temporary difficulties.

II MUSSOLINI

*The Doctrine of Fascism**

FUNDAMENTAL IDEAS

1. Like every sound political conception, Fascism is both practice and thought; action in which a doctrine is immanent, and a doctrine which, arising out of a given system of historical forces, remains embedded in them and works there from within. Hence it has a form correlative to the contingencies of place and time, but it has also a content of thought which raises it to a formula of truth in the higher level of the history of thought. In the world one does not act spiritually as a human will dominating other wills without a conception of the transient and particular reality under which it is necessary to act, and of the permanent and universal reality in which the first has its being and its life. In order to know men it is necessary to know man; and in order to know man it is necessary to know reality and its laws. There is no concept of the State which is not fundamentally a concept of life: philosophy or intuition, a system of ideas which develops logically or is gathered up into a vision or into a faith, but which is always, at least virtually, an organic conception of the world.

2. Thus Fascism could not be understood in many of its practical manifestations as a party organization, as a system of education, as a discipline, if it were not always looked at in the light of its whole way of conceiving life, a spiritualized way. The world seen through

* From Michael Oakshott, *The Social and Political Doctrines of Contemporary Europe* (Cambridge Univ. Press, 1939). By permission.

Fascism is not this material world which appears on the surface, in which man is an individual separated from all others and standing by himself, and in which he is governed by a natural law that makes him instinctively live a life of selfish and momentary pleasure. The man of Fascism is an individual who is nation and fatherland, which is a moral law, binding together individuals and the generations into a tradition and a mission, suppressing the instinct for a life enclosed within the brief round of pleasure in order to restore within duty a higher life free from the limits of time and space: a life in which the individual, through the denial of himself, through the sacrifice of his own private interests, through death itself, realizes that completely spiritual existence in which his value as a man lies.

3. Therefore it is a spiritualized conception, itself the result of the general reaction of modern times against the flabby materialistic positivism of the nineteenth century. Anti-positivistic, but positive: not sceptical, nor agnostic, nor pessimistic, nor passively optimistic, as are, in general, the doctrines (all negative) that put the centre of life outside man, who with his free will can and must create his own world. Fascism desires an active man, one engaged in activity with all his energies: it desires a man virilely conscious of the difficulties that exist in action and ready to face them. It conceives of life as a struggle, considering that it behoves man to conquer for himself that life truly worthy of him, creating first of all in himself the instrument

(physical, moral, intellectual) in order to construct it. Thus for the single individual, thus for the nation, thus for humanity. Hence the high value of culture in all its forms (art, religion, science), and the enormous importance of education. Hence also the essential value of work, with which man conquers nature and creates the human world (economic, political, moral, intellectual).

4. This positive conception of life is clearly an ethical conception. It covers the whole of reality, not merely the human activity which controls it. No action can be divorced from moral judgement; there is nothing in the world which can be deprived of the value which belongs to everything in its relation to moral ends. Life, therefore, as conceived by the Fascist, is serious, austere, religious: the whole of it is poised in a world supported by the moral and responsible forces of the spirit. The Fascist disdains the "comfortable" life.

5. Fascism is a religious conception in which man is seen in his immanent relationship with a superior law and with an objective Will that transcends the particular individual and raises him to conscious membership of a spiritual society. Whoever has seen in the religious politics of the Fascist regime nothing but mere opportunism has not understood that Fascism besides being a system of government is also, and above all, a system of thought.

6. Fascism is an historical conception, in which man is what he is only in so far as he works with the spiritual process in which he finds himself, in the family or social group, in the nation and in the history in which all nations collaborate. From this follows the great value of tradition, in memories, in language, in customs, in the standards of social life. Outside history man is nothing. Consequently Fascism is opposed to all the individualistic abstractions of a materialistic nature like those of the eighteenth century; and it is opposed to all Jacobin utopias and innovations. It does not consider that "happiness" is possible upon

earth, as it appeared to be in the desire of the economic literature of the eighteenth century, and hence it rejects all teleological theories according to which mankind would reach a definitive stabilized condition at a certain period in history. This implies putting oneself outside history and life, which is a continual change and coming to be. Politically, Fascism wishes to be a realistic doctrine; practically, it aspires to solve only the problems which arise historically of themselves and that of themselves find or suggest their own solution. To act among men, as to act in the natural world, it is necessary to enter into the process of reality and to master the already operating forces.

7. Against individualism, the Fascist conception is for the State; and it is for the individual in so far as he coincides with the State, which is the conscience and universal will of man in his historical existence. It is opposed to classical Liberalism, which arose from the necessity of reacting against absolutism, and which brought its historical purpose to an end when the State was transformed into the conscience and will of the people. Liberalism denied the State in the interests of the particular individual; Fascism reaffirms the State as the true reality of the individual. And if liberty is to be the attribute of the real man, and not of that abstract puppet envisaged by individualistic Liberalism, Fascism is for liberty. And for the only liberty which can be a real thing, the liberty of the State and of the individual within the State. Therefore, for the Fascist, everything is in the State, and nothing human or spiritual exists, much less has value, outside the State. In this sense Fascism is totalitarian, and the Fascist State, the synthesis and unity of all values, interprets, develops and gives strength to the whole life of the people.

8. Outside the State there can be neither individuals nor groups (political parties, associations, syndicates, classes). Therefore Fascism is opposed to Socialism, which confines the movement of history within the class struggle and ignores

the unity of classes established in one economic and moral reality in the State; and analogously it is opposed to class syndicalism. Fascism recognizes the real exigencies for which the socialist and syndicalist movement arose, but while recognizing them wishes to bring them under the control of the State and give them a purpose within the corporative system of interests reconciled within the unity of the State.

9. Individuals form classes according to the similarity of their interests, they form syndicates according to differentiated economic activities within these interests; but they form first, and above all, the State, which is not to be thought of numerically as the sum-total of individuals forming the majority of a nation. And consequently Fascism is opposed to Democracy, which equates the nation to the majority, lowering it to the level of that majority; nevertheless it is the purest form of democracy if the nation is conceived, as it should be, qualitatively and not quantitatively, as the most powerful idea (most powerful because most moral, most coherent, most true) which acts within the nation as the conscience and the will of a few, even of One, which ideal tends to become active within the conscience and the will of all—that is to say, of all those who rightly constitute a nation by reason of nature, history or race, and have set out upon the same line of development and spiritual formation as one conscience and one sole will. Not a race,¹ nor a geographically determined region, but as a community historically perpetuating itself, a multitude unified by a single idea, which is the will to existence and to power: consciousness of itself, personality.

10. This higher personality is truly the nation in so far as it is the State. It is not the nation that generates the State, as according to the old naturalistic concept which served as the basis of the political theories of the national States of the

¹ "Race; it is an emotion, not a reality; ninety-five per cent of it is emotion." Mussolini.

nineteenth century. Rather the nation is created by the State, which gives to the people, conscious of its own moral unity, a will and therefore an effective existence. The right of a nation to independence derives not from a literary and ideal consciousness of its own being, still less from a more or less unconscious and inert acceptance of a *de facto* situation, but from an active consciousness, from a political will in action and ready to demonstrate its own rights; that is to say, from a state already coming into being. The State, in fact, as the universal ethical will, is the creator of right.

11. The nation as the State is an ethical reality which exists and lives in so far as it develops. To arrest its development is to kill it. Therefore the State is not only the authority which governs and gives the form of laws and the value of spiritual life to the wills of individuals, but it is also a power that makes its will felt abroad, making it known and respected, in other words, demonstrating the fact of its universality in all the necessary directions of its development. It is consequently organization and expansion, at least virtually. Thus it can be likened to the human will which knows no limits to its development and realizes itself in testing its own limitlessness.

12. The Fascist State, the highest and most powerful form of personality, is a force, but a spiritual force, which takes over all the forms of the moral and intellectual life of man. It cannot therefore confine itself simply to the functions of order and supervision as Liberalism desired. It is not simply a mechanism which limits the sphere of the supposed liberties of the individual. It is the form, the inner standard and the discipline of the whole person; it saturates the will as well as the intelligence. Its principle, the central inspiration of the human personality living in the civil community, pierces into the depths and makes its home in the heart of the man of action as well as of the thinker, of the artist as well as of the scientist: it is the soul of the soul.

13. Fascism, in short, is not only the giver of laws and the founder of institu-

tions, but the educator and promoter of spiritual life. It wants to remake, not the forms of human life, but its content, man, character, faith. And to this end it requires discipline and authority that can enter into the spirits of men and there govern unopposed. Its sign, therefore, is the Lictors' rods, the symbol of unity, of strength and justice.

POLITICAL AND SOCIAL DOCTRINE

1. When in the now distant March of 1919 I summoned to Milan, through the columns of the *Popolo d' Italia*, my surviving supporters who had followed me since the constitution of the Fasces of Revolutionary Action, founded in January 1915, there was no specific doctrinal plan in my mind. I had known and lived through only one doctrine, that of the Socialism of 1903-4 up to the winter of 1914, almost ten years. My experience in this had been that of a follower and of a leader, but not that of a theoretician. My doctrine, even in that period, had been a doctrine of action. An unequivocal Socialism, universally accepted, did not exist after 1905, when the Revisionist Movement began in Germany under Bernstein and there was formed in opposition to that, in the see-saw of tendencies, an extreme revolutionary movement, which in Italy never emerged from the condition of mere words, whilst in Russian Socialism it was the prelude to Bolshevism. Reform, Revolution, Centralization—even the echoes of the terminology are now spent; whilst in the great river of Fascism are to be found the streams which had their source in Sorel, Peguy, in the Lagardelle of the *Mouvement Socialiste* and the groups of Italian Syndicalists, who between 1904 and 1914 brought a note of novelty into Italian Socialism, which by that time had been devitalized and drugged by fornication with Giolitti, in *Pagine Libere* of Olivetti, *La Lupa* of Orano and *Divenire Sociale* of Enrico Leone.

In 1919, at the end of the War, Socialism as a doctrine was already dead: it

existed only as hatred, it had still only one possibility, especially in Italy, that of revenge against those who had wished for the War and who should be made to expiate it. The *Popolo d' Italia* expressed it in its subtitle—"The Newspaper of Combatants and Producers." The word "producers" was already the expression of a tendency. Fascism was not given out to the wet nurse of a doctrine elaborated beforehand round a table: it was born of the need for action; it was not a party, but in its first two years it was a movement against all parties. The name which I gave to the organization defined its characteristics. Nevertheless, whoever rereads, in the now crumpled pages of the time, the account of the constituent assembly of the *Fasci italiani di Combattimento* will not find a doctrine, but a series of suggestions, of anticipations, of admonitions, which when freed from the inevitable vein of contingency, were destined later, after a few years, to develop into a series of doctrinal attitudes which made of Fascism a self-sufficient political doctrine able to face all others, both past and present. "If the bourgeoisie," I said at that time, "thinks to find in us a lightning-conductor, it is mistaken. We must go forward in opposition to Labour. . . . We want to accustom the working classes to being under a leader, to convince them also that it is not easy to direct an industry or a commercial undertaking successfully. . . . We shall fight against technical and spiritual retrogression. . . . The successors of the present regime still being undecided, we must not be unwilling to fight for it. We must hasten; when the present regime is superseded, we must be the ones to take its place. The right of succession belongs to us because we pushed the country into the War and we led it to victory. The present method of political representation cannot be sufficient for us, we wish for a direct representation of individual interests. . . . It might be said against this programme that it is a return to the corporations. It doesn't matter! . . . I should like, nevertheless, the Assembly to accept the claims of national syndicalism

from the point of view of economics. . . ."

Is it not surprising that from the first day in the Piazza San Sepolcro there should resound the word "Corporation" which was destined in the course of the revolution to signify one of the legislative and social creations at the base of the regime?

2. The years preceding the March on Rome were years during which the necessity of action did not tolerate enquiries or complete elaborations of doctrine. Battles were being fought in the cities and villages. There were discussions, but—and this is more sacred and important—there were deaths. People knew how to die. The doctrine—beautiful, well-formed, divided into chapters and paragraphs and surrounded by a commentary—might be missing; but there was present something more decisive to supplant it—Faith. Nevertheless, he who recalls the past with the aid of books, articles, votes in Parliament, the major and the minor speeches, he who knows how to investigate and weigh evidence, will find that the foundations of the doctrine were laid while the battle was raging. It was precisely in these years that Fascist thought armed itself, refined itself, moving towards one organization of its own. The problems of the individual and the State; the problems of authority and liberty; political and social problems and those more specifically national; the struggle against liberal, democratic, socialist, Masonic, demagogic doctrines was carried on at the same time as the "punitive expeditions." But since the "system" was lacking, adversaries ingenuously denied that Fascism had any power to make a doctrine of its own, while the doctrine rose up, even though tumultuously, at first under the aspect of a violent and dogmatic negation, as happens to all ideas that break new ground, then under the positive aspect of a constructive policy which, during the years 1926, 1927, 1928, was realized in the laws and institutions of the regime.

Fascism is to-day clearly defined not only as a regime but as a doctrine. And I mean by this that Fascism to-day, self-critical as well as critical of other movements, has an unequivocal point of view of its own, a criterion, and hence an aim, in the face of all the material and intellectual problems which oppress the people of the world.

3. Above all, Fascism, in so far as it considers and observes the future and the development of humanity quite apart from the political considerations of the moment, believes neither in the possibility nor in the utility of perpetual peace. It thus repudiates the doctrine of Pacifism—born of a renunciation of the struggle and an act of cowardice in the face of sacrifice. War alone brings up to their highest tension all human energies and puts the stamp of nobility upon the peoples who have the courage to meet it. All other trials are substitutes, which never really put a man in front of himself in the alternative of life and death. A doctrine, therefore, which begins with a prejudice in favour of peace is foreign to Fascism; as are foreign to the spirit of Fascism, even though acceptable by reason of the utility which they might have in given political situations, all internationalistic and socialistic systems which, as history proves, can be blown to the winds when emotional, idealistic and practical movements storm the hearts of peoples. Fascism carries over this anti-pacifist spirit even into the lives of individuals. The proud motto of the *Squadrista*, "Me ne frego," written on the bandages of a wound is an act of philosophy which is not only stoical, it is the epitome of a doctrine that is not only political: it is education for combat, the acceptance of the risks which it brings: it is a new way of life for Italy. Thus the Fascist accepts and loves life, he knows nothing of suicide and despises it; he looks on life as duty, ascent, conquest; life which must be noble and full: lived for oneself but above all for those others near and far away, present and future.

4. The "demographic" policy of the

regime follows from these premises. Even the Fascist does in fact love his neighbour, but this "neighbour" is not for him a vague and ill-defined concept; love for one's neighbour does not exclude necessary educational severities, and still less differentiations and distances. Fascism rejects universal concord, and, since it lives in the community of civilized peoples, it keeps them vigilantly and suspiciously before its eyes, it follows their states of mind and the changes in their interests and it does not let itself be deceived by temporary and fallacious appearances.

5. Such a conception of life makes Fascism the precise negation of that doctrine which formed the basis of the so-called Scientific or Marxian Socialism: the doctrine of historical Materialism according to which the history of human civilizations can be explained only as the struggle of interest between the different social groups and as arising out of change in the means and instruments of production. That economic improvements—discoveries of raw materials, new methods of work, scientific inventions—should have an importance of their own, no one denies, but that they should suffice to explain human history to the exclusion of all other factors is absurd: Fascism believes, now and always, in holiness and in heroism, that is in acts in which no economic motive—remote or immediate—plays a part. With this negation of historical materialism, according to which men would be only by-products of history, who appear and disappear on the surface of the waves while in the depths the real directive forces are at work, there is also denied the immutable and irreparable "class struggle" which is the natural product of this economic conception of history, and above all it is denied that the class struggle can be the primary agent of social changes. Socialism, being thus wounded in these two primary tenets of its doctrine, nothing of it is left save the sentimental aspiration—old as humanity—towards a social order in which the sufferings and the pains of

the humblest folk could be alleviated. But here Fascism rejects the concept of an economic "happiness" which would be realized socialistically and almost automatically at a given moment of economic evolution by assuring to all a maximum prosperity. Fascism denies the possibility of the materialistic conception of "happiness" and leaves it to the economists of the first half of the eighteenth century; it denies, that is, the equation of prosperity with happiness, which would transform men into animals with one sole preoccupation: that of being well-fed and fat, degraded in consequence to a merely physical existence.

6. After Socialism, Fascism attacks the whole complex of democratic ideologies and rejects them both in their theoretical premises and in their applications or practical manifestations. Fascism denies that the majority, through the mere fact of being a majority, can rule human societies; it denies that this majority can govern by means of a periodical consultation; it affirms the irremediable, fruitful and beneficent inequality of men, who cannot be levelled by such a mechanical and extrinsic fact as universal suffrage. By democratic regimes we mean those in which from time to time the people is given the illusion of being sovereign, while true effective sovereignty lies in other, perhaps irresponsible and secret, forces. Democracy is a regime without a king, but with very many kings, perhaps more exclusive, tyrannical and violent than one king even though a tyrant. This explains why Fascism, although before 1922 for reasons of expediency it made a gesture of republicanism, renounced it before the March on Rome, convinced that the question of the political forms of a State is not pre-eminent today, and that studying past and present monarchies, past and present Republics, it becomes clear that monarchy and republic are not to be judged *sub specie aeternitatis*, but represent forms in which the political evolution, the history, the tradition, the psychology of a given country are manifested. Now Fascism

overcomes the antithesis between monarchy and republic which retarded the movements of democracy, burdening the former with every defect and defending the latter as the regime of perfection. Now it has been seen that there are inherently reactionary and absolutistic republics, and monarchies that welcome the most daring political and social innovations.

7. "Reason, Science," said Renan (who was inspired before Fascism existed) in one of his philosophical Meditations, "are products of humanity, but to expect reason directly from the people and through the people is a chimera. It is not necessary for the existence of reason that everybody should know it. In any case, if such an initiation should be made, it would not be made by means of base democracy, which apparently must lead to the extinction of every difficult culture, and every higher discipline. The principle that society exists only for the prosperity and the liberty of the individuals who compose it does not seem to conform with the plans of nature, plans in which the species alone is taken into consideration and the individual seems to be sacrificed. It is strongly to be feared lest the last word of democracy thus understood (I hasten to say that it can also be understood in other ways) would be a social state in which a degenerate mass would have no other care than to enjoy the ignoble pleasures of vulgar men."

Thus far Renan. Fascism rejects in democracy the absurd conventional lie of political equalitarianism clothed in the dress of collective irresponsibility and the myth of happiness and indefinite progress. But if democracy can be understood in other ways, that is, if democracy means not to relegate the people to the periphery of the State, then Fascism could be defined as an "organized, centralized, authoritarian democracy."

8. In face of Liberal doctrines, Fascism takes up an attitude of absolute opposition both in the field of politics and in that of economics. It is not neces-

sary to exaggerate—merely for the purpose of present controversies—the importance of Liberalism in the past century, and to make of that which was one of the numerous doctrines sketched in that century a religion of humanity for all times, present and future. Liberalism flourished for no more than some fifteen years. It was born in 1830, as a reaction against the Holy Alliance that wished to drag Europe back to what it had been before 1789, and it had its year of splendour in 1848 when even Pius IX was a Liberal. Immediately afterwards the decay set in. If 1848 was a year of light and of poetry, 1849 was a year of darkness and of tragedy. The Republic of Rome was destroyed by another Republic, that of France. In the same year Marx launched the gospel of the religion of Socialism with the famous *Communist Manifesto*. In 1851 Napoleon III carried out his unilateral *coup d'état* and ruled over France until 1870, when he was dethroned by a popular revolt, but as a consequence of a military defeat which ranks among the most resounding that history can relate. The victor was Bismarck, who never knew the home of the religion of liberty or who were its prophets. It is symptomatic that a people of high culture like the Germans should have been completely ignorant of the religion of liberty during the whole of the nineteenth century. It was, there, no more than a parenthesis, represented by what has been called the "ridiculous Parliament of Frankfurt" which lasted only a season. Germany has achieved her national unity outside the doctrines of Liberalism, against Liberalism, a doctrine which seems foreign to the German soul, a soul essentially monarchical, whilst Liberalism is the historical and logical beginning of anarchism. The stages of German unity are the three wars of 1864, 1866 and 1870, conducted by "Liberals" like Moltke and Bismarck. As for Italian unity, Liberalism has had in it a part absolutely inferior to the share of Mazzini and of Garibaldi, who were not Liberals. Without the intervention of the

unliberal Napoleon we should not have gained Lombardy, and without the help of the unliberal Bismarck at Sadowa and Sedan, very probably we should not have gained Venice in 1866; and in 1870 we should not have entered Rome. From 1870–1915 there occurs the period in which the very priests of the new creed had to confess the twilight of their religion: defeated as it was by decadence in literature, by activism in practice. Activism: that is to say, Nationalism, Futurism, Fascism. The "Liberal" century, after having accumulated an infinity of Gordian knots, tried to untie them by the hecatomb of the World War. Never before has any religion imposed such a cruel sacrifice. Were the gods of Liberalism thirsty for blood? Now Liberalism is about to close the doors of its deserted temples because the peoples feel that its agnosticism in economics, its indifference in politics and in morals, would lead, as they have led, the States to certain ruin. In this way one can understand why all the political experiences of the contemporary world are anti-Liberal, and it is supremely ridiculous to wish on that account to class them outside of history; as if history were a hunting ground reserved to Liberalism and its professors, as if Liberalism were the definitive and no longer surpassable message of civilization.

9. But the Fascist repudiations of Socialism, Democracy, Liberalism must not make one think that Fascism wishes to make the world return to what it was before 1789, the year which has been indicated as the year of the beginning of the liberal-democratic age. One does not go backwards. The Fascist doctrine has not chosen De Maistre as its prophet. Monarchical absolutism is a thing of the past and so also is every theocracy. So also feudal privileges and division into impenetrable and isolated castes have had their day. The theory of Fascist authority has nothing to do with the police State. A party that governs a nation in a totalitarian way is a new fact in history. References and comparisons are not pos-

sible. Fascism takes over from the ruins of Liberal Socialistic democratic doctrines those elements which still have a living value. It preserves those that can be called the established facts of history, it rejects all the rest, that is to say the idea of a doctrine which holds good for all times and all peoples. If it is admitted that the nineteenth century has been the century of Socialism, Liberalism, and Democracy, it does not follow that the twentieth must also be the century of Liberalism, Socialism, and Democracy. Political doctrines pass; peoples remain. It is to be expected that this century may be that of authority, a century of the "Right," a Fascist century. If the nineteenth was the century of the individual (Liberalism means individualism) it may be expected that this one may be the century of "collectivism" and therefore the century of the State. That a new doctrine should use the still vital elements of other doctrines is perfectly logical. No doctrine is horn quite new, shining, never before seen. No doctrine can boast of an absolute "originality." It is bound, even if only historically, to other doctrines that have been, and to develop into other doctrines that will be. Thus the scientific socialism of Marx is bound to the Utopian Socialism of the Fouriers, the Owens and the Saint-Simons; thus the Liberalism of the nineteenth century is connected with the whole "Enlightenment" of the eighteenth century. Thus the doctrines of democracy are bound to the *Encyclopédie*. Every doctrine tends to direct the activity of men towards a determined objective; but the activity of man reacts upon the doctrine, transforms it, adapts it to new necessities or transcends it. The doctrine itself, therefore, must be, not words, but an act of life. Hence, the pragmatic veins in Fascism, its will to power, its will to be, its attitude in the face of the fact of "violence" and of its own courage.

10. The keystone of Fascist doctrine is the conception of the State, of its essence, of its tasks, of its ends. For Fascism the State is an absolute before

which individuals and groups are relative. Individuals and groups are "thinkable" in so far as they are within the State. The Liberal State does not direct the interplay and the material and spiritual development of the groups, but limits itself to registering the results; the Fascist State has a consciousness of its own, a will of its own, on this account it is called an "ethical" State. In 1929, at the first quinquennial assembly of the regime, I said:

For Fascism, the State is not the night-watchman who is concerned only with the personal security of the citizens; nor is it an organization for purely material ends, such as that of guaranteeing a certain degree of prosperity and a relatively peaceful social order, to achieve which a council of administration would be sufficient, nor is it a creation of mere politics with no contact with the material and complex reality of the lives of individuals and the life of peoples. The State, as conceived by Fascism and as it acts, is a spiritual and moral fact because it makes concrete the political, juridical, economic organization of the nation and such an organization is, in its origin and in its development, a manifestation of the spirit. The State is the guarantor of internal and external security, but it is also the guardian and the transmitter of the spirit of the people as it has been elaborated through the centuries in language, custom, faith. The State is not only present, it is also past, and above all future. It is the State which, transcending the brief limit of individual lives, represents the immanent conscience of the nation. The forms in which States express themselves change, but the necessity of the State remains. It is the State which educates citizens for civic virtue, makes them conscious of their mission, calls them to unity; harmonizes their interests in justice; hands on the achievements of thought in the sciences, the arts, in law, in human solidarity; it carries men from the elementary life of the tribe to the highest human expression of power which is Empire; it entrusts to the ages the names of those who died for its integrity or in obedience to its laws;

it puts forward as an example and recommends to the generations that are to come the leaders who increased its territory and the men of genius who gave it glory. When the sense of the State declines and the disintegrating and centrifugal tendencies of individuals and groups prevail, national societies move to their decline.

11. From 1929 up to the present day these doctrinal positions have been strengthened by the whole economic-political evolution of the world. It is the State alone that grows in size, in power. It is the State alone that can solve the dramatic contradictions of capitalism. What is called the crisis cannot be overcome except by the State, within the State. Where are the shades of the Jules Simons who, at the dawn of Liberalism, proclaimed that "the State must strive to render itself unnecessary and to prepare for its demise"; of the MacCullochs who, in the second half of the last century, affirmed that the State must abstain from too much governing? And faced with the continual, necessary and inevitable interventions of the State in economic affairs what would the Englishman Bentham now say, according to whom industry should have asked of the State only to be left in peace? Or the German Humboldt, according to whom the "idle" State must be considered the best? It is true that the second generation of Liberal economists was less extremist than the first, and already Smith himself opened, even though cautiously, the door to State intervention in economics. But when one says Liberalism, one says the individual; when one says Fascism, one says the State. But the Fascist State is unique; it is an original creation. It is not reactionary, but revolutionary in that it anticipates the solutions of certain universal problems. These problems are no longer seen in the same light: in the sphere of politics they are removed from party rivalries, from the supreme power of parliament, from the irresponsibility of assemblies; in the sphere of economics they are removed from the sphere of the syndicates' ac-

tivities—activities that were ever widening their scope and increasing their power both on the workers' side and on the employers'—removed from their struggles and their designs; in the moral sphere they are divorced from ideas of the need for order, discipline, and obedience, and lifted into the plane of the moral commandments of the fatherland. Fascism desires the State to be strong, organic and at the same time founded on a wide popular basis. The Fascist State has also claimed for itself the field of economics and, through the corporative, social, and educational institutions which it has created, the meaning of the State reaches out to and includes the farthest off-shoots; and within the State, framed in their respective organizations, there revolve all the political, economic and spiritual forces of the nation. A State founded on millions of individuals who recognize it, feel it, are ready to serve it, is not the tyrannical State of the medieval lord. It has nothing in common with the absolutist States that existed either before or after 1789. In the Fascist State the individual is not suppressed, but rather multiplied, just as in a regiment a soldier is not weakened but multiplied by the number of his comrades. The Fascist State organizes the nation, but it leaves sufficient scope to individuals; it has limited useless or harmful liberties and has preserved those that are essential. It cannot be the individual who decides in this matter, but only the State.

12. The Fascist State does not remain indifferent to the fact of religion in general and to that particular positive religion which is Italian Catholicism. The State has no theology, but it has an ethic. In the Fascist State religion is looked upon as one of the deepest manifestations of the spirit; it is, therefore, not only respected, but defended and protected. The Fascist State does not create a "God" of its own, as Robespierre once, at the height of the Convention's foolishness, wished to do; nor does it vainly seek, like Bolshevism, to expel religion from the minds of men; Fascism respects the God of the ascetics, of the saints, of

the heroes, and also God as seen and prayed to by the simple and primitive heart of the people.

13. The Fascist State is a will to power and to government. In it the tradition of Rome is an idea that has force. In the doctrine of Fascism Empire is not only a territorial, military, or mercantile expression, but spiritual or moral. One can think of an empire, that is to say a nation that directly or indirectly leads other nations, without needing to conquer a single square kilometre of territory. For Fascism the tendency to Empire, that is to say, to the expansion of nations, is a manifestation of vitality; its opposite, staying at home, is a sign of decadence: peoples who rise or re-rise are imperialist, peoples who die are renunciatory. Fascism is the doctrine that is most fitted to represent the aims, the states of mind, of a people, like the Italian people, rising again after many centuries of abandonment or slavery to foreigners. But Empire calls for discipline, coordination of forces, duty, and sacrifice; this explains many aspects of the practical working of the regime and the direction of many of the forces of the State and the necessary severity shown to those who would wish to oppose this spontaneous and destined impulse of the Italy of the twentieth century, to oppose it in the name of the superseded ideologies of the nineteenth, repudiated wherever great experiments of political and social transformation have been courageously attempted: especially where, as now, peoples thirst for authority, for leadership, for order. If every age has its own doctrine, it is apparent from a thousand signs that the doctrine of the present age is Fascism. That it is a doctrine of life is shown by the fact that it has resuscitated a faith. That this faith has conquered minds is proved by the fact that Fascism has had its dead and its martyrs.

Fascism henceforward has in the world the universality of all those doctrines which, by fulfilling themselves, have significance in the history of the human spirit.

FREUD

One of the main causes of Plato's lasting influence is that his theory of the state is based on a *theory of man*. Although his conception of the nature of man may seem out of date, in some respects it shows a remarkable understanding of the complexity of human personality. His psychological hypotheses are weakest where his aristocratic, antidemocratic political outlook blocks his objective appraisal of reality, and where the antiscientific, mythical elements in his philosophy are reflected in his views on the nature of man. Yet, despite these psychological imperfections, his political theory gained immensely from his realization that no study of state and society can be fruitful unless it is based on a systematic conception of man's nature and motivations. In particular, Plato's sense of the complexity of social and political issues is anchored in the realization that they cannot be dealt with in isolation, and that they are ultimately human problems, infused with all the contradictory and irrational elements of man's nature and existence. This psychological element in Plato's political theory has always been one of the most suggestive aspects, regardless of whether one follows or rejects the conclusions of political Platonism.

In modern political theory Rousseau was perhaps the last writer who was keenly interested in the totality of man rather than in his political behavior alone. Like Plato, Rousseau was intensely concerned with education as a process of taming man's irrational forces and transmuting them into socially desirable activities from which the state could derive strength and cohesion. After Rousseau, political speculation increasingly abandoned the older tradition of Platonic and medieval thought in which the nature of the state was related to the nature of man. The classical political doctrines since the late eighteenth century generally have assumed an oversimplified rationalistic conception of man without subjecting it carefully to empirical analysis, and have proceeded to build a theory of state and society on the basis of such an assumption. Facts that do not seem to fit into the framework of theory have been dismissed as extraordinary, abnormal, irregular, or contrary to reason. The intellectual failure to account for the causes and existence of irrational, aggressive, and destructive facts in human relations was later reflected in the practical weakness of coping with such tendencies on the larger international scale.

A new dimension of understanding human behavior has been added by the work of Sigmund Freud (1856–1939). Freud started as a practicing physician in Vienna, and his psychological theories evolved out of his experience as a neurologist and psychiatrist, and not from any preconceived ideas. His pioneering contributions to medicine, psychology, and psychiatry are related to his discoveries of the processes and mechanisms of the *unconscious* in man's mind. Whereas pre-Freudian psychology virtually identified mental with conscious processes, Freud maintains (in his *General Introduction to Psychoanalysis*, 1916–1917) that "mental processes are essentially unconscious, and that those which are conscious are merely isolated acts and parts of the whole psychic entity."

Starting his clinical work with the treatment of the repressions and conflicts of neurotics, Freud soon saw that such conflicts were not peculiar to neurotics but were also found in mentally healthy persons, and the neuroses were not diseases in the traditional meaning of the word but ineffective and distorted ways of dealing with psychological stresses and strains. In his *Psychopathology of Everyday Life* (1904), one of his earliest major works, Freud had already shown that the ordinary slips of the tongue, forgetting of familiar names or events, and other faulty actions of normal persons in everyday life were not the product of accident but repressed thoughts of the unconscious that come to the surface despite the attempt to conceal and repress them. The study of the unconscious led Freud to examine the nature of dreams and of wit and humor as expressions of thoughts that cannot be tolerated in the conscious layers of the mind.

Freud's emphasis on the vital role of repressed sexual impulses at first aroused a great deal of opposition. Later that opposition died down when it was understood that the scientific analysis of the unconscious, irrational forces in man has the effect of lessening their damaging effect: the more we progress in understanding the mechanisms and processes of these irrational forces, the more we may eventually succeed in rationally controlling them.

Firmly believing that psychological phenomena are embedded, like all other phenomena of nature, in the stream of causality, Freud pursued the origin of neurotic conflicts in adults to their childhood experiences, repressions, and conflicts. He found striking similarities between the mental processes of neurotics and children, and between these and the mental processes of primitive peoples. Pathological behavior of neurotics is essentially regression to earlier, infantile stages in the development of normal functions, and the myths of primitive peoples show a striking resemblance to the phantasies of some classes of mentally ill in the western world. Particularly as he grew older, Freud became increasingly absorbed in the study of archaeology, ethnology, anthropology, religion, folklore, and mythology, and he drew attention to the remarkable similarities in the mental development of the individual and that of the human race as a whole.

One of Freud's most general works is his *Civilization and Its Discontents* (1930). Freud analyzes modern civilization in terms of two basic types of man's instinctual life: on the one hand, man has an impulse to love and cooperate, and, on the other, man has the impulse to attack and destroy. The first impulse is called by Freud (as by Plato in his *Symposium*) Eros, of which sexual love is only

one manifestation. The purpose of the erotic impulse is to tie together, to establish ever greater unities, whereas the purpose of the second, the *death* instinct, is to attack, dissolve, destroy, and, finally, to reduce living things to an inorganic death. Freud shows that civilization owes its existence to the possibility of sublimating love for one's family into the wider friendship and loyalty for the group, society, and, lastly, the state.

Yet the very act of this transformation and sublimation of love creates tensions and frustrations that strengthen the aggressive impulses in man. The progress of civilization is thus a constant struggle between the cooperative and aggressive impulses in man, whose frustrations and conflicts turn into aggressive attitudes toward himself or others.

Writing in 1930, when the world seemed to be relatively safe and stable, Freud says in *Civilization and Its Discontents* that "civilized society is perpetually menaced with disintegration through this primary hostility of men towards one another." Freud argues against the communist thesis that the abolition of private property would eliminate personal and collective aggressions. Without taking sides with regard to the economic desirability of private property, Freud predicted in 1930 that the abolition of private property would not inaugurate a reign of love and cooperation in the Soviet Union. On the contrary, Freud warned that persecution in the Soviet Union would not come to an end once the bourgeois class was liquidated, and he predicted that the Russian Communists would eventually direct their aggressive tendencies against the outside world.

The emotional, "libidinal" ties that bind men together in furthering the progress of civilization are thus constantly menaced by the "natural instinct of aggressiveness in man, the hostility of each one against all and of all against each one." The meaning of the evolution of culture is therefore to be found in the constant struggle between "Eros and Death." Freud refused to prophesy whether cooperation would ultimately triumph over aggression and destruction, and he was perturbed by a new source of tension: men have learned to subdue the forces of nature to such an extent that the extermination of the whole human race has become a distinct possibility, and Freud ascribes to this fact (intensified a thousand times by the subsequent development of the atom and hydrogen bombs) an increased state of unrest, dejection, and apprehension that will lead to still more hostility and aggression.

In 1932 the League of Nations and the International Institute of Intellectual Cooperation asked Albert Einstein, the greatest physicist since Newton, to choose a significant issue of the time, and to discuss it with a person to be selected by him. Einstein chose the problem: "Is there a way of delivering mankind from the menace of war?" as the most important issue of humanity, and he selected Freud as the person most qualified to illuminate its cause and cure. This exchange of letters was published by the League of Nations under the title of *Why War?* in 1933. By that time the establishment of the Nazi regime in Germany had made the question one of tragic timeliness.

Applying his two basic concepts of erotic and destructive impulses, Freud came to the conclusion that "there is no likelihood of our being able to suppress humanity's aggressive tendencies." The problem of eliminating war, Freud argues, cannot be tackled directly by seeking to abolish the aggressive impulses

in man, but must be tackled indirectly by diverting these impulses into channels other than warfare and by strengthening the emotional ties that bring men together in common efforts and enjoyments. Freud also holds that the organization of society along rational principles rather than the traditional pattern of authoritarian leadership would indirectly strengthen the forces of peace. All such indirect methods, however, he is bound to admit, "conjure up an ugly picture of mills that grind so slowly that, before the flour is ready, men are dead of hunger."

Yet, owing to two facts, Freud is not wholly pessimistic about the possibility of eliminating war: first, man's progressive ability to master intellectually his instinctual life, and, second, "a well-founded dread of the form that future wars will take." Civilization is essentially the process of taming and domesticating man's instincts, and Freud does not know how the next phase of that process will come about. But he ends with the not altogether hopeless note that "meanwhile we may rest on the assurance that whatever makes for cultural development is working also against war."

Freud did most of his life's work in a period of optimistic, rationalistic liberalism. He was one of the few scientists and thinkers of his era who realized how fragile were the foundations of rationalism and optimism, always menaced by the dark and little-known forces of demonic irrationality lurking in the unconscious of man. If the progress of civilization consists in advancing into the frontiers of the unknown, in conquering more and more ignorance and suffering, Freud's contribution to the tradition of scientific humanism is immense. Freud himself resolutely denied that psychoanalysis is in itself a comprehensive philosophy of life, a *Weltanschauung*, and insisted (in the last of his *New Introductory Lectures on Psycho-Analysis*, 1933) that psychoanalysis shares, as a specialized science and branch of psychology, in the general philosophical orientation of all science: "It asserts that there is no other source of knowledge of the universe but the systematic intellectual analysis of carefully verified observations—in fact, what is called research—and that no knowledge can be obtained from revelation, intuition, or divination.

Although Freud well understood that scientific thought is "still in its infancy," and that there are still many problems with which science has been unable to cope, he did not regard reason as an end in itself. In the great tradition of western humanism, he postulated the value of increasing man's happiness and decreasing his suffering as a worthwhile practical goal, with reason as the only means to that end.

Whereas Plato saw in vision the supreme act of knowing truth, and in irrational myths the basis of authoritarian leadership, Freud regards verifiable experience as the only source of knowledge, and the rational organization of society—without the Platonic pattern of thought control and aristocratic domination—as the only means to a life of freedom and happiness. Wherever the adversaries of objective science have gained power, Freud's name has been considered dangerous and subversive. Wherever, on the other hand, thought is free and science unfettered, Freud's illumination of the dark recesses of the human mind and his strengthening of the scientific tradition is considered a milestone of humanist rationalism.

FREUD

Civilization and Its Discontents *

THE LOVE IMPULSE

What are the influences to which the evolution of culture owes its origin, how did it arise and what determined its course?

This task seems too big a one; one may well confess oneself diffident. Here follows what little I have been able to elicit about it.

Once primitive man had made the discovery that it lay in his own hands—speaking literally—to improve his lot on earth by working, it cannot have been a matter of indifference to him whether another man worked with him or against him. The other acquired the value of a fellow-worker, and it was advantageous to live with him. Even earlier, in his ape-like prehistory, man had adopted the habit of forming families: his first helpers were probably the members of his family. One may suppose that the founding of families was in some way connected with the period when the need for genital satisfaction, no longer appearing like an occasional guest who turns up suddenly and then vanishes without letting one hear anything of him for long intervals, had settled down with each man like a permanent lodger. When this happened, the male acquired a motive for keeping the female, or rather, his sexual objects, near him; while the female, who wanted not to be separated from her helpless young, in their interests, too, had to stay

by the stronger male. In this primitive family one essential feature of culture is lacking: the will of the father, the head of it, was unfettered. I have endeavoured in *Totem und Tabu* to show how the way led from this family-life to the succeeding phase of communal existence in the form of a band of brothers. By overpowering the father, the sons had discovered that several men united can be stronger than a single man. The totemic stage of culture is founded upon the restrictions that the band were obliged to impose on one another in order to maintain the new system. These taboos were the first "Right" or law. The life of human beings in common therefore had a twofold foundation, i.e. the compulsion to work, created by external necessity, and the power of love, causing the male to wish to keep his sexual object, the female, near him, and the female to keep near her that part of herself which has become detached from her, her child. Eros and Ananke were the parents of human culture, too. The first result of culture was that a larger number of human beings could then live together in common. And since the two great powers were here cooperating together, one might have expected that further cultural evolution would have proceeded smoothly towards ever greater mastery over the external world, as well as towards greater extension in the numbers of men sharing the life in common. Nor is it easy to understand how this culture can be felt as anything but satisfying by those who partake of it.

Before we go on to enquire where the

disturbances in it arise, we will let ourselves digress from the point that love was one of the founders of culture and so fill a gap left in our previous discussion. We said that man, having found by experience that sexual (genital) love afforded him his greatest gratification, so that it became in effect a prototype of all happiness to him, must have been thereby impelled to seek his happiness further along the path of sexual relations, to make genital erotism the central point of his life. We went on to say that in so doing he becomes to a very dangerous degree dependent on a part of the outer world, namely, on his chosen love-object, and this exposes him to most painful sufferings if he is rejected by it or loses it through death or defection. The wise men of all ages have consequently warned us emphatically against this way of life; but in spite of all it retains its attraction for a great number of people.

A small minority are enabled by their constitution nevertheless to find happiness along the path of love; but far-reaching mental transformations of the erotic function are necessary before this is possible. These people make themselves independent of their object's acquiescence by transferring the main value from the fact of being loved to their own act of loving; they protect themselves against loss of it by attaching their love not to individual objects but to all men equally, and they avoid the uncertainties and disappointments of genital love by turning away from its sexual aim and modifying the instinct into an impulse with an *inhibited aim*. The state which they induce in themselves by this process—an unchangeable, undeviating, tender attitude—has little superficial likeness to the stormy vicissitudes of genital love, from which it is nevertheless derived. It seems that Saint Francis of Assisi may have carried this method of using love to produce an inner feeling of happiness as far as anyone; what we are thus characterizing as one of the procedures by which the pleasure-principle fulfils itself has in fact been linked up in many ways

with religion; the connection between them may lie in those remote fastnesses of the mind where the distinctions between the ego and objects and between the various objects become matters of indifference. From one ethical standpoint, the deeper motivation of which will later become clear to us, this inclination towards an all-embracing love of others and of the world at large is regarded as the highest state of mind of which man is capable. Even at this early stage in the discussion I will not withhold the two principal objections we have to raise against this view. A love that does not discriminate seems to us to lose some of its own value, since it does an injustice to its object. And secondly, not all men are worthy of love.

The love that instituted the family still retains its power; in its original form it does not stop short of direct sexual satisfaction, and in its modified form as aim-inhibited friendliness it influences our civilization. In both these forms it carries on its task of binding men and women to one another, and it does this with greater intensity than can be achieved through the interest of work in common. The casual and undifferentiated way in which the word "love" is employed by language has its genetic justification. In general usage the relation between a man and a woman whose genital desires have led them to found a family is called love; but the positive attitude of feeling between parents and children, between brothers and sisters in a family, is also called love, although to us this relation merits the description of aim-inhibited love or affection. Love with an inhibited aim was indeed originally full sensual love and in men's unconscious minds is so still. Both of them, the sensual and the aim-inhibited forms, reach out beyond the family and create new bonds with others who before were strangers. Genital love leads to the forming of new families; aim-inhibited love to "friendships," which are valuable culturally because they do not entail many of the limitations of genital love—for instance, its exclusiveness. But

* From Sigmund Freud, *Civilization and Its Discontents* (Hogarth Press, 1930). By permission of Hogarth Press, Ltd., London, and W. W. Norton and Company, Inc., New York.

the interrelations between love and culture lose their simplicity as development proceeds. On the one hand, love opposes the interests of culture; on the other, culture menaces love with grievous restrictions.

This rift between them seems inevitable; the cause of it is not immediately recognizable. It expresses itself first in a conflict between the family and the larger community to which the individual belongs. We have seen already that one of culture's principal endeavours is to cement men and women together into larger units. But the family will not give up the individual. The closer the attachment between the members of it, the more they often tend to remain aloof from others, and the harder it is for them to enter into the wider circle of the world at large. That form of life in common which is phylogenetically older, and is in childhood its only form, resists being displaced by the type that becomes acquired later with culture. Detachment from the family has become a task that awaits every adolescent, and often society helps him through it with pubertal and initiatory rites. One gets the impression that these difficulties form an integral part of every process of mental evolution—and indeed, at bottom, of every organic development, too.

The next discord is caused by women, who soon become antithetical to cultural trends and spread around them their conservative influence—the women who at the beginning laid the foundations of culture by the appeal of their love. Women represent the interests of the family and sexual life; the work of civilization has become more and more men's business; it confronts them with ever harder tasks, compels them to sublimations of instinct which women are not easily able to achieve. Since man has not an unlimited amount of mental energy at his disposal, he must accomplish his tasks by distributing his libido to the best advantage. What he employs for cultural purposes he withdraws to a great extent from women and his sexual life; his constant

association with men and his dependence on his relations with them even estrange him from his duties as husband and father. Woman finds herself thus forced into the background by the claims of culture and she adopts an inimical attitude towards it.

The tendency of culture to set restrictions upon sexual life is no less evident than its other aim of widening its sphere of operations. Even the earliest phase of it, the totemic, brought in its train the prohibition against incestuous object-choice, perhaps the most maiming wound ever inflicted throughout the ages on the erotic life of man. Further limitations are laid on it by taboos, laws and customs, which touch men as well as women. Various types of culture differ in the lengths to which they carry this; and the material structure of the social fabric also affects the measure of sexual freedom that remains. We have seen that culture obeys the laws of psychological economic necessity in making the restrictions, for it obtains a great part of the mental energy it needs by subtracting it from sexuality. Culture behaves towards sexuality in this respect like a tribe or a section of the population which has gained the upper hand and is exploiting the rest to its own advantage. Fear of a revolt among the oppressed then becomes a motive for even stricter regulations. A high-water mark in this type of development has been reached in our Western European civilization. Psychologically it is fully justified in beginning by censuring any manifestations of the sexual life of children, for there would be no prospect of curbing the sexual desires of adults if the ground had not been prepared for it in childhood. Nevertheless there is no sort of justification for the lengths beyond this to which civilized society goes in actually denying the existence of these manifestations, which are not merely demonstrable but positively glaring. Where sexually mature persons are concerned, object-choice is further narrowed down to the opposite sex and most of the extra-genital forms of satis-

faction are interdicted as perversions. The standard which declares itself in these prohibitions is that of a sexual life identical for all; it pays no heed to the disparities in the inborn and acquired sexual constitutions of individuals and cuts off a considerable number of them from sexual enjoyment, thus becoming a cause of grievous injustice. The effect of these restrictive measures might presumably be that all the sexual interest of those who are normal and not constitutionally handicapped could flow without further forfeiture into the channel left open to it. But the only outlet not thus censured, heterosexual genital love, is further circumscribed by the barriers of legitimacy and monogamy. Present-day civilization gives us plainly to understand that sexual relations are permitted only on the basis of a final, indissoluble bond between a man and woman; that sexuality as a source of enjoyment for its own sake is unacceptable to it; and that its intention is to tolerate it only as the hitherto irreplaceable means of multiplying the human race.

This, of course, represents an extreme. Everyone knows that it has proved impossible to put it into execution, even for short periods. Only the weaklings have submitted to such comprehensive interference with their sexual freedom, and stronger natures have done so only under one compensatory condition, of which mention may be made later. Civilized society has seen itself obliged to pass over in silence many transgressions which by its own ordinances it ought to have penalized. This does not justify anyone, however, in leaning towards the other side and assuming that, because it does not achieve all it aims at, such an attitude on the part of society is altogether harmless. The sexual life of civilized man is seriously disabled, whatever we may say; it sometimes makes an impression of being a function in process of becoming atrophied, just as organs like our teeth and our hair seem to be. One is probably right in supposing that the importance of sexuality as a source of plea-

urable sensations, *i.e.* as a means of fulfilling the purpose of life, has perceptibly decreased.¹ Sometimes one imagines one perceives that it is not only the oppression of culture, but something in the nature of the function itself, that denies us full satisfaction and urges us in other directions. This may be an error; it is hard to decide.

THE AGGRESSIVE IMPULSE

Psycho-analytic work has shown that these frustrations in respect of sexual life are especially unendurable to the so-called neurotics among us. These persons manufacture substitute-gratifications for themselves in their symptoms, which, however, are either painful in themselves or become the cause of suffering owing to the difficulties they create with the person's environment and society at large. It is easy to understand the latter fact, but the former presents us with a new problem. But culture demands other sacrifices besides that of sexual gratifications.

We have regarded the difficulties in the development of civilization as part of the general difficulty accompanying all evolution, for we have traced them to the inertia of libido, its disinclination to relinquish an old position in favour of a new one. It is much the same thing if we say that the conflict between civilization and sexuality is caused by the circumstance that sexual love is a relationship between two people, in which a third can only be superfluous or disturbing, whereas civilization is founded on relations between larger groups of persons. When a love-relationship is at its height no room is left for any interest in the

¹ There is a short story, which I valued long ago, by a highly sensitive writer, the Englishman, John Galsworthy, who to-day enjoys general recognition; it is called "The Apple Tree." It shows in a very moving and forcible way how there is no longer any place in present-day civilized life for a simple natural love between two human beings.

surrounding world; the pair of lovers are sufficient unto themselves, do not even need the child they have in common to make them happy. In no other case does Eros so plainly betray the core of his being, his aim of making one out of many; but when he has achieved it in the proverbial way through the love of two human beings, he is not willing to go further.

From all this we might well imagine that a civilized community could consist of pairs of individuals such as this, libidinally satisfied in each other, and linked to all the others by work and common interests. If this were so, culture would not need to levy energy from sexuality. But such a desirable state of things does not exist and never has existed; in actuality culture is not content with such limited ties as these; we see that it endeavours to bind the members of the community to one another by libidinal ties as well, that it makes use of every means and favours every avenue by which powerful identifications can be created among them, and that it exacts a heavy toll of aim-inhibited libido in order to strengthen communities by bonds of friendship between the members. Restrictions upon sexual life are unavoidable if this object is to be attained. But we cannot see the necessity that forces culture along this path and gives rise to its antagonism to sexuality. It must be due to some disturbing influence not yet detected by us.

We may find the clue in one of the so-called ideal standards of civilized society. It runs: "Thou shalt love thy neighbour as thyself." It is world-renowned, undoubtedly older than Christianity which parades it as its proudest profession, yet certainly not very old; in historical times men still knew nothing of it. We will adopt a naïve attitude towards it, as if we were meeting it for the first time. Thereupon we find ourselves unable to suppress a feeling of astonishment, as at something unnatural. Why should we do this? What good is it to us? Above all, how can we do such a thing? How could

it possibly be done? My love seems to me a valuable thing that I have no right to throw away without reflection. It imposes obligations on me which I must be prepared to make sacrifices to fulfil. If I love someone, he must be worthy of it in some way or other. (I am leaving out of account now the use he may be to me, as well as his possible significance to me as a sexual object; neither of these two kinds of relationship between us come into question where the injunction to love my neighbour is concerned.) He will be worthy of it if he is so like me in important respects that I can love myself in him; worthy of it if he is so much more perfect than I that I can love my ideal of myself in him; I must love him if he is the son of my friend, since the pain my friend would feel if anything untoward happened to him would be my pain—I should have to share it. But if he is a stranger to me and cannot attract me by any value he has in himself or any significance he may have already acquired in my emotional life, it will be hard for me to love him. I shall even be doing wrong if I do, for my love is valued as a privilege by all those belonging to me; it is an injustice to them if I put a stranger on a level with them. But if I am to love him (with that kind of universal love) simply because he, too, is a denizen of the earth, like an insect or an earthworm or a grass-snake, then I fear that but a small modicum of love will fall to his lot and it would be impossible for me to give him as much as by all the laws of reason I am entitled to retain for myself. What is the point of an injunction promulgated with such solemnity, if reason does not recommend it to us?

When I look more closely I find still further difficulties. Not merely is this stranger on the whole not worthy of love, but, to be honest, I must confess he has more claim to my hostility, even to my hatred. He does not seem to have the least trace of love for me, does not show me the slightest consideration. If it will do him any good, he has no hesitation in injuring me, never even asking himself

whether the amount of advantage he gains by it bears any proportion to the amount of wrong done to me. What is more, he does not even need to get an advantage from it; if he can merely get a little pleasure out of it, he thinks nothing of jeering at me, insulting me, slandering me, showing his power over me; and the more secure he feels himself, or the more helpless I am, with so much more certainty can I expect this behaviour from him towards me. If he behaved differently, if he showed me consideration and did not molest me, I should in any case, without the aforesaid commandment, be willing to treat him similarly. If the high-sounding ordinance had run, "Love thy neighbour as thy neighbour loves thee," I should not take objection to it. And there is a second commandment that seems to me even more incomprehensible, and arouses still stronger opposition in me. It is: "Love thine enemies." When I think it over, however, I am wrong in treating it as a greater imposition. It is at bottom the same thing.²

I imagine now I hear a voice gravely adjuring me: "Just because thy neighbour is not worthy of thy love, is probably full of enmity towards thee, thou shouldst love him as thyself." I then perceive the case to be like that of *Credo quia absurdum*.

Now it is, of course, very probable that my neighbour, when he is com-

² A great poet may permit himself, at least in jest, to give utterance to psychological truths that are heavily censured. Thus Heine: "Mine is the most peaceable disposition. My wishes are a humble dwelling with a thatched roof, but a good bed, good food, milk and butter of the freshest, flowers at my windows, some fine tall trees before my door; and if the good God wants to make me completely happy, he will grant me the joy of seeing some six or seven of my enemies hanging from these trees. With my heart full of deep emotion I shall forgive them before they die all the wrong they did me in their lifetime—true, one must forgive one's enemies, but not until they are brought to execution." (Heine, *Gedanken und Einfälle*.)

manded to love me as himself, will answer exactly as I have done and reject me for the same reasons. I hope he will not have the same objective grounds for doing so, but he will hope so as well. Even so, there are variations in men's behaviour which ethics, disregarding the fact that they are determined, classifies as "good" and "evil." As long as these undeniable variations have not been abolished, conformity to the highest ethical standards constitutes a betrayal of the interests of culture, for it puts a direct premium on wickedness. One is irresistibly reminded here of an incident in the French Chamber when capital punishment was being discussed; the speech of a member who had passionately supported its abolition was being applauded with loud acclamation, when suddenly a voice was heard calling out from the back of the room, "*Que messieurs les assassins commencent!*"

The bit of truth behind all this—one so eagerly denied—is that men are not gentle, friendly creatures wishing for love, who simply defend themselves if they are attacked, but that a powerful measure of desire for aggression has to be reckoned as part of their instinctual endowment. The result is that their neighbour is to them not only a possible helper or sexual object, but also a temptation to them to gratify their aggressiveness on him, to exploit his capacity for work without recompense, to use him sexually without his consent, to seize his possessions, to humiliate him, to cause him pain, to torture and to kill him. *Homo homini lupus*; who has the courage to dispute it in the face of all the evidence in his own life and in history? This aggressive cruelty usually lies in wait for some provocation, or else it steps into the service of some other purpose, the aim of which might as well have been achieved by milder measures. In circumstances that favour it, when those forces in the mind which ordinarily inhibit it cease to operate, it also manifests itself spontaneously and reveals men as savage beasts to whom the thought of sparing

their own kind is alien. Anyone who calls to mind the atrocities of the early migrations, of the invasion by the Huns or by the so-called Mongols under Jenghiz Khan and Tamurlane, of the sack of Jerusalem by the pious Crusaders, even indeed the horrors of the last world-war, will have to bow his head humbly before the truth of this view of man.

The existence of this tendency to aggression which we can detect in ourselves and rightly presume to be present in others is the factor that disturbs our relations with our neighbours and makes it necessary for culture to institute its high demands. Civilized society is perpetually menaced with disintegration through this primary hostility of men towards one another. Their interests in their common work would not hold them together; the passions of instinct are stronger than reasoned interests. Culture has to call up every possible reinforcement in order to erect barriers against the aggressive instincts of men and hold their manifestations in check by reaction-formations in men's minds. Hence its system of methods by which mankind is to be driven to identifications and inhibited love-relationships; hence the restrictions on sexual life; and hence, too, its ideal command to love one's neighbour as oneself, which is really justified by the fact that nothing is so completely at variance with original human nature as this. With all its striving, this endeavour of culture's has so far not achieved very much. Civilization expects to prevent the worst atrocities of brutal violence by taking upon itself the right to employ violence against criminals, but the law is not able to lay hands on the more discreet and subtle forms in which human aggressions are expressed. The time comes when every one of us has to abandon the illusory anticipations with which in our youth we regarded our fellow-men, and when we realize how much hardship and suffering we have been caused in life through their ill-will. It would be unfair, however, to reproach culture with trying to eliminate all dis-

putes and competition from human concerns. These things are undoubtedly indispensable; but opposition is not necessarily enmity, only it may be misused to make an opening for it.

The Communists believe they have found a way of delivering us from this evil. Man is whole-heartedly good and friendly to his neighbour, they say, but the system of private property has corrupted his nature. The possession of private property gives power to the individual and thence the temptation arises to ill-treat his neighbour; the man who is excluded from the possession of property is obliged to rebel in hostility against the oppressor. If private property were abolished, all valuables held in common and all allowed to share in the enjoyment of them, ill-will and enmity would disappear from among men. Since all needs would be satisfied, none would have any reason to regard another as an enemy; all would willingly undertake the work which is necessary. I have no concern with any economic criticisms of the communistic system; I cannot enquire into whether the abolition of private property is advantageous and expedient.³ But I am unable to recognize that psychologically it is founded on an untenable illusion. By abolishing private property one deprives the human love of aggression of one of its instruments, a strong one undoubtedly, but assuredly not the strongest. It in no way alters the individual differences in power and influence which are turned by

³ Anyone who has been through the misery of poverty in his youth, and has endured the indifference and arrogance of those who have possessions, should be exempt from the suspicion that he has no understanding of or goodwill towards the endeavours made to fight the economic inequality of men and all that it leads to. To be sure, if an attempt is made to base this fight upon an abstract demand for equality for all in the name of justice, there is a very obvious objection to be made, namely, that nature began the injustice by the highly unequal way in which she endows individuals physically and mentally, for which there is no help.

aggressiveness to its own use, nor does it change the nature of the instinct in any way. This instinct did not arise as the result of property; it reigned almost supreme in primitive times when possessions were still extremely scanty; it shows itself already in the nursery when possessions have hardly grown out of their original anal shape; it is at the bottom of all the relations of affection and love between human beings—possibly with the single exception of that of a mother to her male child. Suppose that personal rights to material goods are done away with, there still remain prerogatives in sexual relationships, which must arouse the strongest rancour and most violent enmity among men and women who are otherwise equal. Let us suppose this were also to be removed by instituting complete liberty in sexual life, so that the family, the germ-life of culture, ceased to exist; one could not, it is true, foresee the new paths on which cultural development might then proceed, but one thing one would be bound to expect, and that is that the inextinguishable feature of human nature would follow wherever it led.

Men clearly do not find it easy to do without satisfaction of this tendency to aggression that is in them; when deprived of satisfaction of it they are ill at ease. There is an advantage, not to be undervalued, in the existence of smaller communities, through which the aggressive instinct can find an outlet in enmity towards those outside the group. It is always possible to unite considerable numbers of men in love towards one another, so long as there are still some remaining as objects for aggressive manifestations. I once interested myself in the peculiar fact that peoples whose territories are adjacent, and are otherwise closely related, are always at feud with and ridiculing each other, as, for instance, the Spaniards and the Portuguese, the North and South Germans, the English and the Scotch, and so on. I gave it the name of "narcissism in respect of minor differences," which does not do much to ex-

plain it. One can now see that it is a convenient and relatively harmless form of satisfaction for aggressive tendencies, through which cohesion amongst the members of a group is made easier. The Jewish people, scattered in all directions as they are, have in this way rendered services which deserve recognition to the development of culture in the countries where they settled; but unfortunately not all the massacres of Jews in the Middle Ages sufficed to procure peace and security for their Christian contemporaries. Once the apostle Paul had laid down universal love between all men as the foundation of his Christian community, the inevitable consequence in Christianity was the utmost intolerance towards all who remained outside of it; the Romans, who had not founded their state on love, were not given to lack of religious toleration, although religion was a concern of the state, and the state was permeated through and through with it. Neither was it an unaccountable chance that the dream of a German world-dominion evoked a complementary movement towards anti-semitism; and it is quite intelligible that the attempt to establish a new communistic type of culture in Russia should find psychological support in the persecution of the bourgeois. One only wonders, with some concern, however, how the Soviets will manage when they have exterminated their bourgeois entirely.

If civilization requires such sacrifices, not only of sexuality but also of the aggressive tendencies in mankind, we can better understand why it should be so hard for men to feel happy in it. In actual fact primitive man was better off in this respect, for he knew nothing of any restrictions on his instincts. As a set-off against this, his prospects of enjoying his happiness for any length of time were very slight. Civilized man has exchanged some part of his chances of happiness for a measure of security. We will not forget, however, that in the primal family only the head of it enjoyed this instinctual freedom; the other members lived in

slavish thraldom. The antithesis between a minority enjoying cultural advantages and a majority who are robbed of them was therefore most extreme in that primeval period of culture. With regard to the primitive human types living at the present time, careful investigation has revealed that their instinctual life is by no means to be envied on account of its freedom; it is subject to restrictions of a different kind but perhaps even more rigorous than is that of modern civilized man.

In rightly finding fault, as we thus do, with our present state of civilization for so inadequately providing us with what we require to make us happy in life, and for the amount of suffering of a probably avoidable nature it lays us open to—in doing our utmost to lay bare the roots of its deficiencies by our unsparing criticisms, we are undoubtedly exercising our just rights and not showing ourselves enemies of culture. We may expect that in the course of time changes will be carried out in our civilization so that it becomes more satisfying to our needs and no longer open to the reproaches we have made against it. But perhaps we shall also accustom ourselves to the idea that there are certain difficulties inherent in the very nature of culture which will not yield to any efforts at reform. Over and above the obligations of putting restrictions upon our instincts, which we see to be inevitable, we are imminently threatened with the dangers of a state one may call "*la misère psychologique*" of groups. This danger is most menacing where the social forces of cohesion consist predominantly of identifications of the individuals in the group with one another, whilst leading personalities fail to acquire the significance that should fall to them in the process of group-formation.⁴ The state of civilization in America at the present day offers a good opportunity for studying this injurious effect of civiliza-

⁴ Cf. *Group Psychology and the Analysis of the Ego* (1921). London: Hogarth Press, 1922.

tion which we have reason to dread. But I will resist the temptation to enter upon a criticism of American culture; I have no desire to give the impression that I would employ American methods myself.

THE STRUGGLE BETWEEN EROS AND DEATH

Never before in any of my previous writings have I had the feeling so strongly as I have now that what I am describing is common knowledge, that I am requisitioning paper and ink, and in due course the labour of compositors and printers, in order to expound things that in themselves are obvious. For this reason, if it should appear that the recognition of a special independent instinct of aggression would entail a modification of the psycho-analytical theory of instincts, I should be glad enough to seize upon the idea.

We shall see that this is not so, that it is merely a matter of coming to closer quarters with a conclusion to which we long ago committed ourselves and following it out to its logical consequences. The whole of analytic theory has evolved gradually enough, but the theory of instincts has groped its way forward under greater difficulties than any other part of it. And yet a theory of instincts was so indispensable for the rest that something had to be adopted in place of it. In my utter perplexity at the beginning, I took as my starting-point the poet-philosopher Schiller's aphorism, that hunger and love make the world go round. Hunger would serve to represent those instincts which aim at preservation of the individual; love seeks for objects; its chief function, which is favoured in every way by nature, is preservation of the species. Thus first arose the contrast between ego instincts and object instincts. For the energy of the latter instincts and exclusively for them I introduced the term libido; an antithesis was thus formed between the ego instincts and the libidinal instincts directed towards objects, *i.e.* love in its widest sense. One of these object instincts, the sadistic, certainly stood out

from the rest in that its aim was so very unloving; moreover, it clearly allied itself in many of its aspects with the ego instincts, and its close kinship with instincts of mastery without any libidinal purpose could not be concealed, but these ambiguities could be overcome; in spite of them, sadism plainly belonged to sexual life—the game of cruelty could take the place of the game of love. Neurosis appeared as the outcome of a struggle between the interests of self-preservation and the claims of libido, a struggle in which the ego was victorious, but at the price of great suffering and renunciations.

Every analyst will admit that none of this even now reads like a statement long since recognized as erroneous. All the same, modifications had to be made as our researches advanced from the repressed to the repressing, from the object instincts to the ego. A cardinal point in this advance was the introduction of the concept of narcissism; *i.e.* the idea that libido cathects the ego itself, that its first dwelling-place was in the ego, and that the latter remains to some extent its permanent headquarters. This narcissistic libido turns in the direction of objects, thus becoming object-libido, and can transform itself back into narcissistic libido. The concept of narcissism made it possible to consider the traumatic neuroses, as well as many diseases bordering on the psychoses, and also the latter themselves, from the psycho-analytic angle. It was not necessary to abandon the view that the transference-neuroses are attempts on the part of the ego to guard itself against sexuality, but the concept of the libido was jeopardized. Since the ego-instincts were found to be libidinal as well, it seemed for a time inevitable that libido should become synonymous with instinctual energy in general, as C. G. Jung had previously advocated. Yet there still remained in me a kind of conviction, for which as yet there were no grounds, that the instincts could not all be of the same nature. I made the next step in *Beyond*

the Pleasure Principle (1920), when the repetition-compulsion and the conservative character of instinctual life first struck me. On the basis of speculations concerning the origin of life and of biological parallels, I drew the conclusion that, beside the instinct preserving the organic substance and binding it into ever larger units,⁵ there must exist another in antithesis to this, which would seek to dissolve these units and reinstate their antecedent inorganic state; that is to say, a death instinct as well as Eros; the phenomena of life would then be explicable from the interplay of the two and their counteracting effects on each other. It was not easy, however, to demonstrate the working of this hypothetical death instinct. The manifestations of Eros were conspicuous and audible enough; one might assume that the death instinct worked silently within the organism towards its disintegration, but that, of course, was no proof. The idea that part of the instinct became directed towards the outer world and then showed itself as an instinct of aggression and destruction carried us a step further. The instinct would thus itself have been pressed into the service of Eros, in that the organism would be destroying something animate or inanimate outside itself instead of itself. Conversely, any cessation of this flow outwards must have the effect of intensifying the self-destruction which in any case would always be going on within. From this example one could then surmise that the two kinds of instincts seldom—perhaps never—appear in isolation, but always mingle with each other in different, very varying proportions, and so make themselves unrecognizable to us. Sadism, long since known to us as a component-instinct of sexuality, would represent a particularly strong admixture of the instinct of destruction

⁵ The contradiction between the tireless tendency of Eros to spread ever further and the general conservative nature of the instincts here becomes very noticeable; it would serve as the starting-point of enquiries into further problems.

into the love impulse; while its counterpart, masochism, would be an alliance between sexuality and the destruction at work within the self, in consequence of which the otherwise imperceptible destructive trend became directly evident and palpable.

The assumption of the existence of a death instinct or a destruction instinct has aroused opposition even in analytical circles; I know that there is a great tendency to ascribe all that is dangerous and hostile in love rather to a fundamental bipolarity in its own nature. The conceptions I have summarized here I first put forward only tentatively, but in the course of time they have won such a hold over me that I can no longer think in any other way. To my mind they are theoretically far more fruitful than any others it is possible to employ; they provide us with that simplification, without either ignoring or doing violence to the facts, which is what we strive after in scientific work. I know that we have always had before our eyes manifestations of the destruction instinct fused with erotism, directed outwards and inwards in sadism and masochism; but I can no longer understand how we could have overlooked the universality of nonerotic aggression and destruction, and could have omitted to give it its due significance in our interpretation of life. (It is true that the destructive trend that is directed inwards, when it is not erotically tinged, usually eludes our perceptions.) I can remember my own defensive attitude when the idea of an instinct of destruction first made its appearance in psycho-analytical literature and how long it took until I became accessible to it. That others should have shown the same resistance, and still show it, surprises me less. Those who love fairy tales do not like it when people speak of the innate tendencies in mankind towards aggression, destruction and, in addition, cruelty. For God has made them in his own image, with his own perfections; no one wants to be reminded how hard it is to reconcile the undeniable existence—in spite of

all the protestations of Christian Science—of evil with his omnipotence and supreme goodness. The devil is, in fact, the best way out in acquittal of God; he can be used to play the same economic rôle of outlet as Jews in the world of Aryan ideals. But even so, one can just as well hold God responsible for the existence of the devil as for the evil he personifies. In view of these difficulties, it is expedient for every man to make humble obeisance on suitable occasions in honour of the high-minded nature of men; it will assist him to become universally beloved and much shall be forgiven unto him on account of it.⁶

The name libido can again be used to denote the manifestations of the power of Eros in contradistinction to the energy of the death instinct.⁷ We must confess that it is more difficult for us to detect the latter, and to a great extent we can merely conjecture its existence as a background to Eros, also that it eludes us wherever it is not betrayed by a fusion

⁶ In Goethe's Mephistopheles we have a quite exceptionally striking identification of the principle of evil with the instinct of destruction:

All entities that be
Deserve their end—nonentity.

So all that you name sin, destruction—
Wickedness, briefly—proves to be
The native element for me.

As his adversary, the devil himself cites not what is holy and good, but the power in nature working towards the creation and renewal of life—that is, Eros.

From air, from water, germs in thousands,
As from the soil, break forth, break free,
Dry, wet, warm, cold—a pullulation!
Had I not laid on flame a reservation,
Nothing were set apart for me.

⁷ Our present point of view can be roughly expressed in the statement that libido participates in every instinctual manifestation, but that not everything in that manifestation is libido.

with Eros. In sadism, where it bends the erotic aim to its own will and yet at the same time gratifies the sexual craving completely, we can obtain the clearest insight into its nature and its relation to Eros. But even where it shows itself without any sexual purpose, even in the blindest frenzy of destructiveness, one cannot ignore the fact that satisfaction of it is accompanied by an extraordinarily intense narcissistic enjoyment, due to the fulfilment it brings to the ego of its oldest omnipotence-wishes. The instinct of destruction, when tempered and harnessed (as it were, inhibited in its aim) and directed towards objects, is compelled to provide the ego with satisfaction of its needs and with power over nature. Since the assumption of its existence is based essentially on theoretical grounds, it must be confessed that it is not entirely proof against theoretical objections. But this is how things appear to us now in the present state of our knowledge; future research and reflection will undoubtedly bring further light which will decide the question.

In all that follows I take up the standpoint that the tendency to aggression is an innate, independent, instinctual disposition in man, and I come back now to the statement that it constitutes the most powerful obstacle to culture. At one point in the course of this discussion the idea took possession of us that culture was a peculiar process passing over human life and we are still under the influence of this idea. We may add to this that the process proves to be in the service of Eros, which aims at binding together single human individuals, then families, then tribes, races, nations, into one great unity, that of humanity. Why this has to be done we do not know; it is simply the work of Eros. These masses of men must be bound to one another libidinally; necessity alone, the advantages of common work, would not hold them together. The natural instinct of aggressiveness in man, the hostility of each one against all and of all against each one, opposes this programme of civiliza-

tion. This instinct of aggression is the derivative and main representative of the death instinct we have found alongside of Eros, sharing his rule over the earth. And now, it seems to me, the meaning of the evolution of culture is no longer a riddle to us. It must present to us the struggle between Eros and Death, between the instincts of life and the instincts of destruction, as it works itself out in the human species. This struggle is what all life essentially consists of and so the evolution of civilization may be simply described as the struggle of the human species for existence.⁸ And it is this battle of the Titans that our nurses and governesses try to compose with their lullaby-song of Heaven!

For various reasons, it is very far from my intention to express any opinion concerning the value of human civilization. I have endeavoured to guard myself against the enthusiastic partiality which believes our civilization to be the most precious thing that we possess or could acquire, and thinks it must inevitably lead us to undreamt-of heights of perfection. I can at any rate listen without taking umbrage to those critics who aver that when one surveys the aims of civilization and the means it employs, one is bound to conclude that the whole thing is not worth the effort and that in the end it can only produce a state of things which no individual will be able to bear. My impartiality is all the easier to me since I know very little about these things and am sure only of one thing, that the judgements of value made by mankind are immediately determined by their desires for happiness; in other words, that those judgments are attempts to prop up their illusions with arguments. I could understand it very well if anyone were to point to the inevitable nature of the process of cultural development and say,

⁸ And we may probably add more precisely that its form was necessarily determined after some definite event which still remains to be discovered.

for instance, that the tendency to institute restrictions upon sexual life or to carry humanitarian ideals into effect at the cost of natural selection is a developmental trend which it is impossible to avert or divert, and to which it is best for us to submit as though they were natural necessities. I know, too, the objection that can be raised against this: that tendencies such as these, which are believed to have insuperable power behind them, have often in the history of man been thrown aside and replaced by others. My courage fails me, therefore, at the thought of rising up as a prophet before my fellow-men, and I bow to their reproach that I have no consolation to offer them; for at bottom this is what they all demand—the frenzied revolutionary as passionately as the most pious believer.

The fateful question of the human species seems to me to be whether and to what extent the cultural process developed in it will succeed in mastering the derangements of communal life caused by the human instinct of aggression and self-destruction. In this connection, perhaps the phase through which we are at this moment passing deserves special interest. Men have brought their powers of subduing the forces of nature to such a pitch that by using them they could now very easily exterminate one another to the last man. They know this—hence arises a great part of their current unrest, their dejection, their mood of apprehension. And now it may be expected that the other of the two “heavenly forces,” eternal Eros, will put forth his strength so as to maintain himself alongside of his equally immortal adversary.

GANDHI

More than other thinkers covered here, the thought of Mohandas K. Gandhi (1869–1948) (also called Mahatma, or “great soul”) is best understood through his actions. It is particularly necessary to have some background of the circumstances within which Gandhi lived, as this helps explain his ideas and actions. Strictly in terms of people, today the components of former British India (India, Pakistan, and Bangladesh) have a population twice that of all the countries of Europe combined (excluding the Soviet Union) and have a physical area 85 percent of Europe’s. While the Indian subcontinent’s population has grown significantly faster than Europe’s since Gandhi’s time, their relative populations remain the appropriate measure of the extent of humanity located within them in his day as well as now. Culturally, India’s history extends back 4,000 years, when much of Europe was uncivilized and was to remain uncivilized for hundreds—even thousands of years.

The story of India is one of a vast conglomeration of peoples, religions, languages, and castes. There are, broadly speaking, four classes of individuals in the Hindu varna system which, while related, is different than the caste system. Hinduism is based on the concept of reincarnation and transmigration, in which all living beings, from plant life to gods, are part of an everlasting cycle. As the result of how they have lived in a prior life, individuals are born (or reborn) into different positions. The three twice-born castes are brahmins (priests), kshatriyas (warriors), and vaisha (merchants). In addition, there is the sudra caste (peasants). Apart from these four—which comprise the varna system—are the outcastes, or untouchables. The caste system, then, is the more particular and localized social structure, which generally also determines a person’s occupation (again, by birth). In one linguistic area there may be as many as 50–200 castes with as many as 500–2,000 subcastes.

Gandhi was born a member of the modh bania caste, a grocer’s caste. In his home region the merchant vaisha castes had thrown off traditional deference to brahmins through their absorption of Jainism, a sect which split off from Hinduism in the sixth century B.C. Jainism stresses non-violence and the absence of caste distinctions, and strongly affected Gandhi. His father was the chief minister of one of the numerous small Indian princely states. In not untypical Indian fashion, Gandhi had an arranged marriage at 13 to Kasturbai.

Formative influences on Gandhi included Hinduism and his mother, "the outstanding impression" of whom on him, he states in his autobiography (titled, *The Story of My Experiments with Truth*), was "saintliness." She belonged to a Hindu sect especially opposed to idolatry, one which sought a connection between Hinduism and Islam, and had sympathy for Jainism. Gandhi attended an English secondary school where all lessons were taught in English and cricket was played. To ensure future career opportunities his family determined it was necessary for him to attend college in England. This was a monumental decision and led to ostracism by his local caste community, which was never withdrawn by some.

Gandhi studied law in England and took classes in other academic areas as well. He joined the London Vegetarian Society and became involved with members of the Theosophical Society who, paradoxically, introduced him in depth to the Hindu *Bhagavad Gita* (*The Song Celestial*), which Gandhi considered his greatest debt to the west, and which deepened his love of his faith. He also read the works of Leo Tolstoy and John Ruskin.

Later, from reading Tolstoy's *The Kingdom of God is Within You*, Gandhi was greatly impressed with the power of non-violence, and along the lines of Tolstoy's argument—that no one has a monopoly on truth, and this should lead individuals to be wary of using force. Gandhi was also sympathetic to Tolstoy's opposition to modern life and preference for agrarian living. Ruskin's *Unto this Last* "brought about an instantaneous and practical transformation in my life," according to Gandhi. Ruskin highly valued work (particularly that of the common laborer), criticized nineteenth century economics, and may have planted the seed of the concept in Gandhi's mind that property is, or should be, held for the benefit of all.

On returning to India, Gandhi learned that his father had died, which prevented Gandhi from eventually succeeding him in governmental service. After less than two years of practicing law in India, Gandhi was hired by Indian Moslem merchants to settle a legal dispute in South Africa. While he is above all associated with India, it is vital to remember that Gandhi spent most of a period of over twenty years in South Africa—from 1893 to 1914—during his formative adult years.

The Indian community was and remains a small minority in South Africa, outnumbered by both Africans and Europeans, and occupying an intermediate place between them in the social order. In South Africa Gandhi first experienced virulent racism. Immediately on arriving, he was subjected to discrimination in his travel and accommodations. He commented as follows: "The hardship to which I was subjected was superficial—only a symptom of the deep disease of color prejudice. I should try, if possible, to root out the disease and suffer hardships in the process. Redress for wrongs I should seek only to the extent that would be necessary for the removal of color prejudice." This passage indicates Gandhi's approach to social issues—problems are generally deep-rooted and may require fundamental change to be solved. An individual must be prepared to suffer himself to right social wrongs. Such suffering must be other-directed; it cannot be aimed simply at relieving one's own situation or it becomes ineffective.

Gandhi became leader of the Indian community in South Africa. He started a political association to advocate the rights of Indians, published a weekly

newspaper, began his campaigns of non-violent resistance, and organized his first *ashram* (spiritual community). At one point he wrote a brochure, popularly called "The Green Pamphlet," which caused him to be mobbed by thousands of white South Africans following his return from a trip to India to bring back his wife and children.

In 1906 the white South African government proposed an ordinance that would require all Indians to register with the authorities and carry a certificate at all times. Called the "Black Act," Gandhi believed it would spell disaster for the Indian community. During the course of an Indian mass meeting, the proposal to pass a resolution to refuse submission to the ordinance, with God as a witness, was made. Gandhi was struck by the oath portion of the resolution, and his reaction indicates the religious character of his social thought: "A man who makes an ordinary resolution is not ashamed of himself when he deviates from it, but a man who violates an oath administered to him is not only ashamed of himself, but is also looked upon by society as a sinner." Later he wrote, "Politics, divorced from religion, has absolutely no meaning."

Gandhi's Hinduism was essential to his philosophy, and he always considered Hinduism the superior religion, while valuing other religions. Given the religious character of India, and that even in Hindu India it was religion which served as the unifying thread of the polyglottal social system, it was vital that Gandhi stress religious themes in order to be able to communicate with the Indian masses. He sought, however, a broader reconciliation and in his comments on the occasion of the Black Act, he noted to the mixed Hindu-Moslem audience, "We all believe in one and the same God, the differences of nomenclature in Hinduism and Islam notwithstanding."

Gandhi at first used the term "passive resistance" for the fledgling movement, but quickly realized that the struggle could hardly be known only by an English name, and came later to dislike the term passive resistance, indicating, as he thought, a method of the weak. Therefore the Hindi term *satyagraha* was coined, combining the words *satya* (truth) and *agraha* (firmness of force). *Satya* also implies love, and therefore *satyagraha* is "the Force which is born of Truth and Love or non-violence." The concept of non-violence is paramount in Gandhi's thought, and as well as being implied in *satya* is found directly in the word *ahimsa* (literally, "non-injury"), another key Gandhian term. By *non-injury*, Gandhi meant not just restraint in using physical force, but restraint in the use of any hurtful method, whether of words or even thoughts. Moreover, *ahimsa* enjoins positive actions. The link between *satya* and *ahimsa* in Gandhi's mind is that *ahimsa* lies at the heart of *satya*: Since our notions of truth are incomplete, one may not impose his fragmentary views on others.

Satyagraha is a method for bringing about social change through the persuasion of one's antagonist that he is wrong. There can be no physical force used in this process; the goal is to convince one's adversary, not subjugate him. Violence has no part in this process for, according to Gandhi, the use of violence can only temporarily suppress evil at the cost of having it arise later with redoubled vigor. Non-violence, on the other hand, puts an end to evil by converting the evildoer.

Gandhi considered *satyagraha* to be a method of the strong. Its practitioner—a *satyagrahi*—is an individual who comes up against evil in the world which he must resist. He will submit to any punishment in order to attain the end he

seeks. This is why *satyagraha* enjoins *satyagrahis* to willingly accept legal penalties for their "illegal" (in the eyes of authority) actions. The aim is change through persuasion, not compulsion; the latter can never lead to true change. *Satyagraha* demands absolute self-control and other-directedness. It may take the form of non-cooperation in general as well as active disobedience to particular edicts. Fasting may also be undertaken, but only as a last resort when all other means of *satyagraha* have failed to enable an opponent to see the error of his ways.

Gandhi left South Africa for good in 1914, returning to India a national hero as the result of the publicity his campaigns had received. He became leader of the Indian home rule movement. British India was the exemplar of colonialism, and Gandhi gradually felt his way to the position of complete Indian independence from Britain. In 1909 Gandhi had written *Hind Swaraj*, or *Indian Home Rule*. Despite its title, he did not demand instantaneous departure of the British Empire from India in this book; rather, he advocated that governance of the colony should be in India's interest and by Indian precepts.

Swaraj can be translated "self-rule" as well as "home rule." It is somewhat inaccurate to place western concepts of national organization onto the Indian scene both because they are (or were) somewhat inapplicable there, and they are not the concepts of organization that are intrinsic to the inhabitants. What Gandhi had in mind by *swaraj* was as much how India was governed as who governed it. Whether by Indian or foreigner, "What others get for me is not Home Rule but foreign rule."

Gandhi was opposed to modern western civilization and its industrialism. He had an aversion to machinery and preferred goods produced by hand. He looked forward to not a material, but a spiritual civilization. He thought competition, on which modern western economies are based, to be a tragic waste. He believed that such social ills as alcoholism and prostitution were the inevitable result of materialistic values. His goal was a revitalized rural India, not a westernized one. He favored decentralization.

In all of these views, Gandhi bespoke a radically different outlook than the one to which we are usually accustomed and one which has had less success than his ideas on the methods of social change. His ideas on ultimate social order were as far from materialistic communism as from materialistic capitalism. He quite frankly looked backwards concerning industrialism, not, as Marx, desiring to harness it for the good of humanity but wanting to discard it altogether. Unlike most modern preoccupation with affluence Gandhi believed, "A man is not necessarily happy because he is rich, or unhappy because he is poor."

Three of the lodestars of Gandhi's day-to-day social program were anti-untouchability, Hindu-Moslem reconciliation, and self-sufficiency in economic production (*swadeshi*). He considered untouchability "an ineffaceable blot that Hinduism today carries." Some castes practiced that even the shadow of an untouchable should not fall upon a brahmin. Gandhi's ideal was that untouchables should be absorbed within the sudra (peasant) caste. He admitted untouchables to his *ashrams*, though this caused problems with some of the other participants (including his wife), and preached against discrimination directed toward untouchables.

Gandhi was viscerally opposed to Hindu-Moslem partition of India (although this was the plan ultimately adopted), and he believed that in its diversity India gained strength. He strove mightily to bring the two communities together. This goal dovetailed with that of anti-untouchability, because the majority of Indian Moslems were the descendants of converts from untouchables. In British India, one-quarter of the population was Moslem and one-fifth untouchables. Regarding Hindu-Moslem partition, Gandhi stated, "I find no parallel in history for a body of converts . . . claiming to be a nation apart from the parent stock."

Swadeshi, or the consumption of goods made in one's country, was the practical application of Gandhi's economic ideas. Gandhi strongly supported laboring with one's hands. He thought each person, each village, and each nation should be as self-sufficient as possible. He recommended that every person should take up the art of spinning with one's own hands and wear nothing but homespun garments. He presided over bonfires which consumed piles of western clothes. When he met the King and Queen of England, he wore a homespun garment and no shoes. Gandhi aptly described his ideal economic and social order as follows, giving also his conception of the role of the individual: "Life will not be a pyramid with the apex sustained by the bottom. But it will be an oceanic circle whose center will be the individual always ready to perish for the village, the latter ready to perish for the circle of villages till at last the whole becomes one life composed of individuals, never aggressive in their arrogance, but ever humble, sharing the majesty of the oceanic circle of which they are integral units. Therefore, the outermost circumference will not wield power to crush the inner circle, but will give strength to all within and will derive its own strength from it."

Gandhi led three major civil disobedience movements in India, at roughly ten-year intervals in the early twenties, thirties and forties ("non-violent" and "civil" were interchangeable prefixes to describe the disobedience he had in mind). He felt it was essential that the people should be morally and spiritually ready for a campaign of civil disobedience before it commenced, as otherwise it might be counterproductive. On more than one occasion he called off a campaign of non-violent disobedience because the movement got out of hand and turned violent. While there is some question to what extent Gandhi later in his life countenanced some violence if it were truly inescapable, it remains a fact that, in his words, non-violence was the "first" and "last article of my creed."

The Indian National Congress Party, of which Gandhi was the guiding spirit, resolved in 1928 that unless Britain agreed to allow India a constitution and dominion status (like, for example, Canada and Australia) within one year, another nationwide civil disobedience movement would be started. When these terms were not met, the Congress Party announced that its goal was full independence and authorized Gandhi to start the new campaign.

Brilliantly, he chose to attack the government's monopoly on the manufacture of salt, an action that would not alienate moderates and yet would generate a mass following among those whom the current salt law required to pay tax, and which was consistent with his economic ideals. Gandhi began a twenty-six day trek to the sea, which garnered great publicity, to boil salt. The next action on the part of the Indian people was insurrection without arms. Many villagers

on India's long coastline also went to the sea to make salt. Following Gandhi's decision to invade a salt works he was arrested, as were tens of thousands of others, and the number of Indian political prisoners grew to over 100,000.

Gandhi was released after eight months in jail. Subsequently, other political prisoners were released, Gandhi ceased the disobedience campaign, and the Congress Party sent representatives, including Gandhi, to forthcoming talks in London on a constitution for India. While the talks themselves were unsuccessful, Gandhi considered his real dialogue to have been with the British people, and his stay there did much to enlist popular sympathy for the Indian cause.

One of the controversial aspects of Gandhi's practice of *satyagraha* was his willingness to respond to an opponent's proposal of compromise. Seeing the purpose of *satyagraha* as to persuade one's adversary, Gandhi would leave no stone unturned in his quest to accommodate his opponent's view as long as progress was being made. Another tool of *satyagraha* was the *hartal*, or temporary strike.

The importance of India in Indians' and Gandhi's eyes is and was immense. Understanding this helps to explain why, for example, he supported a "Quit India" policy to the British government during the midst of World War II, for which he was arrested and imprisoned (he spent at different times a total of over six years in jail). Gandhi believed that, as important as World War II was to Europeans, India and its people's needs had at least equally valid claims to attention. This outlook asserts the equality of all peoples, wherever they may live in the world.

Gandhi's influence has been far-reaching. Of him, Albert Einstein said, "Generations to come will scarce believe that such a one as this ever in flesh and blood walked upon this earth." Gandhi's method of non-violent disobedience was not only used in the struggle to achieve Indian independence, but also influenced later social movements. According to Martin Luther King, Jr.: "As I delved deeper into the philosophy of Gandhi . . . I came to see for the first time its potency in the area of social reform. Prior to reading Gandhi . . . I had about concluded that the ethics of Jesus were only effective in individual relationships. . . . But after reading Gandhi, I saw how utterly mistaken I was. Gandhi was probably the first person in history to lift the love ethic of Jesus above mere interaction between individuals to a powerful and effective social force on a large scale."

Gandhi believed that the follower of *satyagraha* had to be willing to die for the movement; in fact, "nothing better can happen to a *Satyagrahi* than meeting death unsought in the very act of *Satyagraha*, i.e., pursuing Truth." His concept of *satyagraha* is egalitarian, in that "there are no leaders and hence no followers." He believed political and social change were more the product of internal changes in people than the result of external changes in their circumstances. Ultimately, a people's government is as good (or as bad) as its people.

In his statement that what Indians wanted was not the "bread made of wheat, but . . . the bread of liberty," Gandhi expresses a sentiment that fired the entire third world. The fall of colonialism in India sent a signal around the globe that helped lead to the dissolution of European empires following World War II. Gandhi rejected colonialism and its mentality, and in so doing furthered the rights and equality of all peoples. His emphasis on the intolerability

of racism and the right of indigenous peoples to live according to their own culture and speak in their own language(s) has left a legacy that continues in the world to this day.

Gandhi's goal for humanity was not a modernistic, socialist one. He explicitly rejected this end, as he did the method of other nineteenth and twentieth century revolutionaries. Unlike those who saw earthly paradise as being able to be constructed through the use of the most abhorrent means, Gandhi saw an inextricable link between ends and means. "The means may be likened to a seed, the end to a tree; and there is just the same inviolable connection between the means and end as there is between the seed and the tree."

Gandhi's methods are what his ultimate impact rely upon. His positions that non-cooperation with evil is as much a duty as cooperation with good, and that non-violence is the best and ultimately the only effective way to achieve positive social change, are enduring contributions to the world's political tradition. Ironically, Gandhi—a man of non-violence—perished in an act of violence, by assassination at the hands of a Hindu extremist. His tragic death paradoxically, however, helped to bring a measure of peace to battling communal factions, because it vividly expressed to them the awfulness of force.

GANDHI

Selected Writings

SATYAGRAHA, CIVIL DISOBEDIENCE, PASSIVE RESISTANCE, NON-COOPERATION*

Satyagraha is literally holding on to Truth and it means, therefore, Truth-force. Truth is soul or spirit. It is, therefore, known as soul-force. It excludes the use of violence because man is not capable of knowing the absolute truth and, therefore, not competent to punish. The word was coined in South Africa to distinguish the non-violent resistance of the Indians of South Africa from the contemporary 'passive resistance' of the suffragettes and others. It is not conceived as a weapon of the weak.

Passive resistance is used in the orthodox English sense and covers the suffragette movement as well as the resistance of the Non-conformists. Passive resistance has been conceived and is regarded as a weapon of the weak. Whilst it avoids violence, being not open to the weak, it does not exclude its use if, in the opinion of a passive resister, the occasion demands it. However, it has always been distinguished from armed resistance and its application was at one time confined to Christian martyrs.

Civil Disobedience is civil breach of immoral statutory enactments. The expression was, so far as I am aware, coined by Thoreau to signify his own resistance to the laws of a slave State. He has left a masterly treatise on the duty of Civil Disobedience. But Thoreau was not perhaps an out and out champion of non-violence. Probably, also, Thoreau limited his breach of

statutory laws to the revenue law, i.e. payment of taxes. Whereas the term Civil Disobedience as practiced in 1919 covered a breach of any statutory and unmoral law. It signified the resister's outlawry in a civil, i.e., non-violent manner. He invoked the sanctions of the law and cheerfully suffered imprisonment. It is a branch of *Satyagraha*.

Non-cooperation predominantly implies withdrawing of cooperation from the State that in the non-cooperator's view has become corrupt and excludes Civil Disobedience of the fierce type described above. By its very nature, non-cooperation is even open to children of understanding and can be safely practiced by the masses. Civil Disobedience presupposes the habit of willing obedience to laws without fear of their sanctions. It can, therefore, be practiced only as a last resort and by a select few in the first instance at any rate. Non-cooperation, too, like Civil Disobedience is a branch of *Satyagraha* which includes all non-violent resistance for the vindication of Truth.

THE THEORY AND PRACTICE OF SATYAGRAHA*

Carried out to its utmost limit, *Satyagraha* is independent of pecuniary or other material assistance; certainly, even in its elementary form, of physical force or violence. Indeed, violence is the negation of this great spiritual force, which can only be cultivated or wielded by those who will entirely eschew violence. It is a force that may be used by individuals as

well as by communities. It may be used as well in political as in domestic affairs. Its universal applicability is a demonstration of its permanence and invincibility. It can be used alike by men, women and children. It is totally untrue to say that it is a force to be used only by the weak so long as they are not capable of meeting violence by violence. This superstition arises from the incompleteness of the English expression, *passive resistance*. It is impossible for those who consider themselves to be weak to apply this force. Only those who realize that there is something in man which is superior to the brute nature in him and that the latter always yields to it, can effectively be *Satyagrahis*. This force is to violence, and, therefore, to all tyranny, all injustice, what light is to darkness. In politics, its use is based upon the immutable maxim, that government of the people is possible only so long as they consent either consciously or unconsciously to be governed. We did not want to be governed by the Asiatic Act of 1907 of the Transvaal, and it had to go before this mighty force. Two courses were open to us: to use violence when we were called upon to submit to the Act, or to suffer the penalties prescribed under the Act, and thus to draw out and exhibit the force of the soul within us for a period long enough to appeal to the sympathetic chord in the governors or the law-makers. We have taken long to achieve what we set about striving for. That was because our *Satyagraha* was not of the most complete type. All *Satyagrahis* do not understand the full value of the force, nor have we men who always from conviction refrain from violence. The use of this force requires the adoption of poverty, in the sense that we must be indifferent whether we have the wherewithal to feed or clothe ourselves. During the past struggle, all *Satyagrahis*, if any at all, were not prepared to go that length. Some again were only *Satyagrahis* so called. They came without any conviction, often with mixed motives, less often with impure motives. Some even, whilst engaged in the struggle, would gladly have resorted to violence but for most vigilant supervision. Thus it was

that the struggle became prolonged; for the exercise of the purest soul-force, in its perfect form, brings about instantaneous relief. For this exercise, prolonged training of the individual soul is an absolute necessity, so that a perfect *Satyagrahi* has to be almost, if not entirely, a perfect man. We cannot all suddenly become such men, but if my proposition is correct—as I know it to be correct—the greater the spirit of *Satyagraha* in us, the better men will we become. Its use, therefore, is, I think, indisputable, and it is a force, which, if it became universal, would revolutionize social ideals and do away with despotisms and the ever-growing militarism under which the nations of the west are groaning and are being almost crushed to death, and which fairly promises to overwhelm even the nations of the east. If the past struggle has produced even a few Indians who would dedicate themselves to the task of becoming *Satyagrahis* as nearly perfect as possible, they would not only have served themselves in the truest sense of the term, they would also have served humanity at large. Thus viewed, *Satyagraha* is the noblest and best education. It should come, not after the ordinary education in letters, of children, but it should precede it. It will not be denied, that a child, before it begins to write its alphabet and to gain worldly knowledge, should know what the soul is, what truth is, what love is, what powers are latent in the soul. It should be an essential of real education that a child should learn, that in the struggle of life, it can easily conquer hate by love, untruth by truth, violence by self-suffering.

CONDITIONS FOR SUCCESSFUL SATYAGRAHA*

There can be no *Satyagraha* in an unjust cause. *Satyagraha* in a just cause is vain, if the men espousing it are not determined and capable of fighting and suffering to the end; and the slightest use of violence often defeats a just cause. *Satyagraha* excludes the use of violence in any shape or

* *Young India*, 23-3-'21.

* *Young India*, 3-11-'27.

* *Young India*, 27-4-'21.

form, whether in thought, speech, or deed. Given a just cause, capacity for endless suffering and avoidance of violence, victory is a certainty.

NON-RETALIATION*

Victory is impossible until we are able to keep our temper under the gravest provocation. Calmness under fire is a soldier's indispensable quality. A non-cooperator is nothing if he cannot remain calm and unperturbed under a fierce fire of provocation.

There should be no mistake. There is no civil disobedience possible, until the crowds behave like disciplined soldiers. And we cannot resort to civil disobedience, unless we can assure every Englishman that he is as safe in India as he is in his own home. It is not enough that we give the assurance. Every Englishman and Englishwoman must feel safe, not by reason of the bayonet at their disposal but by reason of our living creed of non-violence. That is the condition not only of success but our own ability to carry on the movement in its present form. There is no other way of conducting the campaign of non-cooperation.

SATYAGRAHI PRISONER'S CONDUCT†

Whether all of us realize or not the method of non-cooperation is a process of touching the heart and appealing to reason, not one of frightening by rowdiness. Rowdiness has no place in a non-violent movement.

I have often likened *Satyagrahi* prisoners to prisoners of war. Once caught by the enemy, prisoners of war act towards the enemy as friends. It will be considered dishonorable on the part of a soldier as a prisoner of war to deceive the enemy. It does not affect my argument that the Government does not regard *Satyagrahi* prisoners as prisoners of war. If we act as such, we shall soon command respect. We must make the prison a neutral institution in

which we may, nay, must cooperate to a certain extent.

We would be highly inconsistent and hardly self-respecting if on the one hand we deliberately break prison rules and in the same breath complain of punishment and strictness. We may not, for instance, resist and complain of search and at the same time conceal prohibited things in our blankets or our clothes. There is nothing in *Satyagraha* that I know whereby we may under certain circumstances tell untruths or practice other deception.

When we say that if we make the lives of prison officials uncomfortable, the Government will be obliged to sue for peace, we either pay them a subtle compliment or regard them as simpletons. We pay a subtle compliment when we consider that even though we may make prison officials' lives uncomfortable, the Government will look on in silence and hesitate to award us condign punishment so as utterly to break our spirit. That is to say we regard the administrators to be so considerate and humane that they will not severely punish us even though we give them sufficient cause. As a matter of fact, they will not and do not hesitate to throw over-board all idea of decency and award not only authorized but even un-authorized punishments on given occasions.

But it is my deliberate conviction that had we but acted with uniform honesty and dignity, behoving *Satyagrahis*, we would have disarmed all opposition on the part of the Government and such strictly honorable behavior on the part of so many prisoners would have at least shamed the Government into confessing their error in imprisoning so many honorable and innocent men. For is it not their case that our non-violence is but a cloak for our violence? Do we not therefore play into their hands every time we are rowdy?

In my opinion therefore as *Satyagrahis* we are bound, when we become prisoners,

1. to act with the most scrupulous honesty;
2. to cooperate with the prison officials in their administration;

FASTING*

Fasting is a potent weapon in the *Satyagraha* armory. It cannot be taken by every one. Mere physical capacity to take it is no qualification for it. It is of no use without a living faith in God. It should never be a mechanical effort nor a mere imitation. It must come from the depth of one's soul. It is therefore always rare. I seem to be made for it. It is noteworthy that not one of my colleagues on the political field has felt the call to fast. And I am thankful to be able to say that they have never resented my fasts. Nor have fellow-members of the Ashram felt the call except on rare occasions. They have even accepted the restriction that they may not take penitential fasts without my permission, no matter how urgent the inner call may seem to be.

Thus fasting, though a very potent weapon, has necessarily very strict limitations and is to be taken only by those who have undergone previous training. And, judged by my standard, the majority of fasts do not at all come under the category of *Satyagraha* fasts and are, as they are popularly called, hunger-strikes undertaken without previous preparation and adequate thought. If the process is repeated too often, these hunger-strikes will lose what little efficacy they may possess and will become objects of ridicule.

SOME RULES OF SATYAGRAHA†

Satyagraha literally means insistence on truth. This insistence arms the votary with matchless power. This power or force is connoted by the word *Satyagraha*. *Satyagraha*, to be genuine, may be offered against one's wife or one's children, against rulers, against fellow citizens, even against the whole world.

Such a universal force necessarily makes no distinction between kinsmen and strangers, young and old, man and woman, friend and foe. The force to be so applied can never be physical. There is in it no room for violence. The only force of

3. to set by our obedience to all reasonable discipline an example to co-prisoners;
4. to ask for no favors and claim no privileges which the meanness of prisoners do not get and which we do not need strictly for reasons of health;
5. not to fail to ask what we do so need and not to get irritated if we do not obtain it;
6. to do all the tasks allotted, to the utmost of our ability.

It is such conduct which will make the Government position uncomfortable and untenable. It is difficult for them to meet honesty with honesty for their want of faith and unpreparedness for such a rare eventuality. Rowdiness they expect and meet with a double dose of it. They were able to deal with anarchical crime but they have not yet found out any way of dealing with non-violence save by yielding to it.

The idea behind the imprisonment of *Satyagrahis* is that he expects relief through humble submission to suffering. He believes that meek suffering for a just cause has a virtue all its own and infinitely greater than the virtue of the sword. This does not mean that we may not resist when the treatment touches our self-respect. Thus for instance we must resist to the point of death the use of abusive language by officials or if they were to throw our food at us which is often done. Insult and abuse are no part of an official's duty. Therefore we must resist them. But we may not resist search because it is part of prison regulations.

Nor are my remarks about mute suffering to be construed to mean that there should be no agitation against putting innocent prisoners like *Satyagrahis* in the same class as confirmed criminals. Only as prisoners we may not ask for favors. We must be content to live with the confirmed criminals and even welcome the opportunity of working moral reform in them. It is however expected of a government that calls itself civilized to recognize the most natural divisions.

* *Harijan*, 18-3-'39.

† *Young India*, 27-2-'30.

* *Young India*, 25-8-'21.

† *Young India*, 5-6-'24.

universal application can, therefore, be that of *ahimsa* or love. In other words it is soul-force.

Love does not burn others, it burns itself. Therefore, a *Satyagrahi*, i.e. a civil resister, will joyfully suffer even unto death.

It follows, therefore, that a civil resister, whilst he will strain every nerve to compass the end of the existing rule, will do no intentional injury in thought, word or deed to the person of a single Englishman. This necessarily brief explanation of *Satyagraha* will perhaps enable the reader to understand and appreciate the following rules:

AS AN INDIVIDUAL

1. A *Satyagrahi*, i.e., a civil resister will harbor no anger.
2. He will suffer the anger of the opponent.
3. In so doing he will put up with assaults from the opponent, never retaliate; but he will not submit, out of fear of punishment or the like, to any order given in anger.
4. When any person in authority seeks to arrest a civil resister, he will voluntarily submit to the arrest, and he will not resist the attachment or removal of his own property, if any, when it is sought to be confiscated by the authorities.
5. If a civil resister has any property in his possession as a trustee, he will refuse to surrender it, even though in defending it he might lose his life. He will however, never retaliate.
6. Non-retaliation excludes swearing and cursing.
7. Therefore a civil resister will never insult his opponent, and therefore also not take part in many of the newly coined cries which are contrary to the spirit of *ahimsa*.
8. A civil resister will not salute the Union Jack, nor will he insult it or officials, English or Indian.
9. In the course of the struggle if any one insults an official or commits an assault upon him, a civil resister will protect such official or officials from the insult or attack even at the risk of his life.

AS A PRISONER

10. As a prisoner, a civil resister, will behave courteously towards prison officials, and will observe all such discipline of the prison as is not contrary to self-respect; as for instance, whilst he will *salaam* officials in the usual manner, he will not perform any humiliating gyrations and refuse to shout 'Victory to Sarkar' or the like. He will take cleanly cooked and cleanly served food, which is not contrary to his religion, and will refuse to take food insultingly served or served in unclean vessels.
11. A civil resister will make no distinction between an ordinary prisoner and himself, will in no way regard himself as superior to the rest, nor will he ask for any conveniences that may not be necessary for keeping his body in good health and condition. He is entitled to ask for such conveniences as may be required for his physical or spiritual well-being.
12. A civil resister may not fast for want of conveniences whose deprivation does not involve any injury to one's self-respect.

AS A UNIT

13. A civil resister will joyfully obey all the orders issued by the leader of the corps, whether they please him or not.
14. He will carry out orders in the first instance even though they appear to him insulting, inimical or foolish, and then appeal to higher authority. He is free before joining to determine the fitness of the corps to satisfy him, but after he has joined it, it becomes a duty to submit to its discipline irksome or otherwise. If the sum total of the energy of the corps appears to a member to be improper or immoral, he has a right to sever his connection, but being within it, he has no right to commit a breach of its discipline.

15. No civil resister is to expect maintenance for his dependents. It would be an accident if any such provision is made. A civil resister entrusts his dependents to the care of God. Even in ordinary warfare wherein hundreds of thousands give themselves up to it, they are able to make no previous provision. How much more, then, should such be the case in *Satyagraha*? It is the universal experience that in such times hardly anybody is left to starve.

IN COMMUNAL FIGHTS

16. No civil resister will intentionally become a cause of communal quarrels.
17. In the event of any such outbreak, he will not take sides, but he will assist only that party which is demonstrably in the right. Being a Hindu he will be generous towards Muslims and others, and will sacrifice himself in the attempt to save non-Hindus from a Hindu attack. And if the attack is from the other side, he will not participate in any retaliation but will give his life in protecting Hindus.
18. He will, to the best of his ability, avoid every occasion that may give rise to communal quarrels.
19. If there is a procession of *Satyagrahis* they will do nothing that would wound the religious susceptibilities of any community, and they will not take part in any other processions that are likely to wound such susceptibilities.

QUALIFICATIONS FOR SATYAGRAHA*

Satyagraha presupposes self-discipline, self-control, self-purification, and a recognized social status in the person offering it. A *Satyagrahi* must never forget the distinction between evil and the evil-doer. He must not harbor ill-will or bitterness

* *Young India*, 8-8-'29.

against the latter. He may not even employ needlessly offensive language against the evil person, however unrelieved his evil might be. For it should be an article of faith with every *Satyagrahi* that there is none so fallen in this world but can be converted by love. A *Satyagrahi* will always try to overcome evil by good, anger by love, untruth by truth, *himsa* by *ahimsa*. There is no other way of purging the world of evil. Therefore a person who claims to be a *Satyagrahi* always tries by close and prayerful self-introspection and self-analysis to find out whether he is himself completely free from the taint of anger, ill-will and such other human infirmities, whether he is not himself capable of those very evils against which he is out to lead a crusade. In self-purification and penance lies half the victory of a *Satyagrahi*. A *Satyagrahi* has faith that the silent and undemonstrative action of truth and love produces far more permanent and abiding results than speeches or such other showy performances.

