PREFACE

PREFACE TO THE FIFTH EDITION

Over the forty years since its first edition appeared in 1951, *Great Political Thinkers: Plato to the Present* has established itself as one of the all-time best sellers in the area of the history of political theory. The purpose of the fifth edition is to update the material presented. The method of this edition remains what it has always been: introductory essays on the greatest political thinkers—placing them in their historical contexts and providing some analytic apparatus—followed by key selections from the thinkers' greatest works. This approach combines the strengths of original readings and of commentary. In addition, comprehensive "Bibliographical Notes" are provided at the end of the book.

Extensive market research was performed in advance of this edition. Surveys were sent to existing users of *Great Political Thinkers*, and personal interviews were conducted. As a result, three thinkers have been excluded—Clement Attlee, Lord Lindsay of Birker, and Hugh Gaitskell—and eight thinkers have been added—John Rawls, Friedrich Hayek, Mohandas Gandhi, Friedrich Nietzsche, Adam Smith, Immanuel Kant, David Hume, and Epicurus. Further, at his death, William Ebenstein was working on a book to be titled *The Roots of the West*, the purpose of which would have been to trace the beginnings of western political thought to Greek rationalism, Jewish monotheism, and Christian love. His chapter drafts on these subjects have been incorporated here to give a more interpretive account.

Existing users of *Great Political Thinkers* will find that, with the exception of the chapter "Democratic Socialism and the Welfare State" (including Attlee, Lord Lindsay, and Gaitskell), the fifth edition retains almost all of the fourth. All chapters, both introductory essays and readings, have, however, been reviewed and updated where necessary. Other significant changes are placing Hegel in a chapter of his own, adding selections from John Stuart Mill's *The Subjection of Women* to the chapter including him, rearranging the order of several chapters, and moving Gunnar Myrdal to the chapter that was comprised of Herbert Spencer and John Maynard Keynes.

For their advice, assistance, encouragement, and support on the fifth edition of *Great Political Thinkers*, I should like to thank three good friends of my father's and mine—Professors Larry Adams, Tom Schrock, and Gordon Baker—and my brother Rob.

ORIGINAL PREFACE

The purpose of this book is to present the major turning points of Western political thought from Plato to the present. The best way to understand these vital and trailblazing ideas is to read the great writers themselves rather than works about them. There is room for commentary and critical analysis, but neither can take the place of the original sources. Political philosophy, like all philosophy, is not always easy and unambiguous, and the reproduction of the original statements familiarizes the reader most faithfully with the intention of the writer. Moreover, the great works of political literature have attained the rank of classics not only because they reveal philosophical depth and penetration but because they are perennially fresh and exciting as pieces of literature, providing esthetic pleasure and enjoyment as well as intellectual challenge and stimulation. The presentation of carefully selected portions from original writings is most likely to attain both objectives.

The original materials from the great political writings are supplemented in this book in two ways. First, each chapter is prefaced by an introductory essay that seeks to place thinkers and issues in the proper historical setting and perspective. Second, the Bibliographical Notes at the end of the book contain explanatory and critical data and comments designed to help the student in his research on a particular author or problem. The customary listing of mere titles for further reading is of little use to the student who desires to broaden the range and scope of his knowledge, and it is hoped that the more detailed Bibliographical Notes in this book will aid him in discovering and exploring the vast territories of political philosophy.

The problem of selecting important political writers for a book of this sort is not without its difficulties. Some authors are obvious musts, others are less imperative. With regard to American political thought, the field has grown so immensely that I hope to prepare a separate volume on it which will give due scope to its importance. Also, the question arises whether each author should be presented by means of a comparatively lengthy selection from his major work or by several briefer excerpts from several of his works. Most chapters in this book deal with only one writer, and the selection is usually limited to his single most important work. Such a method makes it possible for the reader to concentrate on fewer authors and to familiarize himself more thoroughly with the outstanding political classics of world literature and philosophy. The purpose of providing portions of great works in the original is to whet the reader's appetite to read them in their entirety, and it is hoped that this book will contribute to that end.

Whether all authors included deserve to be called "great" is open to question. Particularly regarding the more recent writers, history alone will tell how important they are from a long-term viewpoint. In some instances writers have been included, not necessarily because they are great thinkers, but because they have had considerable influence on politics, and because their statements typify an entire school of thought that is of direct and vital concern today. Similarly, not all the authors included fall, strictly speaking,

into the domain of traditional political science. But it is hoped that a great economist, like Keynes, or a great psychologist, like Freud, will awaken in the student of politics the awareness that our political wisdom will grow in proportion to our ability to draw on new sources of knowledge and insight.

GREAT
POLITICAL
THINKERS

CHAPTER ONE

ROOTS OF WESTERN POLITICAL THOUGHT

The twentieth century has been one of tremendous change. Politically, economically, culturally, and environmentally—the world of 2000 will bear little resemblance to that of one hundred years before. Without question, and for ill or good (there are those who would argue each way) the primary guiding force in this century has been those nations and ideologies that stem from the western tradition. While this assertion is not meant to downgrade or denigrate the impact that has come from outside the west, it is to say that for the most part the twentieth century has been a western century on a worldwide basis. Whether this remains the case in future centuries is yet, of course, to be seen. A greater understanding of western civilization and its roots will aid in the study of political thought, historical and contemporary.

Western civilization is not a geographical concept. Its birthplace is the Mediterranean—Greece, Palestine, and Italy. From there, it spread throughout Europe and the Middle East. A penetration into Asia and Africa lasted for several centuries. Egypt, for example, was a Christian country before the advent of Islam. But it was in Europe that Greco-Judeo-Christian civilization thrived, and it was Europe that transplanted this civilization to other continents over the last five hundred years. Spain and Portugal created a new world in South and Central America; England transplanted its language, customs, law, and religion to North America and Australia; the French recreated their own civilization in Quebec.

The spread of western civilization should not be confused with mere colonial expansion. Where Europeans did the dirty work of clearing the forest and plowing the soil, western civilization, generally, was most fully transplanted. Where, on the other hand, Europeans remained a small minority—a master race exploiting subjected indigenous majorities—western civilization has often been only a veneer over an enduring, non-western civilization. Examples of this include the Spanish in parts of Latin America, the British in India and

Africa, and the Dutch in Indonesia—Japan is a partial exception to the progress of western civilization through actual development by Europeans; after initial forced westernization in 1865 and 1945, Japan embraced some western ways with a zeal not seen in the original progenitor countries.

Less than three hundred years old, the United States is now the center of gravity of western civilization in terms of economics, politics, culture, and military power. Assuming that this civilization continues to exist, it is easily conceivable that the center of western civilization will someday be elsewhere. In antiquity, Athens, Jerusalem, and Rome were the leading points. During the Dark Ages, Byzantium (not Rome) was the most important site of cultural, literary, and administrative leadership. In the seventeenth and eighteenth centuries, Paris was the undisputed cultural capital of the west. In the nineteenth century, London inherited that place. In this century, New York became the leading artistic, scientific, and intellectual clearing-house in the world. In the next century, Tokyo could become the effectual world center, just as within the United States influence is shifting to Los Angeles and the west coast, demonstrating the geographical mobility of western civilization.

Western civilization is not a fixed geographical entity largely because it revolves around potentially universal ideas rather than a more limited core of racial or ethnic links, as in traditional Chinese civilization or tribal outlooks. The supra-national and supra-racial quality of western civilization at its best is the distinctive feature that has made it so adaptable, dynamic, and enduring: western civilization is not tied to a particular race, nation, or geographical area. Its center of gravity has shifted, throughout its evolution from the Eastern Mediterranean through Europe to a community of nations in both the eastern and western hemispheres. Not all European nations have consistently demonstrated a western outlook. Nazi Germany provides the most glaring example of a European nation's intentional renunciation of western values.

Over the last five hundred years, hardly a corner of the world, from the tropical jungles to the frozen Arctic, has not felt the impact of western civilization. In terms of space and time, there has never been a civilization of such scope and magnitude. Technological and scientific impact are undisputed, and the more controversial issue of spiritual and intellectual influence is not much different. Asian and African societies only gained independence after they developed a class of leaders trained in the west or according to western methods. The revolt of non-western societies against their western overlords occurred following their indoctrination by the west in the concept of individuals' rights to happiness and dignity: Asians and Africans did not revolt against the west, but against its failure to practice its own teachings in dealing with non-western peoples. The condition of many colonial peoples was worse before colonialism than during and after.

Communism, although often a perversion of its ideals, is western in origin. As Lenin cogently observed, Marx derived his economic ideas from British economies, his political ideas from French revolutionary politics, and his philosophy from German thinkers. To some non-westerners, communism has appeared the quickest way to modernization and westernization.

The questions we have to answer are, what is so essential in the structure of western civilization that, were it removed, the whole building would either collapse or at least require overall reconstruction rather than patchwork

repairs; and, on what principles are its ethical, legal, economic, social, and political structures founded? It is difficult to know what is fundamental, because every aspect calls for attention. We shall find the roots of western civilization and its political theories when, in going back into the past, we reach a point beyond which it is either impossible or impractical to inquire. This process will allow us to sift the enduring from the ephemeral, the essential from the incidental, and the fundamental from the decorative.

We know that reason, the *belief in reason*, and the use of reason are not inventions of the twentieth century. Immediately, one recalls the great Age of Reason or Enlightenment which reached a peak in seventeenth- and eighteenth-century France and irradiated throughout the entire western world. Yet, we know France did not invent the cult of reason—rationalism as a way of life—and so we go back and back until we finally find the origin: sixth-century B.C. Greece.

It is true, of course, that the Greeks did not start from scratch—various Oriental peoples influenced them. Nevertheless, Greek civilization, as it imprinted itself on much of the world, was original; it was not derived from any earlier people in the same direct way in which other peoples borrowed some of their basic ideas from the Greeks. In the best of times, rationalism was the core political concept in antiquity and is so again in modernity.

The second root of the west is the Jewish *belief in one God* (monotheism), with the resulting concepts of the brotherhood of mankind (all men and women being children of the same Father) and of one world ruled by a higher law which is above human whim and arbitrariness. These are ethical precepts of the greatest political significance. Again, it can be shown that some other nations "came close" to the concept of one God before the Jews did. But just as the Greeks were the first to assign to reason a place in thought and conduct such as no society had done before, the Jews were the first to build their whole life around their belief in one God, and to base their thought, ethics, law, and government on this belief, which has been transmitted through Christianity to later times.

The practical expression of thought in action is central in classical Judaism. Had the Jewish contribution been confined to an original discovery in religion as a philosophical exercise, its impact on western civilization would have been temporary. But Jewish belief in one God was reflected in a moral code that remains the foundation of western law and ethics. Whereas the supreme Greek ideal was to *think clearly*, the supreme Jewish aspiration was to *act justly*.

The third western root is the Christian *conception of love*. Christianity incorporated Greek rationalism and absorbed Jewish monotheistic ethics, and added a new dimension that went beyond both: the principle of love as the basis of people's relation with God, and, more importantly, each other.

Once again, the point can be made that Greek thought and life put a great value on "sympathy" (a Greek word meaning "to feel with") and friendship, the latter considered by Aristotle, for example, to be the basis of all social and political organizations. The Greeks were intensely interested in love; Plato's dialogue *Symposium* is one of the great conversations on love in world literature. Yet, love in the *Symposium* is primarily the mutual embrace of two souls soaring together to the heights of perfection in the life of reason. On a lower level, love was seen by the Greeks as a fierce demon, something approaching madness. Similarly, classical Jewish thought emphasizes compassion and charity, and admonishes its adherents to "love thy neighbor as thyself." But neither the

Greek nor the Jewish conception of love has the unconditional, universal character of Christian love. In Christian thought, love is not in the periphery of life, in the rare moments of ecstasy, but in the center of life: Love is life itself. More than any other force, this is what has powered (often in fits and starts) the movement toward human equality, an emphatically political concern.

The three roots of western life—Greek rationalism, Jewish monotheism, and Christian love—are so encompassing that it is difficult, if not impossible, to derive specific social, economic, or political systems from them. Both the Old and New Testaments have been invoked to justify slavery and human freedom, obedience to government and revolution, democracy and monarchy, and capitalism and socialism, to mention but a few. Similarly, Greek rationalism has been appealed to in support of authoritarianism and liberalism, the planned economy and free enterprise, censorship and freedom of thought, and many other contradictory political and philosophical systems.

These contradictions have two causes. First, the conceptions of Greek rationalism, Jewish monotheism, and Christian love have never fully been lived up to in the western world. They have served as guiding ideals, but practice has often lagged behind the ideals. Second (and a reason which is often overlooked), these three sources of western thought are not completely complementary. There has always been a tension—though not irreconcilable—between the three elements, a pressure which has been both painful and fruitful. In antiquity itself, for example, Greeks and Jews were not overly fond of one another. To the ancient Greek, the ancient Jew was a fanatical puritan, living by a strict code that knew of no concessions to human frailty or levity. To the Jew, the Greek—with all his theorizing and endless philosophizing—was an ethical barbarian, whose gods indulged in debaucheries worse than would be tolerated among the lowest sinners in Israel.

Similarly, there is the tension between Christianity on the one side and Greek and Jewish ideals on the other. Christianity is not the mechanical merger of Greek and Jewish ideals, but an attempt to transcend them with something new and different; this process of “going beyond” Greek and Jewish ideals inevitably produced spiritual distances, gaps, stresses. At their worst, these tensions resulted in the burning of “pagan” Greek and Roman books by Christian priests and zealots in the early Middle Ages, or in Christian persecutions of Jews at various times. At their best, tensions between Christianity and its Greek and Jewish antecedents have been harmonized in exceptional persons like Albert Schweitzer. His example testifies that it is possible to unite in one life the three Greco-Judeo-Christian ideals of reason, ethics, and love. As a scholar-philosopher-artist, he would have been completely at home if he had been suddenly transported to fifth-century Athens; his conviction that moral belief must be expressed here and now in action that knows no allegiance other than God places him in the central tradition of Judaism; his choice to work among the poorest of humanity places him among the great Christians of all time.

Humanity’s potential remains untapped, and what the future has in store no one knows. But, certainly the lasting endurance of the three roots of the west indicate permanent elements in the human soul and psyche, which show the peaks humanity may reach, and which may define boundaries for political, economic, and social systems.

CHAPTER TWO

THE GREEK FAITH IN REASON

The essence of both Judaism and Christianity can be grasped, albeit imperfectly and incompletely, from the study of a few sources: the Old Testament and the Prophets, combined with the post-Biblical Talmudic literature (commentaries on the Bible), convey an adequate understanding of the essence of classical Judaism. The New Testament, supplemented perhaps by Augustine, Thomas Aquinas, Luther, and Calvin, enables one to intellectually understand the inner meaning of Christianity. This relative simplicity in fixing the roots and essence of Judaism and Christianity arises because both are religious in outlook, and therefore authoritarian to a degree. Authority makes for simplicity.

By contrast, Greek thought is predominantly rational and secular in orientation; there is, therefore, no Bible, no book of authority, no one single source that sums up the essence of Greek thought. The source of Greek thought is Greek life over eight centuries, from the sixth century B.C. to the end of the second century of the Christian era. There is no Moses, as in Judaism, and no Jesus, as in Christianity.

Looking for knowledge, understanding, wisdom, and illumination in the exploration of nature and man, Greek thought was marked in its progress by diversity, contradictions, and lack of definitiveness. Each generation seems to start all over again, incorporating some ideas of its predecessors, rejecting others, and trying to interpret the world in the light of its own experience and its own style of thinking.

The birth of western science and philosophy occurred in the sixth century B.C. The place was not mainland Greece, but the Ionian settlements on the west coast of Asia Minor and on the islands off the coast. These settlements had been formed by emigrants from mainland Greece many centuries before. In the Greek communities on the mainland, the ties of tribal unity were strong. Conversely, the migrants to the Ionian settlements came from various parts of Greece (as the early American colonists came from all over Britain), and thus were relatively free of tribal beliefs and taboos, allowing them to look at the

world from a less traditional perspective, both scientifically and politically. They were the first to organize city-states and learn self-government. Since the coastal strip of Asia Minor where they settled was narrow, and land therefore limited, they early took to navigation and commerce, exploring and doing business in the Mediterranean from its eastern shores in Egypt to the western shores of southern France. Undoubtedly these travels also facilitated their progress.

It is hard to overstate the originality and genius of ancient Greece, which continue to shine brightly and inspire after more than two-thousand years. Never before or since have so many brilliant minds been clustered in such a small part of time and space. Their sudden rise in civilization—to heights never before imagined, much less ascended—distinguishes the Greeks. Seemingly instantaneously, scientific theories and political philosophies emerged fully grown, as did Athena (the goddess of wisdom for whom Athens was named) from the head of Zeus in Greek mythology.

The men who discovered this knowledge were obviously not “modern” in the sense in which we now use this term (to designate the period roughly from 1500 to the present), but they surely were the absolute moderns of their day, which is why we continue to remember and discuss them in our time. Their concepts and contributions in mathematics, science, philosophy, literature, politics, and the arts continue to be examples of excellence.

Sixth-century B.C. Ionian thought marks the beginning of western science, aptly described as “the Greek way of thinking about the world.” The most important Ionian city was Miletus, a rich port and commercial center, the first bourgeois civilization in the west, and the birthplace of the first three great Greek thinkers, Thales, Anaximander, and Anaximenes, the founders of the “Milesian School.”

The literary fate of these early giants of Greek science and philosophy illustrates, and explains, at least one of the reasons why pre-Socratic thought is sometimes falsely seen as merely a prelude to Plato and Aristotle rather than as the greatest period of Greek originality, compared with which Plato and Aristotle mark the beginning of the end, rather than the peak, of Greek creative genius. Of Thales, we do not even know whether he ever wrote a book. If he did, no single authentic fragment survives. The only reason we know approximately when he lived is because he predicted an eclipse, which astronomy tells us took place in 585 B.C. About a dozen lines survive of Anaximander. We know that Anaximenes wrote one book: A single sentence has come down to us.

Compared to the majestic fullness of the works of Plato and Aristotle, the extant pieces of pre-Socratic Greek thought are thin indeed. Yet, the nature and influence of pre-Socratic Greek thinkers can be analyzed through the reactions of their contemporaries and, more often, of later writers still close enough to give us an authentic reflection of pre-Socratic thought.

A second reason, in addition to mere paucity of sources, that pre-Socratic thought has not received the attention it deserves is the influence of Christianity. In many respects, Christianity is the synthesis of Greek and Jewish thought. Yet, the Greek elements in Christianity are primarily Platonic and Aristotelian. There is not a single element of pre-Socratic Greek thought in Christianity. The main ideas of the pre-Socratics, from the sixth-century Ionian scientists and philosophers to the fifth-century sophists, are either opposed or at least indifferent to the main tenets of Christian philosophy. The lack of sympathy felt by the

early Christian theologians with respect to pre-Socratic Greek thought was inherited from Plato, as were so many other of his preferences and animosities.

The main interest of the Ionian scientists and philosophers was the rational exploration of nature. The very concept of “nature” (*physis*) is itself a Greek intellectual discovery and invention. In the pre-Greek, nonscientific world there is no concept of nature as a system of universal laws and regularities graspable by reason. Primitive man is aware only of *individual* things and events in the outside world, primarily from the viewpoint of their utility or harmfulness to himself. The primitive outlook of the world is animistic; it sees a demon, spirit, or divinity in every rock or tree. This leads to a world view that is irrational and dominated by the supernatural and mythical.

Thus, the Greek discovery of nature is one of the few great intellectual revolutions of all time, as it freed reason. From Thales onward, Greek thinkers were firmly convinced that nature could be understood. The modern distinction between scientist and philosopher was, incidentally, unknown to the Greeks. “Philosophy” means in Greek “love of knowledge” or “love of wisdom.” It was not, as it is today, a branch of learning, but the process of learning itself. Philosophy implied the searching for knowledge in all areas—scientific, metaphysical, and social. The emphasis, further, was on the activity of searching for knowledge and understanding, regardless of what the results might be.

From the idea that nature can be understood, early Greek thinkers stepped to the still bolder idea that *all* of nature can be understood; this step in turn led to the conclusion that everything was part of nature, and subject to its laws. This conclusion denied the existence of the supernatural, governed by arbitrary whims of gods or demons. There is only one kind of phenomenon: nature. Everything is subject to its laws, which human feelings and desires cannot influence, and from which even the gods are not exempt. Whereas primitive man sought—by prayer or sacrifice—to *influence* external phenomena or objects, the Greeks were the first to *observe* and *understand* them, realizing that there was no other way to master the universe.

Greek religious conceptions were intimately connected with the rational comprehension of nature. As early as Homer, no sharp separation between God and nature exists, and the miracle—an event running counter to natural law because so willed by God—plays a very small part. Whereas in the Judeo-Christian view God is *above* nature, changing its regularities when He sees fit, the Greek religious view sees the divine *in* nature: the laws of nature express the divine *reason*. The Judeo-Christian miracles, on the other hand, express the divine *will*. For the Jew and Christian, a miracle takes place when divine intervention changes the expected regularities of nature; for the Greek, the greatest miracle of all is the orderly regularity in which natural events occur. In later Hellenistic thought, the identification of God and nature become virtually complete, culminating in the Stoic religious philosophy of pantheism, according to which the whole universe is a manifestation of divine rationality, a view Thales may have expressed centuries earlier in a statement attributed to him, “all things are full of gods.”

It is a tribute to the Greeks’ sense of realism—so clearly expressed in their literature and art—that they first tackled the rational understanding of physical nature before taking on the much more complex job of rational mastery: man. The Greeks were the first people in history in which laymen, not a priestly class,

carried on intellectual activities of a higher order. The *intellectual* as a distinct social type, whether he be a thinker, scientist, writer, lecturer, or teacher—the individual whose sole business it is to think, asking new questions and proposing new answers to old questions—is a phenomenon in the western world that goes back to the Greeks.

The spread of Ionian scientific observation and philosophical speculation challenged traditional modes of thought. The first to attack traditional Greek religious beliefs was Xenophanes, whose early ties with Ionian philosophy stimulated him to describe the processes of nature as the result of natural laws which one can clearly read by careful observation of natural phenomena. In the field of religion, Xenophanes put forward a view from which all study of comparative religion has since drawn sustenance: that *man creates God in his own image* (rather than the other way around, as the Bible puts it). Xenophanes attacked Homer and Hesiod, the two greatest Greek poets, for “attributing to the gods all things that are a shame and a disgrace among men: theft, adultery, and deception.” He also ridiculed the current images of the gods as being created by birth like humans, wearing garments, and possessing bodies and voices like humans. He noted that the Ethiopians visualized their gods black, whereas the Thracians (in Greece) imagined their gods to have blue eyes and red hair. To drive home his point, Xenophanes then makes one of the most famous statements in the history of the study of religion: “If oxen or horses could draw and make statues as men do, oxen would draw the pictures of gods like oxen, and horses like horses.”