But although *Satyagraha* can operate silently, it requires a certain amount of action on the part of a *Satyagrahi*. A *Satyagrahi*, for instance, must first mobilize public opinion against the evil which he is out to eradicate, by means of a wide and intensive agitation. When public opinion is sufficiently roused against a social abuse even the tallest will not dare to practice or openly to lend support to it. An awakened and intelligent public opinion is the most potent weapon of a *Satyagrahi*. When a person supports a social evil in total disregard of unanimous public opinion, it indicates a clear justification for his social ostracism. But the object of social ostracism should never be to do injury to the person against whom it is directed. Social ostracism means complete non-cooperation on the part of society with the offending individual; nothing more, nothing less, the idea being that a person who deliberately sets himself to flout society has no right to be served by society. For all practical purposes this should be enough. Of course, special action may be indicated in special cases and the practice may have to be varied to suit the peculiar features of each individual case.

SATYAGRAHA ASHRAM VOWS*

IMPORTANCE OF VOWS

Taking vows is not a sign of weakness, but of strength. To do at any cost something that one ought to do constitutes a vow. It becomes a bulwark of strength. A man who says that he will do something 'as far as possible', betrays either his pride or his weakness. I have noticed in my own case, as well as in the case of others, that the limitation 'as far as possible' provides a fatal loophole. To do something 'as far as possible' is to succumb to the very first temptation. There is no sense in saying that one would observe truth 'as far as possible'. Even as no businessman will look at a note in which a man promises to pay a certain amount on a certain date 'as far as possible', so will God refuse to accept a promissory note drawn by a man, who will observe truth as far as possible.

God is the very image of the vow. God would cease to be God if He swerved from His own laws even by a hair's breadth. The sun is a greater keeper of observances; hence the possibility of measuring time and publishing almanacs. All business depends upon men fulfilling their promises. Are such promises less necessary in character building or self-realization? We should therefore never doubt the necessity of vows for the purpose of self-purification and self-realization.

TRUTH

I deal with Truth first of all, as the *Satyagraha Ashram* owes its very existence to the pursuit and the attempted practice of Truth.

The word *Satya* (Truth) is derived from *Sat*, which means 'being'. Nothing is or exists in reality except Truth. That is why *Sat* or Truth is perhaps the most important name of God. In fact it is more correct to say that Truth is God, than to say that God is Truth. But as we cannot do without a ruler or a general, names of God

* From Yeravda Mandir, ch.s 1-3, 6.

such as 'King of Kings' or 'the Almighty' are and will remain generally current. On deeper thinking, however, it will be realized, that *Sat* or *Satya* is the only correct and fully significant name for God.

And where there is Truth, there also is knowledge which is true. Where there is no Truth, there can be no true knowledge. That is why the word *Chit* or knowledge is associated with the name of God. And where there is true knowledge, there is always bliss (*Ananda*). Sorrow has no place there. And even as Truth is eternal, so is the bliss derived from it. Hence we know God as *Sat-chit-ananda*, One who combines in Himself Truth, Knowledge and Bliss.

Devotion to this Truth is the sole justification for our existence. All our activities should be centred in Truth. Truth should be the very breath of our life. When once this stage in the pilgrim's progress is reached, all other rules of correct living will come without effort, and obedience to them will be instinctive. But without Truth it would be impossible to observe any principles or rules in life.

Generally speaking, observation of the law of Truth is understood merely to mean that we must speak the truth. But we in the Ashram should understand the word *Satya* or Truth in a much wider sense. There should be Truth in thought, Truth in speech, and Truth in action. To the man who has realized this Truth in its fullness, nothing else remains to be known, because all knowledge is necessarily included in it. What is not included in it is not Truth, and so not true knowledge; and there can be no inward peace without true knowledge. If we once learn how to apply this never-failing test of Truth, we will at once be able to find out what is worth doing, what is worth seeing, what is worth reading.

But how is one to realize this Truth, which may be likened to the philosopher's stone or the cow of plenty? By single-minded devotion (*abhyasa*) and indifference to all other interests in life (*vairagya*)—replies the *Bhagavadgita*. In spite, however, of such devotion, what may appear as truth to one person will often appear as untruth to another person. But that need not worry the seeker. Where there is

honest effort, it will be realized that what appear to be different truths are like the countless and apparently different leaves of the same tree. Does not God Himself appear to different individuals in different aspects? Yet we know that He is one. But Truth is the right designation of God. Hence there is nothing wrong in every man following Truth according to his lights. Indeed it is his duty to do so. Then if there is a mistake on the part of any one so following Truth, it will be automatically set right. For the quest of Truth involves *tapas*—self-suffering, sometimes even unto death. There can be no place in it for even a trace of self-interest. In such selfless search for Truth nobody can lose his bearings for long. Directly he takes to the wrong path he stumbles, and is thus redirected to the right path. Therefore the pursuit of Truth is truth *bhakti* (devotion). It is the path that leads to God. There is no place in it for cowardice, no place for defeat. It is the talisman by which death itself becomes the portal to life eternal.

In this connection it would be well to ponder over the lives and examples of Harishchandra, Prahlad, Ramachandra, Imam Hasan and Imam Husain, the Christian saints, etc. How beautiful it would be, if all of us, young and old, men and women, devoted ourselves wholly to Truth in all that we might do in our waking hours, whether working, eating, drinking or playing, till dissolution of the body makes us one with Truth? God as Truth has been for me a treasure beyond price; may He be so to every one of us.

AHIMSA OR LOVE

We saw last week how the path of Truth is as narrow as it is straight. Even so is that of *ahimsa*. It is like balancing oneself on the edge of a sword. By concentration an acrobat can walk on a rope. But the concentration required to tread the path of Truth and *ahimsa* is far greater. The slightest inattention brings one tumbling to the ground. One can realize Truth and *ahimsa* only by ceaseless striving.

But it is impossible for us to realize perfect Truth so long as we are imprisoned in this mortal frame. We can only visualize it in our imagination. We cannot, through the instrumentality of this ephemeral body, see face to face Truth which is eternal. That is why in the last resort one must depend on faith.

It appears that the impossibility of full realization of Truth in this mortal body led some ancient seeker after Truth to the appreciation of *ahimsa*. The question which confronted him was: "Shall I bear with those who create difficulties for me, or shall I destroy them?" The seeker realized that he who went on destroying others did not make headway but simply stayed where he was, while the man who suffered those who created difficulties marched ahead, and at times even took the others with him. The first act of destruction taught him that the Truth which was the object of his quest was not outside himself but within. Hence the more he took to violence, the more he receded from Truth. For in fighting the imagined enemy without, he neglected the enemy within.

We punish thieves, because we think they harass us. They may leave us alone; but they will only transfer their attentions to another victim. This other victim however is also a human being, ourselves in a different form, and so we are caught in a vicious circle. The trouble from thieves continues to increase, as they think it is their business to steal. In the end we see that it is better to endure the thieves than to punish them. The forbearance may even bring them to their senses. By enduring them we realize that thieves are not different from ourselves, they are our brethren, our friends, and may not be punished. But whilst we may bear with the thieves, we may not endure the infliction. That would only induce cowardice. So we realize a further duty. Since we regard the thieves as our kith and kin, they must be made to realize the kinship. And so we must take pains to devise ways and means of winning them over. This is the path of *ahimsa*. It may entail continuous suffering and the cultivating of endless patience. Given these two conditions, the thief is bound in

the end to turn away from his evil ways. Thus step by step we learn how to make friends with all the world; we realize the greatness of God—of Truth. Our peace of mind increases in spite of suffering; we become braver and more enterprising; we understand more clearly the difference between what is everlasting and what is not; we learn how to distinguish between what is our duty and what is not. Our pride melts away, and we become humble. Our worldly attachments diminish, and the evil within us diminishes from day to day.

Ahimsa is not the crude thing it has been made to appear. Not to hurt any living thing is no doubt a part of *ahimsa*. But it is its least expression. The principle of *ahimsa* is hurt by every evil thought, by undue haste, by lying, by hatred, by wishing ill to anybody. It is also violated by our holding on to what the world needs. But the world needs even what we eat day by day. In the place where we stand there are millions of microorganisms to whom the place belongs, and who are hurt by our presence there. What should we do then? Should we commit suicide? Even that is no solution, if we believe, as we do, that so long as the spirit is attached to the flesh, on every destruction of the body it weaves for itself another. The body will cease to be only when we give up all attachment to it. This freedom from all attachment is the realization of God as Truth. Such realization cannot be attained in a hurry. The body does not belong to us. While it lasts, we must use it as a trust handed over to our charge. Treating in this way, the things of the flesh, we may one day expect to become free from the burden of the body. Realizing the limitations of the flesh, we must strive day by day towards the ideal with what strength we have in us.

It is perhaps clear from the foregoing, that without *ahimsa* it is not possible to seek and find Truth. *Ahimsa* and Truth are so intertwined that it is practically impossible to disentangle and separate them. They are like the two sides of a coin, or rather of a smooth unstamped metallic disc. Who can say, which is the obverse,

and which is the reverse? Nevertheless *ahimsa* is the means; Truth is the end. Means to be means must always be within our reach, and so *ahimsa* is our supreme duty. If we take care of the means, we are bound to reach the end sooner or later. When once we have grasped this point, final victory is beyond question. Whatever difficulties we encounter, whatever apparent reverses we sustain, we may not give up the quest for Truth which alone is, being God Himself.

BRAHMACHARYA OR CHASTITY

The third among our observances is *brahmacharya*. As a matter of fact all observances are deducible from Truth, and are meant to subserve it. The man, who is wedded to Truth and worships Truth alone, proves unfaithful to her, if he applies his talents to anything else. How then can he minister to the senses? A man, whose activities are wholly consecrated to the realization of Truth, which requires utter selflessness, can have no time for the selfish purpose of begetting children and running a household. Realization of Truth through self-gratification should, after what has been said before, appear a contradiction in terms.

If we look at it from the standpoint of *ahimsa* (nonviolence), we find that the fulfilment of *ahimsa* is impossible without utter selflessness. *Ahimsa* means Universal Love. If a man gives his love to one woman, or a woman to one man, what is there left for all the world besides? It simply means, "We two first, and the devil take all the rest of them." As a faithful wife must be prepared to sacrifice her all for the sake of her husband, and a faithful husband for the sake of his wife, it is clear that such persons cannot rise to the height of Universal Love, or look upon all mankind as kith and kin. For they have created a boundary wall round their love. The larger their family, the farther are they from Universal Love. Hence one who would obey the law of *ahimsa* cannot marry, not to speak of gratification outside the marital bond.

Then what about people who are already married? Will they never be able to realize Truth? Can they never offer up their all at the altar of humanity? There is a way out for them. They can behave as if they were not married. Those who have enjoyed this happy condition will be able to bear me out. Many have to my knowledge successfully tried the experiment. If the married couple can think of each other as brother and sister, they are freed for universal service. The very thought that all the women in the world are his sisters, mothers or daughters will at once ennoble a man and snap his chains. The husband and wife do not lose any thing here, but only add to their resources and even to their family. Their love becomes free from the impurity of lust and so grows stronger. With the disappearance of this impurity, they can serve each other better, and the occasions for quarrelling become fewer. There are more occasions for quarrelling where the love is selfish and bounded.

If the foregoing argument is appreciated, a consideration of the physical benefits of chastity becomes a matter of secondary importance. How foolish it is intentionally to dissipate vital energy in sensual enjoyment! It is a grave misuse to fritter away for physical gratification that which is given to man and woman for the full development of their bodily and mental powers. Such misuse is the root cause of many a disease.

Brahmacharya, like all other observances, must be observed in thought, word and deed. We are told in the *Gita*, and experience will corroborate the statement, that the foolish man, who appears to control his body, but is nursing evil thoughts in his mind, makes a vain effort. It may be harmful to suppress the body, if the mind is at the same time allowed to go astray. Where the mind wanders, the body must follow sooner or later.

It is necessary here to appreciate a distinction. It is one thing to allow the mind to harbor impure thoughts; it is a different thing altogether if it strays among them in spite of ourselves. Victory will be ours in

the end, if we non-cooperate with the mind in its evil wanderings.

We experience every moment of our lives, that often while the body is subject to our control, the mind is not. This physical control should never be relaxed, and in addition we must put forth a constant endeavour to bring the mind under control. We can do nothing more, nothing less. If we give way to the mind, the body and the mind will put different ways, and we shall be false to ourselves. Body and mind may be said to go together, so long as we continue to resist the approach of every evil thought.

The observance of *brahmacharya* has been believed to be very difficult, almost impossible. In trying to find a reason for this belief, we see that the term *brahmacharya* has been taken in a narrow sense. Mere control of animal passion has been thought to be tantamount to observing *brahmacharya*. I feel, that this conception is incomplete and wrong. *Brahmacharya* means control of all the organs of sense. He, who attempts to control only one organ, and allows all the others free play, is bound to find his effort futile. To hear suggestive stories with the ears, to see suggestive sights with the eyes, to taste stimulating food with the tongue, to touch exciting things with the hands, and then at the same time expect to control the only remaining organ is like putting one's hands in the fire, and expecting to escape being burnt. He therefore who is resolved to control the one must be likewise determined to control the rest. I have always felt, that much harm has been done by the narrow definition of *brahmacharya*. If we practice simultaneous self-control in all directions, the attempt will be scientific and possible of success. Perhaps the palate is the chief sinner. That is why in the *Ashram* we have assigned to control of the palate a separate place among our observances.

Let us remember the root meaning of *brahmacharya*. *Charya* means course of conduct; *brahma-charya* conduct adapted to the search of *Brahma*, i.e., Truth. From this etymological meaning arises the special meaning, viz., control of all the senses.

We must entirely forget the incomplete definition which restricts itself to the sexual aspect only.

NON-POSSESSION

Possession implies provision for the future. A seeker after Truth, a follower of the law of Love cannot hold anything against tomorrow. God never stores for the morrow; He never creates more than what is strictly needed for the moment. If therefore we repose faith in His providence, we should rest assured that He will give us every day our daily bread, meaning everything that we require. Saints and devotees, who have lived in such faith, have always derived a justification for it from their experience. Our ignorance or negligence of the Divine Law, which gives to man from day to day his daily bread and no more, has given rise to inequalities with all the miseries attendant upon them. The rich have a superfluous store of things which they do not need, and which are therefore neglected and wasted; while millions are starved to death for want of sustenance. If each retained possession only of what he needed, no one would be in want, and all would live in contentment. As it is, the rich are discontented no less than the poor. The poor man would fain become a millionaire, and the millionaire a multi-millionaire. The rich should take the initiative in dispossession with a view to a universal diffusion of the spirit of contentment. If only they keep their own property within moderate limits, the starving will be easily fed, and will learn the lesson of contentment along with the rich.

Perfect fulfilment of the ideal of Non-possession requires, that man should, like the birds, have no roof over his head, no clothing and no stock of food for the morrow. He will indeed need his daily bread, but it will be God's business, and not his, to provide it. Only the fewest possible, if any at all, can reach this ideal. We ordinary seekers may not be repelled by the seeming impossibility. But we must keep the ideal constantly in view, and in the light thereof, critically examine our possessions, and try to reduce them. Civilization, in the real

sense of the term, consists not in the multiplication, but in the deliberate and voluntary reduction of wants. This alone promotes real happiness and contentment, and increases the capacity for service. Judging by this criterion, we find that in the Ashram we possess many things, the necessity for which cannot be proved, and we thus tempt our neighbors to thieve.

From the standpoint of pure Truth, the body too is a possession. It has been truly said that desire for enjoyment creates bodies for the soul. When this desire vanishes, there remains no further need for the body, and man is free from the vicious cycle of births and deaths. The soul is omnipresent; why should she care to be confined within the cagelike body, or do evil and even kill for the sake of that cage? We thus arrive at the ideal of total renunciation, and learn to use the body for the purposes of service so long as it exists, so much so that service, and not bread, becomes with us the staff of life. We eat and drink, sleep and wake, for service alone. Such an attitude of mind brings us real happiness, and the beatific vision in the fulness of time. Let us all examine ourselves from this standpoint.

We should remember, that Non-possession is a principle applicable to thoughts, as well as to things. A man who fills his brain with useless knowledge violates that inestimable principle. Thoughts, which turn us away from God, or do not turn us towards Him, constitute impediments in our way.

SATYAGRAHA OR PASSIVE RESISTANCE*

Reader: Is there any historical evidence as to the success of what you have called soul-force or truth-force? No instance seems to have happened of any nation having risen through soul-force. I still think that the evil-doers will not cease doing evil without physical punishment.

Editor: The poet Tulsidas has said: "Of religion, pity, or love, is the root, as egotism of the body. Therefore, we should not abandon pity so long as we are alive."

* *Hind Swaraj or Indian Home Rule*, ch. 17.

This appears to me to be a scientific truth. I believe in it as much as I believe in two and two being four. The force of love is the same as the force of the soul or truth. We have evidence of its working at every step. The universe would disappear without the existence of that force. But you ask for historical evidence. It is, therefore, necessary to know what history means. The Gujarati equivalent means: "It so happened."

If that is the meaning of history, it is possible to give copious evidence. But, if it means the doings of kings and emperors, there can be no evidence of soul-force or passive resistance in such history. You cannot expect silver ore in a tin mine. History, as we know it, is a record of the wars of the world, and so there is a proverb among Englishmen that a nation which has no history, that is, no wars, is a happy nation. How kings played, how they became enemies of one another, how they murdered one another, is found accurately recorded in history, and if this were all that had happened in the world, it would have been ended long ago. If the story of the universe had commenced with wars, not a man would have been found alive today. Those people who have been warded against have disappeared as, for instance, the natives of Australia of whom hardly a man was left alive by the intruders. Mark, please, that these natives did not use soul-force in self-defense, and it does not require much foresight to know that the Australians will share the same fate as their victims. "Those that take the sword shall perish by the Sword." With us the proverb is that professional swimmers will find a watery grave.

The fact that there are so many men still alive in the world shows that it is based not on the force of arms but on the force of truth or love. Therefore, the greatest and most unimpeachable evidence of the success of this force is to be found in the fact that, in spite of the wars of the world, it still lives on.

Thousands, indeed tens of thousands, depend for their existence on a very active working of this force. Little quarrels of millions of families in their daily lives disappear before the exercise of this force.

Hundreds of nations live in peace. History does not and cannot take note of this fact. History is really a record of every interruption of the even working of the force of love or of the soul. Two brothers quarrel; one of them repents and re-awakens the love that was lying dormant in him; the two again begin to live in peace; nobody takes note of this. But if the two brothers, through the intervention of solicitors or some other reason, take up arms or go to law—which is another form of the exhibition of brute force—their doing would be immediately noticed in the press, they would be the talk of their neighbors and would probably go down to history. And what is true of families and communities is true of nations. There is no reason to believe that there is one law for families and another for nations. History, then, is a record of an interruption of the course of nature. Soul-force, being natural, is not noted in history.

Reader: According to what you say, it is plain that instances of this kind of passive resistance are not to be found in history. It is necessary to understand this passive resistance more fully. It will be better, therefore, if you enlarge upon it.

Editor: Passive resistance is a method of securing rights by personal suffering: It is the reverse of resistance by arms. When I refuse to do a thing that is repugnant to my conscience, I use soul-force. For instance, the Government of the day has passed a law which is applicable to me. I do not like it. If by using violence I force the Government to repeal the law, I am employing what may be termed body-force. If I do not obey the law and accept the penalty for its breach, I use soul-force. It involves sacrifice of self.

Everybody admits that sacrifice of self is infinitely superior to sacrifice of others. Moreover, if this kind of force is used in a cause that is unjust, only the person using it suffers. He does not make others suffer for his mistakes. Men have before now done many things which were subsequently found to have been wrong. No man can claim that he is absolutely in the right or that a particular thing is wrong because he thinks so, but it is wrong for him so long

nonconformists, dissenters and rebels, and Spencer traces in his *Autobiography* (1904) his "conspicuous disregard" of political, religious, and social authority to the tradition of independence and dissent so long cherished by his family. Spencer's education was informal, unconventional, and highly deficient in the more traditional studies of literature and history. His father encouraged his interest in science and technology, and Spencer became an engineer. However, he practiced his profession for but a few years, because he became increasingly interested in political economy, sociology, biology, and philosophy. He was a subeditor of *The Economist* from 1848 to 1853, and then ventured into a full-time career as a free-lance author.

As early as 1842 Spencer contributed to the *Nonconformist* a series of letters called *The Proper Sphere of Government*, his first major publication. It contains his political philosophy of extreme individualism and *laissez faire*, which was little, if at all, modified in his writings of the subsequent sixty years. Spencer expresses in *The Proper Sphere of Government* his belief that "everything in nature has its laws," organic as well as inorganic matter. Man is subject to laws both in his physical and spiritual essence, and "as with man individually, so with man socially." Concerning the evils of society, Spencer postulates a "self-adjusting principle" under which evils rectify themselves, provided that no one interferes with the inherent law of society.

In discussing the functions of the state, Spencer is concerned with what the state should not do, rather than what it should do. Maintenance of order and administration of justice are the only two proper realms of government activity, and their purpose is "simply to defend the natural rights of man—to protect person and property." The state has no business to promote religion, regulate trade and commerce, encourage colonization, aid the poor, or enforce sanitary laws. Spencer went even so far as to deny the state the right to wage war; but, as he says in his *Autobiography*, his "youthful enthusiasm of two-and twenty" had carried him too far in this respect.

Spencer's next major publication was *Social Statics* (1851). In it he repeats the catalogue of functions the state should not exercise, and he adds the two novel proposals that the state abstain from regulating the currency and that it drop the postal business. Both functions could be carried on more efficiently, Spencer holds, by private competitive enterprise. Like Bentham, Spencer considers the greatest happiness of the greatest number as the ultimate standard of measuring conflicting social policies. Unlike Bentham, who was willing to use the machinery of Parliament and administration for the active promotion of reform and improvement, Spencer firmly believes that active interference with the natural laws of society would do much harm and little good.

Spencer introduced the concept of *evolution* into his political and social speculations and held that the same basic law of growth and evolution pervaded the physical, animal, and human worlds. The *advance from the simple to the complex* is the cardinal principle that Spencer sees exemplified in the origin and development of the earth, its flora and fauna, and, finally, in the evolution of human society. Progress consists essentially in the "transformation of the homogeneous into the heterogeneous." Because it pervades all nature, animate and inanimate, progress is, therefore, "not an accident, but a necessity."

Translating the newly developing concepts of biology into social-science terms, Spencer defines evil as the result of the "non-adaptation of constitution

to conditions." The shrub that dwindles in poor soil or dies when removed to a cold climate is no different, in principle, from the suffering of man who is incapable of adapting himself to his environment by means of the faculties he possesses: "Pervading all nature we must see at work a stern discipline, which is a little cruel that it may be very kind." The aged and weak animal is rightly killed by some beast of prey, and such death creates three kinds of happiness: the old animal is spared the suffering of slow and painful starvation, the younger generation can enjoy itself more fully by ridding itself of the burdensome old, and the beasts of prey derive happiness from their activity of killing off the weak and infirm animals. The happiness of humanity is "secured by that same beneficent, though severe discipline, to which the animate creation at large is subject: a discipline which is pitiless in the working out of good: a felicity-pursuing law which never swerves for the avoidance of partial and temporary suffering."

Spencer warns against interference with suffering for sentimental reasons because it distorts the operation of social laws even more grievously. Nature remedies incompetence and ignorance by "inconvenience, suffering, and death." If such penalties seem harsh, Spencer suggests that in reality they produce happiness, because society as a whole benefits from the elimination of the unfit, and the "survival of the fittest" (a phrase coined by Spencer and adopted by Darwin) ensures a constant improvement of the quality of the human race. To relax or suspend the stern discipline of nature slows the progress of society toward the stage in which it will be composed only of those who are well adjusted to their environment, in which the overall equilibrium between man and his surroundings will be one of static repose. Those who are ill-adapted to their conditions of existence are on trial: "If they are sufficiently complete to live, they *do* live, and it is well they should live. If they are not sufficiently complete to live, they die, and it is best they should die."

Viewing the nature of the state in evolutionary terms, Spencer is little interested in forms of government, such as the traditional distinctions of monarchies, aristocracies, and democracies. The two main forms of state and society, according to Spencer, are the *military state* and the *industrial state*. The military state is the early form of social organization, primitive, barbarian, and geared to permanent readiness for war. The individual is no more than a means to an end set by the state: victory in war. Society is rigidly organized, and every individual occupies the place assigned to him by the exigencies of militarism and authoritarian government. *Status* is the characteristic principle of the military society, and there is little mobility between classes and groups. Spencer defines the military state as one in which "the army is the nation mobilized while the nation is the quiescent army."

Showing unusual foresight long before total war was a reality, Spencer understood the impact of war on society as a whole; although his analysis of the military state refers to an early stage of society, it anticipates with remarkable accuracy the developments of the twentieth century. In the military state, Spencer says, the military chief is likely to be the political leader, and he keenly perceived the inner relations between militarism and despotism. Chauvinism, nationalism, and imperialism are the ideological inspiration of the military state, and the task of its ecclesiastical body is to teach obedience and discipline as primary civic virtues. The economic activities of the industrial classes are

subordinated to the military needs of the state, and the purpose of the economy is not to increase personal happiness through greater material welfare but to enhance collective power through successful conquests. There is considerable cooperation in a military state, but it is enforced and involuntary. Because the security of the state is the primary objective of all public action, there is little room for individual liberty, unorthodoxy, or experimentation.

As the military state expands its territory and achieves peace and stability over a long period of time, it gradually evolves into the industrial type of state and society. The latter is in every respect the opposite of the military state. *Contract* rather than status determines the position of the individual in society, as well as his opportunity to move upward or downward. The way of life in the industrial state and society is based on voluntary cooperation, and the tendency is toward the gradual elimination of coercion in all its forms. Spontaneity, diversity, variety, and nonconformity characterize the industrial society with its emphasis on the value of the individual as the supreme end of government. The purpose of the industrial society is to assure the maximum liberty and happiness of its members, whereas the purpose of the military society is to increase its power by rigid regimentation at home and imperialist conquest abroad. In relation to other nations, the industrial society is pacific, eager to exchange the products of labor rather than to acquire wealth by force. Members of the industrial society are therefore antimilitarist, anti-imperialist, cosmopolitan, and humanitarian. Free trade within and between nations is the formula of the industrial society; whereas economic nationalism is the ideal of the military state.

The progress from the military to the industrial society meant for Spencer a simultaneous progressive diminution of government, because government is no more than "proof of still-existing barbarism." The more men learn to cooperate on a peaceful, voluntary, nonexploiting basis, the closer they approximate the ideal of the industrial state and the less they need government, which will eventually wither away. Spencer did not see that modern industrialism itself produced a new kind of predatory ruthlessness, and that the individual can be reduced to the status of a means rather than an end, regardless of whether the idol that devours him is Glory or Wealth. Spencer failed to see in nineteenth-century capitalism the robber-baron type, whose primary virtue was ruthless militancy rather than peaceful cooperation.

Yet when Spencer's idealization of industrialism is allowed for, his insight into the fundamental difference between the military and industrial state is of lasting importance. Around 1900, when the world seemed to be moving in the direction of expanding world trade and free government, when even the traditional military despotisms of Russia and Germany made their bows to constitutional government, Spencer's distinction between the military and the industrial state may have appeared little more than an interesting historical hypothesis, inspired by old-fashioned liberalism. In the second half of the twentieth century, Spencer's basic distinction throws a great deal of light on the political behavior of states. The intimate relation between the internal structure of the state and its foreign aims and policies has been amply demonstrated in this century by aggressive wars waged by totalitarian states. Where the production of wealth has been the predominant objective of a nation, its record as a member of the world community has, on the whole, been less aggressive and rapacious

than that of nations whose internal organization has been thoroughly militarized and regimented for the attainment of power and glory.

Spencer's hypothesis about the nature of the state has therefore little to do with the controversy of capitalism versus socialism. The basic issue is not, as Spencer thought, who owns the means of production, but what their social purpose is: more wealth and happiness for the individual members of society (the ideal of both democratic capitalism and socialism) or greater power of the state through imperialist expansion (the objective of both fascist capitalism and totalitarian communism). Spencer thought that private enterprise without interference from the state is the best guarantee of internal and international peace, and he saw in socialism a return to the preindustrial type of military society. He did not distinguish between democratic socialism and revolutionary communism, but used the two concepts interchangeably.

In 1884 Spencer published four essays in the *Contemporary Review*, subsequently assembled in book form under the title, *The Man versus the State*. It is his most famous work on politics and still the most influential statement of the philosophy of irreconcilable *laissez faire*. In the first essay, "The New Tories," Spencer attacks the English Liberals for abandoning their historical individualism in favor of social reform and the welfare state. According to Spencer, English Conservatives, like conservatives generally, are the historical descendants of the principles of militancy and status, whereas the English Liberals, like liberals generally, stem from individualism and contract. Spencer also noticed that economic individualism, abandoned by Liberals, was more and more adopted by Conservatives, so that the roles of both parties came to be the opposite of what they had originally been. Spencer thus foresaw that the British Conservatives would become the party of economic individualism and free enterprise, whereas the Liberals would increasingly accept public control of the economy.

The second essay of *The Man versus the State* is "The Coming Slavery." In it, Spencer reiterates his belief that the laws of society must not be interfered with by artificial political measures, that it is both futile and harmful to interfere with the beneficent process of the survival of the fittest, and that interference with natural selection lowers the standards of society as a whole. Spencer specifically states that all human suffering ought not to be prevented, because "much of the suffering is curative, and prevention of it is prevention of a remedy." Spencer stresses the tendency of officialdom and official regulations to increase in a geometrical ratio to the power of resistance of the regulated citizens. People get more and more accustomed to the idea that the state will take care of them, and thus they lose the spirit of initiative and enterprise. The growth of popular suffrage represents a danger, according to Spencer, inasmuch as the various parties, in order to capture the popular vote, find they have to outbid each other in promises of more social welfare.

Spencer predicted that social-welfare programs would eventually lead to socialization of the means of production, and "all socialism is slavery." Spencer defines a slave as a person who "labors under coercion to satisfy another's desires." Under socialism or communism the individual would be enslaved to the whole community rather than to a particular master, and "it matters not whether his master is a single person or a society." Spencer says that the

existence of democratic government would not prevent the despotic character of socialism, and he maintains that officialism will always work differently from the way it may be intended to work. The concentration of great economic power in the hands of the bureaucracy would inevitably lead to political despotism.

Spencer's basic objection to socialism is his feeling that institutional changes cannot abolish the difficulties created by the nature of man, and he attacks the view that "by due skill an ill-working humanity may be framed into well-working institutions. It is a delusion. The defective natures of citizens will show themselves in the bad acting of whatever social structure they are arranged into. There is no political alchemy by which you can get golden conduct out of leaden instincts."

In his third essay, "The Sins of Legislators," Spencer deplors the spread of government activity in social and economic areas. Progress is the result of the desire to "increase personal welfare," and not the product of governmental regulation: "It is not to the State that we owe the multitudinous useful inventions from the spade to the telephone; it was not the State which made possible extended navigation by a developed astronomy; it was not the State which made the discoveries in physics, chemistry, and the rest, which guide modern manufacturers; it was not the State which devised the machinery for producing fabrics of every kind, for transferring men and things from place to place, and for ministering in a thousand ways to our comforts."

Legislators must understand the laws of society before they meddle with them, and Spencer particularly charges legislators with confusing *family ethics* with *state ethics*. In the family, generosity is the guiding principle, and benefits received have little or no relation to merit. In the state, Spencer maintains, the ruling principle ought to be justice, according to which there is a proportioning of benefits to merits, "as throughout the animal world." The intrusion of family ethics into state ethics is a dangerous interference with the laws of nature and society, and is slowly followed by "fatal results." The poverty of the incapable, the sufferings of the imprudent, and the shoulderings aside of the weak by the strong are the decrees of a farseeing benevolence, and Spencer sees his doctrine of society confirmed by Darwin's principle of "natural selection." He defines government as "begotten of aggression and by aggression," and he writes that it continually betrays its aggressive nature, even if it apparently seeks to mitigate suffering, because in the end such relief of suffering is cruelty rather than kindness: "For is it not cruel to increase the sufferings of the better that the sufferings of the worse may be decreased?"

The last essay of *The Man versus the State* is "The Great Political Superstition." In the past, Spencer says, the great political superstition was the divine right of kings. In the present it is the "divine right of parliaments." Spencer attacks the doctrine of sovereignty as propounded by Hobbes and rejects the claim of popular majorities for unlimited authority as being inconsistent with the inalienable rights of the individual. Spencer also rejects the Benthamite doctrine that *individual rights* are created by the state and reverts to the Lockean notion that they *precede the state*. In particular, Spencer emphasizes that "property was well recognized before law existed." The state does not create rights but merely formally sanctions and better defines "those assertions of claims and recognitions of claims which naturally originate from the individual

desires of men who have to live in presence of one another." Far from being created by the state, rights stand in inverse relation to it. As the state grows, status and slavery grow with it. The recognition of rights begins when "militancy ceases to be chronic and governmental power declines."

Spencer concludes *The Man versus the State* with the final reminder that government is not a divine institution but a committee of management, and that it has no intrinsic authority beyond the ethical sanction bestowed on it by the free consent of the citizens: "The function of Liberalism in the past was that of putting a limit to the powers of kings. The function of true Liberalism in the future will be that of putting a limit to the powers of parliaments."

Spencer's political ideas hardly changed between 1842, when he published his *Proper Sphere of Government*, and 1903, the year of his death. The constancy of his political thought in the face of a rapidly changing social and economic scene explains why the same ideas that were the last word in radical individualism in the eighteen-forties had become the *ne plus ultra* of orthodox conservatism by 1900. Although Spencer's influence declined in England, it steadily grew in the United States. Just as John Locke dominated American political thought in the eighteenth century by supplying the rationale of government based on consent, Spencer dominated American social philosophy of the latter part of the nineteenth century by supplying the rationale of *laissez faire*.

The period was one of tremendous industrial expansion in the United States, and Spencer's ideas of *laissez faire* and the survival of the fittest by natural selection appealed to businessmen and industrial entrepreneurs who themselves had gone through the hard school of ruthless competition, in which no quarter was asked or given. Spencer supplied businessmen with the comforting thought that the survival of the fittest was not only a principle of political or economic conservatism but a universal law that pervaded nature as well as human society. By linking economic *laissez faire* with progress, Spencer assured the wealthy classes that competitive capitalism was not only in harmony with universal laws but was also in the interest of the general welfare. Business found in Spencer's biological and scientific system a substitute for the lost religious inspiration, and Spencerism became a total view of life rather than a mere social or political theory. With the aid of Spencerism, opposition to social reform appeared no longer as class egotism but as the defense of the true principles of social evolution and progress.

When Spencer visited the United States in 1882, he was immensely impressed by its industrial power, and in his *Autobiography* he records his conviction that "the United States will very soon be by far the most powerful nation in the world." One of Spencer's closest American friends was Andrew Carnegie, the steel magnate, and during his triumphal tour of the country Spencer saw many other successful businessmen and leaders of conservative thought. Yet the restlessness and strain of American life perturbed him, and before he departed for England he declared that the future "has in store a new ideal, differing as much from the present ideal of industrialization as that ideal differs from the past ideal of militancy." His earlier dream that industrialism was the utopia now gave way to the dawning realization that the human cost of industrialism was perhaps higher than he had thought.

Spencerism died as a vitalizing philosophy in the United States after the turn of the century, just as it had died in England a generation earlier. Going first through the experience of the Industrial Revolution, England early showed the reactions to industrialism as a way of life, and popular protest increasingly mounted against the human misery and degradation that industrialism produced together with greater happiness and welfare. Spencerism was a mood that fitted the early phase of ruthless, competitive capitalism of the robber-baron type. As soon as that phase had passed in England and, later, in the United States, as soon as the naïve belief in free enterprise as a law of nature was replaced by critical inquiry into its operation as a man-made system, Spencerism lost its vitality and appeal. Yet, though the extreme positions of Spencer's *laissez faire* were abandoned, much of his thought had imperceptibly permeated the world of liberal capitalism. As long as pecuniary incentives, competition, and individualism are hailed as positive social values, some elements of Spencerism will continue to survive, albeit Spencer's philosophical system as a whole may have outlived its usefulness.

One of the main assumptions of *laissez faire* was that of harmony and equilibrium: if all individuals pursued their own good, they would thereby, in the end, also promote the general good. The assumption of economic harmony out of competition was later buttressed by the wider generalization, popularized by Spencer and Darwin, that the whole universe was ruled by the law of the survival of the fittest, and that natural selection was not only a theory of evolution but of progress. Interference with the economic activities of individuals by public bodies appeared, in the light of Spencerism, economically unsound as well as an outright obstruction of morals and progress. Unfortunately, the world did not appear to conform to *laissez faire* doctrines as its advocates expected it to, and this opened the door to more collectivist forms of liberalism, which saw government as being able to play a fundamental role in promoting and providing economic stability.

Just as England produced, owing to her peculiar historical circumstances, the most characteristic representative of nineteenth-century economic individualism and *laissez faire*, Herbert Spencer, it also provided, in response to changing economic conditions, a new approach to political economy, most significantly expressed in the work of John Maynard Keynes (1883–1946). Keynes' father was a distinguished economist and philosopher, and his mother was mayor of Cambridge. Keynes was well grounded in mathematics and classics before he entered Cambridge University, where he specialized in philosophy and economics. At the age of twenty-three he passed the Civil Service examination as the second-best candidate. He would have been first, but his worst mark was in economics, though Keynes himself was of the opinion that "the examiners presumably knew less than I did." Keynes worked for two years in the India Office and then returned to Cambridge. During his entire life, his main interests lay in public service, on the one hand, and in teaching economics at Cambridge and editing the *Economic Journal*, on the other. At the Paris Peace Conference in 1919, Keynes was the principal representative of the British Treasury. He resigned because he disagreed with the reparations policy

of the Allied Powers, and he wrote a short book, *The Economic Consequences of the Peace* (1919), which made him at once world-famous.

In the years between World Wars I and II, Keynes concentrated on his scholarly activities at Cambridge but did not lose touch with practical affairs. In addition to his heavy duties of writing, editing, and teaching, Keynes found time to serve as chairman of a major insurance company, run an investment company, take an important part in the furthering of the arts, organize a distinguished ballet, and build a new theater. Starting out with no means of his own, he amassed a considerable fortune, most of which he used for the endowment of the arts in Great Britain. During World War II, he served again in the Treasury, and as the war proceeded, he became the chief architect of Britain's long-term financial plans and policies. He rendered his last service to his country by negotiating the American Loan in 1945 and 1946, and he was one of the principal authors of the two new agencies for international monetary and economic cooperation, the International Monetary Fund, and the International Bank for Reconstruction and Development. During World War II, he enthusiastically supported the movement to bring the arts to the people; he became chairman of the Council for the Encouragement of Music and the Arts, and later of the Arts Council. In 1942, Keynes was given a peerage.

Politically, Keynes never ceased to be a Liberal, although he knew by the middle twenties that the Liberal party would never again be in a position to form a government. In a speech in 1926, Keynes described his political credo as follows: "The political problem of mankind is to combine three things: Economic Efficiency, Social Justice, and Individual Liberty. The first needs criticism, precaution, and technical knowledge; the second an unselfish and enthusiastic spirit which loves the ordinary man; the third, tolerance, breadth, appreciation of the excellencies of variety and independence, which prefers, above everything, to give unhindered opportunity to the exceptional and to the aspiring. The second ingredient is the best possession of the great party of the Proletariat. But the first and third require the qualities of the party which, by its traditions and ancient sympathies, has been the home of Economic Individualism and Social Liberty."

In *The End of Laissez-Faire* (1926; reproduced here in its entirety), Keynes clearly indicated where the new liberalism differed from the old. The very title of his book, *The End of Laissez-Faire*, suggests that Keynes considered the philosophy of *laissez faire* a thing of the past. He demonstrates the historical and philosophical roots of economic individualism and *laissez faire*, and traces their long hold on thought and action to their "conformity with the needs and wishes of the business world of the day. They gave full scope to our erstwhile heroes, the great business men." The faith in *laissez faire* vanished together with the faith in the Captain of Industry, the Master-Individualist, and we "grow more doubtful whether it is he who will lead us into Paradise by the hand."

Yet the rejection of *laissez faire* did not lead Keynes to accept socialism as an alternative, primarily because socialism seemed to him to be committed to another dogma: that of complete state control and operation of the economy, just as *laissez faire* was committed to the dogma of no state interference in the economy. Keynes distinguishes services that are *technically social* from those

that are *technically individual*. The state should not meddle in activities that are already performed by individuals, though it could perform them a little better, but do only those things that at present are not done at all. Keynes cites three areas in which government responsibility is desirable: 1) the deliberate control of credit and currency by a central institution, 2) the determination of the scale of savings and investment for the community as a whole, and 3) the formulation of a public policy on the problem of population.

These three areas do not exhaust the list of government responsibilities in economic affairs but indicate the direction in which Keynes' thought was moving. Keynes favors *intervention* in an economy rather than *control* of it; his focus is more on government creating the conditions within which economic prosperity can occur than on government provision of services (though he does not oppose the latter). Rejecting the cash nexus and the pecuniary motive as proper foundations of civilized society, Keynes nevertheless comes to the conclusion that capitalism, "wisely managed, can probably be made more efficient for attaining economic ends than any alternative system yet in sight, but that in itself it is in many ways extremely objectionable. Our problem is to work out a social organization which shall be as efficient as possible without offending our notions of a satisfactory way of life."

Only three years after publication of *The End of Laissez-Faire* the world was engulfed by an economic crisis, the Great Depression. Perhaps the most serious breakdown of economic life in the last century, it was resolved only by the coming of war in 1939. In 1936 Keynes published his most important contribution to political economy, *The General Theory of Employment, Interest, and Money*. It quickly established itself as a pioneering work in its field, in a class with Adam Smith's *Wealth of Nations* and Karl Marx's *Capital*.

The classical economists started out with the assumption of full employment and concentrated their analysis on problems of value with regard to the different factors of production. Keynes revolutionized this tradition by making the problem of *full employment* the central issue of economic theory and policy. Since Keynes, the idea has been abandoned, both in doctrine and policy, that full employment is to be expected from the working of automatic economic laws tending to establish by themselves a satisfactory equilibrium, and the conception has been accepted instead that full employment is the result of a deliberate public policy.

Keynes thus also revolutionized the conception of rationality in the capitalist economy. In classical economics, the "invisible hand" of the market was assumed to provide the element of rationality for the whole economy: if each business firm calculates its operations according to criteria of profits and losses, such individual acts of rationality would then add up to the rationality of the whole economy. Keynes showed that the very opposite may, in fact, occur: individual business decisions, guided by rational calculations of profits and losses, may add up to aggregate irrationality of the whole economy. If, for example, many individual business firms fail to invest in new capital goods and reduce their labor force because they expect an economic downtrend, each company acts rationally from the viewpoint of its own profits, but the collective effect of such individual actions may severely depress the national income and cause widespread unemployment of manpower and resources.

Keynes therefore argued that primary consideration must be given to the impact of economic decisions on the national income, the whole economy, that is, rather than on profits of individual businesses alone. Since individual businesses cannot be expected to plan and act for the well-being of the whole economy, only government can do that, since it alone can protect the interests of the entire nation or, in economic terms, of the whole economy. Since Keynes, economic analysis has thus shifted from the single firm to national income. The deep public concern about the rate of growth of national income is one of the lasting results of the Keynesian perspective in noncommunist countries.

The outstanding fault of capitalist society is, according to Keynes, "its failure to provide for full employment and its arbitrary and inequitable distribution of wealth and income." In contemporary conditions, Keynes argues, "the growth of wealth, so far from being dependent on the abstinence of the rich, as is commonly supposed, is more likely to be impeded by it." Yet Keynes by no means opposes economic inequality as such; he holds that "it is better that a man should tyrannize over his bank balance than over his fellow-citizens; and whilst the former is sometimes denounced as being but a means to the latter, sometimes at least it is an alternative." The barbarism and cruelty of totalitarian despotism taught Keynes that political tyranny is generally worse than economic inequality.

Looking beyond the range of government activity as outlined in *The End of Laissez-Faire*, Keynes maintains in his *General Theory* that in principle only experience can show how far the state should go in ensuring full employment by stimulating investment and by increasing the effective purchasing power of the consumers. Specifically, Keynes believes that the state will have to exercise a guiding influence on the scale of consumption through taxation and other means of distributing the national income. In the field of investment, Keynes holds that the traditional methods of relying solely on private initiative have failed, and that "a somewhat comprehensive socialization of investment will prove the only means of securing an approximation to full employment." Keynes does not suggest that the state do all the investing itself, but only that it encourage and induce private investment through flexible credit and interest policies, and that it supplement private investments with public investments to the extent that private investments do not result in full employment of all available manpower and resources.

Beyond this, Keynes sees no necessity for state socialism, and he envisages an economy that, once the goals of investment are set by public policy, will remain essentially in the hands of private enterprise. Keynes considers decentralization and the play of self-interest the two greatest advantages of private enterprise, which is also more efficient than public ownership and operation of the means of production. Far from regarding his proposals for increased government activity in economic affairs, particularly the *socialization of investment*, as the first step in the destruction of capitalism and its replacement by socialism, Keynes is convinced that his conception of public policy provides the only practicable means of avoiding the total destruction of economic individualism, and of preserving the conditions for the successful social functioning of individual enterprise and initiative.

Keynes' impact was immediate in doctrine and policy. In Britain it was soon recognized by all parties that chronic unemployment, so characteristic of the interwar years, must never be allowed again, and during World War II all parties formally committed themselves to policies aiming at full employment. In the United States the New Deal was strongly influenced by the doctrines of Keynes, and President Roosevelt, who personally discussed economic problems with Keynes, was in general sympathy with Keynesian ideas. In 1946 Congress passed the Employment Act, declaring that it is the "continuing policy and responsibility of the Federal Government" to create and maintain full employment by promoting "maximum employment, production, and purchasing power," committing the government of the United States to a positive policy of full employment.

Democratic socialists are in agreement with Keynes as far as he goes, yet criticize him for not going far enough. Keynes' policies will cure some of the symptoms, democratic socialists believe, but not the causes of instability and unemployment under capitalism. It is not enough that government merely macro-manages the economy; it also must provide extensive public welfare benefits and consider nationalization of key industries.

Gunnar Myrdal (1898-1987) brought an unusual combination of experiences to the analysis of socialism and the welfare state. First, he was not only a Socialist by conviction, but one of the leaders of the Swedish Social Democratic Party, serving for many years as a member of the Swedish Senate and for several years as Minister of Trade and Commerce. Since the Swedish Social Democrats had the longest record of any Socialist party in governing a nation—they continuously held office from 1932 to 1976—Myrdal was intimately familiar with the practical problems of socialist politics. Secondly, Myrdal was a political economist of the first rank. In addition to many economic writings of a more professional nature, he authored two major works. In 1938-1943, he was asked by the Carnegie Corporation to do a study of the American Negro and his place in American society. The study took five years, and was published in 1944 under the title, *An American Dilemma: The Negro Problem and Modern Democracy*. The massive work was an immediate, and even sensational, success, and is considered a classic in its field, particularly since events have proved Myrdal's contention to be true, that is, that the status of blacks in the United States is the great American dilemma the solution of which may well determine the future of the nation. After serving as Executive Secretary of the United Nations Economic Commission for Europe in 1947-1957, Myrdal began, in 1957, a ten-year study for the Twentieth Century Fund on the problem of economic underdevelopment, concentrating on one particular—and highly important—region: South Asia, encompassing India, Pakistan, Ceylon, Burma, Malaya, Thailand, Indonesia, and the Philippines. The fruit of his researches was a three-volume work of over 2200 pages, published in 1968 under the title, *Asian Drama: An Inquiry into the Poverty of Nations*.

In *Beyond the Welfare State* Myrdal makes the important point that economic planning was not the result of a master plan or ideology favoring government intervention in the economy, but that the relation between the two was the reverse: *ad hoc* government interventions, caused either by domestic economic

crises or by international disturbances, came first, and as such governmental interventions in the economy multiplied, the need arose to coordinate them: "Coordination leads to planning or, rather, it is planning." Improved statistical data and more sophisticated economic analysis make it possible, and necessary, for governments to make short-term and long-term forecasts of the economy, and to plan in accordance with such forecasts. In particular, Myrdal stresses that welfare state policies—originally adopted mainly for reasons of social justice—have had a considerable impact on the economy by raising productivity and redirecting the distribution of a large share of the national income. Thus, welfare policies inevitably lead to more government intervention and economic planning, if such policies are to be consistent with each other as well as with the entire economy. For example, government intervention in housing is not only a welfare measure in the interest of social justice, but also involves complex economic policies with respect to interest rates for mortgages, credit facilities, the costs of labor and building materials, and problems of urban renewal.

Full employment is considered by Myrdal the biggest commitment of Western nations to economic planning. The days are gone when workers are satisfied with relief during unemployment: what they now insist on is that government take positive measures which will maintain an effective demand for labor. Before 1914, public revenues and expenditures were too small to have a significant impact on the whole economy. Since World War I, and particularly since the Great Depression of the 1930s, the share of government expenditures in relation to the national income has increased consistently, and now amounts to about twenty-five to forty percent in most advanced countries. In commanding such a large share of the national income, governments now possess a powerful weapon to influence the level of economic activity: "The expansionist theory of spending one's way out of a depression is now on the way to becoming orthodox, even in the more conservative sections of the business world." Differences of degree may, nevertheless, spell success or failure. Thus, Myrdal notes that vigorous "pump priming" by the Social Democratic government in Sweden during the early years of the Great Depression was successful, whereas similar policies in the United States and other countries were less successful, because their non-socialist governments did not spend enough, since large budget deficits were considered incompatible with traditional precepts of capitalist economic orthodoxy. The determination to maintain full employment is "the crowning accomplishment of the democratic Welfare State," but such a commitment may require "even radical policy measures, when needed" and a "planned coordination of all economic policies."

Concerning the question of *nationalization*, Myrdal notes that Socialist parties, when small and without much influence, propose the nationalization of industries and financial institutions. But as they gain popular support and run the government, they tend to play down the issue of nationalization and concentrate on comprehensive welfare policies. For tactical reasons, some Socialist parties keep nationalization as part of their program, but, he writes, "I would expect that sooner or later nationalization will disappear from the program, too." This does not mean that Socialist parties have swung from one rigid position—that of nationalization—to another equally rigid dogma—that of no further nationalization at any time in the future. Myrdal conceives the possibility

that in the welfare state of the future public ownership and management will play a larger role than at present, but such questions will be decided in practical terms of utility and expediency rather than in abstract terms of principle.

When socialism as an organized political force first made its appearance in the late nineteenth and early twentieth centuries, many students of government were concerned that democracy would be unable to stand the strain of the conflict between two diametrically opposed economic philosophies. On the one hand, there was the philosophy of socialism aiming at the nationalization of the means of production, exchange, and distribution. On the other hand, both Liberal and Conservative parties held that without private property and unregulated private enterprise democracy would decay and disappear. Since democracy can exist only if there is general agreement on fundamentals, it was felt by many that disagreement over one such fundamental—the question of property and the relation of government to the economy—would undermine the vitality and very existence of democracy.

Yet experience has proved otherwise. As so often in democratic politics, apparently irreconcilable positions are eventually reconciled by compromise, as a result of which each contending side has to make important concessions to the other. Capitalism has moved toward socialism with respect to the welfare state, because the democratic ideal of human dignity is incompatible with personal insecurity, social inequality, economic want, and human suffering where the means are available to remedy such conditions. Adherents of capitalism have also come to terms with the need for government action, even long-term policies, in the economy, and have abandoned the idea that the best of all possible worlds will come into being by allowing the forces in the market to create a “natural harmony.” On the other side, Socialists have moved in the direction of classical political economy on the issue of private ownership and management of the means of production, because no compelling case has been made that the shortcomings of a capitalist economy can only be remedied through nationalization, and—more importantly—because the democratic political value of diffusion of power and personal liberty is incompatible with total ownership and management of the economy by the state.

In practical politics, therefore, the issues in democratic nations between Socialist and non-Socialist parties have been reduced from irreconcilable conflicts of principle to negotiable differences of quantity, particularly with respect to welfare policies. For example, Conservative parties, while accepting the welfare state in principle, may reject the Socialist policy of using welfare measures as a means toward greater equality and may insist that the welfare state guarantee only a minimum standard of living for the needy, whereas Socialists are more inclined to apply basic welfare measures—such as a national health program, free higher education, or generous old-age pensions—to every citizen, regardless of his need. In general, Socialists are more concerned with raising the opportunities and benefits for those on the lower rungs of success, even if this means higher taxes and comparatively fewer benefits for those in the upper economic strata of the population. Democratic socialists are much more concerned about equality than conservatives.

In the nineteenth century, the main differences between Conservative and reformist parties were largely in the areas of politics, such as the suffrage, the

relations between church and state, individual liberty, or problems of empire. Today, the main disagreement between Conservative and Socialist parties is in the area of social and economic policy. In spite of the fact that the issue of nationalization has largely disappeared as a source of basic divisiveness, democratic politics shows no signs of running out of less divisive, but still very important, issues of how far the state should go in regulating the economy and providing for the welfare—in education, social security, housing, urban renewal—of the people.

The encounter between capitalism and socialism has led, through the slow working of the democratic political process, to an economy which is neither capitalist, if capitalism means *laissez faire* and rugged individualism, nor socialist, if socialism means an economy which is owned and operated by the state. The new mixed economy seeks to combine the best of both worlds: the predominantly private energy in private property with the predominantly public responsibility in social welfare. The relative strength of these two elements is never static, and Socialist parties will continue to press for the expansion of the public element, just as conservatives will stress the importance of the private factor in this balance of forces.

I SPENCER

Social Statics and The Man Versus the State

THE SURVIVAL OF THE FITTEST *

Pervading all nature we may see at work a stern discipline, which is a little cruel that it may be very kind. That state of universal warfare maintained throughout the lower creation, to the great perplexity of many worthy people, is at bottom the most merciful provision which the circumstances admit of. It is much better that the ruminant animal, when deprived by age of the vigour which made its existence a pleasure, should be killed by some beast of prey, than that it should linger out a life made painful by infirmities, and eventually die of starvation. By the destruction of all such, not only its existence ended before it becomes burdensome, but room is made for a younger generation capable of the fullest enjoyment; and, moreover, out of the very act of substitution happiness is derived for a tribe of predatory creatures. Note further, that their carnivorous enemies not only remove from herbivorous herds individuals past their prime, but also weed out the sickly, the malformed, and the least fleet or powerful. By the aid of which purifying process, as well as by the fighting, so universal in the pairing season, all vitiation of the race through the multiplication of its inferior

samples is prevented; and the maintenance of a constitution completely adapted to surrounding conditions, and therefore most productive of happiness, is ensured.

The development of the higher creation is a progress towards a form of being capable of a happiness undiminished by these drawbacks. It is in the human race that the consummation is to be accomplished. Civilization is the last stage of its accomplishment. And the ideal man is the man in whom all the conditions of that accomplishment are fulfilled. Meanwhile the well-being of existing humanity, and the unfolding of it into this ultimate perfection, are both secured by that same beneficent, though severe discipline, to which the animate creation at large is subject: a discipline which is pitiless in the working out of good: a felicity-pursuing law which never swerves for the avoidance of partial and temporary suffering. The poverty of the incapable, the distresses that come upon the imprudent, the starvation of the idle, and those shoulderings aside of the weak by the strong, which leave so many "in shallows and in miseries," are the decrees of a large, far-seeing benevolence. It seems hard that an unskilfulness which with all his efforts he cannot overcome, should entail hunger upon the artisan. It seems hard that a labourer incapacitated by sickness from competing with his stronger fellows, should have to bear the resulting privations. It seems hard that

widows and orphans should be left to struggle for life or death. Nevertheless, when regarded not separately, but in connection with the interests of universal humanity, these harsh fatalities are seen to be full of the highest beneficence—the same beneficence which brings to early graves the children of diseased parents, and singles out the low-spirited, the intemperate, and the debilitated as the victims of an epidemic.

There are many very amiable people—people over whom in so far as their feelings are concerned we may fitly rejoice—who have not the nerve to look this matter fairly in the face. Disabled as they are by their sympathies with present suffering, from duly regarding ultimate consequences, they pursue a course which is very injudicious, and in the end even cruel. We do not consider it true kindness in a mother to gratify her child with sweetmeats that are certain to make it ill. We should think it a very foolish sort of benevolence which led a surgeon to let his patient's disease progress to a fatal issue, rather than inflict pain by an operation. Similarly, we must call those spurious philanthropists, who, to prevent present misery, would entail greater misery upon future generations. All defenders of a poor-law must, however, be classed amongst such. That rigorous necessity which, when allowed to act on them, becomes so sharp a spur to the lazy, and so strong a bridle to the random, these paupers' friends would repeal, because of the wailings it here and there produces. Blind to the fact, that under the natural order of things society is constantly excreting its unhealthy, imbecile, slow, vacillating, faithless members, these unthinking, though well-meaning, men advocate an interference which not only stops the purifying process, but even increases the vitiation—absolutely encourages the multiplication of the reckless and incompetent by offering them an unflinching provision, and discourages the multiplication of the competent and provident by heightening the prospective difficulty of maintaining a family. And

thus, in their eagerness to prevent the really salutary sufferings that surround us, these sigh-wise and groan-foolish people bequeath to posterity a continually increasing curse.

Returning again to the highest point of view, we find that there is a second and still more injurious mode in which law-enforced charity checks the process of adaptation. To become fit for the social state, man has not only to lose his savageness, but he has to acquire the capacities needful for civilized life. Power of application must be developed; such modification of the intellect as shall qualify it for its new tasks must take place; and, above all, there must be gained the ability to sacrifice a small immediate gratification for a future great one. The state of transition will of course be an unhappy state. Misery inevitably results from incongruity between constitution and conditions. All these evils, which afflict us, and seem to the uninitiated the obvious consequences of this or that removable cause, are unavoidable attendants on the adaptation now in progress. Humanity is being pressed against the inexorable necessities of its new position—is being moulded into harmony with them, and has to bear the resulting unhappiness as best it can. The process *must* be undergone, and the sufferings *must* be endured. No power on earth, no cunningly-devised laws of statesmen, no world-rectifying schemes of the humane, no communist panaceas, no reforms that men ever did broach or ever will broach, can diminish them one jot. Intensified they may be, and are; and in preventing their intensification, the philanthropic will find ample scope for exertion. But there is bound up with the change a *normal* amount of suffering, which cannot be lessened without altering the very laws of life. Every attempt at mitigation of this eventuates in exacerbation of it. All that a poor-law, or any kindred institution can do, is to partially suspend the transition—to take off for awhile, from certain members of society, the painful pressure which is effecting their trans-

* From Herbert Spencer, *Social Statics* (1851).

formation. At best this is merely to postpone what must ultimately be borne. But it is more than this: it is to undo what has already been done. For the circumstances to which adaptation is taking place cannot be superseded without causing a retrogression—a partial loss of the adaptation previously effected; and as the whole process must some time or other be passed through, the lost ground must be gone over again, and the attendant pain borne afresh. Thus, besides retarding adaptation, a poor-law adds to the distresses inevitably attending it.

At first sight these considerations seem conclusive against *all* relief to the poor—voluntary as well as compulsory; and it is no doubt true that they imply a condemnation of whatever private charity enables the recipients to elude the necessities of our social existence. With this condemnation, however, no rational man will quarrel. That careless squandering of pence which has fostered into perfection a system of organized begging—which has made skilful mendicancy more profitable than ordinary manual labour—which induces the simulation of palsy, epilepsy, cholera, and no end of diseases and deformities—which has called into existence warehouses for the sale and hire of impostor's dresses—which has given to pity-inspiring babes a market value of 9 d. per day—the unthinking benevolence which has generated all this, cannot but be disapproved by every one. Now it is only against this injudicious charity that the foregoing argument tells. To that charity which may be described as helping men to help themselves, it makes no objection—countenances it rather. And in helping men to help themselves, there remains abundant scope for the exercise of a people's sympathies. Accidents will still supply victims on whom generosity may be legitimately expended. Men thrown upon their backs by unforeseen events, men who have failed for want of knowledge inaccessible to them, men ruined by the dishonesty of others, and men in whom hope long delayed has made the heart

siek, may, with advantage to all parties, be assisted. Even the prodigal, after severe hardship has branded his memory with the unbending conditions of social life to which he must submit, may properly have another trial afforded him. And, although by these ameliorations the process of adaptation must be remotely interfered with, yet in the majority of cases, it will not be so much retarded in one direction as it will be advanced in another.

Objectionable as we find a poor-law to be, even under the supposition that it does what it is intended to do—diminish present suffering—how shall we regard it on finding that in reality it does no such thing—cannot do any such thing? Yet, paradoxical as the assertion looks, this is absolutely the fact. Let but the observer cease to contemplate so fixedly one side of the phenomenon—pauperism and its relief—and begin to examine the other side—rates and the *ultimate* contributors of them—and he will discover that to suppose the sum-total of distress diminishable by act-of-parliament bounty is a delusion. A statement of the case in terms of labour and produce will quickly make this clear.

Here, at any specified period, is a given quantity of food and things exchangeable for food, in the hands or at the command of the middle and upper classes. A certain portion of this food is needed by these classes themselves, and is consumed by them at the same rate, or very near it, be there scarcity or abundance. Whatever variation occurs in the sum-total of food and its equivalents must therefore affect the remaining portion, not used by these classes for personal sustenance. This remaining portion is given by them to the people in return for their labour, which is partly expended in the production of a further supply of necessaries, and partly in the production of luxuries. Hence, by how much this portion is deficient, by so much must the people come short. Manifestly a redistribution by legislative or other agency cannot make that sufficient for them

which was probably insufficient. It can do nothing but change the parties by whom the insufficiency is felt. If it gives enough to some who else would not have enough, it must inevitably reduce certain others to the condition of not having enough. And thus, to the extent that a poor-law mitigates distress in one place, it unavoidably produces distress in another.

THE COMING SLAVERY *

The kinship of pity to love is shown among other ways in this, that it idealizes its object. Sympathy with one in suffering suppresses, for the time being, re-*feeling* which vents itself in "poor remembrance of his transgressions. The low!" on seeing one in agony, excludes the thought of "bad fellow," which might at another time arise. Naturally, then, if the wretched are unknown or but vaguely known, all the demerits they may have are ignored; and thus it happens that when, as just now, the miseries of the poor are depicted, they are thought of as the miseries of the deserving poor, instead of being thought of, as in large measure they should be, as the miseries of the undeserving poor. Those whose hardships are set forth in pamphlets and proclaimed in sermons and speeches which echo throughout society, are assumed to be all worthy souls, grievously wronged; and none of them are thought of as bearing the penalties of their own misdeeds.

On hailing a cab in a London street, it is surprising how generally the door is officiously opened by one who expects to get something for his trouble. The surprise lessens after counting the many loungers about tavern-doors, or after observing the quickness with which a street-performance, or procession, draws from neighbouring slums and stable-

yards a group of idlers. Seeing how numerous they are in every small area, it becomes manifest that tens of thousands of such swarm through London. "They have no work," you say. Say rather that they either refuse work or quickly turn themselves out of it. They are simply good-for-nothings, who in one way or other live on the good-for-somethings—vagrants and sots, criminals and those on the way to crime, youths who are burdens on hard-worked parents, men who appropriate the wages of their wives, fellows who share the gains of prostitutes; and then, less visible and less numerous, there is a corresponding class of women.

Is it natural that happiness should be the lot of such? or is it natural that they should bring unhappiness on themselves and those connected with them? Is it not manifest that there must exist in our midst an immense amount of misery which is a normal result of misconduct, and ought not to be dissociated from it? There is a notion, always more or less prevalent and just now vociferously expressed, that all social suffering is removable, and that it is the duty of somebody or other to remove it. Both these beliefs are false. To separate pain from ill-doing is to fight against the constitution of things, and will be followed by far more pain. Saving men from the natural penalties of dissolute living, eventually necessitates the infliction of artificial penalties in solitary cells, on tread-wheels, and by the lash. I suppose a dictum, on which the current creed and the creed of science are at one, may be considered to have as high an authority as can be found. Well, the command "if any would not work neither should he eat," is simply a Christian enunciation of that universal law of Nature under which life has reached its present height—the law that a creature not energetic enough to maintain itself must die: the sole difference being that the law which in the one case is to be artificially enforced, is, in the other case, a natural necessity. And yet this particular tenet of their religion

* *Contemporary Review*, XLV (April, 1884). Reprinted in Herbert Spencer, *The Man versus the State* (1884).

which science so manifestly justifies, is the one which Christians seem least inclined to accept. The current assumption is that there should be no suffering, and that society is to blame for that which exists.

"But surely we are not without responsibilities, even when the suffering is that of the unworthy?"

If the meaning of the word "we" be so expanded as to include with ourselves our ancestors, and especially our ancestral legislators, I agree. I admit that those who made, and modified, and administered, the old Poor Law, were responsible for producing an appalling amount of demoralization, which it will take more than one generation to remove. I admit, too, the partial responsibility of recent and present lawmakers for regulations which have brought into being a permanent body of tramps, who ramble from union to union; and also their responsibility for maintaining a constant supply of felons by sending back convicts into society under such conditions that they are almost compelled again to commit crimes. Moreover, I admit that the philanthropic are not without their share of responsibility; since, that they may aid the offspring of the unworthy, they disadvantage the offspring of the worthy through burdening their parents by increased local rates. Nay, I even admit that these swarms of good-for-nothings, fostered and multiplied by public and private agencies, have, by sundry mischievous meddlings, been made to suffer more than they would otherwise have suffered. Are these the responsibilities meant? I suspect not.

But now, leaving the question of responsibilities, however conceived, and considering only the evil itself, what shall we say of its treatment? Let me begin with a fact.

A late uncle of mine, the Rev. Thomas Spencer, for some twenty years incumbent of Hinton Charterhouse, near Bath, no sooner entered on his parish duties than he proved himself anxious for the

welfare of the poor, by establishing a school, a library, a clothing club, and land-allotments, besides building some model cottages. Moreover, up to 1833 he was a pauper's friend—always for the pauper against the overseer.

There presently came, however, the debates on the Poor Law, which impressed him with the evils of the system then in force. Though an ardent philanthropist he was not a timid sentimentalist. The result was that, immediately the new Poor Law was passed, he proceeded to carry out its provisions in his parish. Almost universal opposition was encountered by him: not the poor only being his opponents, but even the farmers on whom came the burden of heavy poor-rates. For, strange to say, their interests had become apparently identified with the maintenance of this system which taxed them so largely. The explanation is that there had grown up the practice of paying out of the rates a part of the wages of each farm-servant—"make-wages," as the sum was called. And though the farmers contributed most of the fund from which "make-wages" were paid, yet, since all other ratepayers contributed, the farmers seemed to gain by the arrangement. My uncle, however, not easily deterred, faced all this opposition and enforced the law. The result was that in two years the rates were reduced from £700 a year to £200 a year; while the condition of the parish was greatly improved. "Those who had hitherto loitered at the corners of the streets, or at the doors of the beer-shops, had something else to do, and one after another they obtained employment"; so that out of a population of 800, only 15 had to be sent as incapable paupers to the Bath Union (when that was formed), in place of the 100 who received out-door relief a short time before. If it be said that the £25 telescope which, a few years after, his parishioners presented to my uncle, marked only the gratitude of the ratepayers; then my reply is the fact that when, some years later still, having killed himself by overwork in pursuit of

popular welfare, he was taken to Hinton to be buried, the procession which followed him to the grave included not the well-to-do only but the poor.

Several motives have prompted this brief narrative. One is the wish to prove that sympathy with the people and self-sacrificing efforts on their behalf, do not necessarily imply approval of gratuitous aids. Another is the desire to show that benefit may result, not from multiplication of artificial appliances to mitigate distress, but, contrariwise, from diminution of them. And a further purpose I have in view is that of preparing the way for an analogy.

Under another form and in a different sphere, we are now yearly extending a system which is identical in nature with the system of "make-wages" under the old Poor Law. Little as politicians recognize the fact, it is nevertheless demonstrable that these various public appliances for working-class comfort, which they are supplying at the cost of ratepayers, are intrinsically of the same nature as those which, in past times, treated the farmer's man as half-labourer and half-pauper. In either case the worker receives in return for what he does, money wherewith to buy certain of the things he wants; while, to procure the rest of them for him, money is furnished out of a common fund raised by taxes. What matters it whether the things supplied by ratepayers for nothing, instead of by the employer in payment, are of this kind or that kind? the principle is the same. For sums received let us substitute the commodities and benefits purchased; and then see how the matter stands. In old Poor-Law times, the farmer gave for work done the equivalent, say of house-rent, bread, clothes, and fire; while the ratepayers practically supplied the man and his family with their shoes, tea, sugar, candles, a little bacon, &c. The division is, of course, arbitrary; but unquestionably the farmer and the ratepayers furnished these things between them. At the present time the artisan receives from his employer in

wages, the equivalent of the consumable commodities he wants; while from the public comes satisfaction for others of his needs and desires. At the cost of rate payers he has in some cases, and will presently have in more, a house at less than its commercial value; for of course when, as in Liverpool, a municipality spends nearly £200,000 in pulling down and reconstructing low-class dwellings, and is about to spend as much again, the implication is that in some way the ratepayers supply the poor with more accommodation than the rents they pay would otherwise have brought. The artisan further receives from them, in schooling for his children, much more than he pays for; and there is every probability that he will presently receive it from them gratis. The ratepayers also satisfy what desire he may have for books and newspapers, and comfortable places to read them in. In some cases too, as in Manchester, gymnasias for his children of both sexes, as well as recreation grounds, are provided. That is to say, he obtains from a fund raised by local taxes, certain benefits beyond those which the sum received for his labour enables him to purchase. The sole difference, then, between this system and the old system of "make-wages," is between the kinds of satisfactions obtained; and this difference does not in the least affect the nature of the arrangement.

Moreover, the two are pervaded by substantially the same illusion. In the one case, as in the other, what looks like a gratis benefit is not a gratis benefit. The amount which, under the old Poor Law, the half-pauperized labourer received from the parish to eke out his weekly income, was not really, as it appeared, a bonus; for it was accompanied by a substantially-equivalent decrease of his wages, as was quickly proved when the system was abolished and the wages rose. Just so is it with these seeming boons received by working people in towns. I do not refer only to the fact that they unawares pay in part through the raised rents of their dwellings (when they are

not actual ratepayers); but I refer to the fact the wages received by them are, like the wages of the farm-labourer, diminished by these public burdens falling on employers. Read the accounts coming of late from Lancashire concerning the cotton-strike, containing proofs, given by artisans themselves, that the margin of profit is so narrow that the less skilful manufacturers, as well as those with deficient capital, fail, and that the companies of co-operators who compete with them can rarely hold their own; and then consider what is the implication respecting wages. Among the costs of production have to be reckoned taxes, general and local. If, as in our large towns, the local rates now amount to one-third of the rental or more—if the employer has to pay this, not on his private dwelling only, but on his business-premises, factories, warehouses, or the like; it results that the interest on his capital must be diminished by that amount, or the amount must be taken from the wages-fund, or partly one and partly the other. And if competition among capitalists in the same business, and in other businesses, has the effect of so keeping down interest that while some gain, others lose, and not a few are ruined—if capital, not getting adequate interest, flows elsewhere and leaves labour unemployed; then it is manifest that the choice for the artisan under such conditions, lies between diminished amount of work or diminished rate of payment for it. Moreover, for kindred reasons these local burdens raise the costs of the things he consumes. The charges made by distributors, too, are, on the average, determined by the current rates of interest on capital used in distributing businesses; and the extra costs of carrying on such businesses have to be paid for by extra prices. So that as in the past the rural worker lost in one way what he gained in another, so in the present does the urban worker: there being, too, in both cases, the loss entailed on him by the cost of administration and the waste accompanying it.

"But what has all this to do with 'the coming slavery'?" will perhaps be asked.

Nothing directly, but a good deal indirectly, as we shall see after yet another preliminary section.

It is said that when railways were first opened in Spain, peasants standing on the tracks were not unfrequently run over; and that the blame fell on the engine-drivers for not stopping: rural experiences having yielded no conception of the momentum of a large mass moving at a high velocity.

The incident is recalled to me on contemplating the ideas of the so-called "practical" politician, into whose mind there enters no thought of such a thing as political momentum, still less of a political momentum which, instead of diminishing or remaining constant, increases. The theory on which he daily proceeds is that the change caused by his measure will stop where he intends it to stop. He contemplates intently the things his act will achieve, but thinks little of the remoter issues of the movement his act sets up, and still less its collateral issues. When, in war-time, "food for powder" was to be provided by encouraging population—when Mr. Pitt said, "Let us make relief in cases where there are a number of children a matter of right and honour, instead of a ground for opprobrium and contempt;"¹ it was not expected that the poor-rates would be quadrupled in fifty years, that women with many bastards would be preferred as wives to modest women, because of their incomes from the parish, and that hosts of ratepayers would be pulled down into the ranks of pauperism. Legislators who in 1833 voted £20,000 a year to aid in building school-houses, never supposed that the step they then took would lead to forced contributions, local and general, now amounting to £6,000,000;² they did not intend to establish the principle that A should be made responsible for educating B's offspring; they did not

¹ Hansard's *Parliamentary History*, 32, p. 710.

² *Fortnightly Review*, January, 1884, p. 17.

dream of a compulsion which should deprive poor widows of the help of their elder children; and still less did they dream that their successors, by requiring impoverished parents to apply to Boards of Guardians to pay the fees which School Boards would not remit, would initiate a habit of applying to Boards of Guardians and so cause pauperization. Neither did those who in 1834 passed an Act regulating the labour of women and children in certain factories, imagine that the system they were beginning would end in the restriction and inspection of labour in all kinds of producing establishments where more than fifty people are employed; nor did they conceive that the inspection provided would grow to the extent of requiring that before a "young person" is employed in a factory, authority must be given by a certifying surgeon, who, by personal examination (to which no limit is placed) has satisfied himself that there is no incapacitating disease or hodily infirmity: his verdict determining whether the "young person" shall earn wages or not. Even less, as I say, does the politician who plumes himself on the practicalness of his aims, conceive the indirect results that will follow the direct results of his measures. Thus, to take a case connected with one named above, it was not intended through the system of "payment by results," to do anything more than give teachers an efficient stimulus: it was not supposed that in numerous cases their health would give way under the stimulus; it was not expected that they would be led to adopt a cramming system and to put undue pressure on dull and weak children, often to their great injury; it was not foreseen that in many cases a bodily enfeeblement would be caused which no amount of grammar and geography can compensate for. The licensing of public-houses was simply for maintaining public order: those who devised it never imagined that there would result an organized interest powerfully influencing elections in an unwholesome way. Nor did it occur to the "practical" politicians who provided a compulsory load-line for mer-

chant vessels, that the pressure of ship-owners' interests would habitually cause the putting of the load-line at the very highest limit, and that from precedent to precedent, tending ever in the same direction, the load-line would gradually rise in the better class of ships; as from good authority I learn that it has already done. Legislators who, some forty years ago, by Act of Parliament compelled railway-companies to supply cheap locomotion, would have ridiculed the belief, had it been expressed, that eventually their Act would punish the companies which improved the supply; and yet this was the result to companies which began to carry third-class passengers by fast trains, since a penalty to the amount of the passenger-duty was inflicted on them for every third-class passenger so carried. To which instance concerning railways, add a far more striking one disclosed by comparing the railway policies of England and France. The law-makers who provided for the ultimate lapsing of French railways to the State, never conceived the possibility that inferior travelling facilities would result—did not foresee that reluctance to depreciate the value of property eventually coming to the State, would negative the authorization of competing lines, and that in the absence of competing lines locomotion would be relatively costly, slow, and infrequent; for, as Sir Thomas Farrer has shown, the traveller in England has great advantages over the French traveller in the economy, swiftness, and frequency with which his journeys can be made.

But the "practical" politician who, in spite of such experiences repeated generation after generation, goes on thinking only of proximate results, naturally never thinks of results still more remote, still more general, and still more important than those just exemplified. To repeat the metaphor used above—he never asks whether the political momentum set up by his measure, in some cases decreasing but in other cases greatly increasing, will or will not have the same general direction with other such momenta; and whether it may not join them in presently

producing an aggregate energy working changes never thought of. Dwelling only on the effects of his particular stream of legislation, and not observing how such other streams already existing, and still other streams which will follow his initiative, pursue the same average course, it never occurs to him that they may presently unite into a voluminous flood utterly changing the face of things. Or to leave figures for a more literal statement, he is unconscious of the truth that he is helping to form a certain type of social organization, and that kindred measures, effecting kindred changes of organization, tend with ever-increasing force to make that type general; until, passing a certain point, the proclivity towards it becomes irresistible. Just as each society aims when possible to produce in other societies a structure akin to its own—just as among the Greeks, the Spartans and the Athenians struggled to spread their respective political institutions, or as, at the time of the French Revolution, the European absolute monarchies aimed to re-establish absolute monarchy in France while the Republic encouraged the formation of other republics; so within every society, each species of structure tends to propagate itself. Just as the system of voluntary co-operation by companies, associations, unions, to achieve business ends and other ends, spreads throughout a community; so does the antagonistic system of compulsory co-operation under State-agencies spread; and the larger becomes its extension the more power of spreading it gets. The question of questions for the politician should ever be—"What type of social structure am I tending to produce?" But this is a question he never entertains.

Here we will entertain it for him. Let us now observe the general course of recent changes, with the accompanying current of ideas, and see whither they are carrying us.

The blank form of a question daily asked is—"We have already done this; why should we not do that?" And the

regard for precedent suggested by it, is ever pushing on regulative legislation. Having had brought within their sphere of operation more and more numerous businesses, the Acts restricting hours of employment and dictating the treatment of workers are now to be made applicable to shops. From inspecting lodging-houses to limit the numbers of occupants and enforce sanitary conditions, we have passed to inspecting all houses below a certain rent in which there are members of more than one family, and are now passing to a kindred inspection of all small houses. The buying and working of telegraphs by the State is made a reason for urging that the State should buy and work the railways. Supplying children with food for their minds by public agency is being followed in some cases by supplying food for their bodies; and after the practice has been made gradually more general, we may anticipate that the supply, now proposed to be made gratis in the one case, will eventually be proposed to be made gratis in the other: the argument that good bodies as well as good minds are needful to make good citizens, being logically urged as a reason for the extension.³ And then, avowedly proceeding on the precedents furnished by the church, the school, and the reading-room, all publicly provided, it is contended that "pleasure, in the sense it is now generally admitted, needs legislating for and organizing at least as much as work."⁴

Not precedent only prompts this spread, but also the necessity which arises for supplementing ineffective measures,

³ Verification comes more promptly than I expected. This article has been standing in type since January 30, and in the interval, namely on March 13, the London School Board resolved to apply for authority to use local charitable funds for supplying gratis meals and clothing to indigent children. Presently the definition of "indigent" will be widened; more children will be included, and more funds asked for.

⁴ *Fortnightly Review*, January, 1884, p. 21.

and for dealing with the artificial evils continually caused. Failure does not destroy faith in the agencies employed, but merely suggests more stringent use of such agencies or wider ramifications of them. Laws to check intemperance, beginning in early times and coming down to our own times, when further restraints on the sale of intoxicating liquors occupy nights every session, not having done what was expected, there come demands for more thorough-going laws, locally preventing the sale altogether; and here, as in America, these will doubtless be followed by demands that prevention shall be made universal. All the many appliances for "stamping out" epidemic diseases not having succeeded in preventing outbreaks of smallpox, fevers, and the like, a further remedy is applied for in the shape of police-power to search houses for diseased persons, and authority for medical officers to examine any one they think fit, to see whether he or she is suffering from an infectious or contagious malady. Habits of improvidence having for generations been cultivated by the Poor-Law, and the improvident enabled to multiply, the evils produced by compulsory charity are now proposed to be met by compulsory insurance.

The extension of this policy, causing extension of corresponding ideas, fosters everywhere the tacit assumption that Government should step in whenever anything is not going right. "Surely you would not have this misery continue!" exclaims some one, if you hint a demurrer to much that is now being said and done. Observe what is implied by this exclamation. It takes for granted, first, that all suffering ought to be prevented, which is not true: much suffering is curative, and prevention of it is prevention of a remedy. In the second place, it takes for granted that every evil can be removed: the truth being that, with the existing defects of human nature, many evils can only be thrust out of one place or form into another place or form—often being increased by the change. The exclamation also implied the unhesitating

belief, here especially concerning us, that evils of all kinds should be dealt with by the State. There does not occur the inquiry whether there are at work other agencies capable of dealing with evils, and whether the evils in question may not be among those which are best dealt with by these other agencies. And obviously, the more numerous governmental interventions become, the more confirmed does this habit of thought grow, and the more loud and perpetual the demands for intervention.

Every extension of the regulative policy involves an addition to the regulative agents—a further growth of officialism and an increasing power of the organization formed of officials. Take a pair of scales with many shot in the one and a few in the other. Lift shot after shot out of the loaded scale and put it into the unloaded scale. Presently you will produce a balance; and if you go on, the position of the scales will be reversed. Suppose the beam to be unequally divided, and let the lightly loaded scale be at the end of a very long arm; then the transfer of each shot, producing a much greater effect, will far sooner bring about a change of position. I use the figure to illustrate what results from transferring one individual after another from the regulated mass of the community to the regulating structures. The transfer weakens the one and strengthens the other in a far greater degree than is implied by the relative change of numbers. A comparatively small body of officials, coherent, having common interests, and acting under central authority, has an immense advantage over an incoherent public which has no settled policy, and can be brought to act unitedly only under strong provocation. Hence an organization of officials, once passing a certain stage of growth, becomes less and less resistible; as we see in the bureaucracies of the Continent.

Not only does the power of resistance of the regulated part decrease in a geometrical ratio as the regulating part increases, but the private interests of many in the regulated part itself, make

the change of ratio still more rapid. In every circle conversations show that now, when the passing of competitive examinations renders them eligible for the public service, youths are being educated in such ways that they may pass them and get employment under Government. One consequence is that men who might otherwise reprobate some further growth of officialism, are led to look on it with tolerance, if not favourably, as offering possible careers for those dependent on them and those related to them. Any one who remembers the numbers of upper-class and middle-class families anxious to place their children, will see that no small encouragement to the spread of legislative control is now coming from those who, but for the personal interests thus arising, would be hostile to it.

This pressing desire for careers is enforced by the preference for careers which are thought respectable. "Even if his salary is small, his occupation will be that of a gentleman," thinks the father, who wants to get a Government-clerkship for his son. And this relative dignity of State-servants as compared with those occupied in business increases as the administrative organization becomes a larger and more powerful element in society, and tends more and more to fix the standard of honour. The prevalent ambition with a young Frenchman is to get some small official post in his locality, to rise thence to a place in the local centre of government, and finally to reach some head-office in Paris. And in Russia, where that universality of State-regulation which characterizes the militant type of society has been carried furthest, we see this ambition pushed to its extreme. Says Mr. Wallace, quoting a passage from a play:—"All men, even shopkeepers and cobblers, aim at becoming officers, and the man who has passed his whole life without official rank seems to be not a human being."⁵

These various influences working from above downwards, meet with an increas-

ing response of expectations and solicitations proceeding from below upwards. The hard-worked and over-burdened who form the great majority, and still more the incapables perpetually helped who are ever led to look for more help, are ready supporters of schemes which promise them this or the other benefit by State-agency, and ready believers of those who tell them that such benefits can be given, and ought to be given. They listen with eager faith to all builders of political air-castles, from Oxford graduates down to Irish irreconcilables; and every additional tax-supported appliance for their welfare raises hopes of further ones. Indeed, the more numerous public instrumentalities become, the more is there generated in citizens the notion that everything is to be done for them, and nothing by them. Each generation is made less familiar with the attainment of desired ends by individual actions or private combinations, and more familiar with the attainment of them by governmental agencies; until, eventually, governmental agencies come to be thought of as the only available agencies. This result was well shown in the recent Trades-Unions Congress at Paris. The English delegates, reporting to their constituents, said that between themselves and their foreign colleagues "the point of difference was the extent to which the State should be asked to protect labour"; reference being thus made to the fact, conspicuous in the reports of the proceedings, that the French delegates always invoked governmental power as the only means of satisfying their wishes.

The diffusion of education has worked, and will work still more, in the same direction. "We must educate our masters," is the well-known saying of a Liberal who opposed the last extension of the franchise. Yes, if the education were worthy to be so called, and were relevant to the political enlightenment needed, much might be hoped from it. But knowing rules of syntax, being able to add up correctly, having geographical information, and a memory stocked with the

dates of kings' accessions and generals' victories, no more implies fitness to form political conclusions than acquirement of skill in drawing implies expertness in telegraphing, or than ability to play cricket implies proficiency on the violin. "Surely," rejoins some one, "facility in reading opens the way to political knowledge." Doubtless; but will the way be followed? Table-talk proves that nine out of ten people read what amuses them or interests them rather than what instructs them; and that the last thing they read is something which tells them disagreeable truths or dispels groundless hopes. That popular education results in an extensive reading of publications which foster pleasant illusions rather than of those which insist on hard realities, is beyond question. Says "A Mechanic," writing in the *Pall Mall Gazette* of December 3, 1883:—

Improved education instils the desire for culture—culture instils the desire for many things as yet quite beyond working men's reach . . . in the furious competition to which the present age is given up they are utterly impossible to the poorer classes; hence they are discontented with things as they are, and the more educated the more discontented. Hence, too, Mr. Ruskin and Mr. Morris are regarded as true prophets by many of us.

And that the connection of cause and effect here alleged is a real one, we may see clearly enough in the present state of Germany.

Being possessed of electoral power, as are now the mass of those who are thus led to nurture sanguine anticipations of benefits to be obtained by social reorganization, it results that whoever seeks their votes must at least refrain from exposing their mistaken beliefs, even if he does not yield to the temptation to express agreement with them. Every candidate for Parliament is prompted to propose or support some new piece of *ad captandum* legislation. Nay, even the chiefs of parties—these anxious to retain

office and those to wrest it from them—severally aim to get adherents by out-bidding one another. Each seeks popularity by promising more than his opponent has promised, as we have lately seen. And then, as divisions in Parliament show us, the traditional loyalty to leaders overrides questions concerning the intrinsic propriety of proposed measures. Representatives are unconscientious enough to vote for Bills which they regard as essentially wrong in principle, because party-needs and regard for the next election demand it. And thus a vicious policy is strengthened even by those who see its viciousness.

Meanwhile there goes on out-of doors an active propaganda to which all these influences are ancillary. Communist theories, partially indorsed by one Act of Parliament after another, and tacitly if not avowedly favoured by numerous public men seeking supporters, are being advocated more and more vociferously under one or other form by popular leaders, and urged on by organized societies. There is the movement for land-nationalization which, aiming at a system of land-tenure equitable in the abstract, is, as all the world knows, pressed by Mr. George and his friends with avowed disregard for the just claims of existing owners, and as the basis of a scheme going more than half-way to State-communism. And then there is the thorough-going Democratic Federation of Mr. Hyndman and his adherents. We are told by them that "the handful of marauders who now hold possession [of the land] have and can have no right save brute force against the tens of millions whom they wrong." They exclaim against "the shareholders who have been allowed to lay hands upon (!) our great railway communications." They condemn "above all, the active capitalist class, the loan-mongers, the farmers, the mine exploiters, the contractors, the middlemen, the factory-lords—these, the modern slave drivers" who exact "more and yet more surplus value out of the wage-slaves whom they employ." And they think it "high time" that trade should be "re-

⁵ *Russia*, i, 422.

moved from the control of individual greed."⁶

See, then, the many concurrent causes which threaten continually to accelerate the transformation now going on. There is that spread of regulation caused by following precedents, which become the more authoritative the further the policy is carried. There is that increasing need for administrative compulsions and restraints, which results from the unforeseen evils and shortcomings of preceding compulsions and restraints. Moreover, every additional State-inference strengthens the tacit assumption that it is the duty of the State to deal with all evils and secure all benefits. Increasing power of a growing administrative organization is accompanied by decreasing power of the rest of the society to resist its further growth and control. The multiplication of careers opened by a developing bureaucracy, tempts members of the classes regulated by it to favour its extension, as adding to the chances of safe and respectable places for their relatives. The people at large, led to look on benefits received through public agencies as gratis benefits, have their hopes continually excited by the prospects of more. A spreading education, furthering the diffusion of pleasing errors rather than of stern truths, renders such hopes both stronger and more general. Worse still, such hopes are ministered to by candidates for public choice, to augment their chances of success; and leading statesmen, in pursuit of party ends, bid for popular favour by countenancing them. Getting repeated justifications from new laws harmonizing with their doctrines, political enthusiasts and unwise philanthropists push their agitations with growing confidence and success. Journalism, ever responsive to popular opinion, daily strengthens it by giving it voice; while counter-opinion, more and more discouraged, finds little utterance.

Thus influences of various kinds con-

⁶ *Socialism Made Plain*, Reeves, 185, Fleet Street.

spire to increase corporate action and decrease individual action. And the change is being on all sides aided by schemers, each of whom thinks only of his pet project and not at all of the general reorganization which his, joined with others such, are working out. It is said that the French Revolution devoured its own children. Here, an analogous catastrophe seems not unlikely. The numerous socialistic changes made by Act of Parliament, joined with the numerous others presently to be made, will by-and-by be all merged in State-socialism—swallowed in the vast wave which they have little by little raised.

"But why is this change described as 'the coming slavery'?" is a question which many will still ask. The reply is simple. All socialism involves slavery.

What is essential to the idea of a slave? We primarily think of him as one who is owned by another. To be more than nominal, however, the ownership must be shown by control of the slave's actions—a control which is habitually for the benefit of the controller. That which fundamentally distinguishes the slave is that he labours under coercion to satisfy another's desires. The relation admits of sundry gradations. Remembering that originally the slave is a prisoner whose life is at the mercy of his captor, it suffices here to note that there is a harsh form of slavery in which, treated as an animal, he has to expend his entire effort for his owner's advantage. Under a system less harsh, though occupied chiefly in working for his owner, he is allowed a short time in which to work for himself, and some ground on which to grow extra food. A further amelioration gives him power to sell the produce of his plot and keep the proceeds. Then we come to the still more moderated form which commonly arises where, having been a free man working on his own land, conquest turns him into what we distinguish as a serf; and he has to give to his owner each year a fixed amount of labour or produce, or both: retaining the rest himself. Finally, in some cases, as in Russia until

recently, he is allowed to leave his owner's estate and work or trade for himself elsewhere, under the condition that he shall pay an annual sum. What is it which, in these cases, leads us to qualify our conception of the slavery as more or less severe? Evidently the greater or smaller extent to which effort is compulsorily expended for the benefit of another instead of for self-benefit. If all the slave's labour is for his owner the slavery is heavy, and if but little it is light. Take now a further step. Suppose an owner dies, and his estate with its slaves comes into the hands of trustees; or suppose the estate and everything on it to be bought by a company; is the condition of the slave any the better if the amount of his compulsory labour remains the same? Suppose that for a company we substitute the community; does it make any difference to the slave if the time he has to work for others is as great, and the time left for himself is as small, as before? The essential question is—How much is he compelled to labour for other benefit than his own, and how much can he labour for his own benefit? The degree of his slavery varies according to the ratio between that which he is forced to yield up and that which he is allowed to retain; and it matters not whether his master is a single person or a society. If, without option, he has to labour for the society, and receives from the general stock such portion as the society awards him, he becomes a slave to the society. Socialistic arrangements necessitate an enslavement of this kind; and towards such an enslavement many recent measures, and still more the measures advocated, are carrying us. Let us observe, first, their proximate effects, and then their ultimate effects.

The policy initiated by the Industrial Dwellings Acts admits of development, and will develop. Where municipal bodies turn house-builders, they inevitably lower the value of houses otherwise built, and check the supply of more. Every dictation respecting modes of building and conveniences to be provided, diminishes the builder's profit, and

prompts him to use his capital where the profit is not thus diminished. So, too, the owner, already finding that small houses entail much labour and many losses—already subject to troubles of inspection and interference, and to consequent costs, and having his property daily rendered a more undesirable investment, is prompted to sell; and as buyers are for like reasons deterred, he has to sell at a loss. And now these still-multiplying regulations, ending, it may be, as Lord Grey proposes, in one requiring the owner to maintain the salubrity of his houses by evicting dirty tenants, and thus adding to his other responsibilities that of inspector of nuisances, must further prompt sales and further deter purchasers—so necessitating greater depreciation. What must happen? The multiplication of houses, and especially small houses, being increasingly checked, there must come an increasing demand upon the local authority to make up for the deficient supply. More and more the municipal or kindred body will have to build houses, or to purchase houses rendered unsaleable to private persons in the way shown—houses which, greatly lowered in value as they must become, it will, in many cases, pay to buy rather than to build new ones. Nay, this process must work in a double way; since every entailed increase of local taxation still further depreciates property.⁷ And then,

⁷ If any one thinks such fears are groundless, let him contemplate the fact that from 1867-8 to 1880-1, our annual local expenditure for the United Kingdom has grown from £36,132,834 to £63,276,283; and that during the same 13 years, the municipal expenditure in England and Wales alone, has grown from 13 millions to 30 millions a year! How the increase of public burdens will join with other causes in bringing about public ownership, is shown by a statement made by Mr. W. Rathbone, M.P., to which my attention has been drawn since the above paragraph was in type. He says, "within my own experience, local taxation in New York has risen from 12s. 6d. per cent. to £2 12s. 6d.

when in towns this process has gone so far as to make the local authority the chief owner of houses, there will be a good precedent for publicly providing houses for the rural population, as proposed in the Radical programme,⁸ and as urged by the Democratic Federation; which insists on "the compulsory construction of healthy artisans' and agricultural labourers' dwellings in proportion to the population." Manifestly, the tendency of that which has been done, is being done, and is presently to be done, is to approach the socialistic ideal in which the community is sole house-proprietor.

If any one doubts that such a revolution may be so reached, facts may be cited showing its likelihood. In Gaul, during the decline of the Roman Empire, "so numerous were the receivers in comparison with the payers, and so enormous the weight of taxation, that the labourer broke down, the plains became deserts, and woods grew where the plough had been."⁹ In like manner, when the French Revolution was approaching, the public burdens had become such, that many farms remained uncultivated and many were deserted: one-quarter of the soil was absolutely lying waste; and in some provinces one-half was in heath. Nor have we been without incidents of a kindred nature at home. Besides the facts that under the old Poor Law the rates had in some parishes risen to half the rental, and that in various places farms were lying uncultivated, there is the fact that in one case the rates had absorbed the whole proceeds of the soil.

At Cholesbury, in Buckinghamshire, in 1832, the poor rate "suddenly ceased in consequence of the impossibility to con-

per cent. on the capital of its citizens—a charge which would more than absorb the whole income of an average English landlord."—*Nineteenth Century*, February, 1883.

⁸ *Fortnightly Review*, November, 1883, pp. 619–20.

⁹ Lactant. *De M. Persecut.*, cc. 7, 23.

tinue its collection, the landlords having given up their rents, the farmers their tenancies, and the clergyman his glebe and his tithes. The clergyman, Mr. Jeston, states that in October, 1832, the parish officers threw up their hooks, and the poor assembled in a body before his door while he was in bed, asking for advice and food. Partly from his own small means, partly from the charity of neighbours, and partly by rates in aid, imposed on the neighbouring parishes, they were for some time supported."¹⁰

And the Commissioners add that "the benevolent rector recommends that the whole of the land should be divided among the able-bodied paupers": hoping that after help afforded for two years they might be able to maintain themselves. These facts, giving colour to the prophecy made in Parliament that continuance of the old Poor Law for another thirty years would throw the land out of cultivation, clearly show that increase of public burdens may end in forced cultivation under public control.

Then, again, comes State-ownership of railways. Already this exists to a large extent on the Continent. Already we have had here a few years ago loud advocacy of it. And now the cry, which was raised by sundry politicians and publicists, is taken up afresh by the Democratic Federation, which proposes "State-appropriation of railways, with or without compensation." Evidently, pressure from above joined by pressure from below, is likely to effect this change dictated by the policy everywhere spreading; and with it must come many attendant changes. For railway-proprietors, at first owners and workers of railways only, have become masters of numerous businesses directly or indirectly connected with railways; and these will have to be purchased by

¹⁰ *Report of Commissioners for Inquiry into the Administration and Practical Operation of the Poor Laws*, p. 37. February 20, 1834.

Government when the railways are purchased. Already exclusive carrier of letters, exclusive transmitter of telegrams, and on the way to become exclusive carrier of parcels, the State will not only be exclusive carrier of passengers, goods, and minerals, but will add to its present various trades many other trades. Even now, besides erecting its naval and military establishments and building harbours, docks, breakwaters, &c., it does the work of ship-builder, cannon-founder, small-arms maker, manufacturer of ammunition, army-clothier and boot-maker; and when the railways have been appropriated "with or without compensation," as the Democratic Federationists say, it will have to become locomotive-engine-builder, carriage-maker, tarpaulin and grease manufacturer, passenger-vessel owner, coal-miner, stone-quarrier, omnibus proprietor, &c. Meanwhile its local lieutenants, the municipal governments, already in many places suppliers of water, gas-makers, owners and workers of tramways, proprietors of baths, will doubtless have undertaken various other businesses. And when the State, directly or by proxy, has thus come into possession of, or has established, numerous concerns for wholesale production and for wholesale distribution, there will be good precedents for extending its function to retail distribution: following such an example, say, as is offered by the French Government, which has long been a retail tobacconist.

Evidently then, the changes made, the changes in progress, and the changes urged, are carrying us not only towards State-ownership of land and dwellings and means of communication, all to be administered and worked by State-agents, but towards State-usurpation of all industries; the private forms of which, disadvantaged more and more in competition with the State, which can arrange everything for its own convenience, will more and more die away; just as many voluntary schools have, in presence of Board-schools. And so will be brought about the desired ideal of the socialists.

And now when there has been reached this desired ideal, which "practical" politicians are helping socialists to reach, and which is so tempting on that bright side which socialists contemplate, what must be the accompanying shady side which they do not contemplate? It is a matter of common remark, often made when a marriage is impending, that those possessed by strong hopes habitually dwell on the promised pleasures and think nothing of the accompanying pains. A further exemplification of this truth is supplied by these political enthusiasts and fanatical revolutionists. Impressed with the miseries existing under our present social arrangements, and not regarding these miseries as caused by the ill-working of a human nature but partially adapted to the social state, they imagine them to be forthwith curable by this or that re-arrangement. Yet, even did their plans succeed it could only be by substituting one kind of evil for another. A little deliberate thought would show that under their proposed arrangements, their liberties must be surrendered in proportion as their material welfares were cared for.

For no form of co-operation, small or great, can be carried on without regulation, and an implied submission to the regulating agencies. Even one of their own organizations for effecting social changes yields the proof. It is compelled to have its councils, its local and general officers, its authoritative leaders, who must be obeyed under penalty of confusion and failure. And the experience of those who are loudest in their advocacy of a new social order under the paternal control of a Government, shows that even in private voluntarily-formed societies, the power of the regulative organization becomes great, if not irresistible: often, indeed, causing grumbling and restiveness among those controlled. Trade-unions which carry on a kind of industrial war in defence of workers' interests versus employers' interests, find that subordination almost military in its strictness is needful to secure efficient

action; for divided councils prove fatal to success. And even in bodies of co-operators, formed for carrying on manufacturing or distributing businesses, and not needing that obedience to leaders which is required where the aims are offensive, it is still found that the administrative agency acquires so great a power that there arise complaints about "the tyranny of organization." Judge then what must happen when, instead of combinations small, local and voluntary, to which men may belong or not as they please, we have a national combination in which each citizen finds himself incorporated, and from which he cannot separate himself without leaving the country. Judge what must under such conditions become the power of a graduated and centralized officialism, holding in its hands the resources of the community, and having behind it whatever amount of force it finds requisite to carry out its decrees and maintain what it calls order. Well may a Prince Bismarck display leanings towards State-socialism.

And then after recognizing, as they must if they think out their scheme, the power possessed by the regulative agency in the new social system so temptingly pictured, let its advocates ask themselves to what end this power must be used. Not dwelling exclusively, as they habitually do, on the material well-being and the mental gratifications to be provided for them by a beneficent administration, let them dwell a little on the price to be paid. The officials cannot create the needful supplies: they can but distribute among individuals that which the individuals have joined to produce. If the public agency is required to provide for them, it must reciprocally require them to furnish the means. There cannot be, as under our existing system, agreement between employer and employed—this the scheme excludes. There must in place of it be command by local authorities over workers, and acceptance by the workers of that which the authorities assign to them. And this, indeed, is the arrangement distinctly, but as it would seem

inadvertently, pointed to by the members of the Democratic Federation. For they propose that production should be carried on by "agricultural and industrial armies under State-control": apparently not remembering that armies pre-suppose grades of officers, by whom obedience would have to be insisted upon; since otherwise neither order nor efficient work could be ensured. So that each would stand toward the governing agency in the relation of slave to master.

The final result would be a revival of despotism. A disciplined army of civil officials, like an army of military officials, gives supreme power to its head—a power which has often led to usurpation, as in mediæval Europe and still more in Japan—nay, has thus so led among our neighbours, within our own times. The recent confessions of M. de Maupas have shown how readily a constitutional head, elected and trusted by the whole people, may, with the aid of a few unscrupulous confederates, paralyze the representative body and make himself autocrat. That those who rose to power in a socialistic organization would not scruple to carry out their aims at all costs, we have good reason for concluding. When we find that shareholders who, sometimes gaining but often losing, have made that railway-system by which national prosperity has been so greatly increased, are spoken of by the council of the Democratic Federation as having "laid hands" on the means of communication, we may infer that those who directed a socialistic administration might interpret with extreme perversity the claims of individuals and classes under their control. And when, further, we find members of this same council urging that the State should take possession of the railways, "with or without compensation," we may suspect that the heads of the ideal society desired would be but little deterred by considerations of equity from pursuing whatever policy they thought needful: a policy which would always be one identified with their own supremacy. It would need but a war with an adjacent society, or

some internal discontent demanding forcible suppression, to at once transform a socialistic administration into a grinding tyranny like that of ancient Peru; under which the mass of the people, controlled by grades of officials, and leading lives that were inspected out-of-doors and in-doors, laboured for the support of the organization which regulated them, and were left with but a bare subsistence for themselves. And then would be completely revived, under a different form, that *régime* of status—that system of compulsory co-operation, the decaying tradition of which is represented by the old Toryism, and towards which the new Toryism is carrying us back.

"But we shall be on our guard against all that—we shall take precautions to ward off such disasters," will doubtless say the enthusiasts. Be they "practical" politicians with their new regulative measures, or communists with their schemes for re-organizing labour, the answer is ever the same:—"It is true that plans of kindred nature have, from unforeseen

causes and adverse accidents, or the misdeeds of those concerned, been brought to failure; but this time we shall profit by past experiences and succeed." There seems no getting people to accept the truth, which nevertheless is conspicuous enough, that the welfare of a society and the justice of its arrangements are at bottom dependent on the characters of its members; and that improvement in neither can take place without that improvement in character which results from carrying on peaceful industry under the restraints imposed by an orderly social life. The belief, not only of the socialists but also of those so-called Liberals who are diligently preparing the way for them, is that by due skill an ill-working humanity may be framed into well-working institutions. It is a delusion. The defective natures of citizens will show themselves in the bad acting of whatever social structure they are arranged into. There is no political alchemy by which you can get golden conduct out of leaden instincts.

II KEYNES

*The End of Laissez Faire**

THE ORIGINS OF INDIVIDUALISM

The disposition towards public affairs, which we conveniently sum up as Individualism and *laissez-faire*, drew its sustenance from many different rivulets of thought and springs of feeling. For more than a hundred years our philosophers ruled us, because, by a miracle, they nearly all agreed, or seemed to agree, on this one thing. We do not dance even yet to a new tune. But a change is in the air. We hear but indistinctly what were once the clearest and most distinguishable voices which have ever instructed political mankind. The orchestra of diverse instruments, the chorus of articulate sound, is receding at last into the distance.

At the end of the seventeenth century the divine right of monarchs gave place to Natural Liberty and to the Compact, and the divine right of the Church to the principle of Toleration, and to the view that a church is "a voluntary society of men," coming together, in a way which is "absolutely free and spontaneous."¹ Fifty years later the divine origin and absolute voice of duty gave place to the calculations of Utility. In the hands of Locke and Hume these doctrines founded Individualism. The Compact presumed rights in the individual; the

new ethics, being no more than a scientific study of the consequences of rational self-love, placed the individual at the centre. "The sole trouble Virtue demands," said Hume, "is that of just Calculation, and a steady preference of the greater Happiness."² These ideas accorded with the practical notions of conservatives and of lawyers. They furnished a satisfactory intellectual foundation to the rights of property and to the liberty of the individual in possession to do what he liked with himself and with his own. This was one of the contributions of the eighteenth century to the air we still breathe.

The purpose of promoting the Individual was to depose the Monarch and the Church; the effect—through the new ethical significance attributed to Contract—was to buttress Property and Prescription. But it was not long before the claims of Society raised themselves anew against the individual. Paley and Bentham accepted utilitarian hedonism³

² *An Enquiry Concerning the Principles of Morals*, section ix.

³ "I omit," says Archdeacon Paley, "much usual declamation upon the dignity and capacity of our nature, the superiority of the soul to the body, of the rational to the animal part of our constitution; upon the worthiness, refinement, and delicacy of some satisfactions, and the meanness, grossness, and sensuality of others: because I hold that pleasures differ in nothing but in continuance and intensity."—*Principles of Moral and Political Philosophy*, Bk. I, chap. 6.

* From John Maynard Keynes, *Laissez-Faire and Communism* (New Republic, 1926), Part I, pp. 5-73.

¹ Locke, *A Letter Concerning Toleration*.

from the hands of Hume and his predecessors, but enlarged it into social utility. Rousseau took the Social Contract from Locke and drew out of it the General Will. In each case the transition was made by virtue of the new emphasis laid on Equality. "Locke applies his Social Contract to modify the natural equality of mankind, so far as that phrase implies equality of property or even of privilege, in consideration of general security. In Rousseau's version equality is not only the starting point but the goal."⁴

Paley and Bentham reached the same destination, but by different routes. Paley avoided an egoistic conclusion to his hedonism by a God from the machine. "Virtue," he says, "is the doing good to mankind, in obedience to the will of God, and for the sake of everlasting happiness"—in this way bringing back *I* and *others* to a parity. Bentham reached the same result by pure reason. There is no rational ground, he argued, for preferring the happiness of one individual, even oneself, to that of any other. Hence the greatest happiness of the greatest number is the sole rational object of conduct—taking Utility from Hume, but forgetting that sage man's cynical corollary: "Tis not contrary to reason to prefer the destruction of the whole world to the scratching of my finger. 'Tis not contrary to reason for me to choose my total ruin to prevent the least uneasiness of an Indian, or person totally unknown to me. . . . Reason is and ought only to be the slave of the passions, and can never pretend to any other office than to serve and obey them."

Rousseau derived equality from the State of Nature, Paley from the Will of God, Bentham from a mathematical law of Indifference. Equality and altruism had thus entered political philosophy, and from Rousseau and Bentham in conjunction sprang both Democracy and Utilitarian Socialism.

This is the second current—sprung

⁴ Leslie Stephen, *English Thought in the Eighteenth Century*, ii, 192.

from long-dead controversies, and carried on its way by long-exploded sophistries—which still permeates our atmosphere of thought. But it did not drive out the former current. It mixed with it. The early nineteenth century performed the miraculous union. It harmonised the conservative individualism of Locke, Hume, Johnson, and Burke with the Socialism and democratic egalitarianism of Rousseau, Paley, Bentham, and Godwin.⁵

Nevertheless that age would have been hard put to it to achieve this harmony of opposites if it had not been for the *economists*, who sprang into prominence just at the right moment. The idea of a divine harmony between private advantage and the public good is already apparent in Paley. But it was the economists who gave the notion a good scientific basis. Suppose that by the working of natural laws individuals pursuing their own interests with enlightenment in conditions of freedom always tend to promote the general interest at the same time! Our philosophical difficulties are resolved—at least for the practical man, who can then concentrate his efforts on securing the necessary conditions of freedom. To the philosophical doctrine that Government has no right to interfere, and the divine miracle that it has no need to interfere, there is added a scientific proof that its interference is inexpedient. This is the third current of thought, just discoverable in Adam Smith, who was ready in the main to allow the public good to rest on "the natural effort of every individual to better his own condition," but not fully and self-consciously developed until

⁵ Godwin carried *laissez-faire* so far that he thought *all* government an evil, in which Bentham almost agreed with him. The doctrine of equality becomes with him one of extreme individualism, verging on anarchy. "The universal exercise of private judgment," he says, "is a doctrine so unspeakably beautiful that the true politician will certainly feel infinite reluctance in admitting the idea of interfering with it."—*Vide* Leslie Stephen, *op. cit.*, ii, 277.

the nineteenth century begins. The principle of *laissez-faire* had arrived to harmonise Individualism and Socialism, and to make at one Hume's Egoism with the Greatest Good of the Greatest Number. The political philosopher could retire in favour of the business man—for the latter could attain the philosopher's *summum bonum* by just pursuing his own private profit.

Yet some other ingredients were needed to complete the pudding. First the corruption and incompetence of eighteenth-century government, many legacies of which survived into the nineteenth. The Individualism of the political philosophers pointed to *laissez-faire*. The divine or scientific harmony (as the case might be) between private interest and public advantage pointed to *laissez-faire*. But above all, the ineptitude of public administrators strongly prejudiced the practical man in favour of *laissez-faire*—a sentiment which has by no means disappeared. Almost everything which the State did in the eighteenth century in excess of its minimum functions was, or seemed, injurious or unsuccessful.

On the other hand, material progress between 1750 and 1850 came from individual initiative, and owed almost nothing to the directive influence of organised society as a whole. Thus practical experience reinforced *a priori* reasonings. The philosophers and the economists told us that for sundry deep reasons unfettered private enterprise would promote the greatest good of the whole. What could suit the business man better? And could a practical observer, looking about him, deny that the blessings of improvement which distinguished the age he lived in were traceable to the activities of individuals "on the make"? Thus the ground was fertile for a doctrine that, whether on divine, natural, or scientific grounds, State Action should be narrowly confined and economic life left, unregulated so far as may be, to the skill and good sense of individual citizens actuated by the admirable motive of trying to get on in the world.

By the time that the influence of Paley and his like was waning, the innovations of Darwin were shaking the foundations of belief. Nothing could seem more opposed than the old doctrine and the new—the doctrine which looked on the world as the work of the divine Watchmaker and the doctrine which seemed to draw all things out of Chance, Chaos, and Old Time. But at this one point the new ideas bolstered up the old. The economists were teaching that wealth, commerce, and machinery were the children of free competition—that free competition built London. But the Darwinians could go one better than that—free competition had built Man. The human eye was no longer the demonstration of Design, miraculously contriving all things for the best; it was the supreme achievement of Chance, operating under conditions of free competition and *laissez-faire*. The principle of the Survival of the Fittest could be regarded as a vast generalisation of the Ricardian economics. Socialistic interferences became, in the light of this grauder synthesis, not merely inexpedient, but impious, as calculated to retard the onward movement of the mighty process by which we ourselves had risen like Aphrodite out of the primeval slime of Ocean.

Therefore I trace the peculiar unity of the everyday political philosophy of the nineteenth century to the success with which it harmonised diversified and warring schools and united all good things to a single end. Hume and Paley, Burke and Rousseau, Godwin and Malthus, Cobbett and Huskisson, Bentham and Coleridge, Darwin and the Bishop of Oxford, were all, it was discovered, preaching practically the same thing—Individualism and *laissez-faire*. This was the Church of England and those her apostles, whilst the company of the economists were there to prove that the least deviation into impiety involved financial ruin.

These reasons and this atmosphere are the explanations, whether we know it or not—and most of us in these degenerate

days are largely ignorant in the matter—why we feel such a strong bias in favour of *laissez-faire*, and why State action to regulate the value of money, or the course of investment, or the population, provoke such passionate suspicions in many upright breasts. We have not read these authors; we should consider their arguments preposterous if they were to fall into our hands. Nevertheless we should not I fancy, think as we do, if Hobbes, Locke, Hume, Rousseau, Paley, Adam Smith, Bentham, and Miss Martineau had not thought and written as they did. A study of the history of opinion is a necessary preliminary to the emancipation of the mind. I do not know which makes a man more conservative—to know nothing but the present, or nothing but the past.

LAISSEZ FAIRE AND THE ECONOMISTS

I have said that it was the economists who furnished the scientific pretext by which the practical man could solve the contradiction between egoism and socialism which emerged out of the philosophising of the eighteenth century and the decay of revealed religion. But having said this for shortness' sake, I hasten to qualify it. This is what the economists are *supposed* to have said. No such doctrine is really to be found in the writings of the greatest authorities. It is what the popularisers and the vulgarisers said. It is what the Utilitarians, who admitted Hume's egoism and Bentham's egalitarianism at the same time, were *driven* to believe in, if they were to effect a synthesis.⁷ The language of the economists lent itself to the *laissez-faire* interpretation. But the popularity of the doctrine must be laid at the door of the political

⁷ One can sympathise with the view of Coleridge, as summarised by Leslie Stephen, that "the Utilitarians destroyed every element of cohesion, made Society a struggle of selfish interests, and struck at the very roots of all order, patriotism, poetry, and religion."

philosophers of the day, whom it happened to suit, rather than of the political economists.

The maxim *laissez-nous faire* is traditionally attributed to the merchant Legendre addressing Colbert sometime towards the end of the seventeenth century.⁷ But there is no doubt that the first writer to use the phrase, and to use it in clear association with the doctrine, is the Marquis d'Argenson about 1751.⁸ The Marquis was the first man to wax passionate on the economic advantages of Governments leaving trade alone. To govern better, he said, one must govern less.⁹ The true cause of the decline of our manufactures, he declared, is the protection we have given to them.¹⁰ "Laissez-faire, telle devrait être la devise de toute puissance publique, depuis que le monde est civilisé." "Detestable principe que celui de ne vouloir notre grandeur que par l'abaissement de nos voisins! Il n'y a que la méchanceté et la malignité du cœur de satisfaites dans ce principe, et l'intérêt y est opposé. Laissez faire morbleu! Laissez faire!"

Here we have the economic doctrine of *laissez-faire*, with its most fervent expression in Free Trade, fully clothed. The

⁷ "Que faut-il faire pour vous aider?" asked Colbert. "Nous laisser faire," answered Legendre.

⁸ For the history of the phrase, *vide* Oncken, "Die Maxime *Laissez-faire* et laissez passer," from whom most of the following quotations are taken. The claims of the Marquis d'Argenson were overlooked until Oncken put them forward, partly because the relevant passages published during his lifetime were anonymous (*Journal Économique*, 1751), and partly because his works were not published in full (though probably passed privately from hand to hand during his lifetime) until 1858 (*Mémoires et Journal inédit du Marquis d'Argenson*).

⁹ "Pour gouverner mieux, il faudrait gouverner moins."

¹⁰ "On ne peut dire autant de nos fabriques: la vraie cause de leur déclin, c'est la protection outrée qu'on leur accorde."

phrases and the idea must have passed current in Paris from that time on. But they were slow to establish themselves in Literature; and the tradition associating with them the Physiocrats, and particularly de Gournay and Quesnay, finds little support in the writings of this school, though they were, of course, proponents of the essential harmony of social and individual interests. The phrase *laissez-faire* is not to be found in the works of Adam Smith, of Ricardo, or of Malthus. Even the idea is not present in a dogmatic form in any of these authors. Adam Smith, of course, was a Free Trader and an opponent of many eighteenth-century restrictions on trade. But his attitude towards the Navigation Acts and the Usury laws shows that he was not dogmatic. Even his famous passage about "the invisible hand" reflects the philosophy which we associate with Paley rather than the economic dogma of *laissez-faire*. As Sidgwick and Cliff Leslie have pointed out, Adam Smith's advocacy of the "obvious and simple system of natural liberty" is derived from his theistic and optimistic view of the order of the world, as set forth in his *Theory of Moral Sentiments*, rather than from any proposition of Political Economy proper.¹¹ The phrase *laissez-faire* was, I think, first brought into popular usage in England by a well-known passage of Dr Franklin's.¹² It is not, indeed, until we come to the later works of Bentham—who was not an economist at all—that we discover the rule of *laissez-faire*, in the shape in which our grandfathers knew it, adopted into the service of the Utilitarian philosophy. For example, in *A Manual of Political Economy*,¹³ he writes: "The general rule is that

nothing ought to be done or attempted by government; the motto or watchword of government, on these occasions, ought to be—*Be quiet*. . . . The request which agriculture, manufacturers, and commerce present to governments is as modest and reasonable as that which Diogenes made to Alexander: Stand out of my sunshine."

From this time on it was the political campaign for Free Trade, the influence of the so-called Manchester School and of the Benthamite Utilitarians, the utterances of secondary economic authorities, and the educational stories of Miss Martineau and Mrs Marcet, that fixed *laissez-faire* in the popular mind as the practical conclusion of orthodox Political Economy—with this great difference, that the Malthusian view of Population having been accepted in the meantime by this same school of thought, the optimistic *laissez-faire* of the last half of the eighteenth century gives place to the pessimistic *laissez-faire* of the first half of the nineteenth century.¹⁴

In Mrs Marcet's *Conversations on Political Economy* (1817) Caroline stands out as long as she can in favour of controlling the expenditure of the rich. But by page 418 she has to admit defeat:

Caroline.—The more I learn upon this subject, the more I feel convinced that the interests of nations, as well as those of individuals, so far from being opposed to each other, are in the most perfect unison.

Mrs. B.—Liberal and enlarged views will always lead to similar conclusions, and teach us to cherish sentiments of universal benevolence towards each other;

¹⁴ See Sidgwick (*op. cit.*, p. 22): "Even those economists, who adhered in the main to Adam Smith's limitations of the sphere of government, enforced these limitations sadly rather than triumphantly; not as admirers of the social order at present resulting from 'natural liberty,' but as convinced that it is at least preferable to any artificial order that government might be able to substitute for it."

¹¹ Sidgwick, *Principles of Political Economy*, p. 20.

¹² Bentham uses the expression "*laissez-nous faire*," *Works*, p. 440.

¹³ Written in 1793, a chapter published in the *Bibliothèque Britannique* in 1798, and the whole first printed in Bowring's edition of his *Works* (1843).

hence the superiority of science over mere practical knowledge.

By 1850 the *Easy Lessons for the Use of Young People*, by Archbishop Whately, which the Society for Promoting Christian Knowledge was distributing wholesale, do not admit even of those doubts which Mrs B. allowed Caroline occasionally to entertain.

More harm than good is likely to be done, the little book concludes,

by almost any interference of Government with men's money transactions, whether letting and leasing, or buying and selling of any kind.

True liberty is

that every man should be left free to dispose of his own property, his own time, and strength, and skill, in whatever way he himself may think fit, provided he does no wrong to his neighbours.

In short, the dogma had got hold of the educational machine; it had become a copybook maxim. The Political Philosophy, which the seventeenth and eighteenth centuries had forged in order to throw down Kings and Prelates, had been made milk for babes, and had literally entered the nursery.

Finally, in the works of Bastiat we reach the most extravagant and rhetorical expression of the Political Economist's religion. In his *Harmonies Economiques*,

I undertake [he says] to demonstrate the Harmony of those laws of Providence which govern human society. What makes these laws harmonious and not discordant is, that all principles, all motives, all springs of action, all interests, co-operate towards a grand final result. . . . And that result is, the indefinite approximation of all classes towards a level, which is always rising; in other words, the *equalisation* of individuals in the general *amelioration*.

And when, like other priests, he drafts his Credo, it runs as follows:

I believe that He who has arranged the material universe has not withheld His regard from the arrangements of the social world. I believe that He has combined and caused to move in harmony free agents as well as inert molecules. . . . I believe that the invincible social tendency is a constant approximation of men towards a common moral, intellectual, and physical level, with, at the same time, a progressive and indefinite elevation of that level. I believe that all that is necessary to the gradual and peaceful development of humanity is that its tendencies should not be disturbed, nor have the liberty of their movements destroyed.

From the time of John Stuart Mill, economists of authority have been in strong reaction against all such ideas. "Scarcely a single English economist of repute," as Professor Cannan has expressed it, "will join in a frontal attack upon Socialism in general," though, as he also adds, "nearly every economist, whether of repute or not, is always ready to pick holes in most socialistic proposals."¹⁵ Economists no longer have any link with the theological or political philosophies out of which the dogma of Social Harmony was born, and their scientific analysis leads them to no such conclusions.

Cairnes, in the Introductory Lecture on "Political Economy and *Laissez-Faire*," which he delivered at University College, London, in 1870, was perhaps the first orthodox economist to deliver a frontal attack upon *laissez-faire* in general. "The maxim of *laissez-faire*," he declared, "has no scientific basis whatever, but is at best a mere handy rule of practice."¹⁶ This, for fifty years past,

¹⁵ *Theories of Production and Distribution*, p. 494.

¹⁶ Cairnes well described the "prevailing notion" in the following passage from the same lecture: "The prevailing notion is that

has been the view of all leading economists. Some of the most important work of Alfred Marshall—to take one instance—was directed to the elucidation of the leading cases in which private interest and social interest are *not* harmonious. Nevertheless the guarded and undogmatic attitude of the best economists has not prevailed against the general opinion that an individualistic *laissez-faire* is both what they ought to teach and what in fact they do teach.

THE ASSUMPTIONS OF ECONOMIC INDIVIDUALISM

Economists, like other scientists, have chosen the hypothesis from which they set out, and which they offer to beginners, because it is the simplest, and not because it is the nearest to the facts. Partly for this reason, but partly, I admit, because they have been biassed by the traditions of the subject, they have begun by assuming a state of affairs where the ideal distribution of productive resources can be brought about through individuals acting independently by the method of trial and error in such a way that those individuals who move in the right direction will destroy by competition those who move in the wrong direction. This implies that there must be no mercy or protection for those who embark their capital or their labour in the wrong direc-

P.E. undertakes to show that wealth may be most rapidly accumulated and most fairly distributed; that is to say, that human well-being may be most effectually promoted, by the simple process of leaving people to themselves; leaving individuals, that is to say, to follow the promptings of self-interest, unrestrained either by the State or by public opinion, so long as they abstain from force and fraud. This is the doctrine commonly known as *laissez-faire*; and accordingly political economy is, I think, very generally regarded as a sort of scientific rendering of this maxim—a vindication of freedom of individual enterprise and of contract as the one and sufficient solution of all industrial problems."

tion. It is a method of bringing the most successful profit-makers to the top by a ruthless struggle for survival, which selects the most efficient by the bankruptcy of the less efficient. It does not count the cost of the struggle, but looks only to the benefits of the final result which are assumed to be permanent. The object of life being to crop the leaves off the branches up to the greatest possible height, the likeliest way of achieving this end is to leave the giraffes with the longest necks to starve out those whose necks are shorter.

Corresponding to this method of attaining the ideal distribution of the instruments of production between different purposes, there is a similar assumption as to how to attain the ideal distribution of what is available for consumption. In the first place, each individual will discover what amongst the possible objects of consumption *he* wants most by the method of trial and error "at the margin," and in this way not only will each consumer come to distribute his consumption most advantageously, but each object of consumption will find its way into the mouth of the consumer whose relish for it is greatest compared with that of the others, because that consumer will outbid the rest. Thus, if only we leave the giraffes to themselves, (1) the maximum quantity of leaves will be cropped because the giraffes with the longest necks will, by dint of starving out the others, get nearest to the trees; (2) each giraffe will make for the leaves which he finds most succulent amongst those in reach; and (3) the giraffes whose relish for a given leaf is greatest will crane most to reach it. In this way more and juicier leaves will be swallowed, and each individual leaf will reach the throat which thinks it deserves most effort.

This assumption, however, of conditions where unhindered natural selection leads to progress, is only one of the two provisional assumptions which, taken as literal truth, have become the twin butresses of *laissez-faire*. The other one is

the efficacy, and, indeed, the necessity, of the opportunity for unlimited private money-making as an *incentive* to maximum effort. Profit accrues, under *laissez-faire*, to the individual who, whether by skill or good fortune, is found with his productive resources in the right place at the right time. A system which allows the skilful or fortunate individual to reap the whole fruits of this conjuncture evidently offers an immense incentive to the practice of the art of being in the right place at the right time. Thus one of the most powerful of human motives, namely, the love of money, is harnessed to the task of distributing economic resources in the way best calculated to increase wealth.

The parallelism between economic *laissez-faire* and Darwinianism, already briefly noted, is now seen, as Herbert Spencer was foremost to recognise, to be very close indeed. Just as Darwin invoked sexual love, acting through sexual selection, as an adjunct to Natural Selection by competition, to direct evolution along lines which should be desirable as well as effective, so the individualist invokes the love of money, acting through the pursuit of profit, as an adjunct to Natural Selection, to bring about the production on the greatest possible scale of what is most strongly desired as measured by exchange value.

The beauty and the simplicity of such a theory are so great that it is easy to forget that it follows not from the actual facts, but from an incomplete hypothesis introduced for the sake of simplicity. Apart from other objections to be mentioned later, the conclusion that individuals acting independently for their own advantage will produce the greatest aggregate of wealth, depends on a variety of unreal assumptions to the effect that the processes of production and consumption are in no way organic, that there exists a sufficient foreknowledge of conditions and requirements, and that there are adequate opportunities of obtaining this foreknowledge. For economists generally reserve for a later

stage of their argument the complications which arise—(1) when the efficient units of production are large relatively to the units of consumption, (2) when overhead costs or joint costs are present, (3) when internal economies tend to the aggregation of production, (4) when the time required for adjustments is long, (5) when ignorance prevails over knowledge, and (6) when monopolies and combinations interfere with equality in bargaining—they reserve, that is to say, for a later stage their analysis of the actual facts. Moreover, many of those who recognise that the simplified hypothesis does not accurately correspond to fact conclude nevertheless that it does represent what is "natural" and therefore ideal. They regard the simplified hypothesis as health, and the further complications as disease.

Yet, besides this question of fact, there are other considerations, familiar enough, which rightly bring into the calculation the cost and character of the competitive struggle itself, and the tendency for wealth to be distributed where it is not appreciated most. If we have the welfare of the giraffes at heart, we must not overlook the suffering of the shorter necks who are starved out, or the sweet leaves which fall to the ground and are trampled underfoot in the struggle, or the overfeeding of the long-necked ones, or the evil look of anxiety or struggling greediness which overcasts the mild faces of the herd.

But the principles of *laissez-faire* have had other allies besides economic textbooks. It must be admitted that they have been confirmed in the minds of sound thinkers and the reasonable public by the poor quality of the opponent proposals—Protectionism on one hand, and Marxian Socialism on the other. Yet these doctrines are both characterised, not only or chiefly by their infringing the general presumption in favour of *laissez-faire*, but by *mere* logical fallacy. Both are examples of poor thinking, of inability to analyse a process and follow it out to its conclusion. The arguments against them,

though reinforced by the principle of *laissez-faire*, do not strictly require it. Of the two, Protectionism is at least plausible, and the forces making for its popularity are nothing to wonder at. But Marxian Socialism must always remain a portent to the historians of Opinion—how a doctrine so illogical and so dull can have exercised so powerful and enduring an influence over the minds of men, and, through them, the events of history. At any rate, the obvious scientific deficiencies of these two schools greatly contributed to the prestige and authority of nineteenth-century *laissez-faire*.

Nor has the most notable divergence into centralised social action on a great scale—the conduct of the late war—encouraged reformers or dispelled old-fashioned prejudices. There is much to be said, it is true, on both sides. War experience in the organisation of socialised production has left some near observers optimistically anxious to repeat it in peace conditions. War socialism unquestionably achieved a production of wealth on a scale far greater than we ever knew in Peace, for though the goods and services delivered were destined for immediate and fruitless extinction, none the less they were wealth. Nevertheless the dissipation of effort was also prodigious, and the atmosphere of waste and not counting the cost was disgusting to any thrifty or provident spirit.

Finally, Individualism and *laissez-faire* could not, in spite of their deep roots in the political and moral philosophies of the late eighteenth and early nineteenth centuries, have secured their lasting hold over the conduct of public affairs, if it had not been for their conformity with the needs and wishes of the business world of the day. They gave full scope to our erstwhile heroes, the great business men. "At least one-half of the best ability in the Western world," Marshall used to say, "is engaged in business." A great part of "the higher imagination" of the age was thus employed. It was on the activities of these men that our hopes of Progress were centred.

"Men of this class," Marshall wrote, live in constantly shifting visions, fashioned in their own brains, of various routes to their desired end; of the difficulties which Nature will oppose to them on each route, and of the contrivances by which they hope to get the better of her opposition. This imagination gains little credit with the people, because it is not allowed to run riot; its strength is disciplined by a stronger will; and its highest glory is to have attained great ends by means so simple that no one will know, and none but experts will even guess, how a dozen other expedients, each suggesting as much brilliancy to the hasty observer, were set aside in favour of it. The imagination of such a man is employed, like that of the master chess-player, in forecasting the obstacles which may be opposed to the successful issue of his far-reaching projects, and constantly rejecting brilliant suggestions because he has pictured to himself the counter-strokes to them. His strong nervous force is at the opposite extreme of human nature from that nervous irresponsibility which conceives hasty Utopian schemes, and which is rather to be compared to the bold facility of a weak player, who will speedily solve the most difficult chess problem by taking on himself to move the black men as well as the white.¹⁷

This is a fine picture of the great Captain of Industry, the Master-Individualist, who serves us in serving himself, just as any other artist does. Yet this one, in his turn, is becoming a tarnished idol. We grow more doubtful whether it is he who will lead us into Paradise by the hand.

These many elements have contributed to the current intellectual bias, the mental make-up, the orthodoxy of the day. The compelling force of many of the original reasons has disappeared, but, as usual, the vitality of the conclusions outlasts them. To suggest social action

¹⁷ "The Social Possibilities of Economic Chivalry," *Economic Journal* (1907), xvii, p. 9.

for the public good to the City of London is like discussing the *Origin of Species* with a Bishop sixty years ago. The first reaction is not intellectual, but moral. An orthodoxy is in question, and the more persuasive the arguments the graver the offence. Nevertheless, venturing into the den of the lethargic monster, at any rate I have traced his claims and pedigree so as to show that he has ruled over us rather by hereditary right than by personal merit.

THE FUTURE ORGANIZATION OF SOCIETY

Let us clear from the ground the metaphysical or general principles upon which, from time to time, *laissez-faire* has been founded. It is *not* true that individuals possess a prescriptive "natural liberty" in their economic activities. There is *no* "compact" conferring perpetual rights on those who Have or on those who Acquire. The world is *not* so governed from above that private and social interest always coincide. It is *not* so managed here below that in practice they coincide. It is *not* a correct deduction from the Principles of Economics that enlightened self-interest always operates in the public interest. Nor is it true that self-interest generally *is* enlightened; more often individuals acting separately to promote their own ends are too ignorant or too weak to attain even these. Experience does *not* show that individuals, when they make up a social unit, are always less clear-sighted than when they act separately.

We cannot therefore settle on abstract grounds, but must handle on its merits in detail what Burke termed "one of the finest problems in legislation, namely, to determine what the State ought to take upon itself to direct by the public wisdom, and what it ought to leave, with as little interference as possible, to individual exertion."¹⁸ We have to discriminate between what Bentham, in his forgotten

but useful nomenclature, used to term *Agenda* and *Non-Agenda*, and to do this without Bentham's prior presumption that interference is, at the same time, "generally needless" and "generally pernicious."¹⁹ Perhaps the chief task of economists at this hour is to distinguish afresh the *Agenda* of Government from the *Non-Agenda*; and the companion task of Politics is to devise forms of Government within a Democracy which shall be capable of accomplishing the *Agenda*. I will illustrate what I have in mind by two examples.

1. I believe that in many cases the ideal size for the unit of control and organisation lies somewhere between the individual and the modern State. I suggest, therefore, that progress lies in the growth and the recognition of semi-autonomous bodies within the State—bodies whose criterion of action within their own field is solely the public good as they understand it, and from whose deliberations motives of private advantage are excluded, though some place it may still be necessary to leave, until the ambit of men's altruism grows wider, to the separate advantage of particular groups, classes, or faculties—bodies which in the ordinary course of affairs are mainly autonomous within their prescribed limitations, but are subject in the last resort to the sovereignty of the democracy expressed through Parliament.

I propose a return, it may be said, towards mediæval conceptions of separate autonomies. But, in England at any rate, corporations are a mode of government which has never ceased to be important and is sympathetic to our institutions. It is easy to give examples, from what already exists, of separate autonomies which have attained or are approaching the mode I designate—the Universities, the Bank of England, the Port of London Authority, even perhaps the Railway Companies. In Germany there are doubtless analogous instances.

¹⁸ Quoted by M'Culloch in his *Principles of Political Economy*.

¹⁹ Bentham's *Manual of Political Economy*, published posthumously, in Bowring's edition (1843).

But more interesting than these is the trend of Joint Stock Institutions, when they have reached a certain age and size, to approximate to the status of public corporations rather than that of individualistic private enterprise. One of the most interesting and unnoticed developments of recent decades has been the tendency of big enterprise to socialise itself. A point arrives in the growth of a big institution—particularly a big railway or big public utility enterprise, but also a big bank or a big insurance company—at which the owners of the capital, *i.e.* the shareholders, are almost entirely dissociated from the management, with the result that the direct personal interest of the latter in the making of great profit becomes quite secondary. When this stage is reached, the general stability and reputation of the institution are more considered by the management than the maximum of profit for the shareholders. The shareholders must be satisfied by conventionally adequate dividends; but once this is secured, the direct interest of the management often consists in avoiding criticism from the public and from the customers of the concern. This is particularly the case if their great size or semi-monopolistic position renders them conspicuous in the public eye and vulnerable to public attack. The extreme instance, perhaps, of this tendency in the case of an institution, theoretically the unrestricted property of private persons, is the Bank of England. It is almost true to say that there is no class of persons in the Kingdom of whom the Governor of the Bank of England thinks less when he decides on his policy than of his shareholders. Their rights, in excess of their conventional dividend, have already sunk to the neighbourhood of zero. But the same thing is partly true of many other big institutions. They are, as time goes on, socialising themselves.

Not that this is unmixed gain. The same causes promote conservatism and a waning of enterprise. In fact, we already have in these cases many of the faults as well as the advantages of State Socialism.

Nevertheless we see here, I think, a natural line of evolution. The battle of Socialism against unlimited private profit is being won in detail hour by hour. In these particular fields—it remains acute elsewhere—this is no longer the pressing problem. There is, for instance, no so-called important political question so really unimportant, so irrelevant to the re-organisation of the economic life of Great Britain, as the Nationalisation of the Railways.

It is true that many big undertakings, particularly Public Utility enterprises and other business requiring a large fixed capital, still need to be semi-socialised. But we must keep our minds flexible regarding the forms of this semi-socialism. We must take full advantage of the natural tendencies of the day, and we must probably prefer semi-autonomous corporations to organs of the Central Government for which Ministers of State are directly responsible.

I criticise doctrinaire State Socialism, not because it seeks to engage men's altruistic impulses in the service of Society, or because it departs from *laissez-faire*, or because it takes away from man's natural liberty to make a million, or because it has courage for bold experiments. All these things I applaud. I criticise it because it misses the significance of what is actually happening; because it is, in fact, little better than a dusty survival of a plan to meet the problems of fifty years ago, based on a misunderstanding of what someone said a hundred years ago. Nineteenth-century State Socialism sprang from Bentham, free competition, etc., and is in some respects a clearer, in some respects a more muddled version of just the same philosophy as underlies nineteenth-century individualism. Both equally laid all their stress on freedom, the one negatively to avoid limitations on existing freedom, the other positively to destroy natural or acquired monopolies. They are different reactions to the same intellectual atmosphere.

2. I come next to a criterion of

Agenda which is particularly relevant to what it is urgent and desirable to do in the near future. We must aim at separating those services which are *technically social* from those which are *technically individual*. The most important *Agenda* of the State relate not to those activities which private individuals are already fulfilling, but to those functions which fall outside the sphere of the individual, to those decisions which are made by *no one* if the State does not make them. The important thing for Government is not to do things which individuals are doing already, and to do them a little better or a little worse; but to do those things which at present are not done at all.

It is not within the scope of my purpose on this occasion to develop practical policies. I limit myself, therefore, to naming some instances of what I mean from amongst those problems about which I happen to have thought most.

Many of the greatest economic evils of our time are the fruits of risk, uncertainty, and ignorance. It is because particular individuals, fortunate in situation or in abilities, are able to take advantage of uncertainty and ignorance, and also because for the same reason big business is often a lottery, that great inequalities of wealth come about; and these same factors are also the cause of the Unemployment of Labour, or the disappointment of reasonable business expectations, and of the impairment of efficiency and production. Yet the cure lies outside the operations of individuals; it may even be to the interest of individuals to aggravate the disease. I believe that the cure for these things is partly to be sought in the deliberate control of the currency and of credit by a central institution, and partly in the collection and dissemination on a great scale of data relating to the business situation, including the full publicity, by law if necessary, of all business facts which it is useful to know. These measures would involve Society in exercising directive intelligence through some appropriate organ of action over many of the inner intricacies of private business,

yet it would leave private initiative and enterprise unhindered. Even if these measures prove insufficient, nevertheless they will furnish us with better knowledge than we have now for taking the next step.

My second example relates to Savings and Investment. I believe that some co-ordinated act of intelligent judgment is required as to the scale on which it is desirable that the community as a whole should save, the scale on which these savings should go abroad in the form of foreign investments, and whether the present organisation of the investment market distributes savings along the most nationally productive channels. I do not think that these matters should be left entirely to the chances of private judgment and private profits, as they are at present.

My third example concerns Population. The time has already come when each country needs a considered national policy about what size of Population, whether larger or smaller than at present or the same, is most expedient. And having settled this policy, we must take steps to carry it into operation. The time may arrive a little later when the community as a whole must pay attention to the innate quality as well as to the mere numbers of its future members.

THE MONEY MOTIVE

These reflections have been directed towards possible improvements in the technique of modern Capitalism by the agency of collective action. There is nothing in them which is seriously incompatible with what seems to me to be the essential characteristic of Capitalism, namely the dependence upon an intense appeal to the money-making and money-loving instincts of individuals as the main motive force of the economic machine. Nor must I, so near to my end, stray towards other fields. Nevertheless I may do well to remind you, in conclusion, that the fiercest contests and the most deeply felt divisions of opinion are likely

to be waged in the coming years not round technical questions, where the arguments on either side are mainly economic, but round those which, for want of better words, may be called psychological or, perhaps, moral.

In Europe, or at least in some parts of Europe—but not, I think, in the United States of America—there is a latent reaction, somewhat widespread, against basing Society to the extent that we do upon fostering, encouraging, and protecting the money-motives of individuals. A preference for arranging our affairs in such a way as to appeal to the money-motive as little as possible, rather than as much as possible, need not be entirely *a priori*, but may be based on the comparison of experiences. Different persons, according to their choice of profession, find the money-motive playing a large or a small part in their daily lives, and historians can tell us about other phases of social organisation in which this motive has played a much smaller part than it does now. Most religions and most philosophies deprecate, to say the least of it, a way of life mainly influenced by considerations of personal money profit. On the other hand, most men to-day reject ascetic notions and do not doubt the real advantages of wealth. Moreover, it seems obvious to them that one cannot do without the money-motive, and that, apart from certain admitted abuses, it does its job well. In the result the average man averts his attention from the problem, and has no clear idea what he really thinks and feels about the whole confounded matter.

Confusion of thought and feeling leads to confusion of speech. Many people, who are really objecting to Capitalism as a way of life, argue as though they were objecting to it on the ground of its inefficiency in attaining its own objects. Con-

trariwise, devotees of Capitalism are often unduly conservative, and reject reforms in its technique, which might really strengthen and preserve it, for fear that they may prove to be first steps away from Capitalism itself. Nevertheless a time may be coming when we shall get clearer than at present as to when we are talking about Capitalism as an efficient or inefficient technique, and when we are talking about it as desirable or objectionable in itself. For my part, I think that Capitalism, wisely managed, can probably be made more efficient for attaining economic ends than any alternative system yet in sight, but that in itself it is in many ways extremely objectionable. Our problem is to work out a social organisation which shall be as efficient as possible without offending our notions of a satisfactory way of life.

The next step forward must come, not from political agitation or premature experiments, but from thought. We need by an effort of the mind to elucidate our own feelings. At present our sympathy and our judgment are liable to be on different sides, which is a painful and paralysing state of mind. In the field of action reformers will not be successful until they can steadily pursue a clear and definite object with their intellects and their feelings in tune. There is no party in the world at present which appears to me to be pursuing right aims by right methods. Material Poverty provides the incentive to change precisely in situations where there is very little margin for experiments. Material Prosperity removes the incentive just when it might be safe to take a chance. Europe lacks the means, America the will, to make a move. We need a new set of convictions which spring naturally from a candid examination of our own inner feelings in relation to the outside facts.

III MYRDAL

Beyond the Welfare State *

Planning in the Welfare State

THE HISTORICAL AND CAUSAL ORDER

In the last half century, the state, in all the rich countries in the Western world, has become a democratic "Welfare State," with fairly explicit commitments to the broad goals of economic development, full employment, equality of opportunity for the young, social security, and protected minimum standards as regards not only income, but nutrition, housing, health, and education for people of all regions and social groups. The Welfare State is nowhere, as yet, an accomplishment; it is continually in the process of coming into being. In no country was it originally planned in advance—certainly not as a structure of its present imposing ramifications and importance for the individual citizens. In all countries, even in those where the building of the Welfare State is most advanced, the architects are continually laboring with the tasks of simplification, coordination, rationalization and achievement of efficiency. Indeed, this planning becomes pressing as the edifice of the Welfare State rises.

That this must be so, should be clear from the analysis I have given of the forces behind the trend towards planning

* From Gunnar Myrdal, *Beyond the Welfare State: Economic Planning and Its International Implications* (1960). By permission of Yale University Press and Gerald Duckworth.

in the Western countries. The historical and causal order has been that acts of intervention in the play of market forces came first, and that planning then became a necessity. In a process of cumulative causation, the secular increase in the volume of intervention has been spurred on by the sequence of violent international crises since World War I, the increasing rationality of people's attitudes, the democratization of political power, and the growth of provincial and municipal self-government and of large-scale enterprises and interest organizations in all markets. Thus, as public and private intervention became more frequent and more far-reaching and closely related to the other constituents of this mighty process of social change, so there arose situations of growing complexity, contradiction, and confusion. With ever greater impact, the need for a rationalizing coordination of them all was pressed upon the state as the central organ for the public will.

Coordination leads to planning or, rather, it *is* planning, as this term has come to be understood in the Western world. Coordination of measures of intervention implies a reconsideration of them all from the point of view of how they combine to serve the development goals of the entire national community, as these goals become determined by the political process that provides the basis for power. The need for this coordination arose because the individual acts of inter-

vention, the total volume of which was growing, had not been considered in this way when they were initiated originally.

As the state is increasingly involved in coordinating and regulating the national economy, it becomes compelled to make short-term and long-term forecasts, and to try to modify its policies for commerce, finance, development, and social reform in the light of what these forecasts show. A very much improved basis of statistical and other information is also becoming available to the governments. This coordination of policies, and their continued modification in order to remain appropriate in the setting of factual trends revealed by the forecasts, does not take the shape of a rigid, all-embracing plan. Nevertheless, it constitutes a steadily developing approach to planning, which tends to become firmer and more embracing as present tendencies work themselves out.

FROM INTERVENTION TO PLANNING

As regards the activities of the big enterprises and the organizations in the infrastructure beneath the formal constitutional structure, it is, of course, clear at the outset that they were not from the beginning part of a rationally coordinated national plan. They regularly represented special interests, not the general and common interests of the nation. But, as a matter of fact, the lack of coordination is equally apparent in public policies as they were initially motivated and decided upon. The history of economic policies in every country, as regards, for instance, tariffs and taxes, gives abundant proof of this thesis.

There is further proof in the records of how the huge structures for primary and higher education and for public health were built up, and also in the big redistributive reforms, such as the social security schemes and other measures for the care of the sick, the disabled, the unemployed, the aged, and the children. All these complexes of economic and social

intervention, as they now exist, have been the end product of a long process of piecemeal, gradually induced changes, which in the different fields have been pressed forward, at first as independent and unrelated policy measures, motivated on their own merits or undertaken in response to group pressures.

It is, for instance, remarkable that the social security schemes, which are becoming increasingly expensive, were initially supported only by arguments of social justice and welfare for specific groups of people in need; and such arguments remained predominant for a long time. When the opponents of these schemes, who argued all the time that they would ruin the economy of the country, were again and again proved wrong, this was largely the result of the effect of these reforms in raising the productivity of the mass of the people—an effect which had never played an important part in their motivation. As considerations of these wider effects and interrelations gradually come to the fore in public discussion, the explanation is mainly that these policy measures have by now become so numerous and important, and that they re-direct the distribution of such a very large portion of the national product, that they simply must be coordinated with one another, and with the development of the entire national economy. Thus we arrive at planning in the modern sense.

Public intervention in the field of housing and construction of new houses, affords another example. Since the scanty and diffuse beginnings of a few decades ago, it has been increasing tremendously in all Western countries. The state now finds itself responsible for influencing decisively—directly through its legislation and administration and that of the provincial and municipal authorities, or indirectly through the organizations in the infrastructure that operate under the state's indulgence and sanction—the conditions under which people can find houses to live in, and under which some people can make it a business to provide

homes. This involved complex of intervention concerns the level of rents, the availability and price of building and mortgage credits, the conditions on the several labor markets and the markets for building materials, and, indeed, every aspect of the entire economic process by which houses are built, owned or rented, and inhabited. The future number and the age composition of families and other factors determining both human need and effective demand for housing, must be predicted and allowed for, as must the effects of building activity upon trends of general business activity, in the short and long run. The latter effects are so important that the level of building activity has to be watched carefully, even from the point of view of general economic policy. As the cities grow, and as more public investment becomes involved in preparing for such growth, town planning becomes ever more necessary, as does the general public preoccupation with planning and directing the location of industry.

In the same way, the rapid development of higher and professional education now absorbs so much money, and concerns so many young people in all these countries, that it is gradually becoming realized that this activity cannot continue as an independent process of dispersed public policies. Instead, it has to be planned carefully on the basis of calculations of future demand for, and supply of, labor trained in different ways. This necessarily involves a forecast and a plan for the whole national economy. Again, the converse also applies; no long-range forecast or plan for the national economy can any longer be made without including policies for education and training.

Sweden is now inaugurating, as a final effort to complete the edifice of social security, a compulsory provident and pension scheme, aimed at eradicating what are almost the last remnants of class distinction between manual workers and other employees of public and private enterprises. It is probably taking the

lead in a reform movement which other Western countries will soon join. All old people will, by legislation, be guaranteed an income corresponding to two-thirds of their earnings during the best fifteen years of their working life. It is clear that a redistributive reform of this huge magnitude must be founded on the most careful forecast of the development of the entire national economy for a long period ahead, and must be integrated into the whole system of public policies influencing this development. Otherwise it would represent the most reckless gambling with the future economy of the country, risking the frustration of national efforts in all fields. This is more evidently the case as the social security payments to the old are being guaranteed in real terms. It is characteristic of the situation Western countries have now reached in regard to planning that a main criticism raised in Sweden against this reform is that the calculations of its effects on the total economic development of the country are not complete and tight enough. This preoccupation with planning is not least prominent in the minds of the conservatives, who oppose the reform.

"FULL EMPLOYMENT"

In a sense, the biggest commitment to economic planning in the Welfare State of the Western countries is that they are all now pledged to preserving "full employment," though the definition, as well as the form, of the commitment varies. The political process by which governments have gradually reached this situation illuminates this trend towards planning.

Not many decades ago the periodic appearance of mass unemployment was accepted as a more or less natural consequence of necessary market adjustments to changing business conditions, about which not much could be done. As, however, the political power of the workers increased in the process of democratization, to which I have referred, and as the

social conscience became more alert to the sufferings of the unemployed and their families—two changes which, of course, are closely related—measures of financial aid to the unemployed were instituted in one country after another.

At first, these policy measures were all of a compensatory nature, aimed merely at providing the unemployed workers with some of the incomes they had lost by becoming unemployed. It was the symptom, not the cause, of unemployment that was being dealt with. Unemployment insurance, which now forms an integral part of the social security system in all Western countries, represents the consummation of this line of social policy. But soon the demand was raised that the state should take positive measures in order to create additional work opportunities for the unemployed. In the twenties, and still more during the Great Depression, public works policies spread in all Western countries. At the same time, the workers began to press for full wages even in these public works.

These developments represented only steps towards demanding that the state should so direct all its financial and economic policies as to create demand for labor sufficient to liquidate mass unemployment and to keep the national economy uninterrupted in high gear. Economic theory now responded to the ideological needs of the time by placing the responsibility for economic depressions and unemployment on an imbalance between aggregate demand and supply, opening up a rational way for the state to raise investment and production and to create employment simply by raising its expenditure while keeping down taxation. In Sweden, which amongst the Western countries was the first, both theoretically and practically, to adopt this policy, "pump priming" worked fairly well even in the early years of the Great Depression, as it happened to be supplemented by other simultaneous changes in general business conditions which were favorable to a recovery but not part of intentional policy. Similar policies in the United States and many

other countries were less successful, the main explanation being that the over-expanding was too small to have much effect.

After World War II we have all become accustomed to much bigger budgets and also to taking huge budget deficits less seriously. The expansionist theory of spending one's way out of a depression is now on the way to becoming orthodox, even in the more conservative sections of the business world. It has, as yet, not been put to much of a test, however, as first the urgent reconstruction needs and the pent-up demands immediately after the war, and later the immense armament expenditures and other financial consequences of the cold war, have contributed in mighty fashion to sustain total demand. Inflation and not deflation has been the continuous worry. But, whatever the explanation, it is in any case a fact that on the whole all the Western countries have enjoyed full employment, not only during but also after the war. Now only a dwindling minority of workers in these countries have any personal experience of mass unemployment or any recollection of the situation some few decades ago, when even in boom years the fear of unemployment was a sinister cloud on the horizon for every working-class family. It is safe to predict that in none of the Western countries will a period of severe unemployment ever again be tolerated by the people.

In a sense, this determination to preserve full employment is the crowning accomplishment of the democratic Welfare State. It is generally understood and accepted that this implies a preparedness to use even radical policy measures, when needed, in order to keep the entire labor force employed, and also that this assumes a most careful watch on the entire economic development and a planned coordination of all economic policies.

THE FISCAL BUDGETS

All these developments towards planning in the Western world have, of course, had their consequences for the fiscal

budgets, which integrate a certain type of public intervention and, in one way or another, reflect others. A steady rise in the size of these budgets and an increased level of taxation were secular trends in Western countries even before World War I. These trends would have continued their course upwards, even without the push of the crises and the world wars, although they would have risen much less steeply. A convenient way of illustrating what has happened to fiscal policy may be to focus our attention on the science of public finance.

Public finance remained for centuries primarily a study of the rational conduct of the households of the states, the provinces, and the municipalities. Modern science took over directly from the Cameralists. Taxes were studied from the point of view of their ultimate incidence and their just distribution among the citizens. The relation between the public finances and the total economy of a country was dealt with in the same way as is natural and appropriate for an individual person or a business concern: exclusively as a one-way relation, from economy to taxation and public spending. The problem was how the development of the total economy reflected itself in changes in the need for public expenditure and in the yield of taxes and other public incomes at given rates.

For, before World War I, the public finances were not a large enough part of the total economy of a country to have any very significant influence in the other direction, i.e., on the business situation. And during this era, people, including the economists, were not interested enough anyhow in directing the national economy in a planned way to give much importance to this other problem. It lacked political actuality. This is the science of public finance we still find in our old textbooks.

This characterization of the science of public finance before 1914 is broadly correct. However, it must be borne in mind that even before the eighteenth century there had been plenty of speculation and discussion as to the role of fiscal

policy, and especially of the effects of state borrowing on the general business situation. That interest, though, was usually centered upon one particular practical issue; it never determined the structure of fiscal theory as a whole. National budgeting was never approached with a view to its general effect upon the trade cycle or economic growth.

World War I had vast fiscal consequences, in many ways, and these were widely discussed. But such discussion never mentioned the possible use of the budget as a tool in social or economic engineering.

When the Great Depression set in during the thirties, public finances had already, because of the growth of public intervention in economic life, come to absorb so large a proportion of the national product that a variation of public incomes and expenditures could have a substantial influence on the development of the economy as a whole. And the interventionist spirit was rising. The science of public finance during the thirties became, therefore, focused on the problem of how to manipulate the fiscal budgets in such a way as to counteract business variations downwards.

This second stage turned out to be very short. Now, after World War II we are in the third stage. Often something around a third of the national income passes through treasury accounts and the trend is still rising. It thus becomes impossible to distinguish a separate public finance problem any longer. Both the old textbooks and our discussion during the thirties of a planned, counter-cyclical budgetary policy appear outmoded.

The problems of public finance are now inseparably merged with problems of international trade and payments, wages and incomes, money and credit. The theoretical organizing device is the national budget, conceived as the central bookkeeping control in the service of an overall state economic forecasting and planning network. The national budget accounts for the composition of the entire national income and its disposal for investment and consumption by private

as well as public agents. In this national budget, the fiscal budget appears only as a set of items to be analyzed as part of the whole.

The problems of the two earlier stages of the development of the science of public finance still exist and are important: the incidence and the equitable distribution of taxes and the influence of public finances on the general business situation. But they are now integrated inextricably with all other problems of economic policy and are subordinated to the one dominating question of the direction of the whole national economy. In the short span of a lifetime, the science of public finance has had its scope and content radically changed, not once but twice. This illustrates the impact of the growth of public policies and points to the final result of this trend towards overall state economic planning, even if this planning is as yet of a compromise character and anything but comprehensive, programmatic or politically ostentatious.

CONVERGING POLITICAL ATTITUDES

One interesting aspect of this gradual perfection of the modern democratic Welfare State is that many divisions of opinion, once of burning importance, now tend to fade away, or to change character and thereby to become much less important.

This is, for instance, to a large extent true of the discussion of redistributive reform. Nobody nowadays gets very excited about the issue of whether or not there should be progressive taxation. The disagreement between participants in public debate, and between political parties, no longer concerns this issue of principle, but to what extent and by what devices taxation should be used to influence the distribution of wealth and income. Similarly, the discussion about whether there should be a system of social security has ended. The practical problem is now only how much money should be devoted to this purpose, who

should pay it, and how it should be used. Reforms that have been carried through in a country generally win quick and sincere acceptance from the whole population. Even the continuation of this policy is accepted, and more redistributive reforms are becoming an almost automatic consequence of economic progress. We tend to arrive at a situation where there is a large measure of agreement among all the political parties. They sometimes even compete in propagating new and constantly more sweeping redistributive reforms as levels of income rise. In any case, we have seen very few examples, if any, where the coming into power of a more conservative political party has meant a substantial retraction of reforms previously carried through by a party which was further left.

This implies a gradual retreat from their earlier positions by the conservatives. In the opposite direction, we can also witness a coolness on the left towards many ideas of radical reform which were propounded by the Social Democrats when they were a small minority party without influence. Their demand for public ownership of banks, insurance companies, and industries, for instance, did not begin to take hold, and thus never built up any cumulative force. I have already referred in the Introduction to the inherited aversion, in the Western countries, to a "planned economy," of which large-scale nationalization, of course, is an extreme variant. That this aversion was supported and exploited by the business interests—whose power over the communications industry is everywhere strong—is obvious. It is apparent that, as the Social Democrats gradually won popular support and achieved political influence, they generally tended to play down the nationalization issue—with a longer or shorter ideological lag in the different countries. It now plays an ever decreasing role in all Western countries, and may be on the way to disappearing altogether from the political scene.

There was, however, a more logical reason for this adjustment on the part of

the Social Democrats. Nationalization could only be a means to reaching the basic aims of their policy. As the Welfare State developed, these were, however, largely attained by other means, and nationalization was no longer necessary, or even very desirable.

Private banks and insurance companies, for instance, are now closely regulated by legislative and administrative controls, initiated primarily to safeguard the interests of the depositors and policyholders, but increasingly used to serve wider social ends. In the advanced Welfare State, these enterprises become increasingly involved in regular cooperation, both among themselves and with the central bank and the treasury, in order to preserve the balance in the money and capital markets. This cooperation can be made more efficient, and the leadership of the state authorities, as the guardians of the public interest, can be asserted, by an extension of such controls—without nationalization. Moreover, state and cooperative enterprises enter as competitors, establishing standards in their markets. Last but not least, the enterprises are legally bound to subject more and more of their activities to public scrutiny. They are followed in detail by an increasingly vigilant public and in particular by a whole array of private power groups, each with its own facilities for research. When all these things have happened, these enterprises are not very private any more. Usually nothing much could be attained by their being taken over by the state.

Or consider even the private industrial concern. Its activities in the market are as a participant in industrial associations. For most of its labor relations, it has to abide by agreements reached between the employers' association, of which it is a member, and the trade union system. It is legally bound to disclose periodically its complete accounts and also to discuss these and all major policy decisions with representatives of the workers. All profits from it are heavily taxed, as a matter of fact twice, according to steeply graduated rates, when they are distributed as in-

comes to the shareholders. Its decisions on the disposal of profits and internal consolidation are becoming increasingly regulated by law, and are open to state intervention when considerations of general economic policy make this desirable. In all these respects public control can be tightened, without resort to nationalization.

The industrial firm is a participant in a national community which is developing rapidly in the direction of the democratic Welfare State of equity and solidarity. Whether it is a family affair or a more impersonal concern, it is already, in essential respects, "socialized." Moreover, all its operations are constantly influenced by the knowledge, on the part of its owners as well as its managers, that each year it has to justify its existence as a private undertaking on pain of becoming more closely controlled and, perhaps, nationalized.

I may be exaggerating slightly. It is anyhow a fact that during the time, over a quarter of a century, that Sweden has been ruled by the Social-Democratic Labor Party—in fact longer, i.e., since that party in the 'twenties started to become a rising political force—while in all respects the development towards the Welfare State has been exceedingly rapid, there has, in that country, been no major move towards nationalization, although the party is committed to such a line by its formal program, which it has conservatively left unaltered. I would expect that sooner or later nationalization will disappear from the program, too.

In judging this development, it should, of course, be remembered that the Swedish state, as a legacy from long ago—and usually very long ago, in many cases from the era preceding even the liberal one—disposes of large domains of land, forests, and ore deposits, and, together with the municipalities, most water power; and that the state runs the railways and, together with the municipalities, has always owned almost all other public utility industries. That the nationalization issue, at least until recently, has played a more important role in English

politics is very much due, I believe, to a difference in the initial situation, as well as to the lag in rationalization and efficiency in many private enterprises and to the relative lack of effective social control of private business, particularly through taxation.

It is possible that, in the Welfare State of the future, public ownership and public management will come to play a somewhat larger role, perhaps in the very long run a much larger one. But the change will in any case not come suddenly over the whole field. Whether or not to nationalize a particular industry will stand out less and less as a question of political principle and will be more and more a matter of practical expediency.

And in the individual case the change will not usually be of great importance. New state enterprises cannot now be run very differently from any other enterprise, state or private. They will not be "freer" towards other partners in the markets where they sell their products. In the labor markets they will have to negotiate the wages of their workers with the trade unions, as other enterprises do. The profits will go to the state, but through taxation some, and in some countries most, profits of private enterprises are going that way already, and the taxation screw can be further tightened, if that is desirable. The power relations in the national community will be changed by nationalization. But these are being changed anyway, by all the other changes in this process I have been analyzing, which has not nearly reached its end in any country and which in some countries is still far from the democratic ideal. As a matter of fact, all private enterprises in the advanced Welfare State are already in essential respects publicly controlled or are becoming so—without any nationalization of formal ownership.

A "CREATED HARMONY"

The examples I have given of a trend towards convergence of attitudes and ideologies—in regard to the now largely

undisputed, and consequently almost automatic, progress of further redistributive reforms, to which could be added educational and health reforms, etc., and the virtual disappearance of the nationalization issue—point to the increasing political harmony that has come to exist much more generally between all the citizen groups in the advanced Welfare State. The internal political debate in those countries is becoming increasingly technical in character, ever more concerned with detailed arrangements, and less involved with broad issues, since those are slowly disappearing.

To some extent, this harmony of interests and opinions is often spirited away and concealed by the professionals in the political parties and in the interest organizations. They have all a vested interest of self-preservation in making their flocks so much dissatisfied with existing conditions and trends that they can keep up active participation and retain momentum in their organizations. When they then occasionally mobilize the old armory of slogans from the time when people were still basically divided on broad issues of principle—liberalism, socialism, and capitalism; free enterprise and planned economy; private property and nationalization; individualism and collectivism, etc.—it can add emotional stimulus to a public debate otherwise tending to become colorless and bickering, because it arouses the associations still lingering in the old battle cries from a time when there were wider divisions of interest and wider disagreements on major issues as to how the national community should be organized. To the simple-minded it can almost give a feeling of intellectual elevation.

But these slogans are actually becoming rather shallow, and are generally felt to be so, when applied to the practical problems of the day in a functioning Welfare State. When instead the professionals restrict themselves merely to bickering in order to stimulate popular backing for their strivings on behalf of political parties and interest organiza-

tions, they are more in tune with how people really feel in a Welfare State—or can easily be brought to feel by propaganda.

The professionals' interests are divided, however. They seek, at the same time, to give the people to whom they appeal a feeling of satisfaction, and to associate this with an appreciation of what they have attained through participation in the organizations. When, in the advanced Welfare States, complete participation in the ordinary interest organizations, like the trade unions, is becoming the established pattern, this more positive interest in keeping people satisfied is becoming the stronger one. Even in such a state, political parties naturally still mostly have to take up a fighting position—at least at election times when they have to stimulate the lazy and undecided voters to vote, and to vote for them. All professionals, including the politicians, have, however, an interest in preserving favorable conditions for the normal day-to-day cooperation and collective bargaining among them all.

All things considered, it is my feeling that in the most advanced Welfare States the professionals, except for special occasions such as elections or strikes, tend to

do their best to keep people happy and tone down their dissatisfactions. There are, of course, always plenty of frustrated querulants, and they play a not altogether insignificant role in every Western country. But the general mood of the ordinary citizens in the advanced Welfare State can be observed to be one of quiet satisfaction—although combined with a ubiquitous urge, but also a reasonable hope, to get more and more of the good things of life.

Behind this attitude is the reality that in the Welfare State a higher degree of harmony of interests actually becomes attained through cooperation and collective bargaining. When in recent years the Social Democrats in Sweden sponsored, and had a decisive influence in inaugurating, social security legislation affording insurance payments rising with a person's income up to a very high level—in unemployment, sickness, and old age insurance—this was an indication, among many others, that the present income distribution, including the expectation of how it is going to change, is widely accepted in that country as just and fair, even by those who are in the relatively lower income brackets.

HAYEK

The welfare state was bound to create a reaction. In the United States, for example, the national government share of the gross national product increased from 2.5 percent in 1929 to 24 percent in 1983. To look at the expansion of government another way (discounting inflation, economic growth, and population increase), governments at all levels in the United States spent about \$1.7 billion in 1904; eighty-five years later this figure had increased one-thousand fold, to approximately \$1.7 trillion. Great changes of any sort—whether for ill or good—inevitably are controversial.

The essence of the welfare state is that government—particularly the national government—has an obligation to promote the welfare of individuals “from cradle to grave.” Such promotion takes many forms: outright government payments, such as social security for older people or welfare payments to younger people; minimum wage laws; health and safety regulations on the job and elsewhere; favorable treatment for labor unions; support of education; provision of medical services; public housing and other support programs; government operation of industries and businesses; progressive taxation to achieve redistribution of income; and so on. It is important to remark that the welfare state is *interventionist*—attempting to manage the national economy through a mix of fiscal and monetary policies to maintain high employment and keep inflation low—as well as a provider of services. Overarching this concept of the state is the principle that government, not individuals, has primary responsibility for society’s welfare.

Part of the negative reaction to the welfare state was selfish, from people who did not want to pay for it, in the same way that part of the reason for the promotion of the welfare state was selfish, from individuals who stood to gain from it. At the same time, there has been principled opposition to the welfare state in the same way that most of the support for its creation was from the best of motives. Among the most prominent, principled opponents to the expansion of government in the twentieth century is Friedrich Hayek (1899–), co-recipient of the 1974 Nobel Prize in Economics (with Gunnar Myrdal).

Hayek received doctorates in law and political science at the University of Vienna. He is from an academic background; his father was a professor of botany and other members of his family have also specialized in natural

sciences. As a young man, Hayek was a moderate, Fabian socialist, in keeping with the predominant intellectual outlook of the time. Under the influence of the great economic classical liberal of the “Austrian” school, Ludwig von Mises, Hayek’s views shifted to opposition to socialism and support for *laissez faire*.

Hayek’s initial research interest was monetary theory—the relationship between the amount of money in an economy and other occurrences in it. As the result of living in Austria in the twenties, he had personal experience of hyperinflation. Hayek met Keynes in London in 1928, and in 1931 came to the University of London, where he remained until 1950. From 1950 to 1962, Hayek and Milton Friedman (another Nobel Prize winner in Economics) worked together at the University of Chicago.

It is revealing that as politics has developed it has increasingly become connected to economic issues. At first in the modern age, the issues that were at the forefront of political discussions were questions such as freedom of religious practice, freedom of expression generally, and freedom to participate in governance. As these freedoms were obtained, albeit imperfectly and sporadically, they then created a framework within which other issues—such as economic ones—could be discussed more. It is a sign of the relative importance of economics today that the ultimate reason for the collapse of Communist states throughout the world appears to be more their relatively low material productivity rather than their tyranny explicitly. While these states lacked a political framework within which economic questions could be freely discussed, they did, to some extent, have information about what conditions were like elsewhere. This information ultimately served much the same function as freedom of expression did in other nations several generations ago; it led to political change.

Despite his attacks on the expansion of the state, Hayek rejects the label “conservative.” Instead, he considers himself a true liberal—i.e., in the classical sense of the term. Indeed, in a postscript to his major work, *The Constitution of Liberty* (1960), he explicitly writes on, “Why I Am Not a Conservative.” In the first half of the twentieth century, a paradoxical change of roles occurred throughout the world as liberals proclaimed continued adherence to liberty despite their acceptance of more government, and conservatives—though traditionally favoring a more paternalistic state—embraced the doctrines of economic individualism and *laissez faire*. The issue of more versus less state intervention was presented by “new” liberals as one of means and not of objectives. New liberals granted that *laissez faire* was progressive, dynamic, and revolutionary at one time (say in the eighteenth or early nineteenth century), when it was the system that beat back the old, aristocratic inequalities of birth. But by the late nineteenth century, it was argued that the same policies had become regressive, stagnant, and reactionary, because they maintained and nourished new inequalities of wealth that had emerged as the result of exploitation. [Hayek, though, has challenged the analysis that early capitalism was bad for workers in *Capitalism and the Historians* (1954).] Thus, for liberalism to remain true to its purpose of promoting greater personal freedom, it was necessary for it to shift its position from that of unbridled competition to restricting economic power. The only instrument that could accomplish this was government.

The early parts of the Industrial Age witnessed the concentration of capital and—even more significantly—control of business. Monopolies, trusts, and gigantic enterprises created a sense of frustration and protest among the millions whose livelihoods depended on their new employers, and were considered incompatible with the democratic yearnings of the common man. As Tocqueville had predicted, the “new aristocracy of manufacturers” was as anxious to exploit the people as the old aristocracy of birth had been, without, however, any feeling of obligation to those who worked for them. The second major change that undermined the general faith in the validity of *laissez faire* was unemployment. When millions remained out of work for years, when productive resources lay idle, individuals began to doubt that the economy, left to its own laws and harmonies, actually produced the maximum general good.

Capitalism and liberalism originally developed as affirmations of individual rights against the power of the state. As corporate and, later, monopolistic business created vast power aggregates within the structure of capitalism, the threatened individual turned to the state for protection of his rights against the power of impersonal, bureaucratic, entities, in the face of which he felt lost and helpless. True liberalism, from Locke to the present, has always insisted that the state is no more and no less than an instrument of the people. Where eighteenth century liberalism differs from twentieth century liberalism is in the belief of the former that once the dominion of the state is removed, the problem of power as such is removed forever. The state would be replaced by society as a free association of equals, without rulers or ruled. By contrast, liberals of the late nineteenth and twentieth centuries have contended that economic power can impinge as directly on the lives and liberties of people as political power has done in the past, and that there will always be a major role for government.

Liberals, then, found themselves in the unusual position of looking to the state—their historical enemy—for help against new forms of economic and financial power. Yet, this paradox was more apparent than real. All liberalism—whether old or new—is about curbing power, whether power manifests itself in politics or economics. Throughout the eighteenth and early nineteenth centuries, liberals therefore acted consistently by invoking *laissez faire* and individual economic power as a counteracting force against the political power of the state. From the late nineteenth century on, economic power—particularly in the form of the gigantic corporations—became perceived as the main source of power threatening the individual. Liberals therefore acted consistently with their goal by invoking the power of government as the countervailing force against the private economic power of corporate business. Throughout its career, liberalism thus remained constant in its core objective of curbing power; all that changed were the means that were used in attaining that objective. Strengthening the power of government in the eighteenth century would have been an illiberal policy, since government already had too much power. Similarly, advocating *laissez faire* became illiberal in the twentieth century, since the goal was to curb economic power.

Conversely, conservatives who uphold the principles of power and authority acted consistently in favoring strong governmental power in the eighteenth century and strong private economic power in the twentieth. Because government

was the main source of power in the eighteenth century, conservatives, rightly from their viewpoint, opposed the liberal policy of economic individualism. In the twentieth century, however, when economic power became the main source of social power, conservatives again acted consistently by attacking governmental power as a curbing force of economic power. Spencer (who died four years after Hayek was born) correctly foresaw that the British Conservatives would become the party of economic individualism, and called on Liberals, unsuccessfully, to return to their original individualist roots.

Today, the liberal/conservative debate may be coming full circle. Some twentieth century liberals, who once favored actively using the state to curb private economic power, have shifted to the view that the state—even when democratic—can become oppressive and inefficient, and have called for reductions in its scope. Likewise, other twentieth century liberals, who have remained true to their beliefs, now find themselves in the conservative position of defending a well-established status quo. Where original liberalism fits into all of this is that it consistently (whether rightly or not) calls for less governmental power in society, regardless of social circumstances.

Hayek is an adherent to monetarism in that he subscribes to the theory that the amount of money in an economy plays the key role in determining aggregate prices. Keynes in his 1936 *The General Theory of Employment, Interest, and Money* challenged economic orthodoxy by proposing that prices were not, in fact, determined as much by money supply as had been previously thought. Two major strands of Keynes's argument are that in conditions of less than full employment, the *velocity* (the average number of times the money stock is used in making payments for final goods and services per year) of money declines, and thus, other things being equal, prices also decline, *though there has been no change in the money stock*. The essential point is that the relationship between the amount of money and overall prices is uncoupled. The second strand in Keynes's argument is that when interest rates are very low, there is little or no incentive to invest new money in bonds, equities, and other investments (i.e., money is held in relatively cash form), and therefore an increase in money supply has no impact through these investments on an economy either in terms of output or prices, the so-called “liquidity trap.” Again, the result is the same: Money's impact on an economy diminishes.

Hayek and other monetarists—most prominently Friedman—vigorously contest the Keynesian analysis. Instead, monetarists argue, the classical theory of price determination is correct: Changes in the amount of money in an economy play by far the greatest role in determining prices. Moreover, the nonrecognition of this will wreck havoc on nations' economies as they foolishly pursue monetary policies that lead to ever increasing inflation. “There is,” in turn, as Keynes himself recognized, “no subtler, no surer means of overturning the existing basis of society than to debauch the currency.” Those who have saved will find the real worth of their savings diminished, and those who have borrowed will find the real value of what they must pay back reduced. Industry and thrift are punished, prodigality and indolence are rewarded. Over the long-term, there is less incentive to save, and society thus lacks the investment pool from which to permanently improve its capital stock and thereby increase production. Furthermore, the unstable value of money distorts economic planning generally.

Hayek's contribution to monetary theory is his postulate that changes in the amount of money in an economy affect not just prices, but the productive equilibrium of the economy. Money is first injected into an economy through the banking system, through an increase in the amount of credit available. This increase in credit results in lower interest rates, which—in the short-term—allows more borrowing, particularly by business. But the business expansion which temporarily follows is constructed on a false foundation. There is no permanent increase in savings which expanded credit, just a single injection of worthless money. Capital projects, by their very nature, take long periods of time to complete. Businesses that start to expand in an inflationary economic boom will find that they cannot finish their projects before interest rates rise again, and will have to leave capital expansion plans incomplete. Moreover, the funds that businesses expended to start capital projects are now in the hands of workers, whose demand is for finished goods. Consequently, businesses will also for this reason be required to shift back their productive resources from anticipated capital expansion to finished goods.

The aftermath of an inflationary economic expansion is waste. Resources have been directed first one way and then another, with the concomitant inefficiency this entails. Because there was no real base on which the short-term expansion was founded, employees who were hired as the result of it will be quickly laid off. The economy as a whole is less productive in even the intermediate-term as a consequence of the misallocation of resources. As the result of the initial injection of money, there is a higher aggregate price level throughout the economy as a whole, with its negative long-term effects.

During the thirties, when there was actual deflation, Keynes's analysis may have had more validity, though Friedman has argued persuasively that the Great Depression was much sustained by inappropriate monetary policy on traditional principles. Hayek observed presciently in the thirties that, for expansionary monetary policies to have even the same short-term stimulative impacts, they would need to be successively greater, as it would take more and more money to be injected in an economy to overcome the productive inefficiencies that are caused by each previous round of inflation. When increasingly greater bouts of inflation combined with stagnant economies characterized the sixties and seventies, monetary theory came back in vogue, thanks largely to Friedman, but also to Hayek.

Hayek's ultimate argument for the necessity of a correct understanding of the relationship between money and prices is that "inflation is probably the most important single factor in that vicious circle wherein one kind of government action makes more and more government control necessary. For this reason all those who wish to stop the drift toward increasing government control should concentrate their efforts on monetary policy." In the worst case scenario, government attempts to use wage and price controls to limit inflation. To Hayek, this is impossible, and can only end in greater governmental involvement in the economy, sacrificing liberty, and leading to mismanagement.

An ingredient of Hayek's monetary theory that he stresses is the importance of money as an information-dispersing mechanism in an economy. It is not just that the amount of money, more than anything else, determines the aggregate price level; relative prices tell the supply and demand for particular goods. When

the relative price of a good is high (i.e., compared to other goods, not as part of a general inflation), this indicates that a good is scarce and there is a profit to be made in producing it. More of that good will then be produced in a free economy. In this way, individual prices are essential "signals" in economies. Inflation, thus, not only disrupts an economy as a whole through the processes described above, it obscures the messages that markets are sending in their relative valuations of goods, thereby causing further economic inefficiency.

Hayek's primary claim to popular fame is *The Road to Serfdom* (1944), which was a bestseller in both Britain and the United States, and has frequently been reprinted, often in condensed form. The book created a stir in academic and popular circles, although Hayek thought at the time that its message was almost entirely disregarded. Written during World War II, *The Road to Serfdom* was published at a time when support for a collectivist approach to democratic society was at its peak—because of the perceived collapse of capitalism during the Great Depression, the wartime alliance with the Soviet Union, and a general feeling in particularly British society that the time had come for a more social approach to human organization.

The Road to Serfdom is explicitly a "political book," dedicated to "the socialists of all parties", in the hope that it would persuade them of the error in their ways, its target of opposition is socialism. By socialism, Hayek means: "the nationalization of the means of production and the central economic planning which this makes possible and necessary." He does not as much mean by this governmental taxation and spending policies to establish social programs or redistribute wealth, though he thinks these are probably equally harmful in the long run. Because what Hayek means by socialism is, first, nationalized government industries, he wrote in the mid-seventies that although Sweden had a steeper tax rate than Great Britain's—and more extensive governmental provision of services—Sweden was not as socialist as Great Britain at that time, as the government in Britain then directly controlled more of the economy through nationalized industries. Hayek's chief target of opposition is governmental management of the economy.

Hayek sees world civilization as having taken a wrong step in the twentieth century, with its retreat from the *laissez faire* policies of the nineteenth. Indeed, he speaks of the nineteenth century's policies as "the abandoned road"—and a road that has been abandoned to mankind's detriment. In *The Road to Serfdom*, Hayek wishes to call attention to what in his mind is the inevitable tendency of any steps away from *laissez faire* and liberalism as traditionally understood as being in the direction of despotism. Planning inevitably becomes more coercive because it does not (because it cannot) work, and those social reformers who started out attempting to build heavens on earth become replaced by less scrupulous power-mongers who in reality create hells.

Hayek's essential argument against socialism is not that it would be undesirable if it were possible, but that it is not possible. It is for this reason that socialist schemes are condemned to fail: They are incompatible with human nature. Mankind requires freedom to economically prosper. Moreover, Hayek rejects the concept of "social democracy." For him, free government and a free market are inseparably interwoven. Where there is not the latter there cannot be—at least in the long run—the former.

Basic to Hayek's understanding of human nature in society is that men's ability to shape their social circumstances is quite limited. In his most recent work, *The Fatal Conceit* (1988), he argues that the fundamental error of socialism is that "man is able to shape the world according to his wishes"—the fatal conceit. Rather, true wisdom consists in recognizing that society is infinitely more complex than any one mind is able to organize, and therefore, that any attempt to establish it to one person's precepts is necessarily dictatorial and unproductive. Far from holding that as society becomes more complex it requires greater planned social organization, Hayek believes that societies' increasing complexities call for greater freedom, as it becomes progressively more difficult for one perspective to be all-encompassing.

Hayek is almost Burkean at times in his position that, because of limitations on individuals' knowledge of social processes, social change should be approached warily. Hayek's perspective is close to social Darwinism; he holds that institutions arise through a process akin to natural selection: Those institutions that work, thrive; those that do not, falter. Almost all of what is best in a social order is not the result of conscious planning; rather, it has naturally evolved. For example, in *The Constitution of Liberty*, he writes: "Though freedom is not a state of nature but an artifact of civilization, it did not arise from design. The institutions of freedom, like everything freedom has created, were not established because people foresaw the benefits they would bring. But, once its advantages were recognized, men began to perfect and extend the reign of freedom." It is a mistaken belief that because institutions were created by humans they must be able to be modified by them according to their will. There is modesty in this view of Hayek's, implying as it does that the power to create social institutions is limited.

Hayek sees competition (the freedom to compete) as providing an invaluable threshing service for society. Life is a struggle between what is more valuable and what is less. As J.S. Mill wrote, "Wherever competition is not, monopoly is; and monopoly is the taxation of the industrious for the support of indolence, if not plunder." If monopoly of any sort is given to government, or anyone else, then inefficiency will result. This is to the benefit of none.

Hayek is not completely true to nineteenth century liberalism. He allows a greater role for the state than Spencer (though not Mill) countenanced. He sees defense and police powers, together with a judiciary system and prisons, as necessarily state functions. Moreover, he thinks that many public services for which it is difficult to establish a market without "free-riders" can be and probably should be provided by government, for example, roads and fire protection. Further, recognizing that modern society is no longer organized into kinship groups who look after their own, he sees it as inevitable that all of society must in some way be required to take care of those of its members who truly cannot take care of themselves. But at the same time, there is no reason why, according to Hayek, government must have a monopoly on even those, limited, functions it does assume. The provision of services by government does not require that it must be government itself that runs the prisons or builds the roads. Taking the case to an extreme, Hayek does not support a governmental monopoly even on money. Though society today must collectively take care of its members, this could be accomplished by requiring

individuals to insure themselves against health calamity or old age, similar to the requirement that individuals who drive must take out car insurance.

Much of Hayek's effort in *The Constitution of Liberty*, and, more particularly, *Law, Legislation and Liberty* (1973-79), is directed toward setting out the specific mechanics and legal order, as well as principles, needed for what he considers a free society. Some of the provisions of this legal order will probably not be what endures in Hayek thought. At one point, he suggests that individuals should be able to vote only once in their lives, after age 45. At the same time, to the extent that all original thinking on political questions—undertaken in good faith and within certain parameters on the desirability of freedom, however defined—is valuable, then Hayek's work even in these regards may, as he states in *Studies in Philosophy, Politics and Economics* (1967), "make the philosophic foundations of a free society once more a living intellectual issue, and its implementation a task which challenges the ingenuity and imagination of our liveliest minds."

Hayek is against social engineering, and the historicist view that history has an end or purpose. He is for the traditional liberal values of democracy, capitalism, and free trade. He sees the free market as providing the opportunity for unknowing extended interaction among many for mutual benefit. Friedman speaks of the "Hayek tide" replacing the "Fabian tide" which itself succeeded the "Adam Smith tide." During the 1980s—when Margaret Thatcher's government in England sold off a number of nationalized British industries, Ronald Reagan's policies in the United States reduced tax rates and attempted to stem the growth of social spending, and governments throughout the world adopted monetarist policies—this was not an unreasonable prophecy. Ultimately, the popularity of Hayek and similarly-minded thinkers will probably most depend on the real life accuracy of their ideas.

HAYEK

I *The Road to Serfdom**

THE ABANDONED ROAD

A programme whose basic thesis is, not that the system of free enterprise for profit has failed in this generation, but that it has not yet been tried.

F. D. Roosevelt.

WHEN the course of civilization takes an unexpected turn, when instead of the continuous progress which we have come to expect, we find ourselves threatened by evils associated by us with past ages of barbarism, we blame naturally anything but ourselves. Have we not all striven according to our best lights, and have not many of our finest minds incessantly worked to make this a better world? Have not all our efforts and hopes been directed towards greater freedom, justice, and prosperity? If the outcome is so different from our aims, if, instead of freedom and prosperity, bondage and misery stare us in the face, is it not clear that sinister forces must have foiled our intentions, that we are the victims of some evil power which must be conquered before we can resume the road to better things? However much we may differ when we name the culprit, whether it is the wicked capitalist or the vicious spirit of a particular nation, the stupidity of our elders, or a social system not yet, although we have struggled against it for half a century, fully overthrown—we all are, or at least were until recently, certain of one thing: that the leading ideas which during the last generation have become common to most people of goodwill and have determined the

major changes in our social life cannot have been wrong. We are ready to accept almost any explanation of the present crisis of our civilization except one: that the present state of the world may be the result of genuine error on our own part, and that the pursuit of some of our most cherished ideals have apparently produced results utterly different from those which we expected.

While all our energies are directed to bringing this war to a victorious conclusion, it is sometimes difficult to remember that even before the war the values for which we are now fighting were threatened here and destroyed elsewhere. Though for the time being the different ideals are represented by hostile nations fighting for their existence, we must not forget that this conflict has grown out of a struggle of ideas within what, not so long ago, was a common European civilization; and that the tendencies which have culminated in the creation of the totalitarian systems were not confined to the countries which have succumbed to them. Though the first task must now be to win the war, to win it will only gain us another opportunity to face the basic problems and to find a way of averting the fate which has overtaken kindred civilizations.

Now, it is somewhat difficult to think of Germany and Italy, or of Russia, not as different worlds, but as products of a development of thought in which we have shared; it is, at least so far as our enemies are concerned, easier and more comforting to think that they are entirely different from us and that what happened there cannot happen here. Yet, the history of these countries in the years before the rise of the totalitarian system showed few features

with which we are not familiar. The external conflict is a result of a transformation of European thought in which others have moved so much faster as to bring them into irreconcilable conflict with our ideals, but which has not left us unaffected.

That a change of ideas, and the force of human will, have made the world what it is now, though men did not foresee the results, and that no spontaneous change in the facts obliged us thus to adapt our thought, is perhaps particularly difficult for the English to see, just because in this development the English have, fortunately for them, lagged behind most of the European peoples. We still think of the ideals which guide us and have guided us for the past generation, as ideals only to be realized in the future, and are not aware how far in the last twenty-five years they have already transformed, not only the world, but also this country. We still believe that until quite recently we were governed by what are vaguely called nineteenth-century ideas or the principle of *laissez-faire*. Compared with some other countries, and from the point of view of those impatient to speed up the change, there may be some justification for such belief. But although till 1931 this country had followed only slowly on the path on which others had led, even by then we had moved so far that only those whose memory goes back to the years before the last war know what a liberal world has been like.

The crucial point of which people here are still so little aware is, however, not merely the magnitude of the changes which have taken place during the last generation, but the fact that they mean a complete change in the direction of the evolution of our ideas and social order. For at least twenty-five years before the spectre of totalitarianism became a real threat, we had progressively been moving away from the basic ideas on which European civilization has been built. That this movement on which we have entered with such high hopes and ambitions should have brought us face to face with the totalitarian horror has come as a profound shock to this generation, which still refuses to connect the two facts. Yet this development merely

confirms the warnings of the fathers of the liberal philosophy which we still profess. We have progressively abandoned that freedom in economic affairs without which personal and political freedom has never existed in the past. Although we had been warned by some of the greatest political thinkers of the nineteenth century, by de Tocqueville and Lord Acton, that socialism means slavery, we have steadily moved in the direction of socialism. And now that we have seen a new form of slavery arise before our eyes, we have so completely forgotten the warning, that it scarcely occurs to us that the two things may be connected.

How sharp a break not only with the recent past but with the whole evolution of western civilization the modern trend towards socialism means, becomes clear if we consider it not merely against the background of the nineteenth century, but in a longer historical perspective. We are rapidly abandoning not the views merely of Cobden and Bright, of Adam Smith and Hume, or even of Locke and Milton, but one of the salient characteristics of western civilization as it has grown from the foundations laid by Christianity and the Greeks and Romans. Not merely nineteenth- and eighteenth-century liberalism, but the basic individualism inherited by us from Erasmus and Montaigne, from Cicero and Tacitus, Pericles and Thucydides is progressively relinquished.

The Nazi leader who described the National-Socialist revolution as a counter-Renaissance spoke more truly than he probably knew. It was the decisive step in the destruction of that civilization which modern man had built up from the age of the Renaissance and which was above all an individualist civilization. Individualism has a bad name to-day and the term has come to be connected with egotism and selfishness. But the individualism of which we speak in contrast to socialism and all other forms of collectivism has no necessary connection with these. Only gradually in the course of this book shall we be able to make clear the contrast between the two opposing principles. But the essential features of that individualism which, from elements provided by

* From Friedrich Hayek, *The Road to Serfdom* (1944). By permission.

Christianity and the philosophy of classical antiquity, was first fully developed during the Renaissance and has since grown and spread into what we know as western European civilization—the respect for the individual man *qua* man, that is the recognition of his own views and tastes as supreme in his own sphere, however narrowly that may be circumscribed, and the belief that it is desirable that men should develop their own individual gifts and bents. “Freedom” and “liberty” are now words so worn with use and abuse that one must hesitate to employ them to express the ideals for which they stood during that period. Tolerance is, perhaps, the only word which still preserves the full meaning of the principle which during the whole of this period was in the ascendant and which only in recent times has again been in decline, to disappear completely with the rise of the totalitarian state.

The gradual transformation of a rigidly organized hierarchic system into one where men could at least attempt to shape their own life, where man gained the opportunity of knowing and choosing between different forms of life, is closely associated with the growth of commerce. From the commercial cities of Northern Italy the new view of life spread with commerce to the west and north, through France and the south-west of Germany to the Low Countries and the British Isles, taking firm root wherever there was no despotic political power to stifle it. In the Low Countries and Britain it for a long time enjoyed its fullest development and for the first time had an opportunity to grow freely and to become the foundation of the social and political life of these countries. And it was from there that in the late seventeenth and eighteenth centuries it again began to spread in a more fully developed form to the west and east, to the New World and the centre of the European continent where devastating wars and political oppression had largely submerged the earlier beginnings of a similar growth.

During the whole of this modern period of European history the general

direction of social development was one of freeing the individual from the ties which had bound him to the customary or prescribed ways in the pursuit of his ordinary activities. The conscious realization that the spontaneous and uncontrolled efforts of individuals were capable of producing a complex order of economic activities could come only after this development had made some progress. The subsequent elaboration of a consistent argument in favor of economic freedom was the outcome of a free growth of economic activity which had been the undesigned and unforeseen by-product of political freedom.

Perhaps the greatest result of the unchaining of individual energies was the marvellous growth of science which followed the march of individual liberty from Italy to England and beyond. That the inventive faculty of man had been no less in earlier periods is shown by the many highly ingenious automatic toys and other mechanical contrivances constructed while industrial technique still remained stationary, and by the development in some industries which, like mining or watch-making, were not subject to restrictive controls. But the few attempts towards a more extended industrial use of mechanical inventions, some extraordinarily advanced, were promptly suppressed, and the desire for knowledge was stifled, so long as the dominant views were held to be binding for all: the beliefs of the great majority on what was right and proper were allowed to bar the way of the individual innovator. Only since industrial freedom opened the path to the free use of new knowledge, only since everything could be tried—if somebody could be found to back it at his own risk—and, it should be added, as often as not from outside the authorities officially entrusted with the cultivation of learning, has science made the great strides which in the last hundred and fifty years have changed the face of the world.

As is so often true, the nature of our civilization has been seen more clearly by its enemies than by most of its friends: “the perennial western malady, the revolt of the individual against the species,” as

that nineteenth-century totalitarian, Auguste Comte, has described it, was indeed the force which built our civilization. What the nineteenth century added to the individualism of the preceding period was merely to make all classes conscious of freedom, to develop systematically and continuously what had grown in a haphazard and patchy manner and to spread it from England and Holland over most of the European Continent.

The result of this growth surpassed all expectations. Wherever the barriers to the free exercise of human ingenuity were removed man became rapidly able to satisfy ever-widening ranges of desire. And while the rising standard soon led to the discovery of very dark spots in society, spots which men were no longer willing to tolerate, there was probably no class that did not substantially benefit from the general advance. We cannot do justice to this astonishing growth if we measure it by our present standards, which themselves result from this growth and now make many defects obvious. To appreciate what it meant to those who took part in it we must measure it by the hopes and wishes men held when it began: and there can be no doubt that its success surpassed man's wildest dreams, that by the beginning of the twentieth century the working man in the western world had reached a degree of material comfort, security, and personal independence which a hundred years before had seemed scarcely possible.

What in the future will probably appear the most significant and far-reaching effect of this success is the new sense of power over their own fate, the belief in the unbounded possibilities of improving their own lot, which the success already achieved created among men. With the success grew ambition—and man had every right to be ambitious. What had been an inspiring promise seemed no longer enough, the rate of progress far too slow; and the principles which had made this progress possible in the past came to be regarded more as obstacles to speedier progress, impatiently to be brushed away, than as the conditions for the preservation and development of what had already been achieved.

THE GREAT UTOPIA

What has always made the state a hell on earth has been precisely that man has tried to make it his heaven.

F. Hoelderlin.

THAT socialism has displaced liberalism as the doctrine held by the great majority of progressives does not simply mean that people had forgotten the warnings of the great liberal thinkers of the past about the consequences of collectivism. It has happened because they were persuaded of the very opposite of what these men had predicted. The extraordinary thing is that the same socialism that was not only early recognized as the gravest threat to freedom, but quite openly began as a reaction against the liberalism of the French Revolution, gained general acceptance under the flag of liberty. It is rarely remembered now that socialism in its beginnings was frankly authoritarian. The French writers who laid the foundations of modern socialism had no doubt that their ideas could be put into practice only by a strong dictatorial government. To them socialism meant an attempt to “terminate the revolution” by a deliberate reorganization of society on hierarchical lines, and the imposition of a coercive “spiritual power.” Where freedom was concerned, the founders of socialism made no bones about their intentions. Freedom of thought they regarded as the root-evil of nineteenth-century society, and the first of modern planners, Saint-Simon, even predicted that those who did not obey his proposed planning boards would be “treated as cattle.”

Only under the influence of the strong democratic currents preceding the revolution of 1848 did socialism begin to ally itself with the forces of freedom. But it took the new “democratic socialism” a long time to live down the suspicions aroused by its antecedents. Nobody saw more clearly than de Tocqueville that democracy as an essentially individualist institution stood in an irreconcilable conflict with socialism:

Democracy extends the sphere of individual freedom [he said in 1848], socialism

restricts it. Democracy attaches all possible value to each man; socialism makes each man a mere agent, a mere number. Democracy and socialism have nothing in common but one word: equality. But notice the difference: while democracy seeks equality in liberty, socialism seeks equality in restraint and servitude.

To allay these suspicions and to harness to its cart the strongest of all political motives, the craving for freedom, socialism began increasingly to make use of the promise of a "new freedom". The coming of socialism was to be the leap from the realm of necessity to the realm of freedom. It was to bring "economic freedom", without which the political freedom already gained was "not worth having". Only socialism was capable of effecting the consummation of the age-long struggle for freedom in which the attainment of political freedom was but a first step.

The subtle change in meaning to which the word freedom was subjected in order that this argument should sound plausible is important. To the great apostles of political freedom the word had meant freedom from coercion, freedom from the arbitrary power of other men, release from the ties which left the individual no choice but obedience to the orders of a superior to whom he was attached. The new freedom promised, however, was to be freedom from necessity, release from the compulsion of the circumstances which inevitably limit the range of choice of all of us, although for some very much more than for others. Before man could be truly free, the "despotism of physical want" had to be broken, the "restraints of the economic system" relaxed.

Freedom in this sense is, of course, merely another name for power or wealth. Yet, although the promises of this new freedom were often coupled with irresponsible promises of a great increase in material wealth in a socialist society, it was not from such an absolute conquest of the niggardliness of nature that economic freedom was expected. What the promise really amounted to was that the great existing disparities in the range of choice of different

people were to disappear. The demand for the new freedom was thus only another name for the old demand for an equal distribution of wealth. But the new name gave the socialists another word in common with the liberals and they exploited it to the full. And although the word was used in a different sense by the two groups, few people noticed this and still fewer asked themselves whether the two kinds of freedom promised really could be combined.

There can be no doubt that the promise of greater freedom has become one of the most effective weapons of socialist propaganda and that the belief that socialism would bring freedom is genuine and sincere. But this would only heighten the tragedy if it should prove that what was promised to us as the Road to Freedom was in fact the High Road to Servitude. Unquestionably the promise of more freedom was responsible for luring more and more liberals along the socialist road, for blinding them to the conflict which exists between the basic principles of socialism and liberalism, and for often enabling socialists to usurp the very name of the old party of freedom. Socialism was embraced by the greater part of the intelligentsia as the apparent heir of the liberal tradition: therefore it is not surprising that to them the idea should appear inconceivable of socialism leading to the opposite of liberty.

INDIVIDUALISM AND COLLECTIVISM

The socialists believe in two things which are absolutely different and perhaps even contradictory: freedom and organization.

Elie Halévy.

BEFORE we can progress with our main problem, an obstacle has yet to be surmounted. A confusion largely responsible for the way in which we are drifting into things which nobody wants must be cleared up.

This confusion concerns nothing less than the concept of socialism itself. It may mean, and is often used to describe,

merely the ideals of social justice, greater equality and security which are the ultimate aims of socialism. But it means also the particular method by which most socialists hope to attain these ends and which many competent people regard as the only methods by which they can be fully and quickly attained. In this sense socialism means the abolition of private enterprise, of private ownership of the means of production, and the creation of a system of "planned economy" in which the entrepreneur working for profit is replaced by a central planning body.

There are many people who call themselves socialists although they care only about the first, who fervently believe in those ultimate aims of socialism but neither care nor understand how they can be achieved, and who are merely certain that they must be achieved, whatever the cost. But to nearly all those to whom socialism is not merely a hope but an object of practical politics, the characteristic methods of modern socialism are as essential as the ends themselves. Many people, on the other hand, who value the ultimate ends of socialism no less than the socialists, refuse to support socialism because of the dangers to other values they see in the methods proposed by the socialists. The dispute about socialism has thus become largely a dispute about means and not about ends—although the question whether the different ends of socialism can be simultaneously achieved is also involved.

This would be enough to create confusion. And the confusion has been further increased by the common practice of denying that those who repudiate the means value the ends. But this is not all. The situation is still more complicated by the fact that the same means, the "economic planning" which is the prime instrument of socialist reform, can be used for many other purposes. We must centrally direct economic activity if we want to make the distribution of income conform to current

ideas of social justice. "Planning", therefore, is wanted by all those who demand that "production for use" be substituted for production for profit. But such planning is no less indispensable if the distribution of incomes is to be regulated in a way which to us appears to be the opposite of just. Whether we should wish that more of the good things of this world should go to some racial élite, the Nordic men, or the members of a party or an aristocracy, the methods which we shall have to employ are the same as those which could ensure an equalitarian distribution.

It may, perhaps, seem unfair to use the term socialism to describe its methods rather than its aims, to use for a particular method a term which for many people stands for an ultimate ideal. It is probably preferable to describe the methods which can be used for a great variety of ends as collectivism and to regard socialism as a species of that genus. Yet, although to most socialists only one species of collectivism will represent true socialism, it must always be remembered that socialism is a species of collectivism and that therefore everything which is true of collectivism as such must apply also to socialism. Nearly all the points which are disputed between socialists and liberals concern the methods common to all forms of collectivism and not the particular ends for which socialists want to use them; and all the consequences with which we shall be concerned in this book follow from the methods of collectivism irrespective of the ends for which they are used. It must also not be forgotten that socialism is not only by far the most important species of collectivism or "planning"; but that it is socialism which has persuaded liberal-minded people to submit once more to that regimentation of economic life which they had overthrown because, in the words of Adam Smith, it puts governments in a position where "to support themselves they are obliged to be oppressive and tyrannical."

HAYEK

II *The Constitution of Liberty**

THE DECLINE OF SOCIALISM AND THE RISE OF THE WELFARE STATE

Experience should teach us to be most on our guard to protect liberty when the Government's purposes are beneficent. Men born to freedom are naturally alert to repel invasion of their liberty by evil-minded rulers. The greatest dangers to liberty lurk in insidious encroachment by men of zeal, well meaning but without understanding.

L. BRANDEIS

Efforts toward social reform, for something like a century, have been inspired mainly by the ideals of socialism—during part of this period even in countries like the United States which never has had a socialist party of importance. Over the course of these hundred years socialism captured a large part of the intellectual leaders and came to be widely regarded as the ultimate goal toward which society was inevitably moving. This development reached its peak after the second World War, when Britain plunged into her socialist experiment. This seems to have marked the high tide of the socialist advance. Future historians will probably regard the period from the revolution of 1848 to about 1948 as the century of European socialism.

During this period socialism had a fairly precise meaning and a definite program. The common aim of all socialist movements was the nationalization of the "means of production, distribution, and exchange," so that all economic activity

* From Friedrich Hayek, *The Constitution of Liberty* (1960). By permission.

might be directed according to a comprehensive plan toward some ideal of social justice. The various socialist schools differed mainly in the political methods by which they intended to bring about the reorganization of society. Marxism and Fabianism differed in that the former was revolutionary and the latter gradualist; but their conceptions of the new society they hoped to create were basically the same. Socialism meant the common ownership of the means of production and their "employment for use, not for profit."

The great change that has occurred during the last decade is that socialism in this strict sense of a particular method of achieving social justice has collapsed. It has not merely lost its intellectual appeal; it has also been abandoned by the masses so unmistakably that socialist parties everywhere are searching for a new program that will insure the active support of their followers. They have not abandoned their ultimate aim, their ideal of social justice. But the methods by which they had hoped to achieve this and for which the name "socialism" had been coined have been discredited. No doubt the name will be transferred to whatever new program the existing socialist parties will adopt. But socialism in the old definite sense is now dead in the western world.

Though such a sweeping statement will still cause some surprise, a survey of the stream of disillusionist literature from socialist sources in all countries and the discussions inside the socialist parties amply confirm it. To those who watch merely the developments inside a single country, the decline of socialism may still seem no more than a temporary setback, the reaction to political defeat. But the international

The Constitution of Liberty

character and the similarity of the developments in the different countries leave no doubt that it is more than that. If, fifteen years ago, doctrinaire socialism appeared as the main danger to liberty, today it would be tilting at windmills to direct one's argument against it. Most of the arguments that were directed at socialism proper can now be heard from within the socialist movements as arguments for a change of program.

Unlike socialism, the conception of the welfare state has no precise meaning. The phrase is sometimes used to describe any state that "concerns" itself in any manner with problems other than those of the maintenance of law and order. But, though a few theorists have demanded that the activities of government should be limited to the maintenance of law and order, such a stand cannot be justified by the principle of liberty. Only the coercive measures of government need be strictly limited. We have already seen that there is undeniably a wide field for non-coercive activities of government and that there is a clear need for financing them by taxation.

Indeed, no government in modern times has ever confined itself to the "individualist minimum" which has occasionally been described, nor has such confinement of governmental activity been advocated by the "orthodox" classical economists. All modern governments have made provision for the indigent, unfortunate, and disabled and have concerned themselves with questions of health and the dissemination of knowledge. There is no reason why the volume of these pure service activities should not increase with the general growth of wealth. There are common needs that can be satisfied only by collective action and which can be thus provided for without restricting individual liberty. It can hardly be denied that, as we grow richer, that minimum of sustenance which the community has always provided for those not able to look after themselves, and which can be provided outside the market, will gradually rise, or that government may, usefully and without doing any harm, assist or even lead in such endeavors. There is little reason why the government should not also

play some role, or even take the initiative, in such areas as social insurance and education, or temporarily subsidize certain experimental developments. Our problem here is not so much the aims as the methods of government action.

References are often made to those modest and innocent aims of governmental activity to show how unreasonable is any opposition to the welfare state as such. But, once the rigid position that government should not concern itself at all with such matters is abandoned—a position which is defensible but has little to do with freedom—the defenders of liberty commonly discover that the program of the welfare state comprises a great deal more that is represented as equally legitimate and unobjectionable. If, for instance, they admit that they have no objection to pure-food laws, this is taken to imply that they should not object to any government activity directed toward a desirable end. Those who attempt to delimit the functions of government in terms of aims rather than methods thus regularly find themselves in the position of having to oppose state action which appears to have only desirable consequences or of having to admit that they have no general rule on which to base their objections to measures which, though effective for particular purposes, would in their aggregate effect destroy a free society. Though the position that the state should have nothing to do with matters not related to the maintenance of law and order may seem logical so long as we think of the state solely as a coercive apparatus, we must recognize that, as a service agency, it may assist without harm in the achievement of desirable aims which perhaps could not be achieved otherwise. The reason why many of the new welfare activities of government are a threat to freedom, then, is that, though they are presented as mere service activities, they really constitute an exercise of the coercive powers of government and rest on its claiming exclusive rights in certain fields.

The current situation has greatly altered the task of the defender of liberty and made it much more difficult. So long as the danger came from socialism of the

frankly collectivist kind, it was possible to argue that the tenets of the socialists were simply false: that socialism would not achieve what the socialists wanted and that it would produce other consequences which they would not like. We cannot argue similarly against the welfare state, for this term does not designate a definite system. What goes under that name is a conglomerate of so many diverse and even contradictory elements that, while some of them may make a free society more attractive, others are incompatible with it or may at least constitute potential threats to its existence.

We shall see that some of the aims of the welfare state can be realized without detriment to individual liberty, though not necessarily by the methods which seem the most obvious and are therefore most popular; that others can be similarly achieved to a certain extent, though only at a cost much greater than people imagine or would be willing to bear, or only slowly and gradually as wealth increases; and that, finally, there are others—and they are those particularly dear to the hearts of the socialists—that cannot be realized in a society that wants to preserve personal freedom.

There are all kinds of public amenities which it may be in the interest of all members of the community to provide by common effort, such as parks and museums, theaters and facilities for sports—though there are strong reasons why they should be provided by local rather than national authorities. There is then the important issue of security, of protection against risks common to all, where government can often either reduce these risks or assist people to provide against them. Here, however, an important distinction has to be drawn between two conceptions of security: a limited security which can be achieved for all and which is, therefore, no privilege, and absolute security, which in a free society cannot be achieved for all. The first of these is security against severe physical privation, the assurance of a given minimum of sustenance for all; and the second is the assurance of a given standard of life, which is determined by comparing the standard enjoyed by a person or a

group with that of others. The distinction, then, is that between the security of an equal minimum income for all and the security of a particular income that a person is thought to deserve. The latter is closely related to the third main ambition that inspires the welfare state: the desire to use the powers of government to insure a more even or more just distribution of goods. Insofar as this means that the coercive powers of government are to be used to insure that particular people get particular things, it requires a kind of discrimination between, and an unequal treatment of, different people which is irreconcilable with a free society. This is the kind of welfare state that aims at "social justice" and becomes "primarily a redistributor of income." It is bound to lead back to socialism and its coercive and essentially arbitrary methods.

TAXATION

Those who advocated progressive taxation during the latter part of the nineteenth century generally stressed that their aim was only to achieve equality of sacrifice and not a redistribution of income; also they generally held that this aim could justify only a "moderate" degree of progression and that its "excessive" use (as in fifteenth-century Florence, where rates had been pushed up to 50 per cent) was, of course, to be condemned. Though all attempts to supply an objective standard for an appropriate rate of progression failed and though no answer was offered when it was objected that, once the principle was accepted, there would be no assignable limit beyond which progression might not be carried with equal justification, the discussion moved entirely in a context of contemplated rates which made any effect on the distribution of income appear negligible. The suggestion that rates would not stay within these limits was treated as a malicious distortion of the argument, betraying a reprehensible lack of confidence in the wisdom of democratic government.

It was in Germany, then the leader in "social reform," that the advocates of progressive taxation first overcame the

resistance and its modern evolution began. In 1891, Prussia introduced a progressive income tax rising from 0.67 to 4 per cent. In vain did Rudolf von Geist, the venerable leader of the then recently consummated movement for the *Rechtsstaat*, protest in the Diet that this meant the abandonment of the fundamental principle of equality before the law, "of the most sacred principle of equality," which provided the only barrier against encroachment on property. The very smallness of the burden involved in the new schemes made ineffective any attempt to oppose it as a matter of principle.

Though some other Continental countries soon followed Prussia, it took nearly twenty years for the movement to reach the great Anglo-Saxon powers. It was only in 1910 and 1913 that Great Britain and the United States adopted graduated income taxes rising to the then spectacular figures of $8\frac{1}{4}$ and 7 per cent, respectively. Yet within thirty years these figures had risen to $97\frac{1}{2}$ and 91 per cent.

Thus in the space of a single generation what nearly all the supporters of progressive taxation had for half a century asserted could not happen came to pass. This change in the absolute rates, of course, completely changed the character of the problem, making it different not merely in degree but in kind. All attempt to justify these rates on the basis of capacity to pay was, in consequence, soon abandoned, and the supporters reverted to the original, but long avoided, justification of progression as a means of bringing about a more just distribution of income. It has come to be generally accepted once more that the only ground on which a progressive scale of over-all taxation can be defended is the desirability of changing the distribution of income and that this defense cannot be based on any scientific argument but must be recognized as a frankly political postulate, that is, as an attempt to impose upon society a pattern of distribution determined by majority decision.

An explanation of this development that is usually offered is that the great increase in public expenditure in the last forty

years could not have been met without resort to steep progression, or at least that, without it, an intolerable burden would have had to be placed on the poor and that, once the necessity of relieving the poor was admitted, some degree of progression was inevitable. On examination, however, the explanation dissolves into pure myth. Not only is the revenue derived from the high rates levied on large incomes, particularly in the highest brackets, so small compared with the total revenue as to make hardly any difference to the burden borne by the rest; but for a long time after the introduction of progression it was not the poorest who benefited from it but entirely the better-off working class and the lower strata of the middle class who provided the largest number of voters. It would probably be true, on the other hand, to say that the illusion that by means of progressive taxation the burden can be shifted substantially onto the shoulders of the wealthy has been the chief reason why taxation has increased as fast as it has done and that, under the influence of this illusion, the masses have come to accept a much heavier load than they would have done otherwise. The only major result of the policy has been the severe limitation of the incomes that could be earned by the most successful and thereby gratification of the envy of the less-well-off.

MONETARY POLICY

With government in control of monetary policy, the chief threat in this field has become inflation. Governments everywhere and at all times have been the chief cause of the depreciation of the currency. Though there have been occasional prolonged falls in the value of a metallic money, the major inflations of the past have been the result of governments' either diminishing the coin or issuing excessive quantities of paper money. It is possible that the present generation is more on its guard against those cruder ways in which currencies were destroyed when governments paid their way by issuing paper money. The same can be done nowadays, however, by

subtler procedures that the public is less likely to notice.

We have seen how every one of the chief features of the welfare state which we have considered tends to encourage inflation. We have seen how wage pressures from the labor unions, combined with the current full-employment policies, work in this manner and how the heavy financial burden which governments are assuming through old age pensions are likely to lead them to repeated attempts to lighten them by reducing the value of money. We should also note here, although this may not necessarily be connected, that governments seem invariably to have resorted to inflation to lighten the burden of their fixed obligations whenever the share of national income which they took exceeded about 25 per cent. And we have also seen that, because under a system of progressive taxation inflation tends to increase tax revenue proportionately more than incomes, the temptation to resort to inflation becomes very great.

If it is true, however, that the institutions of the welfare state tend to favor inflation, it is even more true that it was the effects of inflation which strengthened the demand for welfare measures. This is true not only of some of those measures we have already considered but also of many others which we have yet to examine or can merely mention here, such as rent restrictions on dwellings, food subsidies, and all kinds of controls of prices and expenditures. The extent to which the effects of inflation have in recent times provided the chief arguments for an extension of government controls is too well known to need more illustration. But the extent to which, for over forty years now, developments throughout the whole world have been determined by an unprecedented inflationary trend is not sufficiently understood. It is perhaps best seen in the influence that it has had on the efforts of the generation whose working life covers that period to provide for their old age.

It will help us to see what inflation has done to the savings of the generation now on the point of retiring if we look at the results of a little statistical inquiry. The

aim of the inquiry was to determine what would be the present value in various countries of the accumulated savings of a person who for a period of forty-five years, from 1913 to 1958, had put aside every year the equivalent in money of the same real value and invested it at a fixed rate of interest of 4 per cent. This corresponds approximately to the return which the small saver in western countries could have obtained from the kind of investment accessible to him, whether its actual form was a savings account, government bonds, or life insurance. We shall represent as 100 the amount that the saver would have possessed at the end of the period if the value of money had remained constant. What part of this real value would such a saver actually have had in 1958?

It seems that there is only one country in the world, namely, Switzerland, where the amount would have been as much as 70 per cent. The saver in the United States and Canada would still have been relatively well off, having been able to retain about 58 per cent. For most of the countries of the British Commonwealth and the other members of the "sterling bloc" the figure would have been around 50 per cent, and for Germany, in spite of the loss of all pre-1924 savings, still as much as 37 per cent. The investors in all those countries were still fortunate, however, compared with those in France or Italy, who would have retained only between 11 and 12 per cent of what the value of their savings over the period ought to have been at the beginning of 1958.

It is usual today to dismiss the importance of this long and world-wide inflationary trend with the comment that things have always been like that and that history is largely a history of inflation. However true this may be in general, it is certainly not true of the period during which our modern economic system developed and during which wealth and incomes grew at an unprecedented rate. During the two hundred years preceding 1914, when Great Britain adhered to the gold standard, the price level, so far as it can be meaningfully measured over such a period, fluctuated around a constant level,

ending up pretty well where it started and rarely changing by more than a third above or below that average level (except during the period of the Napoleonic wars, when the gold standard was abandoned). Similarly, in the United States, during the period 1749-1939 there also does not seem to have occurred a significant upward trend of prices. Compared with this, the rate at which prices have risen during the last quarter of a century in these and other countries represents a major change.

Although there are a few people who deliberately advocate a continuous upward movement of prices, the chief source of the existing inflationary bias is the general belief that deflation, the opposite of inflation, is so much more to be feared that, in order to keep on the safe side, a persistent error in the direction of inflation is preferable. But, as we do not know how to keep prices completely stable and can achieve stability only by correcting any small movement in either direction, the determination to avoid deflation at any cost must result in cumulative inflation. Also, the fact that inflation and deflation will often be local or sectional phenomena which must occur necessarily as part of the mechanism redistributing the resources of the economy means that attempts to prevent any deflation affecting a major area of the economy must result in over-all inflation.