The critical and empirical tendency in Xenophanes is also reflected in his attitude toward truth and knowledge. Certain truth is impossible, he says, particularly when it comes to the ultimate questions about man or the gods. Conjecture or probability is all that man can attain in his search for truth: “The gods have not revealed all things to men from the beginning; but by long seeking men discover what is better.” Xenophanes thus suggests that the road to truth is long and endless, and that there is no short-cut through revelation.

Protagoras (480–411 B.C.), the first of the sophists, expresses a similar view about the nature and limitations of human knowledge: “Concerning the gods, I am unable to know whether they exist or not, nor what form they have; many things prevent this knowledge: the obscurity of the problem and the brevity of man’s life.”

Protagoras’ famous saying that “man is the measure of all things” expresses a similar viewpoint. It does not mean that each individual can set up, in a completely anarchical and irresponsible way, his standards of knowledge and ignorance, truth and error, virtue and vice. What Protagoras tried to say is that, unless we claim to have divinely revealed truth (which he denied), we can only mobilize our human resources in trying to discover knowledge about mankind and nature.

This *belief in man* is the source of all subsequent tendencies in Western civilization that go under the name of humanism. Greek humanism did not, as has often been alleged, worship man as the “Lord of Creation,” nor did it worship any other idol. The greatness of pre-Platonic humanism consisted precisely in accepting, for the first time in history, the limitations as well as the potentialities of human intelligence and creativity.

In this humanistic view, man was neither a worm of no value and significance (as in the Oriental despotisms of Egypt and Babylonia), nor was he a demigod. The story of Prometheus, as dramatized by Aeschylus, clearly illustrates Greek humanism. Prometheus arouses the anger of Zeus for having taught men the art of fire: Zeus punishes him by chaining him to a mountain rock, and orders a vulture to gnaw away at his liver. Prometheus defies Zeus, and even dares to curse him. Peace is finally made between Zeus and Prometheus, neither coming out as victor. Prometheus does not meekly submit in the end (as does Job, for example, in a similar Biblical story of a just man receiving undeserved misfortune from God), nor, though, does he triumph over God—as he would have done had the Greeks been human-worshippers.

Protagoras and Democritus, who was an originator of the atomic theory, adhered to the philosophy of empiricism, holding that knowledge derives solely from experience (and not from revelation), and that knowledge is therefore subject to constant change and improvement. Both Protagoras and Democritus also favored liberal democracy in politics: The parallelism between philosophical empiricism and political liberalism has often been repeated in western thought, as can be seen from the later examples of Locke, Thomas Jefferson, John Dewey, and Bertrand Russell.

Plato in the *Laws* reversed Protagoras’ saying of man being the measure of all things into the statement that “God ought to be the measure of all things, and not man.” This anti-empirical and anti-humanist view of Plato is reflected in his political philosophy. Knowledge of truth and error—of right and wrong—is certain, because it ultimately derives from a mystic vision of God. But only a few are capable of attaining, after a long preparatory education, such absolute certainty; these are to rule as philosopher-kings. Absolute political authority of the few is based in Plato on the assumption that only a few have the capacity to reach certain knowledge.

Since the ancient Greeks, those who have held that truth is certain have also generally held the parallel view that only a few are capable of reaching that truth. On the other hand, those who have held that truth is never final, that it can never be more infallible than fallible man himself, have more often taken the view that everyone has the capacity to reach the imperfect truth that exists in the world as it is constituted.

The philosophy of the early Greek thinkers was both practical and speculative. The Babylonians were skilled in observing the stars, but their primary interest was astrology, not astronomy. The Egyptians were skilled in some measurements, but they did not push mathematics further. Christian writers of the early Christian era rejected the rare harmony between theory and practice of the Greeks; for them, philosophy assumes a different meaning—a life of meditation, contemplation, withdrawal, and self-denial. Plato passed this conception of philosophy on to Christianity, another illustration of how Plato differed from typical and representative Greek thinking.

The philosophical origins of democracy in ancient Greece are not based, as is often mistakenly asserted, on the shallow rationalistic ground of the perfectibility of mankind. On the contrary, the pre-Socratic thinkers saw the imperfection and fallibility of human judgment and knowledge. They therefore concluded that all men are in the same boat of doubt and uncertainty. There is no aristocracy of

those who know (as Plato thought). Therefore (and here philosophy merges with politics), if there is no absolute standard of right and wrong, the opinions of the majority are to decide. After all, the only alternative to this position is for the minority to decide what is best for the majority—which is even less satisfying than the democratic solution. The philosophy of empiricism maintains a middle position between skepticism (according to which no knowledge is possible) and metaphysical idealism (according to which truth is absolutely certain). Political democracy similarly holds the middle ground between anarchy (no government) and authoritarianism or totalitarianism (all-pervasive government).

The sophists' great period was the century of 450–350 B.C. Because of the Platonic caricature of the sophists, the term has acquired a derogatory meaning in modern western languages: Sophistry is now considered a method of reasoning which perverts truth by captious and cunning logic, bordering on dishonesty. "Sophist" originally meant in Greek a skilled craftsman and, more generally, a wise or prudent man.

The sophists travelled from city to city lecturing and teaching. Unlike pre-sophistic teaching in special disciplines or vocations, the sophists were the first to undertake the education of the whole man, particularly the political man: man as a citizen and, above all, as a political leader. In the Platonic dialogue named for him, Protagoras is represented as saying he does not wish to instruct pupils in special fields like arithmetic, geometry, music, or astronomy. Instead he wants to teach "the art of politics"—managing one's own affairs prudently and effectively, and speaking and acting for the best in the affairs of the state.

The revolutionary new educational concept of the sophists was largely a response to the change of Greek civilization from an aristocratic society to a bourgeois (middle-class) one. In the old aristocratic society, character and political ability were not formally acquired, but were inherited through ties of blood, social "atmosphere," and in-bred customs revered and cultivated in the few, privileged families of the aristocracy. But in the democratic city-states, such as Athens, everybody was held to possess the potential ability to participate in public affairs.

If political leadership no longer depended on inherited virtues, then only one alternative was open—educating citizens in those spiritual and intellectual qualities that enable them to play their roles as citizens and leaders in a democratic society. From the beginning, the emphasis was on *education for leadership*. The sophists charged fees which only the well-to-do could afford. However, the citizens of the democratic city-states understood that democracy, like any other form of state or society, could not maintain itself against internal or external threats without imaginative and competent political leaders.

Since the democratic city-states produced rival political parties and factions, the art of persuasion (or "rhetoric") included both the content and form of political oratory. Later, the term "rhetoric" increasingly stood for the form rather than the content of political or legal oratory. The question of the intrinsic merit of a political program became subordinated to the desire to sell it to as many people as possible. It was at this later stage that the sophists were attacked as teachers of political propaganda, advertising, and salesmanship rather than of political character and high-minded statesmanship.

The teachings of the sophists shocked many because they emphasized *what social reality is* rather than what it should be. At all times, realistic political

analysis has produced the charge that it leads to moral cynicism. This charge has, in fact, also often been levelled against artists and writers who present life as it is rather than as it should be. Those who benefit from the *status quo* prefer to see it presented as universal truth and justice, and they may therefore resent anyone who presents social reality in political philosophy or in fictional literature.

The sophist doctrine of the origin of social and political institutions shocked many of their more conservative contemporaries. The sophists were the original progenitors of the *social contract*. They held that social and political institutions are not the product of superhuman, divine forces, endowed with absolute truth and justice: Laws and institutions, the sophists argued, are nothing other than social conventions, agreed upon by men for utilitarian reasons. What might be useful and right under one set of circumstances, in one society, might be harmful and wrong under different circumstances or in a different society. The sophists thus denied that laws and governments could ever base their claim for allegiance on absolute or divine truth, just as the later social contract theory of the seventeenth and eighteenth centuries denied the doctrine of the "divine right of kings."

If convenience and utility became the sole foundation of social and political institutions, obedience to government could be based only on consent, since no one would freely consent to government that is oppressive or harmful to him, if it were not divinely established. The sophist doctrine of the social contract (as its revival in the last three centuries) thus inevitably led to the liberal and democratic conception of *government by consent*. The most famous description of Greek democracy at its best is contained in Pericles' funeral address (430 B.C.) in honor of the Athenians who gave their lives in the war with Sparta. While most of the Athenians of Pericles' day were not citizens, for those who were, his words had real meaning:

Our government is called a democracy because it is in the hands of the many and not of the few. Our laws secure equal justice for all in their private disputes, and our public opinion welcomes and honors talent in every kind of achievement, not for any sectional reason, but on grounds of excellence alone. And as we give free play to all in our public life, so we carry the same spirit into our daily relations with one another. We are not angry with our neighbor if he does what he likes, nor do we put on our sour looks at him which, though harmless, are unpleasant. Open and friendly in our private relations, in our public acts we keep strictly within the law. We recognize the restraint of reverence; we are obedient to officials and laws, especially to the laws that protect the oppressed and to the unwritten laws whose violation brings admitted shame.

Yet ours is no work-a-day city only. No other provides so many recreations for the spirit—contests and sacrifices all year round, and beauty in our public buildings to cheer the heart and delight the eye day by day. Moreover, this city is so large and powerful that the wealth of all the world flows into her, so that our own products seem no more homelike to us than those of other nations.

Our military training is different from that of our opponents. Our city is thrown open to the world, and we never expel a foreigner or prevent him from seeing or learning anything which might be useful to an enemy. For our trust is not in the devices of material equipment, but in our own good spirits for battle. In education, our enemies laboriously cultivate courage from early youth, while we live at ease,

and yet are equally ready to face danger when it arises. If we choose to face danger with an easy mind rather than after a rigorous training, and to trust in native manliness rather than in state-made courage, the advantage lies with us; for we are spared all the weariness of practicing for future hardships, and when the hour of danger comes we are as brave as our plodding rivals. Our city thus sets an example in peace as in war.

We love beauty without extravagance, and wisdom without unmanliness. We employ wealth, not as a means to vanity and ostentation, but as an opportunity for service. To acknowledge poverty is no disgrace; the true disgrace is in making no effort to overcome it. An Athenian citizen does not neglect public affairs because he takes care of his private business; we regard a person who takes no interest in public affairs, not as "quiet" but as useless. If few of us are originators, we are all sound judges of a policy. The great impediment to action is, in our opinion, not discussion, but the lack of full information which is gained by discussion prior to action.

To sum up: Athens is the school of all Greece, and Athenians yield to none in independence of spirit, versatility of accomplishment, and complete self-reliance in limbs and brain. This is no passing and idle word, but truth and fact verified by the position to which these qualities have raised the state. No other city faces her ordeal greater than men ever dreamed; no other is so powerful that the invading enemy feels no bitterness at being repulsed, and her subject cities feel no shame at the indignity of their dependence.

There is a striking similarity between Pericles' funeral address and Abraham Lincoln's Gettysburg Address—two of the most famous statements about democracy, uttered on similar occasions to honor those who had given their lives defending freedom.

The most memorable creation of Athenian civilization, of all of Greek antiquity, is not this or that idea, this or that sculpture or drama, but a person: Socrates (born in 469 B.C. and executed in 399 B.C.). Like Jesus, he never wrote a line, yet his influence on western thought, directly and indirectly through Plato, is second to none. One of the great teachers of all time, Socrates said of himself, "I have never set myself up as any man's teacher." He was ready at all times to converse with anyone who wished to do so, and "to answer questions for rich and poor alike."

In his youth he was strongly impressed with the philosophical and scientific ideas then current and generally accepted by the intellectuals throughout Greece. As he grew older, his interest shifted—like that of Greek thought generally—from the understanding of the outer world to the inner world of man. What was important (in fact, the only important thing) was the understanding and mastery of the inner life of individuals and their relations with others. He felt that just as knowledge unravelled the mysteries of physical nature, so it could lead to mankind's moral mastery. But this knowledge was not the specialized knowledge of the craftsman or expert in a particular field, but the knowledge of moral principles by which all are to be governed.

The method he used in the process of discovering these principles was not one of dogmatically laying down the truth in advance, followed by arguments in support. Socrates' method—and this is what makes him a teacher second to none—was to proceed by question and answer, helping the other person to use

his own mind in finding answers to those questions that must be answered if life is to have meaning. Socrates liked to think of himself as merely fulfilling the function of an intellectual midwife, facilitating the birth of ideas already conceived in the mind of the other person.

The questions he asked were those that every person encounters in everyday living: What are the meanings of justice, courage, beauty, the good? By adducing practical examples of these abstract concepts, Socrates helped his fellow-debaters or interlocutors to gradually arrive at a general definition. Yet, he did not state he had final answers. He said that the only difference between himself and others was that, whereas they thought they knew, he at least knew he did not. If the moral life depends on knowledge, then virtue, or doing the good, and philosophy, or knowing the good, become identical. Living the right kind of life thus leads to an endless search for the knowledge of the right principles of living. Humankind's salvation from confusion and conflict lies, therefore, Socrates teaches, in a life-long quest for philosophical—and, consequently, moral—self-mastery. Humanity is saved, not (as in Christianity) by outside divine grace, but by inner rational and moral forces, provided these are mobilized and utilized properly.

Socrates was a profoundly religious man; yet his religion knew of no rewards and punishments, as in the Judeo-Christian theology. His innermost desire was to transcend the material temptations of life and to achieve a life of pure spirit on earth—to "practice immortality" in this life. He was not sure whether there was a life after death, but he faced death with equanimity whether death meant complete annihilation or the migration of the soul to another world.

Socrates was tried in 399 B.C., ostensibly on the charge of corrupting the minds of the young and of believing in deities of his own invention. In fact, the trial was political. The Peloponnesian War between the two alliances of states—one led by Athens, the other by Sparta—had started in 431 B.C., and ended in 404 B.C. with the defeat of Athens, a defeat from which neither Athens nor Greece ever recovered. As a result of this defeat, an antidemocratic regime, led by Critias, a disciple of Socrates, was set up, and it committed many crimes of violence and tyranny. In 403 B.C. this unpopular tyranny was overthrown and democracy was restored.

Socrates was known as the spiritual guide and mentor of many of the antidemocratic faction and therefore something had to be done against him. In addition to this obvious political cause of the trial, there was also a deeper motivation: the fear of independent, unorthodox thinking. This was a fear not peculiar to democracy in ancient Athens. Had he asked for mercy or pity, there is little doubt Socrates would have received them from his judges. He also had the opportunity of escaping from his jail after he was sentenced to death. Yet Socrates used his trial (as described in Plato's *Apology*) not as means of saving his own life but as his last opportunity of serving his fellow citizens in the only way which he knew and thought was right, telling them again what his life was all about, what he believed in, and what it means to be a human. Possibly the most succinct summary of Socrates' thought, expressing both his intellectual and moral beliefs, is one brief statement during his trial: "*The unexamined life is not worth living.*"

The balance between rationalism and mysticism in Socrates was profoundly altered in favor of mysticism in his greatest disciple, Plato, who was born

shortly after the Peloponnesian War broke out and saw Athens' final defeat in 404 B.C. Born into one of the oldest aristocratic families in Athens, and closely related, by family ties or personal friendship, to the most antidemocratic elements in Athens, Plato's hostility to democracy became implacable after the trial and execution of Socrates.

In Sparta, the first rigidly planned totalitarian state, Plato saw the model of the ideal political community as elaborated—in a mixture of rational philosophy and visionary poetry—in the *Republic*. Next to the Old and New Testaments, the *Republic* has been the most influential book in western intellectual history, and Plato therefore the most influential philosopher in western civilization. Plato wrote his works in the form of dialogues with Socrates as the main speaker. It is not always easy, however, to know where Socrates ends and where Plato begins.

As mentioned earlier, far from being the culmination of Greek civilization, Plato is the beginning of the end. Gone is the faith in man and in his capacity to think for himself, to rule himself; instead, we find in Plato a pessimism, atypical of the Greek tradition, that is all-pervasive. Rigid thought control and censorship, as outlined in the *Republic*, must protect humanity from its weaknesses. Even the lie is justified in protecting people's minds against the unuseful truth: Plato limits the use of the lie to circumstances where it is important to the health of the body politic, but even a "noble lie" or "medicinal lie" is still a lie.

Powerful as Plato's explicit opposition to democracy is, his implicit opposition to democratic humanism is even more serious, because less easily detected. Plato rejects the traditional Greek this-worldly outlook—of the worth of life in this world and advocates the pessimistic philosophy that humans can find true self-realization, the discovery of truth, only after their souls are liberated from the "folly of the body" by death.

As long as the soul dwells in the body, it can never attain pure knowledge: The soul comes closest to knowledge by avoiding as much as possible all contact or association with the body. Plato considers the body a disease of the soul, and believes humans can attain final purification and deliverance only in death. All of these thoughts affected Christianity. Yet, the body is not only the source of intellectual evil and disease; it is also the source of moral evil: "Wars and revolutions and battles are due simply and exclusively to the body and its desires. All wars are undertaken for the acquisition of wealth, and the reason why we have to acquire wealth is the body, for we are slaves in its service." Intellectual and (therefore) moral perfection—the two are in Plato's thought identical—are thus divorced from man's life in this world and relegated to the after-life.

Plato's deep distrust in the world as it is leads him to idolize the future life of the soul in the next world. From this idolization stems his contempt for empirical science as a means of obtaining knowledge. Observations of facts, according to Plato, can only lead to uncertain opinions, because facts are fleeting phenomena, far removed from reality. Reality is Idea, Form—only imperfectly reflected in tangible objects.

The Platonic Idea or Form is not idea or thought in our minds, but is the object of thought; it exists in another world of changeless eternity and can but imperfectly be reflected in this world. Just as the human body distorts the perfection of the soul temporarily inhabiting it, the physical properties of any object distort the perfection of its Idea or Form. This applies to the Good or

Justice. No human act or institution can be perfectly just, for which reason the ideal community of the *Republic* can never exist in reality. Perfect Justice exists as an absolute reality outside the world of empirical fact, and it can only be approximated in just acts or institutions. This absolute reality of Idea, Form, or Justice can be apprehended only by the mind after it has freed itself from the necessary imperfections of physical fact and empirical observation.

Plato assumes that Truth (with a capital "T") is eternal and unchanging and that only a few can contemplate it after years of systematic and rigorous training. He nowhere defines the nature of Idea, Form, or the Good in rational or verifiable terms. It is a secret, "something beyond truth and knowledge." In his *Seventh Letter* (which, while some hold it a forgery, would still reflect the spirit of his thought), he writes, "The truths of philosophy cannot be expressed in words as other subjects can, but after personal assistance in these studies from a guide, after living for some time with that guide, suddenly a flash of understanding, as it were, is kindled by a spark that leaps across, and once it has come into being within the soul it proceeds to nourish itself."

This is closer to a description of a mystical vision, a miracle, than any Greek writer ever put forward. Familiar as the concept of miracle or mystical vision is in Christian religious tradition, it was alien to the Greeks. Plato was the first to express the thought that mystical, unverifiable intuition, and not empirical, rational knowledge, was the key to the discovery of reality.

Francis Bacon, Hume, and Locke challenged the Platonic concept of Truth with the more modern view of truth (with a small "t") as something tentative, hypothetical, and changeable, subject to constant verification, modification, or rejection. It is an endless process of testing old and new hypotheses against new experience. Truth is not discovered in the sudden Platonic flash of mystical insight and intuition. It is pieced together, step by step, in the process of observing. The modern view does not regard truth as a mountain peak that will eventually be conquered. Each new discovery of knowledge opens up new areas of ignorance. The more we find out about nature and reality, the more we are aware of what we do not know. Truth is not the visible peak of the mountain. It is no more than a way-station in an endless journey on an endless road.

Neither Plato nor his great student, Aristotle—who expressed the empirical more than his teacher—understood the Greek political decline that was going on before their eyes. The traditional city-state was doomed to failure, and with it, political freedom and independence. In 338 B.C., Greece became subject to the Macedonian monarchy, and in 146 B.C. it became a province of the Roman Empire. Yet, the end of Greek political independence was not synonymous with the failure or death of Greek civilization. Through the work of the Macedonian monarchs and Rome, Greek civilization became a root of western civilization.

In the first century A.D., a Greek-speaking commercial traveler could travel from Spain to India, either along the northern or southern shores of the Mediterranean, and find everywhere either Greek settlers or Greek-speaking persons of all nationalities who considered Hellenism their first civilization, whatever their original mother-tongue might have been. The Hellenistic period lasted about five centuries (from about 300 B.C. to about 200 A.D.). Yet, as its very name suggests, Hellenism was no longer exclusively Greek, but a mixture of Greek and non-Greek. Hellenization was the process of transmitting Greek ideas and the

Greek style of thought to non-Greeks, and was also characterized by the continuous entry of non-Greeks into Greek life. Gradually, Greece ceased to be the source, and instead became the universal clearing-house, of new ideas.

The most influential school of thought of the Hellenistic period was Stoicism. In its classical era, Stoicism was a moral, rather than a political, philosophy. It appealed to the individual as a man rather than as a citizen. Reflecting the loss of individual liberty in the new imperial structure of Rome, Stoicism taught individuals to disregard passions, emotions, desires, or worldly possessions. The emphasis was on reason, the most characteristically human of traits. A rational faculty common to all humanity, the Stoics argued, also implies the existence of universal law and justice. This concept of a natural law became, in the seventeenth and eighteenth centuries, one of the leading political doctrines.

Stoicism never became deeply rooted in the masses, because it emphasized rational self-discipline, passionless austerity, and personal responsibility. Its religious appeal was also limited to a small, though influential, minority: Stoicism neither threatened penalties nor promised rewards, as most religions do, but asked individuals *to do good solely because it was good*, as is vividly expressed in the famous Stoic definition of God: "God is man's helping of man."

Stoicism has had its greatest appeal in those ages or circumstances in which persons find themselves facing the world alone. Under enemy occupation, after great natural catastrophes, or faced with the reality of death, individuals often find that wealth, possessions, and glory count for little, and that in the end moral integrity and selfhood are all that one has or needs. Stoicism thus often became a philosophy of consolation, and in this it was true to its own origins.