It is, however, rather doubtful whether, from a long-term point of view, deflation is really more harmful than inflation. Indeed, there is a sense in which inflation is infinitely more dangerous and needs to be more carefully guarded against. Of the two errors, it is the one much more likely to be committed. The reason for this is that moderate inflation is generally pleasant while it proceeds, whereas deflation is immediately and acutely painful. There is little need to take precautions against any practice the bad effects of which will be immediately and strongly felt; but there is need for precautions wherever action which is immediately pleasant or relieves temporary difficulties involves much greater harm that will be felt only later. There is, indeed, more than a mere superficial similarity

between inflation and drug-taking, a comparison which has often been made.

Inflation and deflation both produce their peculiar effects by causing unexpected price changes, and both are bound to disappoint expectations twice. The first time is when prices prove to be higher or lower than they were expected to be and the second when, as must sooner or later happen, these price changes come to be expected and cease to have the effect which their unforeseen occurrence had. The difference between inflation and deflation is that, with the former, the pleasant surprise comes first and the reaction later, while, with the latter, the first effect on business is depressing. The effects of both, however, are self-reversing. For a time the forces which bring about either tend to feed on themselves, and the period during which prices move faster than expected may thus be prolonged. But unless price movements continue in the same direction at an ever accelerating rate, expectations must catch up with them. As soon as this happens, the character of the effects changes.

Inflation at first merely produces conditions in which more people make profits and in which profits are generally larger than usual. Almost everything succeeds, there are hardly any failures. The fact that profits again and again prove to be greater than had been expected and that an unusual number of ventures turn out to be successful produces a general atmosphere favorable to risk-taking. Even those who would have been driven out of business without the windfalls caused by the unexpected general rise in prices are able to hold on and to keep their employees in the expectation that they will soon share in the general prosperity. This situation will last, however, only until people begin to expect prices to continue to rise at the same rate. Once they begin to count on prices being so many per cent higher in so many months' time, they will bid up the prices of the factors of production which determine the costs to a level corresponding to the future prices they expect. If prices then rise no more than had been expected, profits will return to normal, and the proportion of those making a

profit also will fall; and since, during the period of exceptionally large profits, many have held on who would otherwise have been forced to change the direction of their efforts, a higher proportion than usual will suffer losses.

The stimulating effect of inflation will thus operate only so long as it has not been foreseen; as soon as it comes to be foreseen, only its continuation at an increased rate will maintain the same degree of prosperity. If in such a situation prices rose less than expected, the effect would be the same as that of unforeseen deflation. Even if they rose only as much as was generally expected, this would no longer provide the exceptional stimulus but would lay bare the whole backlog of adjustments that had been postponed while the temporary stimulus lasted. In order for inflation to retain its initial stimulating effect, it would have to continue at a rate always faster than expected.

We cannot consider here all the complications which make it impossible for adaptations to an expected change in prices ever to become perfect, and especially for long-term and short-term expectations to become equally adjusted; nor can we go into the different effects on current production and on investment which are so important in any full examination of industrial fluctuations. It is enough for our purpose to know that the stimulating effects of inflation must cease to operate unless its rate is progressively accelerated and that, as it proceeds, certain unfavorable consequences of the fact that complete adaptation is impossible become more and more serious. The most important of these is that the methods of accounting on which all business decisions rest make sense only so long as the value of money is tolerably stable. With prices rising at an accelerating rate, the techniques of capital and cost accounting that provide the basis for all business planning would soon lose all meaning. Real costs, profits, or income would soon cease to be ascertainable by any conventional or generally acceptable method. And, with the principles of taxation being what they are, more and more would be taken in taxes as

profits that in fact should be reinvested merely to maintain capital.

Inflation thus can never be more than a temporary fillip, and even this beneficial effect can last only as long as somebody continues to be cheated and the expectations of some people unnecessarily disappointed. Its stimulus is due to the errors which it produces. It is particularly dangerous because the harmful aftereffects of even small doses of inflation can be staved off only by larger doses of inflation. Once it has continued for some time, even the prevention of further acceleration will create a situation in which it will be very difficult to avoid a spontaneous deflation. Once certain activities that have become extended can be maintained only by continued inflation, their simultaneous discontinuation may well produce that vicious and rightly feared process in which the decline of some incomes leads to the decline of other incomes, and so forth. From what we know, it still seems probable that we should be able to prevent serious depressions by preventing the inflations which regularly precede them, but that there is little we can do to cure them, once they have set in. The time to worry about depressions is, unfortunately, when they are furthest from the minds of most people.

The manner in which inflation operates explains why it is so difficult to resist when policy mainly concerns itself with particular situations rather than with general conditions and with short-term rather than with long-term problems. It is usually the easy way out of any temporary difficulties for both government and private business—the path of least resistance and sometimes also the easiest way to help the economy get over all the obstacles that government policy has placed in its way. It is the inevitable result of a policy which regards all the other decisions as data to which the supply of money must be adapted so that the damage done by other measures will be as little noticed as possible. In the long run, however, such a policy makes governments the captives of their own earlier decisions, which often force them to adopt measures that they know to be harmful. It is no accident that the

author whose views, perhaps mistakenly interpreted, have given more encouragement to these inflationary propensities than any other man's is also responsible for the fundamentally antiliberal aphorism, "in the long run we are all dead." The inflationary bias of our day is largely the result of the prevalence of the short-term view, which in turn stems from the great difficulty of recognizing the more remote consequences of current measures, and from the inevitable preoccupation of practical men, and particularly politicians, with the immediate problems and the achievement of near goals.

Because inflation is psychologically and politically so much more difficult to prevent than deflation and because it is, at the same time, technically so much more easily prevented, the economist should always stress the dangers of inflation. As soon as deflation makes itself felt, there will be immediate attempts to combat it—often

when it is only a local and necessary process that should not be prevented. There is more danger in untimely fears of deflation than in the possibility of our not taking necessary countermeasures. While nobody is likely to mistake local or sectional prosperity for inflation, people often demand wholly inappropriate monetary countermeasures when there is a local or sectional depression.

These considerations would seem to suggest that, on balance, probably some mechanical rule which aims at what is desirable in the long run and ties the hands of authority in its short-term decisions is likely to produce a better monetary policy than principles which give to the authorities more power and discretion and thereby make them more subject to both political pressure and their own inclination to overestimate the urgency of the circumstances of the moment.

HAYEK

III *The Fatal Conceit**

WAS SOCIALISM A MISTAKE?

The idea of Socialism is at once grandiose and simple. . . . We may say, in fact, that it is one of the most ambitious creations of the human spirit, . . . so magnificent, so daring, that it has rightly aroused the greatest admiration. If we wish to save the world from barbarism we have to refute Socialism, but we cannot thrust it carelessly aside.

Ludwig von Mises

This book argues that our civilization depends, not only for its origin but also for its preservation, on what can be precisely described only as the extended order of human cooperation, an order more commonly, if somewhat misleadingly, known as capitalism. To understand our civilization, one must appreciate that the extended order resulted not from human design or intention but spontaneously: it arose from unintentionally conforming to certain traditional and largely *moral* practices, many of which men tend to dislike, whose significance they usually fail to understand, whose validity they cannot prove, and which have nonetheless fairly rapidly spread by means of an evolutionary selection—the comparative increase of population and wealth—of those groups that happened to follow them. The unwitting, reluctant, even painful adoption of these practices kept these groups together, increased their access to valuable information of all sorts, and enabled them to be ‘fruitful, and multiply, and replenish the earth, and subdue it’ (*Genesis*

1:28). This process is perhaps the least appreciated facet of human evolution.

Socialists take a different view of these matters. They not only differ in their conclusions, they see the facts differently. That socialists are wrong *about the facts* is crucial to my argument, as it will unfold in the pages that follow. I am prepared to admit that if socialist analyses of the operation of the existing economic order, and of possible alternatives, were factually correct, we might be obliged to ensure that the distribution of incomes conform to certain moral principles, and that this distribution might be possible only by giving a central authority the power to direct the use of available resources, and might presuppose the abolition of individual ownership of means of production. If it were for instance true that central direction of the means of production could effect a collective product of at least the same magnitude as that which we now produce, it would indeed prove a grave moral problem how this could be done justly. This, however, is not the position in which we find ourselves. For there is no known way, other than by the distribution of products in a competitive market, to inform individuals in what direction their several efforts must aim so as to contribute as much as possible to the total product.

The main point of my argument is, then, that the conflict between, on one hand, advocates of the spontaneous extended human order created by a competitive market, and on the other hand those who demand a deliberate arrangement of human interaction by central authority based on collective command over available resources is due to a factual error by the latter about how knowledge of these

resources is and can be generated and utilized. As a question of fact, this conflict must be settled by scientific study. Such study shows that, by following the spontaneously generated moral traditions underlying the competitive market order (traditions which do not satisfy the canons or norms of rationality embraced by most socialists), we generate and garner greater knowledge and wealth than could ever be obtained or utilized in a centrally-directed economy whose adherents claim to proceed strictly in accordance with ‘reason’. Thus socialist aims and programmes are factually impossible to achieve or execute; and they also happen, into the bargain as it were, to be logically impossible.

This is why, contrary to what is often maintained, these matters are not merely ones of differing interests or value judgements. Indeed, the question of how men came to adopt certain values or norms, and what effect these had on the evolution of their civilization, is itself above all a

factual one, one that lies at the heart of the present book. The demands of socialism are not moral conclusions derived from the traditions that formed the extended order that made civilization possible. They endeavor to overthrow these traditions by a rationally designed moral system whose appeal depends on the instinctual appeal of its promised consequences. They assume that, since people had been able to *generate* some system of rules coordinating their efforts, they must also be able to *design* an even better and more gratifying system. But if humankind owes its very existence to one particular rule-guided form of conduct of proven effectiveness, it simply does not have the option of choosing another merely for the sake of the apparent pleasantness of its immediately visible effects. The dispute between the market order and socialism is no less than a matter of survival. To follow socialist morality would destroy much of present humankind and impoverish much of the rest.

RAWLS

Great works of political or moral philosophy are often the results of the eras in which they are written. Sometimes, they can be a negative reaction to an era, as was essentially Plato's *Republic*. Other times, they are the justification of the political happenings of a period, as is the case with Locke's *Treatises on Civil Government*. *A Theory of Justice*, by John Rawls (1921–), is the result of the modern welfare state and is a justification of it.

The acclaim which greeted *A Theory of Justice's* publication in 1971 was unheard of for a work of political or moral philosophy. It received lead rave reviews in numerous journals, periodicals, and newspapers. It was designated one of the five most important books of 1972 by the *New York Times Book Review* on the ground that "its political implications may change our lives."

The years around 1971 marked, in many ways, the high tide of welfare state policies, at least in the United States. Though a Republican, Richard Nixon, was in the White House that year, the middle and late sixties had seen a significant expansion in the role of government in attempting to combat poverty, provide a social "safety-net" for all, and eliminate inequalities between groups and persons. These years also coincided with the substantial American military involvement in Southeast Asia. This background figures into *A Theory of Justice* (hereafter *ATOJ*), particularly those sections that concern such issues as civil disobedience and conscientious refusal, which can almost be read as contemporary justifications of civil rights movement activities and opposition to the draft. Even in the seventies, the federal government's role in the United States continued to grow.

Rawls' target of opposition in *ATOJ* is utilitarianism. He regards its maximalist edict ("it is the greatest happiness of the greatest number that is the measure of right and wrong") as fundamentally unjust. "It may be expedient but it is not just that some should have less in order that others may prosper," he writes. Rawls' objection to utilitarianism is not that it is consequentialist. "All ethical doctrines worth our attention," he holds, "take consequences into account in judging rightness. One which did not would simply be irrational, crazy." By taking consequences into account, Rawls simply means that actions must be viewed comprehensively—all of the

temporal outcomes of an act must be evaluated when considering its rightness or wrongness. There is no difference here between Rawls and utilitarianism.

Also, Rawls does not condemn the ethical object *per se* of utilitarianism—happiness—though he defines it slightly differently as "the satisfaction of rational desire." Rawls' argument, again, with utilitarian theory is its maximizing element, the *greatest* happiness of the *greatest* number.

Rawls' presentation of utilitarianism is fair. Rawls understands the theory of utility in its classical form to define the appropriate terms of social structure as those which achieve the greatest sum of satisfactions of individuals' rational desires. His problem with this theory is that he does not consider it to take persons' individualities seriously. The interests of one, or a few, or even many can be sacrificed as long as the sum of the sacrifice is less than whatever gain the sacrifice buys for others. According to *ATOJ*, this is contrary to justice: "each person possesses an inviolability founded on justice that even the welfare of society as a whole cannot override."

ATOJ is partly a destructive and partly a constructive work. The destructive (in a descriptive sense) part is that which rebuts utilitarianism and, to a lesser extent, intuitionism. The constructive part of the book is the effort to erect principles of justice that are superior to those of these systems. Rawls states there is little new in his system. He attempts to expand and make more abstract the social contract theories of Locke, Rousseau, and Kant. He is particularly influenced by Kant's conception of the method of making the social contract, and by Kant's admonition to never treat humans as means, but always as ends.

The primary subject of justice is "the basic structure of society." This includes fundamental rights and duties, economic system, family structure, and the like. Thus, the scope of potential societal control that Rawls can allow in his perfectly just society is broad. It should be noted that Rawls does not mean for his principles of justice to apply either to private association or organizations within a society, or to relations between societies. Justice, for him, pertains to societal relationships within one society.

Whereas the typical social contract of the seventeenth and eighteenth centuries took place in an original "state of nature," Rawls' takes place in an explicitly imaginary initial or original position. This is behind what he terms the "veil of ignorance," where the parties making the social contract have no idea of their eventual places in society, nor even of the society in which they will live (as well as having other limitations on their knowledge).

The limitations on the parties in the original position are crucial to his theory. Rawls is concerned to create a fair initial situation in order that the principles of justice that are agreed upon in it are fair. If individuals were able to tailor the social order to promote their personal ends, or if powerful individuals were able to exploit to their advantage the bargaining process that goes into the selection of societal principles, then the resulting social contract would simply reflect the distribution of power or institutions already existing in a society. This would, therefore, provide no guidance as to what these should be. By limiting the initial situation in a way that he thinks fair, Rawls hopes to improve on traditional social contract theory.

The principles of justice, then, that Rawls says bargaining parties would unanimously reach for their future social order in an original position as he defines it are as follows:

First Principle

Each person is to have an equal right to the most extensive total system of equal basic liberties compatible with a similar system of liberty for all.

Second Principle

Social and economic inequalities are to be arranged so that they are both:

- a) to the greatest benefit of the least advantaged, consistent with the just savings principle, and
- b) attached to offices and positions open to all under conditions of fair equality of opportunity.

Rawls' definition of these principles is essential to his meaning. He considers liberty—freedom of thought and conscience, civil liberties, and the ability to participate equally in political affairs—the preeminent societal value. So basic is liberty, in fact, that the two principles of justice are in what he terms “lexical order.” This means that the first principle must be completely fulfilled before the second principle, concerning social and economic place, comes into play.

The rule listed in *ATOTJ* for regulating the priority of liberty takes away some of the emphasis that Rawls places on liberty through his lexical ordering of it and the second principle. While liberty cannot be restricted for economic or social place, it “can be restricted . . . for the sake of liberty.” This statement is held to circumscribe two cases: “a less extensive liberty must strengthen the total system of liberty shared by all [and/or] . . . must be acceptable to those with the lesser liberty.”

Regarding the first case—a less extensive liberty shared by all—Rawls distinguishes between liberty of conscience and thought, and that of political participation (such as voting). He believes the former type of liberty is more essential than the latter. In this judgment, most would probably agree with him. He also distinguishes between “ideal” and “nonideal” parts of his theory of justice. Under ideal circumstances, a society is characterized by harmonious social order and acknowledged principles of justice. This happy situation, however, may not always be the case; therefore, principles that work in nonideal settings are also necessary. Under nonideal circumstances—for example, in a society with warring sects, perhaps as in Lebanon—Rawls thinks that political and social liberties that are guaranteed in the United States may not be applicable.

This statement, as reasonable as it sounds, is open to challenge. Not all have agreed with Rawls' statement that “in many historical situations a lesser political liberty may have been justified.” Furthermore, his position that “it may be reasonable to forgo part of these freedoms when the long-run benefits are great enough to transform a less fortunate society into one where the equal liberties can be fully enjoyed,” presents a logic that can be (and has been historically) perverted with the worst results for both existing and future generations. The principle of freedom is important enough that it may be able to be postulated

without exceptions. Rawls has also been criticized for his remark in this connection that “slavery and serfdom . . . are tolerable only when they relieve even worse injustices.” This implies that under some circumstances these are justified. Though Rawls would disallow slavery and serfdom on the presumed utilitarian premise that the greater gains of others may more than offset the losses of slaves and serfs, it undoubtedly would make little difference to a slave or serf what the philosophical grounds for his situation were—utilitarian or Rawlsian.

The second case where liberty can be restricted for the sake of liberty is where this constraint is applied to only some members of a society. In other words, this is not a lesser freedom shared by all in a society, but an unequal freedom. For this case to be operative, the lesser liberty must be acceptable to those experiencing it.

As with the former case, this is an apparently paradoxical assertion. In the first place, it seems inconsistent with Rawls' bedrock position that “it is not just that some should have less in order that others may prosper.” Second, among the assumptions that he makes about the parties in the original position is that “the desire for liberty is the chief regulative interest that the parties . . . must suppose they all will have in common.” Given this assumption of the motivational impulse in free and equal men and women, under what circumstances would some agree to a less than equal liberty than others?

Rawls' resolution of this dilemma is as follows: “the principles of paternalism are those that the parties would acknowledge in the original position to protect themselves against the weakness and infirmities of their reason and will in society. Others are authorized and sometimes required to act on our behalf and to do what we would do for ourselves if we were rational, this authorization coming into effect only when we cannot look after our own good.” Thus, when Rawls writes that a lesser freedom applied to some in a society must be acceptable to those experiencing it, he means that it would be acceptable to them were these individuals capable of acting in their own behalf; because they are not, others are permitted—even required—to act in their behalf by restricting their freedom. This restriction, moreover, should be interpreted as being consented to by those experiencing it, as it is in their interest. Furthermore, Rawls does not intend that the application of this case of liberty curtailment will be applicable only to “children . . . [and the] seriously injured or mentally disturbed.”

Finally, regarding Rawls' conception of liberty's priority, liberty of conscience and thought are less than inviolate: “Liberty of conscience is to be limited only when there is a reasonable expectation that not doing so will damage the public order which the government should maintain. This expectation must be based on evidence and ways of reasoning acceptable to all.” The sentiment is different than the one expressed in *On Liberty*: “If all mankind minus one were of one opinion, and only one person were of the contrary opinion, mankind would be no more justified in silencing that one person, than he, if he had the power, would be justified in silencing mankind.”

Rawls' second principle of justice concerns social and economic inequalities. The economic and social goods covered by the second principle may not be traded for the liberty goods covered by the first principle: Liberty is absolutely first. It should be noted, though, that Rawls appears to consider it inevitable

that societies will have a social and economic class structure of some sort; these apparently are inerradicable under even ideal circumstances.

Rawls' most controversial position in *ATOJ* is that which relates to his second principle of justice, the "maximin rule." According to this rule, societies are ranked such that the society in which the place of most needy is least bad is the best society. In ranking societies according to social and economic factors, all that matters is the social and economic goods of the worst-off group.

This position has a reasonable amount of intuitive appeal. Surely, basing a society on this principle would maximize the position of the minimum class (hence, "maximin"), and this cannot be considered a completely unworthy social goal. In addition, Rawls postulates three assumptions about the initial situation that lead the parties in it to choose the maximin rule: 1) the parties in the original position have no knowledge of their probabilities of living in one society or another, 2) the parties' "conception of the good [is] such that [they] care very little, if anything, for what [they] might gain above the minimum stipend that [they] can, in fact, be sure of by following the maximin rule," and 3) other principles for governing societies' social and economic goods potentially have outcomes so bad that the parties cannot take the risk of accepting any of these other principles.

As Rawls states, the maximin rule is very conservative. It would lead to the complete discounting of the heights to which individuals may soar in order that they will not decline to the depths they may reach. The three assumptions underlying it, while distinct, are inter-related.

The premise underlying the third assumption is that other principles for regulating societal inequalities in social and economic goods—particularly utilitarianism—may have outcomes that individuals cannot accept. For example, individuals might have to be slaves or serfs in order that others may prosper. So terrible is it to be a slave or serf, furthermore, and because, as the result of the first assumption, individuals do not know their probabilities of being in a particular society, that they will rationally adopt a principle that will protect them from the worst outcomes, rather than one that will allow them to achieve the best. Also, because according to the second assumption, individuals do not want much more than the minimum they can be sure to obtain by adhering to the maximin rule, they will much more want to avoid a great loss than achieve a great gain.

The three assumptions can be challenged from both factual and ethical perspective. Regarding the second assumption particularly, many would hold that it is not at all the case that individuals little value increases in social and economic goods above some minimum stipend. If this assumption of Rawls' is factually wrong, then the conclusions he draws from it are inoperative. On the other hand, from the moral perspective, as Rawls himself states, "it seems extraordinary that the justice of increasing the expectations of the better placed by a billion dollars, say, should turn on whether the prospects of the least favored increase or decrease by a penny." Finally, the second assumption seems inconsistent with his own position expressed elsewhere in *ATOJ* on human beings' motivational impulses—that the parties in the original position will attempt "to win for themselves the highest index of primary social goods [defined as, "rights and liberties, opportunities and powers, income and wealth"]."

Part of Rawls' answer to the objections that can be raised to his second assumption is what he terms "chain connection." Roughly, this means that whenever the prospects of one class rise so do the fortunes of adjacent classes. But in this case the reason for the maximin rule disappears. If raising one class's fortunes also necessarily raises other classes', then there is no need to postulate the maximin rule, because, for example, a "maximaxi" rule would do just as well (in that, according to chain connection, maximizing the most favored class's position would also thereby improve the circumstances of all other classes).

The initial appeal of the maximin rule is that it squares with many individuals' intuitive idea of morality—that one should do the most for those who are least fortunate. However, desirable as this rule may be in an ethical sense, it appears inapplicable in Rawls' system, as he assumes people are "mutually disinterested" and neither "envious" nor "vain." According to Rawls, individuals care not about their relative places in a society; all they care about is how many primary social goods they absolutely have, regardless of the amount others have. On this premise, it would seem impossible to maintain the maximin rule.

Moreover, it should also, on deeper reflection, appear ultimately undesirable to assert the maximin rule. While it should be held that the value of a set amount of primary social goods that go to less fortunate people is more than the goods' value to the more fortunate (for example, \$1,000 makes more of a difference to someone earning \$10,000 than to someone earning \$100,000), this does not mean that at no point is there no greater good that can go to more fortunate individuals at the cost of a smaller loss to the less fortunate. This would be particularly true in a society where all classes received a certain social minimum, and the class being benefitted was not the most advantaged class, but merely a class more advantaged than the lowest class.

Rawls' excessive egalitarianism, as expressed by the maximin rule, is unfounded. While goods have declining marginal utility, more than the goods of exclusively the least advantaged class in a society matter.

Regarding the first and third assumptions establishing the maximin rule, if it truly were the case that the parties in the initial situation had no knowledge of the probabilities of their being in certain societies when the veil of ignorance were lifted, and some of these societies had social organizations that were so atrocious as to be unacceptable, then it might be the case that the parties would desire to craft principles of justice that would protect them from the worst possible outcomes, rather than allow them to achieve the best possible. But there appears to be no reason why such a principle would need to be affirmed absolutely. For example, a number of commentators on Rawls have suggested that the parties in the original position could merely adopt two sets of principles—one to apply to atrocious societies and the other to more advantaged ones. In an atrocious society, the maximin rule would be applicable; in more advantaged societies, a social minimum would be guaranteed, and from there the sky could be the limit for individuals, irrespective of the least fortunate's position above the social minimum. Moreover, if the worst possible outcome were so bad that it were worse negatively than the best possible outcome were good positively, then utilitarianism would also choose the maximin rule in this case.

When Rawls states in his second principle of justice that social and economic inequalities must be "consistent with the just savings principle," as well as to

the greatest advantage of the least fortunate, he means that the least fortunate's position must be maximized over time, rather than at a point in time.

The final part of Rawls' second principle of justice is that social and economic inequalities must be "attached to offices and positions open to all under conditions of fair equality of opportunity." The operative phrase here is "fair equality of opportunity." What does this mean?

"Fair equality of opportunity," Rawls holds, "must not . . . be confused with the notion of careers open to talents." The problem with careers open to talents, according to Rawls, is that this creates a meritocratic society, wherein those who produce more receive more and those who produce less, less. This is not what Rawls considers a just society.

Fair equality of opportunity is also equivalent to what Rawls terms "open positions." What does he mean by this? He defines open positions as those which are open to all in society, regardless of talents. Open positions are, thus, accessible to all in a society implementing fair equality of opportunity.

Fair equality of opportunity and open positions are lexically prior to the principle of efficiency, and "it may be possible to improve everyone's situation by assigning certain powers and benefits to positions despite the fact that certain groups are excluded from them . . . the principle of open positions forbids this." Rawls' ultimate justification for the principle of fair equality of opportunity is that individuals would otherwise be "debarred from experiencing the realization of self which comes from a skillful and devoted exercise of social duties." Essentially, what Rawls has in mind are affirmative action-like programs, but not focused only on individuals from groups who have suffered discrimination.

Summarized, Rawls' two principles of justice are that liberty is lexically prior to social and economic place, and may only be sacrificed for liberty; that social and economic goods must be maximized for the least advantaged class in a society; and that careers must not be open to individuals only on the basis of talent.

ATOJ is a rich and compelling work, and covers many topics that have not been touched on here, and into subjects that have been discussed here in much greater depth. While books that are the products of eras can have lasting appeal, this may not be the case with Rawls' work, at least to the extent of its appeal over the past twenty years. *A Theory of Justice* was probably most relevant to the time in which it was written. While it has had some practical impact on certain West European socialist governments, it remains to be seen whether it will have the same effect on the United States in the future.

RAWLS

*A Theory of Justice**

THE ROLE OF JUSTICE

Justice is the first virtue of social institutions, as truth is of systems of thought. A theory however elegant and economical must be rejected or revised if it is untrue; likewise laws and institutions no matter how efficient and well-arranged must be reformed or abolished if they are unjust. Each person possesses an inviolability founded on justice that even the welfare of society as a whole cannot override. For this reason justice denies that the loss of freedom for some is made right by a greater good shared by others. It does not allow that the sacrifices imposed on a few are outweighed by the larger sum of advantages enjoyed by many. Therefore in a just society the liberties of equal citizenship are taken as settled; the rights secured by justice are not subject to political bargaining or to the calculus of social interests. The only thing that permits us to acquiesce in an erroneous theory is the lack of a better one; analogously, an injustice is tolerable only when it is necessary to avoid an even greater injustice. Being first virtues of human activities, truth and justice are uncompromising.

These propositions seem to express our intuitive conviction of the primacy of justice. No doubt they are expressed too strongly. In any event I wish to inquire whether these contentions or others similar to them are sound, and if so how they can be accounted for. To this end it is necessary to work out a theory of justice in the light of which these assertions can be interpreted and assessed. I shall begin by considering the role of the principles of

justice. Let us assume, to fix ideas, that a society is a more or less self-sufficient association of persons who in their relations to one another recognize certain rules of conduct as binding and who for the most part act in accordance with them. Suppose further that these rules specify a system of cooperation designed to advance the good of those taking part in it. Then, although a society is a cooperative venture for mutual advantage, it is typically marked by a conflict as well as by an identity of interests. There is an identity of interests since social cooperation makes possible a better life for all than any would have if each were to live solely by his own efforts. There is a conflict of interests since persons are not indifferent as to how the greater benefits produced by their collaboration are distributed, for in order to pursue their ends they each prefer a larger to a lesser share. A set of principles is required for choosing among the various social arrangements which determine this division of advantages and for underwriting an agreement on the proper distributive shares. These principles are the principles of social justice: They provide a way of assigning rights and duties in the basic institutions of society and they define the appropriate distribution of the benefits and burdens of social cooperation.

Now let us say that a society is well-ordered when it is not only designed to advance the good of its members but when it is also effectively regulated by a public conception of justice. That is, it is a society in which (1) everyone accepts and knows that the others accept the same principles of justice, and (2) the basic social institutions generally satisfy and are generally known to satisfy these principles. In this

* From John Rawls, *A Theory of Justice* (1971). By permission.

case while men may put forth excessive demands on one another, they nevertheless acknowledge a common point of view from which their claims may be adjudicated. If men's inclination to self-interest makes their vigilance against one another necessary, their public sense of justice makes their secure association together possible. Among individuals with disparate aims and purposes a shared conception of justice establishes the bonds of civic friendship; the general desire for justice limits the pursuit of other ends. One may think of a public conception of justice as constituting the fundamental charter of a well-ordered human association.

THE SUBJECT OF JUSTICE

Many different kinds of things are said to be just and unjust: not only laws, institutions, and social systems, but also particular actions of many kinds, including decisions, judgments, and imputations. We also call the attitudes and dispositions of persons, and persons themselves, just and unjust. Our topic, however, is that of social justice. For us the primary subject of justice is the basic structure of society, or more exactly, the way in which the major social institutions distribute fundamental rights and duties and determine the division of advantages from social cooperation. By major institutions I understand the political constitution and the principal economic and social arrangements. Thus the legal protection of freedom of thought and liberty of conscience, competitive markets, private property in the means of production, and the monogamous family are examples of major social institutions. Taken together as one scheme, the major institutions define men's rights and duties and influence their life-prospects, what they can expect to be and how well they can hope to do. The basic structure is the primary subject of justice because its effects are so profound and present from the start. The intuitive notion here is that this structure contains various social positions and that men born into different positions have different expectations of life determined, in part, by the political system as

well as by economic and social circumstances. In this way the institutions of society favor certain starting places over others. These are especially deep inequalities. Not only are they pervasive, but they affect men's initial chances in life; yet they cannot possibly be justified by an appeal to the notions of merit or desert. It is these inequalities, presumably inevitable in the basic structure of any society, to which the principles of social justice must in the first instance apply. These principles, then, regulate the choice of a political constitution and the main elements of the economic and social system. The justice of a social scheme depends essentially on how fundamental rights and duties are assigned and on the economic opportunities and social conditions in the various sectors of society.

THE MAIN IDEA OF THE THEORY OF JUSTICE

My aim is to present a conception of justice which generalizes and carries to a higher level of abstraction the familiar theory of the social contract as found, say, in Locke, Rousseau, and Kant. In order to do this we are not to think of the original contract as one to enter a particular society or to set up a particular form of government. Rather, the guiding idea is that the principles of justice for the basic structure of society are the object of the original agreement. They are the principles that free and rational persons concerned to further their own interests would accept in an initial position of equality as defining the fundamental terms of their association. These principles are to regulate all further agreements; they specify the kinds of social cooperation that can be entered into and the forms of government that can be established. This way of regarding the principles of justice I shall call justice as fairness.

Thus we are to imagine that those who engage in social cooperation choose together, in one joint act, the principles which are to assign basic rights and duties and to determine the division of social benefits. Men are to decide in advance how they are to regulate their claims against one

another and what is to be the foundation charter of their society. Just as each person must decide by rational reflection what constitutes his good, that is, the system of ends which it is rational for him to pursue, so a group of persons must decide once and for all what is to count among them as just and unjust. The choice which rational men would make in this hypothetical situation of equal liberty, assuming for the present that this choice problem has a solution, determines the principles of justice.

In justice as fairness the original position of equality corresponds to the state of nature in the traditional theory of the social contract. This original position is not, of course, thought of as an actual historical state of affairs, much less as a primitive condition of culture. It is understood as a purely hypothetical situation characterized so as to lead to a certain conception of justice. Among the essential features of this situation is that no one knows his place in society, his class position or social status, nor does any one know his fortune in the distribution of natural assets and abilities, his intelligence, strength, and the like. I shall even assume that the parties do not know their conceptions of the good or their special psychological propensities. The principles of justice are chosen behind a veil of ignorance. This ensures that no one is advantaged or disadvantaged in the choice of principles by the outcome of natural chance or the contingency of social circumstances. Since all are similarly situated and no one is able to design principles to favor his particular condition, the principles of justice are the result of a fair agreement or bargain. For given the circumstances of the original position, the symmetry of everyone's relations to each other, this initial situation is fair between individuals as moral persons, that is, as rational beings with their own ends and capable, I shall assume, of a sense of justice. The original position is, one might say, the appropriate initial status quo, and thus the fundamental agreements reached in it are fair. This explains the propriety of the name "justice as fairness": it conveys the idea that the principles of justice are agreed to in an initial situation that is fair.

The name does not mean that the concepts of justice and fairness are the same, any more than the phrase "poetry as metaphor" means that the concepts of poetry and metaphor are the same.

Justice as fairness begins, as I have said, with one of the most general of all choices which persons might make together, namely, with the choice of the first principles of a conception of justice which is to regulate all subsequent criticism and reform of institutions. Then, having chosen a conception of justice, we can suppose that they are to choose a constitution and a legislature to enact laws, and so on, all in accordance with the principles of justice initially agreed upon. Our social situation is just if it is such that by this sequence of hypothetical agreements we would have contracted into the general system of rules which defines it. Moreover, assuming that the original position does determine a set of principles (that is, that a particular conception of justice would be chosen), it will then be true that whenever social institutions satisfy these principles those engaged in them can say to one another that they are cooperating on terms to which they would agree if they were free and equal persons whose relations with respect to one another were fair. They could all view their arrangements as meeting the stipulations which they would acknowledge in an initial situation that embodies widely accepted and reasonable constraints on the choice of principles. The general recognition of this fact would provide the basis for a public acceptance of the corresponding principles of justice. No society can, of course, be a scheme of cooperation which men enter voluntarily in a literal sense; each person finds himself placed at birth in some particular position in some particular society, and the nature of this position materially affects his life prospects. Yet a society satisfying the principles of justice as fairness comes as close as a society can to being a voluntary scheme, for it meets the principles which free and equal persons would assent to under circumstances that are fair. In this sense its members are autonomous and the obligations they recognize self-imposed.

One feature of justice as fairness is to think of the parties in the initial situation as rational and mutually disinterested. This does not mean that the parties are egoists, that is, individuals with only certain kinds of interests, say in wealth, prestige, and domination. But they are conceived as not taking an interest in one another's interests. They are to presume that even their spiritual aims may be opposed, in the way that the aims of those of different religions may be opposed. Moreover, the concept of rationality must be interpreted as far as possible in the narrow sense, standard in economic theory, of taking the most effective means to given ends. I shall modify this concept to some extent, but one must try to avoid introducing into it any controversial ethical elements. The initial situation must be characterized by stipulations that are widely accepted.

In working out the conception of justice as fairness one main task clearly is to determine which principles of justice would be chosen in the original position. To do this we must describe this situation in some detail and formulate with care the problem of choice which it presents. These matters I shall take up in the immediately succeeding chapters. It may be observed, however, that once the principles of justice are thought of as arising from an original agreement in a situation of equality, it is an open question whether the principle of utility would be acknowledged. Offhand it hardly seems likely that persons who view themselves as equals, entitled to press their claims upon one another, would agree to a principle which may require lesser life prospects for some simply for the sake of a greater sum of advantages enjoyed by others. Since each desires to protect his interests, his capacity to advance his conception of the good, no one has a reason to acquiesce in an enduring loss for himself in order to bring about a greater net balance of satisfaction. In the absence of strong and lasting benevolent impulses, a rational man would not accept a basic structure merely because it maximized the algebraic sum of advantages irrespective of its permanent effects on his own basic rights and interests. Thus it seems that the principle of utility is incompatible with the conception of social

cooperation among equals for mutual advantage. It appears to be inconsistent with the idea of reciprocity implicit in the notion of a well-ordered society. Or, at any rate, so I shall argue.

I shall maintain instead that the persons in the initial situation would choose two rather different principles: the first requires equality in the assignment of basic rights and duties, while the second holds that social and economic inequalities, for example inequalities of wealth and authority, are just only if they result in compensating benefits for everyone, and in particular for the least advantaged members of society. These principles rule out justifying institutions on the grounds that the hardships of some are offset by a greater good in the aggregate. It may be expedient but it is not just that some should have less in order that others may prosper. But there is no injustice in the greater benefits earned by a few provided that the situation of persons not so fortunate is thereby improved. The intuitive idea is that since everyone's well-being depends upon a scheme of cooperation without which no one could have a satisfactory life, the division of advantages should be such as to draw forth the willing cooperation of everyone taking part in it, including those less well situated. Yet this can be expected only if reasonable terms are proposed. The two principles mentioned seem to be a fair agreement on the basis of which those better endowed, or more fortunate in their social position, neither of which we can be said to deserve, could expect the willing cooperation of others when some workable scheme is a necessary condition of the welfare of all. Once we decide to look for a conception of justice that nullifies the accidents of natural endowment and the contingencies of social circumstance as counters in quest for political and economic advantage, we are led to these principles. They express the result of leaving aside those aspects of the social world that seem arbitrary from a moral point of view.

Justice as fairness is an example of what I have called a contract theory. Now there

may be an objection to the term "contract" and related expressions, but I think it will serve reasonably well. Many words have misleading connotations which at first are likely to confuse. The terms "utility" and "utilitarianism" are surely no exception. They too have unfortunate suggestions which hostile critics have been willing to exploit; yet they are clear enough for those prepared to study utilitarian doctrine. The same should be true of the term "contract" applied to moral theories. As I have mentioned, to understand it one has to keep in mind that it implies a certain level of abstraction. In particular, the content of the relevant agreement is not to enter a given society or to adopt a given form of government, but to accept certain moral principles. Moreover, the undertakings referred to are purely hypothetical: a contract view holds that certain principles would be accepted in a well-defined initial situation.

THE ORIGINAL POSITION AND JUSTIFICATION

I have said that the original position is the appropriate initial status quo which insures that the fundamental agreements reached in it are fair. This fact yields the name "justice as fairness." It is clear, then, that I want to say that one conception of justice is more reasonable than another, or justifiable with respect to it, if rational persons in the initial situation would choose its principles over those of the other for the role of justice. Conceptions of justice are to be ranked by their acceptability to persons so circumstanced. Understood in this way the question of justification is settled by working out a problem of deliberation: we have to ascertain which principles it would be rational to adopt given the contractual situation. This connects the theory of justice with the theory of rational choice.

If this view of the problem of justification is to succeed, we must, of course, describe in some detail the nature of this choice problem. A problem of rational decision has a definite answer only if we know the beliefs and interests of the parties, their relations with respect to one another, the alternatives between which

they are to choose, the procedure whereby they make up their minds, and so on. As the circumstances are presented in different ways, correspondingly different principles are accepted. The concept of the original position, as I shall refer to it, is that of the most philosophically favored interpretation of this initial choice situation for the purposes of a theory of justice.

But how are we to decide what is the most favored interpretation? I assume, for one thing, that there is a broad measure of agreement that principles of justice should be chosen under certain conditions. To justify a particular description of the initial situation one shows that it incorporates these commonly shared presumptions. One argues from widely accepted but weak premises to more specific conclusions. Each of the presumptions should by itself be natural and plausible; some of them may seem innocuous or even trivial. The aim of the contract approach is to establish that taken together they impose significant bounds on acceptable principles of justice. The ideal outcome would be that these conditions determine a unique set of principles; but I shall be satisfied if they suffice to rank the main traditional conceptions of social justice.

One should not be misled, then, by the somewhat unusual conditions which characterize the original position. The idea here is simply to make vivid to ourselves the restrictions that it seems reasonable to impose on arguments for principles of justice, and therefore on these principles themselves. Thus it seems reasonable and generally acceptable that no one should be advantaged or disadvantaged by natural fortune or social circumstances in the choice of principles. It also seems widely agreed that it should be impossible to tailor principles to the circumstances of one's own case. We should insure further that particular inclinations and aspirations, and persons' conceptions of their good do not affect the principles adopted. The aim is to rule out those principles that it would be rational to propose for acceptance, however little the chance of success, only if one knew certain things that are irrelevant from the standpoint of justice.

For example, if a man knew that he was wealthy, he might find it rational to advance the principle that various taxes for welfare measures be counted unjust; if he knew that he was poor, he would most likely propose the contrary principle. To represent the desired restrictions one imagines a situation in which everyone is deprived of this sort of information. One excludes the knowledge of those contingencies which sets men at odds and allows them to be guided by their prejudices. In this manner the veil of ignorance is arrived at in a natural way. This concept should cause no difficulty if we keep in mind the constraints on arguments that it is meant to express. At any time we can enter the original position, so to speak, simply by following a certain procedure, namely, by arguing for principles of justice in accordance with these restrictions.

It seems reasonable to suppose that the parties in the original position are equal. That is, all have the same rights in the procedure for choosing principles; each can make proposals, submit reasons for their acceptance, and so on. Obviously the purpose of these conditions is to represent equality between human beings as moral persons, as creatures having a conception of their good and capable of a sense of justice. The basis of equality is taken to be similarity in these two respects. Systems of ends are not ranked in value; and each man is presumed to have the requisite ability to understand and to act upon whatever principles are adopted. Together with the veil of ignorance, these conditions define the principles of justice as those which rational persons concerned to advance their interests would consent to as equals when none are known to be advantaged or disadvantaged by social and natural contingencies.

There is, however, another side to justifying a particular description of the original position. This is to see if the principles which would be chosen match our considered convictions of justice or extend them in an acceptable way. We can note whether applying these principles would lead us to make the same judgments about the basic structure of society which we now make

intuitively and in which we have the greatest confidence; or whether, in cases where our present judgments are in doubt and given with hesitation, these principles offer a resolution which we can affirm on reflection. There are questions which we feel sure must be answered in a certain way. For example, we are confident that religious intolerance and racial discrimination are unjust. We think that we have examined these things with care and have reached what we believe is an impartial judgment not likely to be distorted by an excessive attention to our own interests. These convictions are provisional fixed points which we presume any conception of justice must fit. But we have much less assurance as to what is the correct distribution of wealth and authority. Here we may be looking for a way to remove our doubts. We can check an interpretation of the initial situation, then, by the capacity of its principles to accommodate our firmest convictions and to provide guidance where guidance is needed.

TWO PRINCIPLES OF JUSTICE

I shall now state in a provisional form the two principles of justice that I believe would be chosen in the original position. In this section I wish to make only the most general comments, and therefore the first formulation of these principles is tentative. As we go on I shall run through several formulations and approximate step by step the final statement to be given much later. I believe that doing this allows the exposition to proceed in a natural way.

The first statement of the two principles reads as follows.

First: each person is to have an equal right to the most extensive basic liberty compatible with a similar liberty for others.

Second: social and economic inequalities are to be arranged so that they are both (a) reasonably expected to be to everyone's advantage, and (b) attached to positions and offices open to all.

By way of general comment, these principles primarily apply, as I have said, to

the basic structure of society. They are to govern the assignment of rights and duties and to regulate the distribution of social and economic advantages. As their formulation suggests, these principles presuppose that the social structure can be divided into two more or less distinct parts, the first principle applying to the one, the second to the other. They distinguish between those aspects of the social system that define and secure the equal liberties of citizenship and those that specify and establish social and economic inequalities. The basic liberties of citizens are, roughly speaking, political liberty (the right to vote and to be eligible for public office) together with freedom of speech and assembly; liberty of conscience and freedom of thought; freedom of the person along with the right to hold (personal) property; and freedom from arbitrary arrest and seizure as defined by the concept of the rule of law. These liberties are all required to be equal by the first principle, since citizens of a just society are to have the same basic rights.

The second principle applies, in the first approximation, to the distribution of income and wealth and to the design of organizations that make use of differences in authority and responsibility, or chains of command. While the distribution of wealth and income need not be equal, it must be to everyone's advantage, and at the same time, positions of authority and offices of command must be accessible to all. One applies the second principle by holding positions open, and then, subject to this constraint, arranges social and economic inequalities so that everyone benefits.

These principles are to be arranged in a serial order with the first principle prior to the second. This ordering means that a departure from the institutions of equal liberty required by the first principle cannot be justified by, or compensated for, by greater social and economic advantages. The distribution of wealth and income, and the hierarchies of authority, must be consistent with both the liberties of equal citizenship and equality of opportunity.

It is clear that these principles are rather specific in their content, and their

acceptance rests on certain assumptions that I must eventually try to explain and justify. A theory of justice depends upon a theory of society in ways that will become evident as we proceed. For the present, it should be observed that the two principles (and this holds for all formulations) are a special case of a more general conception of justice that can be expressed as follows.

All social values—liberty and opportunity, income and wealth, and the bases of self-respect—are to be distributed equally unless an unequal distribution of any, or all, of these values is to everyone's advantage.

Injustice, then, is simply inequalities that are not to the benefit of all. Of course, this conception is extremely vague and requires interpretation.

As a first step, suppose that the basic structure of society distributes certain primary goods, that is, things that every rational man is presumed to want. These goods normally have a use whatever a person's rational plan of life. For simplicity, assume that the chief primary goods at the disposition of society are rights and liberties, powers and opportunities, income and wealth. (Later on in Part Three [not included here] the primary good of self-respect has a central place.) These are the social primary goods. Other primary goods such as health and vigor, intelligence and imagination, are natural goods; although their possession is influenced by the basic structure, they are not so directly under its control. Imagine, then, a hypothetical initial arrangement in which all the social primary goods are equally distributed: everyone has similar rights and duties, and income and wealth are evenly shared. This state of affairs provides a benchmark for judging improvements. If certain inequalities of wealth and organizational powers would make everyone better off than in this hypothetical starting situation, then they accord with the general conception.

Now it is possible, at least theoretically, that by giving up some of their fundamental liberties men are sufficiently compensated by the resulting social and economic

gains. The general conception of justice imposes no restrictions on what sort of inequalities are permissible; it only requires that everyone's position be improved. We need not suppose anything so drastic as consenting to a condition of slavery. Imagine instead that men forego certain political rights when the economic returns are significant and their capacity to influence the course of policy by the exercise of these rights would be marginal in any case. It is this kind of exchange which the two principles as stated rule out; being arranged in serial order they do not permit exchanges between basic liberties and economic and social gains. The serial ordering of principles expresses an underlying preference among primary social goods. When this preference is rational so likewise is the choice of these principles in this order.

In developing justice as fairness I shall, for the most part, leave aside the general conception of justice and examine instead the special case of the two principles in serial order. The advantage of this procedure is that from the first the matter of priorities is recognized and an effort made to find principles to deal with it. One is led to attend throughout to the conditions under which the acknowledgment of the absolute weight of liberty with respect to social and economic advantages, as defined by the lexical order of the two principles, would be reasonable. Offhand, this ranking appears extreme and too special a case to be of much interest; but there is more justification for it than would appear at first sight. Or at any rate, so I shall maintain. Furthermore, the distinction between fundamental rights and liberties and economic and social benefits marks a difference among primary social goods that one should try to exploit. It suggests an important division in the social system. Of course, the distinctions drawn and the ordering proposed are bound to be at best only approximations. There are surely circumstances in which they fail. But it is essential to depict clearly the main lines of a reasonable conception of justice; and under many conditions anyway, the two principles in serial order may serve well enough. When necessary we can fall back on the more general conception.

The fact that the two principles apply to institutions has certain consequences. Several points illustrate this. First of all, the rights and liberties referred to by these principles are those which are defined by the public rules of the basic structure. Whether men are free is determined by the rights and duties established by the major institutions of society. Liberty is a certain pattern of social forms. The first principle simply requires that certain sorts of rules, those defining basic liberties, apply to everyone equally and that they allow the most extensive liberty compatible with a like liberty for all. The only reason for circumscribing the rights defining liberty and making men's freedom less extensive than it might otherwise be is that these equal rights as institutionally defined would interfere with one another.

THE DIFFERENCE PRINCIPLE

To illustrate the difference principle, consider the distribution of income among social classes. Let us suppose that the various income groups correlate with representative individuals by reference to whose expectations we can judge the distribution. Now those starting out as members of the entrepreneurial class in property-owning democracy, say, have a better prospect than those who begin in the class of unskilled laborers. It seems likely that this will be true even when the social injustices which now exist are removed. What, then, can possibly justify this kind of initial inequality in life prospects? According to the difference principle, it is justifiable only if the difference in expectation is to the advantage of the representative man who is worse off, in this case the representative unskilled worker. The inequality in expectation is permissible only if lowering it would make the working class even more worse off. Supposedly, given the rider in the second principle concerning open positions, and the principle of liberty generally, the greater expectations allowed to entrepreneurs encourages them to do things which raise the long-term prospects of laboring class. Their better prospects act as incentives so that the economic process is more efficient, innovation proceeds at a

faster pace, and so on. Eventually the resulting material benefits spread throughout the system and to the least advantaged. I shall not consider how far these things are true. The point is that something of this kind must be argued if these inequalities are to be just by the difference principle.

I shall now make a few remarks about this principle. First of all, in applying it, one should distinguish between two cases. The first case is that in which the expectations of the least advantaged are indeed maximized (subject, of course, to the mentioned constraints). No changes in the expectations of those better off can improve the situation of those worst off. The best arrangement obtains, what I shall call a perfectly just scheme. The second case is that in which the expectations of all those better off at least contribute to the welfare of the more unfortunate. That is, if their expectations were decreased, the prospects of the least advantaged would likewise fall. Yet the maximum is not yet achieved. Even higher expectations for the more advantaged would raise the expectations of those in the lowest position. Such a scheme is, I shall say, just throughout, but not the best just arrangement. A scheme is unjust when the higher expectations, one or more of them, are excessive. If these expectations were decreased, the situation of the least favored would be improved. How unjust an arrangement is depends on how excessive the higher expectations are and to what extent they depend upon the violation of the other principles of justice, for example, fair equality of opportunity; but I shall not attempt to measure in any exact way the degrees of injustice. The point to note here is that while the difference principle is, strictly speaking, a maximizing principle, there is a significant distinction between the cases that fall short of the best arrangement. A society should try to avoid the region where the marginal contributions of those better off are negative, since, other things equal, this seems a greater fault than falling short of the best scheme when these contributions are positive. The even larger difference between rich and poor makes the latter even worse off, and this violates the principle of mutual advantage as well as democratic equality.

A further point is this. We saw that the system of natural liberty and the liberal conception attempt to go beyond the principle of efficiency by moderating its scope of operation, by constraining it by certain background institutions and leaving the rest to pure procedural justice. The democratic conception holds that while pure procedural justice may be invoked to some extent at least, the way previous interpretations do this still leaves too much to social and natural contingency. But it should be noted that the difference principle is compatible with the principle of efficiency. For when the former is fully satisfied, it is indeed impossible to make any one representative man better off without making another worse off, namely, the least advantaged representative man whose expectations we are to maximize. Thus justice is defined so that it is consistent with efficiency, at least when the two principles are perfectly fulfilled. Of course, if the basic structure is unjust, these principles will authorize changes that may lower the expectations of some of those better off; and therefore the democratic conception is not consistent with the principle of efficiency if this principle is taken to mean that only changes which improve everyone's prospects are allowed. Justice is prior to efficiency and requires some changes that are not efficient in this sense. Consistency obtains only in the sense that a perfectly just scheme is also efficient.

Next, we may consider a certain complication regarding the meaning of the difference principle. It has been taken for granted that if the principle is satisfied, everyone is benefited. One obvious sense in which this is so is that each man's position is improved with respect to the initial arrangement of equality. But it is clear that nothing depends upon being able to identify this initial arrangement; indeed, how well off men are in this situation plays no essential role in applying the difference principle. We simply maximize the expectations of the least favored position subject to the required constraints. As long as doing this is an improvement for everyone, as we assume it is, the estimated gains from the situation of hypothetical equality are irrelevant, if not largely impossible to ascertain

anyway. There may be, however, a further sense in which everyone is advantaged when the difference principle is satisfied, at least if we make certain natural assumptions. Let us suppose that inequalities in expectations are chain-connected: that is, if an advantage has the effect of raising the expectations of the lowest position, it raises the expectations of all positions in between. For example, if the greater expectations for entrepreneurs benefit the unskilled worker, they also benefit the semiskilled. Notice that chain connection says nothing about the case where the least advantaged do not gain, so that it does not mean that all effects move together. Assume further that expectations are close-knit: that is, it is impossible to raise or lower the expectation of any representative man without raising or lowering the expectation of every other representative man, especially that of the least advantaged. There is no loose-jointedness, so to speak, in the way expectations hang together. Now with these assumptions there is a sense in which everyone benefits when the difference principle is satisfied. For the representative man who is better off in any two-way comparison gains by the advantages offered him, and the man who is worse off gains from the contributions which these inequalities make. Of course, these conditions may not hold. But in this case those who are better off should not have a veto over the benefits available for the least favored. We are still to maximize the expectations of those most disadvantaged.

FAIR EQUALITY OF OPPORTUNITY

I should now like to comment upon the second part of the second principle, henceforth to be understood as the liberal principle of fair equality of opportunity. It must not then be confused with the notion of careers open to talents; nor must one forget that since it is tied in with the difference principle its consequences are quite distinct from the liberal interpretation of the two principles taken together. In particular, I shall try to show further on that

this principle is not subject to the objection that it leads to a meritocratic society. Here I wish to consider a few other points, especially its relation to the idea of pure procedural justice.

First, though, I should note that the reasons for requiring open positions are not solely, or even primarily, those of efficiency. I have not maintained that offices must be open if in fact everyone is to benefit from an arrangement. For it may be possible to improve everyone's situation by assigning certain powers and benefits to positions despite the fact that certain groups are excluded from them. Although access is restricted, perhaps these offices can still attract superior talent and encourage better performance. But the principle of open positions forbids this. It expresses the conviction that if some places were not open on a basis fair to all, those kept out would be right in feeling unjustly treated even though they benefited from the greater efforts of those who were allowed to hold them. They would be justified in their complaint not only because they were excluded from certain external rewards of office such as wealth and privilege, but because they were debarred from experiencing the realization of self which comes from a skillful and devoted exercise of social duties. They would be deprived of one of the main forms of human good.

Now I have said that the basic structure is the primary subject of justice. This means, as we have seen, that the first distributive problem is the assignment of fundamental rights and duties and the regulation of social and economic inequalities and of the legitimate expectations founded on these. Of course, any ethical theory recognizes the importance of the basic structure as a subject of justice, but not all theories regard its importance in the same way. In justice as fairness society is interpreted as a cooperative venture for mutual advantage. The basic structure is a public system of rules defining a scheme of activities that leads men to act together so as to produce a greater sum of benefits and assigns to each certain recognized claims to a share in the proceeds. What a person does depends upon what the public rules

say he will be entitled to, and what a person is entitled to depends on what he does. The distribution which results is arrived at by honoring the claims determined by what persons undertake to do in the light of these legitimate expectations.

THE TENDENCY TO EQUALITY

I wish to conclude this discussion of the two principles by explaining the sense in which they express an egalitarian conception of justice. Also I should like to forestall the objection to the principle of fair opportunity that it leads to a callous meritocratic society. In order to prepare the way for doing this, I note several aspects of the conception of justice that I have set out.

First we may observe that the difference principle gives some weight to the considerations singled out by the principle of redress. This is the principle that undeserved inequalities call for redress; and since inequalities of birth and natural endowment are undeserved, these inequalities are to be somehow compensated for. Thus the principle holds that in order to treat all persons equally, to provide genuine equality of opportunity, society must give more attention to those with fewer native assets and to those born into the less favorable social positions. The idea is to redress the bias of contingencies in the direction of equality. In pursuit of this principle greater resources might be spent on the education of the less rather than the more intelligent, at least over a certain time of life, say the earlier years of school.

Now the principle of redress has not to my knowledge been proposed as the sole criterion of justice, as the single aim of the social order. It is plausible as most such principles are only as a *prima facie* principle, one that is to be weighed in the balance with others. For example, we are to weigh it against the principle to improve the average standard of life, or to advance the common good. But whatever other principles we hold, the claims of redress are to be taken into account. It is thought to represent one of the elements in our conception of justice. Now the difference principle is not of course the principle of

redress. It does not require society to try to even out handicaps as if all were expected to compete on a fair basis in the same race. But the difference principle would allocate resources in education, say, so as to improve the long-term expectation of the least favored. If this end is attained by giving more attention to the better endowed, it is permissible; otherwise not. And in making this decision, the value of education should not be assessed solely in terms of economic efficiency and social welfare. Equally if not more important is the role of education in enabling a person to enjoy the culture of his society and to take part in its affairs, and in this way to provide for each individual a secure sense of his own worth.

Thus although the difference principle is not the same as that of redress, it does achieve some of the intent of the latter principle. It transforms the aims of the basic structure so that the total scheme of institutions no longer emphasizes social efficiency and technocratic values. We see then that the difference principle represents, in effect, an agreement to regard the distribution of natural talents as a common asset and to share in the benefits of this distribution whatever it turns out to be. Those who have been favored by nature, whoever they are, may gain from their good fortune only on terms that improve the situation of those who have lost out. The naturally advantaged are not to gain merely because they are more gifted, but only to cover the costs of training and education and for using their endowments in ways that help the less fortunate as well. No one deserves his greater natural capacity nor merits a more favorable starting place in society. But it does not follow that one should eliminate these distinctions. There is another way to deal with them. The basic structure can be arranged so that these contingencies work for the good of the least fortunate. Thus we are led to the difference principle if we wish to set up the social system so that no one gains or loses from his arbitrary place in the distribution of natural assets or his initial position in society without giving or receiving compensating advantages in return.

In view of these remarks we may reject the contention that the ordering of institutions is always defective because the distribution of natural talents and the contingencies of social circumstance are unjust, and this injustice must inevitably carry over to human arrangements. Occasionally this reflection is offered as an excuse for ignoring injustice, as if the refusal to acquiesce in injustice is on a par with being unable to accept death. The natural distribution is neither just nor unjust; nor is it unjust that persons are born into society at some particular position. These are simply natural facts. What is just and unjust is the way that institutions deal with these facts. Aristocratic and caste societies are unjust because they make these contingencies the ascriptive basis for belonging to more or less enclosed and privileged social classes. The basic structure of these societies incorporates the arbitrariness found in nature. But there is no necessity for men to resign themselves to these contingencies. The social system is not an unchangeable order beyond human control but a pattern of human action. In justice as fairness men agree to share one another's fate. In designing institutions they undertake to avail themselves of the accidents of nature and social circumstance only when doing so is for the common benefit. The two principles are a fair way of meeting the arbitrariness of fortune; and while no doubt imperfect in other ways, the institutions which satisfy these principles are just.

A further point is that the difference principle expresses a conception of reciprocity. It is a principle of mutual benefit. We have seen that, at least when chain connection holds, each representative man can accept the basic structure as designed to advance his interests. The social order can be justified to everyone, and in particular to those who are least favored; and in this sense it is egalitarian. But it seems necessary to consider in an intuitive way how the condition of mutual benefit is satisfied. Consider any two representative men A and B, and let B be the one who is less favored. Actually, since we are most interested in the comparison with the least

favored man, let us assume that B is this individual. Now B can accept A's being better off since A's advantages have been gained in ways that improve B's prospects. If A were not allowed his better position, B would be even worse off than he is. The difficulty is to show that A has no grounds for complaint. Perhaps he is required to have less than he might since his having more would result in some loss to B. Now what can be said to the more favored man? To begin with, it is clear that the well-being of each depends on a scheme of social cooperation without which no one could have a satisfactory life. Secondly, we can ask for the willing cooperation of everyone only if the terms of the scheme are reasonable. The difference principle, then, seems to be a fair basis on which those better endowed, or more fortunate in their social circumstances, could expect others to collaborate with them when some workable arrangement is a necessary condition of the good of all.

There is a natural inclination to object that those better situated deserve their greater advantages whether or not they are to the benefit of others. At this point it is necessary to be clear about the notion of desert. It is perfectly true that given a just system of cooperation as a scheme of public rules and the expectations set up by it, those who, with the prospect of improving their condition, have done what the system announces that it will reward are entitled to their advantages. In this sense the more fortunate have a claim to their better situation; their claims are legitimate expectations established by social institutions, and the community is obligated to meet them. But this sense of desert presupposes the existence of the cooperative scheme; it is irrelevant to the question whether in the first place the scheme is to be designed in accordance with the difference principle or some other criterion.

Perhaps some will think that the person with greater natural endowments deserves those assets and the superior character that made their development possible. Because he is more worthy in this sense, he deserves the greater advantages that he could achieve with them. This view,

however, is surely incorrect. It seems to be one of the fixed points of our considered judgments that no one deserves his place in the distribution of native endowments, any more than one deserves one's initial starting place in society. The assertion that a man deserves the superior character that enables him to make the effort to cultivate his abilities is equally problematic; for his character depends in large part upon fortunate family and social circumstances for which he can claim no credit. The notion of desert seems not to apply to these cases. Thus the more advantaged representative man cannot say that he deserves and therefore has a right to a scheme of cooperation in which he is permitted to acquire benefits in ways that do not contribute to the welfare of others. There is no basis for his making this claim. From the standpoint of common sense, then, the difference principle appears to be acceptable both to the more advantaged and to the less advantaged individual. Of course, none of this is strictly speaking an argument for the principle, since in a contract theory arguments are made from the point of view of the original position. But these intuitive considerations help to clarify the nature of the principle and the sense in which it is egalitarian.

THE PRIORITY OF LIBERTY

Aristotle remarks that it is a peculiarity of men that they possess a sense of the just and the unjust and that their sharing a common understanding of justice makes a polis. Analogously one might say, in view of our discussion, that a common understanding of justice as fairness makes a constitutional democracy. For I have tried to show, after presenting further arguments for the first principle, that the basic liberties of a democratic regime are most firmly secured by this conception of justice. In each case the conclusions reached are familiar. My aim has been to indicate not only that the principles of justice fit our considered judgments but also that they provide the strongest arguments for freedom. By contrast ideological principles permit at best uncertain grounds for

liberty, or at least for equal liberty. And liberty of conscience and freedom of thought should not be founded on philosophical or ethical skepticism, nor on indifference to religious and moral interests. The principles of justice define an appropriate path between dogmatism and intolerance on the one side, and a reductionism which regards religion and morality as mere preferences on the other. And since the theory of justice relies upon weak and widely held presumptions, it may win quite general acceptance. Surely our liberties are most firmly based when they are derived from principles that persons fairly situated with respect to one another can agree to if they can agree to anything at all.

I now wish to examine more carefully the meaning of the priority of liberty. I shall not argue here for this priority; instead I wish to clarify its sense in view of the preceding examples, among others. There are several priorities to be distinguished. By the priority of liberty I mean the precedence of the principle of equal liberty over the second principle of justice. The two principles are in lexical order, and therefore the claims of liberty are to be satisfied first. Until this is achieved no other principle comes into play. The priority of the right over the good, or of fair opportunity over the difference principle, is not presently our concern.

As all the previous examples illustrate, the precedence of liberty means that liberty can be restricted only for the sake of liberty itself. There are two sorts of cases. The basic liberties may either be less extensive though still equal, or they may be unequal. If liberty is less extensive, the representative citizen must find this a gain for his freedom on balance; and if liberty is unequal, the freedom of those with the lesser liberty must be better secured. In both instances the justification proceeds by reference to the whole system of the equal liberties. These priority rules have already been noted on a number of occasions.

There is, however, a further distinction that must be made between two kinds of circumstances that justify or excuse a

restriction of liberty. First a restriction can derive from the natural limitations and accidents of human life, or from historical and social contingencies. The question of the justice of these constraints does not arise. For example, even in a well-ordered society under favorable circumstances, liberty of thought and conscience is subject to reasonable regulations and the principle of participation is restricted in extent. These constraints issue from the more or less permanent conditions of political life; others are adjustments to the natural features of the human situation, as with the lesser liberty of children. In these cases the problem is to discover the just way to meet certain given limitations.

In the second kind of case, injustice already exists, either in social arrangements or in the conduct of individuals. The question here is what is the just way to answer injustice. This injustice may, of course, have many explanations, and those who act unjustly often do so with the conviction that they pursue a higher cause. The examples of intolerant and of rival sects illustrate this possibility. But men's propensity to injustice is not a permanent aspect of community life; it is greater or less depending in large part on social institutions, and in particular on whether these are just or unjust. A well-ordered society tends to eliminate or at least to control men's inclinations to injustice, and therefore warring and intolerant sects, say, are much less likely to exist, or to be a danger, once such a society is established. How justice requires us to meet injustice is a very different problem from how best to cope with the inevitable limitations and contingencies of human life.

These two kinds of cases raise several questions. It will be recalled that strict compliance is one of the stipulations of the original position; the principles of justice are chosen on the supposition that they will be generally complied with. Any failures are discounted as exceptions. By putting these principles in lexical order, the parties are choosing a conception of justice suitable for favorable conditions and assuming that a just society can in due

course be achieved. Arranged in this order, the principles define then a perfectly just scheme; they belong to ideal theory and set up an aim to guide the course of social reform. But even granting the soundness of these principles for this purpose, we must still ask how well they apply to institutions under less than favorable conditions, and whether they provide any guidance for instances of injustice. The principles and their lexical order were not acknowledged with these situations in mind and so it is possible that they no longer hold.

I shall not attempt to give a systematic answer to these questions. The intuitive idea is to split the theory of justice into two parts. The first or ideal part assumes strict compliance and works out the principles that characterize a well-ordered society under favorable circumstances. It develops the conception of a perfectly just basic structure and the corresponding duties and obligations of persons under the fixed constraints of human life. My main concern is with this part of the theory. Nonideal theory, the second part, is worked out after an ideal conception of justice has been chosen; only then do the parties ask which principles to adopt under less happy conditions. This division of the theory has, as I have indicated, two rather different subparts. One consists of the principles for governing adjustments to natural limitations and historical contingencies, and the other of principles for meeting injustice.

Viewing the theory of justice as a whole, the ideal part presents a conception of a just society that we are to achieve if we can. Existing institutions are to be judged in the light of this conception and held to be unjust to the extent that they depart from it without sufficient reason. The lexical ranking of the principles specifies which elements of the ideal are relatively more urgent, and the priority rules this ordering suggests are to be applied to non-ideal cases as well. Thus as far as circumstances permit, we have a natural duty to remove any injustices, beginning with the most grievous as identified by the extent of the deviation from perfect justice. Of course, this idea is extremely rough. The

measure of departures from the ideal is left importantly to intuition. Still our judgment is guided by the priority indicated by the lexical ordering. If we have a reasonably clear picture of what is just, our considered convictions of justice may fall more closely into line even though we cannot formulate precisely how this greater convergence comes about. Thus while the principles of justice belong to the theory of an ideal state of affairs, they are generally relevant.

The several parts of nonideal theory may be illustrated by various examples, some of which we have discussed. One type of situation is that involving a less extensive liberty. Since there are no inequalities, but all are to have a narrower rather than a wider freedom, the question can be assessed from the perspective of the representative equal citizen. To appeal to the interests of this representative man in applying the principles of justice is to invoke the principle of the common interest. (The common good I think of as certain general conditions that are in an appropriate sense equally to everyone's advantage.) Several of the preceding examples involve a less extensive liberty: the regulation of liberty of conscience and freedom of thought in ways consistent with public order, and the limitation on the scope of majority rule belong to this category. These constraints arise from the permanent conditions of human life and therefore these cases belong to that part of nonideal theory which deals with natural limitations. The two examples of curbing the liberties of the intolerant and of restraining the violence of contending sects, since they involve injustice, belong to the partial compliance part of nonideal theory. In each of these four cases, however, the argument proceeds from the viewpoint of the representative citizen. Following the idea of the lexical ordering, the limitations upon the extent of liberty are for the sake of liberty itself and result in a lesser but still equal freedom.

The second kind of case is that of an unequal liberty. If some have more votes than others, political liberty is unequal; and the same is true if the votes of some are weighted much more heavily, or if a

segment of society is without the franchise altogether. In many historical situations a lesser political liberty may have been justified. Perhaps Burke's unrealistic account of representation had an element of validity in the context of eighteenth century society. If so, it reflects the fact that the various liberties are not all on a par, for while at that time unequal political liberty might conceivably have been a permissible adjustment to historical limitations, serfdom and slavery, and religious intolerance, certainly were not. These constraints do not justify the loss of liberty of conscience and the rights defining the integrity of the person. The case for certain political liberties and the rights of fair equality of opportunity is less compelling. As I noted before, it may be reasonable to forgo part of these freedoms when the long-run benefits are great enough to transform a less fortunate society into one where the equal liberties can be fully enjoyed. This is especially true when circumstances are not conducive to the exercise of these rights in any case. Under certain conditions that cannot be at present removed, the value of some liberties may not be so high as to rule out the possibility of compensation to those less fortunate. To accept the lexical ordering of the two principles we are not required to deny that the value of liberty depends upon circumstances. But it does have to be shown that as the general conception of justice is followed social conditions are eventually brought about under which a lesser than equal liberty would no longer be accepted. Unequal liberty is then no longer justified. The lexical order is, so to speak, the inherent long-run equilibrium of a just system. Once the tendency to equality has worked itself out, if not long before, the two principles are to be serially ranked.

In these remarks I have assumed that it is always those with the lesser liberty who must be compensated. We are always to appraise the situation from their point of view (as seen from the constitutional convention or the legislature). Now it is this restriction that makes it practically certain that slavery and serfdom, in their

familiar forms anyway, are tolerable only when they relieve even worse injustices. There may be transition cases where enslavement is better than current practice. For example, suppose that city-states that previously have not taken prisoners of war but have always put captives to death agree by treaty to hold prisoners as slaves instead. Although we cannot allow the institution of slavery on the grounds that the greater gains of some outweigh the losses to others, it may be that under these conditions, since all run the risk of capture in war, this form of slavery is less unjust than present custom. At least the servitude envisaged is not hereditary (let us suppose) and it is accepted by the free citizens of more or less equal city-states. The arrangement seems defensible as an advance on established institutions, if slaves are not treated too severely. In time it will presumably be abandoned altogether, since the exchange of prisoners of war is a still more desirable arrangement, the return of the captured members of the community being preferable to the services of slaves. But none of these considerations, however fanciful, tend in any way to justify hereditary slavery or serfdom by citing natural or historical limitations. Moreover, one cannot at this point appeal to the necessity or at least to the great advantage of these servile arrangements for the higher forms of culture.

The problem of paternalism deserves some discussion here, since it has been mentioned in the argument for equal liberty, and concerns a lesser freedom. In the original position the parties assume that in society they are rational and able to manage their own affairs. Therefore they do not acknowledge any duties to self, since this is unnecessary to further their good. But once the ideal conception is chosen, they will want to insure themselves against the possibility that their powers are undeveloped and they cannot

rationally advance their interests, as in the case of children; or that through some misfortune or accident they are unable to make decisions for their good, as in the case of those seriously injured or mentally disturbed. It is also rational for them to protect themselves against their own irrational inclinations by consenting to a scheme of penalties that may give them a sufficient motive to avoid foolish actions and by accepting certain impositions designed to undo the unfortunate consequences of their imprudent behavior. For these cases the parties adopt principles stipulating when others are authorized to act in their behalf and to override their present wishes if necessary; and this they do recognizing that sometimes their capacity to act rationally for their good may fail, or be lacking altogether.

Thus the principles of paternalism are those that the parties would acknowledge in the original position to protect themselves against the weakness and infirmities of their reason and will in society. Others are authorized and sometimes required to act on our behalf and to do what we would do for ourselves if we were rational, this authorization coming into effect only when we cannot look after our own good. Paternalistic decisions are to be guided by the individual's own settled preferences and interests insofar as they are not irrational, or failing a knowledge of these, by the theory of primary goods. As we know less and less about a person, we act for him as we would act for ourselves from the standpoint of the original position. We try to get for him the things he presumably wants whatever else he wants. We must be able to argue that with the development or the recovery of his rational powers the individual in question will accept our decision on his behalf and agree with us that we did the best thing for him.

BIBLIOGRAPHICAL NOTES

Among the general histories of ideas, Bertrand Russell, *A History of Western Philosophy: And Its Connection with Political and Social Circumstances from the Earliest Times to the Present Day* (New York, 1945), holds a special place. It is written by a distinguished philosopher, and it has three outstanding qualities: first, it is a source of pleasure from a purely literary viewpoint (Russell received the Nobel Prize in literature in 1950) and thus demonstrates that there need be no drudgery in science and philosophy; second, Russell's discussion of political ideas is constantly related to the main issues of general philosophy; third, unlike some writers of histories of political theory who identify themselves in each chapter with the thinker they discuss, Russell writes from a definite and clearly stated point of view. Thus his work has direction and consistency. Another work of merit from a general philosophical perspective is Frederick Copleston's nine-volume *A History of Philosophy* (Westminster, Maryland, 1946-1974).

The following histories of political philosophy will be found useful: Crane Brinton, *Ideas and Men: The Story of Western Thought* (New York, 1950); George Catlin, *The Story of the Political Philosophers* (New York-London, 1939); William Elliott and Neil McDonald, *Western Political Heritage* (New York, 1949); Andrew Hacker, *Political Theory: Philosophy, Ideology, Science* (New York, 1961); Lee McDonald, *Western Political Theory* (New York, 1968); Robert Nisbet, *The Social Philosophers* (New York, 1973); Gerald Runkle, *A History of Western Political Theory* (New York, 1968); George H. Sabine and Thomas Thorson, *A History of Political Theory*, 4th ed. (New York, 1973); Mulford Sibley, *Political Ideas and Ideologies; A History of Political Thought* (New York, 1970); Leo Strauss and Joseph Cropsey (eds.), *History of Political Philosophy*, 3rd ed. (Chicago, 1987); and Sheldon S. Wolin, *Politics and Vision: Continuity and Innovation in Western Political Thought* (Boston, 1960).

Other works by William Ebenstein in the area of the history of political theory include *Modern Political Thought; The Great Issues*, 2nd ed. (New York, 1960), which includes introductory essays and readings on a wide variety of modern political issues; and *Political Thought in Perspective* (New York, 1957), which features essays on great political thinkers by other leading thinkers or political figures.

CHAPTER ONE

ROOTS OF WESTERN POLITICAL THOUGHT

(See Bibliographical Notes to Chapter Two, "The Greek Faith in Reason," and Chapter Eight, "The Judeo-Christian Background.")

CHAPTER TWO

THE GREEK FAITH IN REASON

- AGARD, WALTER R., *What Democracy Meant to the Greeks* (Chapel Hill, 1942). Includes a succinct appraisal of Plato (pp. 206-220). A. H. M. Jones, *Athenian Democracy* (Oxford, 1960), discusses the social and economic underpinnings of Athenian democracy, and examines how well it worked.
- BURCKHARDT, JACOB, *History of Greek Culture* (New York, 1963). This abridged translation of a classic work by the great nineteenth-century Swiss historian contains interesting analyses of Greek government and politics.
- CALHOUN, GEORGE M., *Introduction to Greek Legal Science* (Oxford, 1944). Contains considerable material of interest to the student of politics; Chap. III, "Legal Thought in the Aristocracies" (pp. 15-21), and V, "The Athenian Democracy" (pp. 30-49), are particularly relevant.
- DICKINSON, G. LOWES, *The Greek View of Life*, 18th ed. (London, 1938). The second chapter is "The Greek View of the State" (pp. 69-137). Pericles' funeral address, one of the classical statements on democracy, is reproduced (pp. 121-124). See also A. R. Burns, *Pericles and Athens* (London, 1948).
- DODDS, E. R., *The Greeks and the Irrational* (Berkeley, 1951). In probing into the place of irrationality in Greek life and thought, the author explores much territory hitherto unknown or neglected. Chap. VII (pp. 207-235) deals with the irrational, theological, and mystical elements in Plato's thought. Plato's place in the "mystical tradition" (as distinct from the scientific) of classical Greece is also examined in F. M. Cornford, *From Religion to Philosophy* (Harper Torchbooks, 1957), particularly pp. 242-263, and in M. B. Foster, *Mystery and Philosophy* (London, 1957), pp. 31-37. A comprehensive and systematic survey of the evolution and vicissitudes of Greek rationalism from its beginnings in the sixth century B.C. to its "final capitulation" in the third century A.D. will be found in George Boas, *Rationalism in Greek Philosophy* (Baltimore, 1961).
- FARRAR, CYNTHIA, *The Origins of Democratic Thinking* (Cambridge, 1988). A study on the development of politics in ancient Athens, with special attention on Protagoras, Thucydides, and Democritus.
- FREEMAN, KATHLEEN, *The Greek Way: An Anthology* (London, 1947). Translations from Greek verse and prose,

The Greek Faith in Reason

representing the "Greek genius for living as well as for thinking."

• ———, *The Pre-Socratic Philosophers* (Oxford, 1946), and *Ancilla to the Pre-Socratic Philosophers* (Oxford, 1948). The first is a companion to H. Diels, *Fragmente der Vorsokratiker*, 5th ed. (Berlin, 1934-1938), the foremost collection (in Greek) of pre-Socratic Greek philosophy. The second work by Kathleen Freeman is a complete English translation of the fragments in Diels's collection.

Plato and Aristotle were not, as is often thought, the beginning of Greek philosophy but its peak, or, as some think, the beginning of its decay. One of the main reasons for the pervasive influence of Plato and Aristotle is that their most important writings have been preserved. By contrast, most of the pre-Socratic philosophical writings have either been lost or preserved in small bits and fragments. Thus the *Ancilla to the Pre-Socratic Philosophers*, which contains the complete translation of the fragments in the Diels collection, is only 162 pages long, though referring to ninety sources; in numerous instances, not a single line of important thinkers is preserved.

For a detailed history of pre-Socratic Greek philosophy, see J. Burnet, *Early Greek Philosophy* (London-Edinburgh, 1892), and Theodor Gomperz, *Greek Thinkers* (London-New York, 1901, reprinted 1964), Vol. I. See also Léon Robin, *Greek Thought and the Origins of the Scientific Spirit* (London-New York, 1928), pp. 1-147; F. M. Cornford, *Before and after Socrates* (Cambridge, 1932), pp. 1-32; Milton C. Nahm (ed.), *Selections from Early Greek Philosophy*, 2nd ed. (New York, 1944); and Felix M. Cleve, *The Giants of Pre-Sophistic Greek Philosophy: An Attempt to Reconstruct Their Thought*, 2 vols. (The Hague, 1965).

Mario Untersteiner, *The Sophists* (translated from the Italian by Kathleen Freeman, Oxford, 1954), is the best introduction to the lives and ideas of the most important sophists, and corrects many traditional misunderstandings and distortions first expressed in Plato's writings.

To the sophists we owe the concept, Untersteiner writes, that man has "the right to a human life, human speech, and human thought" (p. xvi).

• FRENCH, A., *The Growth of the Athenian Economy* (London, 1964). Tracing the economic development of Athens from Solon to the Persian wars, French considers both internal factors of economic growth as well as external factors of war and diplomacy which made Athens the cultural and economic center of Greece and Europe. Of particular interest is Chap. VIII (pp. 135-162) on the "social consequences" of rising wealth on the Athenian class structure and political ideas and practices. For a more general study, see also H. Mitchell, *The Economics of Ancient Greece* (Cambridge, 1940). Both French and Mitchell have extensive bibliographical data. The problem of slavery, both in its economic and noneconomic aspects, is dealt with in M. I. Finley (ed.), *Slavery in Classical Antiquity* (Cambridge, 1960), and Victoria Cuffel, "The Classical Greek Concept of Slavery," *Journal of the History of Ideas*, XXVII (July-September, 1966), 323-342.

• GUTHRIE, W. K. C., *A History of Greek Philosophy*, 6 vols. (Cambridge, 1962-1981). The first volume covers *The Earlier Presocratics and the Pythagoreans*; the second, *The Presocratic Tradition from Parmenides to Democritus*; the third, *The Fifth-Century Enlightenment*; the fourth, *Plato; The Man and His Dialogues: Earlier Period*; the fifth, *The Later Plato and the Academy*; and the sixth, *Aristotle: An Encounter*. This is the most detailed account of Greek thought in the English language and a landmark of classical scholarship.

• HUXLEY, G. L., *The Early Ionians* (London, 1966). Provides a historical and social background of the early Ionians, and discusses the birth of natural philosophy and the contributions of its major figures. See also Giorgio de Santillana, *The Origins of Scientific Thought* (New York, 1961).

• JAEGER, WERNER, *Paideia: The Ideals of Greek Culture*, 3 vols. (New York, 1939-1944). This ambitious work is

comprehensive in scope, though lacking somewhat in novelty of interpretation. Vols. II and III deal mainly with Plato, and the *Republic* is analyzed in Vol. II (pp. 198–370).

• JONES, A. H. M., *Sparta* (Cambridge, Mass., 1967). Briefly presents Sparta's political institutions and its evolution from its origins to its final subjection to Roman rule. In Chap. IX ("The Discipline"), the author describes the training of Sparta's youth as follows: "The training was mainly athletic and military, but there was singing of traditional songs, and no doubt Homer and the Spartan poets were read. The boys lived very hard—they slept in dormitories on rushes which they had to cut themselves without knives, received one garment a year, and very meager rations. They were not allowed baths (of course they could bathe in the river, but the Eurotas is very cold in winter). To supplement their meager diet they were encouraged to steal food and punished if they were caught for being so clumsy. Contemporary Greeks found this funny and quizzed Spartans about it. Girls received a similar athletic and musical training and like the boys held public competition; other Greeks were shocked at girls appearing naked in public. Some of the tests to which the boys were put were very brutal. Notorious was the game of stealing cheeses from the altar of Artemis Orthia; the boys had to run a gauntlet of flogging under which not a few died" (p. 35).

Victor Ehrenberg, *Aspects of the Ancient World* (Oxford, 1946), deals in Chap. VII, "A Totalitarian State" (pp. 94–104), with Sparta and shows how "this first and greatest of all authoritarian and totalitarian states" became, after its victory over Athens, "the starting-point and center of political theory. The development, which reached its culmination, though by no means its end, in Plato's imposing and bewildering picture of an ideal state in the *Republic*, led far away from reality." The educational system and communal life of the Spartan ruling class closely resembled those of the guardians in the *Republic*, although they were by no means identical.

E. N. Tigerstedt, *The Legend of Sparta in Classical Antiquity*, Vol. I (Stockholm, 1965), discusses the relations of Plato to Sparta's thought and institutions in detail (pp. 244–276), and concludes that Plato played an important role in fostering the legend of Sparta, for example, its glorification as a moral, political, and social ideal. Although conceding that Plato at times sharply criticized some of Sparta's practices and institutions, the author points to the numerous affinities which Plato's "contemporaries and posterity were bound to find between the political ideal as proposed by Plato and the historical Lacedaemon. Which other state in Greece could at one and the same time show the same division of the inhabitants into a small ruling minority and a great majority of politically disenfranchized, the same—at least outwardly professed—disregard for wealth, the same equality between its members, the same freedom for women, the same state education for youth, the same moral and political order and surveillance of citizens?" (p. 274). Tigerstedt also adds that "Plato's criticism of Sparta, even where it is most outspoken, does not have the scornful and contemptuous bitterness which characterizes his pronouncements on Athens, the Athens of democracy. Plato takes Sparta seriously, as he never does Athens. It would be quite unthinkable that he should subject Athenian democracy to a similar searching inquiry as Spartan timocracy. The folly of democracy and its worthlessness is for him a self-evident fact. To the extent to which Athens is identified with democracy, to the same extent Sparta indirectly profits from Plato's loathing of democracy" (*ibid.*). See also John H. Randall, "Plato's Treatment of the Theme of the Good Life and His Criticism of the Spartan Ideal," *Journal of the History of Ideas*, XXVIII (July–September, 1967), 307–324.

• KRAUT, RICHARD, *Socrates and the State* (Princeton, 1984). Chapters VII and VIII deal with Socrates's opinions on democracy generally and Athens particularly. Kraut's conclusion is that Socrates was a critic of democracy.

• LIVINGSTONE, R. W. (ed.), *The Legacy of Greece* (Oxford, 1921). One of the best general introductions to Greek civilization, with contributions by Gilbert Murray ("The Value of Greece to the Future of the World"), J. Burnet ("Philosophy"), D'Arcy W. Thompson ("Natural Science"), Arnold Toynbee ("History"), A. E. Zimmern ("Political Thought"), and others on such varied topics as religion, mathematics and astronomy, biology, medicine, literature, and art.

In *The Greek Genius and Its Meaning to Us* (London, 1912), Livingstone interprets Greek genius in terms of the following principal qualities: beauty, freedom, directness, humanism, sanity, and many-sidedness. He stresses that the "main stream of Hellenism" was characterized by these qualities, but there was a "subordinate current of thought" in Greek life that reflected the absence or even opposite of these qualities, and "the one great extant writer who fully represents" this "unhellenic spirit" is Plato (3rd imp., 1924, p. 182). Livingstone refers particularly to Plato's theories of poetry and love, his hostility to liberty and humanism, and his tendencies toward asceticism and otherworldliness.

In the introduction to his *Plato: Selected Passages* (London–New York–Toronto, 1940), Livingstone states that the "gravest criticisms against Plato are that he imposes goodness forcibly, that his methods would fail in practice, and that at best they could only produce a mechanical virtue and a static and stereotyped humanity," and that the "authoritarians of all ages are his children—all who from natural pessimism or bitter experience have held that the masses must be saved from themselves by a governing elite" (p. xxi). Livingstone arrives at this critical view of Plato although he starts his appraisal with the words: "Perhaps no thinker has had as deep and permanent an influence on European thought as Plato, and many people meet him there without recognizing him" (p. vii).

• MURRAY, GILBERT, *Five Stages of Greek Religion* (Thinker's Library, London, 1946). Chap. IV, "The Failure of Nerve"

(pp. 123–172), is the most famous of the book. See also Murray's *Greek Studies* (New York, 1946). Greek religious conceptions are also discussed in Kathleen Freeman, *God, Man, and State: Greek Concepts* (London, 1952); Werner Jaeger, *The Theology of the Early Greek Philosophers* (Oxford, 1947); Carl Kerényi, *The Gods of the Greeks* (Penguin Books, Baltimore, 1958); and Martin P. Nilsson, *Cults, Myths, Oracles, and Politics in Ancient Greece* (Lund, 1951).

• MYRES, JOHN L., *The Political Ideas of the Greeks* (New York–Cincinnati, 1927). See also M. Cary and T. J. Haarhoff, *Life and Thought in the Greek and Roman World* (London, 1940), and T. A. Sinclair, *Greek Political Thought* (London, 1951).

• OBER, JOSIAH, *Mass and Elite in Democratic Athens* (Princeton, 1989). A detailed examination of the ancient city-state. See also Ellen Wood, *Peasant-Citizen and State* (London, 1988) and R. K. Sinclair, *Democracy and Participation in Athens* (Cambridge, 1988).

• SCHRÖDINGER, ERWIN, *Nature and the Greeks* (Cambridge, 1954). The birth of Greek science, as seen by one of the greatest physicists of the twentieth century. See also George Sarton, *Ancient Science and Modern Civilization* (New York, 1959).

• STONE, I. F., *The Trial of Socrates* (New York, 1988). A work which attempts to explain Socrates's rejection of Athens, as well as its rejection of him.

• STRAUSS, LEO, *Xenophon's Socrates* (Ithaca, NY, 1972). A textual analysis of the only major non-Platonic sources of information about Socrates—Xenophon's *Memorabilia*, *Apology of Socrates*, and *Symposium*.

• TAYLOR, ALFRED EDWARD, *Socrates* (Doubleday Anchor Books, New York, 1957). An excellent brief introduction into the life and thought of Socrates. The best portrait of Socrates appears in the pages of Plato's dialogues *Apology* and *Crito*. See also John D. Montgomery, *The State versus Socrates: A Case Study in Civic Freedom* (Boston, 1954), an anthology of writings on Socrates by many authors, including Friedrich Wilhelm Nietzsche, John Stuart Mill, George

Grote, Vilfredo Pareto, A. E. Taylor, Werner Jaeger, Karl R. Popper, Arnold J. Toynbee, and others. Similarly, Herbert Spiegelberg (ed.), *The Socratic Enigma: A Collection of Testimonies through Twenty-Four Centuries* (Indianapolis-New York, 1964), presents a variety of viewpoints on Socrates from antiquity to the present. The bulk of the collection is taken from the modern period and is organized according to major countries and languages. See also Michael J. O'Brien, *The Socratic Paradoxes and the Greek Mind* (Chapel Hill, 1967), focusing on the main ethical paradoxes of Socrates: that "no one does wrong willingly; no one wishes evil; virtue can be taught; virtue is an art like medicine or carpentry; virtue is knowledge; vice is ignorance" (p. 16). Alexander Eliot, *Socrates* (New York, 1967), presents a brief and popular portrait of Socrates as a man and prophet, with special emphasis on his relevance to our contemporary world.

• TOYNBEE, ARNOLD J., *Hellenism: The History of a Civilization* (New York, 1959). The author sees in "man-worship or Humanism" (p. 10) the distinctive mark of Greek civilization. While humanism flourished at other times and places (such as the Italian Renaissance and the French Age of Reason), the Hellenic experiment in Humanism "was the most whole-hearted and uncompromising practice of man-worship that is on record up to date. This is the distinctive mark of Hellenic history, and it raises an interesting question: What was the connexion

between the Hellenes' worship of man and Hellenism's rise, achievements, breakdown, and eventual fall? That is the subject of this book" (*ibid.*). The failure of the Greeks to unite politically, the author concludes, rendered the collapse of their civilization inevitable. Today we see again the revival of the Greek worship of idolized local states: "The Modern World must exorcise this demon resolutely if it is to save itself from meeting with its Hellenic predecessor's fate" (p. 253).

• VLASTOS, GREGORY, "The Historical Socrates and Athenian Democracy," *Political Theory* (November, 1983), 495-516. Presents the opinion that Socrates was much more inclined toward democracy than is generally held. For a response, see Ellen Wood and Neal Wood, "Socrates and Democracy," *Political Theory* (February, 1986), 55-82.

• ZIMMERN, ALFRED, *The Greek Commonwealth: Politics and Economics in Fifth-Century Athens*, 5th ed. (Oxford, 1931). The best book on the subject. See also André Bonnard, *Greek Civilization*, 3 vols. (New York, 1958-1961); C. M. Bowra, *The Greek Experience* (New York, 1958); H. D. F. Kitto, *The Greeks* (Penguin Books, Baltimore, 1951); Moses Hadas, *Humanism: The Greek Ideal and Its Survival* (New York, 1960); M. I. Finley, *The Ancient Greeks: An Introduction to Their Life and Thought* (New York, 1964); Hugh Lloyd-Jones (ed.), *The Greek World* (London-Baltimore, 1965); and Victor Ehrenberg, *The Greek State* (New York, 1960).

CHAPTER THREE

PLATO

• ANNAS, JULIA, *An Introduction to Plato's Republic*, (Oxford, 1981). Annas holds that Plato's perceived authoritarianism is partially the result of "an expansive

theory of justice" which sees justice more broadly than modern conceptions do. Good "Further Reading" sections at the end of each chapter.

• AVERROES, *Averroes on Plato's Republic* (trans. Ralph Lerner, with an introduction and notes, Ithaca, NY, 1974). The twelfth century philosopher's commentary.

• BAMBROUGH, RENFORD (ed.), *Plato, Popper and Politics: Some contributions to a Modern Controversy* (Cambridge, 1967). A collection of essays separately published elsewhere for and against Plato.

• BARKER, ERNEST, *Greek Political Theory: Plato and His Predecessors*, 2nd ed. (London, 1925). The first four chapters on pre-Platonic political thought (pp. 1-85) are especially valuable, as is the Appendix, "The Later History of Plato's Political Theory" (pp. 383-392). The analysis of the *Republic* forms the core of the book (pp. 145-270).

• BARROW, ROBIN, *Plato, Utilitarianism and Education* (London, 1975). Argues that the ethical, social, and educational systems of the *Republic* are essentially utilitarian, with each class performing the role for which it is particularly suited.

• BOSANQUET, BERNARD, *A Companion to Plato's Republic* (New York, 1895). Preceded by an introduction (pp. 1-35), the commentary follows the text of the *Republic* book by book.

• BRUMBAUGH, ROBERT S., *Plato for the Modern Age* (New York, 1964). Traces the main stages of Plato's life and thought in a succinct and simple manner, and appraises the relevance of Plato's key ideas to the modern world. Brumbaugh notes that "there has been, in the Western world, a tremendous increase in our intuitive ethical sensitivity since Plato's times" (p. 214), but he points out that many later developments are causally related to Plato's philosophy. In his brief analysis of the *Republic* (pp. 85-103), Brumbaugh stresses Plato's conception of the good and takes up the question of whether he should be regarded as a mystic: "In the sense that his system recognizes a direct intellectual vision of some highest form of being, Plato is surely a mystic. In the sense that such a vision is different from and totally unlike all other experience, so that it is disconnected from reason and experiment, Plato equally surely is not" (p. 102). On Plato's

mysticism, see also Paul Friedländer, *Plato*, Vol. 1 (New York, 1958), pp. 72-80.

• CAVARNOS, CONSTANTINE, *Plato's View of Man* (Belmont, Mass., 1975). A brief (95 pages) work. Two Bowen Prize essays on the problems of the destiny of man and the individual life, together with selected passages from Plato on the soul.

• CROMBIE, I. M., *An Examination of Plato's Doctrines*, 2 vols. (London-New York, 1962-1963). The first volume is devoted to Plato's life and writings and the development of his thought, including a discussion of the relation of Plato to Socrates. Then follows a detailed interpretation of Plato's politics, ethics, esthetics, and religion. The second volume examines Plato's theory of knowledge, cosmology, metaphysics, and logic. Written from the viewpoint of modern philosophical scholarship and analysis, rather than from that of classical or historical scholarship, Crombie's work is a major contribution to a better understanding of Plato's thought. Crombie is sympathetic to what Plato tried to do without turning him into an idol, and at the same time he is critical where criticism is valid, without cutting down Plato to the size of a pigmy. In fairness, clarity, and depth Crombie's work ranks with the best in any language written in the last several generations. In *Plato: The Midwife's Apprentice* (London, 1964), Crombie summarizes the major findings and conclusions of his larger work, but without providing the supporting arguments in detail. In less than 200 pages, the short volume covers the major themes and problems of Plato's thought, and is therefore particularly useful for the beginning student of Plato. Morris Stockhammer (ed.), *Plato Dictionary* (New York, 1963) presents the important concepts and ideas of Plato through appropriate passages from his various works. The arrangement is in alphabetical order in dictionary form.

• CROSS, R. C., and A. D. WOOLEY, *Plato's Republic: A Philosophical Commentary* (New York, 1964). A highly successful attempt to present the main problems of philosophy through a

systematic examination of the main philosophical themes in the *Republic*. The subjects covered follow, in general, the sequence of the *Republic*. In dealing with the key conceptions of the *Republic*, as of Greek thought in general, the authors repeatedly go into considerable detail in showing the difficulties of translating Greek terms into English. This aspect of the book is of special value to the reader who has no (or only little) knowledge of Greek. See also William Boyd, *An Introduction to the Republic of Plato* (New York, 1963); Alexander Sesonske (ed.), *Plato's Republic: Interpretation and Criticism* (Belmont, Cal., 1966); Neville R. Murphy, *The Interpretation of Plato's Republic* (New York, 1960); and Noah E. Fehl, *A Guide to the Study of Plato's Republic* (Hong Kong, 1962).

• CROSSMAN, R. H. S., *Plato To-day*, 2nd ed. (London, 1959). Confronts Plato with British democracy, communism, and fascism. Written with verve and insight into modern problems.

• DEMOS, RAPHAEL, *The Philosophy of Plato* (New York, 1939). "Man," the fourth and last part (pp. 303-399), is divided into four chapters: "Human Nature"; "Degeneration in the Individual and in the Society"; "The Ideal of Reason"; "Portrait of the Philosopher." Though many interpretive works on Plato deal with his dialogues, which are treated individually, Demos organizes his analysis according to topics; his discussion of Plato's political ideas is therefore drawn from many Platonic sources and thus gains in interest and perspective. Demos arrives at the conclusion that Plato's ideal state "combines the features both of aristocracy and of what we know as democracy." As to the former, the aristocracy "is of the benevolent kind. The rulers will not exploit the masses but will guide them to the fullest realization of their possibilities." As to the democratic aspect, "the state will be democratic in that the energies of the state will be used for the service of the interests, not of the few, but of all" (p. 357).

Demos seems to be insufficiently aware that government of the people and by the people is indispensable to democracy, and

that government for the people is perfectly compatible with undemocratic forms of rule. Demos arrives at his position, so similar to that of Plato himself, from the assumption that today reason is "a disintegrating factor," and that since the Reformation the "modern world is broken up into a multiplicity of sects. This is not reason but the chaos in the receptacle" (p. 378). One of the main purposes of the *Republic* was a unified social system, dominated by a hierarchy of values and persons. Modern Platonists, too, dread the diversity and pluralism of the non-hierarchical and egalitarian society, and yearn for the absolute and universal Good that all men will accept.

• DICKINSON, G. LOWES, *Plato and His Dialogues* (London, 1931). Chap. IV is on the *Republic* (pp. 78-170).

• FERGUSON, JOHN, *Utopias of the Classical World* (Ithaca, N.Y., 1975). Includes an excellent chapter on Plato's thought from the *Republic* to the *Laws*, with reference to other dialogues.

• FIELD, G. C., *The Philosophy of Plato* (Home University Library, London-New York, 1949). An elementary introduction, useful for the understanding of Plato's political theory in relation to his philosophy, metaphysics, and religion. Field defends Plato against the charge of antidemocracy.

See also Field's *Plato and His Contemporaries*, 2nd ed. (London, 1948), an excellent survey of Plato's life and work against the background of his contemporaries.

• FINDLAY, JOHN, *Plato: The Written and Unwritten Doctrines* (New York, 1974). Presents the view that Plato's political philosophy is based on his larger cosmology: "political life derives from the metaphysical Ultimates of the Universe." Findlay's conclusion is that "Plato is best regarded as having constructed an imaginary Pythagorean commune." See also Findlay's *Plato and Platonism: An Introduction* (New York, 1978).

• FOSTER, M. B., *The Political Philosophies of Plato and Hegel* (Oxford, 1935). The first two chapters (pp. 1-71) are on Plato and rank among the most brilliant

contributions to Platonic studies. Indispensable to an understanding of Plato's political philosophy.

• GROTE, GEORGE, *Plato and the Other Companions of Sokrates*, 3 vols. (London, 1865). Despite its age, still one of the best analyses and interpretations of Platonic and Socratic doctrines. Grote's considerable classical scholarship was buttressed by extensive experience in business and government, including ten years as a Member of Parliament, and his comments on the *Republic* (Vol. III, Chaps. XXXIII-XXXV, pp. 27-242) deserve special attention.

Socrates, the central figure in the *Republic*, seems to Grote to have been portrayed by Plato in a distorted fashion. The "real Socrates," as depicted by Plato himself in the *Apology* and other, earlier, dialogues, was a dissenter from the established order, confessing his own ignorance and his inability to teach anything. But in the *Republic*, Plato presents Socrates as "passing to the opposite pole; taking up the orthodox, conservative, point of view," and Socrates "now expects every individual to fall into place, and contract the opinions, prescribed by authority; including among those opinions deliberate ethical and political fictions, such as that about the gold and silver earthborn men. Free-thinking minds, who take views of their own, and enquire into the evidence of these beliefs, become inconvenient and dangerous" (III, 240). Grote's general estimate of the *Republic* was that "we must look upon Plato as a preacher—inculcating a belief which he thinks useful to be diffused; rather than as philosopher, announcing truths of human nature, and laying down a consistent, scientific, theory of Ethics" (*ibid.*, p. 156). See also Vols. II and III of Theodor Gomperz, *Greek Thinkers* (London-New York, 1905, reprinted 1964), a classic in the field.

• GULLEY, NORMAN, *Plato's Theory of Knowledge* (London, 1962). Examines Plato's views on truth, knowledge, belief, perception, and sensation. F. M. Cornford, *Plato's Theory of Knowledge* (London, 1955), contains translations of

Plato's *Theaetetus* and *Sophist*, with running commentaries and an introduction by the translator. See also William D. Ross, *Plato's Theory of Ideas* (Oxford, 1951), and Robert E. Cushman, *Therapeia: Plato's Conception of Philosophy* (Chapel Hill, 1958). For analyses of the role of mathematical concepts in Plato's thought, see Gulley, *op. cit.*, pp. 169-187; F. Lasserre, *The Birth of Mathematics in the Age of Plato* (New York, 1964); Robert S. Brumbaugh, *Plato's Mathematical Imagination* (Bloomington, 1954); Anders E. O. Wedberg, *Plato's Philosophy of Mathematics* (Stockholm, 1955); and R. M. Hare, "Plato and the Mathematicians," in Renford Bambrough (ed.), *New Essays on Plato and Aristotle* (New York, 1965), pp. 21-38.

• HAVELOCK, ERIC A., *The Liberal Temper in Greek Politics* (New Haven, 1957). The author of this pioneering work strongly objects to the fact that in most conventional histories of Greek political thought "the naturalists and the materialists, the sophists and the democrats, are treated only as faint and futile voices protesting off-stage," while the undemocratic or antidemocratic views of Plato and Aristotle occupy the center of the stage (p. 19). By contrast, Havelock documents in detail his main thesis that liberalism was a part of the intellectual history of classic Greece, growing outside the walls of Plato's idealism and Aristotle's teleology. Throughout his book Havelock deals fully and fairly with Plato's political thought, presenting many points in a new light.

• ———, *Preface to Plato* (Cambridge, Mass., 1963). Plato's attack on poetry in the *Republic* has generally been condemned or defended by students of Platonic thought on political grounds. Havelock places the whole issue into a much broader perspective. In Plato's time, and even more so before his time, poetry in Greece did not mean poetry or even literature in the modern sense, but the orally transmitted sum total of all existing knowledge—history, politics, ethics, and technology. Oral transmission depended on emphasizing the concrete

and the emotional aspects of happenings, using colorful images as vehicles of communication. Plato's attack against poetry, Havelock argues, was therefore not a side issue, but central in his attempt to develop conceptual and abstract thinking: "Platonism at bottom is an appeal to substitute a conceptual discourse for an imagistic one" (p. 261). Plato's theory of Forms dramatized this split between "the image-thinking of poetry and the abstract thinking of philosophy" (p. 266), and thus turned Greek, and European, thought into a new direction.

• KAGAN, DONALD, *The Great Dialogue: History of Greek Political Thought* (New York, 1965). Chap. IX (pp. 155-194) deals with Plato's political dialogues on the *Republic*, *Statesman*, and *Laws*. See also Christopher Morris, *Western Political Thought*, Vol. I: *Plato to Augustine* (New York, 1967), Chap. 2, "Plato" (pp. 35-79), preceded by an interesting discussion of "The 'Miraculous Birth' of Political Thought" (pp. 9-34). Alvin W. Gouldner, *Enter Plato: Classical Greece and the Origins of Social Theory* (New York, 1965), examines the origins and significance of Plato's thought from the sociological viewpoint, with special emphasis on the Greek social structure and class system.

• KELSEN, HANS, *What Is Justice: Justice, Law, and Politics in the Mirror of Science* (Berkeley and Los Angeles, 1957). Chap. III (pp. 82-109) is on "Platonic Justice." Originally published in *Kant-Studien*, XXXVIII, Nos. 1-2 (1933), 91-117, this is one of the most penetrating studies of Plato and basic to an understanding of his political ideas in the light of his general philosophy and metaphysics. Kelsen writes incisively on the irrational and mystical elements in Plato's philosophy that lead to politically dangerous consequences: "Plato's mysticism, this most complete expression of irrationalism, is the justification of his antidemocratic politics; it is the ideology of every autocracy." Concerning the problem of justice, Kelsen concludes that "rational science can never give an answer to the question concerning the nature of justice, that it cannot solve that problem,

but only resolve it. The final position rational science will take in all its different forms is this: there is no such thing as absolute justice, which cannot be defined conceptually. Such an ideal is an illusion. There are only interests and conflicts of interests, which are resolved either by struggle or compromise. In the sphere of rationality, the idea of peace inevitably replaces the ideal of justice" (pp. 116-117 of the original German version, from which this translation is made directly).

• ———, "Platonic Love," *American Imago*, III (April, 1942), 1-112, originally published (in German) in *Imago*, XIX, Nos. 1-2 (1933), 34-98, 225-255, and reprinted in his *Aufsätze zur Ideologiekritik* (Neuwied am Rhein-Berlin, 1964), pp. 114-197. This is the only detailed critical analysis of Plato's defense of homosexuality and its reflection in his philosophical and political ideas. Contrary to common belief, homosexuality was not widespread in ancient Greece but practiced by only a thin layer of the aristocratic class; the general reaction to boy love was condemnatory and punitive in both social mores and actual penal legislation. Most of those inclined toward homosexuality were married and raised families, and their love of boys was in addition to their normal heterosexual lives; Plato was—even by the standards of these men—more extreme, because he confined himself to an erotic world in which there was no room for marriage or family, or any intimate personal relation with a woman. It was inevitable that the profound conflict with himself and society should pervade all his thinking and writing. Kelsen brilliantly traces the inner relation between Plato's tragic personal life, full of love and affection as well as of guilt and shame, and his schemes for political reform. A short critical discussion, "Platonic Love," will also be found in Warner Fite, *The Platonic Legend* (New York, 1934), Chap. VIII (pp. 153-179).

The views of Plato on love and sex are defended against Kelsen and Fite by Ronald B. Levinson, *In Defense of Plato* (Cambridge, Mass., 1953), Chap. VI (pp. 81-138). Highly sympathetic to Plato's

views on love is also Thomas Gould, *Platonic Love* (London, 1963). Gould does not confine himself to the *Symposium* and the *Phaedrus*, the two main Platonic dialogues that deal directly with the subject of love, but also examines Platonic statements in other dialogues, including the *Republic*. Comparing Plato's conception of love with the Christian, Romantic, and Freudian concepts, Gould finds that "only Plato and Freud have worked out the philosophical implications" of the idea of love as the key to everything in life. But "compared to Plato, Freud hardly got going" (p. 17). See also the following: Stanley Rosen, *Plato's Symposium* (New Haven, 1968); Douglas N. Morgan, *Love: Plato, the Bible and Freud* (Englewood Cliffs, N.J., 1964); Josef Pieper, *Love and Inspiration: A Study of Plato's Phaedrus* (New York, 1964); Herman L. Sinaiko, *Love, Knowledge, and Discourse in Plato: Dialogue and Dialectic in Phaedrus, Republic, Parmenides* (Chicago, 1965); and H. D. Rankin, *Plato and the Individual* (London, 1964), Chap. V, "Man, Woman, and Eros" (pp. 77-100).

• KLOSKO, GEORGE, *The Development of Plato's Political Theory* (New York, 1986). A valuable addition to the Platonic literature. Klosko attempts a comprehensive treatment of Plato's political theory, discussing both the scholarly literature and the relevant dialogues. Klosko also discusses Plato within the social and political context of his times.

• LEVINSON, RONALD B., "The *Republic* Revisited," *Yale Review*, XXIX (Autumn, 1939), 153-166. Interprets Plato as "the moralist and poet of the spiritual life" and, though admitting, "without argument or reservation, that Plato was not a democrat," denies that the *Republic* is an "anticipatory confirmation of the contemporary dictatorships." Later, Levinson elaborated his approach in a larger work, *In Defense of Plato* (Cambridge, Mass., 1953). For further studies in defense of Plato, see John Wild, *Plato's Theory of Man* (Cambridge, Mass., 1946), and *Plato's Modern Enemies and the Theory of Natural Law* (Chicago, 1953); Rupert C. Lodge, *The Philosophy of Plato* (London, 1956); and

Paul Friedländer, *Plato*, 3 vols. (New York-Princeton, 1958-1969).

• LODGE, RUPERT C., *Plato's Theory of Ethics* (London, 1928). The starting point and main object of inquiry in the *Republic* is the nature of justice. The separation of ethics and politics is a relatively modern phenomenon, unknown to Plato. *Plato's Theory of Ethics* is therefore useful to an understanding of the *Republic*, though it is a work of systematic explanation rather than of critical analysis. For a brief survey of Plato's theories of art, including the role of the artist in society, see Lodge's *Plato's Theory of Art* (London, 1953). John Gould, *The Development of Plato's Ethics* (Cambridge, 1955), starts out with a searching portrait of Socrates as the major source of Plato's ethical views and then analyzes the great themes of Plato's ethics as presented in his dialogues, particularly the *Republic*.

• MORE, PAUL ELMER, *Platonism* (Princeton, 1917). Of particular importance is Chap. VI, "The Doctrine of Ideas" (pp. 162-203).

• MORROW, GLENN, *Plato's Cretan City* (Princeton, 1960). Argues that the social order described in the *Laws* is much influenced by contemporary Athenian practice and the "ancestral" Athenian constitution.

• NETTLESHIP, RICHARD LEWIS, *Lectures on the Republic of Plato* (London, 1937). Unlike most commentaries that analyze the *Republic* topically, Nettleship's *Lectures* follows the *Republic* from beginning to end in its own order of themes. For the reader who approaches the *Republic* for the first time, Nettleship's commentary is perhaps the most useful guide, because it follows the text of the *Republic* closely and sympathetically. See also Nettleship's *The Theory of Education in Plato's Republic* (Oxford, 1935) for a brief exposition of Plato's system of education, in many respects the heart of the *Republic*.

A fuller treatment of Plato's educational philosophy will be found in Sir Richard Livingstone, *Plato and Modern Education* (Cambridge-New York, 1944) and Rupert C. Lodge, *Plato's Theory of Education* (London, 1947). These works present systematic analyses of Plato's educational

philosophy based on the *Republic* as well as on several other major dialogues.

- OATES, WHITNEY J., "The Ideal States of Plato and Aristotle," in *The Greek Political Experience: Studies in Honor of William Kelly Prentice* (Princeton, 1941), pp. 187–213. Seeks to demonstrate that Plato and Aristotle "believed fundamentally in the essence of democracy" (p. 193) and were not progenitors of modern totalitarian systems.
- PANGLE, THOMAS, *The Roots of Political Philosophy* (Ithaca, N.Y., 1987). Literal translations of and interpretive essays on ten little-known Platonic dialogues from a Straussian perspective.
- PATER, WALTER, *Plato and Platonism* (Caravan Library, London, 1934). See particularly Chaps. V, "Plato and the Sophists" (pp. 88–110), and IX, "The *Republic*" (pp. 211–240). See also Pater's *Greek Studies* (Caravan Library, London, 1928).
- PLATO, *The Republic of Plato* (trans. with notes and an interpretive essay by Allan Bloom, New York, 1968). The most literal translation in English of the *Republic*.
- POPPER, KARL R., *The Open Society and Its Enemies* (Princeton, 1950). Part I, "The Spell of Plato" (pp. 11–195), is a scathing critique of Plato's political philosophy and its destructive impact on Western civilization. Popper views Plato's proposal to reconstruct the natural harmony of society as follows: "The more we try to return to the heroic age of tribalism, the more surely do we arrive at the Inquisition, at the Secret Police, and at a romanticized gangsterism. Beginning with the suppression of reason and truth, we must end with the most brutal and violent destruction of all that is human. *There is no return to a harmonious state of nature. If we turn back, then we must go the whole way—we must return to the beasts*" (p. 195). For a critical examination, from the viewpoint of logical positivism, of Plato's analogy of government and politics with art, crafts, and specialized skills, leading to the Platonic justification of rule by the few, see Renford Bambrough, "Plato's Political Analogies," in Peter Laslett (ed.), *Philosophy, Politics, and Society* (Oxford, 1956), pp. 98–115.
- RAVEN, J. E., *Plato's Thought in the Making: A Study of the Development of His Metaphysics* (Cambridge, 1965). After two introductory chapters on the sources of Plato's thought and his early life, Raven analyzes the development of Plato's key metaphysical conceptions. Plato's central concept of the Good is defined by Raven as follows: "The Good, for Plato, is first and most obviously the end or aim of life, the supreme object of all desire and all aspiration. Second, and more surprisingly, it is the condition of knowledge, that which makes the world intelligible and the mind intelligent. And third and last and most important, it is the creative and sustaining cause of the whole world and all its contents, that which gives to everything else its very existence" (p. 130). Similarly, Christopher Morris, *Western Political Thought*, Vol. I: *Plato to Augustine* (New York, 1967), writes: "Plato's 'good' is, in the last analysis, an intellectual thing. It is what the philosopher knows and sees and contemplates, what he has discovered by venturing outside the Cave. It has something in common with the Beatific Vision but it is neither closely nor clearly connected with most of what we now call goodness. It is related far more closely to what a man understands than to what he is or to what he does" (p. 47). A variety of viewpoints on basic problems of Plato's metaphysics is presented in the symposium, R. E. Allen (ed.) *Studies in Plato's Metaphysics* (New York, 1965).
- REEVE, C. D. C., *Philosopher-Kings: The Argument of Plato's Republic* (Princeton, 1988). An avowedly "to some extent . . . revisionist work," *Philosopher-Kings* attempts to explode various "myths" about the *Republic*—that it contains the doctrine of the forms, that it is not a unified work, that it teaches a form of proto-totalitarianism, and that Plato does not make his case for justice. Chapter four is specifically on politics.
- RITTER, CONSTANTIN, *The Essence of Plato's Philosophy* (New York, 1933). A portion of the book deals with Plato's political ideas (pp. 319–356). Ritter was one of Germany's leading authorities on Plato.

- RYLE, GILBERT, *Plato's Progress* (Cambridge, 1966). Examines the evolution of Plato's thought in a fresh and unorthodox manner. In Chap. VII (pp. 216–300) the author gives a "Timetable" of Plato's dialogues. The problems of the dates of composition of the different parts of the *Republic* are discussed on pp. 244–250. Ryle frequently discusses the relations of Aristotle's thought to Plato, and there are also interesting sidelights on writing, publishing, selling, and reading books in Plato's time.
- SESONSKE, ALEXANDER (ed.), *Plato's Republic: Interpretation and Criticism* (Belmont, Calif., 1966). A brief collection of essays by various authors on different aspects of the *Republic*.
- SHOREY, PAUL, *Platonism: Ancient and Modern* (Berkeley, 1938). Analyzes the impact of Plato on antiquity, Christianity, the Middle Ages, the Renaissance, and French and English thought. See also Gilbert Murray, *Hellenism and the Modern World* (London, 1953).
- STALLEY, R. F., *An Introduction to Plato's Laws* (Oxford, 1983). The only recent book devoted exclusively to Plato's last and longest work—the *Laws*.
- STRAUSS, LEO, *The Argument and the Action of Plato's Laws* (Chicago, 1975). Strauss's last book; a demanding work that requires close attention to both itself and the *Laws*. Those who disagree with Strauss's approach may find it of little value.
- ———, *The City and Man* (Chicago, 1964). Includes an extensive examination of Plato's conceptions of the city and justice in government (Chap. II, pp. 50–138).
- ———, *Studies in Platonic Political Philosophy*, with an introduction by Thomas Pangle and a foreword by Joseph Cropsey (Chicago, 1983). A collection of Strauss pieces on Platonic themes. Pangle's introduction places the essays in the context of Strauss's other writings.
- TAYLOR, ALFRED EDWARD, *Plato: The Man and His Work*, 6th ed. (London, 1949). Chap. I (pp. 1–9) briefly describes Plato's life, and the subsequent chapters analyze his writings. The *Republic* is dealt with in Chap. XI (pp. 263–298). Taylor's *Plato*, generally written from the orthodox viewpoint, ranks as one of the standard works in the field. Accounts of Plato's excursions into practical politics in his earlier years will be found in Gertrude R. Levy, *Plato in Sicily* (London, 1956), and Ludwig Marcuse, *Plato and Dionysius* (New York, 1947).
- ———, *Platonism and Its Influence* (Boston, 1924). A volume in the Our Debt to Greece and Rome series. It attempts to indicate "the line of descent by which Platonic ideas have become part of the unconscious inheritance of the educated man of today" (p. 28). More specifically, the author examines the impact of Plato on the subsequent development of science, ethics, and theology.
- THORSON, THOMAS LANDON (ed.), *Plato: Totalitarian or Democrat?* (Englewood Cliffs, N.J., 1963). The pros and cons on this issue are skillfully culled from the writings of R. H. S. Crossman, Karl R. Popper, John Wild, John H. Halliwell, Leo Strauss, and Bertrand Russell.
- VLASTOS, GREGORY, *Platonic Studies*, 2nd printing (Princeton, 1981). A collection of essays by one of the great Plato scholars of our time. Part I is on "Morals, Politics, Metaphysics."
- WHITE, NICHOLAS, *A Companion to Plato's Republic* (Oxford, 1979). Consists for the most part of a book-by-book exposition of the *Republic*, preceded by an introduction emphasizing the centrality of the search of justice to the totality of the *Republic*.
- WINSPEAR, ALBAN DEWES, *The Genesis of Plato's Thought* (New York, 1940). The first systematic analysis, in English, of Plato's political ideas from a Marxist viewpoint. As Winspear is a good scholar, and not only a good Marxist, his book will be found suggestive, although overdrawn in part. For a Marxist interpretation of Socrates, see Alban D. Winspear and Tom Silverberg, *Who Was Socrates?*, 2nd ed. (New York, 1960). Of related interest, and equally written from a strict Marxist angle, are George Thomson's *Aeschylus and Athens* (London, 1941), and *Studies in Ancient Greek Society*, 2 vols. (London,

1954–1961); the first volume is on *The Prehistoric Aegean*, and the second, on *The First Philosophers*. Thomson summarizes his appraisal of Plato (*The First Philosophers*, p. 328) as follows: “Granted that in his theory of Ideas Plato made important contributions to epistemology, and that all his writings (except the *Laws*) are presented with superb literary skill, his philosophy expresses the reactionary outlook of a selfish oligarchy clinging blindly to its privileges at a time when their social and economic basis was crumbling away. It is a philosophy founded on the denial of motion and change and

hence of life itself.” Plato’s attitude to natural science is discussed in Benjamin Farrington, *Science and Politics in the Ancient World* (New York, 1932), Chaps. VIII (pp. 87–106) and XI (pp. 130–147), and *Greek Science* (London, 1944), Chap. VII (pp. 81–101).

F. M. Cornford, *The Unwritten Philosophy: And Other Essays* (Cambridge Paperbackbacks, 1967), includes a critical examination, “The Marxist View of Ancient Philosophy” (pp. 117–137), directed particularly against Farrington and Thomson.

CHAPTER FOUR

ARISTOTLE

• ACKRILL, J. L., *Aristotle the Philosopher* (Oxford, 1981). A brief work on Aristotle’s comprehensive philosophy; Ackrill regards Aristotle from the perspective that Aristotle’s system is “open,” as opposed to a closed set of doctrines. Another brief, recent work on Aristotle’s comprehensive philosophy is that of Jonathan Barnes (a contemporary translator), *Aristotle* (Oxford, 1982), which is a part of the “Past Masters” series.

• AMBER, WAYNE, “Aristotle on Nature and Politics: The Case of Slavery,” *Political Theory* (August, 1987), 390–410. A reinterpretation of Aristotle’s views on slavery, suggesting that his views reflect a tension between what human nature provides and what the city needs.

• BALDRY, H. C., *The Unity of Mankind in Greek Thought* (Cambridge, 1965). In tracing the awareness of the Greeks of the problem of human unity from Homer to the Stoics, the author points to the interesting fact that no single Greek work deals with that subject as a whole. Throughout his study, the author concentrates on several main aspects of Greek attitudes toward human unity: the hostility of Greeks

against non-Greeks—the latter being considered barbarians by definition, that is, by not being Greek. Within the Greek city-state, there was the conflict between the “high” and the “low” classes, a distinction based on birth or wealth; the assumed superiority of men over women; and, finally, the basic difference of status between the free and the slaves. Aristotle’s views are discussed on all these topics (pp. 88–101). In general, Aristotle followed the opinions and prejudices of his fellow Greeks with respect to the inferior position of the barbarians in terms of rational endowment and cultural accomplishment. As to women, Aristotle felt that women possessed less reason than men, and he considered the female state as “a kind of deformity.” As to Aristotle’s defense of slavery as being derived from natural differences between men, Baldry observes: “Rarely, it may be said, has a great thinker so sadly mistaken a transitional man-made institution for one of nature’s laws” (p. 96). See also Lewis Hanke, *Aristotle and the American Indians: A Study in Race Prejudice in the Modern World* (London, 1959).

• BARKER, ERNEST, *The Political Thought of Plato and Aristotle* (London–New York, 1906). Chaps. V–XI (pp. 208–496) deal with Aristotle in a clear and sympathetic manner. An epilogue (“The Later History of the *Politics*”) provides a brief survey of the impact of Aristotle’s political ideas on later writers from the Stoics to Hegel. See also Barker’s *The Politics of Aristotle* (Oxford, 1946), a translation of Aristotle’s *Politics*, with an introduction, notes, and appendices. The introduction (pp. xi–lxxvi) considers the historical and scientific background, the substance, argument, and vocabulary of the *Politics*.

• CHERNISS, HAROLD, *Aristotle’s Criticism of Plato and the Academy* (Baltimore, 1944), Vol. I. Purports to “give a complete account and analysis of all that Aristotle says about Plato and about Plato’s pupils and associates in the Academy,” and is the standard work on the subject. A brief treatment of the relation of Aristotle and Plato will be found in K. V. Gajendragadkar, *Aristotle’s Critique of Platonism* (Mysore, 1953), in which the author concludes that Aristotle “remains after all the greatest of the Platonists as also the greatest critic of Plato and his school” (pp. 77–78). See also I. Duering and G. E. L. Owen (eds.), *Plato and Aristotle in the Mid-Fourth Century* (Goeteborg, 1960), a symposium of leading European and American scholars dealing, to a large extent, with the relationships of Aristotle and Plato.

• EDEL, ABRAHMAN, *Aristotle and His Philosophy* (Chapel Hill, N.C., 1982). A comprehensive exploration of Aristotle’s thought, from his own frame of reference.

• GROTE, GEORGE, *Aristotle*, 2 vols. (London, 1872). Grote died before the work was finished. Neither the *Ethics* nor the *Politics* is specifically dealt with, but most of the other works of Aristotle are carefully analyzed.

• GUMMERE, RICHARD M., *The American Colonial Mind and the Classical Tradition: Essays in Comparative Culture* (Cambridge, Mass., 1963). Filling an important gap in American intellectual history, the author traces the impact of Greek and Roman thought on American thinkers and political leaders from the earliest colonial

days to the Constitutional Convention of 1787. The outstanding influence of Aristotle is particularly stressed in the making of the Constitution, and Gummere holds that “the theory of our Constitution derives from Aristotle” (p. 176). Aristotle’s opposition to tyranny and mob rule particularly appealed to the delegates at the Convention, as did his belief in the mixed constitution and in the importance of a strong and prosperous middle class as the foundation of political stability. By contrast, Gummere points out, Plato “rarely appeared in colonial America as an authority on governmental matters” (p. 179).

• HAMBURGER, MAX, *Morals and Law: The Growth of Aristotle’s Legal Theory*, new ed. (New York, 1965). Examines Aristotle’s concepts of law and justice as set forth, primarily, in his *Ethics*, *Politics*, and *Rhetoric*. The author holds that Aristotle’s legal and political theory went beyond that of his predecessors, including Plato, and that “it is with Aristotle that modern legal and political science really begins” (p. 182). He concludes as follows: “There is a perfect harmony between Aristotle’s ethical, legal, and political theory—the theory of the right mean is the basis; *philia*, social sympathy, is the life force; equity, fairness, reasonableness, and humaneness the leitmotiv; and well-being, i.e., human happiness and perfection, the supreme end” (p. 183). A diametrically opposed view will be found in Hans Kelsen, “Aristotle’s Doctrine of Justice” (in his *What Is Justice: Justice, Law, and Politics in the Mirror of Science*, Berkeley and Los Angeles, 1957, pp. 110–136). Kelsen holds that the Aristotelian principle of giving everyone his due, or “to each his own,” is a purely tautological formula, and that “it is so interesting because it shows the unlimited possibility of using this formula to any purpose whatever” (p. 136). See also W. von Leyden, “Aristotle and the Concept of Law,” *Philosophy*, XLII (January, 1967), 1–19. For an analysis of Aristotle’s concept of justice from the standpoint of linguistic philosophy, see Renford Bambrough, “Aristotle on Justice: A Paradigm of Philosophy,” in Renford Bambrough (ed.), *New Essays on*

Plato and Aristotle (New York, 1965), pp. 159-174.

• JAEGER, WERNER, *Aristotle: Fundamentals of the History of His Development* (Oxford, 1934). A biography of Aristotle's intellectual development. The last chapter is on "Aristotle's Place in History" (pp. 368-406).

• KELSEN, HANS, "The Philosophy of Aristotle and the Hellenic-Macedonian Policy," *Ethics*, XLVIII (October, 1937), 1-64. This essay on Aristotle stresses the inner relation and resemblance between Plato and Aristotle, in philosophy as in political thought, and paints a vivid picture of the background of Aristotle's *Politics*. Kelsen is particularly interested in the impact of Macedonian policy on Aristotle's ideas.

• KIERNAN, THOMAS P. (ed.), *Aristotle Dictionary* (New York, 1962). The main ideas and concepts of Aristotle presented in dictionary form, documented by textual passages from Aristotle's writings.

• LEYDEN, WOLFGANG VON, *Aristotle on Equality and Justice: His Political Argument* (New York, 1985). Seeks to contribute both to Aristotelian scholarship and modern discussions of equality and justice. Leyden finds that, as the result of Aristotle's inequalitarian views, Aristotle's argument on justice (particularly regarding the division of social goods) is that "fair shares need not always be equal."

• MORRALL, JOHN, *Aristotle* (London, 1977). Part of the "Political Thinkers" series. Gives a full, but brief, presentation of Aristotle's political theory, with particular attention to his historical context.

• MULGAN, R. G., *Aristotle's Political Theory* (Oxford, 1977). Subtitled "An Introduction for Students of Political Theory," this is an excellent place to start for a comprehensive, yet concise, examination of the *Politics*.

• MURE, G. R. G., *Aristotle* (London, 1932). Part I is called "The Heritage of Aristotle" (pp. 3-68), Part II, "The Philosophy of Aristotle" (pp. 71-230), and Part III, "The Verdict of History" (pp. 233-274), a stimulating survey of the impact of Aristotelianism from antiquity to

the modern period. A volume in the Leaders of Philosophy series. See also D. J. Allan, *The Philosophy of Aristotle* (New York, 1952), and Werner Marx, *The Meaning of Aristotle's Ontology* (The Hague, 1954), for general philosophical studies of Aristotle's thought.

• NEWMAN, WILLIAM L., *The Politics of Aristotle*, 4 vols. (Oxford, 1887-1902). The first volume is a detailed and scholarly introduction to the *Politics*; the other three volumes contain the Greek text of the *Politics*, with notes and critical comments. Comparing the Aristotelian conception of the state with modern views, the author writes: "We look back to a succession of States which have helped to build up the fabric of European civilization, and the State which has not fought a Salamis, or done great things for religion or law or science, falls, in our view, behind the State which has. We regard the State not as living to itself and dying to itself, but as influencing for good or ill the destinies of mankind. Aristotle, on the contrary, knows nothing of the historical mission of States. He looks to the quality of the life, not to the results achieved—to the intrinsic nobility of the life lived, not to its fruitfulness in consequences" (I, 562-563).

• OATES, WHITNEY J., *Aristotle and the Problem of Value* (Princeton, 1963). This study, one of the most painstaking and comprehensive analyses of Aristotle's conception of value in English, draws on Aristotle's philosophical, metaphysical, ethical, and political writings as well as on his biological, psychological, and physical treatises. The main purpose of the work is the examination of the relation of "Being and Value by a comparative analysis of the metaphysical positions of Plato and Aristotle" (p. 369). Chap. VII (pp. 260-334) deals with the problem of value as it appears in Aristotle's *Nicomachean Ethics* and *Politics*. Oates points out that in Aristotle's view ethics and politics were not two separate disciplines but rather "two closely related aspects of a single subject" (p. 321). In particular, Oates stresses Aristotle's ethical doctrine of the mean or

moderation as a key principle of his views on property, law, and constitutional government. See also the following: Henry B. Veatch, *Rational Man: A Modern Interpretation of Aristotelian Ethics* (Bloomington, 1962); James J. Walsh and Henry L. Shapiro (eds.), *Aristotle's Ethics: Issues and Interpretations* (Belmont, Calif., 1967); Ronald D. Milo, *Aristotle on Practical Knowledge and Weakness of Will* (The Hague, 1966); J. M. E. Moravcsik (ed.), *Aristotle: A Collection of Critical Essays* (Garden City, N.Y., 1967), covers Aristotle's *Ethics* in Part IV (pp. 241-333). Clarence Shute, *The Psychology of Aristotle: An Analysis of the Living Being* (New York, 1964), examines in Chap. III (pp. 57-83) "The Initiation and Control of Behavior," in which ethical considerations, too, operate.

• POPPER, KARL R., *The Open Society and Its Enemies* (Princeton, 1950). Chap. XI critically presents several aspects of Aristotelianism (pp. 199-222).

• RANDALL, JOHN H., JR., *Aristotle* (New York, 1960). In this general account of Aristotle's thought, the author stresses its empirical characteristic. In particular, Randall holds that the *Politics* is written less from the standpoint of the moral physician of the soul, and more from that of "the natural philosopher observing and analyzing nature's way with human governments, the natural processes of the generation and the destruction of organized human societies" (p. 256). In comparing the *Politics* with Plato's *Republic*, Randall writes: "There is in Aristotle none of the free play of the imagination to be found in the *Republic*, there is no talk of 'remolding human nature' in the light of a more perfect model than that used by God in creating man. There is a sense of the limits imposed by the encountered facts of experience, and of a bondage to them" (pp. 247-248). A more concise account of Aristotle's general philosophy will be found in Marjorie Grene, *A Portrait of Aristotle* (London, 1963).

• ROBIN, LÉON, *Aristotle* (Paris, 1944). A general account of Aristotle's scientific,

philosophical, and political ideas. The author, a leading French student of Greek thought, concludes his analysis of Aristotle's political theory by doubting whether it is as profound as is commonly assumed. In particular, Robin is surprised that Aristotle saw in the old Greek city-state the normal form of political organization, at the very time when his close personal association with "Macedonian imperialism" should have shown him that the city-state was doomed. Robin concludes that "a somewhat narrow empiricism and a prematurely too broad systematization are the substance of Aristotelian thinking on politics" (p. 283). A succinct account of the *Politics* will also be found in Robin's *Greek Thought and the Origins of the Scientific Spirit* (London-New York, 1928), pp. 268-276. The main criticism there of Aristotle is that he failed to see properly "the great events which were happening or brewing before his eyes in the Greek world. His eyes, like Plato's, were turned on the past, on the small self-centered republic, and he sought its future, blindly, in a reinforcement of that concentration" (p. 276).

• ROSS, W. D., *Aristotle*, 2nd ed. (London, 1930). Chap. VIII deals with Aristotle's political thought (pp. 235-269).

• STEENBERGHEN, FERNAND VAN, *Aristotle in the West: The Origins of Latin Aristotelianism* (Louvain, 1955). Aims to show "how the union between Aristotelianism and traditional Christian thought came about" (p. 5). The emphasis is on the role of Paris and Oxford Universities in the introduction of Aristotelianism in the thirteenth century. See also Ingemar Duering, *Aristotle in the Ancient Biographical Tradition* (Goeteborg, 1957).

• WINN, CYRIL, and MAURICE JACKS, *Aristotle: His Thought and Its Relevance Today* (London-New York, 1967). This brief volume in "The Library of Educational Thought" summarizes Aristotle's ideas on education and their relevance to educational programs and objectives today. See also William K. Frankena, *Three Historical Philosophies of Education: Aristotle, Kant, Dewey* (Chicago, 1965).

CHAPTER FIVE

POLYBIUS

- ABBOTT, EVELYN (ed.), *Hellenica: A Collection of Essays on Greek Poetry, Philosophy, History and Religion* (Oxford and Cambridge, 1880). The essay, "Polybius" (pp. 387-424), is by James Leigh Strachan-Davidson; it provides the background of Polybius' deportation to Rome and critically examines the character of his political and historical views.
- BALDREY, H. C., *The Unity of Mankind in Greek Thought* (Cambridge, 1965). In his account of Polybius with regard to the problem of the unity of mankind (pp. 171-176), Baldrey stresses Polybius' moving away from a narrow national historical perspective toward a broader transnational conception: "The main part of Polybius' work is indeed an embodiment of the idea of human affairs, springing directly from the rise of Roman power to balance the intellectual leadership of Greece" (p. 176). Yet Baldrey also correctly points out that Polybius, while transcending national frontiers, continued to accept the traditional divisions of class and status, including the institution of slavery.
- CHINARD, GILBERT, "Polybius and the American Constitution," *Journal of the History of Ideas*, I (January, 1940), 38-58. Illuminating on the role and use of Polybius' ideas in the making of the American Constitution. The author gives a brief account of the classical background and education of the revolutionary leaders and then shows specifically, without overstressing his case, to what extent Polybius was a conscious intellectual influence at that time.
- FRITZ, KURT VON, *The Theory of the Mixed Constitution in Antiquity: A Critical Analysis of Polybius' Political Ideas* (New York, 1954). Presents, in a masterly fashion, the historical and analytical background of the theory of the mixed constitution, the most influential of Polybius' doctrines in antiquity as well as in the modern age, particularly in the formative stage of the United States.
- GLOVER, T. R., *Springs of Hellas* (Cambridge, 1945). Chap. VI, "Polybius at Rome" (pp. 109-130), is the best short summary of the main events in Polybius' life and his leading political and historical ideas.
- USHER, S., "Polybius," *History Today*, XIII (April, 1963), 267-274. In dealing with the political ambiguity of Polybius' views, the author writes that "the task that Polybius set himself was not one likely to promote his work's popularity among his countrymen: for he proposed to prove to them that Rome was irresistible, and that any people, Greeks included, who opposed her would be courting national disaster" (p. 270).
- WALBANK, F. W., *A Historical Commentary on Polybius* (Oxford, 1957). The most detailed commentary in English on Polybius' *Histories*, preceded by a detailed bibliography (pp. xiii-xxvii) and a lengthy Introduction on the life and thought of Polybius (pp. 1-37). See also Walbank's "Polemics in Polybius," *Journal of Roman Studies*, LII (1962), 1-12.
- ———, *Polybius* (Berkeley, CA, 1972). A recent work on Polybius, which was originally delivered as the Sather classical lectures. Includes a bibliography. See, further, Walbank's *Selected Papers: Studies in Greek and Roman History and Historiography* (Cambridge, Engl., 1985), which includes a number of papers about Polybius.

CHAPTER SIX

CICERO

- BAILEY, CYRIL (ed.), *The Legacy of Rome* (Oxford, 1923). Contains chapters on empire, administration, communications and commerce, law, family and social life, religion and philosophy, science, literature, art, engineering, and agriculture, written by authorities in their respective fields. Profusely illustrated, this volume is ideally suited as an introduction to Roman thought and civilization. See also R. H. Barrows, *The Romans* (Pelican Books, Harmondsworth, 1949), and Paul MacKendrick, *The Roman Mind at Work* (Anvil Books, Princeton, 1958).
- BAILEY, D. R. SHACKLETON, *Cicero* (New York, 1971). A life of Cicero largely through his letters.
- BARKER, ERNEST, *Church, State, and Study: Essays* (London, 1930). Chap. I (pp. 1-43) is "The Roman Conception of Empire," and Chap. VII (pp. 171-192) "The 'Rule of Law.'"
- BUCKLAND, W. W., and ARNOLD D. MCNAIR, *Roman Law and Common Law: A Comparison in Outline*, 2nd ed. (Cambridge, 1965). The authors stress the point that, while the theoretical conceptions of the Roman law and common law are different, "the practical rules of the two systems show an astonishing amount of similarity" (p. xx). Chap. I, "The Sources" (pp. 1-20), is most relevant to the study of the history of political thought.
- CARLYLE, R. W., and A. J. CARLYLE, *A History of Medieval Political Theory in the West*, 3rd ed. (Edinburgh-London, 1930), Vol. I. The first chapter, "The Political Theory of Cicero" (pp. 1-18), is built around the thesis that there "is no change in political theory so startling in its completeness as the change from the theory of Aristotle to the later philosophical view represented by Cicero and Seneca. Over against Aristotle's view of the natural inequality of human nature we find set out the theory of the natural equality of human nature" (p. 8).
- CHINARD, GILBERT, "Polybius and the American Constitution," *Journal of the History of Ideas*, I (January, 1940), 38-58. The author points out that "most of the men who made a name for themselves during the revolutionary era were no mean classical scholars. That they read Locke and later Montesquieu cannot be disputed; but at all times they studied and memorized Cicero and some of the Greek historians. It was from Cicero particularly, among the ancients, that they derived their ideals of liberty and government" (p. 40). See also Richard M. Gummere, *The American Colonial Mind and the Classical Tradition* (Cambridge, Mass., 1963), pp. 176 ff.
- CICERO, MARCUS TULLIUS, *Brutus: On the Nature of the Gods: On Divination: On Duties* (Chicago, 1950). With an excellent "Introduction to the Philosophy of Cicero" (pp. 1-65) by Richard McKeon.
- ———, *On the Commonwealth* (trans., with Notes and Introduction, by George H. Sabine and Stanley B. Smith, Columbus, Ohio, 1929). Chap. III of the Introduction deals with Cicero's political theory (pp. 39-67), and there is a useful bibliography (pp. 100-102). The text of the *Republic* (called by the translators *On the Commonwealth*) is profusely annotated.
- CROOK, JOHN, *Law and Life of Rome* (Ithaca, N.Y., 1967). Analyzes Roman law, not as a body of legal rules and concepts, but as a reflection of Roman society and as an influence on it. The first, introductory chapter (pp. 7-35) surveys the sources of Roman law, the relation of law to custom, the development of legal

practice and jurisprudence, and the processes by which law was created. Chap. II (pp. 36-67) deals with "The Law of Status," and covers such subjects as citizenship, free status, and slavery. Chap. III (pp. 68-97) deals with "The Machinery of the Law," and shows the slow evolution of the judicial process. Chaps. IV-VII take up substantive law in the areas of the family, property, labor, and commerce, and are greatly enriched by numerous illustrative cases of Roman social and economic life. The final chapter (pp. 250-285) analyzes the relations of "The Citizen and the State" (pp. 250-285), both the citizen's rights and duties toward the state.

• DOREY, T. A. (ed.), *Cicero* (New York, 1965). This symposium by eminent classical scholars presents Cicero as a man, thinker, writer, and leading statesman, and also provides illuminating insights into Roman political values and attitudes. See also: R. E. Smith, *Cicero the Statesman* (Cambridge, 1966); Torsten Pettersson, *Cicero: A Biography* (New York, 1963); and F. R. Cowell, *Cicero and the Roman Republic*, 2nd ed. (Baltimore, 1962). Edith Hamilton, *The Roman Way to Western Civilization* (Mentor Books, New York, 1957), devotes three chapters (pp. 42-75) to Cicero, depicting him as a man and politician, and drawing copiously on Cicero's letters, since he was one of the great letter-writers in world literature. John Dickinson, *Death of a Republic: Politics and Political Thought at Rome, 59-44 B.C.* (New York, 1963), presents a detailed analysis of Cicero's political thought and career in Chap. VI (pp. 257-323). Dickinson concludes that Cicero's "conception of mixed government leaves room for the ultimate supremacy of the people and for the leadership of an eminent individual. Likewise, his emphasis on the importance of laws and institutions is combined with recognition of the necessity and value of the noninstitutional element in a nation's life—the spirit and temper of the people, their character as individuals, and above all the personal character and qualifications of their leaders. In other words, the striking quality of Cicero's thought is that there was nothing

mechanical or doctrinaire about it—he was not, in Napoleon's phrase, an ideologue" (p. 322).

• EARL, DONALD, *The Moral and Political Tradition of Rome* (Ithaca, N.Y., 1967). Seeks to show how the ideas and ideals of the Roman nobility became the traditional dominant outlook of the governing classes and later of all educated Romans. Chap. I, "Morality and Politics" (pp. 11-43), is the longest in the book and the most pertinent to the student of political thought. The two outstanding virtues expected of the Roman aristocrat, the author says, were courage and wisdom. However, wisdom did not mean "a rarefied philosophic detachment or an intellectual enquiry into first causes and the nature of things. It meant practical political judgment" (p. 33). See also F. E. Adcock, *Roman Political Ideas and Practice* (Ann Arbor Paperbacks, Ann Arbor, 1964), and M. L. Clarke, *The Roman Mind: Studies in the History of Thought from Cicero to Marcus Aurelius* (Cambridge, Mass., 1960).

• GRANT, MICHAEL, *The World of Rome* (Mentor Books, New York, 1961). Profusely illustrated, this is one of the most successful compact accounts of Roman civilization as a whole, treating government and law, philosophy and religion, and literature and the arts. Also has a useful bibliography (pp. 336-339). See also A. H. McDonald, *Republican Rome* (New York, 1966); Harold Mattingly, *Roman Imperial Civilization* (Anchor Books, Garden City, N.Y., 1959); and Jérôme Carcopino, *Daily Life in Ancient Rome* (Penguin Books, Harmondsworth, 1962). For straight histories, see M. Rostovtzeff, *Rome* (Galaxy Books, New York, 1960), and Donald R. Dudley, *The Civilization of Rome* (Mentor Books, New York, 1960).

• HASKELL, H. J., *This Was Cicero: Modern Politics in a Roman Toga* (New York, 1942). Fresh, readable, and written with a keen sense of human drama. The author, a newspaperman with a thorough knowledge of politics in Kansas City and Washington, justifies his biography on the ground that it takes into account "factors that have escaped the attention of biographers who were not familiar with politics

in action," and his work successfully conveys the political atmosphere in Rome during Cicero's lifetime. Extensive bibliographical notes will be found (pp. 368-406). See also G. C. Richards, *Cicero: A Study* (London, 1935), an account of Cicero's life and thought. The author concludes that "Cicero's position in Rome was one of great influence, because in the total absence of the Press, the Pulpit and the University, he in his single person supplied something of all three" (p. 282). *Eternal Lawyer: A Legal Biography of Cicero*, by (Judge) Robert N. Wilkin (New York, 1947), is a stimulating study of Cicero's career and ideas from the viewpoint of a lawyer with wide interests. The author points out that Cicero "was the first to use the word 'constitution' in its modern sense of public law of the state or law by which government itself was limited," and he stresses Cicero's impact on the makers of the American Constitution (pp. 217 ff.).

• LACEY, WALTER, *Cicero and the End of the Roman Republic* (London, 1978). A biography that places Cicero in his context, briefly discusses his impact, and contains a useful bibliography.

• LEE, R. W., *The Elements of Roman Law: With a Translation of the Institutes of Justinian* (London, 1944). The introduction (pp. 1-43) is a general survey of the Roman law, of interest to the student of law as well as the student of political thought. The remainder of the book is a translation of the *Institutes* of Justinian. Thomas Collett Sanders, *The Institutes of Justinian* (London-New York, 1903), contains the text of the *Institutes* in Latin and English, with detailed notes and commentaries. Whereas the *Institutes* are brief and elementary, the extensive code of Justinian is the *Digest*, a translation of which will be found in *The Digest of Justinian* (trans. Charles H. Monro, 2 vols., Cambridge, 1909). The beginning of the first volume contains the sections on the nature and types of law that are of most general interest. Paul Vinogradoff, *Roman Law in Mediaeval Europe* (Oxford, 1929), traces the spread of Roman law throughout Europe in the Middle Ages and its adaptation to local customs and needs.

England remained the only country in Europe which did not "receive" Roman law as its general system of law in the late medieval and early modern periods, developing its own system of Common Law as the only other law in the Western world. Why did England not receive the Roman law when all other European nations eagerly turned to it? The answer is to be found in a famous lecture of Frederic William Maitland, *English Law and the Renaissance* (Cambridge, 1901).

• MITCHELL, THOMAS, *Cicero: The Ascending Years* (New Haven, Conn., 1979). Concentrates on the first two-thirds of Cicero's life and the political heritage that shaped his ideas, also tracing the way his political ideas affected his practical politics.

• NEDERMAN, CARY, "The Ciceronian Tradition in Medieval Political Thought," *Journal of the History of Ideas* (January-March, 1988). Tracks Cicero's later political influence, noting: "Cicero was the only political thinker of pagan antiquity whose writings continued to be accessible to the Christian West following the collapse of Roman domination."

• RAND, E. K., *Cicero in the Courtroom of St. Thomas Aquinas* (Milwaukee, 1946). A study of Cicero's influence on St. Thomas Aquinas from a general philosophical and literary viewpoint. Cicero was one of the three ancient Latin authors most frequently referred to by St. Thomas Aquinas, the other two being Seneca and Boethius.

• RAWSON, ELIZABETH, *Cicero* (London, 1975). The best recent biography.

• ROLFE, JOHN C., *Cicero and His Influence* (Boston, 1923). A volume in the Our Debt to Greece and Rome series, which defends Cicero against his critics, and traces his influence from antiquity to modern times. See also Hans Baron, "Cicero and the Roman Civic Spirit in the Middle Ages and Early Renaissance," *The John Rylands Library Bulletin*, XXII (April, 1938), 72-97, and Tenney Frank, *Cicero* (Annual Lecture on a Master Mind, in *Proceedings of the British Academy*, London, 1932, pp. 111-134), who summarizes Cicero's influence on the Middle Ages and Renaissance

as follows: "To the thinkers of the Middle Ages, who did not have access to the earlier sources, Cicero's philosophical dialogues were full of illumination and suggestion, and they played a decided role in humanizing philosophy in the fifteenth and sixteenth centuries. Without them the western world would not have been ready to comprehend the libraries of Greek thought that came westward during the renaissance. Even Copernicus confessed that it was from a citation found in Cicero that he formed the idea of the earth's revolutions. Furthermore, these essays are our only source for much of the lost post-Aristotelian work. But apart from our gratitude, the works themselves are of considerable interest because we can discover from them the spirit in which a cultivated Roman of the Republic approached the problems they discuss" (p. 127). An illuminating study, full of interesting historical detail, on Cicero's literary sources of inspiration and his love of books will be found in T. R. Glover, *Springs of Hellas and Other Essays* (Cambridge, 1945), pp. 131-159 ("Cicero among His Books").

- SHERWIN-WHITE, A. N., *The Roman Citizenship*, 2nd ed. (Oxford, 1973). A comprehensive investigation of Roman citizenship from the times of the republic to those of the empire.
- TAYLOR, HANNIS, *Cicero: A Sketch of His Life and Works* (Chicago, 1918). A comprehensive work, whose usefulness is enhanced by a bibliography (pp. xxxvii-

xliv), and an appendix, "The Sayings of Cicero" (pp. 459-603), an anthology of about a thousand extracts selected from Cicero's writings and correspondence. Cicero's correspondence, an unusually rich source for the study of his temper and personality, ranks among the great examples of letter writing in world literature. See also Harold A. K. Hunt, *The Humanism of Cicero* (Melbourne, 1954).

- WIRSZUBSKI, CH., *Libertas as a Political Idea at Rome During the Late Republic and Early Principate* (Cambridge, 1960). Examines the corrosion of the concept and practice of political liberty in the two centuries between the Gracchi and Trajan. See also Ramsay MacMullen, *Enemies of the Roman Order: Treason, Unrest, and Alienation in the Empire* (Cambridge, Mass., 1966) for a uniquely valuable inquiry into the main philosophical, social, and political movements of dissent and revolt, particularly as republican institutions were increasingly replaced by a highly centralized, and ultimately autocratic, monarchy. An extensive bibliography (pp. 269-292) greatly enhances the usefulness of the pioneering work.

- WOOD, NEAL, *Cicero's Social and Political Thought* (Berkeley, 1988). The major work on this subject in decades. Wood's thesis is that Cicero is an important political philosopher, and that anticipations of much of what came later in political theory are found in his writings.

CHAPTER SEVEN

STOICISM AND EPICUREANISM

- ARNOLD, E. VERNON, *Roman Stoicism* (Cambridge, 1911). Includes an extensive bibliography (pp. 437-450). The last chapter stresses the profound impact of Stoicism on Christianity (pp. 408-436).
- ASMIS, ELIZABETH, *Epicurus' Scientific Method* (Ithaca, N.Y., 1984). A

comprehensive study of Epicurus' scientific thought.

- BAILEY, CYRIL, *The Greek Atomists and Epicurus* (Oxford, 1928). A dated study on Epicurus' system, and the influence of the Greek atomic philosophers on him.

- BARKER, ERNEST, *From Alexander to Constantine: Passages and Documents Illustrating the History of Social and Political Ideas 336 B.C.-A.D. 337* (New York, 1956). The best sourcebook on the political thought of the Hellenistic period, including many less well-known materials.

- BEVAN, EDWYN, *Stoics and Sceptics* (Cambridge, 1959). The author sees the main beneficial impact of Stoicism in the fact that it "did nerve innumerable men for centuries to brave action and brave endurance in a world where brute force and cruelty had dreadful scope" (p. 76). Yet the Stoic ideal of inner tranquillity and detachment is also seen as its main weakness, and Bevan draws some interesting comparisons between this ideal and that of ancient Hindu philosophy and religion: "In India also complete detachment from the world of Fear and Desire has been for multitudes the supreme goal of wisdom, and Buddhism has carried from India the ideal of Detachment to the great nations which it has penetrated farther East. The Bhagavad-gita and the Buddhist scriptures present strange harmonies of language with the Stoic teaching; here, too, we find a great deal about good action, with the proviso that such action must be unaccompanied with desire; a great deal about benevolence, provided that there be no love. I think it is important to realize that mankind has two different ideals before it; and I do not see how the ideal of Detachment is compatible with the ideal of Love" (pp. 68-69).

- BIRLEY, ANTHONY, *Marcus Aurelius* (Boston, 1966). In this highly readable biography, the author shows how Marcus Aurelius managed to keep his Stoic serenity throughout his whole life, in spite of the many persistent difficulties and tribulations he had to face as an emperor as well as a husband and father. Chap. X (pp. 289-304) is on the *Meditations*. In Appendix IV (pp. 328-331) the author deals with the persecutions of Christians under the reign of Marcus Aurelius. Profusely illustrated, the volume has a detailed bibliography (pp. 332-339).

- CHRISTENSEN, JOHNNY, *An Essay on the Unity of Stoic Philosophy* (Copenhagen,

1962). The author concludes that "the identification of the supreme moral law with the all-determining law of Nature is the crowning achievement of the Stoic quest for unity. If the rationality of man, fully expanded in its scope, is the same rationality that governs Nature, man's striving for freedom is no longer senseless" (p. 73).

- CLAY, DISKIN, *Lucretius and Epicurus* (Ithaca, N.Y., 1983). A Straussian approach; this book concentrates more on Lucretius than on Epicurus.

- DE WITT, NORMAN, *Epicurus and His Philosophy* (Minneapolis, 1954). The most accessible work on Epicurus.

- EDELSTEIN, LUDWIG, *The Meaning of Stoicism* (Cambridge, Mass., 1966). In one hundred pages, the author manages to present the main ideas of Stoicism in a sympathetic, and yet not uncritical, manner. With respect to Stoic economic philosophy, the author holds that the Stoics accepted private property, but felt that the inequalities of a private property system cannot be resolved either by statism or *laissez faire*. They considered wealth as a trust rather than as absolute ownership, and they "asked the individual to learn that it is necessary for him to live for others and that he is born for human society at large, of which he must always feel himself to be a member rather than a fragment separated off" (p. 79). In politics, the Stoics were indifferent to the various forms of government, and the "judgment passed upon them depends on the spirit in which those in power govern" (p. 86). This disregard of institutions is considered by Edelstein one of the most vulnerable points in Stoic thought, since they "put the whole responsibility on the individual and underestimated the importance of institutions" (p. 96). Finally, the author criticizes the Stoic view of reason according to which "evil is nothing but misunderstanding and that enlightenment and change of conditions can restore man to his original good nature. We have learned to our dismay that if there is coolness of moral action and help without sympathy or love, there is also passionless crime, crime for the sake of crime, abetted and supported by reason" (p. 97). Yet, despite

such criticisms, the author concludes that Stoicism is "the creed of all freedom-loving men" (p. 98). Throughout, the author also shows the impact of Stoicism on later ages, including the framers of the American Constitution.

- FARQUHARSON, A. S. L., *The Meditations of the Emperor Marcus Antoninus*, 2 vols. (Oxford, 1944). The first volume contains a long introduction, the Greek text and English translation of the *Meditations*, the story of Marcus Aurelius' life, and a detailed commentary on the *Meditations*, book by book, and chapter by chapter. The second volume comments on the Greek text. All in all, this is the most scholarly edition of the *Meditations* and indispensable to the study of Marcus Aurelius and Stoic thought. See also Farquharson's biography, *Marcus Aurelius: His Life and His World*, 2nd ed. (Oxford, 1952), the last chapter of which (pp. 122-141) is on "The Religion of Stoicism." In an Appendix (pp. 142-148), the author deals with "The Christian Churches Under Marcus." Farquharson points out that atheism was "the charge most often in men's mouths about the Christians. It was part of the burden and dislike they inherited from the Jews. It means that they scorned the divinities of the pagan world" (p. 143).
- FARRINGTON, BENJAMIN, *The Faith of Epicurus* (New York, 1967). A sympathetic and brief presentation of Epicurus' thought. Chapter six is "Political Religion."
- HAHM, DAVID, *The Origins of Stoic Cosmology* (Columbus, Ohio, 1977). A relatively technical work concentrating on Stoic physics and its beginnings.
- HAYWARD, F. H., *Marcus Aurelius: A Saviour of Men* (London, 1935). See also the following biographies: C. Clayton Dove, *Marcus Aurelius Antoninus: His Life and Times* (London, 1930); John C. Joy, *The Emperor Marcus Aurelius: A Study in Ideals* (Dublin, 1913); Henry Dwight Sedgwick, *Marcus Aurelius* (New Haven, 1921); and Paul Barron Watson, *Marcus Aurelius Antoninus* (New York, 1884).
- HIBLER, RICHARD, *Happiness Through Tranquility: The School of Epicurus* (Lanham, Maryland, 1984). A very brief study

on Epicurus, concentrating on his ethical thought.

- INWOOD, BRAD, *Ethics and Human Action in Early Stoicism* (Oxford, 1985). A book about the Stoic conception of human nature and how, in this conception, humans differ from animals.
- MITSIS, PHILLIP, *Epicurus' Ethical Theory* (Ithaca, N.Y., 1989). A scholarly investigation of the subject. Chapter two is "Justice and the Virtues."
- MURRAY, GILBERT, *The Stoic Philosophy* (Conway Memorial Lecture, New York-London, 1915). One of the outstanding essays in the vast literature on Stoicism. Reprinted in Murray's *Stoic, Christian, and Humanist* (London, 1940), pp. 89-118. See also Margaret E. Reesor, *The Political Theory of the Old and Middle Stoa* (New York, 1951).
- NICHOLS, JAMES, *Epicurean Political Philosophy* (Ithaca, N.Y., 1976). A study of *On the Nature of Things* by Lucretius. Nichols's thesis is that there is an Epicurean political philosophy, although there is no surviving specifically Epicurean political work.
- REESOR, MARGARET, *The Nature of Man in Early Stoic Philosophy* (London, 1989). A study of Stoic philosophers from 312 to 129 B.C.
- RENAN, ERNEST, *Marcus Aurelius* (trans. Walter G. Hutchinson, Camelot Series, London-Newcastle-on-Tyne, n.d.). One of the finest appreciations of Marcus Aurelius. Speaking of the worship that followed the emperor's death, Renan says: "Never was worship more legitimate, and it remains our own today. Yes, every one of us wears mourning in his heart for Marcus Aurelius, as though he died but yesterday" (p. 242). The main theme of the volume, the seventh and last of Renan's *Origines du Christianisme*, is the development of Christianity under Marcus Aurelius and the relation of Christianity ("the great principle which has effected moral reformation by faith in the supernatural") and of Stoicism ("the finest effort of the lay school of virtue which the world has up till now ever known").
- RIST, JOHN, *Stoic Philosophy* (London, 1968). A study not on Stoic philosophers,

but, as its title states, on Stoic philosophy. Later, Rist wrote *Epicurus* (Cambridge, Eng., 1972), a comprehensive but brief introduction to Epicurus.

- ROSTOVITZ, M., *The Stoic and Economic History of the Hellenistic World*, 3 vols. (Oxford, 1941). Indispensable to an understanding of the background of Stoicism and of the whole period of Hellenistic civilization. See also his *Social and Economic History of the Roman Empire* (Oxford, 1926), in the last chapter of which the author examines the problem of decay of ancient civilization, and concludes as follows: "The evolution of the ancient world has a lesson and a warning for us. Our civilization will not last unless it be a civilization not of one class, but of the masses" (pp. 486-487).
- SANDBACH, F., *The Stoics* (New York, 1975). A good brief introduction to Stoicism and leading Stoics. Contains a short, but useful, bibliography.
- STOZIER, ROBERT, *Epicurus and Hellenistic Philosophy* (Lanham, Maryland, 1985). A work on the differences between Lucretius and Epicurus.

CHAPTER EIGHT

THE JUDEO-CHRISTIAN BACKGROUND

- AYERS, ROBERT, *Judaism and Christianity* (Lanham, Maryland, 1983). An introduction to the major beliefs, perspectives, and traditions of Judaism and Christianity. The first six chapters are on ancient Judaism and early Christianity.
- BOMAN, THORLEIF, *Hebrew Thought Compared With Greek* (London, 1960): Throughout the ages, the comparative study of early Christianity has often probed into the Hebrew and Greek elements that went into its making. Boman's pioneering work provides a more original approach to the problem. He does not seek to compare the contents of Hebrew and Greek ideas and values, but to discover

what differences and similarities there are between the Hebrew *style of thought* as compared with the Greek, comparing "the intellectual world of the Old Testament with the intellectual world of the Greek, principally that of the philosophers, and particularly that of Plato" (p. 20). According to Boman, "the Greeks describe reality as *being*, the Hebrews as *movement*" (p. 208), yet this distinction is not absolute but expresses two possible and equally necessary reactions to reality, mutually complementing each other. In *Culture and Anarchy* (London, 1869), an analysis of the basic forces and tensions in modern culture, Matthew Arnold extensively dealt

with some aspects of the problem (particularly in the Preface and pp. 142–197). Arnold sees in Hebraism and Hellenism the two basic forces: “between these two points of influence moves our world” (p. 143). The “uppermost idea” in Hebraism is “right acting,” whereas in Hellenism it is “right thinking.” Arnold assigned to right acting the priority over right thinking, and he called Puritanism—one of the most powerful forces in shaping modern England—“a reaction of Hebraism against Hellenism” (p. 163). Reinhold Niebuhr, the most influential religious thinker of the twentieth century, deals with the issue of Hebrew and Greek elements in Christianity in many of his works (see, for example, his *The Self and the Dramas of History*, New York, 1955, pp. 75–88): “The basic fallacy of the Greek philosophers was to regard the rational faculty as the source of virtue. This error was partly due to their failure to recognize the ability of the self to use its reason for its own ends” (p. 84). By contrast, the Hebrew conception of man, Niebuhr argues, is more empirical than the Greek, for it understands the unity of man’s body, mind, and soul: “The self is not related to God by sharing its reason with God and finding a point of identity with the divine through the rational faculty. The self is related to God in repentance, faith, and commitment.” See also Martin Buber, *Pointing the Way* (New York, 1963), pp. 182–191; Norman Bentwich, *Hellenism* (Philadelphia, 1943); Dom Gregory Dix, *Jew and Greek: A Study in the Primitive Church* (London, 1953); and C. H. Dodd, *The Bible and the Greeks* (London, 1935); and G. H. C. Macgregor and A. C. Purdy, *Jew and Greek: Tutors unto Christ* (Edinburgh, 1959).

- BONSIRVEN, JOSEPH, *Palestinian Judaism in the Time of Jesus Christ* (trans. William Wolf, New York, 1964). A brief work on the beliefs of Jews in Palestine at the time of Jesus.
- BOX, GEORGE, *Early Christianity and Its Rivals* (New York, 1929). This book is about the conflict between religions in the early Roman Empire.
- BULTMANN, RUDOLF, *Primitive Christianity* (trans. R. H. Fuller, New York,

1956). Contains sections on “The Old Testament Heritage,” “Judaism,” “The Greek Heritage,” “Hellenism,” and “Primitive Christianity.”

- DAVIES, JOHN, *The Early Christian Church* (New York, 1965). A detailed examination of the development of early Christianity. For a more social historical approach, see Davies’ *Daily Life in the Early Church* (London, 1952).
- DAVIES, W. D., and LOUIS FINKELSTEIN, (eds.), *The Cambridge History of Judaism*, 2 vols. (Cambridge, Eng., 1984–1989). A major recent scholarly addition to works available on Jewish history. Volume I is on the Persian period; volume II, on the Hellenistic. Two more volumes, on later Jewish history, are planned.
- GOWAN, DONALD, *Bridge Between the Testaments*, 3rd ed. (Allison Park, Penn., 1986). A history of Judaism between the fall of Jerusalem in 587 B.C. and the failure of the second revolt against Rome in A.D. 135.
- GUIGNEBERT, CH., *The Jewish World in the Time of Jesus* (trans. S. H. Hooke, London, 1939). A comprehensive history and description.
- HALLIDAY, WILLIAM, *The Pagan Background of Early Christianity* (Liverpool, Eng., 1925). An extensive discussion of Greco-Roman elements in Christianity.
- HATCH, EDWIN, *The Influence of Greek Ideas on Christianity* (New York, 1957). As an introduction into the subject, this is the standard work. The influence of Plato and Platonism on Christian thought and theology is stressed (see particularly pp. 238–240). The following may also be consulted: A. H. Armstrong and R. A. Markus, *Christian Faith and Greek Philosophy* (London, 1960); E. R. Dodds, *Pagan and Christian in an Age of Anxiety* (Cambridge, 1965); William Fairweather, *Jesus and the Greeks* (Edinburgh, 1924); John Ferguson, *Moral Values in the Ancient World* (London, 1958); and James K. Feibleman, *Religious Platonism: The Influence of Religion on Plato and the Influence of Plato on Religion* (New York, 1959).
- HYDE, WALTER, *Paganism to Christianity in the Roman Empire* (New York, 1970).

A comprehensive presentation of the rise of Christianity.

- JAEGER, WERNER, *Early Christianity and Greek Paideia* (Cambridge, Mass., 1961). Lectures, with extensive notes, on the movement of Hellenism into Christianity.
- JOHNSON, PAUL, *A History of Christianity* (London, 1976). The most popular history in recent years. See also Johnson’s *A History of the Jews* (New York, 1987).
- MCNEILL, JOHN, ed., *Environmental Factors in Christian History* (Port Washington, N.Y., 1970). A collection of essays on early Christian topics.
- NASH, RONALD, *Christianity and the Hellenistic World* (Grand Rapids, Mich., 1984). This book, written from a Christian perspective, disputes the viewpoint that early Christianity was heavily influenced by Hellenistic philosophies.
- NEUSNER, JACOB, *Invitation to the Talmud*, 2nd ed. (New York, 1984). Subtitled *A Teaching Book*, this text is the most accessible entry to Talmudic writings.
- RAPHAEL, CHAIM, *The Springs of Jewish Life* (New York, 1982). A book for the general reader, with most chapters on the period of Judaism covered in *Great Political Thinkers*.

CHAPTER NINE

ST. AUGUSTINE

- AUGUSTINE, ST., *The City of God* (trans. John Healey, London–New York, 1931). The introduction (pp. vii–lx) by Ernest Barker greatly adds to the value of this abridged reissue of an early seventeenth-century translation of the *City of God*. Concerning the relations between church and state, Barker suggests that this question “hardly enters into St. Augustine’s thought, in the form in which it presented itself to the Middle Ages, or presents itself to us today” (p. xxxi). Granting this

- RANDALL, JOHN, *Hellenistic Ways of Deliverance and the Making of the Christian Synthesis* (New York, 1970). A comprehensive presentation of the background and development of early Christianity.
- SORDI, MARTA, *The Christians and the Roman Empire* (trans. Annabel Bedini, London, 1983). A brief and useful introduction to the changing relationships between Christians and political power, and Christians and the Roman Empire, to Constantine.
- TINDER, GLENN, *The Political Meaning of Christianity* (Baton Rouge, La., 1989). A contemporary political theorist, who also is a Christian, presents his view of Christianity’s political significance.
- TYSON, JOSEPH, *The New Testament and Early Christianity* (New York, 1984). A study on the inter-relationship between the New Testament and early Christianity. This book does not consider Hellenism, and discusses all of the books of the New Testament.
- WALKER, WILLISTON, et al., *A History of the Christian Church*, 4th ed. (New York, 1985). Originally written by Walker and published in 1918, this excellent work has been revised every twenty years or so by a new generation of scholars.

premise, Barker nevertheless says that “there is a sense in which the doctrine of the *City of God* is inimical to the State, and even subversive of its existence. St. Augustine shifts the centre of gravity. The men of the ancient world had thought in terms of the *Civitas Romana* as the one and only society; they had deified the Roman Emperor as its living incarnation. . . . The ultimate effect of the *City of God* is the elimination of the State: it is the enthronement of the Church. . . .” (p. xxxii).

- BATHORY, PETER, *Political Theory as Public Confession* (New Brunswick, N.J., 1981). Subtitled *The Social and Political Thought of St. Augustine of Hippo*, this valuable work attempts to place Augustine and his political thought within his context—that of a practicing preacher within a church that was much more decentralized than it later became.
- BEVAN, EDWYN, *Hellenism and Christianity* (London, 1921). Chap. VII (“The Prophet of Personality”) is a vivid study of Augustine, “the first modern man,” as he is sometimes called, because of his searching self-analysis and psychological insights (pp. 136–144). The whole volume, a collection of essays on the formative period of Christianity and its impact on the Hellenistic world, is rewarding reading.
- BLOCH, MARC, *Feudal Society* (London, 1961). The best single volume on the subject, with a detailed Bibliography (pp. 453–481). The clarity of thought and style comes through successfully in the English version of the French original. For a much briefer account, see F. L. Ganshoff, *Feudalism* (Harper Torchbooks, New York, 1961).
- BROWN, P. R. L., “Saint Augustine,” in Beryl Smalley (ed.), *Trends in Medieval Political Thought* (Oxford, 1965), pp. 1–21. The author asserts that St. Augustine is more relevant to our age than such classics of modern political thought as Hobbes, Locke, and Rousseau. “The central problem of Augustine’s thought,” he writes, “is one which we all have to face: to what extent is it possible to treat man as having a measure of rational control over his political environment? The discovery that the extent of this control is limited has revolutionized political theory. Half the world is committed to some form of Marxist determinism; and the other half, far from rallying to Hobbes, Locke, and Rousseau, studies Freud, the social psychologists, and the sociologists” (p. 3).
- BURLEIGH, JOHN H. S., *The City of God: A Study of St. Augustine’s Philosophy* (London, 1949). Interpreting St. Augustine sympathetically from a Protestant viewpoint, the author suggests that “the City of God is none other than the Invisible Church of Wycliffe and Hus, Luther and Calvin” (p. 182).
- BUTLER, DOM CUTHBERT, *Western Mysticism*, 2nd ed. (Harper Torchbooks, New York, 1966). Much of the discussion is centered on St. Augustine’s mysticism. In examining the Platonic element in St. Augustine’s mysticism (“Mysticism or Platonism?”, pp. 40–50), the author concedes that St. Augustine “to the end continued a convinced and devoted Platonist” (p. 41). Yet he concludes that St. Augustine’s “contemplations” were “fully religious experiences,” and not Platonism (p. 50).
- CARLYLE, R. W., and A. J. CARLYLE, *A History of Medieval Political Theory in the West*, 6 vols. (Edinburgh and London, 1903–1936). The most important work, in any language, on medieval political theory. The first volume discusses St. Augustine’s doctrine of the state (pp. 164–170), property (pp. 139–142), and slavery (pp. 118–121).
- CHABANNES, JACQUES, *St. Augustine* (Garden City, N.Y., 1962). In this biography, written with deep sympathy and admiration for its subject, the author constantly shows how St. Augustine’s life is linked with his thought. In conclusion, the author writes: “His work is made up of a surprising juxtaposition of opposites from which the truth springs forth as though by interaction. He turned everything into account—his sensuality he changed into a yearning for things divine, his taste for enjoyment into peace, his human love into Christian charity” (p. 211). For short biographical studies, see Rebecca West, *St. Augustine* (New York, 1933), and Henri Marrou, *St. Augustine and His Influence Through the Ages* (Harper Torchbooks, New York, 1957). John J. O’Meara, *The Young Augustine: The Growth of St. Augustine’s Mind Up to His Conversion* (Staten Island, N.Y., 1965), covers St. Augustine’s personal and doctrinal development from his birth in 354 to his conversion in 387.
- CHADWICK, HENRY, *Augustine* (Oxford, 1986). A brief introduction to Augustine’s thought, as opposed to his life and times. Part of the “Past Masters” series.

- COULBORN, RUSHTON (ed.), *Feudalism in History* (Princeton, 1956). Written by leading American scholars in the field, this symposium is a unique contribution to the comparative study of feudalism. In addition to Western Europe, the work deals with Russia, the Byzantine Empire, China, Japan, India, and other areas often neglected.
- COULTON, G. G., *Studies in Medieval Thought* (London, 1940). This is the best short introduction to medieval political ideas, by a leading authority on the Middle Ages. Chaps. II and III deal with Augustine and the *City of God* (pp. 24–47). Coulton stresses St. Augustine’s acceptance of the state “as a real and necessary factor in human progress since the Fall.” The Church “must render unto Caesar the things that are Caesar’s. The City of God, being inextricably mixed up with the State—the Churchman being a citizen quite as really as he is a Churchman—therefore the City of God must obey the laws which are promulgated by the Earthly City” (pp. 44). See also C. V. Wedgwood, *Velvet Studies* (London, 1946), pp. 74–79 (“The City of God”).
- CULLMANN, OSCAR, *The State in the New Testament* (New York, 1956). The author, a leading Protestant theologian in the field of New Testament and early church history, seeks to demonstrate that “the apparent contradictions in the primitive Christian interpretations of the State are in reality not contradictions” (p. 87). The consistency of the New Testament with regard to the State is rooted, the author argues, in the essential Christian tension between the present and the future. A radically different view is presented by Hans Kelsen in his essay on “Justice in the Holy Scriptures,” included in his *What Is Justice? Justice, Law, and Politics in the Mirror of Science* (Berkeley and Los Angeles, 1957), pp. 25–81. Kelsen concludes that the Christian theology of justice, based on Paul’s teaching, can be summed up as follows: “There is a relative, human, justice which is identical with the positive law, and an absolute, divine, justice which is the secret of faith. Hence, there is in this theology no answer to the question as to what is justice, as a question of human reason referring to an ideal which is not necessarily identical with every positive law and which can be realized in this world” (p. 81). See also Adolf Harnack, *What Is Christianity?* (Harper Torchbooks, New York, 1957), pp. 75–151, for an analysis of the relation of the Gospel to the main political, social, and economic issues of Western civilization.
- D’ARCY, M. C. (ed.), *Saint Augustine* (Meridian Books, New York, 1957). A symposium on Augustine’s background, life, thought, and impact, written by leading Catholic theologians and philosophers, including Jacques Maritain, Étienne Gilson, Christopher Dawson, and Maurice Blondel. Roy W. Battenhouse (ed.), *A Companion to the Study of St. Augustine* (New York, 1955), is a symposium written from a sympathetic Protestant standpoint, with contributions from American and British students of religious philosophy. Chap. X (pp. 257–283) is on *The City of God*.
- DEANE, HERBERT A., *The Political and Social Ideas of St. Augustine* (New York, 1966). The author feels that the *City of God* is not sufficient for an adequate understanding of St. Augustine’s political thought, and he therefore draws on his other works as well. Inquiring into the renewed interest in St. Augustine in our own age, Deane writes in his concluding chapter: “Both his theological beliefs and his experience and observation of men’s actions in an age of disorder enforced upon him an attitude of pessimistic realism, which would not allow him to sentimentalize or evade the darker aspects of social and political life. In our own century, when, once more, men have been compelled to recognize the almost incredible brutalities of which human beings are capable, especially when they struggle for political power and military domination, it is no accident that Augustinian pessimism and realism have enjoyed a considerable revival among both theologians and secular thinkers” (pp. 241–242). See also H. Hohensee, *The Augustinian Concept of Authority* (New York, 1954), and R. S. Hartigan, “Saint Augustine on War

and Killing: The Problem of the Innocent," *Journal of the History of Ideas*, XXVII (April-June, 1966), 195-204.

• EARL, DONALD, *The Moral and Political Tradition of Rome* (Ithaca, N.Y., 1967). In the Epilogue, the author looks at St. Augustine from the perspective of the late Roman political experience rather than from that of early Christian history. Earl argues that St. Augustine, in working out his concepts, heavily drew on Roman social and political models and terminology. Specifically, "in the *De Civitate Dei* the speculations of the pagan philosophers and the moral and political traditions of Rome were fused with and transmuted by the teachings of the Scriptures and the doctrines of the early Fathers to serve the ideal of the Church and the glory of God" (p. 131).

• FIGGIS, JOHN NEVILLE, *The Political Aspects of St. Augustine's "City of God"* (London, 1921). One of the most incisive analyses, in English, of St. Augustine's thought; the last two chapters trace his influence in the Middle Ages and the modern period (pp. 81-117), and the important literature on the *City of God* is briefly summarized in a "Bibliography" (pp. 118-122). Figgis stresses that the conflict between the heavenly and earthly cities is "not primarily between two polities" but represents a deeper antagonism "between the other-worldly and the this-worldly reference to all institutions" (p. 114).

• FRIBERG, HANS DANIEL, *Love and Justice in Political Theory: A Study of Augustine's Definition of the Commonwealth* (Chicago, 1944). A comparison between Cicero's conception of the state in terms of law and justice, and St. Augustine's stress on love as the bond of political organization: "Whereas Cicero denies the existence—at any time, including the future—of an absolutely perfect commonwealth, Augustine recognizes its existence now in full reality in heaven, also now by faith among the believers, and finally in full reality also among them who now believe" (p. 73).

• GILSON, ÉTIENNE, *The Christian Philosophy of Saint Augustine* (New York, 1960). The author, one of the world's foremost

students of medieval Christian thought, provides here a comprehensive analysis of St. Augustine's philosophical, religious, moral, and political ideas. Concerning the divergent interpretations of St. Augustine's conception of the relations of state and church, the author holds that he "can neither be considered to have defined the medieval ideal of a civil society subject to the primacy of the Church, nor to have condemned such a conception in advance. What does remain strictly and absolutely true is that under no circumstances can the earthly city, much less the City of God, be identified with any form of the State whatsoever" (p. 182). An extensive Bibliography (pp. 367-383) is included.

• HEARNshaw, F. J. C. (ed.), *Medieval Contributions to Modern Civilization* (New York, 1922). A collection of essays, by distinguished authorities, on religion, philosophy, science, art, literature, education, social relations, economics, and politics. The chapter on politics is by J. W. Allen (pp. 225-267), who concludes as follows: "I suggest not merely that any separation of politics from ethics is fatal, but that a society which has lost belief in the validity of its own moral intuitions rests on rotting foundations. I suggest, further, that the idea that government must be directed to a recognized, common, and ultimate end, and refer to a standard of absolute values or be radically purposeless, is perfectly sound. The end, perhaps, need not transcend this world. It may be possible to find a purpose referring only to this world that will satisfy the soul of man. But I suggest that no such end has yet been found. We can strip from the medieval system of ideas that I have tried to define in outline all that is not essential to it. We can eliminate the Church altogether, and it will still stand logically coherent. It is a question—it is perhaps the question—whether we can also eliminate God" (pp. 267-268).

• ——— (ed.), *The Social and Political Ideas of Some Great Medieval Thinkers* (London, 1923). Chap. I is an excellent introduction to the main political ideas and issues of the Middle Ages, by Ernest Barker; Chap. II, "St. Augustine and the City of God," is by A. J. Carlyle

(pp. 34-52). Concerning the influence of St. Augustine's political theory in his own time and in the Middle Ages, Carlyle says that "so far as it was different from the normal traditions of the Stoic philosophers and of the Christian Fathers it had no importance and no significance, but that so far as it corresponded with these, so far as in his own way and under his own terms he re-stated the traditional view of the Stoics and of the Christian Fathers, it may well be said that St. Augustine had much influence" (pp. 51-52).

• KEVANE, EUGENE, *Augustine the Educator: A Study in the Fundamentals of Christian Education* (Westminster, Md., 1964). Discusses the relevance of St. Augustine's educational principles to Roman Catholic educational philosophy in the light of contemporary problems. See also the symposium, *Augustinian Studies: Papers Read at Recent Augustinian Educational Conferences* (Freeport, N.Y., 1967).

• KEYES, G. L., *Christian Faith and the Interpretation of History: A Study of St. Augustine's Philosophy of History* (Lincoln, Nebr., 1966). Throughout this highly critical study the author deals with St. Augustine's moral and political views; in Chap. IV (pp. 124-126) he deals with such specific issues as power, authority, government, the position of the individual in relation to the state, violence, persecution, and war. Concerning persecution, the author holds that St. Augustine "did not press for forceful persecution—but was ready to profit by it when it occurred" (p. 142), and that "many think that in condemning all pagans and heretics to eternal damnation he did less than justice to the divine love" (p. 191).

• KIRWAN, CHRISTOPHER, *Augustine* (London, 1989). A philosophical approach to Augustine. Chapter XI is on Christian society.

• MARKUS, ROBERT (ed.), *Augustine: A Collection of Critical Essays*. While most of the essays contained herein are on religious as opposed to political subjects, some light will be shed on Augustine's conception of humanity.

• MORRALL, JOHN B., *Political Thought in Medieval Times* (London, 1958). Provides

a brief introduction into the subject, emphasizing the main themes of medieval civilization. See also Gordon Leff, *Medieval Thought from Saint Augustine to Ockham* (Penguin Books, Baltimore, 1958), for a more general survey of medieval philosophy. Chap. II (pp. 32-54) deals with Augustine and his successors.

• MOSS, H. ST. L. B., *The Birth of the Middle Ages, 395-814* (London, 1935). Part I, "Romans and Barbarians," deals with the period that is fundamental to a full appreciation of St. Augustine (pp. 1-78). The following will also be found useful: R. W. Southern, *The Making of the Middle Ages* (Yale Paperbacks, New Haven, 1960), for the period of the late tenth to the early thirteenth century; Friedrich Heer, *The Medieval World: Europe 1100-1350* (Mentor Books, New York, 1963); and J. Huizinga, *The Waning of the Middle Ages* (Anchor Books, Garden City, N.Y., 1954), covering the period of the fourteenth and fifteenth centuries in France and the Netherlands.

• NIEBUHR, REINHOLD, *Christian Realism and Political Problems* (New York, 1953). Chap. IX (pp. 119-146) is on "Augustine's Political Realism" (also reprinted in William Ebenstein, *Political Thought in Perspective* [New York, 1957], pp. 109-124). Niebuhr holds that Augustine is, with regard to basic political problems "a more reliable guide than any known thinker" (p. 146). Augustine helps us, Niebuhr argues, to avoid the pitfalls of the three representative approaches to political problems. The "realists" understand the power of collective self-interest, but not its blindness; the pragmatists perceive the futility of fixed and detailed norms, but do not grasp that love must be the final norm; lastly, modern liberal Christians recognize that love is the supreme norm for man, but often fall into sentimentality by failing to appreciate the persisting power of self-love. Niebuhr stresses that Augustine's thought, avoiding these various pitfalls, is particularly pertinent to the problem of the growing world community today.

• POPE, HUGH, *Saint Augustine of Hippo: Essays dealing with his Life and Times*

and Some Features of His Work (Westminster, Md., 1949). The first two chapters on Roman Africa and its Christianization (pp. 1-77) are particularly interesting. The third chapter (pp. 78-138) tells the story of St. Augustine's life. The remaining six chapters (pp. 139-361) deal with his thought, stressing particularly his theology.

• TROELTSCH, ERNST, *The Social Teaching of the Christian Churches*, 2 vols.

(London-New York, 1931). The standard work on the subject.

• ULLMANN, WALTER, *A History of Political Thought: The Middle Ages* (Penguin Books, Baltimore, 1965). Highly useful as a first introduction into the subject. See also his *Principles of Government and Politics in the Middle Ages* (New York, 1961), investigating the problem of medieval authority in relation to the papacy, kingship, and popular government.

CHAPTER TEN

JOHN OF SALISBURY

• CARLYLE, R. W., and A. J. CARLYLE, *A History of Medieval Political Theory in the West*, 2nd imp. (Edinburgh-London, 1932), Vol. IV. Chap. II of Part II deals with John of Salisbury's views on the relations of church and state (pp. 330-341). See also *op. cit.* (Edinburgh-London, 1928), Vol. III, Part II, Chap. V, which discusses John of Salisbury's distinction of kingship and tyranny in relation to other medieval doctrines on the subject (pp. 125-146), and G. G. Coulton, *Studies in Medieval Thought* (London, 1940), Chap. VII (pp. 87-95).

• KNOWLES, DAVID, *The Evolution of Medieval Thought* (Baltimore, 1962). Chapter XI (pp. 131-140) is on "The School of Chartres and John of Salisbury." The author calls John of Salisbury "the Erasmus, the Johnson of the twelfth century" and considers him "the most accomplished scholar and stylist of his age" (p. 135). See also M. Anthony Brown, "John of Salisbury," *Franciscan Studies*, XIX (September-December, 1959), 241-297.

• LIEBESCHÜTZ, HANS, *Medieval Humanism in the Life and Writings of John of Salisbury* (London, 1950). An original contribution, portraying the life and thought of John of Salisbury against his own medieval background rather than

against modern political ideas. A systematic survey of the literature on John in Chap. I (pp. 1-7) adds to the usefulness of the work. See also Johan Huizinga, "John of Salisbury: A Pre-Gothic Mind," in his *Men and Ideas: History, the Middle Ages, the Renaissance* (Meridian Books, New York, 1959), pp. 159-177.

• PIKE, JOSEPH B., *Frivolities of Courtiers and Footprints of Philosophers* (Minneapolis, 1938). A translation of the First, Second, and Third Books, and selections from the Seventh and Eighth Books of John of Salisbury's *Statesman's Book*. It thus supplements the translation of the *Statesman's Book* by John Dickinson (New York, 1928), which contains the Fourth, Fifth, and Sixth Books, and selections from the Seventh and Eighth Books. The Dickinson translation is preceded by a long and excellent introduction (pp. xvii-lxxxii). See also *John of Salisbury's Memoirs of the Papal Court* (trans. from the Latin with Introduction and Notes by Marjorie Chibnall, New York, 1956), and *The Letters of John of Salisbury* (ed. by W. J. Miller and H. E. Butler, revised by C. N. L. Brooke, New York, 1955), both with lengthy introductory essays on the life and thought of John of Salisbury.

• POOLE, REGINALD LANE, *Illustrations of the History of Medieval Thought and*

Learning, 2nd ed. (New York, 1960). Chap. VII (pp. 176-197) is on John of Salisbury, and is one of the most useful short summaries of his life and thought. The distinctive mark of John's *Statesman's Book*, Poole says, "is a humanism which seems to remove it from medieval associations" (p. 191). See also Poole's "The Masters of the Schools at Paris and Chartres in John of Salisbury's Time," *English Historical Review*, XXXV (July, 1920), 321-342.

• ULLMANN, WALTER, *Medieval Papalism: The Political Theories of the Medieval Canonists* (London, 1949). A scholarly study of papalist political theories, based on original sources, *Medieval Papalism* is an important and original contribution to a much neglected field. See also Ullmann's article, "The Influence of John of Salisbury on Medieval Italian Jurists," *English Historical Review*, LIX (September, 1944), 384-392, in which he maintains that "recent researches into fourteenth-century jurisprudence have shown that the *Policraticus* was one of the most quoted and perused treatises written by a medieval philosopher" (p. 384). For a broader treatment of

this subject, see Gaines Post, *Studies in Medieval Legal Thought: Public Law and the State, 1100-1322* (Princeton, 1964), pp. 259 ff., 514 ff., and 558 ff.

• WEBB, CLEMENT C. J., *John of Salisbury* (reprinted, New York, 1971). The author sees in John of Salisbury "a typical Englishman. He is a strong 'party man,' yet ready to be, so far as possible, on friendly terms with his opponents; he has a instinctive aversion to extremes, and distaste alike for rhetorical display and doctrinaire rigidity; with a constant disposition to seek means of accommodation and even of compromise, if they can be had without abandonment of a few principles which he regards as fundamental" (pp. 176-177). Indispensable as an introduction into the life and work of John of Salisbury.

• WULF, MAURICE DE, *History of Medieval Philosophy*, 2 vols., 3rd ed. (London-New York, 1935-1938). A short discussion of John of Salisbury is in the first volume (pp. 226-232). The *Statesman's Book* is called "the most complete philosophy of the State produced in the first period of the Middle Ages" (p. 231).

CHAPTER ELEVEN

ST. THOMAS AQUINAS

• BETTENSON, HENRY (ed.), *Documents of the Christian Church* (New York, 1947). The most easily accessible documentary source book of its kind, containing both official and unofficial statements.

• BLYTHE, JAMES, "The Mixed Constitution in the Work of Thomas Aquinas," *Journal of the History of Ideas* (October-December, 1986). Blythe's position is that Aquinas always supported a mixed constitution and achieved a "truly original synthesis of Greek political theory and medieval political thought."

• BORRESEN, KARI, *Subordination and Equivalence: The Nature and Role of*

Women in Augustine and Thomas Aquinas (trans. Charles Talbot, Washington, D.C., 1981). Discusses the status of women in these two great theologians.

• BOURKE, VERNON J., *Aquinas' Search for Wisdom* (Milwaukee, 1964). Firmly anchored in the most advanced Thomistic scholarship, this work combines a full biography of the life of St. Thomas Aquinas with a clear exposition of his doctrinal development. The biographical part does away with some of the legends and fictions that have surrounded traditional Thomistic lore. In the discussion of Thomistic doctrine, the author

presents a fair and balanced picture within the faithfully accepted framework of Thomism, and concludes as follows: "What made St. Thomas' wisdom golden was not the philosophical, or even the theological, detail of his thought. He left an example of what can be done by a Christian scholar who is willing and able to learn from any source of information. His mind was open to the insights of pagan philosophers, of Mohammedan and Jewish sages, of the long tradition of Greek and Latin Christian Fathers. Thomas was able to admit his own limitations: there were things that he never understood; there were times when he could only resort to prayer. The myth of an Aquinas who knew all the answers is a false construction of overzealous followers. Yet Thomas was always optimistic and hopeful in his quest for truth; with God's help, he approached every problem in a spirit of confidence. Neither pessimism nor skepticism held any virtue for him. He did not pretend that he had solved all the riddles of reality and life; he kept looking for ever better answers; and he enjoyed the challenge of his search" (pp. 229-230). For a much briefer biographical and doctrinal account of St. Thomas, see L. H. Petitot, *The Life and Spirit of Thomas Aquinas* (Chicago, 1966).

• BRACON, HENRY DE, *On the Laws and Customs of England* (written before 1256). The most systematic expression of the typically medieval doctrine that law derives from custom, that the king, though not subject to man, ought to be subject to "God and to the law, for the law makes the king," and that "there is no king where the will and not the law has dominion" (*On the Laws and Customs of England*, ed. Travers Twiss, London, 1878, I, 39). About two hundred years later, John Fortescue emphasized again the medieval principle that the king "is not able himself to change the laws without the assent of his subjects nor to burden an unwilling people with strange imposts" (*De laudibus legum Angliae [In Praise of the Laws of England]*, written about 1470, edited and translated, with introduction and notes, by S. B. Chrimes, Cambridge, 1942, p. 25). The concept of

the supremacy of law played a major political part in the struggles of Parliament against the Stuarts in the seventeenth century, and Bracton, in particular, was appealed to by Sir Edward Coke, the lawyer and leader of the parliamentary party. Walter Ullmann's *The Medieval Idea of Law* (London, 1946) is focused on the fourteenth century and illuminates hitherto neglected aspects of medieval legal thought and scholarship.

• BRENNAN, ROBERT EDWARD, *Thomistic Psychology* (New York, 1941). A "philosophic analysis of the nature of man," with an introduction by Mortimer J. Adler.

• CARLYLE, R. W., and A. J. CARLYLE, *A History of Medieval Political Theory in the West*, 2nd ed. (1938), Vol. V. The whole volume is devoted to the political theory of the thirteenth century, including detailed analyses of St. Thomas Aquinas.

• CASSIRER, ERNST, *The Myth of the State* (New Haven, 1946). Chaps. VII-IX deal with medieval political philosophy (pp. 78-115).

• CHENU, M. D., *Toward Understanding Saint Thomas* (New York, 1964). In the first half of the work, the author, a leading French Thomist scholar, provides a highly interesting background of the time and environment in which St. Thomas Aquinas grew up. He then analyzes St. Thomas' language and methods of documentation, throwing a good deal of light on the methods of medieval scholarship, philosophy, and theology. In the second half of the book, Chenu comments on the individual major works of St. Thomas. In all, this is one of the outstanding contributions to Thomistic literature.

• CHESTERTON, G. K., *St. Thomas Aquinas* (New York, 1933). A vivid and colorful biographical sketch, stressing the rational element in St. Thomas' thought. Chesterton calls him "one of the great liberators of the human intellect" (p. 19), and says that it was "the very life of Thomist teaching that Reason can be trusted; it was the very life of the Lutheran teaching that Reason is utterly untrustworthy" (p. 21). The Protestant Reformation of the sixteenth century was, according to Chesterton, "a belated

revolt of the thirteenth-century pessimists" and "a backwash of the old Augustinian Puritanism against the Aristotelian liberalism" (p. x).

• COPLESTON, F. C., *Aquinas* (Penguin Books, Baltimore, 1955). Chap. V (pp. 192-234) deals with the social and political thought of St. Thomas. Copleston, a leading English Jesuit historian of western ideas, holds that St. Thomas "favored constitutional monarchy" (p. 233). As to the controversial issue of St. Thomas' attitude on tyranny and resistance to tyranny, Copleston argues that according to St. Thomas tyrants "can legitimately be deposed on the ground that they are guilty of abusing their position and power unless, indeed, there is a reason for thinking that rebellion would result in as bad a state of affairs as the one which it was designed to remedy" (p. 232).

• CRANSTON, MAURICE, "St. Thomas Aquinas as a Political Philosopher," *History Today*, XIV (May, 1964), 313-317. The author rejects Lord Acton's view of St. Thomas as "the first Whig" on several grounds: "Aquinas believed, assuredly, in freedom and natural rights and government by consent; but there is no clear evidence that he thought men had a right to rebellion; he explicitly rejected the theory of the social contract; and as for the 'natural right' that interested Whig theorists most—the right to property—Aquinas denied that it was, strictly speaking, a natural right at all" (pp. 313-314). Yet Cranston also rejects the notion that St. Thomas merely revived Aristotle's political thinking: "For he improved on Aristotle's notion of the state as a natural institution by incorporating an idea that, though not Christian in origin, has become a crucial notion in Christian thinking: that of Natural Law. His point here is not difficult to follow. It is natural for men to live under government; but governments do not fully conform to nature unless they are just: and the criterion of justice is something laid down by the Creator, and visible to the eye of reason in all men" (p. 315). Since natural law is closely linked to divine law, about which the Church claimed to speak with authority,

St. Thomas' argument thus leads logically to the conception of the superiority of the Church over the state.

• D'ARCY, MARTIN C., *Thomas Aquinas* (Boston, 1930). A volume in the *Leaders of Philosophy* series. The first chapter (pp. 3-31) gives an illuminating account of the historical and philosophical background of the period, with special emphasis on Aristotelianism and scholasticism. The last chapter (pp. 251-275) deals with the impact of Thomism on modern thought, and the author stresses the lack of uniformity in Thomism: "There is a left wing and a right wing of Thomism, there are conservatives and liberals. For this reason one will find no agreement about what are the philosophical weaknesses in St. Thomas which need to be remedied" (p. 271).

• D'ENTRÈVES, ALEXANDER PASSERIN, *The Medieval Contribution to Political Thought* (Oxford, 1939). The first, introductory, chapter deals with the general characteristics of medieval political ideas (pp. 1-18). Chap. II is on Thomas Aquinas (pp. 19-43). See also D'Entrèves (ed.), *Aquinas: Selected Political Writings* (Blackwell's Political Texts, Oxford, 1948), pp. vii-xxxiii (introduction).

• FARRELL, WALTER, *A Companion to the Summa*, 4 vols. (New York, 1939-1945). A comprehensive work, written from a rigid, literal, and Dominican viewpoint that seeks to interpret recent intellectual and social movements in the light of Thomist principles. Chap. XVIII of the second volume discusses St. Thomas' treatment of the problem of law (pp. 363-389).

• GILBY, THOMAS, *The Political Thought of Thomas Aquinas* (Chicago, 1958). The first part gives the intellectual and social background of the whole period in which Thomas Aquinas lived. The second, and much longer, part, traces the philosophical and theological development of St. Thomas, drawn against a broad European canvas. The author, a Dominican teacher and scholar like St. Thomas himself, emphasizes four points in the latter's political thought. First, the acceptance of the Aristotelian view that the state springs from the social appetite of man rather than from his corruption and sin, as had been

maintained by St. Augustine and the patristic tradition, later to be resurrected by Martin Luther. Second, the author claims (less convincingly) that St. Thomas adhered to the Gelasian concept of the twin authorities, spiritual and temporal, each being supreme in its own sphere. Third, St. Thomas upheld the idea of the limited scope of governmental authority; as to tyrannicide, the author concedes that St. Thomas was rather conservative, and "more prim" and "more hesitant" (p. 289) than John of Salisbury, for example. Fourth, St. Thomas stressed that government was more an art than a branch of ethics and science, a point to be developed more fully in modern political thought by Edmund Burke.

• GILSON, E'TIENNE, *The Christian Philosophy of St. Thomas Aquinas* (New York, 1956). An over-all synthesis by one of the leading Thomist philosophers of the twentieth century. Part III (pp. 251-378) deals with the moral, legal, social, and political doctrines of St. Thomas Aquinas. Conceding that for St. Thomas "monarchy is the best form of government" (p. 329), Gilson stresses that this preference does not include absolute monarchy: "The prince or king can only ensure the common good of the people when he is dependent upon them" (*ibid.*). Concerning the general orientation of St. Thomas' thinking, Gilson concludes as follows: "If we grant that a philosophy is not to be defined from the elements it borrows but from the spirit which quickens it, we shall see here neither Platonism nor Aristotelianism, but, above all, Christianity" (p. 378). See also Gilson's *The Philosophy of St. Thomas Aquinas* (St. Louis, Mo., 1939), *Reason and Revelation in the Middle Ages* (New York, 1939), *The Spirit of Medieval Philosophy* (New York, 1940), and *Thomism* (New York, 1964).

• GOERNER, E. A., "Thomistic Natural Right," *Political Theory* (August, 1983), 393-418. Puts forward the unconventional view that "Thomas's moral and political doctrine is not fundamentally a natural law teaching at all." See also Goerner's "On Thomistic Natural Law," *Political Theory* (February, 1979), 101-122.

• GRABMANN, MARTIN, *Thomas Aquinas: His Personality and Thought* (New York, 1928). The author was the leading modern student of Thomism in Germany.

• GREENLEAF, W. H., "The Thomasian Tradition and the Theory of Absolute Monarchy," *English Historical Review*, LXXIX (October, 1964), 747-760. The author seeks to resolve one of the main ambiguities in St. Thomas' political thought. On the one hand, there is in St. Thomas the emphasis on order and hierarchy as exemplified by God's government of the universe, and this cosmic principle is also applied by St. Thomas to human society, in which the lower is subordinated to the higher. This element of St. Thomas' thought, the author argues, was eagerly grasped and elaborated by the early modern defenders of royal absolutism. Yet on the other hand, St. Thomas also stresses the ultimate spiritual supremacy of the Church over the state and the superiority of divine and natural law over man-made law, which conceptions point to the doctrine of limited government. After tracing the evolutionary process from medieval government to early modern royal absolutism, Greenleaf concludes that "the philosophy of St. Thomas may be seen in the background of both the 'authoritarian' and 'limited' traditions of government, the dialectic between which has determined the nature of modern political thought" (p. 760).

• GRENET, PAUL, *Thomism: An Introduction* (New York, 1967). In this brief volume the author concentrates on St. Thomas' philosophy of nature and metaphysics rather than on his theology or ethics. In the concluding chapter the author presents St. Thomas's view of "The Place and the Role of Man in the Universe" (pp. 122-125), and stresses that Thomism is more a philosophy of universalism than of personalism: "Beyond all question, man is at home in the universe because he is in the house of God, and because God is the total good of the universe of which man is but a part" (p. 125).

• HENLE, ROBERT J., *Saint Thomas and Platonism* (The Hague, 1956). Because of the immense impact of Aristotle on St.

Thomas, the relations between Thomism and Platonism are often neglected or obscured. The author shows in detail the relations of Plato's writings to Thomistic thought. See also H. V. Jaffa, *Thomism and Aristotelianism: A Study of the Commentary by Thomas Aquinas on the Nicomachean Ethics* (Chicago, 1952), and J. L. Stocks, *Aristotelianism* (Boston, 1925), pp. 119-134.

• HUTCHINS, ROBERT M., *St. Thomas and the World State* (Milwaukee, 1949). The author holds that the "existence of a world society, of a family of nations, which popes and Catholic jurists have always asserted, implies, then, world law and world government. The only perfect community today is a world state. It is the only community that is self-sufficing. Every smaller community requires, in the phrase of St. Thomas, the help of another" (p. 40). See also Gerald Francis Benkert, *The Thomistic Conception of an International Society* (The Catholic University of America, *Philosophical Studies*, Vol. 70, Washington, 1942).

• JOLY, RALPH PHILIP, *The Human Person in a Philosophy of Education* (The Hague, 1965). Although St. Thomas Aquinas wrote no special treatise on education, the author—a fervent Thomist—feels that St. Thomas' general philosophy as well as his conception of man provide the basic principles of a philosophy of education. Above all, the author argues that a proper philosophy of education must include some training in religion: "Thomistic philosophy maintains that education cannot be divorced from religion and still accomplish its mission of preparing the student adequately for the activities of life, since the practice of religion is an essential part of any well-ordered human life. The school that attempts to be indifferent to religion produces in practice an antagonism to religion" (p. 135). Joly focuses his criticism on John Dewey's thought, including his philosophy of education, because "his epistemology is pragmatic, his metaphysics is naturalistic, and his psychology is behavioristic" (p. 117).

• KILLEEN, SYLVESTER MICHAEL, *The Philosophy of Labor According to Thomas*

Aquinas (Washington, 1939). The author admits that St. Thomas justified slavery and serfdom, yet holds that his doctrine "in no way destroyed the dignity of the human person" (p. 69). A more detailed defense of St. Thomas' acceptance of slavery and servitude will be found in Winston Ashley, *The Theory of Natural Slavery According to Aristotle and St. Thomas* (Notre Dame, Ind., 1941): even if servitude is involuntary, it "is not essentially wrong if (a) it is necessary for the common good of society, and (b) if it does not deprive the subject of his strictly natural rights" (p. 144). At the same time, the author warns that "Christian society must always view with extreme suspicion a system which supposes the perfect virtue of the intelligent, and the low virtue of the poor and simple, a system which naturally aims first at the freedom of the most virtuous, and only secondarily at making a way for the lowest men toward the life of contemplation" (p. 145). See also George V. Dougherty, *The Moral Basis of Social Order According to Saint Thomas* (Washington, 1941); James Henry Hoban, *The Thomistic Concept of Person and Some of Its Social Implications* (Washington, 1939); and Robert G. Brehmer, *The Social Doctrines of the Catholic Church* (New York, 1936).

• KLOCKER, HARRY R., *Thomism and Modern Thought* (New York, 1962). A critical exposition and refutation of some major trends in modern philosophy—Kantian idealism, Hegelianism, pragmatism, logical positivism, existentialism, and dialectical materialism—from a strict Thomist standpoint. See also Ralph M. McNerny, *Thomism in an Age of Renewal* (Garden City, N.Y., 1966), which examines the challenges confronting Thomism in an open and fearless manner, strongly influenced by Pope John XXIII who, in the author's view, inaugurated "an age of renewal in the Church" (p. 8).

• LEA, H. C., *A History of the Inquisition of the Middle Ages*, 3 vols. (New York, 1887-1888). The standard work on the subject. A penetrating and brief discussion of "Freethought and Inquisition" will be found in G. G. Coulton, *Medieval*

Panorama (Cambridge, 1938), Chap. XXXV (pp. 457-476). St. Thomas Aquinas' main discussion of heresy and unbelief is in *Summa Theologica*, II-II, QQ. 10-14. See also George Quentin Friel, *Punishment in the Philosophy of Saint Thomas Aquinas and among Some Primitive Peoples* (Washington, 1939).

• MCLWAIN, CHARLES HOWARD, *The Growth of Political Theory in the West* (New York, 1932). Contrary to most writers on the subject, McIlwain holds that St. Thomas Aquinas was neither a believer in limited, constitutional monarchy, nor a "Whig" or democrat, but "the greatest of all contemporary exponents of pure monarchy" (p. 333).

• MALLOY, MICHAEL, *Civil Authority in Medieval Philosophy* (Lanham, Maryland, 1985). Part II is on Aquinas.

• MARGENAU, HENRY, *Thomas and the Physics of 1958: A Confrontation* (Milwaukee, 1958). The author, an American physicist and philosopher of science, examines St. Thomas' views on science in relation to contemporary physics, and finds a harmonious concordance between the two.

• MARITAIN, JACQUES, *St. Thomas Aquinas* (Meridian Books, New York, 1958). Maritain is the outstanding liberal Catholic writer since Lord Acton, and one of the leading modern Thomist philosophers. One of the main propositions of the book is that "St. Thomas wrote not for the thirteenth century but for our time" (p. 103), and that he is "preeminently the apostle and teacher of our time" (p. 115). Maritain's estimate of St. Thomas' position is as follows: "It is proper to remember that God in His most exalted works proceeds by way of privileges and exceptions and unique cases. He once sent His only begotten Son on earth, and gave Him a precursor. He once gave the law through Moses—is there anything surprising in that He should once have given His Church a Doctor *par excellence* in philosophical and theological wisdom?" (p. 155). Testimonies of popes on St. Thomas Aquinas and four of the most important official papal pronouncements on Thomism as the official doctrine of the Roman Catholic

Church are contained in an appendix (pp. 167-266).

Maritain applies his interpretation of Thomism to modern social and political problems in two books that are most representative of his liberal, democratic, antitotalitarian philosophy: *True Humanism* (New York, 1938), and *Scholasticism and Politics* (New York, 1940). In both books he develops his concept of "personalist democracy," which is opposed both to the "atomistic and mechanistic type of bourgeois individualism, which suppresses the social organic totality" (*Scholasticism and Politics*, p. 82), and to the totalitarian doctrines of communism, nazism, and fascism, which "engulf the person" (*ibid.*). Maritain contrasts "democracy of the individual and humanism of the individual," which "arise from an anthropocentric inspiration," with his own conception of "democracy of the person and humanism of the person," which "spring forth from a theocentric inspiration" (pp. 84-85), and which are based on the idea of man as God's image, the common good, human rights, and concrete liberty. Maritain is particularly concerned about the rights of man: "If the human person is without rights, then rights and, consequently, authority exist nowhere" (p. 111). Maritain is also keenly aware that there can be no rebuilding of society without thoroughgoing social and economic reforms. He interprets socialism as the result, not so much of demands for improved living conditions (which could also be obtained under reformist or paternalist capitalism), but of the struggle for recognition "of an offended and humiliated human dignity" (*True Humanism*, p. 225), which has been distorted by Marxism into class consciousness and class war. Trade-unionism "is at the moment the most considerable and the most promising force of social renovation" (p. 233), though the Christian idea of community is above class, as it is above race and nation: "Yet, precisely because man is at once carnal and spiritual, because every great historic and temporal undertaking has biologicico-sociological material foundations, where the very animality of

man and a whole irrational capital is at once borne along and exalted, it is natural that, in the transformation of a regime such as the capitalist system, the working classes should furnish this sociological basis: and in a sense one may speak of their historic mission, may hold that the destiny of humanity depends largely, in actual fact, on their attitude and action" (p. 230).

Concerning the question of property, Maritain recalls the Thomistic doctrine that recognizes, on the one hand, private property, but insists, on the other, that it should serve the good of all. The remedy of the evil of concentration of private property in the hands of the few under capitalism is not, according to Maritain, the abolition of the institution of property but its diffusion and distribution "in ways which can remain very diverse, and which do not exclude, where they are necessary, certain collectivizations" (p. 179). In industry, Maritain is opposed to both state ownership and communism, and prefers cooperative ownership by the workers themselves, because such copartnerships would better protect the freedom of the workers and also provide a better solution of the problem of incentive than is possible under state ownership of industry. Socialist theory in democratic states is likely to move in an analogous direction, stressing socialization (by municipalities, cooperatives, and other associations and corporations) rather than nationalization (by the state). A succinct summary of Maritain's philosophy of "personalist democracy" will be found in his short book, *The Person and the Common Good* (New York, 1947). The basic doctrine of "personalism" is that "the human being is caught between two poles; a material pole, which, in reality, does not concern the true person but rather the shadow of personality or what, in the strict sense, is called *individuality*, and a spiritual pole, which does concern *true personality*" (p. 23). For Maritain's position on "neomodernist" religious, social, economic, and political tendencies in Roman Catholicism, see his *The Peasant of the Garonne: An Old Layman Questions Himself About the Present Time* (New

York, 1968). A detailed analysis of the various aspects of Maritain's philosophy will be found in Joseph W. Evans (ed.), *Jacques Maritain: The Man and His Achievement* (New York, 1963).

• PEGIS, ANTON C. (ed.), *Basic Writings of Saint Thomas Aquinas*, 2 vols. (New York, 1945). Contains substantial portions of the *Summa Theologica* and the *Summa contra gentiles*, his second most important work. The editor's introduction (pp. xxxv-liii) deals with the background of St. Thomas' thought, particularly in relation to Plato, Aristotle, and Christian theology. The anti-Platonism of St. Thomas receives special consideration. See also Pegis' *At the Origins of the Thomistic Notion of Man* (New York, 1963) and *St. Thomas and Philosophy* (Milwaukee, 1964).

• PIEPER, JOSEF, *Guide to Thomas Aquinas* (New York, 1962). Brief introduction into St. Thomas' intellectual and theological development, as exemplified by the style of his thought rather than its contents. Pieper's *The Silence of St. Thomas: Three Essays* (New York, 1957), particularly the third essay on "The Timeliness of Thomism" (pp. 75-108), has some suggestive comparisons between Thomism and existentialism. See also Ralph M. McInerney, *Thomism in an Age of Renewal* (Garden City, N.Y., 1966).

• SMITH, GEORGE D. (ed.), *The Teaching of the Catholic Church: A Summary of Catholic Doctrine*, 2 vols. (New York, 1949). A monumental work, with contributions from many distinguished scholars, all members of the clergy. See, in particular, Chap. I, "Faith and Revealed Truth," I, 1-37, and Chap. XX, "The Church on Earth," II, 691-732. There are more references to St. Thomas Aquinas than to any other source of doctrine (see Index, pp. 1313-1314).

• STOCKHAMMER, MORRIS (ed.), *Thomas Aquinas Dictionary* (New York, 1965). Presents, in alphabetical order, the principal concepts and ideas of St. Thomas, based on excerpts culled from his writings.

• STUBBS, WILLIAM, *Seventeen Lectures on the Study of Medieval and Modern History* (Oxford, 1886). Concerning medieval scholastic philosophers, Bishop Stubbs

says that they "ticketed every portion of man's moral anatomy, found a rule for every possible choice, a reason and a reward for every virtue, and a punishment for every conceivable crime; they turned generalizations into laws, and deduced from them as laws the very facts from which they had generalised. They benefited mankind by exercising and training subtle wits, and they reduced dialectics, almost, we might say, logic itself, to absurdity. I do not undervalue them, because the great men among them were so great that even such a method did not destroy them: in reading Thomas Aquinas, for instance, one is constantly provoked to say, What could not such a mind have done if it had not been fettered by such a method?" (p. 90). For critical summaries of scholastic philosophy, see also G. G. Coulton, *Studies in Medieval Thought* (London-New York, 1940), pp. 130-150. How heresy and free thought continued to exist under scholasticism—albeit under precarious conditions—is described in J. M. Robertson, *A History of Freethought*, 4th ed. (London, 1936), I, 304-401.

• TAYLOR, A. E., *St. Thomas Aquinas as a Philosopher* (Oxford, 1924). St. Thomas is presented as a philosopher who appeared as a most audacious innovator to his contemporaries; in particular, the "substitution of Aristotelianism for Platonism as the basis of a specifically Christian philosophy was a revolution and a rather paradoxical revolution" (p. 10). Aristotle had two main tendencies: one directed toward naturalism, and another deeply embedded in the thought of Plato, and "it is Aristotle the Platonist rather than Aristotle the positivist who influences the thought of Thomas" (p. 25). See also John Frederick Piefer, *The Concept in Thomism* (New York, 1952).

• TRACY, DAVID (ed.), *Celebrating the Medieval Heritage* (Chicago, 1978). A collection of essays on Aquinas and Bonaventure. Part 3 is "Ethics and Political Thought."

• WULF, MAURICE DE, *History of Medieval Philosophy*, 2 vols., 3rd ed. (London-New York, 1935-1938). The first volume of this standard work, indispensable for reference

purposes, deals with medieval philosophy to the end of the twelfth century, the second with the thirteenth century, including a study of St. Thomas Aquinas (pp. 116-151). Detailed bibliographies greatly enhance the value of the work. Concerning scholasticism—which he accepts enthusiastically—the author makes the point that, when scholastic philosophy is called "a religious philosophy, the qualification is correct if by it is meant that on the one hand revealed doctrine governed the choice of certain special problems, and that on the other hand, dogma served as a regulating principle and as an indirect control of philosophical research. But it ought to be understood that, speaking formally and in strict terms, a philosophy in the degree in which it is distinct from theology, is not susceptible of the adjective Christian, and hence, the expression Christian philosophy is an unsuitable one" (I, 280). To the extent that a philosophy is different from theology, it is not Christian (according to de Wulf), and to the extent that it is not different from theology, it is not philosophy. This extreme (though perhaps logically consistent) position is rejected by another neo-Thomist, Étienne Gilson, who admits the possibility of Christian philosophy in the acceptance of Christian revelation as "an indispensable auxiliary to reason" (*The Spirit of Medieval Philosophy*, p. 37), and in the selection of those philosophical problems that affect the conduct of religious life. See also de Wulf's *Medieval Philosophy: Illustrated from the System of Thomas Aquinas* (Cambridge, Mass., 1922), a short account of St. Thomas' philosophy, including his theory of the state (pp. 117-128), and D. J. Kennedy, *St. Thomas Aquinas and Medieval Philosophy* (New York, 1919), which includes a detailed exposition of the three functions assigned to reason by St. Thomas: "(1) to prepare for faith, (2) to explain the truths of faith, (3) to defend the truths of faith" (pp. 82 ff.). A more critical approach will be found in Philip H. Wicksteed, *The Relations between Dogma and Philosophy Illustrated from the Works of S. Thomas Aquinas* (Hibbert Lectures, Second Series, London, 1920).

CHAPTER TWELVE

DANTE

• BARBI, MICHELE, *The Life of Dante* (translated and edited by Paul G. Ruggiers, Berkeley and Los Angeles, 1954). Brief introduction into Dante's life and work by a leading Italian Dante specialist. Discussing Dante's *De monarchia*, Barbi writes that "the whole treatise is directed against all those who, for one reason or another, do not recognize the legitimacy of the Roman monarchy and its direct derivation from God. If on the whole it tends to confute the claims of the Church, that is because the Church has more authority and there is more harm in her usurpations" (p. 59). As an Italian patriot and nationalist, Barbi deeply sympathizes with Dante's praise of the Roman empire: "By exalting and defending the Empire he exalted and defended an Italian glory. Even if historical contingencies or divine justice had temporarily granted the imperial crown to foreign rulers, they were still imperial rulers. The Empire was Roman in every way, and Rome had to be the seat of it; and Italy, 'queen of the peoples,' (*domina gentium*), thus had the honor of ruling the world" (pp. 63-64).