The legacy of the Greeks to the western world can be briefly summarized. They invented the idea of a *secular civilization*. All members of the community have the opportunity to contribute to the intellectual and moral progress of society; there is no concept of a privileged priestly class morally and intellectually superior to the rest. The United States was the first modern country to separate church and state, thus denying any church or priesthood the right to set itself up as the moral or intellectual master of society. Philosophy and science—the insatiable curiosities about the nature of the world, about things as they really are—are other permanent Greek legacies. They could only have been born in a secular civilization and are based on the daring assumption that man is able to discover the meaning of physical and human phenomena, provided he is not afraid of where knowledge will lead him.

Knowledge is often painful: *The source of knowledge* is therefore *not only intellectual curiosity, but also moral courage*. Only a few centuries ago, scientists were persecuted because they held theologically wrong views about physical nature; today, churches no longer interfere with free scientific research in the physical sciences. Yet, fear can impede the results of free investigation and the progress of knowledge in social and humanistic studies. Now, it is no longer the churches that stand in the way of free thought, but vested social interests.

Implied in the Greek inventions of philosophy and science was the belief in free thought to be expressed in free speech. The Romans had in their law the principle of *audiatur et altera pars* ("the other side, too, must be heard"). For the Greeks, this principle applied to all spheres of human relations, not only to the narrow field of law. Drama is more than an important artistic invention

of the Greeks; it has an equally important philosophical message: Truth and justice—between man and God or between man and man—are not simple matters settled once and for all in a few sacred formulas. Truth and justice are as uncertain and elusive as human life itself. Because truth has many facets, even an authoritarian thinker like Plato used the dialogue in his philosophy.

In public affairs, too, the dialogue takes its proper place in the search for truth and justice. The Greek invention of government by popular assemblies recognizes the fundamental belief that truth is complex, and that it is more than a choice between black and white. There are many ways of seeing and experiencing the world, and all must be heard before a decision is made. This concept of the dialogue also implies that free speech is the proper instrument of adjusting human relations, and not despotic force. If one recognizes the philosophical principle that no one person possesses infallible truth, then one must also recognize the implication that free thought and free speech are the only ways of eliciting as many opinions as possible. The Greeks held that, if reason was humanity's most characteristic attribute, free speech was the only way of utilizing the rational faculty.

As its very name suggests, politics is a Greek discovery. The inventiveness of the Greeks in this field is shown both in theory and in practice. There has been little advance in politics since them. Although Greece was small by any standards, ancient or modern, the Greek political practice covered a whole range of systems from the extreme totalitarianism of Sparta to the liberal democracy (for its citizens) of Athens. Political theories in Greek thought ranged from the liberal democratic views of Democritus or Protagoras to the rational authoritarianism of Plato.

The dominance of Greek over European thought lasted until the seventeenth century. Two philosophies competed: Materialism, which was founded by the pre-Socratic philosopher-scientists, and idealism, which was founded by Plato. In the seventeenth and eighteenth centuries, a new major philosophical school of philosophical empiricism, founded by Locke and Hume, gained importance. Yet, even this newest and currently most influential school in western philosophy can be traced to the pre-Socratics.

The history of Christianity provides another illustration of Greek dominance. In its beginnings, Christianity was under the sway of Plato, the "most Christian of the pagan philosophers," as St. Augustine called him. In the thirteenth century, St. Thomas Aquinas, a devotee of Aristotle, successfully challenged the dominant Platonic-Augustinian trend. Through St. Augustine and St. Thomas Aquinas, the two greatest leaders of Christian theology in its history, Plato and Aristotle continued to dominate the philosophical aspects of Christianity. In the sixteenth century an Augustinian monk, Martin Luther, challenged the predominance of the Aristotelian-Thomistic tradition, and urged what he regarded as a return to the original and authentic Christian tradition of Plato and St. Augustine, thereby starting the Protestant Reformation, which played a vital role in shaping modernity.

Greek style of thought to non-Greeks, and was also characterized by the continuous entry of non-Greeks into Greek life. Gradually, Greece ceased to be the source, and instead became the universal clearing-house, of new ideas.

PLATO

The imperishable contribution of the Greeks to western civilization lies in the taming of man and nature through reason. In the pre-Greek world, advanced peoples had learned to live with nature by wresting from it, through patient observation, some of its secrets, and by applying them to gainful purposes. But such practical knowledge never lost its close association with demons and myths, fears and hopes, punishments and rewards; and the pre-Greek conception of nature viewed physical phenomena as essentially individual, unique, and incalculable rather than as general, universal, and predictable. The Greeks were not the first to think about recurrent regularities of inanimate events; but they were the first to develop—going beyond observation and knowledge—the *scientific attitude*, a new approach to the world that constitutes to this day one of the distinctive elements of western life.

In the field of human relations, too, Greek inventiveness and originality lay, not in this or that political theory, but in the discovery of the scientific study of politics. The Greeks were not the first to think about the problem of a well-ordered society. But pre-Greek political thought had been a mixture of legend, myth, theology, and allegory, and if there was an element of independent reasoning, it served as a means to a higher end, usually to be found in the tenets of a supernatural system, such as religion. Thus the contribution of Jewish thought to the political heritage of the world has been seminal: the idea of the brotherhood of man, of “one world,” is deeply rooted in the conception of monotheism as transmitted through the Bible. By contrast, polytheism made it difficult for the Greeks to see the basic oneness of mankind, and their religious pluralism reflected their inability to transcend, intellectually and institutionally, the confines of the city-state.

From a social viewpoint, the Bible was opposed to slavery on principle—a unique phenomenon in antiquity—established a weekly day of rest (still unknown in some parts of the earth), and contained a host of protective rules in favor of workers, debtors, women, children, and the poor. The concept of “covenant,” first appearing in the agreement between God and Abraham, is a frequent theme in the Bible whenever momentous decisions are to be made; it becomes again an inspiration centuries later when the Puritans attempt to build a new religion and civil society, or, still later, when President Wilson, a devout

Presbyterian, names the constitution of the League of Nations a “Covenant.” But, significant as these contributions to western civilization have been, they never were, nor were they meant to be, political science. They were political and social *ethics* rather than science, and as such constitute one of the three chief tributaries to the mainstream of western civilization, the other two being the Christian principle of *love* and the Greek principle of *rationalism*.

The first work that deserves to be called political science, in that it applies systematic reasoning and critical inquiry to political ideas and institutions, is Plato’s *Republic*. After almost twenty-four hundred years it is still matchless as an introduction to the basic issues that confront human beings as citizens. No other writer on politics has equaled Plato (427–347 B.C.) in combining penetrating and dialectical reasoning with poetic imagery and symbolism.

One of the main (and most revolutionary) assumptions of the *Republic* is that the right kind of government and politics can be the legitimate object of rigorous, rational analysis, rather than the inevitable product of muddling through fear and faith, indolence and improvisation. This Platonic assumption of the applicability of reason to social relations is as hotly debated in the twentieth century as it was in Plato’s own time, and it is one of the key elements that go into the making of our political outlook and temperament. To the extent that we believe in the possibility of applying reason and critical analysis to the solution of political and social issues we are all Plato’s spiritual heirs, although we may heartily disagree with any or all of his specific teachings. By seeking to disprove Plato on a point of political doctrine or practice, the anti-Platonist has already conceded to Plato the most important single point: that political and social issues can be clarified by argument rather than by force and dogma.

Socrates, Plato’s teacher and the chief figure in the *Republic*, has been contemptuously called the “first Social Democrat” by some modern totalitarians; what they hate in him above all is his irritating habit of endlessly searching, through argument, for the reason that lies behind accepted ideas and institutions. Other totalitarians, penetrating less deeply into Plato’s thought, have usurped him as their first intellectual ancestor because there is so much in the *Republic* that is explicitly undemocratic, or outright antidemocratic. Yet, implicit in Plato’s and Socrates’ rationalism is the assumption, incompatible with the cult of violence, that man’s intellect can discover the nature of the good life and the means of attaining it by philosophical inquiry.

In one basic point, modern political analysis would gain in insight and understanding if it followed Plato more closely: Plato never starts out with the hypothesis of a *homo politicus*, an abstract “political man” unrelated to the richness and complexity of individual selves or of society as a whole. Today Plato’s psychology may seem naïve in its analogies and presumed facts, but what is of timeless significance is his conviction that no theory of politics can be sound unless based on the study of man. Modern psychology has taught us enough about neurotic persons to make us realize that a healthy society cannot be composed of men and women who are haunted by fear and insecurity.

Plato’s political thought also introduced the concept of the “public” as distinct from the “private” in the context of governmental relations. As a Greek, Plato could not be clearly aware of the opposing ideas of the individual and (or, sometimes, versus) the state, because the city-state was a spiritual and religious

material wants through the principle of the division of labor, is, as Glaucon puts it, a "community of pigs," lacking as yet the conscious direction of a ruling class whose specific excellence is reason. The growth of the simple first city into a condition of fever is caused, according to Plato, by the expansion and refinement of human wants, that is, by luxury. The inability of the community to fill the newly developing luxurious needs out of the existing resources (land, labor, skills) is the cause of war, either aggressive or defensive war.

The feverish condition is, however, not limited to the threat of external war but also implies the possibility of the disruption or dissolution of the health and balance of the first city through internal unrest. In order to safeguard or, rather, restore the original balance of the community, a special class of fighters is needed. Yet, if the new fighting class is not to degenerate into a class of praetorians, drunk with power and quarreling continuously among themselves and with the members of the producing class, it must receive a training that will make its members "gentle to their own people and dangerous only to enemies," instill them with courage to defend the city against internal and external enemies, and at the same time imbue them with an understanding of the principles that make the city worth defending.

The class of the fighters (auxiliaries) thus makes the existence of a still higher class necessary, the guardians, or rulers, who pick and train the auxiliaries as well as the future guardians. The characteristic quality of the rulers is *wisdom*, just as *courage* (tempered by understanding) is the characteristic quality of the fighters, and *appetite* (or the desire to satisfy material wants) is the distinctive trait of the working population (workers, farmers, merchants, doctors, nurses, actors). Just as the first city was the product of unconscious growth, the "second," or "ideal," city of the *Republic* is the product of rational direction.

The Platonic community is the first example of a planned state; but it must be borne in mind that the planned sector of this state applies only to the guardians and auxiliaries, whereas the producing class is left to itself as far as its economic activities go. Plato was an aristocrat who exhibited the bias against labor and business so characteristic of aristocrats in all ages, and the lack of regulations of the economic order of the producing class in the *Republic* indicates the contempt of the nobleman for the prosaic existence of those who must work for a living.

The life of the guardians and auxiliaries excludes individual interests, whether in property, love, or the family, but this community of absolute sharing is not socialism. The outlook of socialism is hedonistic: Its objective is the increase of human happiness through the abolition of want and misery. The goal of socialism is not the realization of a preconceived just ideal of society but the attainment of maximum *happiness* for the maximum number of people *here and now*. The sharing of the guardians and auxiliaries in the *Republic* is based on a principle that is almost diametrically opposed to that of socialism: the principle of *austerity*, which puts little, if any, value on material wants and their satisfaction. Not happiness of human beings with varying and unique personalities, but the realization of a predetermined social ideal of justice is the purpose of the political community as described in the *Republic*.

Though the analogy to the communal life of the guardians and auxiliaries is not to be found in the socialist state (in which all citizens share in the amenities of life) nor in socialist communities within a nonsocialist state, it can be found

in armies, monastic orders, and the clergy of churches who are denied marriage or private property. In all such groups the ruling class shares with the Platonic guardians the certainty of knowing what is best for the ruled, without asking for their consent, as well as the relative disregard for property, sex, family, or other forms of personal happiness. Plato's "socialism" of the guardians was authoritarian service rather than the sharing of happiness and enjoyment, and as such the exact antithesis of western socialism.

The *Republic* is opposed to democracy on two levels of argument: a more obvious explicit level and a less obvious implicit level. The explicit opposition of the *Republic* to democracy rests on the threefold division of the population into rulers, fighters, and producers (farmers, artisans, traders). A numerically small aristocracy of rulers, in command of a well-trained body of soldiers and administrators, governs the third class, or producers, which constitutes four-fifths or more of the total population. Plato claims that the threefold class division of the second city is but an extension of the principle of the division of labor, characteristic of the first city. Ruling or defending a state, Plato argues, is just as much a *specialized craft* as shoemaking; and if the principle of the division of labor forbids the shoemaker from making furniture, he is equally excluded from ruling, or defending and administering, the city—functions that constitute special, and specialized, crafts.

There is one objection to Plato's reasoning here (and this objection is fundamental to the whole edifice of the *Republic*): If the nature of ruling and administering a state is a specialized craft no different from shoemaking or farming, it is difficult to see why he does not simply add the two new crafts of the second city to the already existing number of crafts of the first city. In it, we may recall, there were no special crafts of ruling and administering, because the harmony of society was maintained naturally, growing out of the division of labor and without conscious guidance or rule. If, for example, the number of crafts in the first city was one hundred, the addition of two new crafts of ruling and fighting in the second city should produce one hundred and two crafts, if the second city were still based, as before, on the principle of division of labor. Instead, Plato presents us with the concept of *three classes* in the second city: first, the class of rulers (guardians in the narrower sense); second, the class of military and civilian executive aides (auxiliaries); third, the class of producers or handworkers. This last class composed, in the first city, the entire population, organized on the principle of division of labor; now, in the second city, the working part makes up only from eighty to ninety percent.

The principle of the division of labor can produce only more and more specialized crafts, as the needs and skills of society proliferate, but it can never lead to a class system based on hierarchical values. If Plato nevertheless introduces the concept of the threefold class division into the second city, a new principle, different from that of the division of labor, must be found to distinguish the functions of ruling and administering the state from all other crafts. The main difference between the ruler-philosophers and the producers in the *Republic* is the difference between *political wisdom* and *technical knowledge*. Only the philosophers have insight into *human* problems, insight that is more than highly specialized learning. The craftsman, by contrast, has no all-comprehensive understanding of the phenomena of nature and society of which he is a part, only *limited* knowledge of a *technical* nature. Even where such knowledge, as in

medicine, applies to human beings, it is still only technical knowledge and not higher philosophical understanding and insight, because the physician is interested in human beings as parts of the psychophysical world, and not of the world of values and ideas.

The Platonic craftsman is thus inferior, in two ways, to the philosopher: First, his material is limited and finite, and subject to causal or esthetical laws the knowledge of which is relatively easy, compared with the material of the philosopher—mankind and the cosmos, the laws of which are most difficult to discover and grasp. Second, the knowledge of the craftsman never attains the height of wisdom and understanding that the philosopher reaches in his study of ultimate values, intrinsic forms, and cosmic laws. The knowledge of the craftsman is only an intermediary stage, raw material that goes into the process of learning and acquiring wisdom to which the philosopher is subjected in the *Republic*.

The democratic theory of politics challenges Plato not only in his basic assumption that the capacity to govern is possessed by only a small class, but that such capacity can be transmitted, in general (Plato admits occasional exceptions), by selective breeding. This Platonic concept of a hereditary aristocratic ruling class, not too hermetically closed to talent from below, is rejected by the democratic theory of man and the state on grounds of historical evidence and rational reflection. The democratic view of man is less pessimistic than Plato's and assumes hopefully that wisdom and understanding may be found in the most unexpected places, in log cabins as well as in stately mansions.

If the explicit opposition of the *Republic* to the democratic way of life is serious enough, the implicit opposition is even more fundamental and irreconcilable. Plato assumes (in the *Republic* as in his other writings) that Truth is something eternal, unchanging and unchangeable, and that it can be made accessible to a select few through an ingeniously devised training reserved for the future fighters and rulers. The preparation of the rulers begins before they are born, as the very pairing of the parents is arranged by a preconceived plan that is to insure the highest physical and mental qualities of the offspring to be bred. Nothing is left to personal whim or accident from infancy on, and the process of education, both theoretical and practical, continues until the age of fifty. Literature, music, physical and military instruction, elementary and advanced mathematics, philosophy and metaphysics, and subordinate military and civilian-service assignments are the stages of the planned program of training philosopher-rulers:

Then when they are fifty, those who have come safely through and proved the best in all points in action and in study must be brought at last to the goal. They must lift up the eye of the soul to gaze on that which sheds light on all things; and when they have seen the Good itself, take it as a pattern for the right ordering of the state and the individual, themselves included. For the rest of their lives, most of their time will be spent in study; but they will all take their turn at the troublesome duties of public life and act as Rulers for their country's sake, not regarding it as a distinction but as an unavoidable task.

Plato thus regarded the training in literary, mathematical, and philosophical knowledge as a mere preparation for the "ascent to the vision of Goodness,"

the "highest object of knowledge," which final stage cannot be mastered by mere rational instruction or comprehension, but partakes of the nature of *revelation*, a mystical and socially incommunicable experience.

Plato nowhere defines the nature of the Good in verifiable or rational terms; it is a secret, "something beyond truth and knowledge, and, precious as these both are, of still higher worth," as he says in the *Republic*. The only approach to it is through vision and revelation, and few are blessed with the capacity to "climb the ascent" to such visions. The Platonic philosopher-ruler thus bases his rule over the people, not on superior character and rational knowledge alone, as it might appear from a hasty reading of the *Republic*, but on a personal and unique innermost experience that is mystical and incommunicable in rational terms. To know is to "contemplate the realities themselves as they are for ever in the same unchanging state," and because the ruler *knows*, as the result of his vision of the Good, he has the right to rule the people; they can never hope to attain similar summits of insight and vision, and can only *believe* in, but not rationally understand, a social order built on intuitions that are, in the ultimate, mysterious and inaccessible to common-sense experience.

The nature and scope of the authority of the rulers in the *Republic* are intimately related to its foundation. Just as the knowledge of the rulers that gives them title to rule is directed to the absolute, so is their authority, which is morally based on their training and wisdom, absolute and unconditional. The rulers have the moral right to constrain the ruled if they show any sign of defection from the established order. Plato assumes that, in general, such compulsion will not be necessary. The people will be brought up to believe in the existing class system by means of myths and allegories, because they are incapable of rigorous scientific and philosophical thinking.

But if the use of force in the *Republic* raises serious critical considerations, the recommended use of censorship and the "medicinal lie" for the upbringing of the ruling and military-executive classes is no less alarming. Plato often compares the rulers to doctors, and the ruled to patients, and he says that "for a private person to mislead the Rulers we shall declare to be a worse offense than for a patient to mislead his doctor"; and he goes on to attack such crimes as "fatal" and "subversive" in a state. Though the ruled are under no circumstances permitted to deviate from truth, particularly in their relations with the rulers, the latter may lie "in the way of a medicine." Just as a medicine may be handled only by a doctor, "if anyone, then, is to practice deception, either on the country's enemies or on its citizens, it must be the Rulers of the commonwealth, acting for its benefit; no one else may meddle with this privilege."

An illustration of such a "medicinal lie" is the fable of the origins of the class system, according to which God put gold into those who are fit to rule, silver into the auxiliaries, and iron and brass into the farmers and craftsmen. "I shall try to convince," Socrates says, "first the Rulers and the soldiers, and then the whole community," and if they accept this fable, all three classes will think of each other as "brothers born of the same soil" and will be ready to defend their land, which they will eventually think of as "mother and nurse." It is significant that Plato's example of a "medicinal lie" relates, not to a matter of subordinate expediency and convenience, but to the root of his ideal political community, namely, the inequality of the threefold class system.

As to censorship, Plato frequently expresses in the *Republic* hostility toward artists. His hostility arises from his apprehension that art appeals to feeling and passion rather than to reason and intellect. Specifically, poets must write in a way that will further the objectives of the future rulers' training (it may be recalled that only the rulers and the military-executive, but not the ruled population, are to be educated). Negatively, the poet must not, for example, present the gods in an unattractive and "all-too-human" light, if he does, "we shall be angry and refuse him the means to produce his play." Positively, the poets will be told by the rulers what elements to stress in their stories and "the limits beyond which they must not be allowed to go." The main, perhaps only, value of art is moral education, particularly self-control: "And for the mass of mankind that chiefly means obeying their governors, and themselves governing their appetite for the pleasure of eating and drinking and sex."

Plato finds Homer, Hesiod, and the other masters of Greek literature opprobrious and corrupting. Toward the end of the *Republic* the conclusion is presented that "all poetry, from Homer onwards, consists in representing a semblance of its subject, whatever it may be, including any kind of human excellence, with no grasp of the reality." In fact, the artist is assigned a place below the shoemaker or smith, because the latter have at least a limited *direct* knowledge of reality, that of their craft, whereas the artist "knows nothing worth mentioning, about the subjects he represents"; art, therefore, "is a form of play, not to be taken seriously." Because the poet, by appealing to sentiment rather than reason, "sets up a vicious form of government" in the individual soul, "We shall be justified in not admitting him into a well-ordered commonwealth." Like Plato, modern authoritarian rulers are also keenly aware that poetry, fiction, and other kinds of imaginative literature can be more dangerous than factual historical, political or economic analyses. In the twentieth century, four of the most influential books against totalitarian government have been novels: Arthur Koestler's *Darkness at Noon*, George Orwell's *1984*, Boris Pasternak's *Dr. Zhivago*, and Aleksandr Solzhenitsyn's *One Day in the Life of Ivan Denisovich*.

In accepting the "medicinal lie" and the regulation, positive and negative, of the arts, Plato started a line of thought that has been enthusiastically accepted by those who base their right to rule on superior and exclusive knowledge rather than on the freely expressed consent of the ruled. Those who adhere to the creed of certainty are eventually driven to use, as a means of governing, medicinal lies, censorship, thought control, and physical compulsion.

The Platonic conception of Truth is challenged by the modern view. Modern philosophers insist that truth is intimately related to experience, that it can never be fully grasped, that it is an *endless process* of testing new hypotheses against new experiences, that it is not something that exists prior to man, but that it is constantly made and remade in *doing*, rather than discovered in intellectual speculation or in a flash of mystical insight. Plato's concept of Truth is more *absolute* and *individual-aristocratic*: Truth is eternally the same and unchangeable, and it can be perceived by the use of the speculative and intuitive faculties of the philosophical person, who therefore has the right to rule those who do not possess these capacities. The modern view of truth is more *relative*, *empirical*, and *social-cooperative*: Truth is not eternally the same, is changeable and changing, is never attainable more than in a proximate and practical way, and—what is perhaps most important of all—it is not the

product of brilliant individual intellects but of the cooperative effort of many individuals and social groups.