• BERGIN, THOMAS G., *Dante* (New York, 1965). The first four chapters cover Dante's Europe, Dante's Florence, Dante's life, and Dante's reading (pp. 1-66). Chap. X (pp. 177-194) analyzes *De monarchia*. While generally sympathetic to Dante's political reasoning, Bergin finds Dante's argument less convincing that Roman imperial power was sanctioned by God's will: "This section makes fascinating, if hardly very convincing, reading for a twentieth-century reader, who may find the comments of St. Augustine more appropriate. For Augustine, in the *City of God* (III, 17-19), has some very anti-Roman comments to make on the 'heroes'

of the early republic, whom he saw as motivated purely by lust of glory. It seems as though Dante had very often fallen into the error he had feared: that of identifying right with might" (p. 188).

• BRYCE, JAMES, *The Holy Roman Empire*, 7th ed. (New York, 1877). Chap. XV (pp. 239-269) provides a discussion of Dante against the political and intellectual currents of his age.

• BURNHAM, JAMES, *The Machiavellians: Defenders of Freedom* (New York, 1943). Part I is called "Dante: Politics as Wish" (pp. 3-26). Burnham considers *De monarchia* as the prototype of nineteenth of all writing on politics, whose general method consists in concealing the "real meaning" of the argument behind its "formal meaning," the latter being expressed "in terms of the fictional world of religion, metaphysics, miracles, and pseudo-history" (p. 9). Applying this distinction of formal and real meaning to *De monarchia*, Burnham writes: "We think we are debating universal peace, salvation, a unified world government, and the relations between Church and State, when what is really at issue is whether the Florentine Republic is to be run by its own citizens or submitted to the exploitation of a reactionary foreign monarch" (p. 24). Burnham also argues that Dante was a traitor to his country because he supported the imperial cause against Florence, and that "his sociological allegiance was reactionary" (p. 22) because he did not support the cause of the cities, at that time the most progressive elements in politics and culture, but sided with the great nobles and the imperial party, the Ghibellines, who "wanted to stop history short" (*ibid.*). *De monarchia* is, according to Burnham, no more than a "Ghibelline Party Platform," and its

"vicious and reactionary" objectives are the "aims of an embittered and incompetent set of traitors" (p. 20). Burnham's severe critique of Dante is provocative, but debunking, too, can go too far.

• CHUBB, THOMAS CALDECOT, *Dante and His World* (Boston, 1966). A massive biography of Dante, written for the general reader and stressing Dante the man rather than the poet or political polemicist. Chap. XXII (pp. 653-674), which discusses *De monarchia*, contains the interesting statistical fact that of its 207 quotations 97 were from classical Latin and Greek authors, 65 from the New Testament, 28 from the Old Testament, nine from the Church fathers, and eight from various sources (p. 659).

• CHURCH, R. W., *Dante and Other Essays* (London, 1888). The first essay is on Dante (pp. 1-191).

• DANTE SEXCENTENARY LECTURES, *Rice Institute Pamphlet*, VIII (April, 1921). The most interesting paper is "Dante and the Renaissance," by Albert L. Guérard (pp. 194-215). See also Robert G. Caldwell, "The Political Writings of Dante" (pp. 170-193).

• DAVIS, CHARLES T., "Dante and Italian Nationalism," in William De Sua and Gino Rizzo (eds.), *A Dante Symposium: In Commemoration of the 700th Anniversary of the Poet's Birth (1265-1965)* (Chapel Hill, 1965), pp. 199-213. The author holds that Dante's "firm belief in the universality of Roman Power made any exclusive theory of nationalism impossible" (p. 202), and he concludes that during the liberal era of the Risorgimento Dante was a "political prophet for the whole nation" whereas during the fascist period "his voice reflected mainly the shrillness of official diatribes" (p. 213).

• ———, *Dante's Italy, and Other Essays* (Philadelphia, 1984). The main topics in this book are Dante's historical and political views, and the context from which they emerged. See also Davis's *Dante and the Idea of Rome* (Oxford, 1957).

• D'ENTRÈVES, A. P., *Dante as a Political Thinker* (Oxford, 1952). Interpreting Dante's political thought on the basis of the *Divine Comedy* as well as *De monarchia*,

the author finds that there are important discrepancies between the two; specifically, *De monarchia* seems to be "characterized by a temporary forgetfulness, on Dante's side, of the fundamental Christian idea, that from within and not from without, must mankind be redeemed and saved" (p. 51). This viewpoint, the author argues, is recanted by Dante in the *Divine Comedy*. Extensive bibliographical notes (pp. 98-113) enhance the value of this provocative study by a leading authority in the field of Italian thought and letters.

• FARNELL, STEWART, *The Political Ideas of the Divine Comedy* (Lanham, Maryland, 1985). A brief introduction to this subject. Farnell states, "The threads of Dante's political thinking are essential parts of the splendid tapestry of *The Divine Comedy*." A longer work on the same subject is Joan Ferrante, *The Political Vision of The Divine Comedy* (Princeton, 1984).

• FERGUSSON, FRANCIS, *Dante* (New York, 1966). Skillfully weaves together Dante's life, his intellectual sources, the political struggles in which Dante was involved, and his writings. The author's analyses are greatly enriched by his frequent analogies and comparisons, putting Dante's thought into a broader temporal and spatial context. Concerning *De monarchia*, Fergusson argues that, although Dante's idea of a Roman monarch of all mankind had no future, his idea of history as divine providence played an important role in forging the modern monarchies of national states, such as Spain, France, and England: "Book II of *De monarchia*, where Dante discusses the will of God in history, may be used to gloss Shakespeare's plays about the English monarchy, with their dramatic interplay between reason and religious loyalty to the anointed King; their more or less ritual ordeals by combat; their assumption that God's will in history is the ultimate arbiter of political conflict" (p. 78). Annotated Bibliographical Notes (pp. 201-208) are included.

• GILSON, ÉTIENNE, *Dante and Philosophy* (Harper Torchbooks, New York, 1963). Written from a neo-Thomist viewpoint, this is one of the most brilliant studies of Dante and essential to an understanding of

his political philosophy, treated in Part III (pp. 162-224). Gilson is satisfied that Dante was completely loyal to his faith, religion, and church. Yet on the basic issues of the relation of ecclesiastical and temporal powers, and of philosophy and theology, "this alleged Thomist struck a mortal blow at the doctrine of St. Thomas Aquinas" (p. 212).

• HENRY, AURELIA, *The De Monarchia of Dante Alighieri* (Boston-New York, 1904). This translation of *De monarchia* contains a long introduction (pp. xvii-li) and numerous notes and cross references of considerable value and usefulness. A translation of *De monarchia* (by Philip H. Wicksteed) will also be found in *The Latin Works of Dante: Translated into English* (Temple Classics, London, 1904), pp. 127-280, accompanied by interpretative comments and explanations. The volume includes Dante's *Letters (Epistolae)*, pp. 295-368 in an annotated translation; they are one of the principal sources of Dante's political ideas. A convenient edition of the Latin text is Dante, *De monarchia* (the Oxford Text edited by E. Moore, with an introduction on the political theory of Dante, by W. H. V. Reade, Oxford, 1916).

• LENKEITH, NANCY, *Dante and the Legend of Rome* (London, 1952). Dante's humanism, the glorification of the classical culture and heritage, had a decidedly political character: "It was a yearning for a new life which was to be a restoration of the ancient Roman way of being, of an entire civilization which would put to shame the barbarians across the Alps" (p. vii). While Dante was not the first Italian to revive the worship of ancient Rome, "he took the old 'patriotism' of the Italians, their half-poetical half-mythological love of their Roman origins, and attempted to give it a philosophical foundation" (p. 176). For a more recent study of Dante's conception of Rome, see Charles T. Davis, *Dante and the Idea of Rome* (Oxford, 1957).

• LIMENTANI, U. (ed.), *The Mind of Dante* (Cambridge, 1965). A symposium of essays by several British and Italian Dante scholars, mostly addressed to the general reader. In the essay on "Religion

and Philosophy in Dante" by Kenelm Foster (pp. 47-78), the author, in comparing *De Monarchia* with the *Divine Comedy*, writes: "There may be no difference in principle between the *Monarchia* and the *Comedy*; but a difference of 'slant,' emphasis, perspective, there undoubtedly is: enough to repeat that one work looks wholly to temporal existence, the other to eternal. It does not follow, of course, that the *Monarchia* is simply an irreligious work, if by religion one means only a general reverence towards a felt 'divinity' in things; for there is certainly *that* in the *Monarchia*. But, more strictly, religion can mean trying to get as close as possible to that 'divinity,' whatever it may be; it means seeking God, in short; and to see Dante really seeking God we have to turn to the *Comedy*" (pp. 74-75). In his chapter on "Dante's Political Thought" (pp. 113-137), the editor concludes that Dante's general outlook can be summarized as "internationalism rather than nationalism, laicism rather than theocracy, in the arrangement of human affairs" (p. 137).

• MANCUSI-UNGARO, DONNA, *Dante and the Empire* (New York, 1987). A short book on Dante's political philosophy. The author attempts to understand and explain "Dante's view of man, mankind, and the political structure of a world-city."

• OZANAM, FREDÉRIC, *Dante and Catholic Philosophy in the Thirteenth Century* (New York, 1897). The author, a French scholar, finds that Dante's religious orthodoxy is well established; he calls him the "St. Thomas of poetry" in the Middle Ages (p. 357). An equally sympathetic interpretation will be found in Auguste Valensin, *Le christianisme de Dante* (Paris, 1954). The author, a French Jesuit theologian, warmly defends Dante's religious faith. In this, he follows the official view of the Roman Catholic Church of the last hundred years, as expressed by Pope Benedict XIV in 1914: "Alighierius noster est" ("Dante belongs to us"). Earlier, the Catholic attitude toward Dante was hostile.

A divergent view on Dante's religious thought is expressed by John Jay Chapman, *Dante* (Boston, 1927): "To speak of Dante as a Protestant would be so historically

inexact as to be offensive. But Dante represents the spirit that was at the bottom of Protestantism, the impulse of a man to decide the religious question for himself, and to accept as much or as little as he sees fit" (p. 84). On Dante's relation to the papacy, Chapman writes that neither Luther, Calvin, nor John Knox ever "conceived of such supernal opposition to the Papacy as was Dante's bread and meat for many years. All that those northern reformers wanted was to be let alone. But Dante invades and browbeats the Roman Pontiff. He taught the Italians to hate the Vatican, and his influence it was which, more than any other one thing, led to the triumph of the Risorgimento and the unification of Italy in the last century" (p. 85). By contrast, Luigi Sturzo, a learned priest and scholar, writes as follows: "For man and Christian the *Divine Comedy* remains the book of art nearest to our spirit and faith" (*Church and State*, New York, 1939, p. 124).

• PAGE, THOMAS NELSON, *Dante and His Influence* (New York, 1922). Dante's political views are mainly discussed in Chap. III (pp. 89-116).

• PAPINI, GIOVANNI, *Dante Vivo* (English trans., New York, 1935). Dante's separation of the political from the religious power "was a first step in progressive anticlericalism: the State ought to be independent of the Church; the State has a right to supervise and direct the Church; the State transfers to itself the greater part of the offices of the Church: the State ignores the Church; the State ought to suppress the Church" (pp. 243-244). It is doubtful whether this kind of logic either proves or disproves Dante's basic position on the issue.

• PIRENNE, HENRI, *Economic and Social History of Medieval Europe* (London, 1936). Describes concisely and accurately the revival and growth of urban life, commerce, and trade in the Middle Ages, and provides the elementary social and economic data for an understanding of Dante's time. One of the best short books in the field.

• ROLBIECKI, JOHN JOSEPH, *The Political Philosophy of Dante Alighieri* (Washington,

1921). Stresses Dante's historical role as an advocate of international institutions for the regulation of the common interests of all mankind. The exposition of Dante's political ideas (pp. 15-150) is followed by a bibliography (pp. 151-156).

• SAYERS, DOROTHY L., *Introductory Papers on Dante* (London, 1954). Attempts to bring Dante to life for the modern reader, on the assumption that he was intended to be read by the common man and woman. The author doubts that *De monarchia* was Dante's "last word on the subject" (p. 211). Specifically, she claims that the two main theses of *De monarchia*—the complete emancipation of philosophy from faith and the establishment of a secular monarchy—were errors, and rectified by Dante himself in the *Divine Comedy*. While the author is primarily interested in Dante as an artist and poet, she has much to say that is relevant to a deeper understanding of Dante's general outlook and philosophy. See also her *Further Papers on Dante* (New York, 1957).

• TOYNBEE, PAGET, *Dante Alighieri: His Life and Works*, 4th ed. (Harper Torchbooks, New York, 1965). The emphasis is on the political background of Dante's time, particularly in Florence, and on his life and personal characteristics. Dante's Latin works, including *De monarchia*, are briefly analyzed in the last chapter (pp. 231-261). See also C. H. Grandgent, *Dante* (New York, 1916); Lonsdale Ragg, *Dante and His Italy* (New York, 1907); Paolo Milano (ed.), *The Portable Dante* (The Viking Portable Library, New York, 1948); and Karl Vossler, *Medieval Culture: An Introduction to Dante and His Times*, 2 vols. (New York, 1929).

• WICKSTEED, PHILIP H., *Dante and Aquinas* (London-New York, 1913). In this searching analysis of one of the crucial aspects of Dante's philosophy, the author concludes that "while Dante habitually moved within the circle of scholastic ideas, he did not allow it to confine him when his own thought or his poetic vision broke away from its limitations. In this respect his attitude towards it differed from his attitude towards Christian dogma, which he accepted without question, however

grievous a strain it put upon his conscience or his affections" (p. 147). The book also includes illuminating analyses of the relations of medieval thought and Greek philosophy (pp. 1-26), Neoplatonism (pp. 27-43), and the migration of

Aristotle and the transformations of Aristotelianism (pp. 44-85). Dante's relation to Virgil, his favorite poet, just as Aristotle was his favorite philosopher, is the main subject of J. H. Whitfield, *Dante and Virgil* (Oxford, 1949).

CHAPTER THIRTEEN

MARSILIO OF PADUA

• ALLEN, J. W., "Marsilio of Padua and Medieval Secularism," in *The Social and Political Ideas of Some Great Medieval Thinkers* (ed. F. J. C. Hearnshaw, London, 1923), pp. 167-191. The author is not sure whether Marsilio "was a Christian in any sense at all, in spite of the display of scriptural texts in the *Defensor*. We all know that the devil himself can quote Scripture" (p. 171). As to the meaning of Marsilio's concept of the "weightier part" of the citizenry, Allen suggests that normally it would mean the "numerical majority" (p. 182).

• BOASE, T. S. R., *Boniface VIII* (London, 1933). Includes, in the last chapter, a brief account of Boniface's successors, Benedict XI and Clement V.

• COULTON, G. G., *Studies in Medieval Thought* (London, 1940). Chap. XIV is called "The Lay Revolt" (pp. 181-193). See also his *Medieval Panorama* (Cambridge, 1938), Chaps. XXXVI, "The Papal Schism" (pp. 477-484), and LII, "The Bursting of the Dykes" (pp. 720-731).

• D'ENTRÈVES, ALEXANDER PASSERIN, *The Medieval Contribution to Political Thought* (London, 1939). Chaps. III and IV are on Marsilio (pp. 44-87). Interprets Marsilio's political theory as a medieval revival of Aristotle's conception of the state.

• EMERTON, EPHRAIM, *The Defensor Pacis of Marsiglio of Padua* (Harvard Theological Studies, VIII, Cambridge, Mass., 1920). At the outset the author writes as follows: "Marsiglio is the herald of a new world, the prophet of a new social order,

acutely conscious of his modernness and not afraid to confess it. His book has often been called the most remarkable literary product of the Middle Ages, and I am inclined to accept this verdict" (p. 1). This balanced study is excellent in both exposition and criticism.

• FIGGIS, JOHN NEVILLE, *The Divine Right of Kings* (Cambridge, 1934). Chap. III, "The Holy Roman Empire and the Papacy" (pp. 38-65), gives both the history and theory of the conflict, including brief accounts of Pope Boniface VIII, King Philip IV, and Marsilio of Padua.

• GEWIRTH, ALAN, "John of Jandun and the *Defensor Pacis*," *Speculum*, XXIII (April, 1948), 267-272. On the basis of a careful comparison of Marsilio's works with those of John of Jandun, the author concludes that "no substantial part of the *Defensor Pacis* was written by John of Jandun. From the external evidence of his close association in friendship and in political activities with Marsilius, it is highly probable that John contributed advice and assistance. But the actual composition and doctrine of the entire treatise are the product of one man, Marsilius of Padua" (p. 272). See also Gewirth's *Marsilius of Padua and Medieval Political Philosophy* (New York, 1951).

• GIERKE, OTTO, *Political Theories of the Middle Age* (trans., with an introduction, by Frederick William Maitland, Cambridge, 1938). Chaps. VI, "The Idea of Popular Sovereignty" (pp. 37-61), and X, "The Beginnings of the Modern State"

(pp. 87-100), are particularly pertinent. Maitland's introduction (pp. xii-xlv) is a classic within a classic.

• HENDERSON, ERNEST F. (ed.), *Select Historical Documents of the Middle Ages* (London, 1903). Pope Boniface VIII's two bulls, *Clericis Laicos* (1296) and *Unam Sanctam* (1302), are reprinted (pp. 432-437).

• HOLMES, OLIVER WENDELL, "The Path of the Law," *Harvard Law Review*, X (No. 8, 1897), 457-478. The definition of the law is given as "the prophecies of what the courts will do in fact, and nothing more pretentious" (pp. 460-461). For Hans Kelsen's view of coercion as an essential element in law, see his *General Theory of Law and State* (Cambridge, Mass., 1945), pp. 18 ff., 122 ff., 391 ff.

• LEWIS, EWART, "The 'Positivism' of Marsiglio of Padua," *Speculum*, XXXVIII (October, 1963), 541-582. The author challenges the dominant interpretation of Marsilio's concept of law, according to which he broke with the medieval view that reason was the essence of law, substituting for it the new concept that the essence of law was its coerciveness. "It seems clear that, far from basing the validity of laws on the coercive authority of a certain legislator," the author states, "Marsiglio is actually trying to base the valid authority of a certain legislator on the necessary characteristics of laws; and that, in this attempt, he is rather more concerned with the substantive requisites of laws than with their necessary coerciveness. And although, in common with all medieval theory of legislation, his theory assumes that an authoritative decision, an act of will, is essential to the minting of mere reason into law, he nowhere suggests that what is just and beneficial is itself determined by that act of will" (pp. 570-571).

• MCLWAIN, CHARLES HOWARD, *The Growth of Political Thought in the West* (New York, 1932). In his analysis of Marsilio's political ideas (pp. 295-315) the author rejects the accepted democratic interpretation of the doctrine of the "weightier part" of the citizens, and holds that it is "in much closer correspondence with the anti-democratic ideas of Aristotle

than with the political conceptions of our modern time" (p. 304). McIlwain calls *The Defender of Peace* "one of the real landmarks" in the development of political thought (p. 313), because it is the first book that "denies to the clergy coercive authority of any kind whatsoever, spiritual or temporal, direct or indirect" (*ibid.*).

• MARSILIO OF PADUA, *The Defender of the Peace* (trans. out of Latin into English by William Marshall, London, 1535). Until the publication of Alan Gewirth's translation in 1956, the Marshall translation was the only one. Published in 1535, at the height of Henry VIII's reign, it is noteworthy for the omission of passages in *The Defender of Peace* that treat of the correction of rulers who abuse their powers. For a study of the influence of Marsilio on Thomas Starkey, chaplain to Henry VIII, and author of an important political work, the *Dialogue between Cardinal Pole and Thomas Lupset*, see Franklin Le Van Baumer, "Thomas Starkey and Marsilius of Padua," *Politica*, II (November, 1936), 188-205.

• POOLE, REGINALD LANE, *Illustrations of the History of Medieval Thought and Learning*, 2nd ed. (New York, 1960). In discussing *The Defender of Peace* (pp. 230-241), Poole stresses that it contains "the whole essence of the religious and political theory which separates modern times from the middle ages. The significance of the reformation, putting theological details aside, lay in the substitution of a ministry serving the church, the congregation of Christian men, for a hierarchical class. The significance of the later political revolution, even now far from universally realized, lay in the recognition of the people as the source of government, as the sovereign power in the state. Both these ideas Marsiglio appropriated. He had not only a glimpse of them as from afar off; he thought them out, defined them, stated them with the clearest precision, so that the modern constitutional statesman, the modern Protestant, has nothing to alter in their principle, has only to develop them and fill in their outline" (p. 240).

• POWICKE, F. M., *The Christian Life in the Middle Ages* (Oxford, 1935). Chap. III

is on "Pope Boniface VIII" (pp. 48-73). See also the author's *Ways of Medieval Life and Thought* (London, 1950), Chap. VII: "Reflections on the Medieval State" (pp. 130-148).

• PREVITTE-ORTON, C. W., *Marsilius of Padua* (Annual Italian Lecture of the British Academy, London, 1935). The best short introduction, in English, to Marsilio's main ideas. The author stresses the impact of republican Padua on Marsilio, and emphasizes the democratic aspects of his political theory. See also Previté-Orton's introduction to his edition of the Latin text of *The Defensor Pacis of Marsilio of Padua* (Cambridge, 1928), pp. ix-xliii; "Marsiglio of Padua," *English Historical Review*, XXXVIII (January, 1923), 1-18; and "The Authors Cited in the *Defensor Pacis*," in *Essays in History Presented to Reginald Lane Poole* (ed. by H. W. C. Davis, Oxford, 1927), pp. 405-420.

• REEVES, MARJORIE, "Marsiglio of Padua and Dante Alighieri," in Beryl Smalley (ed.), *Trends in Medieval Political Thought* (Oxford, 1965), pp. 86-104. The author of this perceptive comparative analysis notes striking parallels between the experiences of Marsilio and Dante, but she is even more impressed with the substantial difference of their ideas: "Both have an Italian civic

background and it is noteworthy that only one incorporates it into his idea of peace. This sharp contrast perhaps gives us the most central point of divergence between Dante and Marsiglio, for whereas Dante's aspiration to achieve the possible intellect leads him straightforward to the single monarch as the only means to this end, Marsiglio's spread of varying civic values without distinction of grade is the basis of his republicanism. The qualities of his sufficient life are minimal enough to be desired and attained by a large proportion of the people, whereas a hierarchy of ends presupposes that only an elite will reach the highest" (p. 96).

• SIGMUND, PAUL E., "The Influence of Marsilius of Padua on Fifteenth-Century Conciliarism," *Journal of the History of Ideas*, XXIII (July-September, 1962), 392-402. Although *The Defender of Peace* was burned at the University of Paris in 1324 and Marsilio himself was condemned as a heretic in 1327, the author shows that Marsilio exercised a considerable influence on numerous writers in the fifteenth century who sought to circumscribe absolute papal power through the conciliar movement. On Marsilio and conciliarism, see also Michael Wilks, *The Problem of Sovereignty in the Middle Ages* (Cambridge, 1963), pp. 477 ff.

CHAPTER FOURTEEN

MACHIAVELLI

• ACTON, LORD, *The History of Freedom and Other Essays* (London, 1907). Chap. VII (pp. 212-231), on Machiavelli, includes many comments on *The Prince* by famous writers and statesmen. Lord Acton concludes his observations as follows: "Machiavelli is the earliest conscious and articulate exponent of certain living forces in the present world. Religion, progressive enlightenment, the perpetual vigilance of public opinion, have not reduced his

empire, or disproved the justice of his conception of mankind. He obtains a new lease of life from causes that are still prevailing, and from doctrines that are apparent in politics, philosophy, and science. Without sparing censure, or employing for comparison the grosser symptoms of the age, we find him near our common level, and perceive that he is not a vanishing type, but a constant and contemporary influence" (p. 231).

- BURNHAM, JAMES, *The Machiavellians* (New York, 1943). Part II (pp. 29–77) is on “Machiavelli: The Science of Power.” Burnham says that “Machiavelli divorced politics from ethics only in the same sense that every science must divorce itself from ethics. Scientific descriptions and theories must be based upon the facts, the evidence, not upon the supposed demands of some ethical system” (p. 38). Concerning the attitude to Machiavelli, Burnham observes that “the harsh opinion of Machiavelli has been more widespread in England and the United States than in the nations of Continental Europe. This is no doubt natural, because the distinguishing quality of Anglo-Saxon politics has always been hypocrisy, and hypocrisy must always be at pains to shy away from the truth” (p. 77). Burnham sees in the Machiavellian tradition the true foundation of politics and the science of politics. In addition to Machiavelli, he deals with Mosca, Sorel, Michels, and Pareto. Burnham concludes that democracy as “self-government” or “government by the people” is impossible, and that the theory of democracy as self-government “must be understood as a myth, formula, or derivation” (p. 236).
- BUTTERFIELD, HERBERT, *The Statecraft of Machiavelli* (London, 1940). The author sees Machiavelli’s main original contribution in his use of history as a method of political analysis, although in practice he was not always scientific in his method, and “when he observes he sees what the ancients have taught him to see, when he examines the facts he may know beforehand the conclusion that he is going to draw from them” (p. 78). The last chapter is an interesting discussion of “Machiavelli and Bolingbroke” (pp. 135–164).
- CASSIRER, ERNST, *The Myth of the State* (New Haven, 1946). Chaps. X–XII (pp. 116–162) place Machiavelli in the philosophical and scientific background of his time and interpret his political thought in a fresh and penetrating manner. See also Cassirer’s “Some Remarks on the Originality of the Renaissance,” *Journal of the History of Ideas*, IV (January, 1943), 49–56. The entire issue is

devoted to a symposium on the Renaissance.

- CHABOD, FEDERICO, *Machiavelli and the Renaissance* (trans. into English, Cambridge, Mass., 1958). Like most Italian students of Machiavelli, the author emphasizes the context of Italian history and civilization which provide the clue for a proper understanding of Machiavelli’s thought. In the same tradition of Italian scholarship, Chabod concentrates on *The Prince* as the core of Machiavelli’s ideas, and assigns to *The Discourses* a much less important role than is customary among non-Italian scholars. The author arrives at this relative evaluation of the two works on grounds not only of intrinsic merit and analysis, but also of chronology: contrary to the commonly held view, according to which *The Discourses* was written much later than *The Prince*, Chabod argues that “it may be regarded as certain that at the time when Machiavelli started work on *The Prince* the first book of *The Discourses* was already largely complete” (p. 31). An extensive bibliography (pp. 201–247) examines the literature on the concept and meaning of the Renaissance. See also Chabod’s *Scritti su Machiavelli* (Turin, 1964), a collection of his writings on Machiavelli over a period of three decades.
- CROCE, BENEDETTO, *Politics and Morals* (New York, 1945). Defends Machiavelli in the light of Italian politics and traditions: “The art and science of politics, of pure politics, brought to maturity by the Italians, were to him a source of pride” (p. 63). The last chapter is “Historical Pessimism” (pp. 200–204).
- DONALDSON, PETER, *Machiavelli and Mystery of State* (New York, 1988). A study of six individuals—Reginald Pole, Stephen Gardiner, John Wolfe, Arnold Clapmar, Gabriel Naude, and Louis Machon—for whom Machiavelli was associated with ancient ways of statecraft.
- FERRERO, GUGLIELMO, “Machiavelli and Machiavellism,” *Foreign Affairs*, XVII (April, 1939), 569–577. Asserts that in *The Discourses* there is not a trace of Machiavellianism, and that even *The Prince* contains only a few such passages, “not

connected with each other nor with the rest of the argument, which could be either suppressed entirely without mutilating the work or rendered quite inoffensive by disguising their thought in less frank terminology. Anyone acquainted with the life and character of Machiavelli knows that these fragments of his thought, on which a whole theory of conduct has been erected, are nothing but bad-tempered explosions” (p. 571).

- FIGGIS, JOHN NEVILLE, *Studies of Political Thought from Gerson to Grotius, 1414–1625*, 2nd ed. (Cambridge, 1931). In his appraisal of Machiavelli (pp. 72–93), Figgis stresses the absence of the concept of natural law in Machiavelli and draws suggestive comparisons between Machiavelli and Nietzsche.
- FLEISHER, MARTIN (ed.), *Machiavelli and the Nature of Political Thought* (New York, 1972). Papers from the first Conference for the Study of Political Thought.
- GARVER, EUGENE, *Machiavelli and the History of Prudence* (Madison, Wisc., 1987). An essay on prudence or practical wisdom in which the place of Machiavelli is assessed.
- GILBERT, ALLAN H., *Machiavelli’s Prince and Its Forerunners* (Durham, N.C., 1938). Advances the thesis—not too convincingly—that *The Prince* is essentially a typical representative of a thousand books written during several centuries preceding Machiavelli, and that “few of the ideas expressed in *The Prince* are altogether novel; most of them are to be found in medieval and renaissance works belonging to the type of books of advice to kings. Possibly a complete reading of the treatises belonging to this class would leave Machiavelli with nothing wholly new” (p. 234). A detailed bibliography is appended (pp. 238–247). See also Felix Gilbert, “The Humanist Concept of the Prince and *The Prince* of Machiavelli,” *Journal of Modern History*, XI (December, 1939), 449–483, and *Machiavelli and Guicciardini: Politics and History in Sixteenth-Century Florence* (Princeton, 1965), particularly Chap. IV (pp. 153–200), which discusses Machiavelli’s political thought, and the

“Bibliographical Essay” on Machiavelli (pp. 316–330).

- HANCOCK, W. K., “Machiavelli in Modern Dress: An Inquiry into Historical Method,” *History*, XX (September, 1935), 97–115. The author sums up his position as follows: “Taught by Machiavelli, we shall try to avoid deluding ourselves about the actualities of historical periods and situations. We shall be alive to the importance of technical capacity in the conduct of policy. We shall not deny that the power and interest of the State is a proper object of statesmanship: we shall on the contrary develop our conception of State-interest in harmony with the developing complexities of community life. So far we keep company with Machiavelli. But we part company with him when he pushes his theory of interest to the point of denying the existence of a society of states, bound together by obligations of law and morality. At this point we become, without equivocation, Anti-machiavellian” (p. 114).
- HEARNSHAW, F. J. C. (ed.), *The Social and Political Ideals of Some Great Thinkers of the Renaissance and the Reformation* (London, 1925), Chap. IV, by the editor, is on Machiavelli (pp. 87–121). The author reaches this conclusion: “I hold that both the conscience of mankind and the verdict of history have declared themselves decisively against Machiavellism. The one says that it is theoretically indefensible, the other that it is practically unsound” (p. 118). Numerous illustrations from history are cited to show that the application of Machiavellian principles does not pay—quite apart from the question of their ethical character.
- HULLIUNG, MARK, *Citizen Machiavelli* (Princeton, N.J., 1984). Hulliung holds the traditional view of Machiavelli, namely, that his moral and political thought is “scandal[ous].” Hulliung’s view is not that Machiavelli was a misguided or misinterpreted humanist, but that he deliberately and intentionally put forth a political teaching different than his predecessors’.
- JENSEN, DE LAMAR (ed.), *Machiavelli: Cynic, Patriot, or Political Scientist?* (Boston, 1960). A useful brief symposium

of excerpts from the writings of students of Machiavelli, giving the pros and cons on each of the major issues treated. Has "Suggestions for Additional Reading" (pp. 109-111).

• LANDI, ERNESTO, "The Political Philosophy of Machiavelli," *History Today*, XIV (August, 1964), 550-555. In this brief analysis, addressed to the general reader, the author writes: "Machiavelli was certainly a devious man; and much of what he says is literally shocking. What is perhaps the most audacious, and also the most original suggestion in his theory, is that there is not one morality, as all previous philosophers had taught, but two moralities—political morality and private morality" (p. 554). Yet the author recognizes that "there have been surprisingly few takers" for this basic concept of Machiavelli, "possibly because it entails too radical a break with that Christian and Hellenistic tradition by which the European mind has been shaped" (p. 555).

• LASKI, HAROLD J., *The Dangers of Obedience and Other Essays* (New York, 1930). Chap. IX, "Machiavelli and the Present Time" (pp. 238-263), is a critical study of Machiavelli in the light of political philosophy and historical experience. Machiavelli's doctrine is called a "gospel of death" (p. 262).

• LEWIS, WYNDHAM, *The Lion and the Fox* (New York-London, n.d.). A suggestive study of the impact of Machiavelli on English literature, with particular reference to Shakespeare.

• MANSFIELD, HARVEY, *Machiavelli's New Modes and Orders: A Study of the Discourses on Livy* (Ithaca, N.Y., 1979). An interpretive and detailed commentary of the *Discourses* on a chapter-by-chapter basis, from a Straussian perspective.

• MATTINGLY, GARRETT, "Machiavelli's Prince: Political Science or Political Satire?" *The American Scholar*, XXVII (Autumn, 1958), 482-491. Puts forward the thesis that *The Prince* should be read as a parody or satirical version of "Mirrors of Princes," handbooks of advice to princes frequently written before and during Machiavelli's time: "In some ways, Machiavelli's little treatise was just like all the

other 'Mirrors of Princes'; in other ways it was a diabolical burlesque of all of them, like a political Black Mass" (p. 487). The author finds supporting evidence for his thesis both in Machiavelli's life and thought, and even if his reappraisal is ultimately not fully convincing it deserves careful attention.

• MEINECKE, FRIEDRICH, *Machiavellism: The Doctrine of Raison d'État and Its Place in Modern History* (New Haven, 1957). The classic study of the concept and evolution of the reason of state by the foremost German historian of the twentieth century. The introduction (pp. 1-22) analyzes the essence of the reason of state, and Chap. I (pp. 25-48) is on Machiavelli. See also Gerhard Ritter, *The Corrupting Influence of Power* (Hadleigh, Essex, 1952); Chap. II is on Machiavelli as the "Path-Finder of Continental Power Politics" (pp. 17-45). The principal theme of Ritter's book is the contrast between Machiavelli and Thomas More, the "Ideologist of the Island Welfare State" (pp. 46-89), and the historical consequences of this contrast in modern European history (pp. 90-197).

• MEISEL, JAMES H. *The Myth of the Ruling Class: Gaetano Mosca and the "Elite"* (Ann Arbor, 1958). Mosca is the most important modern political writer emphasizing the role of the elite in government and politics. Chap. XIII (pp. 262-285) is on "Machiavelli and the Machiavellians," particularly in relation to the modern elite theory of politics.

• MUIR, D. ERSKINE, *Machiavelli and His Times* (London, 1936). The author sees the clue to Machiavelli's political theory in his "burning indignation at the state of Italy and the decadence of Italians, and a hard ruthless determination to point to the only remedies in which he believed" (p. 251). Attractive illustrations are included in the book.

• OLSCHKI, LEONARDO, *Machiavelli the Scientist* (Berkeley, 1945). A brief and illuminating essay, stressing the relation of Machiavelli's ideas to the new scientific tendencies of his time. Olschki characterizes Machiavelli "as one of the greatest exponents of the laical genius of Italy that sought clarity, knowledge, and wisdom as

manifestations of a free human judgment and of autonomous intellectual experiences" (p. 56).

• PITKIN, HANNA, *Fortune Is a Woman* (Berkeley, 1984). Subtitled *Gender and Politics in the Thought of Niccolò Machiavelli*, this book is a sustained investigation of Machiavelli's thought, in which the focus is made to be the role of masculinity in his thought.

• PREZZOLINI, GIUSEPPE, *Machiavelli* (New York, 1967). The main value of the book lies in the survey of Machiavelli's influence in the major European countries and the United States, taking up about half of the whole work. In the discussion of Machiavelli's political thought, the author stresses its atheistic and anti-Christian character.

• RAAB, FELIX, *The English Face of Machiavelli: A Changing Interpretation, 1500-1700* (London, 1964). Shows how Machiavelli's ideas found adherents and opponents during the Tudor and early Stuart periods, both among publicists and men in public affairs. See also J. G. A. Pocock, "Machiavelli, Harrington, and English Political Ideologies in the Eighteenth Century," *William and Mary Quarterly*, 3rd Series, XXII (October, 1965), 549-583.

• RIDOLFI, ROBERTO, *The Life of Niccolò Machiavelli* (Chicago, 1963). An outstanding biography of Machiavelli, stressing his character, life, and career rather than his thought, viewed perceptively and sympathetically by a Florentine historian. For a brief biographical introduction, see also J. R. Hale, *Machiavelli and Renaissance Italy* (London, 1961).

• STRAUSS, LEO, *Thoughts on Machiavelli* (Glencoe, Ill., 1958). Seeks to establish the unity of Machiavelli's thought in *The Prince* and *The Discourses*, contrary to the more accepted view that there is a real distinction of outlook between the two works. In trying to fathom the meaning of Machiavelli's doctrines, the author does not relate Machiavelli to his time and historical environment, but dissects the text of Machiavelli's writings in minute detail, including the frequency of some key concepts (or their absence). Strauss rejects the newer interpretations of Machiavelli as a

patriot or scientific student of politics, and accepts the older view of Machiavelli as a "teacher of evil" (p. 9). The symbol of Machiavelli's new philosophy "is the Beast Man as opposed to the God Man: it understands man in the light of the sub-human rather than that of the super-human" (pp. 296-297). Despite its self-imposed limitations of approach, this work is indispensable to the study of Machiavelli.

• VILLARI, PASQUALE, *The Life and Times of Niccolò Machiavelli* (New York, 1898). First published in Italian in 1877, this is still a useful source of Machiavellian studies, though perhaps too apologetic in tendency. The massive work contains detailed accounts of the background of the whole period as well as of Machiavelli's life and thought. Numerous illustrations are included.

• WHITFIELD, JOHN H., *Machiavelli* (Oxford, 1947). Chap. IV (pp. 60-82) of this scholarly and searching work is on *The Prince*. A short bibliography is added (pp. 161-163).

• WOOD, NEAL, "Machiavelli's Concept of *Virtù* Reconsidered," *Political Studies*, XV (June, 1967), 159-172. Machiavelli himself used the term "*virtù*" in many ways, and there has been ceaseless controversy as to whether the many specific meanings used by Machiavelli have a common core. After examining the concept of "*virtù*" in various works of Machiavelli, the author makes a good case for defining the core meaning of "*virtù*" as "a set of qualities, or a pattern of behavior most distinctively exhibited under what may be described as battlefield conditions, whether actual war or politics provide the context. Machiavelli's politico is cast in the mould of the warrior, and the standard of excellence of one is not so different from that of the other" (p. 171). For a different interpretation, see Joseph Anthony Mazzeo, *Renaissance and Seventeenth Century Studies* (New York, 1964), where "*virtù*" is defined as "sheer ability, prudence in the sense of practical insight and the power to act on it, without any ethical meaning attached. It involves an acute understanding of the real nature of things and circumstances as well as the ability to act on that understanding" (p. 156).

CHAPTER FIFTEEN

THE PROTESTANT REFORMATION

- ACTON, LORD, *The History of Freedom and Other Essays* (London, 1907). Chap. IV is called "The Massacre of St. Bartholomew" (pp. 101-149). The royal orders required the public authorities "to collect the Huguenots in some prison or other safe place, where they could be got at by hired bands of volunteer assassins. To screen the King it was desirable that his officers should not superintend the work themselves. Mandelot the Governor of Lyons, having locked the gates of Lyons, and shut up the Huguenots together, took himself out of the way while the Huguenots were butchered" (p. 119). Lord Acton, a devout Catholic, describes the subsequent attempts to whitewash the massacre as follows: "A time came when the Catholics, having long relied on force, were compelled to appeal to opinion. That which had been defiantly acknowledged and defended required to be ingeniously explained away. The same motive which had justified the murder now prompted the lie. Men shrank from the conviction that the rulers and restorers of their Church had been murderers and abettors of murder, and that so much infamy had been coupled with so much zeal. They feared to say that the most monstrous of crimes had been solemnly approved at Rome, lest they should devote the Papacy to the execration of mankind" (p. 148). See also Chap. V, "The Protestant Theory of Persecution" (pp. 150-187), in which Lord Acton deals, in particular, with doctrines and practices of persecution in Lutheranism and Calvinism, and his conclusion is summarized in one brief sentence: "Those who—in agreement with the principle of the early Church, that men are free in matters of conscience—condemn all intolerance, will
- censure Catholics and Protestants alike" (p. 186).
- ALLEN, J. W., *The History of Political Thought in the Sixteenth Century* (London, 1928). Sees the originality of the *Vindiciae* not in the idea of contract, but in the stress on the rights of municipalities, thus foreshadowing the concept of a federal system; the latter had little impact in France and England but influenced the internal political organization of Holland (pp. 320-331).
- ARMSTRONG, E., "The Political Theory of the Huguenots," *English Historical Review*, IV (January, 1889), 13-40. Emphasizes the immense practical impact of the *Vindiciae*, particularly in England, and less in France.
- BAINTON, ROLAND H., *The Reformation of the Sixteenth Century* (Beacon Paperbacks, Boston, 1956). While stressing the religious ideas and issues in the rise of Protestantism, the author gives due attention to its social, economic, and political background. Unlike most other writers, Bainton does not accept the "common generalization that Lutheranism made for totalitarianism and Calvinism for democracy" (p. 233), nor does he favor the view that Protestantism and Catholicism can be clearly juxtaposed in terms of their political impact: "Just as the Catholic Church will make a concordat with any regime that allows freedom to administer the sacraments, freedom to propagate the faith, freedom to hold property, and freedom for the monastic orders, so Protestantism has been willing to tolerate any form of government which accords religious liberty to Protestantism" (p. 234). Interesting comparisons between Catholic and Protestant attitudes on religious toleration from the fifteenth to the

- seventeenth centuries will be found in Bainton's *The Travails of Religious Liberty* (Harper Torchbooks, New York, 1958) and *The Age of the Reformation* (Anvil Books, Princeton, 1956).
- BARKER ERNEST, *Church, State and Study* (London, 1930). Chap. III, "A Huguenot Theory of Politics," deals primarily with the *Vindiciae contra tyrannos* (pp. 72-108), and is one of the most instructive analyses of the work. Of special interest is Barker's detailed evidence of the striking similarity between the *Vindiciae* and Locke's *Second Treatise of Government* (pp. 98-99, 106-108). The question of the authorship of the *Vindiciae* is examined by Barker in "The Authorship of the *Vindiciae contra tyrannos*," *Cambridge Historical Journal*, III (No. 2, 1930), 164-181. A searching examination of the available facts leads Barker to support the traditional acceptance of Hubert Languet as the author of the *Vindiciae*, whereas the evidence against Duplessis-Mornay seems "absolutely conclusive" (p. 174).
- ———, *Traditions of Civility* (Cambridge, 1948). Chap. IV, "The Connection of the Renaissance and the Reformation" (pp. 74-123), is an illuminating interpretation of an age "from which we are sprung, and to which we must always return to understand what we are" (p. 123). The essay is admirably suited for a first introduction to the whole subject of Renaissance and Reformation.
- BORNKAMM, HEINRICH, *Luther's World of Thought* (St. Louis, 1958). The author, a German church historian and fervent Lutheran, deals not only with Luther's religious doctrines, but also with his political ideas and their impact on German political development. Bornkamm argues that Luther was primarily a religious reformer rather than a political thinker or practical statesman. The main point in Luther's concept of the state is his rejection of the Aristotelian thesis that the state is the product of man's social impulses. Luther follows here—as in so many other issues—the doctrine of Augustine according to which the state is the result of, and remedy for, man's sinfulness. While not denying that the German Protestant rulers
- used the Lutheran churches as instruments of political absolutism, the author defends Luther on that point by arguing that such developments ran counter to Luther's intentions and expectations.
- BOUWSMA, WILLIAM, *John Calvin; A Sixteenth-Century Portrait* (Oxford, 1988). The most important recent biography on Calvin. This work much discusses Calvin's ideas (not so much his theology) and is therefore particularly valuable. Includes chapters on "Society" and "Polity."
- BREEN, QUIRINUS, *John Calvin: A Study in French Humanism* (Archon Books, U.S.A., 1968). This book concentrates on the early life of Calvin, which, in Breen's view, "reveals a cross-section in miniature of French humanism."
- CHADWICK, OWEN, *The Reformation* (Penguin Books, Baltimore, 1964). A useful overall introduction into the background, nature, and effects of the Reformation. For studies in depth, stressing particularly the social and economic underpinnings of the Reformation, see Arthur G. Dickens, *Reformation and Society in Sixteenth-Century Europe* (New York, 1966), and Guy E. Swanson, *Religion and Regime: A Sociological Account of the Reformation* (Ann Arbor, 1967).
- COLLINS, ROSS, *Calvin and the Libertines of Geneva* (Toronto, 1968). A brief biography of Calvin that defends him from the views that he was either a political tyrant or Protestant Pope in Geneva.
- DEFENCE OF LIBERTY AGAINST TYRANTS (A Translation of the *Vindiciae contra tyrannos* by Junius Brutus, with an Historical Introduction by Harold J. Laski, London, 1924). Laski's introduction is detailed and penetrating, providing a background of Huguenot political thought as well as a minute analysis of the chief ideas of the *Vindiciae* (pp. 1-60).
- ERIKSON, ERIK, *Young Man Luther* (1968). A psychobiography.
- FIGGIS, JOHN NEVILLE, *Studies of Political Thought from Gerson to Grotius, 1414-1625* (Cambridge, 1931). The first part of Lecture III, "Luther and Machiavelli," deals with the impact of Luther on politics (pp. 55-72). For a brief account of the *Vindiciae*, see pp. 134ff., and Figgis'

The Divine Right of Kings (Cambridge, 1934), pp. 113–118.

• FOSDICK, HARRY EMERSON (ed.), *Great Voices of the Reformation* (Modern Library Giants, New York, 1954). An anthology of writers of the Reformation, from John Wycliffe to John Wesley, including brief excerpts from less well-known sources. The same subject is also covered in a much briefer anthology of Reformation writings by Lewis W. Spitz (ed.), *The Protestant Reformation* (Englewood Cliffs, N.J., 1966).

• GREEN, V. H. H., *Luther and the Reformation* (New York, 1964). In 200 pages the author, combining solid scholarship with fair judgment, succeeds in giving both a vivid portrait of Luther's personality and thought and an incisive account of the world in which he lived. Concerning Luther's attacks against the peasants during the peasant uprising, Green notes that "nothing can justify the shrill and savage tone" of Luther's condemnation of the peasants, but argues that Luther believed "the Evangelical Reformation was itself imperilled by the ravaging bands" (p. 153). In his conclusion, Green compares Luther with Calvin: "His mind was perhaps less incisive and his administrative genius less marked than that of John Calvin, and his general outlook more old-fashioned. In the long run Calvinism exerted greater influence over the future history of the world, but conservative revolutionary as he may well have been, Luther more than any other person fractured the unity of medieval Christendom and challenged the authority of the Church" (p. 197).

• GRISAR, HARTMANN, *Martin Luther: His Life and Work* (St. Louis, 1935). The leading Catholic biography of Luther. See also Jacques Maritain, *Three Reformers: Luther, Descartes, Rousseau* (New York, 1929), for a Catholic interpretation of Luther and his relation to Descartes and Rousseau from the viewpoint of metaphysics and social philosophy. The specific problem of toleration of dissenting religious beliefs during the Reformation period is treated, in a critical yet scholarly manner, by Joseph Lecler, *Toleration and the Reformation*, 2 vols. (New York, 1960).

• HARBISON, E. HARRIS, *The Age of Reformation* (Ithaca, 1955). An outstanding brief survey of the period, skillfully relating the new religious movements to the underlying intellectual and social forces throughout Europe. See also Harbison's *The Christian Scholar in the Age of the Reformation* (New York, 1956), and *Christianity and History* (Princeton, 1964).

• HUNT, GEORGE L. (ed.), *Calvinism and the Political Order* (Philadelphia, 1965). A symposium of ten essays, five of which deal with American topics, such as the influence of the Puritan ethic on American democracy, Lincoln, and Woodrow Wilson. See also Jacob T. Hoogstra (ed.), *American Calvinism: A Survey* (Grand Rapids, 1957), and Roy F. Nichols, *Religion and American Democracy* (Baton Rouge, 1959).

• HUNTER, A. MITCHELL, *The Teaching of Calvin: A Modern Interpretation* (London, 1950). Stresses the impact of Calvinism on the rise of modern democracy: "It was principally because Calvin was such an outright uncompromising exponent of essential democracy in Church and State that his influence so quickly eclipsed that of Luther in the extent of its spread and the constructive and directive idealism he infused into the political systems of modern civilization. Calvinism in fact became the most powerful ferment of civil liberty which has ever worked in the world's heart" (p. 304). See also T. F. Torrance, *Calvin's Doctrine of Man* (London, 1949); A. Dakin, *Calvinism* (Philadelphia, 1946); Sir Alfred T. Davies, *John Calvin and the Influence of Protestantism on National Life and Character* (London, 1946); and James Mackinnon, *Calvin and the Reformation* (New York, 1936).

• MACKINNON, JAMES, *Luther and the Reformation*, 4 vols. (New York, 1925–1930). Covers extensively the background, life, thought, and impact of Luther. The best short biography of Luther is Roland H. Bainton, *Here I Stand: A Life of Martin Luther* (New York, 1950). Older, but still useful, is Preserved Smith, *The Life and Letters of Martin Luther* (Boston–New York, 1911). See also Heinrich Boehmer, *Luther and the Reformation in the Light of*

Modern Research (London, 1930); Edgar M. Carlson, *The Reinterpretation of Luther* (Philadelphia, 1948); and Robert M. Fife, *The Revolt of Martin Luther* (New York, 1957).

• MCNEILL, JOHN T., *The History and Character of Calvinism* (New York, 1954). The first half deals with the origins of Calvinism and the Geneva experiment under Calvin himself; the second half traces the spread of Calvinism to the rest of Europe and North America, and examines the relation of Calvinism to modern issues. With regard to the issue of slavery in the United States, the author writes that, when the civil war came in 1861, "most of the churches upheld the cause espoused by the states in which they were located" (p. 424). See also George L. Mosse, *Calvinism: Authoritarian or Democratic?* (New York, 1957) and Charles Davis Cremeans, *The Reception of Calvinistic Thought in England* (Urbana, 1949).

• NIEBUHR, REINHOLD, *The Nature and Destiny of Man: A Christian Interpretation*, 2 vols. in 1 (New York, 1949). This is the main work by Niebuhr, generally recognized as the most influential Protestant religious thinker of the twentieth century and considered by some as the foremost American political philosopher of his time. In his treatment of the Reformation (II, pp. 184–212), Niebuhr emphasizes that Luther "took a complacent attitude towards the social inequalities of feudalism and observed that on earth there will always be masters and slaves. Luther added an element of perversity to this social ethic by enlarging upon the distinction between an 'inner' and an 'outer' kingdom so that it became, in effect, a distinction between public and private morality. The rulers, as custodians of public morality, were advised to 'hit, stab, kill' when dealing with rebels. . . . The peasants on the other hand, as private citizens, were admonished to live in accordance with the ethic of the Sermon on the Mount. . . . The inevitable consequence of such an ethic is to encourage tyranny; for resistance to government is as important a principle of justice as maintenance of government" (II, pp. 193–195).

Niebuhr also adds that Luther's "inordinate fear of anarchy" and his "corresponding indifference to the injustice of tyranny" (*ibid.*) were "not unrelated" to the subsequent history of Germany and to German Nazism. By contrast with Lutheranism, Niebuhr holds, both Calvinism and Catholicism "have a lively sense of the individual's responsibility for the whole of his common life" (*Faith and History*, New York, 1949, p. 200). See also the following works by Niebuhr: *The Children of Light and the Children of Darkness* (New York, 1944), *Moral Man and Immoral Society* (New York, 1960), *The Self and the Dramas of History* (New York, 1955), and *Pious and Secular America* (New York, 1958). The most extensive examination of Niebuhr's thought by religious thinkers (Protestant, Catholic, and Jewish), philosophers, and political writers will be found in the symposium, by Charles W. Kegley and Robert W. Bretall (eds.), *Reinhold Niebuhr: His Religious, Social, and Political Thought* (New York, 1956), containing also Niebuhr's reply to his critics (pp. 431–451) and a bibliography of his writings until 1956 (pp. 455–478). For sharply critical analyses of Niebuhr's thought, see Charles Frankel, *The Case For Modern Man* (New York, 1956), Chap. VI (pp. 85–116), and Wilson Carey McWilliams, "Reinhold Niebuhr: New Orthodoxy for Old Liberalism," *American Political Science Review*, LVI (December, 1962), 874–885.

• PASCAL, ROY, *The Social Basis of the German Reformation* (London, 1933). Views the Lutheran movement primarily in terms of social and economic conditions in the period of nascent German capitalism.

• PARKER, THOMAS, *John Calvin: A Biography* (London, 1975). When it appeared, the first full-length biography on Calvin in English for 40 years.

• PLASS, EWALD M. (ed.), *What Luther Says: An Anthology*, 3 vols. (St. Louis, 1959). Presents all aspects of Luther's thought—theological, philosophical, social, political, and economic—in his own words. The entries are in alphabetical order. Since Luther was a prolific writer,

and had strong views on many and sundry subjects, this anthology is immensely useful as a quick reference guide to his thought. Luther's writings on the peasant rebellion will be found in Vol. 46 of *Luther's Works* (ed. by Robert C. Schultz, Philadelphia, 1967), pp. 3-85.

• REID, W. STANFORD (ed.), *John Calvin: His Influence in the Western World* (Grand Rapids, Mich., 1982). A collection of essays on various Calvinist subjects, mostly his influence on a country-by-country basis.

• RITTER, GERHARD, *Luther: His Life and Work* (New York, 1963). The author, a liberal German historian, views Luther in the perspective of both German and European history, and the last chapter, "Luther's Historical Importance" (pp. 210-247), is particularly valuable to the student of political ideas. Concerning the German peasant rebellion, Ritter writes: "The catastrophe of the Peasants' Revolt did not prevent the continuance of the Reformation, and perhaps did not seriously hold it up; but it gave the movement another character. It did away for ever with the confidence that one could achieve a reform of spiritual and secular life at once. The nation as a whole lost not only its hope in this transformation, but also its chance of internal participation in public life—that tempting prospect in which they had followed and applauded the breaking away of the Church from Rome as the beginning of a better period for the Germans. From now on the future of Germany was left entirely in the hands of the victors and oppressors, the German princes and their advisers" (p. 173).

• THOMPSON, CARGILL, *The Political Thought of Martin Luther*, ed. Philip Broadhead (Brighton, Eng., 1984). A brief introduction to the subject.

• TROELTSCH, ERNST, *The Social Teaching of the Christian Churches*, trans. from the German, 2 vols. (New York, 1931). The second volume of this monumental study is devoted to Protestantism. In the treatment of Lutheranism (II, pp. 515-576) Troeltsch brings out the basic authoritarianism in Luther: "All along Luther is opposed to revolutionary schemes which are based on an individualistic point of view,

and he is in favor of an authority which controls, conditions, and gradually molds them, even in case of necessity achieving its end by force. In this glorification of authority there were certain resemblances to the doctrine of Machiavelli, which early Lutherans had already noted" (p. 532). Concerning the Lutheran concept of the state, Troeltsch says that it is "the same 'police' and utilitarian idea of State as in Catholicism, only now, in accordance with the circumstances, there is a greater emphasis upon unity of authority" (p. 548).

The discussion of Calvinism (II, pp. 576-691) starts out with the observation that Calvinism rather than Lutheranism "is the chief force in the Protestant world today" (p. 576). The deeper reason for this lies, according to Troeltsch, in the "active character" of Calvinism, as contrasted with the acquiescence of Lutheranism in existing social and political conditions: "From the political and social point of view the significance of Lutheranism for the modern history of civilization lies in its connection with the reactionary parties" (II, p. 577). The "Democratic Tendency of Primitive Calvinism" is discussed (II, pp. 628-630). See also Troeltsch's *Protestantism and Progress: A Historical Study of the Relation of Protestantism to the Modern World* (Beacon Paperbacks, Boston, 1958).

• WALLACE, RONALD, *Calvin, Geneva and the Reformation* (Edinburgh, 1988). Not a biography of Calvin, but a collection of essays on different aspects of his life. Part I is "The Reformer and his City."

• WARFIELD, BENJAMIN B., *Calvin and Augustine* (Philadelphia, 1956). From Luther onward, Protestant thinkers have felt intense spiritual kinship with Augustine. The author, a distinguished Protestant theologian, states that "it is Augustine who gave us the Reformation" (p. 322).

• WEBER, MAX, *The Protestant Ethic and the Spirit of Capitalism* (London, 1930). Weber, the greatest German sociologist of the twentieth century, attacks the study of capitalism from the religious angle, and stresses the role of Calvinism and Puritanism in the growth of the capitalist spirit. A similar approach will be found in

R. H. Tawney, *Religion and the Rise of Capitalism* (Mentor Books, New York, 1947). Weber's view is challenged by H. M. Robertson in his *Aspects of the Rise of Capitalism: A Criticism of Max Weber and His School* (Cambridge, 1933), in which he tries to prove that capitalism first started in Catholic countries like Italy and France. The answer to Robertson will be found in the work of a Jesuit writer, J. Broderick, *The Economic Morals of the Jesuits: An Answer to Dr. H. M. Robertson* (London, 1934). Excerpts from some of these and other related writings will be found in Robert W. Green (ed.), *Protestantism and Capitalism: The Weber Thesis and Its Critics* (Boston, 1959).

• WHALE, J. S., *The Protestant Tradition* (Cambridge, 1955). The first part deals with Luther, Calvin, and the later sectarian movements; the second part takes up the attitudes of the Protestant churches on modern issues, such as religious toleration, church and state, totalitarianism and democracy, and social reform. A brief survey of the history of Protestantism and its relation to modern intellectual and political issues will also be found in W. R. Inge, *Protestantism* (New York, 1935). Henry Townsend, *The Claims of Free Churches* (London, 1949), examines the crucial role of the nonconformist sects and churches in British history: "The idea and experience of freedom, which gave birth to the Free Church gave birth also to the Free State" (p. 193). For the impact of Puritanism on Britain and the United States, see also John Brown, *The English Puritans* (Cambridge, 1912); John S. Flynn, *The Influence of Puritanism on the*

Political and Religious Thought of the English (London, 1920); and Ralph Barton Perry, *Puritanism and Democracy* (New York, 1944).

• WOLIN, SHELDON S., "Politics and Religion: Luther's Simplistic Imperative," *American Political Science Review*, L (March, 1956), 24-42. The author seeks to resolve the fundamental paradox in Luther's thought: the libertarian implications of his religious doctrines as contrasted with the absolutistic impact of his political writings. Whereas many students of Luther seek to resolve this contradiction in Luther by transforming him into a consistent libertarian or authoritarian in both religion and politics, Wolin argues that there is a common denominator between Luther's religious individualism and his political authoritarianism: his "simplistic imperative," or the tendency to oversimplify, and, above all, Luther's "failure to appreciate institutions" (p. 40). In religion, this simplistic imperative is shown in Luther's insistence on faith, the purely spiritual relation between man and God, in which churches, laws, ministers, and traditions play a subordinate role. In politics, too, Luther holds the notion that rules and regulations are not important; what matters is the wisdom of the rulers and the unquestioning obedience of the subjects: "In both instances the quest is for personal identification: the believer with his God, the citizen with his government" (p. 42). See also Wolin's "Calvin and the Reformation: The Political Education of Protestantism," *American Political Science Review*, LI (June, 1957), 428-453.

CHAPTER SIXTEEN

BODIN

• ALLEN, J. W., *A History of Political Thought in the Sixteenth Century* (London, 1928). Part III, Chap. VIII, "Jean

Bodin" (pp. 394-444), greatly contributes to an understanding of Bodin. The author states that the originality of Bodin's

theory of sovereignty consisted essentially "in the fact that he did not connect it specifically and directly with the will of God," and of the various elements that went into Bodin's theory, "the only one that is new is the conception of political society as absolutely and necessarily associated with the existence of the family and of private property and the conception of a consequent limitation of political authority" (p. 423). See also Allen's "Jean Bodin," in F. J. C. Hearnshaw (ed.), *The Social and Political Ideas of Some Great Thinkers of the Sixteenth and Seventeenth Centuries* (London, 1926), Chap. II (pp. 42-62).

• BODIN, JEAN, *The Six Bookes of a Commonweale* (edited with an Introduction by Kenneth Douglas McRae, Cambridge, Mass., 1962). This is a facsimile reprint of the English translation of *Les Six livres de la République* by Richard Knolles of 1606, the only English version of the complete work. The Knolles translation is based on the French and Latin texts of the treatise. In this edition, the text of Bodin's work is preceded by McRae's Introduction (pp. A3-A90), a detailed synopsis (pp. A91-A103), and the text itself is followed by a detailed critical apparatus of Notes (pp. A105-A172). See also the translation (in abridged form) by M. J. Tooley (Blackwell's Political Texts, Oxford-New York, 1955).

• CARLYLE, R. W., and A. J. CARLYLE, *A History of Medieval Political Theory in the West*, Vol. VI: *Political Theory from 1300 to 1600* (London, 1936). Includes an account of Bodin (pp. 417-429), particularly in relation to the theory of absolute monarchy.

• CHURCH, WILLIAM FARR, *Constitutional Thought in Sixteenth-Century France* (Cambridge, Mass., 1941). Includes a detailed analysis of Bodin in relation to his predecessors and contemporaries (pp. 194-242). Concerning Bodin's influence on his followers, the author writes that "it was not Bodin's thought as a whole which was adopted by his followers but rather certain salient features which were appropriated because of their immediate value or appeal to contemporary writers. And in the process of adoption by others, those

portions of Bodin's system undergoing such treatment could but be distorted because of their removal from their original context. Certain important concepts were seized upon, torn from their immediate milieu, and, through association with other ideas, were attributed meanings entirely lacking to Bodin. Such was the fate of his most important contribution, his theory of sovereignty" (p. 244). A detailed bibliography is on pp. 339-350.

• DICKINSON, JOHN, "A Working Theory of Sovereignty," *Political Science Quarterly*, XLII (December, 1927), 524-548, and XLIII (March, 1928), 32-63. Defines sovereignty in the legal sense, following Bodin's juristic conception, as "nothing more nor less than a logical postulate or presupposition of any system of order according to law," because if there is to be uniformity of legal rules in a community, "then there must be a single final source of law" that all inferior tribunals and officials recognize as the ultimate authority (p. 525). If competing authorities exist side by side, subject to no common superior, the result is anarchy (p. 526). Dickinson's views are directed against those who confuse the legal concept of sovereignty with the psychological concept of power, as well as against those who, like the pluralists (Harold J. Laski, G. D. H. Cole), deny the usefulness and validity of the doctrine of sovereignty altogether.

The ablest juristic and analytic treatment of the problem of sovereignty will be found in Hans Kelsen, *General Theory of Law and State* (Cambridge, Mass., 1945) and *Principles of International Law*, 2nd ed. (New York, 1966). Dickinson's interpretation of the concept of sovereignty as a logical postulate or presupposition of a system of law is based on Kelsen's view that sovereignty is not a social fact but an hypothesis, the expression of the unity of a legal system. For accounts of Kelsen's legal theory, see William Ebenstein, *The Pure Theory of Law* (Madison, Wis., 1945), and "Kelsen, Hans," *International Encyclopedia of the Social Sciences*, Vol. VIII (New York, 1968), pp. 360-366.

• FIGGIS, J. N., *The Divine Right of Kings* (Cambridge, 1934). For a brief analysis of

Bodin, see pp. 126-130; *Studies of Political Thought from Gerson to Grotius, 1414-1625* (Cambridge, 1931), pp. 110 ff.; and "Political Thought in the Sixteenth Century," in *Cambridge Modern History* (Cambridge, 1904), Vol. III, Chap. XXII (pp. 736-769). See also, in the same volume, Chap. I, "The Wars of Religion in France," by A. J. Butler (pp. 1-52).

• FRANKLIN, JULIAN H., *Jean Bodin and the Rise of Absolutist Theory* (London, 1973). Development of Bodin's thoughts on sovereignty, presenting the position that his position shifted from one of limited to absolute sovereignty. Develops the influence of his historical context on Bodin. The central thesis of this book is that Bodin's later absolutism "was as unprecedented as the doctrine it opposed," namely, the constitutionalism of the Huguenots.

• ———, *Jean Bodin and the Sixteenth-Century Revolution in the Methodology of Law and History* (New York, 1963). Examines Bodin's pioneering role in introducing the historical and comparative methods into the study of public law and government. See also Constance I. Smith, "Jean Bodin and Comparative Law," *Journal of the History of Ideas*, XXV (July-September, 1964), 417-422.

• GILMORE, MYRON PIPER, *Argument from Roman Law in Political Thought, 1200-1600* (Cambridge, Mass., 1941). Includes an account of Bodin's theory of office (pp. 93-113).

• GREENLEAF, W. H., *Order, Empiricism and Politics: Two Traditions of English Political Thought, 1500-1700* (New York, 1964). English political thought of 1500-1700 is characterized, the author argues, by two main philosophies: the political theory of order, politically linked to absolute monarchy, and the political theory of empiricism, politically linked to theories of mixed government and limited monarchy. Chap. VII (pp. 125-141) is devoted to Bodin, the only non-English thinker to receive such special coverage, because he was one of the most frequently cited authors in England, particularly in the first half of the seventeenth century. In his general social philosophy, Bodin eulogized

order and abhorred disorder, and in the specific sphere of politics Bodin advocated the doctrine of unlimited sovereignty and hereditary monarchy. After Bodin's political theory of order came under fire from the middle of the seventeenth century on, his "works seemed to lose much of their previous significance and they lapsed into an undeserved obscurity" (p. 126).

• KING, PRESTON, *The Ideology of Order: A Comparative Analysis of Jean Bodin and Thomas Hobbes* (New York, 1974). A critique of the politics of order. Part III is on Bodin.

• LASKI, HAROLD J., *A Grammar of Politics*, 2nd ed. (London, 1930). Chap. II, "Sovereignty" (pp. 44-88), rejects the validity and usefulness of the concept of sovereignty from the viewpoint of legal theory and political philosophy, and seeks to demonstrate that sovereignty does not satisfactorily describe the conduct and goals of the state in its domestic or foreign relations. A more detailed exposition of Laski's theory of pluralism, which replaces the traditional monistic concept of the sovereignty of the state with the concept of associations as the basis of the state, will be found in *Studies in the Problem of Sovereignty* (New Haven, 1917), *Authority in the Modern State* (New Haven, 1919), and *The Foundation of Sovereignty and Other Essays* (New Haven, 1921). Laski's theory of political pluralism stresses individualism and voluntarism: "The will of the State obtains preeminence over the wills of other groups exactly to the point where it is interpreted with sufficient wisdom to obtain general acceptance, and no further. It is a will to some extent competing with other wills, and, Darwinwise, surviving only by its ability to cope with its environment. Should it venture into dangerous places it pays the penalty of its audacity. It finds its sovereignty by consent transformed into impotence by disagreement. But, it may be objected, in such a view sovereignty means no more than the ability to secure assent. I can only reply to the objection by admitting it. There is no sanction for law other than the human mind. It is sheer illusion to imagine that the authority of the State has

any other safeguard than the wills of its members" (*Studies in the Problem of Sovereignty*, p. 14).

See also Jacques Maritain, "The Concept of Sovereignty," *American Political Science Review*, XLIV (June, 1950), 343-357, who fully concurs with Laski, though writing from a different philosophical starting point. Maritain, basing his discussion of sovereignty on Bodin, Hobbes, and Rousseau, concludes that the concept of sovereignty be discarded altogether: "The two concepts of Sovereignty and Absolutism have been forged together on the same anvil. They must be scrapped together" (p. 357).

• MCLLWAIN, CHARLES H., "Sovereignty Again," *Economica*, VI (November, 1926), 253-268, reprinted in his *Constitutionalism and the Changing World* (New York, 1939), Chap. II (pp. 26-46). Chap. III, "A Fragment on Sovereignty" (pp. 47-60), is mainly devoted to Bodin. McIlwain hails Bodin as the first author of the theory of the *Rechtsstaat*, the state based on the rule of law, and says that Bodin's analysis "is a sounder foundation on which to build than either the assertions of Hobbes or the negations of the modern Pluralists" (p. 60). The moderate and antidespotic position of Bodin is emphasized by McIlwain in *The Growth of Political Thought in the West*

(New York, 1932), pp. 364-394. Concerning the later abuse of Bodin's doctrine of sovereignty for the justification of despotic government, McIlwain writes: "The more liberal parts of Bodin's conception of kingship are a heritage of the middle ages; the development of the absolute monarchy into an arbitrary one is a modern achievement" (p. 388). See also McIlwain's "Sovereignty in the World Today," *Measure*, I (Spring, 1950), 109-117.

• MURRAY, R. H., *The Political Consequences of the Reformation: Studies in Sixteenth-Century Political Thought* (New York, 1960). Chap. IV (pp. 129-168) is on "Bodin and the Theory of Sovereignty."

• SALMON, J. H. M., *The French Religious Wars in English Political Thought* (Oxford, 1959). In the late sixteenth and seventeenth centuries, French political experience and thought had a considerable influence in England, whereas from the eighteenth century onward English political philosophy had a strong appeal in France. Salmon's study shows in detail the impact of French political thought in the late sixteenth and seventeenth centuries on English political theory and practice. In particular, the influence of Bodin on England is analyzed, including his personal links with prominent English publicists and politicians.

CHAPTER SEVENTEEN

HOBBS

• ALEKSANDROV, G. F., *A History of Western European Philosophy*, 2nd ed. (trans. from the Russian, New Haven, 1949). In this Soviet text, Hobbes is described as a firm defender of private property, who "regarded the development of society through a prism, which sharply distorted the real position of things. He saw the cause of men's struggle with one another not in the exploitation of man by man, nor in the private ownership of the means of

production, but in the absence of private property. Thus the entire course of the actual development of human society is presented by Hobbes in reverse order" (p. 175). Hobbes "produced the theory that later formed the foundation of innumerable theories of bourgeois governmental structure. This theory fully justified the domination of one section of society over another, of one class over another" (*ibid.*). Hobbes' ideas on state and church were

advanced for his time, and he "did much for the development of atheism" (p. 176). Aleksandrov concludes as follows: "The theory developed by Hobbes was progressive and has a tremendous influence on social science in all European countries in the seventeenth and eighteenth centuries" (*ibid.*).

• BOWLE, JOHN, *Hobbes and His Critics* (London, 1951). Hobbes was a highly controversial figure in his own time, and this is the only full account of his contemporary critics—liberal, conservative, religious, and secular. The author not only contributes to a better understanding of Hobbes in the context of his own period, but also shows how some of the main arguments of Hobbes' contemporary critics became the dominant ideas in English political thought from Locke onward. See also Samuel I. Mintz, *The Hunting of Leviathan: Seventeenth-Century Reactions to the Materialism and Moral Philosophy of Thomas Hobbes* (Cambridge, 1962). This volume supplements the study by Bowle, since it concentrates on contemporary attacks on Hobbes' moral and religious opinions, whereas Bowle is largely concerned with political criticisms of Hobbes. The Mintz volume has extensive bibliographical data (pp. 157-183).

• BROWN, KEITH C. (ed.), *Hobbes Studies* (Oxford, 1965). Twelve essays on Hobbes' views on politics, ethics, law, and religion, written by scholars in Great Britain, the United States, Canada, and Italy. The period following World War II saw a remarkable resurgence of Hobbes studies, and this symposium provides a representative sampling of some of the more important essays.

• CARRITT, E. F., *Morals and Politics* (London, 1935). Chap. III is on Hobbes (pp. 25-39). See also W. R. Sorley, *A History of English Philosophy* (Cambridge, 1937), pp. 47-74; R. H. S. Crossman, *Government and the Governed* (London, 1939), pp. 43-69; C. E. Vaughan, *Studies in the History of Political Philosophy before and after Rousseau* (Manchester, 1939), Vol. I, 17-61; and J. W. Gough, *The Social Contract* (Oxford, 1936), pp. 100-107.

• CATLIN, GEORGE E. G., "Thomas Hobbes and Contemporary Political Theory," *Political Science Quarterly* LXXXII (March, 1967), 1-13. Examines the relevance of Hobbes' political theory in the perspective of the world's most urgent problem in the atomic age: peace. The author writes that "the central contribution of Hobbes to political science is his theory of power, more developed and sophisticated than that which we owe, implicitly, to Machiavelli. Nothing, incidentally, can be more topical in our atomic age than the role which Hobbes assigned to the political factor of terror" (p. 5). The author concludes that the issue of world peace "has been the prime preoccupation of applied political theory since 1914, just as the comparable problem of local civil wars preoccupied Thomas Hobbes in the middle of the disturbed seventeenth century" (p. 13).

• COLEMAN, FRANK, *Hobbes and America* (Toronto, 1977). Puts forward the thesis that Hobbes is the intellectual precursor of the American constitution.

• GAUTHIER, DAVID, *The Logic of Leviathan* (Oxford, 1969). Subtitled *The Moral and Political Theory of Thomas Hobbes*, this brief but comprehensive book was conceived in part as a response to Howard Warrender's *The Political Philosophy of Hobbes* (see below). Gauthier's conclusion is that Hobbes's theory, although illuminating, and profitable to study, is "a failure."

• GERT, BERNARD, "Hobbes and Psychological Egoism," *Journal of the History of Ideas*, XXVIII (October-December, 1967), 503-520. The idea is widely held that Hobbes was a follower of the doctrine of psychological egoism, and that his political theory is necessarily linked to it. The author of this provocative study challenges this almost universal view and seeks to show that Hobbes did not adhere to psychological egoism and that his political theory not only does not require an egoistic psychology but is incompatible with it. Assembling his evidence from various works of Hobbes, the author concludes that "Hobbes believed that human nature was malleable, that one could

train, educate, and discipline people into good citizens. Granted this conditioning must take into account the strong passions of natural man, still through such training man could become quite different from what he was originally" (p. 519).

• GOLDSMITH, M. M., *Hobbes's Science of Politics* (New York, 1966). The author examines Hobbes' thought in terms of his own intention to create a unified system encompassing both natural and civil philosophy. The first four chapters (pp. 1-128) deal with philosophy, natural philosophy, human nature, and the natural condition. In the last three chapters (pp. 129-242), Hobbes' concepts of constructing a social order as well as his theories of government and sovereignty are elaborated. The volume has a detailed bibliography (pp. 253-262).

• GOOCH, G. P., *Hobbes* (Annual Lecture on a Master Mind, British Academy, London, 1939). Presents Hobbes in the perspective of English history and his later influence at home and abroad. Gooch concludes that it "is one of the ironies of history that the disciples whom the author of *Leviathan* failed to find in his own country and his own time are crowding the continental stage after the lapse of three hundred years" (p. 42). See also Gooch's *Political Thought in England: From Bacon to Halifax* (Home University Library, London, 1937), Chap. II, "Hobbes" (pp. 35-57).

• HOOD, F. C., *The Divine Politics of Thomas Hobbes: An Interpretation of Leviathan* (Oxford, 1964). The author makes the bold attempt to interpret Hobbes as a "sincere Christian thinker," and to show how his views on ethics, natural law, and government reflect a basically Christian outlook. Even those who will not be persuaded by Hood's central argument will find much in the volume that is provocative and that forces the reader to reexamine accepted ideas about Hobbes.

• JAMES, DAVID G., *The Life of Reason: Hobbes, Locke, Bolingbroke* (New York, 1949). Chap. I, "The Proud Mind" (pp. 1-62), is on Hobbes. The author sees in the combination of rationalism and

materialism in Hobbes a "hopeless contradiction" (p. 268).

• JOUVENEL, BERTRAND DE, *Sovereignty* (Cambridge, 1957). Chap. XIV is on "The Political Consequences of Hobbes" (pp. 231-246). The author rejects the interpretation of Hobbes as a forerunner of totalitarianism: "It is psychologically necessary to successful totalitarianism that each man feels himself a mere part, whereas Hobbesian man feels himself most vividly a whole" (p. 239). Far from being the "father of totalitarianism," Hobbes is "an individualist and progressive, who would like each man to develop his faculties in striving to fulfil his desires, as these are successively aroused. Only, men so employed may do each other harm. The State exists to stop the mischief which the intersection of their appetites may do them" (*ibid.*).

• LAIRD, JOHN, *Hobbes* (London, 1934). In the preface to this volume in the *Leaders of Philosophy* series, the author calls Hobbes a "psychologist of genius, a notable metaphysician, a political thinker of enduring renown, and a moralist who should be called the father of British ethics in its greatest period, although most of his progeny were anxious to show why and in what ways they could not live down to so disreputable an ancestor" (p. v). Part I is on Hobbes' life and time (pp. 3-81); Part II is on his philosophy, including a long chapter on politics and religion (pp. 85-239); Part III deals with Hobbes' influence (pp. 243-317). A short bibliography is appended (pp. 318-319).

• LEMOS, RAMON, *Hobbes and Locke: Power and Consent* (Athens, Ga., 1978). A study of natural right, natural law, and social contract approaches in Hobbes and Locke.

• MACPHERSON, C. B., *The Political Theory of Possessive Individualism: Hobbes to Locke* (Oxford, 1962). Hobbes is treated in Chap. II, "Hobbes: The Political Obligation of the Market" (pp. 9-106). Essentially Marxist in its approach, this reexamination of English political thought from Hobbes to Locke stresses the "possessive" quality of English individualism during that period. According

to Macpherson, seventeenth-century England had become a "possessive market society" (p. 62), and Hobbes drew the logical conclusions from this type of society, "where all values are reduced to market values, justice itself is reduced to a market concept. And in demanding that a market concept of justice should replace the customary concept, he seems both to be claiming that a fully market society is here to stay, and to be acknowledging that it has only recently come" (p. 64). In an essay on "Hobbes's Bourgeois Man" (in Keith C. Brown, ed., *Hobbes Studies*, Oxford, 1965, pp. 169-183), Macpherson also writes that "Hobbes's morality is the morality of the bourgeois world and that his state is the bourgeois state. There is his attitude towards the poor, his view of thrift and extravagance, his insistence that the state should institute private property and provide freedom for individual enrichment, his expectation that the sovereign will provide for equality before the law" (p. 175). For critical examination of Macpherson's central thesis, see Sir Isaiah Berlin, "Hobbes, Locke and Professor Macpherson," *Political Quarterly*, XXXV (October-December, 1964), 444-468; Bertram Morris, "Possessive Individualism and Political Realities," *Ethics*, LXXV (April, 1965), 207-214; C. Williamson, "A Contradiction in Hobbes' Analysis of Sovereignty," *Canadian Journal of Economics and Political Science*, XXXII (May, 1966), 202-219; and Alan Ryan, "Locke and the Dictatorship of the Bourgeoisie," *Political Studies*, XIII (June, 1965), 219-230.

• OAKESHOTT, MICHAEL, *Hobbes on Civil Association* (Berkeley, 1975). Oakeshott's famous introduction to the Blackwell's edition of *Leviathan*, and three other essays.

• PARSONS, TALCOTT, *The Structure of Social Action* (Glencoe, Ill., 1949). In his discussion of "Hobbes and the Problem of Order" Parsons says that "Hobbes' system of social theory is almost a pure case of utilitarianism" (p. 90), and that he "saw the problem with a clarity which has never been surpassed" (p. 93). On "Hobbes and the Utilitarians," see also John Plamenatz, *The English Utilitarians* (Oxford, 1949), pp. 10-16.

• PETERS, RICHARD, *Hobbes* (Penguin Books, Baltimore, 1956). A volume in the Pelican Philosophy Series. After an introductory chapter on the life of Hobbes in the context of his turbulent era, the author examines the major point of Hobbesian thought on government and politics as well as on logic, psychology, ethics, and religion.

• ROSS, RALPH, et al. (eds.), *Thomas Hobbes in His Time* (Minneapolis, 1975). Six essays, including John Dewey's 1918 "The Motivation of Hobbes's Political Philosophy," wherein sovereignty is presented as a solution to the conflict between church and state in Hobbes's time, not as a solution to the more subsequent conflict between personal freedom and state control.

• SHULMAN, GEORGE, "Hobbes, Puritans, and Promethean Politics," *Political Theory* (August, 1989). This analysis presents Hobbes's project as directing Puritan rebellion away from grounding political power in the people and toward grounding it in the state. "It is on the grave of a defeated but assimilated Puritanism that Hobbes stands as the first great modernizer and state builder."

• SKINNER, QUENTIN, "Thomas Hobbes and His Disciples in France and England," *Comparative Studies in Society and History*, VIII (January, 1966), 153-167. During his self-imposed exile in Paris from 1640 to 1651 Hobbes maintained close relations with some of the leading scientists and philosophers in France. After his return to England in 1651 Hobbes kept corresponding with his French friends; much of Skinner's investigation is based on previously unpublished letters from and to Hobbes' French correspondents. In Skinner's judgment, "Hobbes was widely denounced in England, but he seems to have been widely accepted abroad. . . . At least some of his followers recognized and sympathized with his most ambitious hopes for a Science of Politics. And at least some of this enthusiasm seems to have been conveyed back even to England" (pp. 163-164). For a more detailed examination of contemporary attitudes toward Hobbes, particularly in

England, see also Skinner's article, "The Ideological Context of Hobbes's Political Thought," *Historical Journal*, IX, No. 3 (1966), 286–317.

• STEPHEN, LESLIE, *Hobbes* (Ann Arbor Paperbacks, Ann Arbor, 1961). One of the best short books on Hobbes. Chap. 1 (pp. 1–69) is on his life, IV (pp. 173–236) on his political theory. See also George Croom Robertson, *Hobbes* (Edinburgh-London, 1886), and A. E. Taylor, *Hobbes* (London, 1908).

• STRAUSS, LEO, *The Political Philosophy of Hobbes: Its Basis and Its Genesis* (Oxford, 1936, reprinted Chicago, 1952). In this pioneering study, the author seeks to demonstrate that Hobbes' "new moral attitude" preceded his interest in modern science, and that his break with tradition and his original contribution were due rather to that new moral attitude than to his (later) contact with science. Specifically, Strauss argues that however much "Hobbes personally esteemed the aristocracy, and esteemed the specific qualities of the aristocracy, his political philosophy is directed against the aristocratic rules of life in the name of bourgeois rules of life. His morality is the morality of the bourgeois world" (pp. 120–121). The genesis of Hobbes' political philosophy is "nothing other than the progressive supplanting of aristocratic virtue by bourgeois virtue" (p. 126). In an earlier study on Hobbes, Strauss had already written that all the characteristic premises and affirmations of liberalism can be found in Hobbes, and that "the absolutism of Hobbes is nothing but militant liberalism in *statu nascendi*, that is, liberalism in its most radical form. Hobbes is thus the true founder of liberalism, and therefore in looking for a radical critique or justification of liberalism, one has to go back to him." Strauss emphasizes that Hobbes—though a founder

of liberalism—was not a Liberal in the proper sense of the term.

• WARRENDER, HOWARD, *The Political Philosophy of Hobbes: His Theory of Obligation* (Oxford, 1957). Contrary to the traditional interpretation of Hobbes as a positivist sharply opposed to natural law, Warrender argues that Hobbes is "essentially a natural-law philosopher" (p. 323), because his "theory of political society is based upon a theory of duty, and his theory of duty belongs essentially to the natural-law tradition" (p. 322). Although its main conclusions will not be universally accepted, the book is an original and provocative contribution to the study of Hobbes.

• WATKINS, J. W. N., *Hobbes's System of Ideas* (London, 1965). The author seeks to show that Hobbes' political ideas are closely related to his general philosophical ideas and his views about nature and man. Avoiding excessive generalization and abstraction, Watkins sticks to essentials and draws his evidence from numerous works of Hobbes. In criticizing Hobbes' concept of sovereignty, the author makes this interesting comment: "He knew of only one political calamity (external wars excepted) besides which others pale into insignificance. We know of two: civil war and totalitarianism. And the question is whether his drastic remedy for civil war—an all-powerful sovereign upon whom there is no constitutional check—is not likely to lead to a situation as grim as the one it replaces" (p. 172).

• WILLEY, BASIL, *The Seventeenth Century Background: Studies in the Thought of the Age in Relation to Poetry and Religion* (Anchor Books, New York, 1953). In the section on Hobbes (pp. 99–124), the author stresses the "radical incompatibility between the principles of Hobbes's philosophy and those of any sort of Christianity, if not of any sort of religion" (p. 115).

CHAPTER EIGHTEEN

LOCKE

• AARON, R. I., *John Locke*, 2nd ed. (Oxford, 1963). Locke's political, moral, religious, and educational views are examined in Part III (pp. 256–308). A useful bibliography is included (pp. 313–320).

• ASHCROFT, RICHARD, *Revolutionary Politics and Locke's Two Treatises of Government* (Princeton, 1986). A very comprehensive work on the meaning and content of Locke's political views and politics.

• BROGAN, A. P., "John Locke and Utilitarianism," *Ethics*, LXIX (January, 1959), 79–93. The author shows that Locke not only dominated the intellectual climate which later produced the full-fledged utilitarian doctrines of Bentham and his followers, but that he directly formulated the main elements of utilitarian ethics.

• COX, RICHARD H., *Locke on Peace and War* (New York, 1960). Although Locke developed no systematic theory of international relations, his political ideas and observations have significant implications for such a theory. Specifically, Locke clearly saw that peace within the political community is not a natural condition, but can only be attained through the deliberately created mechanisms of positive law, impartial third-party adjudication, and effective enforcement of the law. From Locke's own premises, peace between states is also not natural, but would require the creation of the same three mechanisms, and there is "no suggestion in Locke that the attempt to *partially* introduce the techniques and institutions of civil government into relations among governments would be of decisive importance. So long as each state retains its power to judge its own case, and the force to back up that judgment, Locke's principles suggest that no intermediary arrangement can be successful" (pp. 189–190).

Yet Locke did not draw the conclusions from his own premises with respect to the problem of peace among nations, and, in fact, was pessimistic about its possibility. In the concluding pages of his study, the author tries to explain the factors in Locke's pessimism on this issue (pp. 190–195). See also R. D. Masters, "The Lockean Tradition in American Foreign Policy," *Journal of International Affairs*, XXI, No. 2 (1967), 253–277.

• CRANSTON, MAURICE, *John Locke: A Biography* (New York, 1957). The definitive biography of Locke, superseding previous accounts of his life. Utilizing a large collection of Locke's personal papers previously inaccessible to scholars, the author presents not only Locke as a man in a new light, but also corrects numerous misconceptions about his intellectual development. Indispensable to the study of Locke and his time.

• CROSSMAN, R. H. S., *Government and the Governed*, 4th ed. (London, 1958). Chap. III, "The English Revolution" (pp. 43–80), deals with the background of the age, the contrasting personalities of Hobbes and Locke, and with the latter's political theory. Crossman concludes that "we should not blame Locke for the faults of his successors. In his own day, he was a sane progressive, whose writings tempered the arrogance of the social oligarchy and taught it the discipline of representative institutions. And, if later he was to inspire Burke's conservatism, he inspired Paine and Rousseau—and even Karl Marx as well" (p. 80). See also Willmoore Kendall, *John Locke and the Doctrine of Majority Rule* (Illinois Studies in the Social Sciences, Vol. XXVI, No. 2, Urbana, Ill., 1941).

• DEWHURST, KENNETH, *John Locke (1632–1704), Physician and Philosopher:*

A Medical Biography (London, 1963). Based on previously inaccessible papers, this medical biography of Locke has much that is of interest to anyone who desires to find out more about Locke's life and thought. Locke had a life-long devotion to medicine, both its theory and practice, and distinguished British and Continental physicians were among his friends. The narrative part of the volume has many fascinating data that are not strictly medical, and even Locke's medical notes, reproduced in their entirety, illuminate Locke's character and personality.

• DUNN, JOHN, *Locke* (Oxford, 1984). Very brief, part of the "Past Masters" series. See also Dunn's *The Political Thought of John Locke; An Historical Account of the Argument of the Two Treatises of Government* (London, 1969).

• GOUGH, J. W., *John Locke's Political Philosophy* (Oxford, 1950). Eight studies on the following topics: the law of nature; the rights of the individual; government by consent; theory of property; separation of powers and sovereignty; Locke and the Revolution of 1688; political trusteeship; and Locke's belief in toleration. Succinct and essential to the study of Locke. Gough's *The Social Contract*, 2nd ed. (Oxford, 1957), traces the development of the social-contract theory from antiquity to the nineteenth century, and has a chapter on Locke (IX, pp. 126-146). See also his introduction to John Locke, *The Second Treatise of Government, and A Letter Concerning Toleration* (Blackwell's Political Texts, Oxford, 1946), pp. vii-xxxvi, and Ernest Barker's introduction to *Social Contract: Essays by Locke, Hume, and Rousseau* (New York, 1948), a considerable portion of which is on Locke (pp. xv-xxvii).

• GRANT, RUTH, *John Locke's Liberalism* (Chicago, 1987). Sees the central issue in Locke as "justifying both a duty to obey and a right to resist."

• HAMILTON, WALTON H., "Property—According to Locke," *Yale Law Journal*, XLI (April, 1931), 864-880. Protects Locke against his own defenders, especially the zealots who have read into Locke's theory of property more than he

himself meant. See also Paschal Larkin, *Property in the Eighteenth Century: with Special Reference to England and Locke* (Dublin, 1930), and Harold J. Laski, *The Rise of European Liberalism* (London, 1936). Laski writes that Locke's state "is nothing so much as a contract between a group of business men who form a limited liability company whose memorandum of association forbids to the directors all those practices of which the Stuarts had, until this time, been guilty" (p. 116). See also H. Moulds, "Private Property in John Locke's State of Nature," *American Journal of Economics and Sociology*, XXIII (April, 1964), 179-188; J. P. Day, "Locke on Property," *Philosophical Quarterly*, XVI (July, 1966), 207-220; and Max Milam, "The Epistemological Basis of Locke's Idea of Property," *Western Political Quarterly*, XX (March, 1967), 16-30. Critics of Locke have often pointed to the alleged discrepancy between Locke's empirical theory of knowledge (or epistemology) and his nonempirical, rationalist political and economic doctrines. Addressing himself specifically to the problem of property, Milam concludes that there is "no basis for the charge of inconsistency" between Locke's theory of knowledge and his idea of property (p. 28), at least as Locke understood empiricism—a term coined and substantively developed and refined by modern empiricists long after Locke.

• HARRISON, JOHN, and PETER LASLETT, *The Library of John Locke* (Oxford, 1965). Locke was an avid reader and buyer of books, and his collection included about four thousand books and pamphlets. In Part I (pp. 1-61), the authors describe his collection, how he built it up and what happened to it after his death, and in Part II (pp. 67-267) the individual items are listed with the appropriate bibliographical data. Some of the findings of the authors' analysis of the library are of more than biographical or bibliographical interest. As to the main subject categories, 24 percent of Locke's books were on theology, 11 percent on medicine, 11 percent on politics and law, and 7 percent on philosophy, to list but a few major fields. In political philosophy,

Locke had only three works by Hobbes, but ten volumes by Machiavelli. In religion, his library holdings suggest a stronger interest in, and sympathy for, Unitarianism than his public statements on religion and his communication in the Church of England indicated. Aficionados of Locke who can never read enough firsthand material about him will find this volume exceptionally rewarding and entertaining.

• LASKI, HAROLD J., *Political Thought in England: From Locke to Bentham* (London, 1920), pp. 22-61. Laski gives a sympathetic account of Locke's relation to the Revolution of 1688 and his influence on subsequent English thought, as well as his contribution to French and American political ideas and institutions. He emphasizes that Locke was the first English political thinker whose argument was mainly secular, and that Locke rejected a purely legal theory as a sufficient basis of political society. See also J. L. Stocks, *Locke's Contribution to Political Theory* (London, 1933); C. H. Driver, "John Locke," in F. J. C. Hearnshaw (ed.), *The Social and Political Ideas of Some English Thinkers of the Augustan Age* (London, 1928), pp. 66-96; H. R. G. Greaves, "Locke and the Separation of Powers," *Politica*, I (February, 1934), 90-102; Sterling Power Lamprecht, *The Moral and Political Philosophy of John Locke* (New York, 1918, reprinted 1962); and C. E. Vaughan, *Studies in the History of Political Philosophy before and after Rousseau* (Manchester, 1939), Vol. I, Chap. IV (pp. 130-203). A. H. Maclean, "George Lawson and John Locke," *Cambridge Historical Journal*, IX, No. 1 (1947), 69-77, traces Locke's main political ideas to Lawson, the forgotten author of a liberal treatise on politics, *Politica sacra et civilis*, published in 1660, and concludes that the "most highly characteristic conceptions and arguments of Locke's second treatise *Of Government* had received a formally complete expression in England as early as the year 1660" (p. 77).

• LASLETT, PETER, "The English Revolution and John Locke's *Two Treatises of Government*," *Cambridge Historical*

Journal (1956), 40-55. The definitive article on the origins and purposes of the *Two Treatises*.

• LOCKE, JOHN, *Essays on the Law of Nature* (trans. from the Latin and ed. by W. von Leyden, Oxford, 1954). Contains both the original Latin text and the English translation, published in this volume for the first time. A long introduction (pp. 1-92) by von Leyden gives new information on Locke's early life during which his essays on the law of nature were written, and also relates these early essays to his later chief philosophical and political writings. See also Leo Strauss, "Locke's Doctrine of Natural Law," *American Political Science Review*, LII (June, 1958), 490-501; John W. Yolton, "Locke on the Law of Nature," *Philosophical Review*, LXVII (October, 1958), 477-498; R. Singh, "John Locke and the Theory of Natural Law," *Political Studies*, IX (June, 1961), 105-118; and M. Seliger, "Locke's Natural Law and the Foundation of Politics," *Journal of the History of Ideas*, XXIV (July-September, 1963), 337-354.

• ———, *Two Tracts on Government* (edited with an Introduction, Notes and Translations by Philip Abrams, Cambridge, 1967). More generally known as the essays *On the Civil Magistrate*, these two essays (one in English and the other in Latin) were written by Locke in 1660-1661; but they remained inaccessible to the public until 1947, when Oxford University bought the Lovelace Collection of Locke's papers and journals. Locke himself provided no titles for the two essays, but the English essay starts with this introductory heading: "Question: Whether the Civil Magistrate may lawfully impose and determine the use of indifferent things in reference to Religious Worship." The Latin essay has a similar introductory heading. The two essays are more related to Locke's life-long interest in religious toleration than to his more general interest in the foundations of government. When Locke composed these two essays, he was still under thirty, and his outlook, as expressed in the essays, was more traditionalist and authoritarian than it was later. Only a few years after writing (but

not publishing) the two essays, Locke was closely befriended by leading Whig politicians, and the brief youthful phase of traditionalist and authoritarian leanings in state-church relations was quickly, and permanently, overshadowed by his growing and deep commitment to the cause of liberalism in religion and politics.

• ———, *Two Treatises of Government* (a critical edition with an Introduction and Apparatus Criticus by Peter Laslett), 2nd ed. (Cambridge, 1967). Laslett's Introduction (pp. 3–120) and appended materials (pp. 121–152) are a book within a book. On the basis of previously inaccessible Locke papers, Laslett establishes conclusively that the *Two Treatises of Government* was written in 1779–1781, with changes and revisions added in later years. Laslett also discusses Locke as a man and writer, Locke and Hobbes, the relation of the *Two Treatises of Government* to the Revolution of 1688, and the social and political theory of the *Two Treatises of Government*. In addition, the text of the *Two Treatises of Government* is accompanied by many useful notes. This is likely to remain the most scholarly edition of Locke's classic.

• LOUGH, JOHN (ed.), *Locke's Travels in France, 1675–1679* (Cambridge, 1953). Taken from his diaries, letters, and other papers, Locke's extensive travels in France reveal not only his character and personality, but also contribute to a better understanding of his intellectual growth. For a more detailed study of Locke's intellectual relations with France, see Gabriel D. Bonno, *Les relations intellectuelles de Locke avec la France* (Berkeley, 1955).

• O'CONNOR, D. J., *John Locke* (Penguin Books, Baltimore, 1952). Provides an introduction into the life and thought of Locke in clear and concise language.

• PANGLE, THOMAS, *The Spirit of Modern Republicanism* (Chicago, 1988). Explores the philosophies of and relationship between Locke and America's founders. Pangle conceives this book as in part a completion of his earlier *Montesquieu's Philosophy of Liberalism*.

• PARRY, GERAINT, "Individuality, Politics and the Critique of Paternalism in

John Locke," *Political Studies*, XII (June, 1964), 163–177. The distinction between political power and the power of the master over the slave or that of a father over his child is fundamental in Locke's political thinking, and one that often recurs in his *Two Treatises of Government*. Yet the author feels that, whereas the master-slave analogy to political power has frequently been commented on by students of Locke, the father-child analogy has received insufficient attention. In religion, politics, and economics Locke opposed paternalistic protection and tutelage by government or a religious or social group, and affirmed the individual's freedom to make his own choices. In government, Locke saw its main function as that of an umpire between colliding private interests rather than that of a dispenser of welfare. Parry shows how Locke's assumption of free man as "master of himself and of his environment" (p. 176) ran into difficulties in the nineteenth century, particularly in the economic area, when many individuals in the newly developing industrial society found themselves in conditions of dependency and deprivation due to structural changes of the economy rather than to individual shortcomings. The ensuing welfare-state policies reflected a revival of paternalistic ideas. "The possibility," the author concludes, "that Locke's conception of freedom and morality could, through a theory of political participation, justify a more positive role for politics which would still avoid the pitfalls of paternalism remained incompletely explored" (p. 177).

• READ, CONYERS (ed.), *The Constitution Reconsidered* (New York, 1938). Contains papers by Charles McIlwain, Gaetano Salvemini, Charles A. Beard, Walton H. Hamilton, and others. R. M. MacIver, "European Doctrines and the Constitution" (pp. 51–61), discusses the influence of Locke. See also Carl Becker, *The Declaration of Independence* (New York, 1922), pp. 24–79, and Edward S. Corwin, *Liberty against Government* (Baton Rouge, 1948), who concludes his analysis of Locke with the statement that "Locke's is the last great name in the tradition of Liberty against

Government that is common to our own country and England" (p. 51).

• RUSSELL, BERTRAND, *Philosophy and Politics* (London, 1947). Russell considers empiricism the only philosophy that can be a theoretical justification of democracy: "Locke, who may be regarded, so far as the modern world is concerned, as the founder of empiricism, makes it clear how closely this is connected with his views on liberty and toleration and with his opposition to absolute monarchy" (p. 20). Russell concludes that, "in our own day as in the time of Locke, empiricist Liberalism (which is not incompatible with *democratic socialism*) is the only philosophy that can be adopted by a man who, on the one hand, demands some scientific evidence for his beliefs, and, on the other hand, desires human happiness more than the prevalence of this or that party or creed" (p. 27).

• SELIGER, M., *The Liberal Politics of John Locke* (New York, 1969). A reassessment of Locke's thought, based partially on the notion that Locke was less democratic than he is often considered.

• WELDON, T. D., *States and Morals* (London, 1946). The author of this suggestive book divides all theories of the state into two groups: "Some define it as a kind of organism, others as a kind of machine" (p. 26). Locke falls into the latter category (pp. 122–147).

• WISHY, BERNARD, "John Locke and the Spirit of '76," *Political Science Quarterly*, LXXIII (September, 1958), 413–425. Examining the relations between Lockean ideas and the Declaration of Independence, the author agrees with the accepted view that the Declaration was a statement of Lockean principles, but doubts that this alone makes it necessarily a "liberal-individualistic" document. Wishy notes that Locke failed to deal with majority rule "as realistically and as fully as he

dealt with divine right," and that he allowed only for revolution by the people against unjust rulers, but not for individual rebellion against the majority. The main problem of the Declaration as a Lockean statement of principles is therefore seen by Wishy as follows: "Does the Declaration assert fully and unambiguously a doctrine of human rights that amounts to supremacy of the individual conscience or does it establish a doctrine of popular sovereignty?" (p. 419). Wishy's conclusion is that the claim that "the Declaration of Independence did proclaim a theory of human rights effectively superior to the commands of any government seems strongly open to doubt" (p. 425). See also S. Gerald Sandler, "Lockean Ideas in Thomas Jefferson's *Bill For Establishing Religious Freedom*," *Journal of the History of Ideas*, XXI (January–March, 1960), 110–116, and Martin Seliger, "Locke's Theory of Revolutionary Action," *Western Political Quarterly*, XVI (September, 1963), 548–568.

• WOOD, NEAL, *The Politics of Locke's Philosophy* (Berkeley, 1983). This book's purpose is to find the political philosophy in Locke's *Essay Concerning Human Understanding*. Wood believes that this work was intended by Locke to be an "instrument for effecting social change," and reflects "bourgeois attitudes and ideals."

• YOLTON, JOHN M., (ed.), *John Locke: Problems and Perspectives* (Cambridge, 1969). A collection of essays on all aspects of Locke's thought, including political.

• ———, *John Locke and the Way of Ideas* (London, 1956). Analyzes Locke's theory of knowledge and its impact on ethics and religion in the seventeenth and eighteenth centuries. See also Douglas Odgaard, "Locke as an Empiricist," *Philosophy*, XL (July, 1965), 185–196.

CHAPTER NINETEEN

MONTESQUIEU

- CABEEN, DAVID C., *Montesquieu: A Bibliography* (New York, 1947). An annotated bibliography of books and articles (87 pp.).
- CARRITHERS, DAVID, "Montesquieu's Philosophy of History," *Journal of the History of Ideas* (January-March, 1986). An exploration of a critical element of Montesquieu's thought: how social and natural circumstances shape history.
- COLLINS, J. CHURTON, *Voltaire, Montesquieu and Rousseau in England* (London, 1908). The section on Montesquieu's stay in England is on pp. 117-181. In England Montesquieu "perceived and understood what liberty meant, intellectually, morally, politically, socially. He saw it in its ugliness, he saw it in its beauty" (p. 178).
- COURTNEY, C. P., *Montesquieu and Burke* (Oxford, 1963). The author observes at the outset that "no French writer was more highly esteemed or more influential in England in the eighteenth century than Montesquieu" (p. 1). Burke called Montesquieu, in one of his earlier writings, "the greatest genius which has enlightened this age," and he continued to admire Montesquieu throughout his life, the only contemporary French writer for whom he harbored such sentiments. During the period of the French Revolution many revolutionaries considered the British constitution a product of superstition and ignorance, in sharp contrast to Montesquieu who had earlier viewed it as the greatest monument to liberty—a fact which greatly enhanced Burke's admiration for Montesquieu. The specific impact of Montesquieu's *Spirit of the Laws* on English thought is also discussed (pp. 13-26).
- DEVLETOGLU, NICOS E., "Montesquieu and the Wealth of Nations," *Canadian Journal of Economics and Political Science*,

XXIX (February, 1963), 1-25. Having secured for himself during his life time a place of enduring eminence in the study of political ideas, Montesquieu was later hailed as one of the founders, perhaps the founder, of modern sociology, and finally attracted the attention of economists. In his pioneering investigation, the author analyzes Montesquieu's views on agriculture, industry, enterprise, money, international trade, and population as well as on the relations of economic welfare to social and political institutions. Since this last point has attracted the attention of political economists so intensely in our own age, Montesquieu's insistence that "the social framework must be liberal" is termed by the author as "perhaps Montesquieu's most brilliant insight into the social and political roots of economic welfare" (p. 25).

- DURKHEIM, EMILE, *Montesquieu and Rousseau: Forerunners of Sociology* (Ann Arbor, 1960). Durkheim, one of the leaders of modern sociology, holds that "it is Montesquieu who first laid down the fundamental principles of social science" (p. 61). Montesquieu's classification of political systems is discussed (pp. 24-35). See also W. Stark, *Montesquieu: Pioneer of the Sociology of Knowledge* (London, 1960).
- FLETCHER, F. T. H., *Montesquieu and English Politics (1750-1800)* (London, 1939). Unlike most studies on Montesquieu, which stress his indebtedness to England, the author traces the influence of Montesquieu on English political thought, particularly in the half century following the publication of the *Spirit of the Laws*. The end of this period is filled with the drama of the French Revolution, and the author notes that Montesquieu was used more by British conservative writers who

opposed the French Revolution than by radical and liberal writers.

- HOLDSWORTH, W. S., "The Conventions of the Eighteenth Century Constitution," *Iowa Law Review*, XVII (January, 1932), 161-180. In this important study the author points out that the "conventions of the eighteenth century were directed to secure the maintenance of a system of divided powers and of checks and balances. The conventions of the nineteenth and twentieth centuries are directed to secure the political predominance of the House of Commons" (p. 163). King, Lords, and Commons were independent of one another, and it was from this constitution that Montesquieu deduced his view of English politics and of the doctrine of separation of powers. It must therefore be admitted "that there is an element of truth in Montesquieu's analysis. Independent benches of judges did administer a supreme law. The units of government were divided. Each had its independent autonomous powers that it could use freely, subject only to the supreme law administered by the independent benches of judges. The main faults of Montesquieu's theory were that it exaggerated the sharpness of the separation" (p. 165).
- HULLIUNG, MARK, *Montesquieu and the Old Regime* (Berkeley, 1976). A presentation of the unorthodox view that Montesquieu was a radical critic of the old regime and a convinced democrat, not an enlightened aristocrat.
- LEVIN, LAWRENCE MEYER, *The Political Doctrine of Montesquieu's Esprit des Lois: Its Classical Background* (New York, 1936). Contains an extensive bibliography (pp. 331-359). See also Gilbert Chinard, "Montesquieu's Historical Pessimism," in *Studies in the History of Culture* (Menasha, Wis., 1942), pp. 161-172; Franz Neumann's Introduction to the *Spirit of the Laws* (Hafner Library of Classics, New York, 1949); and D. Lowenthal, "Book I of Montesquieu's *The Spirit of the Laws*," *American Political Science Review*, LIII (June, 1959), 485-498. D. Kettler, "Montesquieu on Love: Notes on the *Persian Letters*," *American Political Science Review*, LVIII (September, 1964),

658-661, briefly discusses Montesquieu's ideas on love in relation to social institutions, including government.