To take a practical illustration, according to Plato the concept of social justice is one that can be discovered and defined through illuminated reasoning. The more modern empirical and relative view holds that social justice is not a pre-existing reality logically or intuitively *discovered* by speculation or revelation, but that *temporary approximations* to justice can be worked out in a socially satisfactory fashion through negotiation and bargaining of interested groups and classes. This *dynamic* concept of truth is more modest than the *static* one of Plato, inasmuch as it appreciates the limitations of human capacity and disinterestedness in the face of a constantly changing world of circumstances; but at the same time, it is also more optimistic than Plato's concept, because it holds that the process of working out approximations to truth is *open to all*, and that, in fact, such approximations are likely to be more accurate if related to the widest possible range of ascertainable experience. By contrast, Plato's view of the possibility of finding truth is more pessimistic in the sense that it is conceived as a form of intellectual insight that is open, because of its final and absolute value, to only a *few select* minds. If antidemocratic and authoritarian political systems throughout history have looked back sympathetically to Plato, the reason has been less the explicit opposition of the *Republic* to democracy than the implicit view of the world in which truth—social, philosophical, metaphysical, religious—is the prerogative of a small elect class, endowed with special and exclusive capacities to apprehend it in a regime of formal training, and enabled to translate it into reality in a preconceived framework of society in which the few govern and the many obey and conform.

Yet, even more deeply than Plato's conception of Truth, his conception of man is not compatible with democracy. In Plato's three-class society, the rulers have the right, and duty, to rule all, because they possess the highest quality—rational wisdom. The class of civilian-military administrators (auxiliaries) is characterized by courage, or the ability to face reality, to serve as an intermediary between the ruling class and the third, lowest, class, the mass of the people whose dominant psychological trait is the desire to satisfy their crude material and instinctual desires. According to Plato, this threefold division of society merely reflects the threefold division of the individual soul: It, too, is made up of three elements: the *rational*, which is the highest; the *spirited*, which has the capacity to follow and assert the claims of reason; and the *appetitive*, the lowest in rank, which harbors man's desires and emotions. Plato assumes that in these three elements of the soul, the rational is the highest and has the duty to keep the other two elements in line. In society, too, the class that is characterized by superior rational endowment is therefore the natural ruler over the other two subordinate classes. The case against Plato's three-class society in which one small superior class rules over the rest can thus be greatly strengthened if his psychological premise is wrong or at least open to serious challenge.

Modern psychological thought often divides the human mind into several components. Freud, for example, divides the human mind into three elements which bear a striking resemblance to Plato's three parts of the soul: First, there is, according to Freud, the *id*—the seat of man's undirected and unconscious instinctual drives. Then, there is the *ego*, which is in the conscious level of the mind and adjusts *id* drives and primitive desires to reality, that is, to the rules

of morals and society. Finally, there is in the human mind the *superego*, the civilized rational conscience which directs the *ego* in dealing with the claims of the *id*. However, in Freud's view—and this is a fundamental rejection of Plato—the three elements of the mind are not ranked hierarchically as superior and inferior, but are coordinate. In particular, Freud pointed to the psychic dangers of repressing *id* drives too harshly rather than channeling them off for purposes that cause no harm to either the individual or society.

Following Freud's pioneering work, modern psychological thinking holds that mental health and stability depends on the balance between intellectual and emotional interests and activities, and that neither are inferior or superior to the other. In modern psychological thought, repression of the so-called lower emotional elements of the mind by the so-called higher intellectual element has been largely replaced by the concept of balance and integration, in which each element of the human personality has its rightful place. Following Plato's example and projecting the relations of the different elements of the mind on the larger social canvas, the modern conception of the human personality would seem to lead to a democratic conception of society in which each group and class has a rightful place of recognition and respect, being neither naturally superior or inferior to any other group or class.

The *Republic* is not a utopia but the work of a thinker passionately interested in practical politics. Rejecting the doctrine that man must fatally and inextricably remain a prisoner of natural or social circumstances, Plato has faith in man's ability to create a community that will correspond to the ideal of knowledge and, therefore, justice. If philosophy and the vision of the Good are the highest forms of human activity, "there can be no rest from troubles" for states or for all mankind, "unless either philosophers become kings in their countries or those who are now called kings and rulers come to be sufficiently inspired with a genuine desire for wisdom; unless, that is to say, political power and philosophy meet together." This passage, probably the most famous in the *Republic*, summarizes Plato's conception of a society in which the best rule, and it makes little difference to him whether this rule is monarchy ("when there is one man who stands out above the rest of the rulers") or aristocracy ("when there are more than one"). The plan of such a perfect constitution and of a "perfect man" might be difficult, "but not impossible."

Nevertheless, Plato anticipated the eventual decline of the best state and its degeneration into progressively lower types of constitution. The first of these forms of state is timocracy, based on ambition and love of honor and war, as represented by Crete and Sparta, "so commonly admired." The second is oligarchy or plutocracy, the rule of the wealthy; the third is democracy, the rule of the people; the fourth, and most imperfect, is despotism, which develops inevitably out of the anarchy of the democratic state. In each instance, Plato correlates a type of human character with the form of government in which it is most commonly reflected: "Constitutions cannot come out of sticks and stones; they must result from the preponderance of certain characters which draw the rest of the community in their wake."

This penetrating insight of Plato's, that government is more than a piece of machinery, that its essence is ultimately determined by the quality of the men and women who compose it, is still not fully grasped today. The twentieth century, in particular, has been strewn with the wreckage of constitutions that

failed dismally, not because they were imperfect in themselves, but because they were not suited to the "preponderant characters" in the societies for which they were devised, whether these individuals were the rulers or the ruled.

In his classification of forms of state, Plato considered democracy the second worst type of government. His description of life in a democratic society may be overdrawn, but it remains to this day the most incisive critique of democracy. Unless democrats assume that democracy is an exception to all human creations, and thus free from imperfections, they must be aware of its intrinsic as well as its incidental weaknesses. If Plato maintains that democracy is "an agreeable form of anarchy with plenty and variety and an equality of a peculiar kind for equals and unequals alike," who can say that his thesis is completely wrong? The buoyant diversity and creative pluralism of the democratic society are its glory, but they are often the path to dissolution and disintegration when its members forget that they are not merely individuals with rights and liberties but also social beings with duties and obligations. Similarly, the unwillingness of democratic citizens to be led is one of the mainsprings of democratic vitality; but if carried too far, if the honest and able leaders are prevented from governing, the dishonest demagogues will take their place.

The fate of democracies in the twentieth century, in particular, has demonstrated that Plato's critique of democracy and the democratic man, far from being an unrealistic caricature of democratic life, is full of sound warnings that no democrat should miss. Nazi, fascist, and communist criticisms of democracy were and are relatively ephemeral and superficial, compared with the enduring and fundamental objections that Plato raises. The answer to Plato's apprehensions about the possibility of democracy lies not in the arguments of democrats but in their lives. The experience of history is harder to disprove than a theoretical argument. If Plato makes democrats more keenly conscious how difficult the life of freedom and fellowship is, he has, perhaps unwittingly, performed a major service to the cause of democracy.

The literary form of the *Republic* is the dialogue, in which Socrates is both the narrator and chief figure. In fact, as the dialogue proceeds, it becomes virtually a monologue, for the other participants increasingly confine their dialectical contributions to nods, monosyllabic expressions of consent, and brief rhetorical assertions that merely give Socrates a cue to go on with his argument. The conversation starts in the house of Cephalus, a retired wealthy businessman. The company includes Cephalus' son, Polemarchus, Plato's two elder brothers, Glaucon and Adeimantus, and a sophist, Thrasymachus, who is represented as a cynic. The discussion soon turns to the central question in the *Republic*, What is justice? In the discussion of justice, all elements of Plato's political philosophy are contained. In his theory of justice the relations of man to nature, to the *polis*, and to his fellow men form an architectonic whole.

Cephalus states the view, based on a long life of practical experience, that justice means honesty and rendering what is due to gods and men. Socrates sees some merit in this approach but is not satisfied with it. Polemarchus next suggests that justice means helping one's friends and harming one's enemies. Socrates is again not satisfied, as such a definition befits more the moral standards of a despot than those of a just man. At this point Thrasymachus breaks into the discussion and puts forward the view that "just" or "right" means nothing but "what is to the interest of the stronger party."

PLATO

The Republic *

JUSTICE AS THE INTEREST OF THE STRONGER

All this time Thrasymachus had been trying more than once to break in upon our conversation; but his neighbours had restrained him, wishing to hear the argument to the end. In the pause after my last words he could keep quiet no longer; but gathering himself up like a wild beast he sprang at us as if he would tear us in pieces. Polemarchus and I were frightened out of our wits, when he burst out to the whole company:

What is the matter with you two, Socrates? Why do you go on in this imbecile way, politely deferring to each other's nonsense? If you really want to know what justice means, stop asking questions and scoring off the answers you get. You know very well it is easier to ask questions than to answer them. Answer yourself, and tell us what you think justice means. I won't have you telling us it is the same as what is obligatory or useful or advantageous or profitable or expedient; I want a clear and precise statement; I won't put up with that sort of verbiage.

I was amazed by this onslaught and looked at him in terror. If I had not seen this wolf before he saw me, I really believe I should have been struck dumb;¹ but fortunately I had looked at him

* From *The Republic of Plato* (trans. F. M. Cornford, Oxford University Press, 1945). By permission.

¹ A popular superstition, that if a wolf sees you first, you become dumb.

earlier, when he was beginning to get exasperated with our argument; so I was able to reply, though rather tremulously:

Don't be hard on us, Thrasymachus. If Polemarchus and I have gone astray in our search, you may be quite sure the mistake was not intentional. If we had been looking for a piece of gold, we should never have deliberately allowed politeness to spoil our chance of finding it; and now when we are looking for justice, a thing much more precious than gold, you cannot imagine we should defer to each other in that foolish way and not do our best to bring it to light. You must believe we are in earnest, my friend; but I am afraid the task is beyond our powers, and we might expect a man of your ability to pity us instead of being so severe.

Thrasymachus replied with a burst of sardonic laughter.

Good Lord, he said; Socrates at his old trick of shamming ignorance! I knew it; I told the others you would refuse to commit yourself and do anything sooner than answer a question.

Yes, Thrasymachus, I replied; because you are clever enough to know that if you asked someone what are the factors of the number twelve, and at the same time warned him: "Look here, you are not to tell me that 12 is twice 6, or 3 times 4, or 6 times 2, or 4 times 3; I won't put up with any such nonsense"—you must surely see that no one would answer a question put like that. He would say: "What do you mean, Thrasymachus? Am I forbidden to give any of these answers, even if one

happens to be right? Do you want me to give a wrong one?" What would you say to that?

Humph! said he. As if that were a fair analogy!

I don't see why it is not, said I; but in any case, do you suppose our barring a certain answer would prevent the man from giving it, if he thought it was the truth?

Do you mean that you are going to give me one of those answers I barred?

I should not be surprised, if it seemed to me true, on reflection.

And what if I give you another definition of justice, better than any of those? What penalty are you prepared to pay?²

The penalty deserved by ignorance, which must surely be to receive instruction from the wise. So I would suggest that as a suitable punishment.

I like your notion of a penalty! he said; but you must pay the costs as well.

I will, when I have any money.

That will be all right, said Glaucon; we will all subscribe for Socrates. So let us have your definition, Thrasymachus.

Oh yes, he said; so that Socrates may play the old game of questioning and refuting someone else, instead of giving an answer himself!

But really, I protested, what can you expect from a man who does not know the answer or profess to know it, and besides that, has been forbidden by no mean authority to put forward any notions he may have? Surely the definition should naturally come from you, who say you do know the answer and can tell it us. Please do not disappoint us. I should take it as a kindness, and I hope you will not be chary of giving Glaucon and the rest of us the advantage of your instruction.

Glaucon and the others added their

² In certain lawsuits the defendant, if found guilty, was allowed to propose a penalty alternative to that demanded by the prosecution. The judges then decided which should be inflicted. The "costs" here means the fee which the sophist, unlike Socrates, expected from his pupils.

entreaties to mine. Thrasymachus was evidently longing to win credit, for he was sure he had an admirable answer ready, though he made a show of insisting that I should be the one to reply. In the end he gave way and exclaimed:

So this is what Socrates' wisdom comes to! He refuses to teach, and goes about learning from others without offering so much as thanks in return.

I do learn from others, Thrasymachus; that is quite true; but you are wrong to call me ungrateful. I give in return all I can—praise; for I have no money. And how ready I am to applaud any idea that seems to me sound, you will see in a moment, when you have stated your own; for I am sure that will be sound.

Listen then, Thrasymachus began. What I say is that "just" or "right" means nothing but what is to the interest of the stronger party. Well, where is your applause? You don't mean to give it me.

I will, as soon as I understand, I said. I don't see yet what you mean by right being the interest of the stronger party. For instance, Polydamas, the athlete, is stronger than we are, and it is to his interest to eat beef for the sake of his muscles; but surely you don't mean that the same diet would be good for weaker men and therefore be right for us?

You are trying to be funny, Socrates. It's a low trick to take my words in the sense you think will be most damaging.

No, no, I protested; but you must explain.

Don't you know, then, that a state may be ruled by a despot, or a democracy, or an aristocracy?

Of course.

And that the ruling element is always the strongest?

Yes.

Well then, in every case the laws are made by the ruling party in its own interest; a democracy makes democratic laws, a despot autocratic ones, and so on. By making these laws they define as "right" for their subjects whatever is for their own interest, and they call anyone who

breaks them a "wrongdoer" and punish him accordingly. That is what I mean: in all states alike "right" has the same meaning, namely what is for the interest of the party established in power, and that is the strongest. So the sound conclusion is that what is "right" is the same everywhere: the interest of the stronger party.

Now I see what you mean, said I; whether it is true or not, I must try to make out. When you define right in terms of interest, you are yourself giving one of those answers you forbade to me; though, to be sure, you add "to the stronger party."

An insignificant addition, perhaps!

Its importance is not clear yet; what is clear is that we must find out whether your definition is true. I agree myself that right is in a sense a matter of interest; but when you add "to the stronger party," I don't know about that. I must consider.

Go ahead, then.

I will. Tell me this. No doubt you also think it is right to obey the men in power?

I do.

Are they infallible in every type of state, or can they sometimes make a mistake?

Of course they can make a mistake.

In framing laws, then, they may do their work well or badly?

No doubt.

Well, that is to say, when the laws they make are to their own interest; badly, when they are not?

Yes.

But the subjects are to obey any law they lay down, and they will then be doing right?

Of course.

If so, by your account, it will be right to do what is not to the interest of the stronger party, as well as what is so.

What's that you are saying?

Just what you said, I believe; but let us look again. Haven't you admitted that the rulers, when they enjoin certain acts on their subjects, sometimes mistake

their own best interests, and at the same time that it is right for the subjects to obey, whatever they may enjoin?

Yes, I suppose so.

Well, that amounts to admitting that it is right to do what is not to the interest of the rulers or the stronger party. They may unwittingly enjoin what is to their own disadvantage; and you say it is right for the others to do as they are told. In that case, their duty must be the opposite of what you said, because the weaker will have been ordered to do what is against the interest of the stronger. You with your intelligence must see how that follows.

Yes, Socrates, said Polemarchus, that is undeniable.

No doubt, Cleitophon broke in, if you are to be a witness on Socrates' side.

No witness is needed, replied Polemarchus; Thrasymachus himself admits that rulers sometimes ordain acts that are to their own disadvantage, and that it is the subjects' duty to do them.

That is because Thrasymachus said it was right to do what you are told by the men in power.

Yes, but he also said that what is to the interest of the stronger party is right; and, after making both these assertions, he admitted that the stronger sometimes command the weaker subjects to act against their interests. From all which it follows that what is in the stronger's interest is no more right than what is not.

No, said Cleitophon; he meant whatever the stronger *believes* to be in his own interest. That is what the subject must do, and what Thrasymachus meant to define as right.

That was not what he said, rejoined Polemarchus.

No matter, Polemarchus, said I; if Thrasymachus says so now, let us take him in that sense. Now, Thrasymachus, tell me, was that what you intended to say—that right means what the stronger thinks is to his interest, whether it really is so or not?

Most certainly not, he replied. Do you

suppose I should speak of a man as "stronger" or "superior" at the very moment when he is making a mistake?

I did think you said as much when you admitted that rulers are not always infallible.

That is because you are a quibbler, Socrates. Would you say a man deserves to be called a physician at the moment when he makes a mistake in treating his patient and just in respect of that mistake; or a mathematician, when he does a sum wrong and just in so far as he gets a wrong result? Of course we do commonly speak of a physician or a mathematician or a scholar having made a mistake; but really none of these, I should say, is ever mistaken, in so far as he is worthy of the name we give him. So strictly speaking—and you are all for being precise—no one who practises a craft makes mistakes. A man is mistaken when his knowledge fails him; and at that moment he is no craftsman. And what is true of craftsmanship or any sort of skill is true of the ruler: he is never mistaken so long as he is acting as a ruler; though anyone might speak of a ruler making a mistake, just as he might of a physician. You must understand that I was talking in that loose way when I answered your question just now; but the precise statement is this. The ruler, in so far as he is acting as a ruler, makes no mistakes and consequently enjoins what is best for himself; and that is what the subject is to do. So, as I said at first, "right" means doing what is to the interest of the stronger.

Very well, Thrasymachus, said I. So you think I am quibbling?

I am sure you are.

You believe my questions were maliciously designed to damage your position?

I know it. But you will gain nothing by that. You cannot outwit me by cunning, and you are not the man to crush me in the open.

Bless your soul, I answered, I should not think of trying. But, to prevent any more misunderstanding, when you speak

of that ruler or stronger party whose interest the weaker ought to serve, please make it clear whether you are using the words in the ordinary way or in that strict sense you have just defined.

I mean a ruler in the strictest possible sense. Now quibble away and be as malicious as you can. I want no mercy. But you are no match for me.

Do you think me mad enough to beard a lion or try to outwit a Thrasymachus?

You did try just now, he retorted, but it wasn't a success.

RULING AS AN ART

Enough of this, said I. Now tell me about the physician in that strict sense you spoke of: is it his business to earn money or to treat his patients? Remember, I mean your physician who is worthy of the name.

To treat his patients.

And what of the ship's captain in the true sense? Is he a mere seaman or the commander of the crew?

The commander.

Yes, we shall not speak of him as a seaman just because he is on board a ship. That is not the point. He is called captain because of his skill and authority over the crew.

Quite true.

And each of these people has some special interest?³

No doubt.

And the craft in question exists for the very purpose of discovering that interest and providing for it?

Yes.

Can it equally be said of any craft that it has an interest, other than its own greatest possible perfection?

What do you mean by that?

³ All the persons mentioned have some interest. The craftsman *qua* craftsman has an interest in doing his work as well as possible, which is the same thing as serving the interest of the subjects on whom his craft is exercised; and the subjects have their interest, which the craftsman is there to promote.

convince us that we are not well advised.

How can I? he replied. If you are not convinced by what I have just said, what more can I do for you? Do you want to be fed with my ideas out of a spoon?

God forbid! I exclaimed; not that. But I do want you to stand by your own words; or, if you shift your ground, shift it openly and stop trying to hoodwink us as you are doing now. You see, Thrasy-machus, to go back to your earlier argument, in speaking of the shepherd you did not think it necessary to keep to that strict sense you laid down when you defined the genuine physician. You represent him, in his character of shepherd, as feeding up his flock, not for their own sake but for the table or the market, as if he were out to make money as a caterer or a cattle-dealer, rather than a shepherd. Surely the sole concern of the shepherd's art is to do the best for the charges put under its care; its own best interest is sufficiently provided for, so long as it does not fall short of all that shepherding should imply. On that principle it followed, I thought, that any kind of authority, in the state or in private life, must, in its character of authority, consider solely what is best for those under its care. Now what is your opinion? Do you think that the men who govern states—I mean rulers in the strict sense—have no reluctance to hold office?

I don't think so, he replied; I know it.

Well, but haven't you noticed, Thrasy-machus, that in other positions of authority no one is willing to act unless he is paid wages, which he demands on the assumption that all the benefit of his action will go to his charges? Tell me: Don't we always distinguish one form of skill from another by its power to effect some particular result? Do say what you really think, so that we may get on.

Yes, that is the distinction.

And also each brings us some benefit that is peculiar to it: medicine gives health, for example; the art of navigation, safety at sea; and so on.

Yes.

And wage-earning brings us wages; that is its distinctive product. Now, speaking with that precision which you proposed, you would not say that the art of navigation is the same as the art of medicine, merely on the ground that a ship's captain regained his health on a voyage, because the sea air was good for him. No more would you identify the practice of medicine with wage-earning because a man may keep his health while earning wages, or a physician attending a case may receive a fee.

No.

And, since we agreed that the benefit obtained by each form of skill is peculiar to it, any common benefit enjoyed alike by all these practitioners must come from some further practice common to them all?

It would seem so.

Yes, we must say that if they all earn wages, they get that benefit in so far as they are engaged in wage-earning as well as in practising their several arts.

He agreed reluctantly.

This benefit, then—the receipt of wages—does not come to a man from his special art. If we are to speak strictly, the physician, as such, produces health; the builder, a house; and then each, in his further capacity of wage-earner, gets his pay. Thus every art has its own function and benefits its proper subject. But suppose the practitioner is not paid; does he then get any benefit from his art?

Clearly not.

And is he doing no good to anyone either, when he works for nothing?

No, I suppose he does some good.

Well then, Thrasy-machus, it is now clear that no form of skill or authority provides for its own benefit. As we were saying some time ago, it always studies and prescribes what is good for its subject—the interest of the weaker party, not of the stronger. And that, my friend, is why I said that no one is willing to be in a position of authority and undertake to set straight other men's troubles, without demanding to be paid; because, if he is to do his work well, he will never, in his

capacity of ruler, do, or command others to do, what is best for himself, but only what is best for the subject. For that reason, if he is to consent, he must have his recompense, in the shape of money or honour, or of punishment in case of refusal.

What do you mean, Socrates? asked Glaucon. I recognize two of your three kinds of reward; but I don't understand what you mean by speaking of punishment as a recompense.

Then you don't understand the recompense required by the best type of men, or their motive for accepting authority when they do consent. You surely know that a passion for honours or for money is rightly regarded as something to be ashamed of.

Yes, I do.

For that reason, I said, good men are unwilling to rule, either for money's sake or for honour. They have no wish to be called mercenary for demanding to be paid, or thieves for making a secret profit out of their office; nor yet will honours tempt them, for they are not ambitious. So they must be forced to consent under threat of penalty; that may be why a readiness to accept power under no such constraint is thought discreditable. And the heaviest penalty for declining to rule is to be ruled by someone inferior to yourself. That is the fear, I believe, that makes decent people accept power; and when they do, they face the prospect of authority with no idea that they are coming into the enjoyment of a comfortable berth; it is forced upon them because they can find no one better than themselves, or even as good, to be entrusted with power. If there could ever be a society of perfect men, there might well be as much competition to evade office as there now is to gain it; and it would then be clearly seen that the genuine ruler's nature is to seek only the advantage of the subject, with the consequence that any man of understanding would sooner have another to do the best for him than be at the pains to do the best for that other himself. On this point, then, I en-

tirely disagree with Thrasy-machus' doctrine that right means what is to the interest of the stronger.

THE RUDIMENTS OF SOCIAL ORGANIZATION

I was delighted with these speeches from Glaucon and Adeimantus, whose gifts I had always admired. How right, I exclaimed, was Glaucon's lover to begin that poem of his on your exploits at the battle of Megara by describing you two as the

sons divine
of Ariston's noble line!

Like father, like sons: there must indeed be some divine quality in your nature, if you can plead the cause of injustice so eloquently and still not be convinced yourselves that it is better than justice. That you are not really convinced I am sure from all I know of your dispositions, though your words might well have left me in doubt. But the more I trust you, the harder I find it to reply. How can I come to the rescue? I have no faith in my own powers, when I remember that you were not satisfied with the proof I thought I had given to Thrasy-machus that it is better to be just. And yet I cannot stand by and hear justice reviled without lifting a finger. I am afraid to commit a sin by holding aloof while I have breath and strength to say a word in its defence. So there is nothing for it but to do the best I can.

Glaucon and the others begged me to step into the breach and carry through our inquiry into the real nature of justice and injustice, and the truth about their respective advantages. So I told them what I thought. This is a very obscure question, I said, and we shall need keen sight to see our way. Now, as we are not remarkably clever, I will make a suggestion as to how we should proceed. Imagine a rather short-sighted person told to read an inscription in small letters from some way off. He would think it a

godsend if someone pointed out that the same inscription was written up elsewhere on a bigger scale, so that he could first read the larger characters and then make out whether the smaller ones were the same.

No doubt, said Adeimantus; but what analogy do you see in that to our inquiry?

I will tell you. We think of justice as a quality that may exist in a whole community as well as in an individual, and the community is the bigger of the two. Possibly, then, we may find justice there in larger proportions, easier to make out. So I suggest that we should begin by inquiring what justice means in a state. Then we can go on to look for its counterpart on a smaller scale in the individual.

That seems a good plan, he agreed.

Well then, I continued, suppose we imagine a state coming into being before our eyes. We might then be able to watch the growth of justice or of injustice within it. When that is done, we may hope it will be easier to find what we are looking for.

Much easier.

Shall we try, then, to carry out this scheme? I fancy it will be no light undertaking; so you had better think twice.

No need for that, said Adeimantus. Don't waste any more time.

My notion is, said I, that a state comes into existence because no individual is self-sufficing; we all have many needs. But perhaps you can suggest some different origin for the foundation of a community?

No, I agree with you.

So, having all these needs, we call in one another's help to satisfy our various requirements; and when we have collected a number of helpers and associates to live together in one place, we call that settlement a state.

Yes.

So if one man gives another what he has to give in exchange for what he can get, it is because each finds that to do so is for his own advantage.

Certainly.

Very well, said I. Now let us build up our imaginary state from the beginning. Apparently, it will owe its existence to our needs, the first and greatest need being the provision of food to keep us alive. Next we shall want a house; and thirdly, such things as clothing.

True.

How will our state be able to supply all these demands? We shall need at least one man to be a farmer, another a builder, and a third a weaver. Will that do, or shall we add a shoemaker and one or two more to provide for our personal wants?

By all means.

The minimum state, then, will consist of four or five men.

Apparently.

Now here is a further point. Is each one of them to bring the product of his work into a common stock? Should our one farmer, for example, provide food enough for four people and spend the whole of his working time in producing corn, so as to share with the rest; or should he take no notice of them and spend only a quarter of his time on growing just enough corn for himself, and divide the other three-quarters between building his house, weaving his clothes, and making his shoes, so as to save the trouble of sharing with others and attend himself to all his own concerns?

The first plan might be the easier, replied Adeimantus.

That may very well be so, said I; for, as you spoke, it occurred to me, for one thing, that no two people are born exactly alike. There are innate differences which fit them for different occupations.

I agree.

And will a man do better working at many trades, or keeping to one only?

Keeping to one.

And there is another point: obviously work may be ruined, if you let the right time go by. The workman must wait upon the work; it will not wait upon his leisure and allow itself to be done in a spare moment. So the conclusion is that

more things will be produced and the work be more easily and better done, when every man is set free from all other occupations to do, at the right time, the one thing for which he is naturally fitted.

That is certainly true.

We shall need more than four citizens, then, to supply all those necessities we mentioned. You see, Adeimantus, if the farmer is to have a good plough and spade and other tools, he will not make them himself. No more will the builder and weaver and shoemaker make all the many implements they need. So quite a number of carpenters and smiths and other craftsmen must be enlisted. Our miniature state is beginning to grow.

It is.

Still, it will not be very large, even when we have added cowherds and shepherds to provide the farmers with oxen for the plough, and the builders as well as the farmers with draught-animals, and the weavers and shoemakers with wool and leather.

No; but it will not be so very small either.

And yet, again, it will be next to impossible to plant our city in a territory where it will need no imports. So there will have to be still another set of people, to fetch what it needs from other countries.

There will.

Moreover, if these agents take with them nothing that those other countries require in exchange, they will return as empty-handed as they went. So, besides everything wanted for consumption at home, we must produce enough goods of the right kind for the foreigners whom we depend on to supply us. That will mean increasing the number of farmers and craftsmen.

Yes.

And then, there are these agents who are to import and export all kinds of goods—merchants, as we call them. We must have them; and if they are to do business overseas, we shall need quite a number of shipowners and others who know about that branch of trading.

We shall.

Again, in the city itself how are the various sets of producers to exchange their products? That was our object, you will remember, in forming a community and so laying the foundation of our state.

Obviously, they must buy and sell.

That will mean having a market-place, and a currency to serve as a token for purposes of exchange.

Certainly.

Now suppose a farmer, or an artisan, brings some of his produce to market at a time when no one is there who wants to exchange with him. Is he to sit there idle, when he might be at work?

No, he replied; there are people who have seen an opening here for their services. In well-ordered communities they are generally men not strong enough to be of use in any other occupation. They have to stay where they are in the market-place and take goods for money from those who want to sell, and money for goods from those who want to buy.

That, then, is the reason why our city must include a class of shopkeepers—so we call these people who sit still in the market-place to buy and sell, in contrast with merchants who travel to other countries.

Quite so.

There are also the services of yet another class, who have the physical strength for heavy work, though on intellectual grounds they are hardly worth including in our society—hired labourers, as we call them, because they sell the use of their strength for wages. They will go to make up our population.

Yes.

Well, Adeimantus, has our state now grown to its full size?

Perhaps.

Then, where in it shall we find justice or injustice? If they have come in with one of the elements we have been considering, can you say with which one?

I have no idea, Socrates; unless it be somewhere in their dealings with one another.

You may be right, I answered. Any-

how, it is a question which we shall have to face.

THE LUXURIOUS STATE

Let us begin, then, with a picture of our citizens' manner of life, with the provision we have made for them. They will be producing corn and wine, and making clothes and shoes. When they have built their houses, they will mostly work without their coats or shoes in summer, and in winter be well shod and clothed. For their food, they will prepare flour and barley-meal for kneading and baking, and set out a grand spread of loaves and cakes on rushes or fresh leaves. Then they will lie on beds of myrtle-boughs and byrony and make merry with their children, drinking their wine after the feast with garlands on their heads and singing the praises of the gods. So they will live pleasantly together; and a prudent fear of poverty or war will keep them from begetting children beyond their means.

Here Glaucon interrupted me: You seem to expect your citizens to feast on dry bread.

True, I said; I forgot that they will have something to give it a relish, salt, no doubt, and olives, and cheese, and country stews of roots and vegetables. And for dessert we will give them figs and peas and beans; and they shall roast myrtle-berries and acorns at the fire, while they sip their wine. Leading such a healthy life in peace, they will naturally come to a good old age, and leave their children to live after them in the same manner.

That is just the sort of provender you would supply, Socrates, if you were founding a community of pigs.

Well, how are they to live, then, Glaucon?

With the ordinary comforts. Let them lie on couches and dine off tables on such dishes and sweets as we have nowadays.

Ah, I see, said I; we are to study the

growth, not just of a state, but of a luxurious one. Well, there may be no harm in that; the consideration of luxury may help us to discover how justice and injustice take root in society. The community I have described seems to me the ideal one, in sound health as it were: but if you want to see one suffering from inflammation, there is nothing to hinder us. So some people, it seems, will not be satisfied to live in this simple way; they must have couches and tables and furniture of all sorts; and delicacies too, perfumes, unguents, courtesans, sweetmeats, all in plentiful variety. And besides, we must not limit ourselves now to those bare necessities of house and clothes and shoes; we shall have to set going the arts of embroidery and painting, and collect rich materials, like gold and ivory.

Yes.

Then we must once more enlarge our community. The healthy one will not be big enough now; it must be swollen up with a whole multitude of callings not ministering to any bare necessity: hunters and fishermen, for instance; artists in sculpture, painting, and music; poets with their attendant train of professional reciters, actors, dancers, producers; and makers of all sorts of household gear, including everything for women's adornment. And we shall want more servants: children's nurses and attendants, lady's maids, barbers, cooks and confectioners. And then swineherds—there was no need for them in our original state, but we shall want them now; and a great quantity of sheep and cattle too, if people are going to live on meat.

Of course.

And with this manner of life physicians will be in much greater request.

No doubt.

The country, too, which was large enough to support the original inhabitants, will now be too small. If we are to have enough pasture and plough land, we shall have to cut off a slice of our neighbours' territory; and if they too are not content with necessities, but give them-

selves up to getting unlimited wealth, they will want a slice of ours.

That is inevitable, Socrates.

So the next thing will be, Glaucon, that we shall be at war.

No doubt.

We need not say yet whether war does good or harm, but only that we have discovered its origin in desires which are the most fruitful source of evils both to individuals and to states.⁴

Quite true.

This will mean a considerable addition to our community—a whole army, to go out to battle with any invader, in defence of all this property and of the citizens we have been describing.

Why so? Can't they defend themselves?

Not if the principle was right, which we all accepted in framing our society. You remember we agreed that no one man can practice many trades or arts satisfactorily.

True.

Well, is not the conduct of war an art, quite as important as shoemaking?

Yes.

But we would not allow our shoemaker to try to be also a farmer or weaver or builder, because we wanted our shoes well made. We gave each man one trade, for which he was naturally fitted; he would do good work, if he confined himself to that all his life, never letting the right moment slip by. Now in no form of work is efficiency so important as in war; and fighting is not so easy a business that a man can follow another trade, such as farming or shoemaking, and also be an efficient soldier. Why, even a game like draughts or dice must be studied from childhood; no one can become a fine player in his spare moments. Just taking up a shield or other weapon will not make a man capable of fighting that very day in any sort of warfare, any more than taking up a tool or

⁴ "All wars are made for the sake of getting money," *Phaedo* 66 c.

implement of some kind will make a man a craftsman or an athlete, if he does not understand its use and has never been properly trained to handle it.

No; if that were so, tools would indeed be worth having.

These guardians of our state, then, inasmuch as their work is the most important of all, will need the most complete freedom from other occupations and the greatest amount of skill and practice.

I quite agree.

And also a native aptitude for their calling.

Certainly.

So it is our business to define, if we can, the natural gifts that fit men to be guardians of a commonwealth, and to select them accordingly. It will certainly be a formidable task; but we must grapple with it to the best of our power.

Yes.

THE GUARDIANS' TEMPERAMENT

Don't you think then, said I, that, for the purpose of keeping guard, a young man should have much the same temperament and qualities as a well-bred watch-dog? I mean, for instance, that both must have quick sense to detect an enemy, swiftness in pursuing him, and strength, if they have to fight when they have caught him.

Yes, they will need all those qualities.

And also courage, if they are to fight well.

Of course.

And courage, in dog or horse or any other creature, implies a spirited disposition. You must have noticed that a high spirit is unconquerable. Every soul possessed of it is fearless and indomitable in the face of any danger.

Yes, I have noticed that.

So now we know what physical qualities our Guardian must have, and also that he must be of a spirited temper.

Yes.

Then, Glaucon, how are men of that natural disposition to be kept from behaving pugnaciously to one another and to the rest of their countrymen?

It is not at all easy to see.

And yet they must be gentle to their own people and dangerous only to enemies; otherwise they will destroy themselves without waiting till others destroy them.

True.

What are we to do, then? If gentleness and a higher temper are contraries, where shall we find a character to combine them? Both are necessary to make a good Guardian, but it seems they are incompatible. So we shall never have a good Guardian.

It looks like it.

Here I was perplexed, but on thinking over what we had been saying, I remarked that we deserved to be puzzled, because we had not followed up the comparison we had just drawn.

What do you mean? he asked.

We never noticed that, after all, there are natures in which these contraries are combined. They are to be found in animals, and not least in the kind we compared to our Guardian. Well-bred dogs, as you know, are by instinct perfectly gentle to people whom they know and are accustomed to, and fierce to strangers. So the combination of qualities we require for our Guardian is, after all, possible and not against nature.

Evidently.

Do you further agree that, besides this spirited temper, he must have a philosophical element in his nature?

I don't see what you mean.

This is another trait you will see in the dog. It is really remarkable how the creature gets angry at the mere sight of a stranger and welcomes anyone he knows, though he may never have been treated unkindly by the one or kindly by the other. Did that never strike you as curious?

I had not thought of it before; but that certainly is how a dog behaves.

Well, but that shows a fine instinct,

which is philosophic in the true sense.

How so?

Because the only mark by which he distinguishes a friendly and an unfriendly face is that he knows the one and does not know the other; and if a creature makes that the test of what it finds congenial or otherwise, how can you deny that it has a passion for knowledge and understanding?

Of course, I cannot.

And that passion is the same thing as philosophy—the love of wisdom.⁵

Yes.

Shall we boldly say, then, that the same is true of human beings? If a man is to be gentle towards his own people whom he knows, he must have an instinctive love of wisdom and understanding.

Agreed.

So the nature required to make a really noble Guardian of our commonwealth will be swift and strong, spirited, and philosophic.

Quite so.

Given those natural qualities, then, how are these Guardians to be brought up and educated? First, will the answer to that question help the purpose of our whole inquiry, which is to make out how justice and injustice grow up in a state? We want to be thorough, but not to draw out this discussion to a needless length.

Glaucon's brother answered: I certainly think it will help.

If so, I said, we must not think of dropping it, though it may be rather a long business.

I agree.

Come on then. We will take our time and educate our imaginary citizens.

Yes, let us do so.

⁵ The ascription of a philosophic element to dogs is not seriously meant. We might regard man's love of knowledge as rooted in an instinct of curiosity to be found in animals; but curiosity has no connexion with gentleness, and for Plato reason is an independent faculty, existing only in man and not developed from any animal instinct.

PRIMARY EDUCATION OF THE GUARDIANS: CENSORSHIP OF LITERATURE

What is this education to be, then? Perhaps we shall hardly invent a system better than the one which long experience has worked out, with its two branches for the cultivation of the mind and of the body. And I suppose we shall begin with the mind, before we start physical training.

Naturally.

Under that head will come stories,⁶ and of these there are two kinds: some are true, others fictitious. Both must come in, but we shall begin our education with the fictitious kind.

I don't understand, he said.

Don't you understand, I replied, that we begin by telling children stories, which, taken as a whole, are fiction, though they contain some truth? Such story-telling begins at an earlier age than physical training; that is why I said we should start with the mind.

You are right.

And the beginning, as you know, is always the most important part, especially in dealing with anything young and tender. That is the time when the character is being moulded and easily takes any impress one may wish to stamp on it.

Quite true.

Then shall we simply allow our children to listen to any stories that anyone happens to make up, and so receive into their minds ideas often the very opposite of those we shall think they ought to have when they are grown up?

No, certainly not.

It seems, then, our first business will be to supervise the making of fables and legends, rejecting all which are unsatisfactory; and we shall induce nurses and mothers to tell their children only those which we have approved, and to think more of moulding their souls with these

⁶ In a wide sense, tales, legends, myths, narratives in poetry or prose.

stories than they now do of rubbing their limbs to make them strong and shapely. Most of the stories now in use must be discarded.

What kind do you mean?

If we take the great ones, we shall see in them the pattern of all the rest, which are bound to be of the same stamp and to have the same effect.

No doubt; but which do you mean by the great ones?

The stories in Hesiod and Homer and the poets in general, who have at all times composed fictitious tales and told them to mankind.

Which kind are you thinking of, and what fault do you find in them?

The worst of all faults, especially if the story is ugly and immoral as well as false—misrepresenting the nature of gods and heroes, like an artist whose picture is utterly unlike the object he sets out to draw.

That is certainly a serious fault; but give me an example.

A signal instance of false invention about the highest matters is that foul story, which Hesiod repeats, of the deeds of Uranus and the vengeance of Cronos;⁷ and then there is the tale of Cronos's doings and of his son's treatment of him. Even if such tales were true, I should not have supposed they should be lightly told to thoughtless young people. If they cannot be altogether suppressed, they should only be revealed in a mystery, to which access should be as far as possible restricted by requiring the sacrifice, not of a pig, but of some victim such as very few could afford.⁸

⁷ Hesiod, *Theogony*, 154 ff. A primitive myth of the forcing apart of Sky (Uranus) and Earth (Gaia) by their son Cronos, who mutilated his father. Zeus, again, took vengeance on his father Cronos for trying to destroy his children. These stories were sometimes cited to justify ill-treatment of parents.

⁸ The usual sacrifice at the Eleusinian Mysteries was a pig, which was cheap. In a mystery unedifying legends might be given an allegorical interpretation, a method

It is true: those stories are objectionable.

Yes, and not to be repeated in our commonwealth, Adeimantus. We shall not tell a child that, if he commits the foulest crimes or goes to any length in punishing his father's misdeeds, he will be doing nothing out of the way, but only what the first and greatest of the gods have done before him.

I agree; such stories are not fit to be repeated.

Nor yet any tales of warfare and intrigues and battles of gods against gods, which are equally untrue. If our future Guardians are to think it a disgrace to quarrel lightly with one another, we shall not let them embroider robes with the Battle of the Giants⁹ or tell them of all the other feuds of gods and heroes with their kith and kin. If by any means we can make them believe that no one has ever had a quarrel with a fellow citizen and it is a sin to have one, that is the sort of thing our old men and women should tell children from the first; and as they grow older, we must make the poets write for them in the same strain. Stories like those of Hera being bound by her son, or of Hephaestus flung from heaven by his father for taking his mother's part when she was beaten, and all those battles of the gods in Homer, must not be admitted into our state, whether they be allegorical or not. A child cannot distinguish the allegorical sense from the literal, and the ideas he takes in at that age are likely to become indelibly fixed; hence the great importance of seeing that the first stories he hears shall be designed to produce the best possible effect on his character.

Yes, that is reasonable. But if we were asked which of these stories in particular are of the right quality, what should we answer?

⁹ which had been applied to Homer since the end of the sixth century B.C.

⁹ Such a robe was woven by maidens for the statue of Athena at the Great Panathenaea.

I replied: You and I, Adeimantus, are not, for the moment, poets, but founders of a commonwealth. As such, it is not our business to invent stories ourselves, but only to be clear as to the main outlines to be followed by the poets in making their stories and the limits beyond which they must not be allowed to go.

True; but what are these outlines for any account they may give of the gods?

Of this sort, said I. A poet, whether he is writing epic, lyric, or drama, surely ought always to represent the divine nature as it really is. And the truth is that that nature is good and must be described as such.

Unquestionably.

Well, nothing that is good can be harmful; and if it cannot do harm, it can do no evil; and so it cannot be responsible for any evil.

I agree.

Again, goodness is beneficent, and hence the cause of well-being.

Yes.

Goodness, then, is not responsible for everything, but only for what is as it should be. It is not responsible for evil.

Quite true.

It follows, then, that the divine, being good, is not, as most people say, responsible for everything that happens to mankind, but only for a small part; for the good things in human life are far fewer than the evil, and, whereas the good must be ascribed to heaven only, we must look elsewhere for the cause of evils.

I think that is perfectly true.

So we shall condemn as a foolish error Homer's description of Zeus as the "dispenser of both good and ill." We shall disapprove when Pandarus' violation of oaths and treaties it said to be the work of Zeus and Athena, or when Themis and Zeus are said to have caused strife among the gods. Nor must we allow our young people to be told by Aeschylus that "Heaven implants guilt in man, when his will is to destroy a house ut-

terly." If a poet writes of the sorrows of Niobe or the calamities of the house of Pelops or of the Trojan war, either he must not speak of them as the work of a god, or, if he does so, he must devise some such explanation as we are now requiring; he must say that what the god did was just and good, and the sufferers were the better for being chastised. One who pays a just penalty must not be called miserable, and his misery then laid at heaven's door. The poet will only be allowed to say that the wicked were miserable because they needed chastisement, and the punishment of heaven did them good. If our commonwealth is to be well-ordered, we must fight to the last against any member of it being suffered to speak of the divine, which is good, being responsible for evil. Neither young nor old must listen to such tales, in prose or verse. Such doctrine would be impious, self-contradictory, and disastrous to our commonwealth.

I agree, he said, and I would vote for a law to that effect.

Well then, that shall be one of our laws about religion. The first principle to which all must conform in speech or writing is that heaven is not responsible for everything, but only for what is good.

I am quite satisfied.

If anyone, then, is to practise deception, either on the country's enemies or on its citizens, it must be the Rulers of the commonwealth, acting for its benefit; no one else may meddle with this privilege. For a private person to mislead such Rulers we shall declare to be a worse offence than for a patient to mislead his doctor or an athlete his trainer about his bodily condition, or for a seaman to misinform his captain about the state of the ship or of the crew. So, if anyone else in our commonwealth "of all that practise crafts, physician, seer, or carpenter," is caught not telling the truth, the Rulers will punish him for introducing a practice as fatal and subversive in a state as it would be in a ship.