- MARTIN, KINGSLEY, *French Liberal Thought in the Eighteenth Century*, 2nd ed. (London, 1954). Chap. VI (pp. 147-169) is on Montesquieu. His "constitutional theory was based on Newtonian physics. In his early work he appears to have had a firmer grasp of the organic idea of the State than any other eighteenth-century writer, but his final political theory, in which each power is separate and related to the others only by a system of checks and balances, is entirely mechanical. The whole phraseology and conception is taken from mechanics: the State is a vast piece of engineering in which each joist is kept in place and made to do its work by an exact calculation of strains and stresses, held in place by a balance here, itself checking another joist, correctly attached and related to its neighbor. Since there is no animating principle, no directing head or organic life, the result would seem to be a motionless equilibrium" (p. 166). See also Harold J. Laski, "The Age of Reason," in F. J. C. Hearnshaw (ed.), *The Social and Political Ideas of Some Great French Thinkers of the Age of Reason* (London, 1930), pp. 9-38, and A. J. Grant, "Montesquieu," *ibid.*, pp. 114-135.
- MERRY, HENRY, *Montesquieu's System of Natural Government* (West Lafayette, Ind., 1970). Argues that particularly as Montesquieu wrote on the *spirit* of the laws and not their end, the best interpretation of his system is wholistically, not segmentally. Stresses the sociologic component of Montesquieu's thought. Downplays the philosophic nature of Montesquieu's writings. A comprehensive and sympathetic account.
- MORGAN, CHARLES, *The Liberty of Thought and the Separation of Powers* (The Zaharoff Lecture for 1948, Oxford, 1948). A reaffirmation of Montesquieu and the doctrine of the separation of powers. Democracy has not solved the issues with which Montesquieu was concerned: "Unchecked power is no less tyranny because someone has voted for it" (p. 17). See also Sir Courtenay Ilbert, *Montesquieu* (The Romanes Lecture 1904, Oxford,

1904), who writes on Montesquieu's central doctrine—the relativity of laws—as follows: “His doctrine of the relativity of laws, which is the foundation of enlightened conservatism, and has been used in defense of much conservatism which is not enlightened, is not a sufficient foundation for a constructive system, but was an admirable starting-point for a man whose primary interest lay in observing and comparing different institutions and drawing inferences from their similarities and diversities” (p. 27). The predominantly conservative influence of Montesquieu is more fully analyzed in C. E. Vaughan, *Studies in the History of Political Philosophy before and after Rousseau* (Manchester, 1939), Vol. I, pp. 253–302. See also John Plamenatz, *Man and Society: Political and Social Theory* (New York, 1963), Vol. 1, pp. 253–298.

- PANGLE, THOMAS, *Montesquieu's Philosophy of Liberalism: A Commentary on*

“The Spirit of the Laws” (Chicago, 1973). Pangle interprets Montesquieu as a liberal who favors commercial republics founded in the English experience, and who sees a connection between political and economic liberty. Pangle finds order in *The Spirit of the Laws*, which often is considered a disorganized work. Of the thinkers at the head of the liberal tradition, Pangle considers Montesquieu to be “the most helpful and relevant for us.”

- SHACKLETON, ROBERT, *Montesquieu: A Critical Biography* (New York, 1961). In its scope, depth, and scholarship, this work supersedes all previous biographies of Montesquieu in English. As the author points out, Montesquieu's life was a life of ideas rather than of events, and this biography focuses therefore on the origins, development, and impact of Montesquieu's ideas. More than one third of the book is devoted to the *Spirit of the Laws*.

CHAPTER TWENTY

HUME

- AYER, A. J., *Hume* (Oxford, 1980). Part of the “Past Masters” series. The final chapter is on “Morals, Politics, and Religion.”
- BOTWINICK, ARYEH, *Ethics, Politics and Epistemology: A Study in the Unity of Hume's Thought* (Lanham, Md, 1980). Botwinick sees an “utmost degree of coherence” in the various aspects of Hume's thought. The political conception of Hume's presented here is non-utilitarian, in contradistinction to that in *Great Political Thinkers*.
- CHAPPELL, V. C. (ed.), *Hume* (Garden City, N.Y., 1966). A collection of essays, mostly but not exclusively on philosophical subjects. Includes an essay, “The Legal and Political Philosophy of David Hume,” by Friedrich Hayek.

- COLBOURN, TREVOR, (ed.), *Fame and the Founding Fathers* (New York, 1974). See the selections by Douglas Adair, particularly “‘That Politics May Be Reduced to a Science’: David Hume, James Madison, and the Tenth Federalist,” for the view that Hume significantly influenced Madison. For a somewhat different perspective, see James Conniff, “The Enlightenment and American Political Thought,” *Political Theory* (August, 1980), 381–402.
- FORBES, DUNCAN, *Hume's Philosophical Politics* (Cambridge, 1975). A study of Hume's political theory, with emphasis on his political intentions and historical context.
- LAING, B. M., *David Hume* (New York, 1932, reprinted 1968). A single volume

with three parts—on Hume's life, thought, and influence.

- MACKIE, J. L., *Hume's Moral Theory* (London, 1980). Particular attention is paid here to the practical virtues which sustain Hume's moral theory. For another work on this subject, see Nicholas Capaldi, *Hume's Place in Moral Philosophy* (New York, 1989).
- MILLER, DAVID, *Philosophy and Ideology in Hume's Political Thought* (Oxford, 1981). A major recent work on Hume, though not a long book. Miller has three purposes: 1) to explain Hume's political theory, 2) to explicate the relationship between Hume's political theory and his philosophy, and 3) to clarify the ideological content of Hume's thought, which ideology Miller finds not to fit neatly into twentieth century categories. This book is more explanatory than critical.
- MORICE, G. P. (ed.), *David Hume: Bicentenary Papers* (Edinburgh, 1977). Papers

presented on the 200th anniversary of Hume's death.

- MOSSNER, E. C., *The Life of David Hume* (Edinburgh, 1954). The definitive biography. Includes an interesting chapter on Hume's relationship with Rousseau.
- RUSSELL, PAUL, “Hume's *Treatise* and Hobbes's *The Elements of Law*,” *Journal of the History of Ideas* (January–March, 1985). The thesis is that Hume was much more influenced by Hobbes than has been thought previously, an influence which Hume concealed for prudential reasons.
- WHELAN, FREDERICK, *Order and Artifice in Hume's Political Philosophy* (Princeton, 1985). Concentrates on the philosophical presuppositions of Hume's political thought, with primary emphasis on the *Treatise of Human Nature*. Whelan holds that Hume's utilitarianism is distinct from Bentham's (contrary to the position put forward in *Great Political Thinkers*), and that Hume should be more considered a conservative than a liberal.

CHAPTER TWENTY-ONE

ROUSSEAU

- BABBITT, IRVING, *Rousseau and Romanticism* (Meridian Books, New York, 1955). Originally published in 1919, this book has remained a highly useful introduction into the crucial conflict between classicism and romanticism, one of the main intellectual and cultural conflicts of the modern world. Babbitt sees in Rousseau the most typical and influential figure of the “great international movement” of romanticism, which is viewed by Babbitt as a profound threat to civilization. Chap. I, “The Terms Classic and Romantic” (pp. 16–38), is particularly helpful in tracing the origins, development, and meaning of classicism and romanticism. For a brief critical appraisal of romanticism, with particular reference to English letters, see Peter Quennell, “The Romantic

Catastrophe,” *Horizon*, 1 (May, 1940), 328–345. By contrast, a spirited defense of Rousseau and romanticism will be found in Jacques Barzun, *Classic, Romantic, and Modern* (Anchor Books, Garden City, N.Y., 1961). The work also includes an interesting collection of numerous samples of usage of the term “romantic” (pp. 155–168). While discussions of, and references to, Rousseau abound in Barzun's study, Chap. II (pp. 18–35) deals specifically with “Rousseau and Modern Tyranny.”

- BOSANQUET, BERNARD, *The Philosophical Theory of the State* (London, 1920). Most of the book deals either with Rousseau directly or with the issues suggested by the problem of the General Will. See also T. H. Green, *Principles of Political Obligation* (London–New York, 1917), pp. 80–92.

- BROOME, J. H., *Rousseau: A Study of His Thought* (London, 1963). In Chap. IV, "The Politics of Regeneration" (pp. 50-74), the author concentrates on the *Social Contract*. In dealing with the concept of the General Will, the author concedes its difficulties and complexities, and he suggests that it should be approached from a psychological viewpoint, since it "shows Rousseau's genuine insight into the psychology of the group" (p. 72). With respect to simple interpretations of Rousseau, Broome holds that "Rousseau's political theory cannot be reduced to liberalism or totalitarianism, as these terms have come to be used" (p. 68).
- CASSIRER, ERNST, *The Question of Jean Jacques Rousseau* (translated and edited with an Introduction and Additional Notes by Peter Gay, Midland Books, Bloomington, Ind., 1963). This brief essay of less than one hundred pages is a landmark in the modern literature on Rousseau. The core problem of Rousseau's thought appears to Cassirer as follows: "How can we build a genuine and truly human community without falling in the process into the evils and depravity of conventional society? This is the question to which the *Contrat social* addresses itself. The return to the simplicity and happiness of the state of nature is barred to us, but the path of freedom lies open; it can and must be taken" (p. 54). Cassirer rejects the charge that Rousseau's political thought is either "atomistic-mechanistic" or totalitarian, and argues that two key conceptions stand out in Rousseau's mind: first, government by law, free from caprice and arbitrariness; and, second, the dignity of man, which seemed to him more important than happiness or utility. By assigning to reason, utility, and happiness comparatively less importance than was customary among the leaders of the Enlightenment at the time, Rousseau separated himself from them markedly. Yet, despite his deep religious feelings, Rousseau also alienated himself from both Protestant and Catholic theology, because he rejected the doctrine of original sin as the source of man's predicament and saw society as the source of man's evil condition. Society therefore has

the responsibility of healing the wounds it has inflicted upon man, and Cassirer sees in this conception of the responsibility of society one of the chief legacies of Rousseau to posterity. The value of the essay is greatly enhanced by Peter Gay's Introduction (pp. 3-30), in which he surveys the main interpretations of Rousseau in the nineteenth and twentieth centuries.

- CHAPMAN, JOHN W., *Rousseau—Totalitarian or Liberal?* (New York, 1956). The author strongly affirms the liberal character of Rousseau's thought. Yet Rousseau's liberalism is closer to modern than to classical liberalism, for "both Rousseau and the modern liberals repudiate the atomism of classical liberal democratic theory" (p. 143). For contrasting interpretations of Rousseau's political thought as totalitarian, see Sir Ernest Barker's Introduction to *Social Contract: Essays by Locke, Hume and Rousseau* (World's Classics, London, 1948), pp. xxxv-liv, and A. D. Lindsay, *The Modern Democratic State* (London, 1943), pp. 127-136.
- CHARVET, JOHN, *The Social Problem in the Philosophy of Rousseau* (Cambridge, 1974). Charvet defines and criticizes what he sees as the fundamental problem about society which Rousseau presents in the *Second Discourse*, *Social Contract*, and *Emile*: namely, that as individuals leave natural isolation and enter society, they lose their healthy egoism and acquire destructive vanity. Individuals forego natural desires and come to have social wants, which is the source of humanity's dilemma.
- COBBAN, ALFRED, *Rousseau and the Modern State*, 2nd ed. (London, 1964). The author argues that Rousseau should not be judged in terms of the twentieth-century sharp juxtaposition of individual versus the state, because he was primarily a moralist, a child of the Enlightenment, and "as such Rousseau's end is always the individual and his liberty," and that "his political theory starts with the individual and its ends with the individual" (p. 8). Concluding his investigation of Rousseau's political thought, Cobban writes that it "is not completely individualist, while at the

- same time it is equally not based on any glorification of society as distinct from the individuals of which it is composed" (p. 168). This tension and duality in Rousseau's political thought explains, the author holds, why Rousseau founded no school, and why he has been denounced by individualists as a collectivist, and by the authoritarians as an individualist. See also Kingsley Martin, *French Liberal Thought in the Eighteenth Century*, 2nd ed. (London, 1954), pp. 192-219; F. J. C. Hearnshaw, "Rousseau," in the symposium volume edited by himself, *The Social and Political Ideas of Some Great French Thinkers of the Age of Reason* (London, 1930), pp. 168-193; and J. W. Gough, *The Social Contract*, 2nd ed. (Oxford, 1957), pp. 164-174.
- COLLINS, J. CHURTON, *Voltaire, Montesquieu and Rousseau in England* (London, 1908). Rousseau was a refugee in England between January 1766 and May 1767. Unlike Voltaire and Montesquieu, Rousseau felt thoroughly miserable in England, though treated with kindness and consideration by his many friends and admirers there. He never learned the English language and developed little understanding for British institutions (pp. 182-271).
- CRANSTON, MAURICE, *Jean-Jacques: The Early Life and Work of Jean-Jacques Rousseau* (London, 1982). The first of a two-volume biography of Rousseau, which will undoubtedly become the standard in the field.
- EINAUDI, MARIO, *The Early Rousseau* (Ithaca, N.Y., 1967). Deals with Rousseau's earlier writings during the period of 1737-1756, with some attention to his personal life during those years. The author feels that "today Rousseau is increasingly seen as the most influential thinker of the eighteenth century" (p. v), and in Chap. 1, "Rousseau Today" (pp. 1-25), he writes: "In the last fifty years in particular we have experienced, or have come very close to experiencing—in 1914, in 1929, in 1939, in 1945—many of the ultimate consequences of the phenomena of disintegration, loneliness, chaos, and selfishness, which are at the center of Rousseau's preoccupations" (p. 2).

- ELLENBURG, STEPHEN, *Rousseau's Political Philosophy: An Interpretation from Within* (Ithaca, N.Y., 1976). Sees greater unity in Rousseau's political thought than is generally considered the case. Ellenburg calls Rousseau a "nonindividualist" rather than a "collectivist."
- FRALIN, RICHARD, *Rousseau and Representation* (New York, 1978). An interpretation which portrays Rousseau as practically rather moderate in his political prescriptions. Traces the development of Rousseau's views on political institutions. Part 2 is on the *Social Contract*.
- GILDIN, HILAIL, *Rousseau's Social Contract* (Chicago, 1983). A Straussian perspective.
- GREEN, F. C., *Rousseau and the Idea of Progress* (Oxford, 1950). Rousseau's doctrine of the return to nature does not imply the "crazy notion of reversing the march of civilization," but means that we must "return to the basic human values which are now in danger of being obliterated by the wrong kind of civilization and which are perpetuated by a system of education based on a false idea of what man is and what he needs for his happiness" (p. 17). See also Green's full-length biography of Rousseau, *Jean-Jacques Rousseau: A Critical Study of His Life and Writings* (Cambridge, 1955).
- GUEHENNO, JEAN, *Jean-Jacques Rousseau*, 2 vols. (New York, 1966). An outstanding achievement by an eminent French writer, this story of Rousseau's life, "the drama of sincerity" (p. xv), is centered on Rousseau as a man rather than as a social or political thinker. The author seeks to relive Rousseau's life day by day, as felt and experienced by Rousseau himself rather than as interpreted by later critics and commentators. Yet with all his uniqueness, Rousseau seems to Guéhenno "extraordinarily representative of the state of man in the modern world, so that we see him formulating, and grappling with, a great many of the most serious problems with which we ourselves still have to contend. This explains why he cannot die, why he is still associated with all the controversies of our day" (p. xiii). See also Ronald

- Grimsley, *Jean-Jacques Rousseau: A Study in Self-Awareness* (Cardiff, 1961).
- HALL, JOHN, *Rousseau* (London, 1973). Part of the "Philosophers in Perspective" series. A brief introduction to Rousseau's political thinking. A good, though short, bibliography.
 - KATEB, GEORGE, "Aspects of Rousseau's Political Thought," *Political Science Quarterly*, LXXVI (December, 1961), 519-543. The author sees the center of Rousseau's political thought as follows: "The essential fact is that the aim of the general will is justice. Once this has been seen, the problem of interpreting Rousseau becomes much less fierce. Once it has been seen that justice is at the center of Rousseau's concerns, no warrant is left for thinking that Rousseau is a collectivist, totalitarian, despot, or individualist. The concept of justice simply displaces these categories. Accompanying justice are two other concepts which figure in Rousseau's political thought, the concept of moral autonomy and the concept of fair play. When these three concepts are located and related, I would say that Rousseau's political thought has been seen in its proper light" (pp. 520-521). See also Theodore Waldman, "Rousseau on the General Will and the Legislator," *Political Studies*, VIII (October, 1960), 221-230; Judith N. Shklar, "Rousseau's Images of Authority," *American Political Science Review*, LVIII (December, 1964), 919-932; Claude E. Ake, "Right, Utility, and Rousseau," *Western Political Quarterly*, XX (March, 1967), 5-14; and Stanley Hoffmann, "Rousseau on War and Peace," *American Political Science Review*, LVII (June, 1963), 317-333.
 - KELLY, CHRISTOPHER, *Rousseau's Exemplary Life* (Ithaca, N.Y., 1987). Subtitled *The Confessions as Political Philosophy*, this book concentrates on that work not for what it shows about Rousseau's personality, but for what it tells about his politics.
 - LASKI, HAROLD J., *The Danger of Disobedience and Other Essays* (New York, 1930). Chap. VII, "A Portrait of Jean Jacques Rousseau" (pp. 178-206), is an interpretation of Rousseau's main ideas and their impact on modern political theory.
- His influence was in the direction of both individualism and collectivism, but "the latter aspect has been the more enduring" (pp. 196-197). Laski notes Rousseau's impact on Hegel and Marx, with whom, as with their disciples, "Rousseauism has essentially meant the sacrifice of the individual to an end beyond himself" (p. 197). See also Laski's *Studies in Law and Politics* (London, 1932), Chap. I, "The Age of Reason" (pp. 13-37), and Chap. III, "The Socialist Tradition in the French Revolution" (pp. 66-103).
- LEMOS, RAMON, *Rousseau's Political Philosophy* (Atlanta, 1977). A comprehensive yet manageable interpretation of Rousseau's political theory. Lemos considers only the *Discourse on the Origin and Foundation of Inequality Among Men*, the *Discourse on Political Economy*, and the *Social Contract*.
 - MASTERS, ROGER D., *The Political Philosophy of Rousseau* (Princeton, 1968). Highly unorthodox in approach, method of analysis, and interpretation. Part I deals with *Émile*, the *Second Discourse*, and the *First Discourse*, the three principal writings of Rousseau linked together by his key idea of "man's natural goodness." According to the author, Rousseau shows in all three of these writings how man's misery was created by the establishment of civil society, which condition cannot be fully remedied by any, even the best, political order. In Part II, called "The Possibilities of Politics," Masters concentrates on the *Social Contract* in both its original draft and its final version. In this concluding chapter, Masters explains why he considers Rousseau's *First Discourse* his most "defensible work" and the one which has the greatest relevance in our own time. This is a work which assumes considerable familiarity with Rousseau's thought and which makes heavy demands on the reader's attention, but which provides the student with a fresh perspective on Rousseau.
 - McDONALD, JOAN, *Rousseau and the French Revolution* (London, 1965). The author of the study of this perennially interesting topic holds that "more than that of any of the great prerevolutionary writers, the memory of Rousseau captured the imagination of the revolutionary generation" (p. 161). However, his reputation and admiration rested on his appeal as a legendary figure, and on his pleas for social and moral regeneration in the *Nouvelle Héloïse and Émile*, and not on his political theories of the *Social Contract*.
 - MILLER, JIM, *Rousseau: Dreamer of Democracy* (New Haven, Ct., 1984). Asserts the traditional view that Rousseau is among the most important of thinkers who fostered democratic ways of thought and action.
 - NOONE, JOHN, *Rousseau's Social Contract; A Conceptual Analysis* (Athens, Ga., 1980). An original interpretation of the *Social Contract*, purporting to find a system in it which others have failed to see, whose keystone is legitimacy.
 - PERKINS, MERLE, *Jean-Jacques Rousseau on the Individual and Society* (Lexington, Ky., 1974). A detailed analysis of Rousseau's political viewpoints, with special reference to his views on international relations.
 - PLATTNER, MARC, *Rousseau's State of Nature* (DeKalb, Ill., 1979). Subtitled *An Interpretation of the Discourse on Inequality*, this brief book is that, focusing on just one aspect of the *Discourse*—Rousseau's conception of the state of nature.
 - ROCHE, KENNEDY, *Rousseau; Stoic & Romantic* (London, 1974). An investigation into the Stoic influence on Rousseau.
 - ROUSSEAU, JEAN JACQUES, *Confessions* (1782-1789). Available in numerous English translations and indispensable to an appreciation of Rousseau's development and thought. The translation of the *Confessions* by J. M. Cohen (Penguin Books, Baltimore, 1953) is recommended.
 - ———, *The Government of Poland* (trans. with an introduction by Willmoore Kendall, Indianapolis, 1972). A little-known, but potentially significant, work of Rousseau's.
 - ———, *The Social Contract, and Discourses* (Everyman's Library, London-New York, 1947). The value of the volume is greatly enhanced by the inclusion of the three *Discourses* on the *Arts and Sciences*, *Origin of Inequality*, and *Political Economy*, because Rousseau's political thought cannot be properly understood from the *Social Contract* alone. The Introduction by G. D. H. Cole (pp. v-xii) is a model of clarity and insight.
 - SHKLAR, JUDITH, *Men and Citizens: A Study of Rousseau's Social Theory* (Cambridge, Mass., 1969). Shklar presents Rousseau as a pessimist, who believes that humanity possesses no happy past, but has no happy future, either. The human condition is irredeemably fallen; society is necessary; society engenders inequality; inequality leads to suffering.
 - TALMON, J. L., *The Origins of Totalitarian Democracy* (London, 1952). The author's main thesis is that the eighteenth century saw the birth of two contradictory types of democracy: "empirical liberal democracy" and "Messianic totalitarian democracy." Rousseau is considered perhaps the most important single source of totalitarian democracy, particularly by marrying the concept of the general will with that of popular sovereignty (p. 43). For a similar juxtaposition of Rousseau's popular sovereignty and eighteenth-century English liberalism, see also Guido de Ruggero, *The History of European Liberalism* (Beacon Paperbacks, Boston, 1959), particularly the Introduction on "The Eighteenth Century" (pp. 1-90). Ruggiero writes that the attributes of Rousseau's concept of sovereignty "are the exact opposite of the principles of garantism as derived from the English Constitution" (p. 62).
 - VAUGHAN, CHARLES E., *The Political Writings of Jean Jacques Rousseau*, 2 vols. (Cambridge, 1915). The most complete collection of all political writings of Rousseau (in French). The Introduction in the first volume (pp. 1-117) gives a detailed interpretation of the development of Rousseau's political thought and maintains the thesis that Rousseau, "far from supporting the individualist theory, is its most powerful assailant" (p. 2).
 - VIROLI, MAURIZIO, *Jean-Jacques Rousseau and the 'Well-Ordered Society'*, trans. Derek Hanson (Cambridge, Eng., 1988). An important work on Rousseau, founded in part on the notion that "Rousseau's political doctrine is based

on the idea of a dual form of the artificial, rather than on the antithesis between nature and the artificial."

• WEISS, PENNY, "Rousseau, Antifeminism, and Woman's Nature," *Political Theory* (February, 1987), 81-98. Presentation of Rousseau's views on women, which, while antifeminist, are not found to include "natural sexual differentiation" as a basis for sexual inequality in society. This topic is also discussed in Joel Schwartz, *The Sexual Politics of Jean-Jacques Rousseau* (Chicago, 1985).

• WILLHOITE, FRED H., JR., "Rousseau's Political Religion," *Review of Politics*, XXVII (October, 1965), 501-515. The author writes that Rousseau's religion "is essentially social rather than theological; man, born into social sin yet capable of salvation only through society, is central, while a transcendent God, though present, is peripheral" (p. 501). Although Rousseau rejected reason and philosophy in favor of nature as the ultimate source of knowledge, thus bringing himself into conflict with most leaders of the Enlightenment, he was still very much a child of the Enlightenment, because of his "agnostic attitude toward supernatural revelation" and his "acceptance of nature as a source of true knowledge" (p. 502). In conclusion, the author makes, from a theological viewpoint, the most serious charge, that of anthropocentricity: "Even in reacting against mechanistic rationalism, Rousseau remained committed to its basic anthropocentricity, its belief in man's

ultimate omniscience. For Rousseau the perfect society is composed of atomistic, self-worshipping individuals, the sum of whose identical will produces a corporate, immanent, infallible guiding force—the general will. The triumph of political society over transcendent religion is so complete that the state becomes the true church and the general will dictates true dogma" (p. 515). Christopher Dawson, "The Birth of Democracy," *Review of Politics*, XIX (January, 1957), 48-61, also writing from a strongly religious viewpoint, offers a more sympathetic appraisal of Rousseau. Before Rousseau, the liberal ideas of the Enlightenment, the author holds, were restricted to a small, privileged class. If these liberal ideas were to penetrate broader classes of people, "they had to make an appeal to psychological forces that lay beneath the surface of rational consciousness. They had to be transformed from a philosophy into a religion: to cease to be mere ideas and to become articles of faith. This reinterpretation of liberalism in religious terms was the work of Jean Jacques Rousseau, who thus became the founder and prophet of a new faith—the religion of democracy" (p. 50).

• YALE FRENCH STUDIES, *Jean-Jacques Rousseau* (No. 28, Fall-Winter, 1961-1962). The entire issue is on Rousseau, and contains contributions by distinguished French and American scholars on his life and personality as well as on his views on morals, politics, law, religion, and education.

CHAPTER TWENTY-TWO

KANT

• BENCIVENGA, ERMANNIO, *Kant's Copernican Revolution* (New York, 1987). An attempt to understand the *Critique of Pure Reason*. For another recent brief work on the same subject, see Robert Kahn, *Kant's*

Newtonian Revolution in Philosophy (Carbondale, Ill., 1988).

• CASSIRER, ERNST *Kant's Life and Thought* (trans. James Haden, New Haven, Ct., 1981). Originally published in German

in 1918, this work is a standard summation of Kant's career. For a more recent work, see Arsenij Gulyga, *Immanuel Kant: His Life and Thought* (trans. Marijan Despalatovic, Boston, 1987).

• GALLIE, W. B., *Philosophers of Peace and War* (New York, 1978). Chapter I is on Kant, and emphasizes the importance of Kant's new conception of international law in *Perpetual Peace*.

• GALSTON, WILLIAM, *Kant and the Problem of History* (Chicago, 1975). Includes a presentation of Kant's political philosophy.

• KANT, IMMANUEL, *Kant's Political Writings* (ed. with and introduction and notes by Hans Reiss, trans. H. B. Nisbet, Cambridge, Eng., 1970). See Reiss's introduction.

• ———, *The Philosophy of Kant* (ed. Carl Friedrich, New York, 1949). Subtitled *Immanuel Kant's Moral and Political Writings*, this book contains a number of Kant's writings on political subjects. See also Friedrich's introduction.

• MULHOLLAND, LESLIE, *Kant's System of Rights* (New York, 1990). A long work on the subject, including considerable discussion on political subjects and recent writers in political theory.

• PATON, H. J., *Kant's Metaphysic of Experience*, 2 vols. (London, 1936). A classic commentary on the first half of the *Critique of Pure Reason*.

• RABEL, GABRIELE, *Kant* (Oxford, 1963). A collection of snippets from each one of Kant's published works, with introductions.

• RAWLS, JOHN, *A Theory of Justice* (Cambridge, Mass., 1971). Much of Rawls's theory of justice is informed by Kant. Section 40 is "The Kantian Interpretation of Justice as Fairness." See also Rawls' "Kantian Constructivism in Moral Theory," *Journal of Philosophy* (September, 1980).

• RILEY, PATRICK, *Kant's Political Philosophy* (Totawa, N.J., 1983). Concentrates on the relationship between Kant's ethics and his political theory. Riley holds that Kant considers the state to be an imperfect (but necessary) realization of the good will. Very extensive quotations from Kant. This book is not a descriptive account of Kant's political theory, but an attempt to find the place of politics in Kant's comprehensive philosophy. See also Riley's "The 'Elements' of Kant's Practical Philosophy," *Political Theory* (November, 1986), 552-583, for a discussion of the *Groundwork of the Metaphysics of Morals* as the foundation for Kant's moral and political thought.

• SANER, HANS, *Kant's Political Thought* (trans. E. B. Ashton, Chicago, 1973). Saner argues that politics is intrinsic to Kant's thought, despite the relative paucity of explicit attention apparently paid to it, and that Kant's political thought "is one of the peaks" of the western political tradition.

• SMITH, NORMAN, *A Commentary to Kant's Critique of Pure Reason*, 2nd ed. (London, 1923). A critical appraisal.

• SULLIVAN, ROGER, *Immanuel Kant's Moral Theory* (Cambridge, Eng., 1989). This book is an attempt to understand the parts of Kant's moral theory within the context of his larger moral conception.

• WERKMEISTER, W. H., *Kant: The Architectonic and Development of His Philosophy* (La Salle, Ill., 1980). An accessible introduction to the progression of Kant's thought.

• WILLIAMS, HOWARD, *Kant's Political Philosophy* (New York, 1983). A comprehensive survey and analysis of Kant's political thought, though this book is under 200 pages. The first half of the book concentrates on presenting Kant's political philosophy; the second, more on analyzing it, with interesting references to other authors. Williams finds: "Kant is, at heart, a republican with strong liberal sympathies."

CHAPTER TWENTY-THREE

SMITH

- CAMPBELL, R. H. and A. S., SKINNER *Adam Smith* (London, 1982). An accessible and brief biography which discusses Smith's academic work. See also Skinner's *A System of Social Science* (Oxford, 1979), a collection of essays published elsewhere on a variety of Smithian topics.
- CLARK, JOHN, et al., *Adam Smith, 1776-1926* (reprinted New York, 1966). A collection of general lectures on Smith on the occasion of the sesquicentennial of the publication of *The Wealth of Nations*.
- CROPSY, JOSEPH, *Polity and Economy; An Interpretation of the Principles of Adam Smith* (The Hague, 1957). A useful examination of Smith's thought, including discussion of the *Theory of Moral Sentiments* as well as *The Wealth of Nations*. One premise of the book is that "capitalism is an embodiment of Smithian principles."
- FOLEY, VERNARD, *The Social Physics of Adam Smith* (West Lafayette, Ind., 1976). An idiosyncratic work advancing the thesis that "important elements of Adam Smith's thought were consciously, systematically, and secretly modeled after a system of physical, biological, and social evolution which he found in the writings of the ancients."
- GLAHE, FRED, ed., *Adam Smith and The Wealth of Nations; 1776-1976 Bicentennial Essays* (Boulder, Co., 1978). A collection of essays on a wide scope of Smithian positions and topics, including one by Milton Friedman on Smith's continuing relevance.
- HEILBRONER, ROBERT, *The Worldly Philosophers*, 6th ed. (New York, 1986). The most successful introduction to economic thinkers. Chapter III is on Smith. Also see chapter IV of Robert Lekachman's *A History of Economic Ideas* (New York, 1959).
- HOLLANDER, SAMUEL, *The Economics of Adam Smith* (Toronto, 1973). An excellent introduction to Smith's economic theories. Not too difficult for the non-economist. Includes two chapters on pre-Smithian economics. For another strictly economic view of Smith, see Maurice Brown, *Adam Smith's Economics* (London, 1988).
- MEEK, RONALD, *Smith, Marx, & After* (London, 1977). A collection of essays comparing and explaining Smith, Marx, and their influence.
- MYERS, MILTON, *The Soul of Modern Economic Man* (Chicago, 1983). This book traces the place of self-interest in British political theorists from Hobbes to Smith. It argues that the *Wealth of Nations* can be seen as a reply to Hobbes's views on self-interest.
- O'DRISCOLL, GERALD, ed., *Adam Smith and Modern Political Economy: Bicentennial Essays on The Wealth of Nations* (Ames, Ia., 1979). Papers delivered at the University of California at Santa Barbara as the Harry Girvetz Memorial Lectures.
- RAE, JOHN, *Life of Adam Smith*, with an introduction by Jacob Viner (reprinted New York, 1965). Although originally published in 1895, still the most comprehensive and influential biography on Smith.
- REISMAN, DAVID, *Adam Smith's Sociological Economics* (London, 1976). A study that attempts to direct greater focus than usual on Smith's comprehensive perspective on society rather than on his economics *per se*.
- SMITH, ADAM, *The Essential Adam Smith* (ed. and with introductory readings by Robert Heilbroner, New York, 1986). Probably the best abridgment available of

Smith's comprehensive writings. Heilbroner's introduction, while brief, is interesting.

- TEICHGRAEBER, RICHARD, *"Free Trade" and Moral Philosophy* (Durham, N.C., 1986). A more comprehensive book arguing in part that the *Wealth of Nations* was conceived by Smith not just as an economic treatise, but as a description of the just political state. Teichgraeber traces Smith's philosophy to the Dutch jurist and statesman Hugo Grotius, who argued

against distributive justice and in favor of private property. Because, under this view, liberty is essentially negative, politics plays a smaller role in societies.

- WINCH, DONALD, *Adam Smith's Politics: An Essay in Historiographic Revision* (Cambridge, 1978). Presents Smith as an eighteenth century political figure influenced by Montesquieu and Hume, and not as much influenced by Locke. Emphasis is on Smith's politics, not his economics.

CHAPTER TWENTY-FOUR

BURKE

- ARIS, REINHOLD, *History of Political Thought in Germany, 1789-1815* (London, 1936). Includes a succinct discussion of Burke's influence on German romanticism and conservatism (pp. 251-265). See also Frieda Braune, *Edmund Burke in Deutschland* (Heidelberg, 1917), which traces the contribution of Burke to the growth of German conservatism and political romanticism in the late eighteenth and early nineteenth centuries. Whereas Burke has been hailed in England not only by conservatives but also by liberals and socialists, his influence in Germany—and it was considerable—has been felt mainly in antidemocratic circles.
- BARKER, ERNEST, *Essays on Government* (Oxford, 1945). Chaps. VI and VII (pp. 155-235) are illuminating studies on "Burke and His Bristol Constituency," and "Burke and the French Revolution." See also C. E. Vaughan, *Studies in the History of Political Philosophy before and after Rousseau* (Manchester, 1939), II, 1-63.
- BEVAN, RUTH, *Marx and Burke: A Revisionist View* (La Salle, Ill., 1973). The purpose of this book is to juxtapose a historical conservative (Burke) with a historical revolutionary (Marx) to gain a greater understanding of contemporary political issues.
- BOULTON, JAMES T., *The Language of Politics in the Age of Wilkes and Burke* (London-Toronto, 1963). The author suggests that the conventional analytical and historical examination of political writers must be supplemented by the "literary-critical" method, thus adding a new dimension of understanding. In dealing with Burke (Chaps. V-VII, pp. 52-133), the author writes: "Burke was not only a great thinker, he was also an imaginative writer who requires a response from the reader as a whole man and not simply as a creature of intellect. Consequently his exposition—the play of imaginative insights as well as the statement of logical argument—itsself becomes 'proof' in this special sense that it communicates, and affirms while communicating, the rich complexity of a philosophy of life; it does not merely demonstrate the truth of a set of propositions" (p. 98). Copiously quoting from Burke, the author shows the power and subtlety of his imagery, often more persuasive than the argument behind it. Boulton also discusses in detail some key words in Burke's diction, such as *nature, world, universe, earth, mankind, authority, religion, morality, law, and principles* (pp. 106-110). Boulton's "literary-critical" method is particularly

applicable and fruitful in the case of Burke, since he is considered by some the greatest prose writer in English.

• CANAVAN, FRANCIS P., *Edmund Burke: Prescription and Providence* (Durham, N. C., 1987). A Straussian interpretation of Burke, emphasizing religion.

• ———, *The Political Reason of Edmund Burke* (Durham, N.C., 1960). The author takes issue with interpreting Burke's political thought as a form of empiricism or utilitarianism. "The central idea in Burke's thought," the author writes, "was that of order" (p. 19). Yet, it is an order which is "the work of reason. The reason which creates order, however, is not solely nor even primarily human reason. In accordance with the intellectual tradition of Christian philosophy, Burke saw the entire universe as an intelligible whole, the product of Divine Reason. Within that universal order there was a natural moral order, derived from the structure and essential relationships of human nature as created by God" (p. 189). The author concedes that there was an element of pragmatism in Burke, but it was "principled pragmatism" with "absolutes" and "fixed stars" as provided by the moral law: "But within these limits, the realm of means and intermediate ends was the domain of prudence. In this area the mode of thought proper to the statesman was that of political reason, which was concerned with adapting means to ends in ever-changing circumstances, according to the norms of an intelligent and enlightened expediency" (pp. 26-27).

• CHAPMAN, GERALD W., *Edmund Burke: The Practical Imagination* (Cambridge, Mass., 1967). The book is organized around the five major critical issues in Burke's life: America, Ireland, Constitutional Reform, France, and India. Burke's thinking united, in the author's view, the two greatest achievements of English civilization, "its literary imagination, and its success in practical politics" (p. 2). The resultant concept of the "practical imagination" is defined by the author as the "power to experience a thing in its concrete complexity, to discriminate its relations, and to act upon or reverence its latent good" (p. 131). The complexity of Burke's own

thought, defying any attempt to build a system out of it, is defined by the author as follows: "His thought is a master-solvent of antinomies—metaphysics and common sense, poetry and practicality, liberalism and conservatism, neoclassicism and romanticism, Christianity and pragmatism, to name but a few" (p. 2). Far from being an advocate for the status quo, Burke had, the author argues, a vivid sense of "things enduring, things changing, things changing in order to endure" (p. 33).

• COBBAN, ALFRED, *Edmund Burke and the Revolt against the Eighteenth Century*, 2nd ed. (London, 1960). Chaps. II-IV (pp. 37-132) are devoted to Burke. Cobban emphasizes Burke's originality in relation to the problem of nationality: "He saw, long before most of his contemporaries, the power and rights of that force of national sentiment which eighteenth-century theorists and politicians had conspired to ignore and trample on. The right of a subject nation to freedom just because it was a nation was a new idea in political thought. Though the fact had been there for centuries, Burke has the honor of first stating in definite form the theory of nationality" (p. 130).

• CONE, CARL B., *Burke and the Nature of Politics*, 2 vols. (Lexington, 1957-1964). The first major biography of Burke to make use of his papers, which became accessible to the public only in 1949. The first volume is on "The Age of the American Revolution," and the second is on "The Age of the French Revolution." In his final appraisal of Burke's place in the history of political philosophy, the author holds that Burke's utilitarian interpreters, particularly during the nineteenth century, put him in a "false position," and that he should more properly be placed in the "natural-law tradition," opposed to the "scientific materialism and the legal positivism of the Enlightenment" (II, pp. 510-511).

• COPELAND, THOMAS W., *Our Eminent Friend Edmund Burke: Six Essays* (New Haven, 1949). Treats various phases of Burke's life and activities. The most interesting essay is Chap. V, "Burke, Paine, and Jefferson" (pp. 146-182).

• FASEL, GEORGE, *Edmund Burke* (Boston, 1983). A good brief introduction to the major components of Burke's thought and writing.

• FAY, C. R., *Burke and Adam Smith* (Belfast, 1956). Analyzes the personal relations and intellectual affinities between Burke and Adam Smith. An ardent believer in custom, authority, and the organic conception in politics, Burke was an emphatic follower of *laissez faire* in economics. In fact, Fay writes that Burke's *Thoughts and Details on Scarcity* (1795) was even more effective than Adam Smith's *Wealth of Nations* (1776) in helping Cobden and the Anti-Corn Law League "in their fight for free food" (p. 25) in the first half of the nineteenth century.

• FENNESSY, R. R., *Burke, Paine, and the Rights of Man: A Difference of Political Opinion* (The Hague, 1963). Written from an avowedly pro-Burke viewpoint, the detailed account of the controversy between Burke and Paine—one of the great ideological debates in English—discusses the personal relations between the two as well as the basic reasons of their doctrinal disagreement. In the author's judgment, "Burke was no doubt a better thinker, and he offered an effective criticism of the kind of political theory that Paine believed in. But the society in which they lived was ripe for change; and when the time comes for great changes in political systems, a plain and intelligible political theory, however faulty, may serve the ends of the reformers better than one that is nearer the truth but more difficult to understand" (p. 254). With respect to Paine, the author makes the interesting comment that, while he failed to convert England to republicanism and thorough constitutional reform, Paine—particularly through the *Rights of Man*—had an enormous impact on the working class and the stirring working class movement (pp. 244-250).

• GRAUBARD, STEPHEN R., *Burke, Disraeli, and Churchill: The Politics of Perseverance* (Cambridge, Mass., 1961). The author considers the qualities of dissent and moral courage the most distinctive link between Burke, Disraeli, and Churchill. All three had to endure more

than the customary amount of political abuse, all three found themselves more often than not out of tune with their times, and each of the three was unique in his own century. In addition, "each was a romantic who lived by a myth, sometimes recognized as such, more frequently incorporated into the basic structure of his thought. These were historically minded men who found in historic example the arguments they required" (p. 11). Yet the author also points to the differences in circumstances, background, issues, and views that separate the three men. Following the Introduction (pp. 1-16), each of the three men is analyzed separately (Burke, pp. 17-87).

• HART, JEFFREY, "Burke and Radical Freedom," *Review of Politics*, XXIX (April, 1967), 221-238. Noting a strong revival of interest in Burke, the author finds the explanation for it in the fact that Burke "was the first to recognize the deep moral division of the West, which was just then opening up, and which today, across the board, is decisive for our moral, political, and metaphysical opinions: and because Burke, having recognized the division and defined its doctrinal grounds, took sides" (pp. 221-222). Hart sees two opposing forces in the modern world: on the one hand, there is a force of perpetual dissatisfaction, "hatred of what is"; on the other hand, there is the older moral tradition of a "sense of being," of saying to the world: "Do not change: *Be*" (p. 238). Burke belongs to that older tradition that, according to the author, goes back to Plato, Aristotle, and Aquinas, and for this reason the concept of "tranquility" is central in Burke's thought: "On the one hand are the qualities to be desired in society: stability, public tranquility, peace, quiet, order, harmony, regularity, unity, decorum. Opposed to these are the symptoms of social disease: discord, contradiction, confusion, violence, excess, the need for coercion. The task of the statesman is to promote 'tranquility'" (p. 237).

• HAZLITT, WILLIAM, *Political Essays, with Sketches of Public Characters* (London, 1819). Hazlitt, a radical democrat and

one of the leading English essayists of the early nineteenth century, devotes two essays to the "Character of Mr. Burke" (pp. 264-269 and pp. 361-377), the first written in 1817 and the second in 1807. Hazlitt concedes that Burke is "the most poetical of our prose writers" (p. 269), but argues that his theory of government is constructed "not on rational, but on picturesque and fanciful principles; as if a king's crown were a painted gewgaw, to be looked at on gala-days; titles an empty sound to please the ear; and the whole order of society a theatrical procession" (p. 267).

- KIRK, RUSSELL, *The Conservative Mind: From Burke to Santayana* (Chicago, 1953). Chap. II (pp. 11-61) is on Burke. The author states that "Burke's ideas provided the defenses of conservatism, on a great scale, that still stand and are not liable to fall in our time" (p. 61). As in the eighteenth century, "our age, too, seems to be groping for certain of the ideas which Burke's inspiration formed into a system of social preservation" (*ibid.*).
- KRAMNICK, ISAAC, "The Left and Edmund Burke," *Political Theory* (May, 1983), 189-214. A history of leftist critiques of Burke, which, surprisingly, have often been positive. See also Kramnick's *The Rage of Edmund Burke: Portrait of an Ambivalent Conservative* (New York, 1977) for a recent biography which attempts to de-mythologize Burke.
- LASKI, HAROLD J., *Political Thought in England: from Locke to Bentham* (Home University Library, London, 1937). Chap. VI (pp. 165-215) is on Burke. Laski's conclusion is that "there is hardly a greater figure in the history of political thought in England" (p. 214). Similar, and even more lyrical, expressions are interesting evidence of the hold that the great conservative writer has over a socialist like Laski, and the whole chapter is highly revealing of the political and intellectual climate of England.
- MACCUNN, JOHN, *The Political Philosophy of Burke* (London, 1913). A fair and well-balanced analysis of Burke's views on major issues of political philosophy, and one of the most useful works of its kind. In dealing with Burke's attitude on freedom

of discussion and religious toleration (Chap. VII, pp. 104-121), the author says that "no man, it is safe to say, ever discussed politics as he did, none so persistently, none with such eloquence and penetration, none with more determination to go to the root of the matter" (p. 105). This did not prevent Burke from opposing untrammelled freedom in politics and religion: "Few great thinkers, indeed, have gone so far in using incomparable powers of discussion in proving that toleration, as well as discussion, ought to have its limits" (p. 111). See also F. J. C. Hearnshaw, "Edmund Burke," in the work edited by himself, *The Social and Political Ideas of Some Representative Thinkers of the Revolutionary Era* (London, 1931), pp. 72-99; Ivor Brown, *English Political Theory* (London, 1929), pp. 68-87; and R. H. S. Crossman, *Government and the Governed* (London, 1939), pp. 84-86, 117-125. Both Crossman and Brown devote more space to Paine than to Burke in dealing with the English response to the French Revolution, and Crossman calls Paine the "ablest pamphleteer" (p. 117) of the French Revolution.

- MAGNUS, PHILIP, *Edmund Burke: A Life* (London, 1939). One of the best modern biographies, with illustrations and contemporary cartoons, and a Select Bibliography (pp. 351-355). The most frequently quoted British statesman, "Burke's political outlook was not shared by all Englishmen, but it was the outlook of the dominant and most characteristic section of the English people. The instinctive political empiricism of the average Englishman now bears for all time the impress of the character and personality of Edmund Burke. It was Burke's genius which first gave shape and direction to what formerly had been little more than an inchoate mass of ideas, floating in the English mind. This was Burke's greatest achievement, and his legacy to his country" (p. 300).
- MORLEY, JOHN VISCOUNT, *Burke* (London, 1923). Viscount Morley (1838-1923) was a lifelong Liberal, and—prior to World War I—a member of several Liberal cabinets in Britain. Appraising Burke's

place in British history, he concurs with Macaulay, who called him the greatest man in English literature since Milton, and writes as follows: "Opinion is slowly, but without reaction, settling down to the verdict that Burke is one of the abiding names in our history; not because he either saved Europe or destroyed the Whig party, but because he added to the permanent considerations of wise political thought, and to the maxims of wise practice in great affairs, and because he imprints himself upon us with a magnificence and elevation of expression that places him among the highest masters of literature, in one of its highest and most commanding senses" (p. 3). On the other hand, Burke's "passion appears hopelessly fatal to success in the pursuit of Truth, who does not usually reveal herself to followers thus inflamed" (pp. 3-4).

- O'GORMAN, FRANK, *Edmund Burke: His Political Philosophy* (Bloomington, Ind., 1973). Places Burke's thought in historical perspective; uses the whole range of Burke's works. O'Gorman's thesis is that Burke's political theory should be evaluated from the perspective that it emerged from an active politician, not a scholarly philosopher.
- PARKIN, CHARLES, *The Moral Basis of Burke's Political Thought* (Cambridge, 1956). Starting from Burke's own thesis that "the principles of true politics are those of morality enlarged," the author examines the precise nature of Burke's moral principles. He concludes as follows: "The source of moral truth, for Burke, is an eternal moral order which is immanent in the historical process. His morality rests therefore on a religious perception. Man is by constitution a religious animal, and religion must be the foundation of civil society" (p. 131).
- ROSSITER, CLINTON, *Conservatism in America: The Thankless Persuasion*, 2nd ed. (Vintage Books, New York, 1962). Chap. VII, "The Conservative Minority, or With Edmund Burke in Darkest America" (pp. 197-234) is particularly important. The author delineates the different strands of conservatism in the United States, and he finds that, for more than a century,

genuine and self-conscious American followers of Burkean conservatism have been but "an eccentric minority in the world of ideas, a misunderstood minority in the world of right-wing politics" (p. 234). Rossiter brilliantly summarizes the main similarities and differences between Burkean conservatism and the dominant (non-Burkean) American conservatism (pp. 198-201), and he identifies the principle of "the primacy of the community" as the most important area of difference between Burkean conservatism and individualistic American conservatism. "While our conservatives have occasionally gone abroad," Rossiter writes, "in search of philosophical support, they have gone to Spencer and Adam Smith rather than to Burke and Coleridge" (p. 198). As to the importance of Burke, Rossiter writes that Burke's *Reflections on the Revolution in France* (1790) "is rightly considered the first and greatest statement of consciously conservative principles" (p. 16).

- STANLIS, PETER J., *Edmund Burke and the Natural Law* (Ann Arbor Paperbacks, Ann Arbor, 1965). The thesis of the work is "that far from being an enemy of Natural Law, Burke was one of the most eloquent and profound defenders of Natural Law morality and politics in Western civilization" (p. ix). Emphasizing the religious roots of Burke's thought, the author calls Burke "the foremost modern Christian humanist in politics because he saw the world and the nature of man through the revelations of Christianity and the right reason of Natural Law" (p. 84). See also Leo Strauss, *Natural Right and History* (Chicago, 1953), pp. 294-323.
- STEPHEN, LESLIE, *History of English Thought in the Eighteenth Century*, 2 vols. (Harbinger Books, New York, 1962). This classic, first published in 1876, discusses Burke in Vol. II, Chap. X (pp. 185-214). The author, an emphatic Liberal, begins his analysis of Burke with these words: "No English writer has received, or has deserved, more splendid panegyrics than Burke" (II, 185). Stephen stresses in Burke's thought the concepts of experience and utility, in contrast to some recent writers who have attempted to interpret Burke

as an adherent of natural law and metaphysics in politics and philosophy. Similarly, T. E. Utey, *Edmund Burke* (London-New York, 1957), considers the "principle of utility" the first and foremost principle in Burke's thought. This principle of utility means that "no consideration of abstract right can be a sufficient basis for just authority and just obedience, but that the proper end of government is the happiness of its subjects, and that this should be the sovereign guide to its conduct, determining how far it shall press its authority in practice" (p. 24).

• WILKINS, BURLEIGH TAYLOR, *The Problem of Burke's Political Philosophy* (Oxford, 1967). The question of whether Burke should be interpreted as a natural law theorist or whether his outlook was essentially utilitarian is considered by the author *the problem of Burke's political philosophy*. Wilkins concedes that Burke used the vocabulary of utility ("utility," "expediency," "convenience") more frequently

than the vocabulary of natural law ("justice," "equity," "law of nature," "natural right"), and that this was particularly the case at the height of his political and parliamentary career. Yet, looking at the whole context of Burke's thought, Wilkins writes: "Given Burke's organic conception of society, his traditionalism, his doctrine of virtual representation, and his ethical and religious beliefs, the resemblances between Burke and the utilitarians appear ultimately superficial" (p. 15). Conceding the many difficulties in interpreting Burke as a champion of natural law, Wilkins' position is a "qualified yes" (p. 88). Burke thought, the author concludes, that natural rights included the rights to life, liberty, and property, but not political rights, such as popular suffrage: "What this adds up to is that Burke's political philosophy was a conservative version of the natural law and not a denial of the natural law in the name of either history or utility" (p. 252).

CHAPTER TWENTY-FIVE

BENTHAM

• AYER, A. J., "The Principle of Utility," in George W. Keeton and Georg Schwarzenberger, *Jeremy Bentham and the Law: A Symposium* (London, 1948), pp. 245-259. A philosophical analysis of the principle of utility from the standpoint of logical positivism, by one of its leading British representatives. See also Bertrand Russell, *Freedom and Organization, 1814-1914* (London, 1949), pp. 103-123, 131-140.

• BAUMGARDT, DAVID, *Bentham and the Ethics of Today: With Bentham Manuscripts Hitherto Unpublished* (Princeton, 1952). The author of this detailed analysis is, on the whole, sympathetic to Bentham's ethic, without uncritically accepting it as the last word on the subject. With respect to the common

charge of egoism, Baumgardt writes: "Bentham's utilitarianism can in no way be considered a philosophy of egoism. On the contrary, it is the most consistent philosophy of altruism, provided that three critical limitations are not lost sight of. First, the disinterestedness of an action does not exclude all self-regarding interest of the same action; it includes some personal interest in that action, this interest being the cause of that act. Second, it ought to be acknowledged that self-preference is, in the total life of nature, a far more necessary motive than disinterestedness. Third, neither the motive of self-regard nor that of disinterestedness is, ethically speaking, good or bad taken by itself; and it is in no wise lamentable that extra-regarding interests

are much rarer than self-regarding ones" (p. 419). With respect to the nature of the principle of utility and of maximizing happiness, the author writes: "The fundamental principle of empirical hedonism can by no means be empirically given; it has to be intuitively presupposed as merely hypothetical truth. However, the preferableness of the utility principle to other hypothetical tenets can be demonstrated, if it can be critically shown that the hypothetical utility principle is less capricious and gives a more coherent explanation of ethical phenomena than its rivals" (p. 530).

• BECKER, JAMES F., "Utilitarian Logic and the Classical Conception of Social Science," *Science and Society*, XXVIII (Spring, 1964), 161-182. Marxists, following Marx' vituperative condemnation of Bentham, generally consider Marxism and Utilitarianism entirely antithetical. The author agrees that there are numerous basic differences on substantive issues of philosophy and political economy between Marxism and Utilitarianism, yet points out that there are also important similarities in the methods of inquiry and analysis employed by Marx and Bentham. "A half-century before Marx," he writes, the Utilitarians "sought to revise the logical bases of social science, to establish the necessary premises for a renaissance in the investigation and ordering of human affairs" (p. 161). In particular, the author stresses the critique of language in both Bentham and Marx: "'Linguistic masquerades' (Marx) and 'word magic' (Bentham) were recognized by Marx and Bentham for what they are: instruments of obscurantism and blind, unobjective rationalizing" (p. 181). For Marx' own statements on Utilitarianism, see Sidney Hook, *From Hegel to Marx* (New York, 1950), pp. 315-322.

• BENTHAM, JEREMY, *A Fragment on Government and Introduction to the Principles of Morals and Legislation* (Blackwell's Political Texts, Oxford-New York, 1948). This convenient collection of Bentham's two most important writings on political theory contains a long introduction by the Editor, Wilfrid Harrison (pp. ix-lxvi).

Harrison's main criticism of Bentham is as follows: "It is unfortunate that Bentham, a leader of the attack on natural rights, could not extend his skepticism into the realm of economics. The natural identification of interests, eschewed in the political field, was accepted by him in the field of economics and the way was thus prepared for that separation of politics and economics which was nineteenth-century liberalism's greatest limitation" (pp. lxv-lxvi). See also the edition of the *Introduction to the Principles of Morals and Legislation* edited by J. H. Burns and H. L. A. Hart (London, 1982).

• ———, *Bentham's Political Thought* (ed. Bhikhu Parekh, London, 1974). Includes previously unpublished or relatively inaccessible selections.

• ———, *Of Laws in General* (ed. H. L. A. Hart, London, 1970). Left in substantially complete but unfinished form at Bentham's death, this manuscript went unpublished for over 100 years until Charles Everett's *The Limits of Jurisprudence Defined* in 1945.

• BORALEVI, LEA, *Bentham and the Oppressed* (Berlin, 1984). Contains otherwise difficult to obtain writings of Bentham's on various subjects, such as his views on homosexuality.

• BURNS, J. H., "Bentham and the French Revolution," *Transactions of the Royal Historical Society*, Fifth Series, XVI (1966), 95-114. Commentators on Bentham have frequently argued that his eventual conversion to radical democracy was, to some extent at least, caused by the French Revolution. Burns convincingly disproves this thesis. Although Bentham welcomed the French Revolution at an early stage and was made an honorary citizen of France in 1792, he became disenchanted with it within a few years, mainly on account of its revolutionary metaphysic and excessive fanaticism. "Radical as he might become," the author writes of Bentham, "in his advocacy of reform, utility as he understood it always drove a wedge between rational improvement and revolutionary Utopianism. That wedge is not without its historical importance in the subsequent history of social theory

and social policy" (pp. 112-113). For a typical example of the traditional view, see Guido de Ruggiero, *The History of European Liberalism* (Beacon Paperbacks, Boston, 1959), which includes a section on Benthamism and Philosophic Radicalism (pp. 93-108), describing Benthamism as "the French Revolution working at a distance and disguised beneath the features of John Bull" (p. 106).

• COHEN, VICTOR, *Bentham* (Fabian Tract No. 211, London, 1927). English socialism, the author says, "owes an inestimable debt of gratitude to the almost mythical exponent of stern individualism" (p. 18). See also Harold J. Laski, "Jeremy Bentham," *New Statesman and Nation*, XXXV (February 21, 1948), 152; G. D. H. Cole, *Some Relations between Political and Economic Theory* (London, 1934), pp. 42-58, and *Socialist Economics* (London, 1950), pp. 28 ff.; and Mary Peter Mack, "The Fabians and Utilitarianism," *Journal of the History of Ideas*, XVI (January, 1955), 76-88. Mack, a noted biographer of Bentham, calls the Fabians "direct descendants of Bentham" (p. 88).

• CRIMMINS, JAMES, "Bentham on Religion: Atheism and the Secular Society," *Journal of the History of Ideas* (January-March, 1986). Demonstrates the extent to which Bentham intended a utilitarian society to be strictly secular, and his anti-religious feelings.

• DICEY, A. V., *Law and Public Opinion in England during the Nineteenth Century*, 2nd ed. (London, 1914). Lecture VI (pp. 126-210) is "The Period of Benthamism or Individualism" (1825-1870), and Lecture IX (pp. 303-310), "The Debt of Collectivism to Benthamism." Dicey says that the debt of democratic socialism to Benthamism is three-fold: a legislative dogma—the principle of utility; a legislative instrument—the active use of parliamentary sovereignty; and a legislative tendency—the constant extension and improvement of the mechanism of government. See also Frederic William Maitland, *Collected Papers* (Cambridge, 1911), I, 112 ff., 146 ff.

• EVERETT, CHARLES W., *Jeremy Bentham* (London, 1966). The author presents

the essentials of Bentham's life and thought as well as his influence on social policy in many countries. In an earlier study, *The Education of Jeremy Bentham* (New York, 1931), Everett concentrated on Bentham's formative years, up to the publication of his *Principles of Morals and Legislation* in 1789.

• HALEVY, ELIE, *The Growth of Philosophic Radicalism* (trans. Mary Morris, London, 1928). This is the most illuminating account of the Utilitarians, centered on Bentham. The author, the leading French authority on nineteenth-century England, has the advantage of looking at Utilitarianism from a broad European viewpoint, and he stresses the influence of French thought on Bentham, particularly in his youth. The volume contains a detailed bibliography of works by, and on, Bentham, compiled by C. W. Everett (pp. 522-546).

• HARRISON, ROSS, *Bentham* (London, 1983). A major philosophic work on Bentham.

• HART, H. L. A., "Bentham," *Proceedings of the British Academy*, 1962, XLVIII (London, 1963), 297-320. In commenting on one of Bentham's most characteristic aspects of his thought, "the extraordinary combination in Bentham of a fly's-eye view of practical detail with boldness or even rashness in generalization," the author writes that Bentham "thought the criticism of existing institutions unaccompanied by demonstrably practical alternatives was worthless; and he believed this not only because criticism, like everything else, was to be judged by its Utility, but because hatred of anarchy and disorder was as strong a passion with him as hatred of blind custom and conservatism" (p. 301). The author also stresses Bentham's critique of language as one of his most outstanding and original contributions to philosophy and social thought, for its purpose "was no less than that of making men conscious of the seeds of deception and confusion buried in the very texture of human thought, and so to arm them against those who would use deception and confusion to cheat them of their happiness" (p. 311).

• ———, *Essays on Bentham* (Oxford, 1982). A collection of essays on Bentham

by one who knows his thought well, and who is himself a leading contemporary legal mind.

• HUME, L. J., *Bentham and Bureaucracy* (New York, 1982). A presentation of Bentham's views on the management and organization of government, with particular attention to the development of his thought on these matters.

• KEETON, GEORGE W., and GEORGE SCHWARZENBERGER (eds.), *Jeremy Bentham and the Law: A Symposium* (London, 1948). In addition to legal subjects, the symposium also deals with broad political and philosophical issues.

• LETWIN, SHIRLEY ROBIN, *The Pursuit of Certainty: David Hume, Jeremy Bentham, John Stuart Mill, Beatrice Webb* (Cambridge, 1965). Part II (pp. 127-188) is on "Jeremy Bentham: Liberty and Logic." The author notes that the "moral foundation of Bentham's system was not the principle of utility but his conviction that to deny a normal adult the right to determine his own life was to treat him as a child and to derogate from his dignity as a rational being" (p. 138). Yet the author feels that Bentham failed in his supreme objective of turning political analysis and practical politics into an exact science, of replacing "practical wisdom with a technique" (p. 187).

• LONG, DOUGLAS, *Bentham on Liberty* (Toronto, 1977). A study in the development of Bentham's political views between the 1770s and first decade of the 1800s.

• MACK, MARY P., *Jeremy Bentham: An Odyssey of Ideas, 1748-1792* (New York, 1963). Using many of his unpublished manuscripts and notes, the author enthusiastically admires Bentham as a man and as a thinker. She particularly stresses the innovative genius of Bentham's philosophy and politics.

• MANNING, D. J., *The Mind of Jeremy Bentham* (New York, 1968). An unsympathetic account of Bentham in which his emphasis on rationality becomes tyrannical in creating a society of atomized individuals.

• MILL, JOHN STUART, "Bentham," in *Dissertations and Discussions* (New York, 1882), I, 355-417, reprinted in F. R. Leavis (ed.), *Mill on Bentham and Coleridge*

(Cambridge, Eng., 1980). Mill's testimony is particularly valuable, as he knew Bentham personally from early childhood, his father, James Mill, being one of Bentham's closest collaborators and disciples. Mill sees in Bentham, above all, "the great questioner of things established," who broke the yoke of authority by forcing every opinion received on tradition to give an account of itself: "Who, before Bentham (whatever controversies might exist on points of detail), dared to speak disrespectfully, in express terms, of the British Constitution or the English law?" (p. 357). Mill's main criticism of Bentham is want of imagination and failure to appreciate the role of feeling in human conduct: "Knowing so little of human feelings, he knew still less of the influences by which those feelings are formed: all the more subtle workings both of the mind upon itself, and of external things upon the mind, escaped him; and no one, probably, who, in a highly instructed age, ever attempted to give a rule to all human conduct, set out with a more limited conception either of the agencies by which human conduct is, or of those by which it *should* be, influenced" (p. 380). In his *Autobiography* (New York, 1924), Mill discusses his views of Bentham and Benthamism in numerous passages (pp. 5, 38-39, 45-50, 54-56, 73-80, 139).

• OGDEN, C. K., *Bentham's Theory of Fictions* (London-New York, 1932). Bentham is one of the founders of semantics, and his work is of direct relevance to the student of politics. The first part consists of Ogden's introduction (pp. ix-clii), the second is a collection of passages from Bentham's writings bearing on semantic problems (pp. 7-150). Ogden's introduction to his edition of Bentham's *Theory of Legislation* (London, 1931) succinctly summarizes the major points of Bentham's political thought (pp. ix-li). See also Ogden's *Jeremy Bentham: 1832-2032* (London, 1932), containing the Bentham Centenary Lecture, delivered at University College, London, on June 6, 1932, as well as ten appendixes on various topics, including Bentham's views on the United States (pp. 88-93). Despite its brevity, Ogden's *Jeremy Bentham:*

1832-2032 is one of the most brilliant appraisals of Bentham.

- PAREKH, BHIKHU, (ed.), *Jeremy Bentham: Ten Critical Essays* (London, 1974). Reactions to Bentham over time, including some nineteenth century essays.
- PLAMENATZ, JOHN, *The English Utilitarians* (London, 1949). Chap. IV (pp. 59-84) of this thoughtful study, valuable both for its philosophical and historical observations, is on Bentham. See also William L. Davidson, *Political Thought in England: The Utilitarians from Bentham to J. S. Mill* (Home University Library, London, 1935) and Ernest Albee, *A History of English Utilitarianism* (reprinted New York, 1962).
- ROSEN, FREDERICK, *Jeremy Bentham and Representative Democracy* (Oxford, 1983). Rosen is one of the leading scholars on Bentham in the world today, and general editor of the new collected works. In this incisive book, he traces the development of Bentham's views on democratic government, and indicates to just what an extent Bentham was ahead of his time.
- STEPHEN, LESLIE, *The English Utilitarians*, 3 vols. (London, 1900, reprinted,

1950). The first volume of this standard work is on Bentham. A "Note on Bentham's Writings" (pp. 319-326) gives a concise account of Bentham's literary career. The second volume of the *Utilitarians* is on James Mill, the third on John Stuart Mill.

- WILLEY, BASIL, *Nineteenth Century Studies* (London, 1949). Chap. V (pp. 132-140) deals with some aspects of Bentham's ethical and religious views. For different interpretations, see J. M. Robertson, *A History of Freethought in the Nineteenth Century* (London, 1929), pp. 86 ff., 200 ff., and Alfred William Benn, *The History of English Rationalism in the Nineteenth Century* (London-New York, 1906), I, 285-325.
- WILLIAMSON, CHILTON, "Bentham Looks at America," *Political Science Quarterly*, LXX (December, 1955), 543-551. Contains interesting data on Bentham's relations with distinguished Americans, and illustrates his intense interest in, and admiration for, the American democratic system of government. See also D. P. Crook, "The United States in Bentham's Thought," *Australian Journal of Politics and History*, X (August, 1964), 196-204.

CHAPTER TWENTY-SIX

THE DILEMMA OF DEMOCRACY: LIBERTY AND EQUALITY

I TOCQUEVILLE

- BOESCHE, ROGER, *The Strange Liberalism of Alexis de Tocqueville* (Ithaca, N.Y., 1987). Boesche attempts to place Tocqueville in the political ideologies of his time. Boesche argues that Tocqueville's conceptions do not fit neatly into twentieth century political frameworks. Contains an extensive bibliography.
- DRESCHER, SEYMOUR, *Tocqueville and England* (Cambridge, Mass., 1964). Since Tocqueville's fame is so closely connected

with his *Democracy in America*, his personal, political, and literary ties with England have often received less than their due attention. Drescher's work fills an important gap in the literature on Tocqueville; it analyzes the influence of English ideas and institutions on Tocqueville's thought, follows him on his trips to England where he met with leading politicians and writers, and finally points to his influence on England, his "second country," as he called it. An excellent bibliography of works by, and on, Tocqueville is included (pp. 231-254).

- EISENSTADT, ABRAHAM (ed.), *Reconsidering Tocqueville's Democracy in America* (New Brunswick, N. J., 1988). A collection of essays by prominent authors and scholars.
- GARGAN, EDWARD T., *De Tocqueville* (London, 1965). This short essay of less than one hundred pages focuses on Tocqueville's main concern: the future of freedom in Western civilization. Tocqueville felt that the spread of democratic revolutions was inevitable, and the experience of England and the United States confirmed his hope that such revolutions "could lead to open rather than to closed societies" (p. 83). He had more doubts about the future of France and the rest of the Continent, but these doubts did not turn him into a pessimist: "He learned throughout his life to live with both despair and hope and he did not reject an existence that included this condition" (pp. 83-84). See also Gargan's *Alexis de Tocqueville: The Critical Years, 1848-1851* (Washington, D.C., 1955), and "The Formation of Tocqueville's Historical Thought," *Review of Politics*, XXIV (January, 1962), 48-61.
- HERETH, MICHAEL, *Alexis de Tocqueville: Threats to Freedom in Democracy* (trans. George Bogardus, Durham, N.C., 1986). An attempt to make Tocqueville relevant to contemporary political issues. This book includes sections on Tocqueville's practical political career and his views on Algeria, as well as a discussion of the type of free republic he favored.
- HERR, RICHARD, *Tocqueville and the Old Regime* (Princeton, 1962). Focuses on Tocqueville's last major work, *The Old Regime and the French Revolution*, published three years before his death. While *The Old Regime* galvanized French thinking about France's past, showing that administrative centralism was not the product of the French Revolution but a legacy from the old regime of absolute monarchy, it is also of great interest to the student of political thought beyond the French frame of reference. Throughout his study, Herr relates *The Old Regime* to Tocqueville's primary concern with the problem of liberty, particularly as exemplified by the different experience of France on

the one hand and of England and the United States on the other. Despite their different settings, *Democracy in America* and *The Old Regime* deal, according to Herr, with the same problem: that without the guarantee of liberty, democracy could lead to despotism: "*Democracy in America* describes the danger of the tyranny acting through an uncontrolled political assembly. *Old Regime* is a response to the Caesarian democracy of the Second Empire. Events since Tocqueville's day have taught us that an unscrupulous minority can use either type of democratic tyranny to subvert a free people" (p. 127).

- HOROWITZ, MORTON J., "Tocqueville and the Tyranny of the Majority," *Review of Politics*, XXVIII (July, 1966), 293-307. The author, following Bryce, Laski, and others, suggests that *Democracy in America* can be understood only if one keeps in mind that Tocqueville had two objectives in his book, intended primarily for Frenchmen: to describe and analyze the United States and at the same time to instruct and warn his own countrymen. Regarding the problem of the tyranny of the majority, the author argues that, when Tocqueville spoke of the potential political tyranny of the majority, he was thinking of France, in which political liberty was constantly under attack; however, when Tocqueville speaks of the potential tyranny of society and public opinion over the individual, the author holds, he was thinking of the United States. See also J. P. Mayer, "Tocqueville as a Political Sociologist," *Political Studies*, I (June, 1953), 132-142, in which the author states that *Democracy in America* is "the greatest contribution from political sociology in the nineteenth century or in our own time towards an interpretation of our civilization," which Mayer calls "the new society of the mass age" (p. 137).
- KEENEY, JAMES, "Tocqueville and the New Politics," *New Politics*, I (Spring, 1962), 58-65. Sharply criticizing Tocqueville from a radical viewpoint, the author writes that Tocqueville had, as an outsider, "some objectivity" in appraising the American situation. Yet where his objectivity fell down "was in condoning the

new men of power and the fraudulent democracy by which they ruled. Faced with accepting either what he considered an absurdity—government by the mass, or the hypocrisy of a democracy in which government remained severely limited and under the control of a new aristocracy, Tocqueville had really no choice. He threw in his lot on the side of order" (p. 62).

• KORITANSKY, JOHN, *Alexis de Tocqueville and New Science of Politics* (Durham, N. C., 1986). An interpretive commentary on *Democracy in America*.

• LASKI, HAROLD J., "Alexis de Tocqueville and Democracy," in F. J. C. Hearnshaw (ed.), *The Social and Political Ideas of Some Representative Thinkers of the Victorian Age* (London, 1933), Chap. V (pp. 100–115). Emphasizes Tocqueville as a precursor of Marx: "However different their ways of expression, however antagonistic the purposes they served, Tocqueville would, I suspect, have subscribed to a good deal of what we call the Marxian interpretation of history. Many of his conclusions bear a striking resemblance to those of *The Communist Manifesto*; with, of course, the important difference that what for Marx represented victory for Tocqueville represented defeat" (pp. 113–114).

• LEROY, MAXIME, "Alexis de Tocqueville," *Politica*, I (August, 1935), 393–424, reprinted in William Ebenstein, *Political Thought in Perspective* (New York, 1957), pp. 472–500. One of the most trenchant critical analyses of Tocqueville's political ideas. On his liberalism, the author writes as follows: "What kind of liberal was he? He regarded himself as being one according to a particular and original fashion. He was mistaken in this point; for he was one in the conservative spirit as were a number of his liberal friends. Tocqueville does not say liberty without understanding by it liberty and property" (p. 401). Concerning Tocqueville's faith in free associations as a counterweight to the power of the state, Leroy says that they have, like business and labor organizations, developed a concentration of interest and power that may become a threat to individual liberty: "It is no longer the

isolated individual, thinking in isolation, according to Tocqueville's wish, who affects society, but coalitions born of democracy. But do not these groups destroy it?" (p. 408). A forceful restatement of some of Tocqueville's main arguments will be found in Bertrand de Jouvenel, *On Power* (New York, 1949).

• MATHEW, DAVID, *Acton: The Formative Years* (London, 1946). Chap. VI (pp. 86–98) analyzes the profound influence of Tocqueville on Lord Acton, one of the great liberal thinkers of the nineteenth century.

• MAYER, J. P., *Alexis de Tocqueville: A Biographical Essay in Political Science* (Harper Torchbooks, New York, 1960). Originally published in 1939, this edition has an added essay on "Tocqueville after a Century" (pp. 117–129). See also William J. Schlaerth (ed.), *Alexis de Tocqueville's Democracy in America: A Symposium* (Fordham University Studies, Burke Society Series, No. 1, New York, 1945).

• PIERSON, GEORGE WILSON, *Tocqueville and Beaumont in America* (New York, 1938). The definitive work on the subject. The first eight parts of the book tell the story of Tocqueville's experiences in the United States. Part IX gives a summary of how *Democracy in America* was written, and also analyzes its defects and enduring qualities (pp. 681–777). A detailed bibliography is appended (pp. 825–833). There is an abridged version, *Tocqueville in America* (Anchor Books, New York, 1959).

• POPE, WHITNEY, *Alexis de Tocqueville: His Social and Political Theory* (Beverly Hills, Calif., 1986). A sociological interpretation of Tocqueville. Includes a section comparing him to Marx and Durkheim.

• PROBST, GEORGE E. (ed.), *The Happy Republic: A Reader in Tocqueville's America* (Harper Torchbooks, New York, 1962). Tocqueville's America, as reflected in the writings, essays, and speeches of contemporary Americans and foreign visitors. The readings are organized in line with Tocqueville's major themes in *Democracy in America*.

• RESH, RICHARD W., "Alexis de Tocqueville and the Negro: *Democracy in America* Reconsidered," *Journal of Negro*

History, XLVIII (October, 1963), 251–259. After examining the bulk of published travel accounts of foreign visitors to the United States in the period of 1820–1832, the author concludes that Tocqueville, like the other foreign visitors at that time, regarded slavery as "the gravest threat to America's security" (p. 251). However, and more importantly, the author concludes, most other foreign visitors "wrote in terms of the human equation. Unlike Tocqueville, they sensed the immediate, personal tragedy of bondage and prejudice. The travelers showed that an overly theoretical discussion of social injustice dwarfed the real victim, the individual" (pp. 258–259).

• SCHAPIRO, J. SALWYN, *Liberalism and the Challenge of Fascism: Social Forces in England and France (1815–1870)* (New York, 1949). In his discussion of "Alexis de Tocqueville, Pioneer of Democratic Liberalism in France" (pp. 290–307), the author concludes that Tocqueville was "an example of the tragedy of French liberalism, which since the French Revolution has waged unceasing war on two fronts: against reaction on the right and against revolution on the left" (p. 306). See also Guido de Ruggiero, *The History of European Liberalism* (Beacon Paperbacks, Boston, 1959), pp. 187–198, who calls Tocqueville "perhaps the greatest French writer of the nineteenth century" (p. 187), and James Bryce, *Studies in History and Jurisprudence* (Oxford, 1901), I, 381–429, who describes *Democracy in America* as "one of the few treatises on the philosophy of politics which has risen to the rank of a classic" (p. 381).

• SCHLEIFER, JAMES, *The Making of Tocqueville's Democracy in America* (Chapel Hill, N.C., 1980). The definitive work on the composition of *Democracy in America*, which composition included much scholarly research as well as observation.

• TOCQUEVILLE, ALEXIS DE, *Democracy in America* (edited by J. P. Mayer and Max Lerner, with a new translation by George Lawrence, New York, 1966). This is the first new translation of *Democracy in America* since the translation by Henry Reeve (Vol. I in 1835 and Vol. II in 1840).

It is prefaced by an introductory essay by Mayer on the reception and reputation of *Democracy in America* in Europe and by Lerner's essay on "Tocqueville and America" (pp. xi–lxxxiii). Seven Appendices containing a variety of materials related to *Democracy in America* further enhance the value of this edition. The Reeve translation is available in several editions, the best of which is *Democracy in America* (ed. Phillips Bradley, Vintage Books, New York, 1954). See also the following works of Tocqueville: *Recollections* (New York, 1949); *The Old Regime and the French Revolution* (Anchor Books, New York, 1955); *Journeys to England and Ireland* (New Haven, 1958); *The European Revolution and Correspondence with Gobineau* (Anchor Books, New York, 1959); and *Journey to America* (New York, 1971), a compilation of the notebooks Tocqueville kept during his journey through the United States and Canada.

• ZETTERBAUM, MARVIN, *Tocqueville and the Problem of Democracy* (Stanford, 1967). The author's thesis is that Tocqueville's central concern about democracy was how to reconcile demands of justice with those of excellence. Tocqueville's solution—"self-interest rightly understood" (p. 157)—does not solve the problem, Zetterbaum holds, because Tocqueville himself admitted that the majority of mankind is unable to attain the kind of "rational and independent conviction which true knowledge can produce out of the midst of doubt" (*ibid.*). The author therefore concludes that the core of Tocqueville's teaching about democracy "is hardly hopeful" (p. 159). The main elements of Zetterbaum's thesis are briefly summarized in his article, "Tocqueville: Neutrality and the Use of History," *American Political Science Review*, LVIII (September, 1964), 611–621. For a fuller, and more balanced, treatment of Tocqueville's views on democracy, see Jack Lively, *The Social and Political Thought of Alexis de Tocqueville* (Oxford–New York, 1962), and Isaiah Berlin, "The Thought of De Tocqueville," *History* (June, 1965), 199–206.

II JOHN STUART MILL

- ALEXANDER, EDWARD, *Matthew Arnold and John Stuart Mill* (New York, 1965). The author considers Arnold the representative spokesman of the humanist tradition in Victorian England, and John Stuart Mill the outstanding representative of liberalism. They were, the author thinks, among the few men of letters in England who at that time realized the inevitability and desirability of democracy. In showing the areas of conflict and agreement between Arnold and Mill, the author concludes that "both believed the essence of democracy to be equality rather than liberty, but whereas for Mill this meant that liberty had to be jealously protected to prevent democracy from becoming tyrannical, for Arnold it meant that liberty had to be carefully circumscribed in order to make democracy successful. Mill, unlike Arnold, thought liberty an essential element of culture. Therefore, he resisted the strengthening of the state which Arnold believed to be the indispensable agent of culture in a democratic society" (pp. 232-233). See also Emery Neff, *Carlyle and Mill*, 2nd ed. (New York, 1964).
- ANSCHUTZ, R. P., *The Philosophy of J.S. Mill* (Oxford, 1969). A brief review of Mill's thought, including several chapters on philosophical subjects.
- BAIN, ALEXANDER, *John Stuart Mill: A Criticism, with Personal Recollections* (London, 1882). A biography of Mill by one of his closest associates.
- BERGER, FRED, *Happiness, Justice, and Freedom; The Moral and Political Philosophy of John Stuart Mill* (Berkeley, 1984). Berger presents the view that Mill's theories are more consistent, and stronger, than is generally thought.
- BERLIN, ISAIAH, *Four Essays on Liberty* (London, 1969). The third essay is "Two Concepts of Liberty," essential reading for an understanding of the positive liberty/negative liberty debate. Chapter four is "John Stuart Mill and the Ends of Life."
- BONAR, JAMES, *Philosophy and Political Economy* (London, 1927). Includes a detailed analysis of John Stuart Mill as a political economist (pp. 237-266). See also Jacob Viner, "Bentham and J. S. Mill: The Utilitarian Background," *American Economic Review*, XXXIX (March, 1949), 360-382.
- BOUTON, CLARK W., "John Stuart Mill: On Liberty and History," *Western Political Quarterly*, XVIII (September, 1965), 569-578. The author argues that *On Liberty* "does not reveal a doctrinaire liberalism, but a teaching related to a certain historical situation and meant to be limited to certain conditions" (p. 574). Specifically, Bouton holds, the principles of *On Liberty* were meant by Mill to apply to the more advanced Western societies in Mill's own time, and not to non-Western societies living in very different circumstances. Mill recognized that throughout history it was often necessary to curtail free speech and other basic freedoms, but "he was also able to envisage a future" (p. 576), in which such restrictions would no longer be necessary. Liberty for Mill, the author concludes, was not an ultimate abstract principle, but the highest principle on the basis of its utility, in relation to mankind's general improvement and progress.
- BRITTON, KARL, *John Stuart Mill* (Penguin Books, Baltimore, 1953). Presents the life of Mill and the main aspects of his logic, ethics, and political thought. See also Ruth Borchard, *John Stuart Mill: The Man* (London, 1957) and John C. Rees, *Mill and His Early Critics* (Leicester, 1956).
- BURNS, J. H., "J. S. Mill and Democracy, 1829-1861," *Political Studies*, V (June, 1957), 158-175, and (October, 1957), 281-294. A detailed analysis of Mill's views on democracy and representative government from 1829, when he began to depart from some orthodoxies of Philosophical Radicalism, to 1861, when he published *Considerations on Representative Government*, his most systematic work on representative government. Other students of Mill have noticed that in his *Considerations on Representative Government* his fear of majority tyranny induced him to embrace ideas about voting and representation which are contrary to democratic principles as commonly understood and also contrary to his own earlier writings. Burns goes further

and arrives at the provocative conclusion that a "consistent viewpoint unites Mill's political thought from start to finish; but it is not, in the strict sense he would himself have adopted, the viewpoint of a democrat" (p. 294). Even those who will not be entirely persuaded by the author's reasoning and interpretation of Mill's views on democracy, will at least find ample material to ponder over some basic differences between liberalism and democracy.

- CARR, ROBERT, "The Religious Thought of John Stuart Mill: A Study in Reluctant Scepticism," *Journal of the History of Ideas*, XXIII (October-December, 1962), 475-495. The author shows the development of Mill's religious views from his early years to his old age. The main source of Mill's difficulties derived from the relation of logic to morality, since he felt that "religion, if not intellectually sustainable, might nevertheless be morally useful" (p. 488). Mill feared anarchy more than rationally unprovable religious beliefs, and "good Victorian that he was, he longed for Christian ethics without Christian supernaturalism, but he feared he could not have the situation both ways" (p. 495). Carr's essay throws as much light on Mill the man as on Mill the thinker.
- COWLING, MAURICE, *Mill and Liberalism* (Cambridge, 1963). One of the most vehement criticisms of Mill in English. Cowling considers Mill "considerably less libertarian than is sometimes suggested," and he even goes so far as to charge him with "more than a touch of something resembling moral totalitarianism" (p. xii). *On Liberty*, Cowling states, "was not so much a plea for individual freedom, as a means of ensuring that Christianity would be superseded by that form of liberal, rationalistic utilitarianism which went by the name of the Religion of Humanity," and "Mill, no less than Marx, Nietzsche or Comte, claimed to replace Christianity by 'something better'" (p. xiii). The purpose of *On Liberty*, according to Cowling, was not to offer safeguards for individuality, but to "propagate the individuality of the elevated by protecting them against the mediocrity of opinion as a whole" (p. 104).

Mill's hostility to moral, philosophical, and religious dogmas does not necessarily prove his own avoidance of dogma, the author asserts, for there are "liberal dogmas as well as Christian ones, and Mill gives expression to them" (p. 114). For a rebuttal of Cowling's interpretation of Mill, see John Rees, "Was Mill for Liberty?" *Political Studies*, XIV (February, 1966), 72-77.

- CRANSTON, MAURICE, *John Stuart Mill* (Great Britain, 1958). An excellent introductory essay on Mill. See also Cranston's "J. S. Mill as a Political Philosopher," *Journal of the History of Ideas* (1958).
- EBENSTEIN, LANNY (ALAN O.), "Mill's Theory of Utility," *Philosophy* (October, 1985), 539-543. Presents the view that Mill's famous "quality-quantity" distinction is akin to the components of value in pleasures and pains that Bentham designates as "intensity" and "duration."
- EBENSTEIN, WILLIAM, "John Stuart Mill: Democrat, Liberal, Socialism?," *Il Politico* (1974). Comments on the pre-sciences of Mill on many political topics.
- GRAY, JOHN, *Mill on Liberty: A Defence* (London, 1983). Argues that Mill's principles of utility and liberty are consistent.
- HALLIDAY, R. J., *John Stuart Mill* (London, 1976). An introductory work. Halliday sees Mill as a pessimistic eclectic in his political thought.
- HAMBURGER, JOSEPH, *Intellectuals in Politics: John Stuart Mill and the Philosophic Radicals* (New Haven, 1965). The author starts from the premise that the Philosophical Radicals were, and considered themselves, both philosophers and politicians. Whereas most studies concentrate on their ideas, the author is primarily concerned with their political activities in and out of Parliament. However, the analysis of the political activities of the Philosophical Radicals also leads to a better understanding of their ideas. The author concludes that the Philosophical Radicals "did not hold abstract theories that discredited all the values and beliefs that upheld the established society, nor were they disposed to use philosophy as a means of justifying a new despotism; and their sectarian attitudes never brought them near

to an affiliation with an organization that could even potentially have become a mass movement. Whereas other ideologues dreamed of benevolent despotism that would demand conformity to what they were sure was the fundamental order of reality, the Philosophic Radicals were doctrinaire politicians whose faith was revealed in nothing worse than dogmatism" (p. 295).

• HIMMELFARB, GERTRUDE, *On Liberty and Liberalism: The Strange Case of John Stuart Mill* (New York, 1974). Himmelfarb's thesis is that Mill's greatest work, *On Liberty*, is inconsistent with the rest of his work. Himmelfarb stresses the role of Harriet Taylor.

• HOLLOWAY, HARRY, "Mill and Green on the Modern Welfare State," *Western Political Quarterly*, XIII (June, 1960), 389-405. The author starts out from the paradox that it was Green, "thorough Victorian and of conservative inclination" (p. 389), who helped lay the foundations of the modern welfare state, and not Mill, who had strong sympathies for socialism and even called himself a "qualified socialist." The author feels that Mill's "intense individualism and his antipathy to majority rule gave his defense of liberty a negative quality," and that his "individualism was fundamentally one of independence and self-sufficiency more akin to the position and aspirations of the middle classes than of the lower classes" (pp. 403, 404). By contrast, Green emphasized, in his conception of freedom, the "opportunity to participate in the goods of society," and by stressing the worth and importance of the community, he "went far towards breaking the bonds of liberalism with an out-dated individualism. His conservatism carried with it the potentially radical principle of extensive government intervention" (p. 404).

• JONES, IVA G., "Trollope, Carlyle, and Mill on the Negro: An Episode in the History of Ideas," *Journal of Negro History*, LII (July, 1967), 185-199. Comparing the "enlightened attitude about the Negro's problem" (p. 199) of John Stuart Mill with that of his contemporaries, Trollope and Carlyle, demonstrates, the author holds, "that Mill was the clear-eyed giant of ideas

in his own time, towering over contemporary pygmies, enmeshed helplessly as were Trollope and Carlyle in the prejudiced sloughs of their own bias" (p. 185).

• McCLOSKEY, H. J., *John Stuart Mill: A Critical Study* (Great Britain, 1971). Part of the "Philosophers in Perspective" series.

• MILL, JOHN STUART, "De Tocqueville on Democracy in America," *London Review*, XXVI (July, 1835-January, 1836), 85-129, and *Edinburgh Review*, LXXII (October, 1840-January, 1841), 1-47. In these reviews of the first and second volumes of *Democracy in America*, Mill came out enthusiastically for Tocqueville, comparing him to Montesquieu among French writers. The personal and intellectual relations between Mill and Tocqueville, an important chapter in the development of nineteenth-century European liberalism, still need to be fully explored. See T. H. Qualter, "John Stuart Mill, Disciple of De Tocqueville," *Western Political Quarterly*, XIII (December, 1960), 880-889, and H. O. Pappe, "Mill and Tocqueville," *Journal of the History of Ideas*, XXV (April-June, 1964), 217-234.

• MILLER, KENNETH E., "John Stuart Mill's Theory of International Relations," *Journal of the History of Ideas*, XXII (October-December, 1961), 493-514. The author discusses both Mill's thinking about world politics in general—a much neglected aspect of studies about Mill—as well as his ideas about major specific aspects of international relations. In Miller's view, John Stuart Mill was more realistic about problems of world politics than Bentham, Cobden, and most other liberals of the time. In particular, Mill's focus of emphasis was less on economics and more on national security, and he was less guided by abstract concepts such as the harmony of mankind. The author suggests that Mill's experience in the India Office provided him with a sense of realism and historical complexity in international relations that other liberals lacked.

• PACKE, MICHAEL ST. JOHN, *The Life of John Stuart Mill* (New York, 1954). The first full-length biography of Mill, utilizing important new sources previously inaccessible. His relation with Harriet Taylor,

so crucial for Mill's personal and intellectual development, is analyzed in detail. See also F. A. Hayek, *John Stuart Mill and Harriet Taylor: Their Friendship and Subsequent Marriage* (Chicago, 1951). A contrary view of Harriet Taylor's influence on Mill will be found in H. O. Pappe, *John Stuart Mill and the Harriet Taylor Myth* (Parkville, Victoria, 1960).

• PLAMENATZ, JOHN, *The English Utilitarians*, 2nd ed. (Oxford, 1958). Chap. VIII (pp. 122-144) is on Mill.

• ROBBINS, LIONEL, *The Theory of Economic Policy in English Classical Political Economy* (London, 1952). Lecture V is on "The Classical Economists and Socialism: John Stuart Mill" (pp. 142-168). See also William Ebenstein, "John Stuart Mill: Political and Economic Liberty," in Carl J. Friedrich (ed.), *Liberty (Nomos IV, Yearbook of the American Society for Political and Legal Philosophy, New York, 1962)*, pp. 89-109.

• ROBSON, JOHN, *The Improvement of Mankind; The Social and Political Thought of John Stuart Mill* (Toronto, 1968). An outstanding work on Mill's comprehensive thought and its development by the leading Mill scholar in the world. Robson was editor of the masterful collected works of Mill published by the University of Toronto press.

• RUSSELL, BERTRAND, "John Stuart Mill," *Proceedings of the British Academy, 1955*, XLI (1956), 43-59. Russell does not consider Mill a great philosopher, like Descartes or Hume. Yet, "his influence was very great and very beneficent. He made rationalism and socialism respectable, though his socialism was of the pre-Marxist sort which did not involve an increase in the powers of the State. His advocacy of equality for women in the end won almost worldwide acceptance. His book *On Liberty* remains a classic: although it is easy to point out theoretical defects, its value increases as the world travels further and further from its teaching" (pp. 58-59).

• RYAN, ALAN, *J. S. Mill* (London, 1974). A book-by-book study of Mill's thought. For a more integrated approach, see Ryan's *The Philosophy of John Stuart Mill*, 2nd ed. (London, 1987).

• SCHNEEWIND, J. B. (ed.), *Mill: A Collection of Critical Essays* (Garden City, N.Y., 1968). A collection of essays on various subjects. See in particular that by J. O. Urmson, "The Interpretation of the Moral Philosophy of J. S. Mill," for the view that Mill was a rule- as opposed to an act-utilitarian.

• SEMMEL, BERNARD, *John Stuart Mill and the Pursuit of Virtue* (New Haven, Ct., 1984). This book is as much a discussion of the issues raised by Mill as it is a description of his particular positions. Semmel sees Mill as a follower of German transcendentalist positive freedom.

• STEPHEN, LESLIE, *The English Utilitarians*, 3 vols. (London, 1900; reprinted by the London School of Economics and Political Science, 1950). Vol. III is on John Stuart Mill.

• SULLIVAN, EILEEN, "J. S. Mill's Defense of the British Empire," *Journal of the History of Ideas* (October-December, 1985). An argument in support of a role for Mill in turning nineteenth century liberalism from anti-imperialism to support for imperialism.

• TEN, C. L., *Mill on Liberty* (Oxford, 1980). A sympathetic defense of Mill's *On Liberty*.

• THOMAS, WILLIAM, *The Philosophic Radicals* (Oxford, 1979). Nine essays on Bentham's circle; this book is as much about Mill's generation as it is about Bentham's.

• WARD, JOHN WILLIAM, "Mill, Marx, and Modern Individualism," *Virginia Quarterly Review*, XXXV (Autumn, 1959), 527-539. The author maintains that Marx' conception of individualism is "the complete negation" of Mill's. Whereas Mill saw the reality of the tensions between the individual and the group, Marx thought that in the classless, Communist society there is "no conflict between the individual and the collectivity, because the collective will is the will of the individual, rightly understood. One is to realize his individuality by participating in the will of the group. The idea is as old as Plato, of course, and individualism becomes an ideal of belonging, not an ideal of separateness" (p. 538).

Ward summarizes the fundamental difference between Marx and Mill acutely by stating that for Marx freedom was to be won at the end of the unfolding of history, whereas for Mill "the free society was to be the premise of history, not its conclusion"

(p. 534). See also Bernice Shoul, "Similarities in the Work of John Stuart Mill and Karl Marx," *Science and Society*, XXIX (Summer, 1965), 270-295, which compares the analyses of capitalism and its long-run tendencies in Mill and Marx.

CHAPTER TWENTY-SEVEN

HEGEL

- AVINERI, SHLOMO, *Hegel's Theory of the Modern State* (London, 1972). Avineri's thesis is that Hegel has been misunderstood continually. The *Philosophy of Right* was not just an attempt to justify the Prussian Restoration of 1815, but was an effort to understand a new regime that had been changed inalterably from the old by the French Revolution and Napoleon's reforms. Avineri traces the development of Hegel's political thought through all of his works, not only in the *Philosophy of Right*, and also attempts to integrate Hegel's political thought within his comprehensive philosophical outlook.
- BOSANQUET, BERNARD, *The Philosophical Theory of the State*, 3rd ed. (London, 1920). The ablest defense of Hegelian political philosophy, centering its analysis on the problem of the "Real Will." Because of its moderation, Bosanquet's book will appear to British and American readers more persuasive than original Hegelianism. An even more moderate expression of Hegelianism, considerably transmuted into, and adapted to, British liberal thought, will be found in Thomas Hill Green, *Principles of Political Obligation*, new imp. (London-New York, 1917). For an interesting comparison and contrast between Hegel and Green with regard to the problem of international order, see D. A. Routh, "The Philosophy of International Relations: T. H. Green versus Hegel," *Politica*, III (September, 1938), 223-235.
- CARRITT, E. F., *Morals and Politics* (London, 1935). Chap. IX (pp. 105-127) deals with the moral foundations of Hegel's political thought, especially his approach to the problem of political obligation. For a discussion of the two chief exponents of Hegelian political philosophy in England, Green and Bosanquet, see pp. 128-157. John H. Muirhead, *The Platonic Tradition in Anglo-Saxon Philosophy* (London-New York, 1931), provides a brief account of Hegelian influences in England and America (pp. 147-218, 315-323).
- COLLETTI, LUCIO, *Marxism and Hegel* (trans. Lawrence Garner, London, 1973). A philosophic investigation into the theoretical relationship between Hegel and Marxism, from a Marxian perspective. More attention is paid to Hegel than Marx, as this book is only one part of the larger Italian work of the same title.
- CULLEN, BERNARD, *Hegel's Social and Political Thought* (London, 1979). A brief introductory book for those who are approaching Hegel for the first time. Cullen attempts to explain Hegel's social and political thought without simplifying it.
- DEWEY, JOHN, *German Philosophy and Politics* (New York, 1915). In his discussion of Hegel's political philosophy (pp. 107-120), Dewey emphasizes the elements of nationalism and militarism. See also George Santayana, *Egotism in German Philosophy*, new ed. (London, 1939), Chap. VIII (pp. 70-83). Santayana calls the servility of Hegel's moral philosophy

"simply an apology for the established order of things and for the prejudices of his time and country" (p. 73). Hegel's philosophy sets up an "idol that feeds on blood, the Absolute State" (p. 83). Bertrand Russell, *A History of Western Philosophy* (New York, 1945), examines in Chap. XXII (pp. 730-746) Hegel's political theory in relation to his logic and metaphysics, and arrives at the conclusion that Hegel's doctrine of the state "justifies every internal tyranny and every external aggression" (p. 742).

- DICKEY, LAURENCE, *Hegel: Religion, Economics, and the Politics of Spirit* (Cambridge, Eng., 1987). Hegel's intellectual development to the publication of the *Phenomenology* in 1806.
- EASTON, LOYD D., *Hegel's First American Followers* (Athens, Ohio, 1966). Before the middle of the nineteenth century, Hegel's ideas found little sympathetic resonance in the United States. Easton describes how a group of four Ohioans (three of whom were born and raised in Germany) spread Hegelian ideas, both philosophical and political, around the middle of the nineteenth century, and thus formed the first American nucleus of Hegelianism. In Chap. I (pp. 1-27), Easton surveys briefly American writings on Hegel in the first half of the nineteenth century. The Appendix (pp. 229-330) contains selections from the writings of the four Ohio Hegelians: Peter Kaufmann, Moncure Conway, August Willich, and John B. Stallo. Although Easton's study is suffused with a measure of Ohio patriotism, it provides many interesting sidelights on American intellectual history in the nineteenth century.
- FINDLAY, JOHN N., *Hegel: A Re-examination* (London, 1958). A systematic presentation and analysis of the major aspects of Hegel's philosophy. Concerning Hegel's political philosophy, the author argues that Hegel described the Prussian state of his time as "the final fruits of the historic development of Spirit" (p. 327), and that Hegel's narrowness of view "is shown, above all, in his carping strictures on the political arrangements of France and England, the

two great creative nations of his own time" (*ibid.*). Looking at Hegel's philosophy as a whole, the author calls him "the Aristotle of our post-Renaissance world, our synoptic thinker without peer" (p. 353). Despite Hegel's "later verging towards reaction, he remains the philosopher of Reformation 'inwardness,' of liberal humanism, of perpetual orderly revolution" (p. 354). See also W. T. Stace, *The Philosophy of Hegel: A Systematic Exposition* (New York, 1955), which includes a lucid statement of Hegel's views on state and society (pp. 404-438). Like Findlay, Stace defends Hegel against the charge of being an antiliberal statist and a forerunner of totalitarianism.

- FOSTER, M. B., *The Political Philosophies of Plato and Hegel* (Oxford, 1935). The second part on Hegel is nearly as brilliant as the first on Plato (pp. 72-204).
- FRIEDRICH, CARL J., "The Power of Negation: Hegel's Dialectic and Totalitarian Ideology," in D. C. Travis (ed.), *A Hegel Symposium* (Austin, 1962), pp. 13-35. Friedrich holds that Hegel's explicit (or "substantive") conception of the state has few, if any, links with totalitarian ideology of the fascist or communist type. However, Friedrich argues, "totalitarian and more especially Marxist Communist ideology derives its peculiar flavor and significance from Hegel's dialectic" (pp. 30-31). Explanations and interpretations of Hegel's dialectic will be found in: G. R. G. Mure, *The Philosophy of Hegel* (Home University Library, London-New York, 1965), pp. 24-40; J. O. Wisdom, "Hegel's Dialectic in Historical Philosophy," *Philosophy*, XV (July, 1940), 243-268; Gustav E. Mueller, "The Hegel Legend of 'Thesis-Antithesis-Synthesis,'" *Journal of the History of Ideas*, XIX (June, 1958), 411-414; and Sidney Hook, "Hegel and the Perspective of Liberalism," in D. C. Travis (ed.), *A Hegel Symposium* (Austin, 1962), pp. 44-53.
- GASCOIGNE, ROBERT, *Religion, Rationality and Community: Sacred and Secular in the Thought of Hegel and His Critics* (The Hague, 1985). While the focus of this book is on the relationships

between religious belief and humanism in Hegel, Gascoigne also has much to say on the political relevance of Hegel's ideas. Includes discussions of Bauer, Schelling, and Kierkegaard.

• HOBHOUSE, L. T., *The Metaphysical Theory of the State* (London, 1918). One of the best critiques of Hegelian political philosophy. See especially Chap. III, "The Real Will" (pp. 44-70), and Appendix I, "Hegel's Theory of the Will" (pp. 138-149).

• HOOK, SIDNEY, "Hegel Rehabilitated?" *Encounter*, XXIV (January, 1965), 53-58. The author, one of the leading American philosophers of the twentieth century, defends the commonly held interpretation of Hegel as a conservative against some revisionist attempts to turn Hegel into a liberal. Hook calls Hegel a "philosophical time-server of Metternichian reaction" (p. 57). Hook also shows that Hegel was an ardent nationalist from the beginning of his career, and not just after the fall of Napoleon, as is frequently alleged. In analyzing Hegel's relation to liberalism, Hook first defines the core of liberalism: "There is a family of traits which define the liberal temper, several of which must be present before we can justifiably classify a thinker as liberal. Among the things we look for in a liberal thinker are recognition of the moral primacy of the individual in appraising institutional life, acceptance of a free market of ideas, tolerance of political opposition, appreciation of diversity, openmindedness to alternatives, endorsement of the right to self-determination, national, social and personal, including the moral right to revolution if the demand for self-determination is persistently frustrated. And, underlying all, reliance on the methods of intelligence conceived not as Reason carrying out ends of which we are not aware, but as common sense fortified by relevant scientific knowledge. Liberalism is not so much a doctrine as an attitude towards political affairs which is aware of human finitude and the tentativeness of human judgment and yet is prepared to act vigorously in moments of crisis. When it is given to religious language, it regards the ascription of Perfection or Divinity to the

State (which we find in Hegel), or to any other human institution, as blasphemous" (p. 58). If this is the liberal temper, Hegel is very far from it, and for "all his invocations to Reason, Hegel distrusted the critical and sceptical spirit of the Enlightenment, its striving for clarity, its exposure of theological and philosophical humbug" (*ibid.*). See also Hook's "Hegel and His Apologists," *Encounter*, XXVI (May, 1966), 84-91, and "Hegel and the Perspective of Liberalism," in D. C. Travis (ed.), *A Hegel Symposium* (Austin, 1962), pp. 39-62, where Hook spells out in greater detail why and how Hegel's philosophy was "markedly hostile" to the liberalism of his own days and also to its "perennial values" (p. 53).

• KAUFMANN, WALTER, *Hegel: Reinterpretation, Texts, and Commentary* (Garden City, N.Y., 1965). A work on Hegel's comprehensive thought and its development, though of manageable proportions, arguing that the traditional view of Hegel (as presented, for example, in *Great Political Thinkers*) is incorrect.

• KAUFMANN, WALTER (ed.), *Hegel's Political Philosophy* (New York, 1970). A collection of responsive essays from different perspectives on Hegel's political thought.

• KELLY, GEORGE, *Hegel's Retreat from Eleusis* (Princeton, 1978). This book tracks the development of Hegel's political theories, with reference to present-day perspectives.

• KOJEVE, ALEXANDER, *Introduction to the Reading of Hegel* (Paris, 1973). An important work especially for elucidating the relationship between Hegel and Marx.

• LOWITH, KARL, *From Hegel to Nietzsche: The Revolution in Nineteenth-Century Thought* (New York, 1964). The relations of Hegel and Hegelianism to the main currents and figures of nineteenth-century German thought, with some consideration of non-German thinkers, such as Kierkegaard, Tocqueville, and Sorel.

• MACGREGOR, DAVID, *The Communist Ideal in Hegel and Marx* (Toronto, 1984). An important work on the relation of Marx to Hegel. MacGregor sees Hegelian logic as ideally suited to Marx's purposes.

• MACINTYRE, ALASDAIR, ed., *Hegel: A Collection of Critical Essays* (Garden City,

N.Y., 1972). Includes Walter Kaufmann's response to Popper's attack on Hegel in *The Open Society and Its Enemies*.

• MARCUSE, HERBERT, *Reason and Revolution: Hegel and the Rise of Social Theory* (Beacon Paperbacks, Boston, 1960). The most vigorous attempt to present Hegel as a liberal. The author argues that the "progressive ideas of liberalism" (p. 413) in Hegel's political thought are incompatible with fascist totalitarianism, and that German nazism was "anti-Hegelian in all its aims and principles" (pp. 418-419).

• MARX, KARL, *Critique of Hegel's "Philosophy of Right"*, ed. Joseph O'Malley (Cambridge, 1970). English translation of Marx's commentary on sections 261-313 of the *Philosophy of Right*, Marx's most comprehensive treatment of Hegel (though incomplete).

• PELCZYNSKI, Z. A., *Hegel's Political Writings* (trans. T. M. Knox, with an Introductory Essay by Z. A. Pelczynski, Oxford, 1964). This admirable translation of the more important political writings of Hegel is an indispensable supplement to his *Philosophy of Law*, Hegel's major work in political philosophy. Hegel's writings are preceded by Pelczynski's introductory essay (pp. 5-137). Pelczynski seeks to expound Hegel's political thought and, more importantly, to defend him against charges of authoritarianism. However, he weakens his defense of Hegel by going to extremes; thus, he states in his conclusion that Hegel belongs to the main stream of Western political theory that favors "constitutionalism, democracy, and progress" (p. 134). Similarly, Pelczynski couples Hegel and Paine in his "Hegel Again," *Encounter*, XXVI (March, 1966), 47-50, as two liberals, making only the slight concession that Paine belonged to the Left of liberalism whereas Hegel belonged to its Right wing. For other studies of Hegel, defending him against charges of nationalism, militarism, and authoritarianism, and portraying him, with varying degrees of intensity, as a cosmopolitan, pacifist, liberal humanist, see Shlomo Avineri, "The Problem of War in Hegel's Thought," *Journal of the History of Ideas*,

XXII (October-December, 1961), 463-474, and "Hegel and Nationalism," *Review of Politics*, XXIV (October, 1962), 461-484; and Irving Louis Horowitz, "The Hegelian Concept of Political Freedom," *Journal of Politics*, XXVIII (February, 1966), 3-28. Horowitz concludes his essay with the astounding statement that Hegel, "no less than John Stuart Mill, set the terms of discourse for the nineteenth century struggle between liberal and conservative ideologies" (p. 28).

• PELCZYNSKI, Z. A., ed., *Hegel's Political Philosophy: Problems and Perspectives* (Cambridge, 1971). A collection of previously unpublished essays. More for the scholar than the student.

• PLANT, RAYMOND, *Hegel* (Bloomington, Ind., 1973). Hegel's political philosophy is presented as part of his larger, more general philosophy. The focus is on Hegel's central metaphysical doctrines.

• POPPER, K. R., *The Open Society and Its Enemies* (Princeton, 1950). Chap. XII, "Hegel and the New Tribalism," (pp. 223-273) contains a pungent point-by-point demonstration of the identity of Hegelianism with "the philosophy of modern totalitarianism" (p. 272).

• RÉGNIER, MARCEL, "Hegelianism and Marxism," *Social Research*, XXXIV (Spring, 1967), 31-46. For a more detailed analysis, see Sidney Hook, *From Hegel to Marx: Studies in the Intellectual Development of Karl Marx* (New York, 1950).

• RIEDEL, MANFRED, *Between Tradition and Revolution; The Hegelian Transformation of Political Philosophy* (trans. Walter Wright, Cambridge, 1984). Sees Hegel as having effectuated a conceptual revolution in political philosophy. Concentrates almost exclusively on the *Philosophy of Right*.

• TAYLOR, CHARLES, *Hegel* (Cambridge, Eng., 1975). A comprehensive work on Hegel. Part IV is "History and Politics."