SELECTION OF RULERS: THE GUARDIANS' MANNER OF LIVING

Good, said I; and what is the next point to be settled? Is it not the question, which of these Guardians are to be rulers and which are to obey?

No doubt.

Well, it is obvious that the elder must have authority over the young, and that the rulers must be the best.

Yes.

And as among farmers the best are those with a natural turn for farming, so, if we want the best among our Guardians, we must take those naturally fitted to watch over a commonwealth. They must have the right sort of intelligence and ability; and also they must look upon the commonwealth as their special concern—the sort of concern that is felt for something so closely bound up with oneself that its interests and fortunes, for good or ill, are held to be identical with one's own.

Exactly.

So the kind of men we must choose from among the Guardians will be those who, when we look at the whole course of their lives, are found to be full of zeal to do whatever they believe is for the good of the commonwealth and never willing to act against its interest.

Yes, they will be the men we want.

We must watch them, I think, at every age and see whether they are capable of preserving this conviction that they must do what is best for the community, never forgetting it or allowing themselves to be either forced or bewitched into throwing it over.

How does this throwing over come about?

I will explain. When a belief passes out of the mind, a man may be willing to part with it, if it is false and he has learnt better, or unwilling, if it is true.

I see how he might be willing to let it go; but you must explain how he can be unwilling.

Where is your difficulty? Don't you agree that men are unwilling to be deprived of good, though ready enough to part with evil? Or that to be deceived about the truth is evil, to possess it good? Or don't you think that possessing truth means thinking of things as they really are?

You are right. I do agree that men are unwilling to be robbed of a true belief.

When that happens to them, then, it must be by theft, or violence, or bewitchment.

Again I do not understand.

Perhaps my metaphors are too high-flown. I call it theft when one is persuaded out of one's belief or forgets it. Argument in the one case, and time in the other, steal it away without one's knowing what is happening. You understand now?

Yes.

And by violence I mean being driven to change one's mind by pain or suffering.

That too I understand, and you are right.

And bewitchment, as I think you would agree, occurs when a man is beguiled out of his opinion by the allurements of pleasure or scared out of it under the spell of panic.

Yes, all delusions are like a sort of bewitchment.

As I said just now, then, we must find out who are the best guardians of this inward conviction that they must always do what they believe to be best for the commonwealth. We shall have to watch them from earliest childhood and set them tasks in which they would be most likely to forget or to be beguiled out of this duty. We shall then choose only those whose memory holds firm and who are proof against delusion.

Yes.

We must also subject them to ordeals of toil and pain and watch for the same qualities there. And we must observe them when exposed to the test of yet a third kind of bewitchment. As people lead colts up to alarming noises to see

whether they are timid, so these young men must be brought into terrifying situations and then into scenes of pleasure, which will put them to severer proof than gold tried in the furnace. If we find one bearing himself well in all these trials and resisting every enchantment, a true guardian of himself, preserving always that perfect rhythm and harmony of being which he has acquired from his training in music and poetry, such a one will be of the greatest service to the commonwealth as well as to himself. Whenever we find one who has come unscathed through every test in childhood, youth, and manhood, we shall set him as a Ruler to watch over the commonwealth; he will be honoured in life, and after death receive the highest tribute of funeral rites and other memorials. All who do not reach this standard we must reject. And that, I think, my dear Glaucon, may be taken as an outline of the way in which we shall select Guardians to be set in authority as Rulers.

I am very much of your mind.

These, then, may properly be called Guardians in the fullest sense, who will ensure that neither foes without shall have the power, nor friends within the wish, to do harm. Those young men whom up to now we have been speaking of as Guardians, will be better described as Auxiliaries, who will enforce the decisions of the Rulers.

I agree.

Now, said I, can we devise something in the way of those convenient fictions we spoke of earlier, a single bold flight of invention,¹⁰ which we may induce the community in general, and if possible the Rulers themselves, to accept?

What kind of fiction?

¹⁰ This phrase is commonly rendered by "noble lie," a self-contradictory expression no more applicable to Plato's harmless allegory than to a New Testament parable or the Pilgrim's Progress, and liable to suggest that he would countenance the lies, for the most part ignoble, now called propaganda.

Nothing new; something like an Eastern tale of what, according to the poets, has happened before now in more than one part of the world. The poets have been believed; but the thing has not happened in our day, and it would be hard to persuade anyone that it could ever happen again.

You seem rather shy of telling this story of yours.

With good reason, as you will see when I have told it.

Out with it; don't be afraid.

Well, here it is; though I hardly know how to find the courage or the words to express it. I shall try to convince, first the Rulers and the soldiers,¹¹ and then the whole community, that all that nurture and education which we gave them was only something they seemed to experience as it were in a dream. In reality they were the whole time down inside the earth, being moulded and fostered while their arms and all their equipment were being fashioned also; and at last, when they were complete, the earth sent them up from her womb into the light of day. So now they must think of the land they dwell in as a mother and nurse, whom they must take thought for and defend against any attack, and of their fellow citizens as brothers born of the same soil.

You might well be bashful about coming out with your fiction.

No doubt; but still you must hear the rest of the story. It is true, we shall tell our people in this fable, that all of you in this land are brothers; but the god who fashioned you mixed gold in the composition of those among you who are fit to rule, so that they are of the most precious quality; and he put silver in the Auxiliaries, and iron and brass in the farmers and craftsmen. Now, since you are all of one stock, although your children will generally be like their parents, sometimes a golden parent may have a

¹¹ Note that the Guardians themselves are to accept this allegory, if possible. It is not "propaganda" foisted on the masses by the Rulers.

silver child or a silver parent a golden one, and so on with all the other combinations. So the first and chief injunction laid by heaven upon the Rulers is that, among all the things of which they must show themselves good guardians, there is none that needs to be so carefully watched as the mixture of metals in the souls of the children. If a child of their own is born with an alloy of iron or brass, they must, without the smallest pity, assign him the station proper to his nature and thrust him out among the craftsmen or the farmers. If, on the contrary, these classes produce a child with gold or silver in his composition, they will promote him, according to his value, to be a Guardian or an Auxiliary. They will appeal to a prophecy that ruin will come upon the state when it passes into the keeping of a man of iron or brass. Such is the story; can you think of any device to make them believe it?

Not in the first generation; but their sons and descendants might believe it, and finally the rest of mankind.¹²

Well, said I, even so it might have a good effect in making them care more for the commonwealth and for one another; for I think I see what you mean.

So, I continued, we will leave the success of our story to the care of popular tradition; and now let us arm these sons of Earth and lead them, under the command of their Rulers, to the site of our city. There let them look round for the best place to fix their camp, from which they will be able to control any rebellion against the laws from within and to beat off enemies who may come from without like wolves to attack the fold. When they have pitched their camp and offered sacrifice to the proper divinities, they must arrange their sleeping quarters; and these must be sufficient to

¹² Just as the tradition that the Athenians were "autochthonous" in a literal sense was popularly believed, though Plato would suppose it to have been originally invented by some myth-making poet.

shelter them from winter cold and summer heat.

Naturally. You mean they are going to live there?

Yes, said I; but live like soldiers, not like men of business.

What is the difference?

I will try to explain. It would be very strange if a shepherd were to disgrace himself by keeping, for the protection of his flock, dogs who were so ill-bred and badly trained that hunger or unruliness or some bad habit or other would set them worrying the sheep and behaving no better than wolves. We must take every precaution against our Auxiliaries treating the citizens in any such way and, because they are stronger, turning into savage tyrants instead of friendly allies; and they will have been furnished with the best of safeguards, if they have really been educated in the right way.

But surely there is nothing wrong with their education.

We must not be too positive about that, my dear Glaucon; but we can be sure of what we said not long ago, that if they are to have the best chance of being gentle and humane to one another and to their charges, they must have the right education, whatever that may be.

We were certainly right there.

Then besides that education, it is only common sense to say that the dwellings and other belongings provided for them must be such as will neither make them less perfect Guardians nor encourage them to maltreat their fellow citizens.

True.

With that end in view, let us consider how they should live and be housed. First, none of them must possess any private property beyond the barest necessities. Next, no one is to have any dwelling or store-house that is not open for all to enter at will. Their food, in the quantities required by men of temperance and courage who are in training for war, they will receive from the other citizens as the wages of their guardianship, fixed so that there shall be just enough for the year with nothing over; and they

will have meals in common and all live together like soldiers in a camp. Gold and silver, we shall tell them, they will not need, having the divine counterparts of those metals always in their souls as a god-given possession, whose purity it is not lawful to sully by the acquisition of that mortal dross, current among mankind, which has been the occasion of so many unholy deeds. They alone of all the citizens are forbidden to touch and handle silver or gold, or to come under the same roof with them, or wear them as ornaments, or drink from vessels made of them. This manner of life will be their salvation and make them the saviours of the commonwealth. If ever they should come to possess land of their own and houses and money, they will give up their guardianship for the management of their farms and households and become tyrants at enmity with their fellow citizens instead of allies. And so they will pass all their lives in hating and being hated, plotting and being plotted against, in much greater fear of their enemies at home than of any foreign foe, and fast heading for the destruction that will soon overwhelm their country with themselves. For all these reasons let us say that this is how our Guardians are to be housed and otherwise provided for, and let us make laws accordingly.

By all means, said Glaucon.

Here Adeimantus interposed. Socrates, he said, how would you meet the objection that you are not making these people particularly happy? It is their own fault too, if they are not; for they are really masters of the state, and yet they get no good out of it as other rulers do, who own lands, build themselves fine houses with handsome furniture, offer private sacrifices to the gods, and entertain visitors from abroad; who possess, in fact, that gold and silver you spoke of, with everything else that is usually thought necessary for happiness. These people seem like nothing so much as a garrison of mercenaries posted in the city and perpetually mounting guard.

Yes, I said, and what is more they will serve for their food only without getting a mercenary's pay, so that they will not be able to travel on their own account or to make presents to a mistress or to spend as they please in other ways, like the people who are commonly thought happy. You have forgotten to include these counts in your indictment, and many more to the same effect.

Well, take them as included now.

And you want to hear the answer?

Yes.

We shall find one, I think, by keeping to the line we have followed so far. We shall say that, though it would not be surprising if even these people were perfectly happy under such conditions, our aim in founding the commonwealth was not to make any one class specially happy, but to secure the greatest possible happiness for the community as a whole. We thought we should have the best chance of finding justice in a state so constituted, just as we should find injustice where the constitution was of the worst possible type; we could then decide the question which has been before us all this time. For the moment, we are constructing, as we believe, the state which will be happy as a whole, not trying to secure the well-being of a select few; we shall study a state of the opposite kind presently. It is as if we were colouring a statue and someone came up and blamed us for not putting the most beautiful colours on the noblest parts of the figure; the eyes, for instance, should be painted crimson, but we had made them black. We should think it a fair answer to say: Really, you must not expect us to paint eyes so handsome as not to look like eyes at all. This applies to all the parts: the question is whether, by giving each its proper colour, we make the whole beautiful. So too, in the present case, you must not press us to endow our Guardians with a happiness that will make them anything rather than guardians. We could quite easily clothe our farmers in gorgeous robes, crown them with gold, and invite them to till the soil at their

pleasure; or we might set our potters to lie on couches by their fire, passing round the wine and making merry, with their wheel at hand to work at whenever they felt so inclined. We could make all the rest happy in the same sort of way, and so spread this well-being through the whole community. But you must not put that idea into our heads; if we take your advice, the farmer will be no farmer, the potter no longer a potter; none of the elements that make up the community will keep its character. In many cases this does not matter so much: if a cobbler goes to the bad and pretends to be what he is not, he is not a danger to the state; but, as you must surely see, men who make only a vain show of being guardians of the laws and of the commonwealth bring the whole state to utter ruin, just as, on the other hand, its good government and well-being depend entirely on them. We, in fact, are making genuine Guardians who will be the last to bring harm upon the commonwealth; if our critic aims rather at producing a happiness like that of a party of peasants feasting at a fair, what he has in mind is something other than a civic community. So we must consider whether our aim in establishing Guardians is to secure the greatest possible happiness for them, or happiness is something of which we should watch the development in the whole commonwealth. If so, we must compel these Guardians and Auxiliaries of ours to second our efforts; and they, and all the rest with them, must be induced to make themselves perfect masters each of his own craft. In that way, as the community grows into a well-ordered whole, the several classes may be allowed such measure of happiness as their nature will compass.

I think that is an admirable reply.

THE VIRTUES IN THE STATE

So now at last, son of Ariston, said I, your commonwealth is established. The next thing is to bring to hear upon it all the light you can get from any quarter,

with the help of your brother and Polemarchus and all the rest, in the hope that we may see where justice is to be found in it and where injustice, how they differ, and which of the two will bring happiness to its possessor, no matter whether gods and men see that he has it or not.

Nonsense, said Glaucon; you promised to conduct the search yourself, because it would be a sin not to uphold justice by every means in your power.

That is true; I must do as you say, but you must all help.

We will.

I suspect, then, we may find what we are looking for in this way. I take it that our state, having been founded and built up on the right lines, is good in the complete sense of the word.

It must be.

Obviously, then, it is wise, brave, temperate, and just.

Obviously.

Then if we find some of these qualities in it, the remainder will be the one we have not found. It is as if we were looking somewhere for one of any four things: if we detected that one immediately, we should be satisfied; whereas if we recognized the other three first, that would be enough to indicate the thing we wanted; it could only be the remaining one. So here we have four qualities. Had we not better follow that method in looking for the one we want?

Surely.

To begin then: the first quality to come into view in our state seems to be its wisdom; and there appears to be something odd about this quality.¹³

What is there odd about it?

I think the state we have described really has wisdom; for it will be prudent in counsel, won't it?

Yes.

And prudence in counsel is clearly a

form of knowledge; good counsel cannot be due to ignorance and stupidity.

Clearly.

But there are many various kinds of knowledge in our commonwealth. There is the knowledge possessed by the carpenters or the smiths, and the knowledge how to raise crops. Are we to call the state wise and prudent on the strength of these forms of skill?

No; they would only make it good at furniture-making or working in copper or agriculture.

Well then, is there any form of knowledge, possessed by some among the citizens of our new-founded commonwealth, which will enable it to take thought, not for some particular interest, but for the best possible conduct of the state as a whole in its internal and external relations?

Yes, there is.

What is it, and where does it reside?

It is precisely that art of guardianship which resides in those Rulers whom we just called Guardians in the full sense.

And what would you call the state on the strength of that knowledge?

Prudent and truly wise.

And do you think there will be more or fewer of these genuine Guardians in our state than there will be smiths?

Far fewer.

Fewer, in fact, than any of those other groups who are called after the kind of skill they possess?

Much fewer.

So, if a state is constituted on natural principles, the wisdom it possesses as a whole will be due to the knowledge residing in the smallest part, the one which takes the lead and governs the rest. Such knowledge is the only kind that deserves the name of wisdom, and it appears to be ordained by nature that the class privileged to possess it should be the smallest of all.

Quite true.

Here then we have more or less made out one of our four qualities and its seat in the structure of the commonwealth.

To my satisfaction, at any rate.

Next there is courage. It is not hard to discern that quality or the part of the community in which it resides so as to entitle the whole to be called brave.

Why do you say so?

Because anyone who speaks of a state as either brave or cowardly can only be thinking of that part of it which takes the field and fight in its defence; the reason being, I imagine, that the character of the state is not determined by the bravery or cowardice of the other parts.

No.

Courage, then, is another quality which a community owes to a certain part of itself. And its being brave will mean that, in this part, it possesses the power of preserving, in all circumstances, a conviction about the sort of things that it is right to be afraid of—the conviction implanted by the education which the law-giver has established. Is not that what you mean by courage?

I do not quite understand. Will you say it again?

I am saying that courage means preserving something.

Yes, but what?

The conviction, inculcated by lawfully established education, about the sort of things which may rightly be feared. When I added "in all circumstances," I meant preserving it always and never abandoning it, whether under the influence of pain or of pleasure, of desire or of fear. If you like, I will give an illustration.

Please do.

You know how dyers who want wool to take a purple dye, first select the white wool from among all the other colours, next treat it very carefully to make it take the dye in its full brilliance, and only then dip it in the vat. Dyed in that way, wool gets a fast colour, which no washing, even with soap, will rob of its brilliance; whereas if they choose wool of any colour but white, or if they neglect to prepare it, you know what happens.

Yes, it looks washed-out and ridiculous.

That illustrates the result we were doing our best to achieve when we were choosing our fighting men and training their minds and bodies. Our only purpose was to contrive influences whereby they might take the colour of our institutions like a dye, so that, in virtue of having both the right temperament and the right education, their convictions about what ought to be feared and on all other subjects might be indelibly fixed, never to be washed out by pleasure and pain, desire and fear, solvents more terribly effective than all the soap and fuller's earth in the world. Such a power of constantly preserving, in accordance with our institutions, the right conviction about the things which ought, or ought not, to be feared, is what I call courage. That is my position, unless you have some objection to make.

None at all, he replied; if the belief were such as might be found in a slave or an animal—correct, but not produced by education—you would hardly describe it as in accordance with our institutions, and you would give it some other name than courage.

Quite true.

Then I accept your account of courage.

You will do well to accept it, at any rate as applying to the courage of the ordinary citizen;¹⁴ if you like we will go into it more fully some other time. At present we are in search of justice, rather than of courage; and for that purpose we have said enough.

I quite agree.

Two qualities, I went on, still remain to be made out in our state, temperance and the object of our whole inquiry, justice. Can we discover justice without troubling ourselves further about temperance?

I do not know, and I would rather not have justice come to light first, if that

¹⁴ As distinct from the perfect courage of the philosophic Ruler, based on immediate knowledge of values.

¹³ Because the wisdom of the whole resides in the smallest part, as explained below.

means that we should not go on to consider temperance. So if you want to please me, take temperance first.

Of course I have every wish to please you.

Do go on then.

I will. At first sight, temperance seems more like some sort of concord or harmony than the other qualities did.

How so?

Temperance surely means a kind of orderliness, a control of certain pleasures and appetites. People use the expression, "master of oneself," whatever that means, and various other phrases that point the same way.

Quite true.

Is not "master of oneself" an absurd expression? A man who was master of himself would presumably be also subject to himself, and the subject would be master; for all these terms apply to the same person.

No doubt.

I think, however, the phrase means that within the man himself, in his soul, there is a better part and a worse; and that he is his own master when the part which is better by nature has the worse under its control. It is certainly a term of praise; whereas it is considered a disgrace, when, through bad breeding or bad company, the better part is overwhelmed by the worse, like a small force outnumbered by a multitude. A man in that condition is called a slave to himself and intemperate.

Probably that is what is meant.

Then now look at our newly founded state and you will find one of these two conditions realized there. You will agree that it deserves to be called master of itself, if temperance and self-mastery exist where the better part rules the worse.

Yes, I can see that is true.

It is also true that the great mass of multifarious appetites and pleasures and pains will be found to occur chiefly in children and women and slaves, and, among free men so called, in the inferior

multitude; whereas the simple and moderate desires which, with the aid of reason and right belief, are guided by reflection, you will find only in a few, and those with the best inborn dispositions and the best educated.

Yes, certainly.

Do you see that this state of things will exist in your commonwealth, where the desires of the inferior multitude will be controlled by the desires and wisdom of the superior few? Hence, if any society can be called master of itself and in control of pleasures and desires, it will be ours.

Quite so.

On all these grounds, then, we may describe it as temperate. Furthermore, in our state, if anywhere, the governors and the governed will share the same conviction on the question who ought to rule. Don't you think so?

I am quite sure of it.

Then, if that is their state of mind, in which of the two classes of citizens will temperance reside—in the governors or in the governed?

In both, I suppose.

So we were not wrong in divining a resemblance between temperance and some kind of harmony. Temperance is not like courage and wisdom, which made the state wise and brave by residing each in one particular part. Temperance works in a different way; it extends throughout the whole gamut of the state, producing a consonance of all its elements from the weakest to the strongest as measured by any standard you like to take—wisdom, bodily strength, numbers, or wealth. So we are entirely justified in identifying with temperance this unanimity or harmonious agreement between the naturally superior and inferior elements on the question which of the two should govern, whether in the state or in the individual.

I fully agree.

Good, said I. We have discovered in our commonwealth three out of our four

qualities, to the best of our present judgment. What is the remaining one, required to make up its full complement of goodness? For clearly this will be justice.

Clearly.

Now is the moment, then, Glaucon, for us to keep the closest watch, like huntsmen standing round a covert, to make sure that justice does not slip through and vanish undetected. It must certainly be somewhere hereabouts; so keep your eyes open for a view of the quarry, and if you see it first, give me the alert.

I wish I could, he answered; but you will do better to give me a lead and not count on me for more than eyes to see what you show me.

Pray for luck, then, and follow me.

I will, if you will lead on.

The thicket looks rather impenetrable, said I; too dark for it to be easy to start up the game. However, we must push on.

Of course we must.

Here I gave the cry halloo. Glaucon, I exclaimed, I believe we are on the track and the quarry is not going to escape us altogether.

That is good news.

Really, I said, we have been extremely stupid. All this time the thing has been under our very noses from the start, and we never saw it. We have been as absurd as a person who hunts for something he has all the time got in his hand. Instead of looking at the thing, we have been staring into the distance. No doubt that is why it escaped us.

What do you mean?

I believe we have been talking about the thing all this while without ever understanding that we were giving some sort of account of it.

Do come to the point. I am all ears.

Listen, then, and judge whether I am right. You remember how, when we first began to establish our commonwealth and several times since, we have laid down, as a universal principle, that everyone ought to perform the one func-

tion in the community for which his nature best suited him. Well, I believe that that principle, or some form of it, is justice.

We certainly laid that down.

Yes, and surely we have often heard people say that justice means minding one's own business and not meddling with other men's concerns; and we have often said so ourselves.

We have.

Well, my friend, it may be that this minding of one's own business, when it takes a certain form, is actually the same thing as justice. Do you know what makes me think so?

No, tell me.

I think that this quality which makes it possible for the three we have already considered, wisdom, courage, and temperance, to take their place in the commonwealth, and so long as it remains present secures their continuance, must be the remaining one. And we said that, when three of the four were found, the one left over would be justice.

It must be so.

Well now, if we had to decide which of these qualities will contribute most to the excellence of our commonwealth, it would be hard to say whether it was the unanimity of rulers and subjects, or the soldier's fidelity to the established conviction about what is, or is not, to be feared, or the watchful intelligence of the Rulers; or whether its excellence were not above all due to the observance by everyone, child or woman, slave or freeman or artisan, ruler or ruled, of this principle that each one should do his own proper work without interfering with others.

It would be hard to decide, no doubt.

It seems, then, that this principle can at any rate claim to rival wisdom, temperance, and courage as conducing to the excellence of a state. And would you not say that the only possible competitor of these qualities must be justice?

Yes, undoubtedly.

Here is another thing which points to

the same conclusion. The judging of law-suits is a duty that you will lay upon your Rulers, isn't it?

Of course.

And the chief aim of their decisions will be that neither party shall have what belongs to another or be deprived of what is his own.

Yes.

Because that is just?

Yes.

So here again justice admittedly means that a man should possess and concern himself with what properly belongs to him.

True.

Again, do you agree with me that no great harm would be done to the community by a general interchange of most forms of work, the carpenter and the cobbler exchanging their positions and their tools and taking on each other's jobs, or even the same man undertaking both?

Yes, there would not be much harm in that.

But I think you will also agree that another kind of interchange would be disastrous. Suppose, for instance, someone whom nature designed to be an artisan or tradesman should be emboldened by some advantage, such as wealth or command of votes or bodily strength, to try to enter the order of fighting men; or some member of that order should aspire, beyond his merits, to a seat in the council-chamber of the Guardians. Such interference and exchange of social positions and tools, or the attempt to combine all these forms of work in the same person, would be fatal to the commonwealth.

Most certainly.

Where there are three orders, then, any plurality of functions or shifting from one order to another is not merely utterly harmful to the community, but one might fairly call it the extreme of wrongdoing. And you will agree that to do the greatest of wrongs to one's own community is injustice.

Surely.

This, then, is injustice. And, conversely, let us repeat that when each order—tradesman, Auxiliary, Guardian—keeps to its own proper business in the commonwealth and does its own work, that is justice and what makes a just society.

I entirely agree.

THE THREE PARTS OF THE SOUL

We must not be too positive yet, said I. If we find that this same quality when it exists in the individual can equally be identified with justice, then we can at once give our assent; there will be no more to be said; otherwise, we shall have to look further. For the moment, we had better finish the inquiry which we began with the idea that it would be easier to make out the nature of justice in the individual if we first tried to study it in something on a larger scale. That larger thing we took to be a state, and so we set about constructing the best one we could, being sure of finding justice in a state that was good. The discovery we made there must now be applied to the individual. If it is confirmed, all will be well; but if we find that justice in the individual is something different, we must go back to the state and test our new result. Perhaps if we brought the two cases into contact like flint and steel, we might strike out between them the spark of justice, and in its light confirm the conception in our own minds.

A good method. Let us follow it.

Now, I continued, if two things, one large, the other small, are called by the same name, they will be alike in that respect to which the common name applies. Accordingly, in so far as the quality of justice is concerned, there will be no difference between a just man and a just society.

No.

Well, but we decided that a society was just when each of the three types of human character it contained performed

its own function; and again, it was temperate and brave and wise by virtue of certain other affections and states of mind of those same types.

True.

Accordingly, my friend, if we are to be justified in attributing those same virtues to the individual, we shall expect to find that the individual soul contains the same three elements and that they are affected in the same way as are the corresponding types in society.

That follows.

Here, then, we have stumbled upon another little problem: Does the soul contain these three elements or not?

Not such a very little one, I think. It may be a true saying, Socrates, that what is worth while is seldom easy.

Apparently; and let me tell you, Glaucon, it is my belief that we shall never reach the exact truth in this matter by following our present methods of discussion; the road leading to that goal is longer and more laborious. However, perhaps we can find an answer that will be up to the standard we have so far maintained in our speculations.

Is not that enough? I should be satisfied for the moment.

Well, it will more than satisfy me, I replied.

Don't be disheartened, then, but go on.

Surely, I began, we must admit that the same elements and characters that appear in the state must exist in every one of us; where else could they have come from? It would be absurd to imagine that among peoples with a reputation for a high-spirited character, like the Thracians and Scythians and northerners generally, the states have not derived that character from their individual members; or that it is otherwise with the love of knowledge, which would be ascribed chiefly to our own part of the world, or with the love of money, which one would specially connect with Phoenicia and Egypt.

Certainly.

So far, then, we have a fact which is easily recognized. But here the difficulty

begins. Are we using the same part of ourselves in all these three experiences, or a different part in each? Do we gain knowledge with one part, feel anger with another, and with yet a third desire the pleasures of food, sex, and so on? Or is the whole soul at work in every impulse and in all these forms of behaviour? The difficulty is to answer that question satisfactorily.

I quite agree.

Let us approach the problem whether these elements are distinct or identical in this way. It is clear that the same thing cannot act in two opposite ways or be in two opposite states at the same time, with respect to the same part of itself, and in relation to the same object. So if we find such contradictory actions or states among the elements concerned, we shall know that more than one must have been involved.

Very well.

Consider this proposition of mine, then. Can the same thing, at the same time and with respect to the same part of itself, be at rest and in motion?

Certainly not.

We had better state this principle in still more precise terms, to guard against misunderstanding later on. Suppose a man is standing still, but moving his head and arms. We should not allow anyone to say that the same man was both at rest and in motion at the same time, but only that part of him was at rest, part in motion. Isn't that so?

Yes.

An ingenious objector might refine still further and argue that a peg-top, spinning with its peg fixed at the same spot, or indeed any body that revolves in the same place, is both at rest and in motion as a whole. But we should not agree, because the parts in respect of which such a body is moving and at rest are not the same. It contains an axis and a circumference; and in respect of the axis it is at rest inasmuch as the axis is not inclined in any direction, while in respect of the circumference it revolves; and if, while it is spinning, the axis does lean out

of the perpendicular in all directions, then it is in no way at rest.

That is true.

No objection of that sort, then, will disconcert us or make us believe that the same thing can ever act or be acted upon in two opposite ways, or be two opposite things, at the same time, in respect of the same part of itself, and in relation to the same object.

I can answer for myself at any rate.

Well, anyhow, as we do not want to spend time in reviewing all such objections to make sure that they are unsound, let us proceed on this assumption, with the understanding that, if we ever come to think otherwise, all the consequences based upon it will fall to the ground.

Yes, that is a good plan.

Now, would you class such things as assent and dissent, striving after something and refusing it, attraction and repulsion, as pairs of opposite actions or states of mind—no matter which?

Yes, they are opposites.

And would you not class all appetites such as hunger and thirst, and again willing and wishing, with the affirmative members of those pairs I have just mentioned? For instance, you would say that the soul of a man who desires something is striving after it, or trying to draw to itself the thing it wishes to possess, or again, in so far as it is willing to have its want satisfied, it is giving its assent to its own longing, as if to an inward question.

Yes.

And, on the other hand, disinclination, unwillingness, and dislike, we should class on the negative side with acts of rejection or repulsion.

Of course.

That being so, shall we say that appetites form one class, the most conspicuous being those we call thirst and hunger?

Yes.

Thirst being desire for drink, hunger for food?

Yes.

Now, is thirst, just in so far as it is thirst, a desire in the soul for anything more than simply drink? Is it, for in-

stance, thirst for hot drink or for cold, for much drink or for little, or in a word for drink of any particular kind? Is it not rather true that you will have a desire for cold drink only if you are feeling hot as well as thirsty, and for hot drink only if you are feeling cold; and if you want much drink or little, that will be because your thirst is a great thirst or a little one? But, just in itself, thirst or hunger is a desire for nothing more than its natural object, drink or food, pure and simple.

Yes, he agreed, each desire, just in itself, is simply for its own natural object. When the object is of such and such a particular kind, the desire will be correspondingly qualified.¹⁵

We must be careful here, or we might be troubled by the objection that no one desires mere food and drink, but always wholesome food and drink. We shall be told that what we desire is always something that is good; so if thirst is a desire, its object must be, like that of any other desire, something—drink or whatever it may be—that will be good for one.¹⁶

Yes, there might seem to be something in that objection.

But surely, wherever you have two correlative terms, if one is qualified, the other must always be qualified too; whereas if one is unqualified, so is the other.

¹⁵ The object of the following subtle argument about relative terms is to distinguish thirst as a mere blind craving for drink from a more complex desire whose object includes the pleasure or health expected to result from drinking. We thus forestall the objection that all desires have "the good" (apparent or real) for their object and include an intellectual or rational element, so that the conflict of motives might be reduced to an intellectual debate, in the same "part" of the soul, on the comparative values of two incompatible ends.

¹⁶ If this objection were admitted, it would follow that the desire would always be correspondingly qualified. It is necessary to insist that we do experience blind cravings which can be isolated from any judgment about the goodness of their object.

I don't understand.

Well, "greater" is a relative term; and the greater is greater than the less; if it is much greater, then the less is much less; if it is greater at some moment, past or future, then the less is less at that same moment. The same principle applies to all such correlatives, like "more" and "fewer," "double" and "half"; and again to terms like "heavier" and "lighter," "quicker" and "slower," and to things like hot and cold.

Yes.

Or take the various branches of knowledge: is it not the same there? The object of knowledge pure and simple is the knowable—if that is the right word—without any qualification; whereas a particular kind of knowledge has an object of a particular kind. For example, as soon as men learnt how to build houses, their craft was distinguished from others under the name of architecture, because it had a unique character, which was itself due to the character of its object; and all other branches of craft and knowledge were distinguished in the same way.

True.

This, then, if you understand me now, is what I meant by saying that, where there are two correlatives, the one is qualified if, and only if, the other is so. I am not saying that the one must have the same quality as the other—that the science of health and disease is itself healthy and diseased, or the knowledge of good and evil is itself good and evil—but only that, as soon as you have a knowledge that is restricted to a particular kind of object, namely health and disease, the knowledge itself becomes a particular kind of knowledge. Hence we no longer call it merely knowledge, which would have for its object whatever can be known, but we add the qualification and call it medical science.

I understand now and I agree.

Now, to go back to thirst: is not that one of these relative terms? It is essentially thirst for something.

Yes, for drink.

And if the drink desired is of a certain kind, the thirst will be correspondingly qualified. But thirst which is just simply thirst is not for drink of any particular sort—much or little, good or bad—but for drink pure and simple.

Quite so.

We conclude, then, that the soul of a thirsty man, just in so far as he is thirsty, has no other wish than to drink. That is the object of its craving, and towards that it is impelled.

That is clear.

Now if there is ever something which at the same time pulls it the opposite way, that something must be an element in the soul other than the one which is thirsting and driving it like a beast to drink; in accordance with our principle that the same thing cannot behave in two opposite ways at the same time and towards the same object with the same part of itself. It is like an archer drawing the bow: it is not accurate to say that his hands are at the same time both pushing and pulling it. One hand does the pushing, the other the pulling.

Exactly.

Now, is it sometimes true that people are thirsty and yet unwilling to drink?

Yes, often.

What, then, can one say of them, if not that their soul contains something which urges them to drink and something which holds them back, and that this latter is a distinct thing and overpowers the other?

I agree.

And is it not true that the intervention of this inhibiting principle in such cases always has its origin in reflection; whereas the impulses driving and dragging the soul are engendered by external influences and abnormal conditions?¹⁷

Evidently.

We shall have good reason, then, to

¹⁷ Some of the most intense bodily desires are due to morbid conditions, e.g. thirst in fever, and even milder desires are caused by a departure from the normal state, which demands "replenishment."

assert that they are two distinct principles. We may call that part of the soul whereby it reflects, rational; and the other, with which it feels hunger and thirst and is distracted by sexual passion and all the other desires, we will call irrational appetite, associated with pleasure in the replenishment of certain wants.

Yes, there is good ground for that view.

Let us take it, then, that we have now distinguished two elements in the soul. What of that passionate element which makes us feel angry and indignant? Is that a third, or identical in nature with one of those two?

It might perhaps be identified with appetite.

I am more inclined to put my faith in a story I once heard about Leontius, son of Aglaion. On his way up from the Piraeus outside the north wall, he noticed the bodies of some criminals lying on the ground, with the executioner standing by them. He wanted to go and look at them, but at the same time he was disgusted and tried to turn away. He struggled for some time and covered his eyes, but at last the desire was too much for him. Opening his eyes wide, he ran up to the bodies and cried, "There you are, curse you; feast yourselves on this lovely sight!"

Yes, I have heard that story too.

The point of it surely is that anger is sometimes in conflict with appetite, as if they were two distinct principles. Do we not often find a man whose desires would force him to go against his reason, reviling himself and indignant with this part of his nature which is trying to put constraint on him? It is like a struggle between two factions, in which indignation takes the side of reason. But I believe you have never observed, in yourself or anyone else, indignation make common cause with appetite in behaviour which reason decides to be wrong.

No, I am sure I have not.

Again, take a man who feels he is in the wrong. The more generous his nature, the less can he be indignant at any

suffering, such as hunger and cold, inflicted by the man he has injured. He recognizes such treatment as just, and, as I say, his spirit refuses to be roused against it.

That is true.

But now contrast one who thinks it is he that is being wronged. His spirit boils with resentment and sides with the right as he conceives it. Persevering all the more for the hunger and cold and other pains he suffers, it triumphs and will not give in until its gallant struggle has ended in success or death; or until the restraining voice of reason, like a shepherd calling off his dog, makes it relent.

An apt comparison, he said; and in fact it fits the relation of our Auxiliaries to the Rulers: they were to be like watchdogs obeying the shepherds of the commonwealth.

Yes, you understand very well what I have in mind. But do you see how we have changed our view? A moment ago we were supposing this spirited element to be something of the nature of appetite; but now it appears that, when the soul is divided into factions, it is far more ready to be up in arms on the side of reason.

Quite true.

Is it, then, distinct from the rational element or only a particular form of it, so that the soul will contain no more than two elements, reason and appetite? Or is the soul like the state, which had three orders to hold it together, traders, Auxiliaries, and counsellors? Does the spirited element make a third, the natural auxiliary of reason, when not corrupted by bad upbringing?

It must be a third.

Yes, I said, provided it can be shown to be distinct from reason, as we saw it was from appetite.

That is easily proved. You can see that much in children: they are full of passionate feelings from their birth; but some, I should say, never become rational, and most of them only late in life.

A very sound observation, said I, the truth of which may also be seen in ani-

mals. And besides, there is the witness of Homer in that line I quoted before: "He smote his breast and spoke, chiding his heart." The poet is plainly thinking of the two elements as distinct, when he makes the one which has chosen the better course after reflection rebuke the other for its unreasoning passion.

I entirely agree.

THE VIRTUES IN THE INDIVIDUAL

And so, after a stormy passage, we have reached the land. We are fairly agreed that the same three elements exist alike in the state and in the individual soul.

That is so.

Does it not follow at once that state and individual will be wise or brave by virtue of the same element in each and in the same way? Both will possess in the same manner any quality that makes for excellence.

That must be true.

Then it applies to justice: we shall conclude that a man is just in the same way that a state was just. And we have surely not forgotten that justice in the state meant that each of the three orders in it was doing its own proper work. So we may henceforth bear in mind that each one of us likewise will be a just person, fulfilling his proper function, only if the several parts of our nature fulfil theirs.

Certainly.

And it will be the business of reason to rule with wisdom and forethought on behalf of the entire soul; while the spirited element ought to act as its subordinate and ally. The two will be brought into accord, as we said earlier, by that combination of mental and bodily training which will tune up one string of the instrument and relax the other, nourishing the reasoning part on the study of noble literature and allaying the other's wildness by harmony and rhythm. When both have been thus nurtured and trained

to know their own true functions, they must be set in command over the appetites, which form the greater part of each man's soul and are by nature insatiably covetous. They must keep watch lest this part, by battenning on the pleasures that are called bodily, should grow so great and powerful that it will no longer keep to its own work, but will try to enslave the others and usurp a dominion to which it has no right, thus turning the whole of life upside down. At the same time, those two together will be the best of guardians for the entire soul and for the body against all enemies from without: the one will take counsel, while the other will do battle, following its ruler's commands and by its own bravery giving effect to the ruler's designs.

Yes, that is all true.

And so we call an individual brave in virtue of this spirited part of his nature, when, in spite of pain or pleasure, it holds fast to the injunctions of reason about what he ought or ought not to be afraid of.

True.

And wise in virtue of that small part which rules and issues these injunctions, possessing as it does the knowledge of what is good for each of the three elements and for all of them in common.

Certainly.

And, again, temperate by reason of the unanimity and concord of all three, when there is no internal conflict between the ruling element and its two subjects, but all are agreed that reason should be ruler.

Yes, that is an exact account of temperance, whether in the state or in the individual.

Finally, a man will be just by observing the principle we have so often stated.

Necessarily.

Now is there any indistinctness in our vision of justice, that might make it seem somehow different from what we found it to be in the state?

I don't think so.

Because, if we have any lingering doubt, we might make sure by comparing it with some commonplace notions. Sup-

pose, for instance, that a sum of money were entrusted to our state or to an individual of corresponding character and training, would anyone imagine that such a person would be specially likely to embezzle it?

No.

And would he not be incapable of sacrilege and theft, or of treachery to friend or country; never false to an oath or any other compact; the last to be guilty of adultery or of neglecting parents or the due service of the gods?

Yes.

And the reason for all this is that each part of his nature is exercising its proper function, of ruling or of being ruled.

Yes, exactly.

Are you satisfied, then, that justice is the power which produces states or individuals of whom that is true, or must we look further?

There is no need; I am quite satisfied.

And so our dream has come true—I mean the inkling we had that, by some happy chance, we had lighted upon a rudimentary form of justice from the very moment when we set about founding our commonwealth. Our principle that the born shoemaker or carpenter had better stick to his trade turns out to have been an adumbration of justice; and that is why it has helped us. But in reality justice, though evidently analogous to this principle, is not a matter of external behaviour, but of the inward self and of attending to all that is, in the fullest sense, a man's proper concern. The just man does not allow the several elements in his soul to usurp one another's functions; he is indeed one who sets his house in order, by self-mastery and discipline coming to be at peace with himself, and bringing into tune those three parts, like the terms in the proportion of a musical scale, the highest and lowest notes and the mean between them, with all the intermediate intervals. Only when he has linked these parts together in well-tempered harmony and has made himself one man instead of many, will he be ready to go about whatever he may have

to do, whether it be making money and satisfying bodily wants, or business transactions, or the affairs of state. In all these fields when he speaks of just and honourable conduct, he will mean the behaviour that helps to produce and to preserve this habit of mind; and by wisdom he will mean the knowledge which presides over such conduct. Any action which tends to break down this habit will be for him unjust; and the notions governing it he will call ignorance and folly.

That is perfectly true, Socrates.

Good, said I. I believe we should not be thought altogether mistaken, if we claimed to have discovered the just man and the just state, and wherein their justice consists.

Indeed we should not.

Shall we make that claim, then?

Yes, we will.

So be it, said I. Next, I suppose, we have to consider injustice.

Evidently.

This must surely be a sort of civil strife among the three elements, whereby they usurp and encroach upon one another's functions and some one part of the soul rises up in rebellion against the whole, claiming a supremacy to which it has no right because its nature fits it only to be the servant of the ruling principle. Such turmoil and aberration we shall, I think, identify with injustice, intemperance, cowardice, ignorance, and in a word with all wickedness.

Exactly.

And now that we know the nature of justice and injustice, we can be equally clear about what is meant by acting justly and again by unjust action and wrongdoing.

How do you mean?

Plainly, they are exactly analogous to those wholesome and unwholesome activities which respectively produce a healthy or unhealthy condition in the body; in the same way just and unjust conduct produce a just or unjust character. Justice is produced in the soul, like health in the body, by establishing the elements

concerned in their natural relations of control and subordination, whereas injustice is like disease and means that this natural order is inverted.

Quite so.

It appears, then, that virtue is as it were the health and comeliness and well-being of the soul, as wickedness is disease, deformity, and weakness.

True.

And also that virtue and wickedness are brought about by one's way of life, honourable or disgraceful.

That follows.

So now it only remains to consider which is the more profitable course: to do right and live honourably and be just, whether or not anyone knows what manner of man you are, or to do wrong and be unjust, provided that you can escape the chastisement which might make you a better man.

But really, Socrates, it seems to me ridiculous to ask that question now that the nature of justice and injustice has been brought to light. People think that all the luxury and wealth and power in the world cannot make life worth living when the bodily constitution is going to rack and ruin; and are we to believe that, when the very principle whereby we live is deranged and corrupted, life will be worth living so long as a man can do as he will, and wills to do anything rather than to free himself from vice and wrongdoing and to win justice and virtue?

Yes, I replied, it is a ridiculous question.

EQUALITY OF WOMEN

We must go back, then, to a subject which ought, perhaps, to have been treated earlier in its proper place; though, after all, it may be suitable that the women should have their turn on the stage when the men have quite finished their performance, especially since you are so insistent. In my judgment, then, the question under what conditions peo-

ple born and educated as we have described should possess wives and children, and how they should treat them, can be rightly settled only by keeping to the course on which we started them at the outset. We undertook to put these men in the position of watch-dogs guarding a flock. Suppose we follow up the analogy and imagine them bred and reared in the same sort of way. We can then see if that plan will suit our purpose.

How will that be?

In this way. Which do we think right for watch-dogs: should the females guard the flock and hunt with the males and take a share in all they do, or should they be kept within doors as fit for no more than bearing and feeding their puppies, while all the hard work of looking after the flock is left to the males?

They are expected to take their full share, except that we treat them as not quite so strong.

Can you employ any creature for the same work as another, if you do not give them both the same upbringing and education?

No.

Then, if we are to set women to the same tasks as men, we must teach them the same things. They must have the same two branches of training for mind and body and also be taught the art of war, and they must receive the same treatment.

That seems to follow.

Possibly, if these proposals were carried out, they might be ridiculed as involving a good many breaches of custom.

They might indeed.

The most ridiculous—don't you think?—being the notion of women exercising naked along with the men in the wrestling-schools; some of them elderly women too, like the old men who still have a passion for exercise when they are wrinkled and not very agreeable to look at.

Yes, that would be thought laughable, according to our present notions.