• WILKINS, BURLEIGH, *Hegel's Philosophy of History* (Ithaca, N.Y., 1974). A philosophical examination of Hegel's conception of history within the context of his overall system. Special reference to the *Science of Logic*.

CHAPTER TWENTY-EIGHT

REVOLUTIONARY COMMUNISM

I MARX AND ENGELS

- APPELBAUM, RICHARD, *Karl Marx* (Newbury Park, Calif., 1988). Part of the "Masters of Social Theory" series, this book is an excellent brief introduction to Marx's thought.
- AVINERI, SHLOMO, *The Social and Political Thought of Karl Marx* (Cambridge, 1968). A brief, yet useful, introduction to Marx for students and general readers. The focus is on Marx's theory as opposed to the practice that followed from it. Avineri does not here consider Engels. See also Avineri's collection of essays on Marx by various scholars, *Marx's Socialism* (New York, 1973).
- BARZUN, JACQUES, *Darwin, Marx, Wagner* (Boston, 1941). Part II (pp. 141-252) deals with Marx as well as with his contemporary and later critics. Stanley Edgar Hyman, *The Tangled Bank: Darwin, Marx, Frazer, and Freud* (New York, 1962), presents Marx (pp. 79-161) and Engels (pp. 162-186) from the perspective of literary criticism rather than of the history of ideas. Hyman's thesis is that much of the influence of the ideas of the men studied by him is due to their qualities as imaginative writers. However, since Hyman's conception of art includes an ethical as well as an aesthetic dimension, his analysis contributes an original and refreshing approach.
- BECKERMAN, GERARD, *Marx and Engels; A Conceptual Concordance* (trans. Terrell Carver, Oxford, 1983). A useful reference book for Marx and Engels' definition and depiction of various topics and subjects. For a similar work, but with fewer entries, see Terrell Carver, *A Marx Dictionary* (Cambridge, Eng., 1987).
- BERLIN, ISAIAH, *Karl Marx: His Life and Environment*, 3rd ed. (New York, 1963).

Since its first publication in 1939, Berlin's account has established itself as the best brief biography of Marx's life and thought, vividly portrayed against the background of the intellectual and political currents of his time. A brilliant stylist, Berlin manages to combine broad coverage and treatment in depth. Includes a bibliography (pp. 285-289). For concise studies of Marx, see also Max Beer, *The Life and Teaching of Karl Marx* (London, 1925); Harold J. Laski, *Karl Marx: An Essay* (London, 1921), and *Marx and Today* (London, 1943); Robert Conquest, *Marxism Today* (London, 1964); and H. B. Acton, *What Marx Really Said* (New York, 1967).

- BERNSTEIN, SAMUEL (ed.), *A Centenary of Marxism* (New York, 1948). Published to commemorate the centenary of the *Communist Manifesto*, this volume represents a special issue of *Science and Society*, XII (Winter, 1948), a leading Marxist quarterly. The first essay is "Marx and Engels on America" (pp. 3-21).
- BOTTOMORE, TOM, et al., (eds.), *A Dictionary of Marxist Thought* (Cambridge, Mass., 1983). A useful reference book for the definition and presentation of many Marxian terms and Marxist figures. Most contributors are from the United Kingdom or continental Europe, and are Marxists of one sort or another.
- COLE, G. D. H., *The Meaning of Marxism* (London, 1948). An excellent introduction to Marxism, this book is not so much a summary of Marx's ideas as a reevaluation of his thought in relation to contemporary social and political developments. Cole successfully simplifies some of the complexities of Marx's essential doctrines without doing violence to them. In addition, he analyzes the social changes that have taken place since Marx,

and discusses their implications for democratic socialist movements. His discussion of the new class of white-collar workers and their political psychology is particularly noteworthy.

- COLLINS, HENRY, and CHIMEN ABRAMSKY, *Karl Marx and the British Labour Movement: Years of the First International* (New York, 1965). Marx lived in England from 1849 to his death in 1883, yet his influence on its labor movement was less than on that in any other European country. This book assesses for the first time one crucial aspect of this problem: the relation of the First International to British industrial and political forces of the time. The "First International" was founded in London in 1864, and its General Council consisted mostly of Englishmen. Contrary to the widespread legend, Marx did not singlehandedly found the "First International," was not even one of its founders, but was co-opted by the General Council as a member, to serve in the modest capacity as Corresponding Secretary for Germany. Once on the Council, Marx quickly established his intellectual leadership in the "First International," drafting its more important addresses, manifestoes, and general policy statements, and thus making it a significant force in creating and influencing workers' organizations on the European Continent and in other parts of the world. In 1872 the "First International" was transferred to New York, where it died a quiet death in 1874. The failure of Marx and the First International in Britain was, by implication, best explained by Robert Applegarth, a British labor leader and member of the General Council of the First International. "Fortunately in England," Applegarth stated in 1869, "we have no need of creeping into holes and corners lest a policeman should see us," and he told his Continental colleagues that workers' rights for which they were fighting on the Continent, were "settled questions with us twenty years ago" (p. 291). A bibliography, the most comprehensive of its kind, is included.
- CORNFORTH, MAURICE, *Dialectical Materialism: An Introduction*, 3 vols. (London, 1952-1954). Written from the

orthodox Marxist-communist viewpoint. See also his *Science versus Idealism: An Examination of "Pure Empiricism" and Modern Logic* (London, 1946), and *In Defence of Philosophy Against Positivism and Pragmatism* (London, 1950). The author arrives at the conclusion that pragmatism, "particularly in the form which Dewey has given it, is the philosophy of American imperialism. It expresses the outlook and aspiration of American big business in philosophical form" (p. 214).

- CROCE, BENEDETTO, *Historical Materialism and the Economics of Karl Marx* (London, 1914). A critical interpretation by the greatest Italian philosopher of the twentieth century.
- DOBB, MAURICE, *Studies in the Development of Capitalism* (London, 1946). The author was one of the leading Marxist economists in England.
- DRACHKOVITCH, MILORAD M. (ed.), *Marxist Ideology in the Contemporary World: Its Appeals and Paradoxes* (New York, 1966). A symposium including essays on Marxism in the Western world, in communist countries, and in underdeveloped areas, on alienation in relation to student movements, and on Marxian economics. Among the contributors are Sidney Hook, Lewis S. Feuer, Daniel Bell, Gottfried Haberler, and others. See also Milorad M. Drachkovitch (ed.), *Marxism in the Modern World* (Stanford, Calif., 1965), in which leading European and American students of Marxism analyze the various forms of Marxism, from Leninism to Maoism and Castroism. The special issue of *Survey*, No. 62 (January, 1967) on "Marxism Today" offers a variety of viewpoints on the impact of Marxism in communist and noncommunist countries.
- DRAPER, HAL, *Karl Marx's Theory of Revolution*, 2 vols. (New York, 1977). Written from a Marxian perspective, this work traces the development of and explains Marx's views. Vol. I is *State and Bureaucracy*; vol. II is *The Politics of Social Classes*.
- DUPRE, LOUIS, *The Philosophical Foundations of Marxism* (New York, 1966). After discussing the essentials of Hegel's philosophy, particularly its political and

social aspects, the author traces the development and formation Marx's thought, and then discusses in detail Marx's philosophical writings, including the *Economic and Philosophical Manuscripts of 1844* (pp. 120-137). Throughout, the author clearly separates the presentation of Marx's ideas from his own critical comments. The final chapter is a critical summary of Marx's historical materialism; in the author's view, Marx's humanistic starting point, his concern with man as a self-creating and historical being who shapes his destiny in communion with his fellow men, was converted by his later "economistic" historical materialism "into a rigid system of oversimplifications, which as a rule of action leads to terror and constitutes a dangerous threat to human dignity" (p. 230). For a briefer and more expository account, see also Auguste Cornu, *The Origins of Marxian Thought* (Springfield, Ill., 1957).

• EASTON, LLOYD D., and KURT H. GUDDAT (trans. and eds.), *Writings of the Young Marx on Philosophy and Society* (Garden City, N.Y., 1967). The most comprehensive assemblage of Marx's early writings, from 1835 to 1847, in fresh translations. The collection begins with a piece on "Reflections of a Youth on Choosing an Occupation" (pp. 35-39), written by Marx before graduating from the Trier *Gymnasium*, and ends with his *Poverty of Philosophy*, written in 1847 (pp. 474-495). T. B. Bottomore (trans. and ed.), *Karl Marx: Early Writings* (New York, 1964), is a much shorter collection than that by Easton and Guddat, containing only the *Economic and Philosophical Manuscripts*, an essay on the Jewish question, and a critique of Hegel. For a concise analysis of Marx's early philosophical thought, see Bernard Delfgaauw, *The Young Marx* (Westminster, Md., 1967).

• ENGELS, FRIEDRICH, *On Historical Materialism* (New York, 1940). A brief essay, published first in 1892, and one of the most succinct statements of the meaning of historical materialism. It stresses the English roots of philosophical materialism, especially Bacon, Hobbes, and Locke, the "fathers of the brilliant French school of mate-

rialists" that made the eighteenth century a "pre-eminently French century" (p. 8).

• FELIX, DAVID, *Marx as Politician* (Carbondale, Ill., 1983). Felix concentrates on Marx as an active revolutionary. Felix believes that Marx's political goals help to explain his thought. Another book on Marx's practical political program is Alan Gilbert, *Marxist Politics* (New Brunswick, N.J., 1981).

• FEUER, LEWIS S. (ed.), *Marx and Engels: Basic Writings on Politics and Philosophy* (Anchor Books, Garden City, N.Y., 1959). Apart from a few excerpts from *Capital* bearing on economics, this anthology focuses on the writings and letters of Marx and Engels dealing with questions of philosophy, politics, ethics, and religion. T. B. Bottomore and Maximilien Rubel (eds.), *Karl Marx: Selected Writings in Sociology and Social Philosophy* (Penguin Books, Baltimore, 1963), is a briefer anthology, centered on Marx as a sociologist and social philosopher.

• FROMM, ERICH, *Marx's Concept of Man* (New York, 1961). The bulk of the volume is made up of Marx's *Economic and Philosophical Manuscripts* and various other materials by, and on, Marx. Marx's writings are preceded by Fromm's introductory essay on "Marx's Concept of Man" (pp. 1-83), in which Fromm elaborates Marx's concept of alienation, arguing that it was not a passing phase of the young Marx, but that it provides the key to Marx's later work as well. Fromm's basic interpretation of Marx as a liberal humanist is critically examined by Sidney Hook, "Marx and Alienation," *The New Leader* (December 11, 1961), 15-18, and Lewis Feuer, "What Is Alienation?," *New Politics*, I (Spring, 1962), 116-134. See also Daniel Bell, *The End of Ideology* (New York, 1960), Chap. 16, "Two Roads from Marx: The Themes of Alienation and Exploitation in Socialist Thought" (pp. 335-368), and "The Debate on Alienation," in Leopold Labedz (ed.), *Revisionism: Essays on the History of Marxist Ideas* (Praeger Paperbacks, New York, 1962), 195-211; Alfred G. Meyer, *Marxism: The Unity of Theory and Practice* (Cambridge, Mass., 1954), 55-64; and David Braybrooke,

"Diagnosis and Remedy in Marx' Doctrine of Alienation," *Social Research*, XXV (Autumn, 1958), 325-345.

• GRAY, ALEXANDER, *The Socialist Tradition: Moses to Lenin* (London, 1946). One of the few systematic historical treatments of the evolution of socialist thought from the ancients to the moderns; interesting on the Greek, Biblical, and medieval sources of socialist ethics. Chap. XII (pp. 297-351), called "Scientific Socialism," analyzes especially Marx and Engels, and Chap. XVIII (pp. 459-486) is on Lenin. Gray is highly critical of Marx as a thinker and social scientist, and sees in him essentially a prophet and visionary who "has proved the most influential figure of the nineteenth century" (p. 331). As to Lenin, Gray sees his main contribution to Marxism in his theory of the dictatorship of the proletariat. Lenin's peculiar position in the history of socialism is that "somehow he got things done" (p. 484).

• HENRY, MICHAEL, *Marx: A Philosophy of Human Reality* (trans. Kathleen McLaughlin, Bloomington, Ind., 1983). A wholistic interpretation of Marx which portrays a unified philosophy between his earlier and later writings.

• HOOK, SIDNEY, *Towards the Understanding of Karl Marx* (New York, 1933). An illuminating interpretation of Marx's main ideas and their relation to basic problems of socialist theory. See also Hook's *From Hegel to Marx: Studies in the Intellectual Development of Karl Marx* (New York, 1950) and *Marx and the Marxists: The Ambiguous Legacy* (Anvil Books, Princeton, N.J., 1955).

• HUNT, RICHARD, *The Political Ideas of Marx and Engels*, 2 vols. (Pittsburgh, Pa., 1974). A comprehensive work—vol. I considers Marx and Engels as totalitarian democrats; vol. II considers their mature thought.

• HUNT, R. N. CAREW, *Marxism: Past and Present* (New York, 1954). One of the best brief introductions into Marx's philosophy of dialectical materialism, his economic and political theories, and the doctrine of the dictatorship of the proletariat. See also H. Stuart Hughes, *Consciousness and Society: The Reorientation of European Social*

Thought, 1890-1930 (New York, 1958), particularly Chap. III on "The Critique of Marxism" (pp. 67-104).

• KAMENKA, EUGENE, *The Ethical Foundations of Marxism* (New York, 1962). The relation of Marx's thought to ethical philosophy is one of the most vexing, and rarely explored, problems in the study of Marx. Kamenka shows the development of Marx's ethical ideas from his earlier to his later stages of intellectual development. In Part V, "Communism and Ethics" (pp. 163-187), the author critically examines the ethical views and practices as officially expressed in the Soviet Union.

• KOLAKOWSKI, LESZEK, *Main Currents of Marxism: Its Rise, Growth, and Dissolution*, 3 vols. (trans. P. S. Falls, Oxford, 1978). The most important recent work in the field of the development of Marxist thought. Volume I is titled *The Founders*, and covers Marx and Engels, as well as some of their precursors and contemporaries. Volume II is *The Golden Age*, and deals with significant Marxists to the Russian Revolution. Volume III is *The Breakdown*, and covers Marxist theory from the Russian Revolution forward. Kolakowski's essential interpretation is that Marxism is a secular religion which—by raising the hope of an imminent secular millenium—paved the way for Stalinist totalitarianism, as any evil was sufferable to achieve this great good. For an older historical treatment which was unavailable in English for many years, see Karl Korsch, *Marxism and Philosophy* (trans. with an intro. by Fred Halliday, New York, 1970).

• KORSCH, KARL, *Karl Marx* (London-New York, 1938). A volume in the series "Modern Sociologists."

• LABEDZ, LEOPOLD (ed.), *Revisionism: Essays on the History of Marxist Ideas* (Praeger Paperbacks, New York, 1962). A symposium on leading personalities and movements in revisionism, beginning with its founder, Eduard Bernstein, and ending with contemporary developments in communist countries, Western Europe, the United States, Japan, and India. In addition to well-known figures, the volume deals with less well-known thinkers, such as Georg Lukacs and Ernst Bloch. The

contributors are mostly American, British, French, German, and Italian; the only two contributors from a communist country—Adam Schaff and Leszek Kolakowski—were purged in the anti-revisionist drive in communist Poland in 1968. On the whole, the volume is indispensable to the study of Marxism after Marx, particularly in the contemporary world, both in communist and noncommunist countries.

• LASKI, HAROLD J., *The Communist Manifesto* (New York, 1967). Contains the full text of the *Communist Manifesto*, with the prefaces to its several German, English, and Russian editions. The major feature of the volume is Laski's Introduction (pp. 3–105), a detailed critical examination in the light of historical experience.

• LEWIS, JOHN, *The Life and Teaching of Karl Marx* (New York, 1965). One of the leading accounts of Marx written from a strictly orthodox Marxist-communist viewpoint. For other orthodox interpretations of Marx, see also Antonio Labriola, *Essays on the Materialistic Interpretation of History* (Chicago, 1903, reprinted New York, 1966); A. Landy, *Marxism and the Democratic Tradition* (New York, 1946); and Stanley Moore, *Three Tactics: The Background in Marx* (New York, 1963).

• LICHTHEIM, GEORGE, *Marxism: An Historical and Critical Study*, 2nd ed. (Praeger Paperbacks, New York, 1965.) One of the most successful overall analyses of Marx and Marxism, in relation to philosophical and political ideas as well as to social and political movements. The author has no axe to grind, and his interpretations of ideas and events are fair and well balanced.

• LINDSAY, A. D., *Karl Marx's Capital: An Introductory Essay* (London, 1925). The first chapter (pp. 15–26) gives a brief outline of Marx and Hegel, emphasizing especially the influence of Hegelian dialectic on Marx. Chaps. II–IV (pp. 27–108) provide well-balanced introductions to economic determinism, the Marxian labor theory of value, and the meaning of surplus value. The final chapter (pp. 109–125) contains suggestive comparisons between Marx and Rousseau, each the father of a great revolution.

• LOBKOWICZ, NICHOLAS (ed.), *Marx and the Western World* (Notre Dame, Ind., 1967). One of the few international symposia on Marx, containing papers by scholars from noncommunist countries, such as the United States, Britain, France, and Germany, as well as by scholars from communist states, such as the Soviet Union, Poland, Yugoslavia, and Czechoslovakia. A variety of topics is covered: the foundations of Marx's political and ethical thought; the impact of Marx and Marxism on developed and underdeveloped countries; and the relations of Marxism to Christianity as seen by Catholic and Protestant thinkers. Some of the papers are followed by critical comments of fellow participants of the symposium. While the contributions are highly uneven in quality, the volume as a whole is stimulating in its breadth of scope and the confrontation of sharply contrasting viewpoints.

• LOHIA, RAMMANOHAR, *Marx, Gandhi, and Socialism* (Hyderabad, 1963). Essays, speeches, and articles by an Indian politician and publicist, whose sympathies lie with Gandhi and democratic socialism rather than with Marxism. The author is critical of both Soviet and American domestic and foreign policies, and his massive volume of six hundred pages provides implicit insights into Indian political thinking. His political ideal is "leftism from bottom" (p. xlvi), or unbureaucratic, democratic socialism with a high degree of governmental decentralization. See also Kalyan Chandra Gupta, *A Critical Examination of Marxist Philosophy* (Calcutta, 1962), for a briefer and more systematic treatment of Marxism.

• LUKES, STEVEN, *Marxism and Morality* (Oxford, 1985). This book is both about Marxian precepts and the degree to which Marxist practice followed from these precepts.

• MAGUIRE, JOHN, *Marx's Theory of Politics* (Cambridge, 1978). Focuses on the positive as opposed to normative aspect of Marx's political thought across his career and writings.

• MARX, KARL, *The Grundrisse* (ed. and trans. by David McLellan, New York, 1971). In many respects, *The Grundrisse*

is the most complete exposition of Marx's entire political economy. While it was intended as the draft for a larger work (of which *Das Kapital* is only one of six projected parts), it is the only complete rendering of Marx's thought on political economy. This version of *The Grundrisse* amounts to about one-fifteenth of the original.

• MARX, KARL, and FRIEDRICH ENGELS, *Selected Correspondence* (New York, 1942). Over two hundred letters, written by Marx and Engels to each other or to leading socialist writers and publicists. These letters throw considerable light on the philosophies and personalities of Marx and Engels, and also contain succinctly formulated analyses that frequently make a point more clearly and convincingly than more ponderous treatments in their better-known works.

• ———, *Writings on the Paris Commune* (ed. Hal Draper, New York, 1971). Of interest more for the writings it brings together than for Draper's introduction.

• MAYER, GUSTAV, *Friedrich Engels* (New York, 1936). The standard biography of Engels. Concerning Engels' share in the *Communist Manifesto*, Mayer says that "although it was chiefly Marx who coined the gold, Engels had not been behind him in collecting the ore" (p. 88).

• McLELLAN, DAVID, *Karl Marx: His Life and Thought*, 2 vols. (New York, 1973). The first full-scale biography on Marx written in the English language in decades. McLellan writes from a "sympathetically critical standpoint," and covers the major facets of Marx's life—personal, intellectual, and political.

• MEHRING, FRANZ, *Karl Marx: The Story of His Life* (New York, 1935). A standard biography. See also Boris Nicolaevsky and Otto Maenchen-Helfen, *Karl Marx: Man and Fighter* (Philadelphia, 1936), and Otto Rühle, *Karl Marx: His Life and Work* (New York, 1929).

• ODAJNIK, WALTER, *Marxism and Existentialism* (Anchor Books, Garden City, N.Y., 1965). Of the various leaders of modern existentialism, Sartre has stood out in his attempt to reconcile it with Marxism. The author shows that Sartre has not

succeeded in this attempt, sacrificing basic existentialist tenets of individual freedom to the collectivist assumptions of Marxism. See also Wilfrid Desan, *The Marxism of Jean-Paul Sartre* (Garden City, N.Y., 1965), likewise arriving at the conclusion that Sartre has failed to bring about the synthesis between existentialism and Marxism, but arguing that Sartre puts some basic elements of existentialist philosophy above Marxian materialism.

• OLLMAN, BERTELL, *Alienation: Marx's Conception of Man in Capitalist Society* (Cambridge, 1971). Develops the essential features of Marx's critique of modern society. Ollman argues that there is no philosophical break between the early and mature Marx, and that Marx's concept of human nature in his earlier works illuminates the larger analyses of the later works.

• PARKES, HENRY BAMFORD, *Marxism: An Autopsy* (Boston, 1939). A trenchant critique of Marxism, which, "owing to the stimulus which it gives to Fascism, must be regarded as a liability rather than an asset to the progressive cause" (p. 6).

• PETROVIĆ, GAJO, *Marx in the Mid-Twentieth Century* (Anchor Books, Garden City, N.Y., 1967). The author, a professor of philosophy in communist Yugoslavia, vigorously rejects the Stalinist type of communist totalitarianism, and stresses Marx's humanist ideas, particularly as expressed in his early philosophical writings. In particular, he picks Marx's concept of alienation as the central idea of a humanist, antitotalitarian Marxian philosophy. However, Petrović sees no discontinuity between the ideas of the young and old Marx: "The theory of alienation is not only the central theme of Marx's 'early' writings; it is also the guiding idea of all his 'later' works" (p. 32). In one important respect, the author goes beyond most Marxists who consider the abolition of private property and its transfer to the state as the cure-all for the economic root of alienation. "The de-alienation of economic life," Petrović writes, "requires also the abolition of state property, its transformation into real social property; and this cannot be achieved without organizing the whole

social life on the basis of the self-management of the immediate producers" (p. 153). Petrović thus takes the position that the important question with respect to productive property is, not who owns it, but by what methods it is managed. However, the author fails to follow up the broader ramifications of this issue, since this might lead to the issue of political democracy—still a touchy subject in Yugoslavia.

- POPPER, KARL, *The Open Society and its Enemies* (Princeton, 1950). The second part is on Hegel and Marx, and the author concentrates on Marx's claim to have formulated a "scientific" theory of society. In the literature on Marx, Popper's work is particularly illuminating, not only because it possesses analytical acumen and philosophical depth but because it places Marx in a tradition of the "enemies of the open society," starting with Plato. Popper's formulation of the concept of the open society is an important contribution to liberal-democratic thought in the twentieth century. See also H. B. Mayo, *Introduction to Marxist Theory* (New York, 1960), for a thoughtful confrontation of the basic tenets of democracy with Marxism.
- RYAZANOFF, D. (ed.), *Karl Marx: Man, Thinker, and Revolutionist* (New York, 1927). An interesting symposium on Marx, with personal reminiscences by Engels, his daughter Eleanor Marx, and his son-in-law Paul Lafargue, as well as sympathetic studies by Lenin, Mehring, Rosa Luxemburg, and others.
- SCHLESINGER, RUDOLF, *Marx: His Time and Ours* (London, 1950). A detailed restatement from an orthodox Marxist viewpoint. The author concludes that "we cannot now refuse the basic Marxist statements any more than a serious physicist can be a non-Newtonian, with the further great difference that, in the field of sociology, more generations must pass before an Einstein appears. He will not come before Marx's work has born all its historical fruits" (pp. 432-433). A bibliography is appended (pp. 434-436).
- SCHUMPETER, JOSEPH A., *Ten Great Economists: From Marx to Keynes*

(London, 1952). Schumpeter, one of the great economists of the twentieth century, devotes the longest chapter (pp. 3-73) to Marx. See also: Joan Robinson, *An Essay on Marxian Economics*, 2nd ed. (New York, 1966); Robert L. Heilbroner, *The Worldly Philosophers: The Lives, Times, and Ideas of the Great Economic Thinkers*, 6th ed. (New York, 1986) and Murray Wolfson, *A Reappraisal of Marxian Economics* (New York, 1966). For selections of Marx's own statements on economic issues, taken from *Capital* and some of his other writings, see Robert Freedman (ed.), *Marx on Economics* (Penguin Books, Baltimore, 1962).

- SCHWARZSCHILD, LEOPOLD, *The Red Prussian: The Life and Legend of Karl Marx* (London, 1948). A highly critical biography, written with verve and fire. The author "debunks" Marx as a man and thinker thoroughly and devastatingly, yet fails to explain why he exercised such a tremendous influence on history.
- STOCKHAMMER, MORRIS, *Karl Marx Dictionary* (New York, 1965). Marxian key concepts and terms, taken from his writings, and alphabetically organized in dictionary form.
- STRVIK, DIRK (ed.), *Birth of the "Communist Manifesto"* (New York, 1971). A valuable collection of all of the prefaces by Marx and Engels to the *Manifesto*, together with early drafts by Engels and other supplementary materials, including Marx's and Engel's accounts of the history of the *Manifesto*.
- SWEETZ, PAUL M., *The Theory of Capitalist Development* (New York, 1942). Chaps. I-XII (pp. 11-236) contain one of the most authoritative statements of Marxian political economy, including such basic concepts as value, surplus value, capital accumulation, the law of the falling profit rate, and crises and depressions. Chap. XV (pp. 270-286) analyzes monopoly and its impact on the capitalist economy. See also Sweetz's *Socialism* (New York, 1949), and *The Present as History: Essays and Reviews on Capitalism and Socialism* (New York, 1953).
- TROTSKY, LEON, *Karl Marx* (The Living Thoughts Library, New York, 1939).

Trotsky's introduction (pp. 1-45) is followed by selected passages from Marx's *Capital* (pp. 48-189). Writing for American readers, and illustrating his theoretical arguments with American materials, Trotsky comes to the conclusion that Marxism has a great future in the United States: "In this, too, America will in a few jumps catch up with Europe and outdistance it. Progressive technique and a progressive social structure will pave their own way in the sphere of doctrine. The best theoreticians of Marxism will appear on American soil. Marx will become the mentor of the advanced American workers" (p. 38). A less optimistic view is expressed by the one-time leader of the Communist Party of the United States, Earl R. Browder, in his *Marx and America* (New York, 1958). For a scholarly examination of the influence of American communist ideas and experience on Marx, see Lewis S. Feuer, "The North American Origins of Marx's Socialism," *Western Political Quarterly*, XVI (March, 1963), 53-67, and "The Influence of the American Communist Colonies on Engels and Marx," *ibid.*, XIX (September, 1966), 456-474.

- TUCKER, ROBERT C., *Philosophy and Myth in Karl Marx* (Cambridge, 1961). In the light of the renewed interest in Marx's philosophy as stimulated, in particular, by the publication in English of his *Economic and Philosophical Manuscripts*, the author interprets Marxism essentially as a "religion of revolution" rather than as a system of social or economic science. Tucker also stresses the philosophical links between Marx and earlier German philosophers, particularly Kant, Hegel, and Feuerbach. The notion of Marxism as a scientific system is also refuted in Max Eastman, *Marxism: Is It Science?* (New York, 1940). By contrast, the scientific nature of Marxism is affirmed in Irving M. Zeitlin, *Marxism: A Re-Examination* (Princeton, N.J., 1967).
- WEYL, NATHANIEL, *Karl Marx: Racist* (New Rochelle, N.Y., 1979). A vitriolic attack on Marx for his allegedly holding racist views.
- WOLFE, BERTRAM D., *Marxism: One Hundred Years in the Life of a Doctrine*

(Delta Paperbacks, New York, 1967). A comprehensive and critical analysis by a life-long student of Marxism and communism.

II LENIN

- ANDERSON, THORNTON, *Masters of Russian Marxism* (New York, 1963). Shows the continuities and discontinuities of Russian Marxism and communism as exemplified by Plekhanov, Lenin, Martov, Trotsky, Kollontai, Bukharin, Stalin, and Khrushchev. The readings from these authors are preceded by Anderson's lucid and balanced introductory essays.
- BERDYAEV, NICOLAS, *The Origin of Russian Communism* (New York, 1937). This stimulating work by an exiled Russian philosopher and religious thinker arrives at the conclusion that "Russian communism is more traditional than is commonly thought and that it is a transformation and deformation of the old Russian messianic idea" (p. 228).
- BLACK, CYRIL E., and THOMAS P. THORNTON (eds.), *Communism and Revolution: The Strategic Use of Political Violence* (Princeton, N.J., 1964). This symposium tackles the complex problem of communist revolution through both general theoretical studies and specific area and country studies. Of particular importance are Chaps. 1-3 and 15, that deal with the communist theory of the state and revolution, with special emphasis on the underdeveloped countries, and how to deal with the challenge of communist revolutionary theory and practice. A well-rounded volume of high scholarship, combining theoretical depth with common sense and practical wisdom.
- BOCHENSKI, JOSEPH M., and GERHART NIEMEYER (eds.), *Handbook on Communism* (New York, 1962). This massive volume of nearly seven hundred pages deals with the doctrines and practices of communism, particularly as shown in Soviet policies and institutions. Of special importance to the student of political ideas are Chaps. I-III that deal with the structure of communism and its political, philosophical, and social doctrines. The final

chapter, XV, is a critique of communism, particularly its basic doctrinal tenets. Includes a bibliography (pp. 649-673).

• CARR, EDWARD HALLETT, *Studies in Revolution* (New York, 1950). The author starts with Saint-Simon and ends with Lenin and Stalin. The book is valuable inasmuch as it emphasizes the relation of Russian communism to the general European revolutionary tradition of the nineteenth century. Yet it overstates its case; Stalin is made to appear as the final link of this tradition, and Stalinism is implied to be the only alternative to liberal democracy. See also Carr's earlier book, *The Soviet Impact on the Western World* (New York, 1947), in which he examines the political, economic, social, international, and ideological influences of Sovietism on the Western world. A succinct summary of "Lenin's Theory of the State" will be found in Carr's *The Bolshevik Revolution, 1917-1923*, Vol. I (London, 1950), pp. 233-249.

• CROSSMAN, RICHARD (ed.), *The God That Failed* (Bantam Books, New York, 1954). Six memoirs by former communists and fellow travelers (Arthur Koestler, Ignazio Silone, Richard Wright, André Gide, Louis Fischer, Stephen Spender) on how they embraced the communist faith and why they eventually renounced it. In the literature on communism, this book is of unique value, for it discusses communism in terms of critical personal experiences rather than abstract ideology. Of the six essays, those by Richard Wright, the American writer, and Ignazio Silone, the Italian novelist, are the most moving. In all, this symposium greatly contributes to an understanding of why persons of profoundly religious, ethical, and democratic faith commit themselves to communism as an ideal and hope.

• DANIELS, ROBERT V., *The Nature of Communism* (Vintage Books, New York, 1963). Succinct survey of communist doctrines from Marx onward. The first four chapters deal with communism in relation to Marxist theory, communism and revolution, the communist party, and communism as a strategy of struggle. Chap. IX, the last, is on communism as a faith. Has bibliographical notes (pp. 376-388).

• DEBRAY, RÉGIS, *Revolution in the Revolution? Armed Struggle and Political Struggle in Latin America* (Evergreen Black Cat Paperbacks, New York, 1967). This brief volume of slightly over one hundred pages is one of the most important contributions to the communist theory of revolution. From a narrower standpoint, Debray's tract is a theoretical formulation of the logic of the Cuban revolution under Castro's leadership, which Debray considers "a decisive contribution to international revolutionary experience and to Marxism-Leninism" (p. 106). In a larger perspective, Debray's analysis is meant to apply not only to Latin America, but to other areas as well. Going beyond the classical revolutionary doctrines of Lenin, Debray agrees with Castro that "there is no revolution without a vanguard; that this vanguard is not necessarily the Marxist-Leninist party; and that those who want to make the revolution have the right and the duty to constitute themselves a vanguard, independently of these parties" (p. 98). Debray considers the guerrilla force "the party in embryo" (p. 106), and the political organization, the party, develops out of the guerrilla force. "That is why," he concludes, "at the present juncture, the principal stress must be laid on the development of guerrilla warfare and not on the strengthening of existing parties or the creation of new parties. That is why insurrectional activity is today the number one political activity" (p. 116). See also Che Guevara, *Guerrilla Warfare* (New York, 1961), a practical handbook for communist revolutionaries to seize power in underdeveloped countries. Based on the experience in Cuba, *Guerrilla Warfare* argues that a successful communist revolution can be started in any Latin American nation with a force of only thirty to fifty guerrilla fighters.

• DENNO, THEODORE, *The Communist Millennium: The Soviet View* (The Hague, 1965). Beginning with the comparatively sparse remarks of Marx and Lenin on the communist utopia after the establishment of the classless society by revolution, the author shows how utopian thinking has developed in Soviet thought and the

official party line. Denno argues that the concept of the communist utopia is not an incidental or decorative element in Marxism and communism, but one of their foundations, supplying the "social myth" without which probably no social system can function. The author finally examines the challenge of the communist conception of utopia in relation to the key concepts and "myths" of the liberal, capitalist societies, and he cautiously expresses the view that the "doctrinal chasm" between communist and noncommunist countries tends to decrease in the long run. Compact in length and treatment, *The Communist Millennium* fills a gap in the literature on Marxism and communism and at the same time points to some of the deeper causes of doctrinal tension that separates communist from noncommunist societies.

• DJILAS, MILOVAN, *The New Class* (Praeger Paperbacks, New York, 1959). Possibly the most important book on communism since the *Communist Manifesto*. The author, a former communist, shows the errors of communist totalitarianism by employing, to a large extent, Marxian concepts and techniques of analysis. See also his *Land Without Justice* (New York, 1958), *Anatomy of a Moral* (New York, 1959), and *Conversations With Stalin* (New York, 1962).

• EASTMAN, MAX, *Marx and Lenin: The Science of Revolution* (New York, 1927). Comparing Marx with Lenin, the author concludes as follows: "In Marx the Hegelian metaphysician was dominant over the practical scientific thinker; in Lenin the scientific thinker gained the victory. And that victory is the theoretical foundation of Bolshevism. Bolshevism is an unconscious, and therefore incomplete, substitution of a practical science of revolution for that revolutionary philosophy of the universe which Marx created" (p. 168).

• FISCHER, LOUIS, *The Life of Lenin* (New York, 1964). One of the outstanding biographies of Lenin. The author, who served as an American correspondent in Moscow from 1922 to 1936, saw Lenin in action on many occasions, and has an intimate feeling for, and understanding of, the Russian

people. See also Stefan T. Possony, *Lenin: The Compulsive Revolutionary* (Chicago, 1964); Adam B. Ulam, *The Bolsheviks: The Intellectual and Political History of the Triumph of Communism in Russia* (New York, 1965); and Leonard Schapiro and Peter Reddaway (eds.), *Lenin: The Man, the Theorist, the Leader* (New York, 1967).

• HOOK, SIDNEY, *World Communism: Key Documentary Material* (Anvil Books, Princeton, N.J., 1962). Documents the theory and historical evolution of communism, with introductory comments by Hook on each selection. The source material is largely taken from official communist sources. For a brief survey of Soviet communism see also Robert H. McNeal, *The Bolshevik Tradition: Lenin, Stalin, Khrushchev* (Englewood Cliffs, N.J., 1963).

• JAWORSKYJ, MICHAEL (ed.), *Soviet Political Thought: An Anthology* (Baltimore, 1968). The most comprehensive collection of Soviet materials related to political thought, covering the period of 1917-1961, and expressing the views of Soviet political writers, economists, historians, and philosophers. The major sections of the anthology are prefaced by introductory essays of the editor.

• KELSEN, HANS, *The Political Theory of Bolshevism: A Critical Analysis* (Berkeley and Los Angeles, 1949). This short book of sixty pages is the best critical analysis of the political theory of Marx and Engels, and of its later development by Lenin and Stalin. The style is clear and straightforward, and the documentation based largely on the original sources of Marx, Engels, Lenin, and Stalin. See also Leonard Schapiro, "Lenin's Contribution to Politics," *Political Quarterly*, XXXV (January-March, 1964), 9-22.

• KOESTLER, ARTHUR, *Darkness at Noon* (Signet Books, New York, 1948). This short novel supplies more insight into the working of totalitarian communism and its terroristic methods than many a ponderous work of nonfiction. The hero of the novel is an old revolutionary whose final fate—imprisonment, abject confession of crimes not committed, and execution—resembles that of the victims of the Moscow treason trials in the nineteen

thirties, in which Stalin liquidated most of the remnants of the original leaders of the revolution. See also George Orwell, *1984* (Signet Books, New York, 1950).

• LASKI, HAROLD J., *Communism: 1381-1927* (London, 1927). The materialist interpretation of history seems to Laski, "as general doctrine, undeniable." Yet he warns that "there is no justification for the resort to violence until the resources of reason have been exhausted" (p. 180). See, especially, Chap. IV, "The Communist Theory of the State" (pp. 123-182). Laski's conclusion is that the answer to "the new faith" of communism "is not the persecution of those who worship in its sanctuary, but the proof that those who do not share its convictions can scan an horizon not less splendid in the prospect it envisions nor less compelling in the allegiance it invokes" (pp. 250-251). See also Laski's *The Secret Battalion: An Examination of the Communist Attitude to the Labour Party* (London, 1946), a devastating critique of communist methods of political infiltration and deception.

• LOVELL, DAVID, *From Marx to Lenin: An Evaluation of Marx's Responsibility for Soviet Authoritarianism* (Cambridge, Eng., 1984). Lovell's study of this problem leads him to conclude that Soviet authoritarianism was not the only practical necessary outcome of Marxism.

• LOWENTHAL, RICHARD, *World Communism: The Disintegration of a Secular Faith* (Galaxy Books, New York, 1966). The author holds that the disintegration of communism as an intellectual and political world movement is irreversible. In tracing this process of decay, Lowenthal sees the major stages in the successful defiance of Stalin by Tito from 1948 on, the destruction of the Stalin myth by Khrushchev in 1956, the Polish and Hungarian revolts of the same year, and the growing rift between Communist China and the Soviet Union from the late 1950s on. Communism as a world movement, the author concludes his analysis, can be regarded, beginning with the 1960s, as a "finished period of history" (p. 233). The deeper cause of the disintegration of communism as a unified world movement

lies, in the eyes of Lowenthal, not in specific mistakes of particular communist leaders, parties, or governments, but in the difficulty, or impossibility, of transferring "the centralism of a ruling totalitarian party to an international movement" (p. 232). Since Lowenthal first published *World Communism* in 1963, events in Europe and elsewhere have strongly validated his main arguments. See also Walter Z. Laqueur and Leopold Labedz (eds.), *Polycentrism* (New York, 1962).

• MARCUSE, HERBERT, *Soviet Marxism: A Critical Analysis* (New York, 1958). Examines the relation of Marxist doctrine to Soviet reality, and concludes that Marxist ideology is a decisive part of the Soviet state and society. The author also feels that Soviet Marxism, in spite of its aberrations and distortions, is pushing Soviet society toward more liberalized economic and political practices. Controversial in some of its conclusions, the book is an important contribution to the understanding of Marxism and its relation to communist reality.

• McLELLAN, DAVID, *Marxism After Marx* (London, 1979). Chapter 7 is on Lenin. See also McLellan's extensive bibliographies.

• MONNEROT, JULES, *Sociology and Psychology of Communism* (Beacon Paperbacks, Boston, 1960). Interprets communism as a quasi-religious movement. See also John Kosa, *Two Generations of Man: A Study in the Psychology of Communism* (Chapel Hill, 1962).

• POLAN, A. J., *Lenin and the Ends of Politics* (Berkeley, 1984). This book considers the influence of Lenin on politics and political theory, which is held to be almost entirely for the bad.

• RUSSELL, BERTRAND, *Bolshevism: Practice and Theory* (New York, 1920). This remarkable book, based on a visit to Russia, is one of the few that have stood the test of time, and the author republished it, in an unchanged second edition, in 1949 (London and New York). Russell agreed with the economic objectives of public ownership of industry but disagreed with the political means of ruthlessness employed by communism for the attainment of its ends.

Writing in 1920, Russell saw three possibilities of Soviet communist development: "The first is the ultimate defeat of Bolshevism by the forces of capitalism. The second is the victory of the Bolsheviks accompanied by a complete loss of their ideals and a regime of Napoleonic imperialism. The third is a prolonged world-war, in which civilization will go under, and all its manifestations (including communism) will be forgotten" (p. 4).

• SCHRAM, STUART R., *The Political Thought of Mao Tse-tung*, rev. ed. (Praeger University Paperbacks, New York, 1968). A collection of Mao's political writings, prefaced by a long introductory essay by Schram. See also Mao's biography by Schram, *Mao Tse-tung* (Penguin Books, 1966). John Wilson Lewis (ed.), *Major Doctrines of Communist China* (New York, 1964), and Anne Fremantle (ed.), *Mao Tse-tung: An Anthology of His Writings* (Mentor Books, New York, 1962), are useful compilations of the political ideas of Mao and the other former communist Chinese leadership.

• SIMMONS, ERNEST J. (ed.), *Continuity and Change in Russian and Soviet Thought* (Cambridge, Mass., 1955). Examines to what extent communist ideas continue, or

break with, long-term ideas and traditions of pre-communist Russia. The contributors include Isaiah Berlin, Merle Fainsod, Michael Karpovich, Hans Kohn, Herbert Marcuse, Philip E. Moseley, and Ernest J. Simmons.

• TROTSKY, LEON, *The History of the Russian Revolution* (three vols. in one, New York, 1937, reprinted Ann Arbor, 1957). Of the prolific literary output of Trotsky, this is likely to remain his most enduring work, since he was not only one of the top leaders of the Russian Revolution in November, 1917, but also a great historian and writer. See also his provocative theoretical contribution in *Permanent Revolution* (New York, 1931). *My Life* (New York, 1931) is one of the few great autobiographies ever written by a leading communist. An overall view of Trotsky's political ideas and personal experiences can be obtained from Irving Howe (ed.), *The Basic Writings of Trotsky* (New York, 1963), with a long introduction by the editor (pp. 3-39).

• WILSON, EDMUND, *To the Finland Station* (Anchor Books, New York, 1953). The bulk of the book (pp. 111-484) deals with Marx, Engels, Lenin, and Trotsky.

CHAPTER TWENTY-NINE

THE LIMITS OF REASON

I NIETZSCHE

• DANNHAUSER, WERNER, *Nietzsche's View of Socrates* (Ithaca, N.Y., 1974). A work on the development of Nietzsche's views on Socrates, and of the former's challenge to the latter.

• DETWILER, BRUCE, *Nietzsche and the Politics of Aristocratic Radicalism* (Chicago, 1990). A comprehensive yet concise re-evaluation of Nietzsche's political views. Detwiler notes that there have been many political interpretations of

Nietzsche, and that Nietzsche has been considered both political and apolitical. Detwiler believes Nietzsche is politically significant, and his analysis of him is not unlike the one put forward in *Great Political Thinkers*.

• DUFFY, MICHAEL and WILLARD MITTELMAN, "Nietzsche's Attitudes Toward the Jews," *Journal of the History of Ideas* (April-June, 1988). This article argues that Nietzsche had different attitudes toward Jews at different times in his life, and that he had different attitudes toward

Judaism at different stages in its development.

- HEIDEGGER, MARTIN, *Nietzsche*, 4 vols. (ed. David Krell, trans. David Krell et al., San Francisco, 1979-1987). Written from 1936 to 1946, and not published in German until 1961. Heidegger's reactions to and reflections on Nietzsche and Nietzschean subjects. Emphasis on nihilism and the death of God. In light of the presentation of Nietzsche in *Great Political Thinkers*, it is not inappropriate to note Heidegger's flirtation with Nazism.
- HOLLINGDALE, R. J., *Nietzsche* (Baton Rouge, La., 1966). On Nietzsche's life and thought.
- KAUFMANN, WALTER, *Nietzsche; Philosopher, Psychologist, Antichrist*, 4th ed. (Princeton, 1974). Kaufman's reinterpretation and rehabilitation of Nietzsche (this book was originally published in 1950) was unquestionably the most influential in postwar Nietzschean scholarship. Kaufman saw Nietzsche as an important philosopher who was misused by the Nazis. This work is a comprehensive presentation of Nietzsche's life and work, and was refined by Kaufman over several decades. It includes an outstanding bibliography.
- LAMPERT, LAWRENCE, *Nietzsche's Teaching: An Interpretation of Thus Spoke Zarathustra* (New Haven, Conn., 1987). *Thus Spoke Zarathustra* is Nietzsche's central work, even according to Nietzsche. Lampert's book attempts to decipher *Thus Spoke Zarathustra* and gives a sympathetic depiction of Nietzsche's philosophy (which is presented as mostly nonpolitical). Lampert ranks Nietzsche's philosophy with Plato's. This book is more valuable for its presentation of *Thus Spoke Zarathustra* than for its interpretation of it.
- NICHOLAS, MARIUS, *From Nietzsche Down to Hitler* (trans. E. G. Ecklin, Port Washington, N.Y., 1970). Investigates this Nietzschean issue.
- PFEFFER, ROSE, *Nietzsche: Disciple of Dionysus* (Lewisburg, 1972). Focuses on Nietzsche's doctrine of eternal recurrence, which is presented as the most important portion of his thought and his solution to God's death.

- STRONG, TRACY, *Friedrich Nietzsche and the Politics of Transfiguration*, expanded edition (Berkeley, Calif., 1988). With Kaufmann's work, another important book to study in order to understand Nietzsche. Strong considers various interpretations of Nietzsche. This book, like Kaufmann's, contains a useful bibliography.
- WARREN, MARK, "Nietzsche and Political Philosophy," *Political Theory* (May, 1985). Nietzsche's philosophy is presented as politically indeterminate. It can be used as a basis for various political ideologies. According to Warren, some of the problem that scholars have had in interpreting Nietzsche is the result of the different questions that he asked than those of twentieth century political theory. The "will to power" is emphasized here.
- ———, *Nietzsche and Political Thought* (Cambridge, Mass., 1988). A postmodernist approach to Nietzsche.

II MUSSOLINI

- ALLARDYCE, GILBERT, ed., *The Place of Fascism in European History* (Englewood Cliffs, N.J., 1971). A collection of essays by, among others, Erich Fromm, Peter Drucker, Hannah Arendt, and Seymour Martin Lipset.
- ARENDT, HANNAH, *The Origins of Totalitarianism*, 2nd ed. (New York, 1958). A classic in the field.
- ASHTON, E. B., *The Fascist: His State and His Mind* (London, 1937). A general account of fascist theory and its application in economics, government, and international relations. See also William Ebenstein, *Fascist Italy* (New York, 1939, republished 1973), *The Nazi State* (New York, 1943, republished 1975), *The German Record: A Political Portrait* (New York, 1945), *Totalitarianism: New Perspectives* (New York, 1962), *Today's Isms: Communism, Fascism, Capitalism, Socialism*, 9th ed. (Englewood Cliffs, N.J., 1985), Chap. II (pp. 105-135), and "National Socialism," *International Encyclopedia of the Social Sciences*, Vol. XI (New York, 1968), pp. 45-50.

- BORGESE, G. A., "The Intellectual Origins of Fascism," *Social Research*, I (November, 1934), 458-485. One of the best analyses of the literary and philosophical origins of fascism. Borge's *Goliath: The March of Fascism* (New York, 1938) contains in Part I a lengthy account of the intellectual and historical background of Italian Fascism.
- CARSTEN, F. L., *The Rise of Fascism* (Berkeley-Los Angeles, 1967). In this major contribution to the literature on fascism, the author is primarily concerned with the period of fascist movements and parties before the seizure of power, thus showing the conditions and forces in non-fascist countries that enabled fascist movements to grow and win, as was the case in Italy and Germany. This analysis is particularly fruitful from the comparative viewpoint, since it is full of lessons for those countries in which fascist groups and parties exist but are unable to get control of the government. While the focus of the book is inevitably on Italy and Germany, the author also deals briefly with fascist groups in other European countries in the 1920s and 1930s. Other comparative accounts of fascism will be found in Hans Rogger and Eugen Weber (eds.), *The European Right: A Historical Profile* (Berkeley-Los Angeles, 1965); Eugen Weber, *Varieties of Fascism* (Anvil Books, Princeton, 1964); and Dennis Eisenberg, *The Re-Emergence of Fascism* (London, 1967). Vol. I, No. 1 (1966) of the *Journal of Contemporary History* is a special issue on "International Fascism, 1920-1945."
- COBBAN, ALFRED, *Dictatorship: Its History and Theory* (New York, 1939). See also Carl J. Friedrich (ed.), *Totalitarianism* (Universal Library Paperbacks, New York, 1964); Carl J. Friedrich and Zbigniew K. Brzezinski, *Totalitarian Dictatorship and Autocracy*, 2nd ed. (Cambridge, Mass., 1965); Sigmund Neumann, *Permanent Revolution*, 2nd ed. (Praeger Paperbacks, New York, 1965); and William S. Halperin, *Mussolini and Italian Fascism* (Anvil Books, Princeton, 1964).
- DRUCKER, PETER, *The End of Economic Man: The Origins of Totalitarianism* (New York, 1969). Drucker's interpretation is

that fascism is the product of a general loss of faith in freedom and equality. Much to say about fascist economics.

- DUTT, R. PALME, *Fascism and Social Revolution* (New York, 1934). The most authoritative interpretation of fascism from the orthodox communist viewpoint. The subtitle of the book is "A Study of the Economics and Politics of the Extreme Stages of Capitalism in Decay." For other Marxist interpretations of fascism, see Paul Sweezy, *The Theory of Capitalist Development* (New York, 1942), pp. 329-347, and Daniel Guerin, *Fascism and Big Business* (New York, 1939).
- FROMM, ERICH, *Escape from Freedom* (New York, 1941). One of the most incisive interpretations of fascism from a psychological viewpoint. Indispensable to an understanding of fascism as a mass movement. See also Eric Hoffer, *The True Believer* (New York, 1951). A milestone in the empirical study of the psychology of fascism is T. W. Adorno and others, *The Authoritarian Personality* (New York, 1950). Its accomplishments and defects are analyzed in Richard Christie and Marie Jahoda (eds.), *Studies in the Scope and Method of "The Authoritarian Personality"* (Glencoe, 1954). See also Bruno Bettelheim, *The Informed Heart: The Human Condition in Modern Mass Society* (New York, 1960).
- GREGOR, A. JAMES, *Interpretations of Fascism* (Morristown, N.J., 1974). A systematic analysis of the major theoretical endeavors to interpret fascism from the 1920s forward.
- KEDWARD, H. RODERICK, *Fascism in Western Europe, 1900-1945* (New York, 1971). Brief accounts of a number of fascist movements.
- KIRKPATRICK, IVONE, *Mussolini: A Study in Power* (New York, 1964). The author of this massive study stresses Mussolini's impact on the world scene. Laura Fermi, *Mussolini* (Chicago, 1961), stresses Mussolini's personality and background, to which she devotes almost one half of her biography. Her account is greatly enriched by having experienced Italian fascism for sixteen years after the fascist seizure of power in 1922. See also Christopher

Hibbert, *Il Duce: The Life of Benito Mussolini* (Boston, 1962).

• PUZZO, DANTE A., "Racism and the Western Tradition," *Journal of the History of Ideas*, XXV (October–December, 1964), 579–586. The author considers racism a modern conception, evolving from the sixteenth century on. He identifies the expansion of Europe overseas, the Protestant Reformation, the rise of the nation-state, and imperial struggles as the most important elements in this process. Since racism has been a decisive factor in fascism everywhere, Puzzo's brief study provides an illuminating historical background for fascist racism in the twentieth century.

• RADER, MELVIN, *No Compromise: The Conflict between Two Worlds* (New York, 1939). A philosophical analysis of the basic principles of fascism. See also C. E. M.

Joad, *A Guide to the Philosophy of Politics and Morals* (London, 1938), pp. 605–663; Bertrand Russell, *In Praise of Idleness and Other Essays* (London, 1948), pp. 82–108; and Karl Mannheim, *Ideology and Utopia* (London–New York, 1940), pp. 119–134.

• REICH, WILHELM, *The Mass Psychology of Fascism* (New York, 1946). Interpreting fascism from the viewpoint of sexual and psychological maladjustments, the author writes that "fascist mysticism is orgasmic longing under the conditions of mystification and inhibition of natural sexuality" (p. xvii). A suggestive book, which tries to harmonize the "depth psychology of Freud with the economic theory of Marx" (p. xix).

• SCHAPIRO, J. SALWYN, *Liberalism and the Challenge of Fascism* (New York, 1949). Chap. XV is entitled "Thomas Carlyle, Prophet of Fascism" (pp. 370–396).

CHAPTER THIRTY

FREUD

• ABRAMSON, JEFFREY, *Liberation and Its Limits: The Moral and Political Thought of Freud* (New York, 1984). Stresses the social implications of Freud's psychological theories, with particular emphasis on autonomy and individuality.

• ALEXANDER, FRANZ, *Fundamentals of Psychoanalysis* (New York, 1948). By one of the leading authorities on psychoanalysis. Each chapter of the book is followed by a bibliography. *The Scope of Analysis: Selected Papers, 1921–1961* (New York, 1961) contains a number of Alexander's papers on social and political problems (pp. 381–480). For presentations of the main theories of psychoanalysis see also David Stafford-Clark, *What Freud Really Said* (New York, 1965).

• BERLINER, ARTHUR, *Psychoanalysis and Society: The Social Thought of Sigmund Freud* (Washington, D.C., 1983).

Explores the relationship between Freud's psychoanalytical and social views.

• BETTELHEIM, BRUNO, *The Informed Heart: The Human Condition in Modern Mass Society* (New York, 1960). The author, who was a practicing psychoanalyst in Vienna, spent a year (1938–1939) in the German concentration camps of Dachau and Buchenwald, and after his release went to the United States where he established himself as one of the leading psychologists, working particularly with children. In *The Informed Heart*, Bettelheim analyzes the disintegration of the human personality under conditions of extreme stress, and points out how his experiences modified his psychological and psychoanalytic thinking. See also a Dutch psychiatrist's experiences in German concentration camps, Elie A. Cohen, *Human Behavior in the Concentration Camp* (New York, 1953).

• BIRNBACH, MARTIN, *Neo-Freudian Social Philosophy* (Stanford, Calif., 1961). After a brief discussion of Freudian thought and its implications for social and political philosophy, the author analyzes the neo-Freudian break with Freud by stressing the importance of society to the mental health of the individual. Specifically, he concentrates on Franz Alexander, Erich Fromm, Karen Horney, Abram Kardiner, Harry Stack Sullivan, and Harold D. Lasswell. See also J. A. C. Brown, *Freud and the Post-Freudians* (Penguin Books, Baltimore, 1961), and Edward Glover, "Freudian or Neofreudian?" *Psychoanalytic Quarterly*, XXXIII (Fall, 1964), 97–109.

• BOCOCK, ROBERT, *Sigmund Freud* (London, 1983). A brief work including discussion of Freud's political and social views.

• CANTRIL, HADLEY, *Human Nature and Political Systems* (New Brunswick, N.J., 1961). A leading American social psychologist examines the psychological requirements and patterns that underlie and condition particular political systems. In *The Politics of Despair* (Collier Books, New York, 1962) Cantril gives an account of an empirical study of people in France and Italy who voted Communist. See also his theoretical and comparative study, *The Pattern of Human Concerns* (New Brunswick, N.J., 1966), and *The Human Dimension: Experiences in Policy Research* (New Brunswick, N.J., 1967), describing the background and methods of his theoretical concepts and empirical researches in political philosophy.

• ERIKSON, ERIK H., *Insight and Responsibility: Lectures on the Ethical Implications of Psychoanalytic Thought* (New York, 1964). The author is a leading figure in American psychoanalytic research, with special emphasis on the field of human development. See also Heinz Hartmann, *Psychoanalysis and Moral Values* (New York, 1960); Lewis S. Feuer, *Psychoanalysis and Ethics* (Springfield, Ill., 1955); David H. Jones, "Freud's Theory of Moral Conscience," *Philosophy*, XLI (January, 1966), 34–57; R. N. Kaul, "Freud's Contribution to Ethical Theory," *Psychoanalytic*

Review, LI (Winter, 1964–1965), 72–78; Anthony B. Gabriele, "The Principle of Irrational Loyalty," *Psychoanalytic Review*, LIII (Spring, 1966), 69–84; and Norman Kelman, "Psychoanalysis and Morality," *American Scholar*, XXIV (Spring, 1955), 158–170.

• EYSENCK, H. J., *The Psychology of Politics* (London, 1954). Empirical studies exploring the relations between personality and political ideology and behavior. About half of the material is derived from research and experiments in Britain, and the other half is based on work done mainly in the United States. See also R. E. Money-Kyrle, *Psychoanalysis and Politics* (London, 1951), and *Man's Picture of His World: A Psychoanalytic Study* (London, 1961), particularly Part II (pp. 105–190), in which the author correlates a person's "world-model" to his political ideas and attitudes.

• FODOR, NANDOR, and FRANK GAYNOR (eds.), *Freud: Dictionary of Psychoanalysis* (New York, 1950). Presents, in dictionary form, the main concepts of psychoanalysis in quotations from Freud's own writings. Useful for rapid reference.

• FREUD, SIGMUND, *A General Introduction to Psychoanalysis* (New York, 1920), and *New Introductory Lectures on Psychoanalysis* (New York, 1933). These are the two basic introductory works. See also the following: *The Interpretation of Dreams*, 3rd ed. (New York, 1932); *The Psychopathology of Everyday Life* (New York, 1914); *Three Essays on the Theory of Sexuality* (New York, 1910); *Wit and Its Relation to the Unconscious* (New York, 1916); *Totem and Taboo* (New York, 1918); *Group Psychology and the Analysis of the Ego* (New York, 1922); *The Future of an Illusion* (New York, 1928); and *An Outline of Psycho-Analysis* (New York, 1949). *The Basic Writings of Sigmund Freud* (ed. A. A. Brill, Modern Library, New York, 1938), contains six of Freud's more important works. Freud's *Collected Papers*, 5 vols. (New York, 1959), contains papers contributed to journals and encyclopedias. Freud's personality is revealed in his letters, Ernst L. Freud (ed.), *Letters of Sigmund Freud* (New York, 1960), and

Heinrich Meng and Ernst L. Freud (eds.), *Psychoanalysis and Faith: The Letters of Sigmund Freud and Oskar Pfister* (London-New York, 1963). For an informal portrait of Freud by his oldest son, see Martin Freud, *Sigmund Freud: Man and Father* (New York, 1958).

• FROMM, ERICH, *Escape from Freedom* (New York, 1941). One of the most successful applications of modified psychoanalytic methods and concepts to the analysis of modern totalitarianism. See also Fromm's *Beyond the Chains of Illusion: My Encounter with Marx and Freud* (New York, 1962), *Man for Himself: An Inquiry into the Psychology of Ethics* (New York, 1947), *Psychology and Religion* (New Haven, 1950), *The Sane Society* (New York, 1955), and *Sigmund Freud's Mission: An Analysis of His Personality and Influence* (New York, 1950).

• GREENSTEIN, FRED I., "The Impact of Personality on Politics: An Attempt to Clear Away Underbrush," *American Political Science Review*, LXI (September, 1967), 629-641. See also: Sol W. Ginsburg, *A Psychiatrist's Views on Social Issues* (New York, 1963); Max Mark, "What Image of Man for Political Science?," *Western Political Quarterly*, XV (December, 1962), 593-604; Jerome S. Bruner, "Freud and the Image of Man," *Partisan Review*, XXIII (Summer, 1956), 340-347; Morton Levitt, *Freud and Dewey on the Nature of Man* (New York, 1960); and Harold D. Lasswell, "Person, Personality, Group, Culture," *Psychiatry* (November, 1939), 539-561.

• HOOK, SIDNEY (ed.), *Psychoanalysis, Scientific Method, and Philosophy* (New York, 1959). See also Herbert Feigl (ed.), *The Foundations of Science and the Concepts of Psychology and Psychoanalysis* (Minneapolis, 1956).

• HORNEY, KAREN, *The Neurotic Personality of Our Time* (New York, 1937). One of the former leading American psychoanalysts, the author modified, or at least supplemented, Freud, by stressing more strongly the cultural and social pressures in the formation of neuroses and conflicts. See also the following of her works: *New Ways in Psychoanalysis* (New York,

1939) and *Our Inner Conflicts* (New York, 1945).

• JONES, ERNEST (ed.), *Social Aspects of Psycho-Analysis* (London, 1924). The most interesting essay is Chap. IV, "Politics" (pp. 128-168), by M. D. Eder. It suggests the potential resources of psychoanalysis that could be employed for a better understanding of politics. See also the following: Hendrik M. Ruitenbeek (ed.), *Psychoanalysis and Social Science* (Dutton Paperbacks, New York, 1962), with contributions by Harold D. Lasswell, Talcott Parsons, Erik H. Erikson, Heinz Hartmann, and other leading writers in the field; J. C. Flugel, *Man, Morals, and Society: A Psychoanalytical Study* (London, 1945); Ranyard West, *Conscience and Society: A Study of the Psychological Prerequisites of Law and Order* (London, 1942); Bruce Mazlish (ed.), *Psychoanalysis and History* (Englewood Cliffs, N.J., 1963); Fritz Schmidl, "Psychoanalysis and History," *Psychoanalytic Quarterly*, XXXI (No. 4, 1962), 532-548; Ernest Becker, "Social Science and Psychiatry," *Antioch Review*, XXIII (Fall, 1963), 353-366; Walter A. Weisskopf, *The Psychology of Economics* (Chicago, 1955); Louis Schneider, *The Freudian Psychology and Veblen's Social Theory* (New York, 1948); and Howard P. Rome, "A Psychiatrist's View," in E. J. Faulkner (ed.), *Man's Quest for Security: A Symposium* (Lincoln, Neb., 1966), pp. 59-74.

• ———, *The Life and Work of Sigmund Freud*, 3 vols. (New York, 1953-1957). The most informative biography of Freud by one of his closest friends and collaborators, and likely to remain the standard source for a long time. See also Jones' *Sigmund Freud: Four Centenary Addresses* (New York, 1956).

• KELSEN, HANS, "The Conception of State and Social Psychology," *International Journal of Psycho-Analysis*, V (Part 1, 1924), 1-38. Illuminating analysis of various conceptions of the state in social psychology, with particular reference to Freud's group theory.

• LASSWELL, HAROLD D., *World Politics and Personal Insecurity* (New York-London, 1935). Lasswell is the first

political scientist who has successfully applied psychoanalytical research methods and experience to the empirical study of political processes. See also the following of his books: *Psychopathology and Politics* (Chicago, 1930); *Politics: Who Gets What, When, How* (New York-London, 1936); *The Analysis of Political Behaviour* (London, 1947); *Power and Personality* (Compass Paperbacks, New York, 1962); and, in coauthorship with Abraham Kaplan, *Power and Society: A Framework for Political Inquiry* (New Haven, 1950). *The Political Writings of Harold D. Lasswell* (Glencoe, Ill., 1951), contains *Psychopathology and Politics*; *Politics: Who Gets What, When, How*; and *Democratic Character*, summarizing Lasswell's thought.

• NELSON, BENJAMIN (ed.), *Freud and the 20th Century* (Meridian Books, New York, 1957). A collection of essays on various aspects of Freud's influence by distinguished writers, including Alfred Kazin, Gregory Zilboorg, Gardner Murphy, Jacques Maritain, and Reinhold Niebuhr. See also John D. Sutherland (ed.), *Psychoanalysis and Contemporary Thought* (London, 1958), and Hendrik M. Ruitenbeek (ed.), *Psychoanalysis and Contemporary American Culture* (Delta Paperbacks, New York, 1964).

• OSBORN, REUBEN, *Marxism and Psycho-Analysis* (London, 1965). Seeking to integrate Marxian and Freudian thought, the author writes: "Both Marxism and psychoanalysis, in their different ways, are studies of the irrational in man's life. Marxism studies the irrationalities of the social order that prevent men utilising to the full the technical discoveries that science has given them. Psycho-analysis studies the irrational forces in men's minds that thwart their development into mature, rational beings able to use science for their well-being. An irrational world situation demands a scientific study of irrationalities, whether subjectively or objectively considered. This is the justification for both the Freudian and Marxian approach" (p. 126). The author concludes that Freudian and Marxian theory "provide important correctives for each other. Freudian theory makes us aware of the complexity of the subjective life but tends to look at

it in isolation from the social background. Marxism calls attention to the social determinants of human behaviour but tends to ignore the subjective pressures that lead men to enter into relationship with the social environment. Without the insights of Freudian theory Marxism tends to be brutal and clumsy in its approach" (pp. 154-155).

• RIEFF, PHILIP, *Freud: The Mind of the Moralizer* (New York, 1959). A social scientist looks at Freud's work as it bears on questions of ethics, politics, and philosophy. See also Paul Roazen, *Freud: Political and Social Thought* (New York, 1968); Jacob A. Arlow, *The Legacy of Freud* (New York, 1956); Gregory Zilboorg, *Sigmund Freud: His Exploration of the Mind of Man* (New York, 1951); Herbert Marcuse, *Eros and Civilization: An Inquiry into Sigmund Freud* (Boston, 1955); Lionel Trilling, *Freud and the Crisis of Our Culture* (Boston, 1955); and *Psychoanalysis and the Social Sciences*, 5 vols. (New York, 1947-1958), continued since 1960 as *The Psychoanalytic Study of Society*.

• ROAZEN, PAUL, *Freud: Political and Social Thought* (New York, 1968). Freud has an undoubted, though uncertain, place in political thought and science. Roazen believes that an understanding of Freud's clinical theories is essential to a complete understanding of his social theories. A complex work.

• SACHS, HANNS, *Freud: Master and Friend* (London, 1945). The author knew Freud from the early stages of psychoanalysis to his death. See also Marthe Robert, *The Psychoanalytic Revolution: Sigmund Freud's Life and Achievement* (New York, 1966); Reuben Fine, *Freud: A Critical Re-Evaluation of His Theories* (New York, 1962); Walter Hollitscher, *Sigmund Freud: An Introduction* (London, 1947); and Charles Rycroft (ed.), *Psychoanalysis Observed* (London, 1966).

• WAELDER, ROBERT, *Progress and Revolution: A Study of the Issues of Our Age* (New York, 1967). The author, a noted psychoanalyst who takes a special interest in social and political questions, discusses—in clear and simple language—the major issues that confront the modern world.

CHAPTER THIRTY-ONE

GANDHI

- ALEXANDER, HORACE, *Gandhi Through Western Eyes*, 2nd ed. (Philadelphia, 1984). A life of Gandhi by an English Quaker who knew him for twenty years.
- ANDREWS, C. F., *Mahatma Gandhi's Ideas* (London, 1929). One of the first books about Gandhi, and still a good introduction to his thought. See also Andrews's *Mahatma Gandhi: His Own Story* (New York, 1930) and *Mahatma Gandhi at Work* (New York, 1931).
- APPADORAI, A. (ed.), *Documents on Political Thought in Modern India*, vol. 1 (New York, 1974). From British assumption of direct rule in 1857 to Nehru's death in 1964. Many items from Gandhi; allows comparison and contrast with his predecessors, contemporaries, and successors.
- ASH, GEOFFREY, *Gandhi* (New York, 1968). An important biography.
- BAKSHI, S. R., *Gandhi and His Techniques of Satyagraha* (London, 1987). A detailed examination of the practices of non-violent change that Gandhi recommended.
- BOSE, NIRMAL and P. H. PATWARDHAN, *Gandhi in Indian Politics* (Bombay, India, 1967). Chapter two is "The Political Philosophy of Gandhi."
- BROWN, JUDITH, *Gandhi: Prisoner of Hope* (New Haven, Conn., 1989). The major recent biography. Includes a very brief, but useful, bibliography.
- CHATTERJEE, MARGARET, *Gandhi's Religious Thought* (Notre Dame, Ind., 1983). Gandhi's moral and political thought were intermeshed. This study attempts to elucidate the religious component in Gandhi's thought.
- COPLEY, ANTONY, *Gandhi: Against the Tide* (Oxford, 1987). A very brief and useful introduction to Gandhi.
- EDUARDES, MICHAEL, *The Myth of the Mahatma* (London, 1986). A revisionist account of the British Empire in India and of Gandhi's role in dismantling it.
- ERIKSON, ERIK, *Gandhi's Truth: On the Origins of Militant Nonviolence* (New York, 1969). Erikson presents the key event in Gandhi's life as the 1918 textile workers' strike. Gandhi was at this time almost 50, and, while well-known in India and abroad for his role in the South African civil rights movement, was not yet revered and despised. The textile workers' strike was a success for satyagraha, and was the first time the fast was used. According to Erikson, this paved the way for the following year's nationwide civil disobedience campaign. This book won the 1970 National Book Award.
- FISCHER, LOUIS, *The Life of Mahatma Gandhi* (New York, 1958). The first full-scale biography of Gandhi's whole life.
- GANDHI, MOHANDAS, *The Moral and Political Writings of Mahatma Gandhi*, 3 vols. (ed. Raghavan Iyer, Oxford, 1986-1987). This is the place to start when considering Gandhi's moral and political thought directly. Volume 1 is *Civilization, Politics, and Religion*; Volume 2 is *Truth and Non-Violence*, and Volume 3 is *Non-Violent Resistance and Social Transformation*. See also Iyer's introductions.
- GANGULI, BIRENDRANATH, *Gandhi's Social Philosophy* (Delhi, India, 1973). A very comprehensive work.
- GREEN, MARTIN, *The Challenge of the Mahatmas* (New York, 1978). A study in the thought of Gandhi and Tolstoy. See also Green's *The Origins of Nonviolence* (University Park, Pa., 1986) and, for Thoreau's influence on Gandhi, *Gandhi's Concept of Civil Disobedience* (New Delhi, India, 1986).

From Liberalism to Democratic Socialism

- JACK, HOMER (ed.), *The Gandhi Reader* (New York, 1961). Subtitled *A Source Book of His Life and Writings*, this book by a Unitarian minister is an invaluable reference for writings mostly by, but also some by others about, Gandhi from 1869 to 1931.
- IYER, RAGHAVAN, *The Moral and Political Thought of Mahatma Gandhi* (New York, 1973). The major work on the subject. Iyer believes that "in order to grasp Gandhi's moral and political thought . . . it is necessary to accept his profound integrity as a thinker and as a seeker of truth."
- PANTHAM, THOMAS, "Thinking with Mahatma Gandhi," *Political Theory* (May, 1983), 165-188. Presents the view that Gandhi's ethics are necessary to replace contemporary liberal democracy.
- PRADHAN, BENUDHAR, *The Socialist Thought of Mahatma Gandhi*, 2 vols. (Delhi, India, 1980). Pradhan's thesis is not that Gandhi was exclusively a socialist, but that there is much that was socialist in it.
- PURI, RASHMI-SUDHA, *Gandhi on War and Peace* (New York, 1987). The author points out that Gandhi was not only for non-violence, he was opposed to war.
- RANI, ASHA, *Gandhian Non-Violence and India's Freedom Struggle* (Delhi, India, 1981). A study in the historical development and practice of Gandhi's principle of non-violence.
- RAY, SIBNARAYAN (ed.), *Gandhi, India, and the World* (Philadelphia, 1970). A collection of essays on a variety of subjects.
- ROY, RAMASHRAY, *Gandhi: Soundings in Political Philosophy* (Delhi, India, 1984). The non-western character of Gandhi's thought is stressed.
- SHARMA, BISHAN, *Gandhi as Political Thinker* (New Delhi, India, 1956). A valuable study. Includes a chapter, "Gandhi and the English Liberal Tradition."
- SWAN, MAUREEN, *Gandhi: The South African Experience* (Johannesburg, S. Africa, 1985). Swan challenges the view that Gandhi was leader of the mass of Indians in South Africa; rather, he is presented as, for the most part, a representative for the highest strata of the South African Indian community.
- WOLFENSTEIN, E. VICTOR, *The Revolutionary Personality: Lenin, Trotsky, Gandhi* (Princeton, 1967). Includes a psychobiography of Gandhi in which his commitment to non-violence is found to be a combination of guilt and self-assertion.

CHAPTER THIRTY-TWO

FROM LIBERALISM TO DEMOCRATIC SOCIALISM

I SPENCER

- ALBEE, ERNEST, *A History of English Utilitarianism* (London-New York, 1902). Chaps. XIII-XV (pp. 268-357) are on Spencer. The author concludes that, "in order to do Mr. Spencer justice, one must regard him as the last great Individualist, in the eighteenth century sense of the word, rather than as the true exponent of Evolutionary Ethics" (p. 356).
- BARKER, ERNEST, *Political Thought in England, 1848-1914* (Home University Library, London, 1932). Chap. IV (pp. 84-131) is on Spencer—an illuminating interpretation of his political ideas. See also Crane Brinton, *English Political Thought in the Nineteenth Century* (London, 1933), pp. 226-239 and F. J. C. Hearnshaw, "Herbert Spencer and the Individualists," in Hearnshaw (ed.), *The Social and Political Ideas of Some Representative Thinkers of the Victorian Age* (London, 1933), pp. 53-83.
- DEWEY, JOHN, *Characters and Events*, 2 vols. (New York, 1929). Includes a study of Spencer's philosophy (I, 45-62).

- DUNCAN, DAVID, *Life and Letters of Herbert Spencer*, 2 vols. (New York, 1908). Supplements Spencer's *Autobiography*, 2 vols. (New York, 1904).
- ENSOR, R. C. K., *Some Reflections on Herbert Spencer's Doctrine That Progress Is Differentiation* (London, 1946). The Herbert Spencer Lecture, delivered before the University of Oxford, May 28, 1946. Ensor brings out the lasting value of Spencer's doctrine that differentiation is progress, and he shows the dangers in modern civilization resulting from uniformity of mind and outlook, particularly in totalitarian states. Even in democracies, the press, radio, and cinema represent, according to Ensor, dangerous elements of uniformity: "It has been through choruses of enslaved minds that every dictatorship has shouted its way into power" (p. 27).
- HOFSTADTER, RICHARD, *Social Darwinism in American Thought*, rev. ed. (Beacon Paperbacks, Boston, 1955). Chap. II, "The Vogue of Spencer" (pp. 31-50), is the best brief analysis of the influence of Spencer's social and political philosophy on American thought. See also Edward L. Youmans, *Herbert Spencer on the Americans, and the Americans on Herbert Spencer* (New York, 1883), containing the text of an interview with Spencer, and a report of the speeches delivered at the farewell banquet given for Spencer before his return to England. Truxtun Beale (ed.), *The Man versus the State* (New York, 1916), contains the full text of *The Man versus the State*, with prefaces to each chapter by distinguished American leaders, such as William Howard Taft, Charles W. Eliot, Elihu Root, Henry Cabot Lodge, Nicholas Murray Butler, E. H. Gary, and others.
- MACPHERSON, HECTOR, *Spencer and Spencerism* (New York, 1900). A balanced appraisal of Spencer's social, economic, political, ethical, philosophical, and religious views. See also Josiah Royce, *Herbert Spencer: An Estimate and Review* (New York, 1904); William Henry Hudson, *Herbert Spencer* (London, 1908); and Alfred W. Tillett, *Spencer's Synthetic Philosophy: What It Is All About* (London, 1914).
- PAUL, ELLEN, "Herbert Spencer: The Historicist as a Failed Prophet," *Journal of the History of Ideas* (October-December, 1983). Presents the view that Spencer's views were historicist, as they see evolution as following a necessary course. This prevented Spencer from being able to forecast the future accurately.
- PEEL, JOHN, *Herbert Spencer: The Evolution of a Sociologist* (New York, 1971). Concerns the origin, content, and influence of Spencer's sociology. The most extensive recent work on this subject.
- RUMNEY, J., *Herbert Spencer's Sociology* (London-New York, 1934, reprinted 1966). Chap. V (pp. 130-161) is on "Society, State, Government," and Chap. VI (pp. 162-186) on "Property and Economic Institutions." An extensive bibliography of writings by, and on, Spencer is appended (pp. 311-351). See also the Introduction by Talcott Parsons to Herbert Spencer, *The Study of Sociology* (Ann Arbor Paperbacks, Ann Arbor, 1961).
- TURNER, JONATHAN, *Herbert Spencer: A Renewed Appreciation* (Beverly Hills, 1985). Concentrates on Spencer's sociology. Turner believes there is much useful still in it.
- WILTSHIRE, DAVID, *The Social and Political Thought of Herbert Spencer* (Oxford, 1978). Contains both a biography/intellectual history of Spencer and an elucidation of his political concerns.

II KEYNES

- BEVERIDGE, WILLIAM H., *Full Employment in a Free Society* (London, 1944). Like Keynes' *General Theory of Employment, Interest, and Money*, Beveridge's *Full Employment in a Free Society* is a pioneering contribution to the solution of the problem of a free society without want and misery, and both works are the products of intellectual leaders of the Liberal party. The underlying principle of *Full Employment in a Free Society* is "to propose for the State only those things which the State alone can do or which it can do better than any local authority or than private citizens either singly or in association, and to leave to these other agencies

- that which, if they will, they can do as well as or better than the State" (p. 36).
- DEWEY, JOHN, *Individualism: Old and New* (New York, 1930). A restatement of the more permanent principles of individualism in the light of twentieth-century industrial civilization. See also Dewey's *Liberalism and Social Action* (New York, 1935), *The Public and Its Problems*, new ed. (Chicago, 1946), *Reconstruction in Philosophy*, enlarged ed. (Boston, 1948), and *Problems of Men* (New York, 1946). Appraisals of John Dewey's impact on contemporary social thought will be found in the symposium volume, Sidney Hook (ed.), *John Dewey: Philosopher of Science and Freedom* (New York, 1950).
- GIRVETZ, HARRY K., *The Evolution of Liberalism* (Collier Books, New York, 1966). The author of this clearly written and cogently argued work divides liberalism into two parts. Part I (pp. 23-149) deals with "Classical Liberalism," covering the period from the seventeenth to the nineteenth century. Part II (pp. 153-387) deals with "Contemporary Liberalism," as it has evolved in the twentieth century. Throughout, the author examines the psychological, philosophical, economic, and political assumptions and realities of liberalism. For an English approach to modern liberalism, see Kenneth R. Minogue, *The Liberal Mind* (Vintage Books, New York, 1968).
- HAHN, ALBERT L., *The Economics of Illusion: A Critical Analysis of Contemporary Economic Theory and Policy* (New York, 1949). A vigorous critique of Keynes' ideas. See also Henry Hazlitt, *The Failure of the "New Economics": An Analysis of the Keynesian Fallacies* (Princeton-New York, 1959), and David McCord Wright, *The Keynesian System* (New York, 1962).
- HARRIS, SEYMOUR (ed.), *The New Economics: Keynes' Influence on Theory and Public Policy* (New York, 1947, reprinted 1965). Contains varied appraisals of Keynes' doctrines in relation to classical and Marxian political economy by distinguished American and European economists. Indispensable to an understanding of Keynes' impact on public policy in Britain and the United States. See also A. C. Pigou, *Keynes' General Theory* (London, 1950); Alvin H. Hansen, *A Guide to Keynes* (New York, 1953); Seymour E. Harris, *John Maynard Keynes: Economist and Policy-Maker* (New York, 1955); Kenneth K. Kurihara, *Introduction to Keynesian Dynamics* (New York, 1956); Joseph A. Schumpeter, *Ten Great Economists* (London, 1952), whose Chap. X is on Keynes (pp. 260-291); and Harlan L. McCracken, *Keynesian Economics in the Stream of Economic Thought* (Baton Rouge, 1961).
- HARROD, R. F., *The Life of John Maynard Keynes* (New York, 1951). The first full-length biography of Keynes' life and thought, with particular reference to his economic and political views. In "Are We Really All Keynesians Now?" *Encounter*, XXII (January, 1964, 46-50), Harrod argues that, at least as far as public policies in Britain and the United States are concerned, the influence of Keynes has not been nearly as great as is commonly alleged. Harrod refers particularly to the issues, all-important to Keynes, of low interest rates, budget deficits, full employment and economic growth, and international balance of payments and international monetary liquidity.
- HEILBRONER, ROBERT L., *The Worldly Philosophers: The Lives, Times, and Ideas of the Great Economic Thinkers*, 6th ed. (New York, 1986). Chap. IX of this popular book, addressed to the general reader, is on "The Sick World of John Maynard Keynes." The author stresses that Keynes was at heart a conservative, whose aim was to rescue capitalism, not to destroy it, to create "a capitalist economy in which unemployment—the single greatest and gravest threat to its continuance—would be forever eliminated."
- HUTT, W. H., *The Keynesian Episode: A Reassessment* (Indianapolis, 1979). A reworking of Hutt's 1963 *Keynesianism—Retrospect and Prospect* (Chicago). One of the most detailed and hostile criticisms of Keynes and Keynesianism.
- JOHNSON, ELIZABETH, *The Shadow of Keynes* (Oxford, 1978). A work on Keynes, his Cambridge environment, and Keynesianism.

- JOHNSON, HARRY G., "The *General Theory* after Twenty-Five Years," *American Economic Review* (Papers and Proceedings), LI (May, 1961), 1-17. On the positive side, the author states, Keynes' *General Theory of Employment, Interest, and Money* "explained why the competitive capitalist economy does not automatically maintain a satisfactory level of employment and outlined the theory of remedial policy, thereby promoting a revolution in ideas on the responsibilities of government in such a system" (pp. 16-17). On the negative side "is the bias that the majority of Keynesians have drawn from the *General Theory* against allowing money, and consequently monetary policy, an important role in determining the level of activity of the economy. This bias has meant that Keynesian theory has proved a poor guide to the dominant post-war policy problem of inflation and that the Keynesian approach to this problem has tended to degenerate into a confused and often obstructive eclecticism" (p. 14).
- KAHN, RICHARD, *The Making of Keynes' General Theory* (Cambridge, 1984). Six lectures on the background and content of Keynes's economics, together with biographical matter on Keynes and an excellent bibliography.
- KEYNES, JOHN MAYNARD, *Two Memoirs* (London, 1949). The second memoir is on "My Early Beliefs" (written in 1938), which throws considerable light on Keynes' early intellectual development. See also Keynes' *Essays in Persuasion* (New York, 1932), particularly "Am I a Liberal?" (pp. 323-338), "Liberalism and Labour" (pp. 339-345), and "Economic Possibilities for Our Grandchildren" (pp. 358-373).
- KEYNES, MILO (ed.), *Essays on John Maynard Keynes* (London, 1975). A collection of mostly personal essays.
- KLEIN, LAWRENCE R., *The Keynesian Revolution*, 2nd ed. (New York, 1966). Chap. VII deals with "Keynes and Social Reform" (pp. 165-187), and the author emphasizes the point that the "Keynesian policy is, indeed, a conservative one because it aims to conserve free-enterprise capitalism." The author warns against the danger of fascism as the possible result of *laissez faire*, fascism being "the worst stage of capitalism. It is the form that our capitalist society will acquire unless we are successful in bringing about Keynesian reforms or a socialist economy. If we let nature take its course, the economic law of motion of capitalism will take us down the same road that Germany followed so recently" (p. 167).
- LEKACHMAN, ROBERT, *The Age of Keynes* (Vintage Books, New York, 1968). Chaps. 1-7 (pp. 11-202) are on "Keynes and Keynesian Economics," and Chaps. 8-11 (pp. 205-301) on "The Keynesian Era." In the concluding "Epilogue" the author writes that Keynes' *General Theory* "was really a search for increased rationality in economic policy. In its contemporary applications, Keynesian economics is essentially a description of the ways in which an alert government, by taking thought, can tame the business cycle and alleviate the miseries of personal insecurity. If Keynes could be said to have possessed an ideology, it was a confidence born of the humane Locke-Hume-Mill tradition that intelligence in human affairs is both essential and possible" (p. 303). See also Lekachman's "John Maynard Keynes," *Encounter*, XXI (December, 1963), 34-43, and the symposium edited by him, *Keynes and the Classics* (Boston, 1964).
- MACGREGOR, D. H., *Economic Thought and Policy* (Home University Library, London-New York, 1949). Studies the relations of economic thought to public policy, and includes discussions of *laissez faire*, Keynes, and democratic socialism. An excellent introduction to the subject.
- MINSKY, HYMAN, *John Maynard Keynes* (New York, 1975). Concentrates almost exclusively on *The General Theory of Employment, Interest, and Money*, with little reference to Keynes's other, or to secondary, works. Minsky's thesis is that *The General Theory* has been misunderstood.
- MOGGRIDGE, DONALD, *John Maynard Keynes* (New York, 1976). An introduction to Keynes and his thought. Part of the "Modern Masters" series.
- POLANYI, KARL, *The Great Transformation* (Beacon Paperbacks, Boston, 1957). A provocative study of the devastating human effects of the market economy, the central institution of the nineteenth century, and

of the growing efforts to protect society against the evils of the unregulated market economy.

- ROBINSON, JOAN, *Introduction to the Theory of Employment* (London, 1937). A brief introduction to the main points of Keynes' theories.
- RUGGIERO, GUIDO DE, *The History of European Liberalism* (Beacon Paperbacks, Boston, 1959). The first part of the book deals with the evolution of liberalism in England, France, Germany, and Italy, while the second part inquires into the relations of liberalism and socialism, democracy, religion, and nationalism. A useful bibliography is included (pp. 445-463). See also Maurice Cranston, *Freedom: A New Analysis* (New York, 1953), which contains both a philosophical analysis of the concept of freedom and the historical varieties of liberalism in England, France, Germany, and the United States.
- SALTER, ARTHUR, *Personality in Politics* (London, 1947). Chap. X (pp. 138-148) is on "Maynard Keynes: The Artist-Economist." Written from close personal knowledge, this brief essay manages to give an intimate picture of Keynes' personality, life, and thought.
- VICARELLI, FAUSTO (ed.), *Keynes's Relevance Today* (Philadelphia, 1985). A collection of essays, mostly on economic topics. See also Vicarelli's *Keynes: The Instability of Capitalism* (trans. John Walker, Philadelphia, 1984).

III MYRDAL

- ANDERSON, PERRY, and ROBIN BLACKBURN (eds.), *Towards Socialism* (London, 1965). A variety of articles on the Labor Party and socialism, generally written from a Left of Center viewpoint within the Labor Party. The contributors include some distinguished names in the British labor movement, such as Richard Crossman, Thomas Balogh, Richard Titmuss, and Raymond Williams.
- ARNOLD, THURMAN, *The Folklore of Capitalism* (New Haven, 1937). This book, full of wit and scholarship, shows that "political government" is not the only, or necessarily the most oppressive, form of government; "economic government,"

especially as it appears in corporate business and monopolies, also expresses power relations between men. Arnold shows how the folklore and mythology of capitalism transform the realities of economic government into innocent fictions and magic rituals.

- BARKER, ERNEST, *Political Thought in England, 1848-1914*, rev. ed. (London, 1928). The last chapter, "Economics and Politics" (pp. 203-247), traces the beginnings of socialist ideas in Britain from the eighteen-eighties on. It analyzes the British reactions to Marx, and briefly describes the birth and growth of Fabianism.
- BAUMOL, WILLIAM J., *Welfare Economics and the Theory of the State*, 2nd ed. (Cambridge, Mass., 1965). Written from an economist's standpoint, the author critically analyzes the difficulties involved in the theory of welfare economics. First published in 1952, the second edition contains a new Introduction, "Welfare and the State Revisited" (pp. 1-48). See also the following: Kenneth J. Arrow, *Social Choice and Individual Values* (New York, 1951); Anthony Downs, *An Economic Theory of Democracy* (New York, 1957); I. M. D. Little, *A Critique of Welfare Economics*, 2nd ed. (Oxford, 1957); A. C. Pigou, "Some Aspects of the Welfare State," *Diogenes*, No. 7 (Summer, 1954), 1-11; E. J. Mishan, "A Survey of Welfare Economics 1939-1959," *Economic Journal*, LXX (June, 1960), 197-265; Harvey Leibenstein, "Notes on Welfare Economics and the Theory of Democracy," *ibid.*, LXXII (June, 1962), 299-319; and Arthur Seldon, "Which Way to Welfare?," *Lloyds Bank Review*, No. 82 (October, 1966), 34-48.
- BEER, MAX, *Fifty Years of International Socialism* (London, 1935). This autobiography of a continental socialist, who spent about a quarter of a century in England, contains some penetrating analyses of English politics in general and English socialism in particular. In Chap. XXXIV, "Interview with Lenin" (pp. 144-159), Beer explained to Lenin some of the effects that he observed in revolutionary socialists who had fled from the Continent to England: "Revolutionary exiles, if they live for any length of time in England, turn

gradually into reformists; she acts upon them as a derevolutionizing filter. I have met in London former revolutionists and terrorists from Germany and Austria, Communards and Anarcho-Communists from the Latin countries, who had become wise in England. With an air of superior wisdom they held forth on the virtues of 'compromise, statesman-like attitude, sagacity, well-balanced judgment, and preference of expediency to principle,' and all those stock phrases they had heard in lecture-halls, or had read in *The Times* or *The Spectator*" (pp. 152-153).

• BESTOR, ARTHUR E., JR., "The Evolution of the Socialist Vocabulary," *Journal of the History of Ideas*, IX (June, 1948), 259-302. This painstaking research into the origins and diffusion of key terms of the socialist vocabulary not only sheds light on the precise meaning of terms, but also contributes a good deal to a better understanding of the history of socialist ideas. The origin of the terms "socialism" and "communism" is discussed on pp. 276-283. The author concentrates on English, French, and German terms. In all, this is an indispensable analysis for the student of the history of socialist ideas.

• BUBER, MARTIN, *Paths in Utopia* (Beacon Paperbacks, Boston, 1958). The author, who held the chair of social philosophy at the Hebrew University in Jerusalem, defends the non-Marxist socialism of Owen, Saint-Simon, Fourier, Proudhon, Kropotkin, and Gustav Landauer against the Marxist-communist doctrine of class war and dictatorship. Buber attempts to show that socialism based on small associations of freely cooperating individuals is the only realistic approach to the reconstruction of modern society, and that it is far from being "utopian," as Marx and Engels sarcastically called it, whereas the self-styled "scientific" doctrines of Marx and Lenin are doomed to fail precisely because they violate the true nature of man, his needs for freedom and cooperation. As an example of cooperative socialism based on personal freedom and voluntary association, the author describes in the epilogue the "Kvuzza," or Village Commune, in Israel ("An Experiment That Did Not Fail,"

pp. 139-149). All in all, this book is indispensable to the study of non-Marxist socialism.

• COLE, G. D. H., *A History of Socialist Thought, 1789-1939*, 5 vols. (New York, 1953-1960). The standard work on the subject, lucidly written, and very broad in coverage. See also the following of Cole's writings: *Social Theory* (London, 1920), *Guild Socialism Restated* (London, 1920), *Robert Owen* (London, 1925), *A Short History of the British Working Class Movement, 1789-1947*, rev. ed. (London, 1948), *Socialist Economics* (London, 1950), *Essays in Social Theory* (London, 1950), *Studies in Class Structure* (London, 1955), and *Socialism in Evolution* (London, 1938). In *Socialism and Evolution*, Cole was one of the first writers to point out the impact on the Socialist parties of the growth of white collar workers, the "salaried," while the proportion of the manual workers in the total labor force has been constantly declining.

• COLE, MARGARET, *The Story of Fabian Socialism* (Stanford, Calif., 1961). Like her husband G. D. H. Cole, who served as chairman and president of the Fabian Society for a number of years, Margaret Cole served the Fabian Society in various capacities for nearly four decades, including a term of office as chairman. Her story of the Fabian Society from its foundation in 1883 to 1960 thus encompasses part of her own life and that of her husband's, and her writing bears the stamp of authenticity and inside knowledge and feeling. Margaret Cole (ed.), *The Webbs and Their Work* (London, 1949), is the best introduction into the thought of the two great Fabians, Sidney and Beatrice Webb, and has contributions by Bernard Shaw, Lord Beveridge, G. D. H. Cole, and others. Chap. XVI, "Political Thought and the Webbs" (pp. 251-264), by Leonard Woolf, is an incisive and critical account of the political ideas of the Webbs. Margaret Cole is also the author of a biography, *Beatrice Webb* (New York, 1946). Beatrice Webb wrote two books about herself and her husband Sidney Webb that are important sources for the study of Fabianism and British socialism: *My Apprenticeship* (London, 1926),

and *Our Partnership* (London, 1948). See also Edward R. Pease, *The History of the Fabian Society*, 3rd ed. (New York, 1965), which covers the period of 1884-1924, and A. M. McBriar, *Fabian Socialism and English Politics, 1884-1918* (Cambridge, 1962), which is organized topically rather than chronologically. For the period treated, McBriar's work is outstanding. Chaps. II-VI, analyzing the political, historical, economic, and sociological ideas of the Fabians, are particularly valuable (pp. 29-162). Has one of the most comprehensive bibliographies on Fabianism (pp. 350-374).

• FROMM, ERICH (ed.), *Socialist Humanism: An International Symposium* (Anchor Books, Garden City, N.Y., 1966). The contributors hail from many countries, including several communist states in Eastern Europe. In his Introduction, Fromm defines humanism as "the belief in the unity of the human race and man's potential to perfect himself by his own efforts" (p. vii), and the papers in the symposium are centered on the philosophical aspects of socialism rather than on its social and economic aspects.

• KAUTSKY, KARL, *Social Democracy versus Communism* (New York, 1946). Kautsky (1854-1938) was the leading socialist theoretician between the age of Marx and Engels (both of whom he met on a visit to England in 1881) and the 1930s. Starting out as an orthodox Marxian, he gradually abandoned the Marxian concepts of revolution and violence, particularly after the Bolshevik Revolution of 1917 in Russia. See also the following of his works: *The Social Revolution* (Chicago, 1905), *The Dictatorship of the Proletariat* (Manchester-London, 1919), *The Labour Revolution* (New York, 1925), and *Bolshevism at a Deadlock* (London, 1931).

• LANDAUER, CARL, *European Socialism: A History of Ideas and Movements from the Industrial Revolution to Hitler's Seizure of Power*, 2 vols. (Berkeley-Los Angeles, 1959). The author does not include British socialism in his massive history of nearly 1900 pages—on the ground that there is ample historical material

available in the works of the Webbs, Max Beer, and G. D. H. Cole. Yet he includes Soviet communism, about which there is abundant historical material available, too. The focus of his study is on Germany, Russia, France, and Italy, and he is particularly familiar with German ideas and events, since he took active part in the German Social Democratic Party until 1933, when he came to the United States. Within its self-imposed limitations, *European Socialism* is a useful source for the study of Continental European socialism and communism.

• MISES, LUDWIG VON, *Socialism* (New York, 1935; originally published in German as *Die Gemeinwirtschaft* in 1922). An important book, because Mises was the first to popularize a few basic arguments against planning and socialism that later gained wider currency through the books of F. A. Hayek and Walter Lippmann. Socialism is impossible, according to Mises, because of the lack of "economic calculation" in a socialist community. In addition, Mises cites what have become the standard arguments against socialism, from bureaucratic centralization to soulless totalitarianism. In *Human Action: A Treatise on Economics* (New Haven, 1949), Mises reaffirmed his faith in extreme *laissez faire*; Chap. XXXV, "The Welfare Principle versus the Market Principle" (pp. 829-850), provides a convenient summary of his position. In *The Anti-capitalist Mentality* (Princeton, 1956) Mises explores the sources of hostility to capitalism, particularly in countries in which the system has worked successfully.

• PIGOU, A. C., *Socialism versus Capitalism* (London, 1937). One of Britain's leading economists deals with such issues as distribution of wealth and income, the allocation of productive resources, unemployment, profit, technical efficiency, and the problem of incentive. He is sympathetic toward the method of "gradualness" in social and economic change, including the nationalization of important industries.

• SCHAEFER, DAVID (ed.), *The New Egalitarianism* (Port Washington, N.Y., 1979). A collection of critical, previously published essays by well-known authors on "The

'New' Egalitarianism," "Sexual Equality," "Remedies' for Inequality," and "The Roots of Contemporary Egalitarianism."

- SCHUMPETER, JOSEPH A., *Capitalism, Socialism, and Democracy*, 3rd ed. (New York, 1950). The bulk of this book, written by one of the great economists of the twentieth century, is on socialism. Whereas most students of socialism—whether sympathetic to it or not—relate the rise of socialism to the failures of capitalism, Schumpeter considers socialism primarily as the result of capitalist achievements and successes. Written in the early 1940s, Schumpeter's masterful analysis reflects the skeptical assumptions about the future of capitalism then common, but the value of the work is not thereby impaired. See also Henry Smith, *The Economics of Socialism Reconsidered* (London-New York, 1962).
- SHAW, BERNARD, and OTHERS, *Fabian Essays* (London, 1889). The most famous document on "Fabian Socialism." In addition to Shaw, the contributors are Sidney Webb, Graham Wallas, Sydney Olivier, William Clarke, Annie Besant, and Hubert Bland. It has sold many tens of thousands of copies since its first publication and has never ceased to be a steady seller in the field of socialist literature.
- TAWNEY, R. H., *Equality*, 4th ed. (New York, 1965). Originally published in 1931, the book is one of the classics of British socialist thought. Tawney, a social and economic historian of distinction, had a marked influence on British socialism, his chief sources of inspiration being moral and religious.
- THOMAS, NORMAN, *Socialism Re-examined* (New York, 1963). By the long-time leader of the Socialist Party, who served democratic socialism in the United States for over fifty years. Appendix I (pp. 215–236) reproduces the resolutions of the Socialist International Congresses of 1951 and 1962, and Appendix II (pp. 237–280) contains the full text of the Platform of the Socialist Party of 1962. Thomas' life and thought are presented in two biographies: Harry Fleischman, *Norman Thomas: A Biography* (New York, 1964), and Murray B.

Seidler, *Norman Thomas: Respectable Rebel*, 2nd ed. (Syracuse, 1967).

- TITMUSS, RICHARD M., *Income Distribution and Social Change* (London, 1962). Challenges the view, widely held in Britain and abroad, that British society has become more egalitarian as a result of the welfare state. For another critique of the welfare state in Britain, mainly from a political and administrative viewpoint, see David C. Marsh, *The Future of the Welfare State* (Penguin Books, Baltimore, 1964).
- ULAM, ADAM B., *Philosophical Foundations of English Socialism* (Cambridge, Mass., 1951). Shows, in particular, the impact of English philosophical idealism on the early English socialists.
- VEBLEN, THORSTEIN, *The Engineers and the Price System* (New York, 1921). This short book is probably the best introduction to Veblen's approach to political economy. Veblen's main concern was the growing separation between the business and financial managers on the one hand and the technical experts, the engineers, and workers on the other. Though he was not a socialist, Veblen's critical analysis of American business institutions had a profound influence on American political and economic thought, and his contribution to social science is perhaps the most original the United States has produced in the twentieth century. Unlike Marx, Veblen did not claim to be in communion with the laws of history, and he was not sure what kind of society would develop once absentee ownership and control in industry would be replaced by a new industrial order in which engineers and workers would predominate. See also the following works by Veblen: *The Theory of the Leisure Class* (New York, 1889); *The Instinct of Workmanship and the State of the Industrial Arts* (New York, 1914); *The Higher Learning in America* (New York, 1918); *Absentee Ownership and Business Enterprise in Recent Times: The Case of America* (New York, 1923); and *Essays in Our Changing Order* (New York, 1934). *What Veblen Taught* (edited, with a long introduction, by Wesley C. Mitchell, New York, 1936) is made up of selections from Veblen's more important writings. The

standard biography is *Thorstein Veblen and His America*, by Joseph Dorfman (New York, 1934, reprinted 1961), but see also: Douglas F. Dowd (ed.), *Thorstein Veblen: A Critical Reappraisal* (Ithaca, N.Y., 1958); John A. Hobson, *Veblen* (New York, 1937); and David Riesman, *Thorstein Veblen: A Critical Interpretation* (New York, 1953).

- WEBB, SIDNEY, and BEATRICE WEBB, *The Decay of Capitalist Civilization*, 3rd

ed. (London, 1923). See also *The Consumers' Co-operative Movement* (London, 1921), and *A Constitution for the Socialist Commonwealth of Great Britain* (London, 1920). One of the most important writings of Sidney Webb is *Labour and the New Social Order* (London, 1918), the Labor Party program of 1918, which for the first time committed it to socialism. Until that time, the Labor Party was not officially socialist.

CHAPTER THIRTY-THREE

HAYEK

- BARRY, NORMAN, *Hayek's Social and Economic Philosophy* (London, 1979). Barry's brief work outlines and discusses the major ideas in philosophy, law, politics, and economics of Hayek.
- BUTLER, EAMONN, *Hayek: His Contribution to the Political and Economic Thought of Our Time* (London, 1983). A brief (168 pages) introduction to Hayek's comprehensive thought.
- CUNNINGHAM, ROBERT (ed.), *Liberty and the Rule of Law* (College Station, Tex., 1979). A collection of essays, not exclusively on Hayek, but concerning Hayekian subjects.
- FINER, HERMAN, *Road to Reaction* (Boston, Mass., 1945). Finer's preface gives the tone of This book, and of much of the early reaction to *The Road to Serfdom*: "Hayek's apparatus of learning is deficient, his reading incomplete; . . . his understanding of the economic process is bigoted, . . . his political science is almost non-existent."
- FRIEDMAN, MILTON, *Capitalism and Freedom* (Chicago, 1962). Friedman's policy recommendations for the American economy, and his presentation of how and why political and economic freedom are inter-related.
- GALEOTTI, ANNA, "Individualism, Social Rules, Tradition," *Political Theory* (May, 1987), 163–181. This article explores

Hayek's conception of individualism, finding that it places very little importance on political citizenship, and concluding that his is a coherent perspective only when political citizenship is replaced by other social ties.

- GRAY, JOHN, *Hayek on Liberty* (Oxford, 1984). Emphasizes the naturalist character of Hayek's theory of justice, in that for him justice is what is naturally possible, not what would be ethically desirable. A major work on Hayek; includes an extensive bibliography.
- HAYEK, FRIEDRICH, *Studies in Philosophy, Politics and Economics* (Chicago, 1967). A particularly broad-ranging collection of 25 essays.
- HOY, CALVIN, *A Philosophy of Individual Freedom: The Political Thought of F. A. Hayek* (Westport, Conn., 1984). A thorough, but brief, investigation into the political thought of Hayek.
- MACHLUP, FRITZ (ed.), *Essays on Hayek* (New York, 1976). Essays by Hayek supporters, including Milton Friedman and William Buckley.
- STREISSLER, ERICH, et al., *Roads to Freedom: Essays in Honour of Friedrich A. von Hayek* (New York, 1969).
- WALKER, GRAHAM, *The Ethics of F. A. Hayek* (Lanham, Maryland, 1986). A critique of the ethical underpinnings of Hayek's thought from a Christian perspective.

CHAPTER THIRTY-FOUR

RAWLS

- *The American Political Science Review* (June, 1975). Contains seven articles on *A Theory of Justice*, including one by Allan Bloom criticizing Rawls from the perspective of traditional political philosophy.
- BARRY, BRIAN, *The Liberal Theory of Justice* (Oxford, 1973). The first and in many ways still the best full-length refutation of Rawls. Barry's brief book subjects *A Theory of Justice* on a number of points to criticism.
- BLOCKER, H. G., et al. (eds.), *John Rawls' Theory of Social Justice: An Introduction* (Athens, O., 1980). A collection of essays grouped under the headings "Fundamentals of the Rawlsian System of Justice," "Applications of the Rawlsian System of Justice," and "Rawls in Perspective."
- DANIELS, NORMAN, ed., *Reading Rawls* (New York, 1980). An excellent collection of essays.
- DE CRESPIGNY, ANTHONY and KENNETH MINOGUE (eds.), *Contemporary Political Philosophers* (London, 1976). Includes a chapter by Samuel Gorovitz on Rawls.
- DI QUATTRO, ARTHUR, "Rawls and Left Criticism," *Political Theory* (February, 1983), 53-78. A defense of Rawls from left criticism, holding: "Rawls' theory of justice, though in need of some friendly amendments, is essentially compatible with socialist, including Marxist, ideas of social justice."
- ESQUITH, STEPHEN and RICHARD PETERSON, "The Original Position as Social Practice," *Political Theory* (May, 1988), 300-334. A Marxist critique of the original position and the ideology which the authors believe is inherent in it—"a kind of humanistic corporatism." Unsurprisingly, Rawls' division of political and economic spheres is criticized.
- MARTIN, REX, *Rawls and Rights* (Lawrence, Kansas, 1985). Martin attempts to extend Rawls' principles in a way which he feels defends Rawls from some criticisms. Martin's emphasis is on the "basic structure rights" which he finds in Rawls, and which he considers of both a political and moral nature.
- NIELSEN, KAI and ROGER SHINER (eds.), *New Essays on Contract Theory* (Guleph, Canada, 1977). Most of the essays are on Rawls.
- POGGE, THOMAS, *Realizing Rawls* (Ithaca, N.Y., 1989). A defense and constructive critique of Rawls' work. Pogge focuses on the basic structure and the maximin principle.
- RAWLS, JOHN, "Some Reasons for the Maximin Criterion," *American Economic Review* (May, 1974), 141-146. A brief defense of the maximin criterion, holding in essence: "the maximin criterion is not meant to apply to small-scale situations . . . Maximin is a macro not a micro principle."
- SCHAEFER, DAVID, *Justice or Tyranny? A Critique of John Rawls' A Theory of Justice* (Washington, N.Y., 1979). The most strident criticism of Rawls, from a Straussian perspective.
- WELLBANK, J. H., et al., *John Rawls and His Critics: An Annotated Bibliography* (New York, 1982). Almost 700 pages and 2,500 entries. Includes all primary sources, and secondary sources by author, title, review, and concept.
- WOLFF, ROBERT, *Understanding Rawls: A Reconstruction and Critique of A Theory of Justice* (Princeton, 1977). Another criticism of Rawls, from a leftist viewpoint.

INDEX

The introductory essays at the beginning of each chapter were read for indexing. Then the authors and titles of reading selections were added. The "Bibliographical Notes" are not indexed.