Now we have started on this subject,

we must not be frightened of the many witticisms that might be aimed at such a revolution, not only in the matter of bodily exercise but in the training of women's minds, and not least when it comes to their bearing arms and riding on horseback. Having begun upon these rules, we must not draw back from the harsher provisions. The wits may be asked to stop being witty and try to be serious; and we may remind them that it is not so long since the Greeks, like most foreign nations of the present day, thought it ridiculous and shameful for men to be seen naked. When gymnastic exercises were first introduced in Crete and later at Sparta, the humorists had their chance to make fun of them; but when experience had shown that nakedness is better uncovered than muffled up, the laughter died down and a practice which the reason approved ceased to look ridiculous to the eye. This shows how idle it is to think anything ludicrous but what is base. One who tries to raise a laugh at any spectacle save that of baseness and folly will also, in his serious moments, set before himself some other standard than goodness of what deserves to be held in honour.

Most assuredly.

The first thing to be settled, then, is whether these proposals are feasible; and it must be open to anyone, whether a humorist or serious-minded, to raise the question whether, in the case of mankind, the feminine nature is capable of taking part with the other sex in all occupations, or in none at all, or in some only; and in particular under which of these heads this business of military service falls. Well begun is half done, and would not this be the best way to begin? Yes.

Shall we take the other side in this debate and argue against ourselves? We do not want the adversary's position to be taken by storm for lack of defenders.

I have no objection.

Let us state his case for him. "Socrates and Glaucon," he will say, "there is no need for others to dispute your position;

you yourselves, at the very outset of founding your commonwealth, agreed that everyone should do the one work for which nature fits him." Yes, of course; I suppose we did. "And isn't there a very great difference in nature between man and woman?" Yes, surely. "Does not that natural difference imply a corresponding difference in the work to be given to each?" Yes. "But if so, surely you must be mistaken now and contradicting yourselves when you say that men and women, having such widely divergent natures, should do the same things?" What is your answer to that, my ingenious friend?

It is not easy to find one at the moment. I can only appeal to you to state the case on our own side, whatever it may be.

This, Glaucon, is one of many alarming objections which I foresaw some time ago. That is why I shrank from touching upon these laws concerning the possession of wives and the rearing of children.

It looks like anything but an easy problem.

True, I said; but whether a man tumbles into a swimming-pool or into mid-ocean, he has to swim all the time. So must we, and try if we can reach the shore, hoping for some Arion's dolphin or other miraculous deliverance to bring us safe to land.¹⁸

I suppose so.

Come then, let us see if we can find the way out. We did agree that different natures should have different occupations, and that the natures of man and woman are different; and yet we are now saying that these different natures are to have the same occupations. Is that the charge against us?

Exactly.

It is extraordinary, Glaucon, what an effect the practice of debating has upon people.

¹⁸ The musician Arion, to escape the treachery of Corinthian sailors, leapt into the sea and was carried ashore at Tænarum by a dolphin, Herodotus, i. 24.

Why do you say that?

Because they often seem to fall unconsciously into mere disputes which they mistake for reasonable argument, through being unable to draw the distinctions proper to their subject; and so, instead of a philosophical exchange of ideas, they go off in chase of contradictions which are purely verbal.

I know that happens to many people; but does it apply to us at this moment?

Absolutely. At least I am afraid we are slipping unconsciously into a dispute about words. We have been strenuously insisting on the letter of our principle that different natures should not have the same occupations, as if we were scoring a point in a debate; but we have altogether neglected to consider what sort of sameness or difference we meant and in what respect these natures and occupations were to be defined as different or the same. Consequently, we might very well be asking one another whether there is not an opposition in nature between bald and long-haired men, and, when that was admitted, forbid one set to be shoemakers, if the other were following that trade.

That would be absurd.

Yes, but only because we never meant any and every sort of sameness or difference in nature, but the sort that was relevant to the occupations in question. We meant, for instance, that a man and a woman have the same nature if both have a talent for medicine; whereas two men have different natures if one is a born physician, the other a born carpenter.

Yes, of course.

If, then, we find that either the male sex or the female is specially qualified for any particular form of occupation, then that occupation, we shall say, ought to be assigned to one sex or the other. But if the only difference appears to be that the male begets and the female brings forth, we shall conclude that no difference between man and woman has yet been produced that is relevant to our purpose. We shall continue to think it proper for

our Guardians and their wives to share in the same pursuits.

And quite rightly.

The next thing will be to ask our opponent to name any profession or occupation in civic life for the purposes of which woman's nature is different from man's.

That is a fair question.

He might reply, as you did just now, that it is not easy to find a satisfactory answer on the spur of the moment, but that there would be no difficulty after a little reflection.

Perhaps.

Suppose, then, we invite him to follow us and see if we can convince him that there is no occupation concerned with the management of social affairs that is peculiar to women. We will confront him with a question: When you speak of a man having a natural talent for something, do you mean that he finds it easy to learn, and after a little instruction can find out much more for himself; whereas a man who is not so gifted learns with difficulty and no amount of instruction and practice will make him even remember what he has been taught? Is the talented man one whose bodily powers are readily at the service of his mind, instead of being a hindrance? Are not these the marks by which you distinguish the presence of a natural gift for any pursuit?

Yes, precisely.

Now do you know of any human occupation in which the male sex is not superior to the female in all these respects? Need I waste time over exceptions like weaving and watching over saucepans and batches of cakes, though women are supposed to be good at such things and get laughed at when a man does them better?

It is true, he replied, in almost everything one sex is easily beaten by the other. No doubt many women are better at many things than many men; but taking the sexes as a whole, it is as you say.

To conclude, then, there is no occupation concerned with the management of

social affairs which belongs either to woman or to man, as such. Natural gifts are to be found here and there in both creatures alike; and every occupation is open to both, so far as their natures are concerned, though woman is for all purposes the weaker.

Certainly.

Is that a reason for making over all occupations to men only?

Of course not.

No, because one woman may have a natural gift for medicine or for music, another may not.

Surely.

Is it not also true that a woman may, or may not, be warlike or athletic?

I think so.

And again, one may love knowledge, another hate it; one may be high-spirited, another spiritless?

True again.

It follows that one woman will be fitted by nature to be a Guardian, another will not; because these were the qualities for which we selected our men Guardians. So for the purpose of keeping watch over the commonwealth, woman has the same nature as man, save in so far as she is weaker.

So it appears.

It follows that women of this type must be selected to share the life and duties of Guardians with men of the same type, since they are competent and of a like nature, and the same natures must be allowed the same pursuits.

Yes.

We come round, then, to our former position, that there is nothing contrary to nature in giving our Guardians' wives the same training for mind and body. The practice we proposed to establish was not impossible or visionary, since it was in accordance with nature. Rather, the contrary practice which now prevails turns out to be unnatural.

So it appears.

Well, we set out to inquire whether the plan we proposed was feasible and also the best. That it is feasible is now agreed;

we must next settle whether it is the best. Obviously.

Now, for the purpose of producing a woman fit to be a Guardian, we shall not have one education for men and another for women, precisely because the nature to be taken in hand is the same.

True.

What is your opinion on the question of one man being better than another? Do you think there is no such difference?

Certainly I do not.

And in this commonwealth of ours which will prove the better men—the Guardians who have received the education we described, or the shoemakers who have been trained to make shoes?

It is absurd to ask such a question.

Very well. So these Guardians will be the best of all the citizens?

By far.

And these women the best of all the women?

Yes.

Can anything be better for a commonwealth than to produce in it men and women of the best possible type?

No.

And that result will be brought about by such a system of mental and bodily training as we have described?

Surely.

We may conclude that the institution we proposed was not only practicable, but also the best for the commonwealth.

Yes.

The wives of our Guardians, then, must strip for exercise, since they will be clothed with virtue, and they must take their share in war and in the other social duties of guardianship. They are to have no other occupation; and in these duties the lighter part must fall to the women, because of the weakness of their sex. The man who laughs at naked women, exercising their bodies for the best of reasons, is like one that "gathers fruit unripe," for he does not know what it is that he is laughing at or what he is doing. There will never be a finer saying than the one which declares that whatever does good

should be held in honour, and the only shame is in doing harm.

That is perfectly true.

ABOLITION OF THE FAMILY FOR THE GUARDIANS

So far, then, in regulating the position of women, we may claim to have come safely through with one hazardous proposal, that male and female Guardians shall have all occupations in common. The consistency of the argument is an assurance that the plan is a good one and also feasible. We are like swimmers who have breasted the first wave without being swallowed up.

Not such a small wave either.

You will not call it large when you see the next.

Let me have a look at the next one, then.

Here it is: a law which follows from that principle and all that has gone before, namely that, of these Guardians, no one man and one woman are to set up house together privately: wives are to be held in common by all; so too are the children, and no parent is to know his own child, nor any child his parent.

It will be much harder to convince people that that is either a feasible plan or a good one.

As to its being a good plan, I imagine no one would deny the immense advantage of wives and children being held in common, provided it can be done. I should expect dispute to arise chiefly over the question whether it is possible.

There may well be a good deal of dispute over both points.

You mean, I must meet attacks on two fronts. I was hoping to escape one by running away: if you agreed it was a good plan, then I should only have had to inquire whether it was feasible.

No, we have seen through that manoeuvre. You will have to defend both positions.

Well, I must pay the penalty for my

cowardice. But grant me one favour. Let me indulge my fancy, like one who entertains himself with idle day-dreams on a solitary walk. Before he has any notion how his desires can be realized, he will set aside that question, to save himself the trouble of reckoning what may or may not be possible. He will assume that his wish has come true, and amuse himself with settling all the details of what he means to do then. So a lazy mind encourages itself to be lazier than ever; and I am giving way to the same weakness myself. I want to put off till later that question, how the thing can be done. For the moment, with your leave, I shall assume it to be possible, and ask how the Rulers will work out the details in practice; and I shall argue that the plan, once carried into effect, would be the best thing in the world for our commonwealth and for its Guardians. That is what I shall now try to make out with your help, if you will allow me to postpone the other question.

Very good; I have no objection.

Well, if our Rulers are worthy of the name, and their Auxiliaries likewise, these latter will be ready to do what they are told, and the Rulers, in giving their commands, will themselves obey our laws and will be faithful to their spirit in any details we leave to their discretion.

No doubt.

It is for you, then, as their lawgiver, who have already selected the men, to select for association with them women who are so far as possible of the same natural capacity. Now since none of them will have any private home of his own, but they will share the same dwelling and eat at common tables, the two sexes will be together; and meeting without restriction for exercise and all through their upbringing, they will surely be drawn towards union with one another by a necessity of their nature—necessity is not too strong a word, I think?

Not too strong for the constraint of love, which for the mass of mankind is more persuasive and compelling than

even the necessity of mathematical proof.

Exactly. But in the next place, Glaucon, anything like unregulated unions would be a profanation in a state whose citizens lead the good life. The Rulers will not allow such a thing.

No, it would not be right.

Clearly, then, we must have marriages, as sacred as we can make them; and this sanctity will attach to those which yield the best results.

Certainly.

How are we to get the best results? You must tell me, Glaucon, because I see you keep sporting dogs and a great many game birds at your house; and there is something about their mating and breeding that you must have noticed.

What is that?

In the first place, though they may all be of good stock, are there not some that turn out to be better than the rest?

There are.

And do you breed from all indiscriminately? Are you not careful to breed from the best so far as you can?

Yes.

And from those in their prime, rather than the very young or the very old?

Yes.

Otherwise, the stock of your birds or dogs would deteriorate very much, wouldn't it?

It would.

And the same is true of horses or of any animal?

It would be very strange if it were not.

Dear me, said I; we shall need consummate skill in our Rulers, if it is also true of the human race.

Well, it is true. But why must they be so skilful?

Because they will have to administer a large dose of that medicine we spoke of earlier. An ordinary doctor is thought good enough for a patient who will submit to be dieted and can do without medicine; but he must be much more of a man if drugs are required.

True, but how does that apply?

It applies to our Rulers: it seems they will have to give their subjects a consid-

erable dose of imposition and deception for their good. We said, if you remember, that such expedients would be useful as a sort of medicine.

Yes, a very sound principle.

Well, it looks as if this sound principle will play no small part in this matter of marriage and child-bearing.

How so?

It follows from what we have just said that, if we are to keep our flock at the highest pitch of excellence, there should be as many unions of the best of both sexes, and as few of the inferior, as possible, and that only the offspring of the better unions should be kept.¹⁹ And again, no one but the Rulers must know how all this is being effected; otherwise our herd of Guardians may become rebellious.

Quite true.

We must, then, institute certain festivals at which we shall bring together the brides and bridegrooms. There will be sacrifices, and our poets will write songs befitting the occasion. The number of marriages we shall leave to the Rulers' discretion. They will aim at keeping the number of the citizens as constant as possible, having regard to losses caused by war, epidemics, and so on; and they must do their best to see that our state does not become either great or small.²⁰

¹⁹ That is, "kept as Guardians." The inferior children of Guardians were to be "thrust out among the craftsmen and farmers." A breeder of race-horses would keep the best foals, but not kill the rest.

²⁰ Plato seems to forget that these rules apply only to Guardians. If the much larger third class is to breed without restriction, a substantial rise in their numbers might entail suspension of all childbirth among Guardians, with a dysgenic effect. Plato, however, feared a decline, rather than a rise, in the birth-rate. (The state described in the *Laws* is always to have 5040 citizens, each holding one inalienable lot of land.)

The "number of marriages" may include both the number of candidates admitted at each festival and the frequency of the festivals. But it is perhaps likely that the festi-

Very good.

I think they will have to invent some ingenious system of drawing lots, so that, at each pairing off, the inferior candidate may blame his luck rather than the Rulers.

Yes, certainly.

Moreover, young men who acquit themselves well in war and other duties, should be given, among other rewards and privileges, more liberal opportunities to sleep with a wife,²¹ for the further purpose that, with good excuse, as many as possible of the children may be begotten of such fathers.

Yes.

As soon as children are born, they will be taken in charge by officers appointed for the purpose, who may be men or women or both, since offices are to be shared by both sexes. The children of the better parents they will carry to the creche to be reared in the care of nurses living apart in a certain quarter of the city. Those of the inferior parents and any children of the rest that are born defective will be hidden away, in some appropriate manner that must be kept secret.²²

vals are to be annual, so that women who had borne children since the last festival would be re-marriageable. If so, at each festival a fresh group will be called up, consisting of all who have reached the age of 25 for men or 20 for women since the previous festival. Some or all of these will be paired with one another or with members of older groups. The couples will cohabit during the festival, which might last (say) for a month. The marriages will then be dissolved and the partners remain celibate until the next festival at earliest. This follows from the statement that the resulting batch of children will all be born between 7 and 10 months after the festival.

²¹ Not to have several wives at once, but to be admitted at more frequent intervals to the periodic marriage festivals, not necessarily with a different wife each time.

²² Infanticide of defective children was practiced at Sparta; but the yague expression used does not imply that all children of inferior Guardians are to be destroyed.

They must be, if the breed of our Guardians is to be kept pure.

These officers will also superintend the nursing of the children. They will bring the mothers to the crèche when their breasts are full, while taking every precaution that no mother shall know her own child; and if the mothers have not enough milk, they will provide wet-nurses. They will limit the time during which the mothers will suckle their children, and hand over all the hard work and sitting up at night to nurses and attendants.

That will make child-bearing an easy business for the Guardians' wives.

So it should be. To go on with our scheme: we said that children should be born from parents in the prime of life. Do you agree that this lasts about twenty years for a woman, and thirty for a man? A woman should bear children for the commonwealth from her twentieth to her fortieth year; a man should begin to beget them when he has passed "the racer's prime in swiftness," and continue till he is fifty-five.

Those are certainly the years in which both the bodily and the mental powers of man and woman are at their best.

If a man either above or below this age meddles with the begetting of children for the commonwealth, we shall hold it an offence against divine and human law. He will be begetting for his country a child conceived in darkness and dire incontinence, whose birth, if it escape detection, will not have been sanctioned by the sacrifices and prayers offered at each marriage festival, when priests and priestesses join with the whole community in praying that the children to be born may be even better and more useful citizens than their parents.

You are right.

The same law will apply to any man within the prescribed limits who touches a woman also of marriageable age when

Those not defective would be relegated to the third class. Promotion of children from that class was provided for above.

the Ruler has not paired them. We shall say that he is foisting on the commonwealth a bastard, unsanctioned by law or by religion.

Perfectly right.

As soon, however, as the men and the women have passed the age prescribed for producing children, we shall leave them free to form a connexion with whom they will, except that a man shall not take his daughter or daughter's daughter or mother or mother's mother, nor a woman her son or father or her son's son or father's father; and all this only after we have exhorted them to see that no child, if any be conceived, shall be brought to light, or, if they cannot prevent its birth, to dispose of it on the understanding that no such child can be reared.²³

That too is reasonable. But how are they to distinguish fathers and daughters and those other relations you mentioned?

They will not, said I. But, reckoning from the day when he becomes a bridegroom, a man will call all children born in the tenth or the seventh month sons and daughters, and they will call him father. Their children he will call grandchildren, and they will call his group grandfathers and grandmothers; and all who are born within the period during which their mothers and fathers were having children will be called brothers and sisters. This will provide for those restrictions on unions that we men-

²³ The unofficial unions might be permanent. The only unions barred as incestuous are between parents and children, or grandparents and grandchildren (all such are included, since, if a woman cannot marry her father's father, a man cannot marry his son's daughter). It seems to follow that Plato did not regard the much more probable connexions of brothers and sisters as incestuous; and if so, he would see no reason against legal marriage of real brothers and sisters, who would not know they were so related. Such unions were regular in Egypt; and some modern authorities deny that they are dysgenic. Greek law allowed marriage between brother and half-sister by a different mother.

tioned; but the law will allow brothers and sisters to live together, if the lot so falls out and the Delphic oracle also approves.²⁴

Very good.

This, then, Glaucon, is the manner in which the Guardians of your commonwealth are to hold their wives and children in common. Must we not next find arguments to establish that it is consistent with our other institutions and also by far the best plan?

Yes, surely.

We had better begin by asking what is the greatest good at which the lawgiver should aim in laying down the constitution of a state, and what is the worst evil. We can then consider whether our proposals are in keeping with that good and irreconcilable with the evil.

By all means.

Does not the worst evil for a state arise from anything that tends to rend it asunder and destroy its unity, while nothing does it more good than whatever tends to bind it together and make it one?

That is true.

And are not citizens bound together by sharing in the same pleasures and pains, all feeling glad or grieved on the same occasions of gain or loss; whereas the bond is broken when such feelings are no longer universal, but any event of public or personal concern fills some with joy and others with distress?

Certainly.

And this disunion comes about when the words "mine" and "not mine," "another's" and "not another's" are not applied to the same things throughout the community. The best ordered state will be the one in which the largest number of persons use these terms in the same sense, and which accordingly most nearly resembles a single person. When one of us hurts his finger, the whole extent of those bodily connexions which are gath-

²⁴ This last speech deals with two distinct questions: (1) avoidance of incestuous union as above defined; (2) legal marriage of brothers and sisters.

ered up in the soul and unified by its ruling element is made aware and it all shares as a whole in the pain of the suffering part; hence we say that the man has a pain in his finger. The same thing is true of the pain or pleasure felt when any other part of the person suffers or is relieved.

Yes; I agree that the best organized community comes nearest to that condition.

And so it will recognize as a part of itself the individual citizen to whom good or evil happens, and will share as a whole in his joy or sorrow.

It must, if the constitution is sound.

It is time now to go back to our own commonwealth and see whether these conclusions apply to it more than to any other type of state. In all alike there are rulers and common people, all of whom will call one another fellow citizens.

Yes.

But in other states the people have another name as well for their rulers, haven't they?

Yes; in most they call them masters; in democracies, simply the government.

And in ours?

The people will look upon their rulers as preservers and protectors.

And how will our rulers regard the people?

As those who maintain them and pay them wages.

And elsewhere?

As slaves.

And what do rulers elsewhere call one another?

Colleagues.

And ours?

Fellow Guardians.

And in other states may not a ruler regard one colleague as a friend in whom he has an interest, and another as a stranger with whom he has nothing in common?

Yes, that often happens.

But that could not be so with your Guardians? None of them could ever treat a fellow Guardian as a stranger.

Certainly not. He must regard every-

one whom he meets as brother or sister, father or mother, son or daughter, grandchild or grandparent.

Very good; but here is a further point. Will you not require them, not merely to use these family terms, but to behave as a real family? Must they not show towards all whom they call "father" the customary reverence, care, and obedience due to a parent, if they look for any favour from gods or men, since to act otherwise is contrary to divine and human law? Should not all the citizens constantly reiterate in the hearing of the children from their earliest years such traditional maxims of conduct towards those whom they are taught to call father and their other kindred?

They should. It would be absurd that terms of kinship should be on their lips without any action to correspond.

In our community, then, above all others, when things go well or ill with any individual everyone will use that word "mine" in the same sense and say that all is going well or ill with him and his.

Quite true.

And, as we said, this way of speaking and thinking goes with fellow-feeling; so that our citizens, sharing as they do in a common interest which each will call his own, will have all their feelings of pleasure or pain in common.

Assuredly.

A result that will be due to our institutions, and in particular to our Guardians' holding their wives and children in common.

Very much so.

But you will remember how, when we compared a well-ordered community to the body which shares in the pleasures and pains of any member, we saw in this unity the greatest good that a state can enjoy. So the conclusion is that our commonwealth owes to this sharing of wives and children by its protectors its enjoyment of the greatest of all goods.

Yes, that follows.

Moreover, this agrees with our principle that they were not to have houses or

lands or any property of their own, but to receive sustenance from the other citizens, as wages for their guardianship, and to consume it in common. Only so will they keep to their true character; and our present proposals will do still more to make them genuine Guardians. They will not rend the community asunder by each applying that word "mine" to different things and dragging off whatever he can get for himself into a private home, where he will have his separate family, forming a centre of exclusive joys and sorrows. Rather they will all, so far as may be, feel together and aim at the same ends, because they are convinced that all their interests are identical.

Quite so.

Again, if a man's person is his only private possession, lawsuits and prosecutions will all but vanish, and they will be free of those quarrels that arise from ownership of property and from having family ties. Nor would they be justified even in bringing actions for assault and outrage; for we shall pronounce it right and honourable for a man to defend himself against an assailant of his own age, and in that way they will be compelled to keep themselves fit.

That would be a sound law.

And it would also have the advantage that, if a man's anger can be satisfied in this way, a fit of passion is less likely to grow into a serious quarrel.

True.

But an older man will be given authority over all younger persons and power to correct them; whereas the younger will, naturally, not dare to strike the elder or do him any violence, except by command of a Ruler. He will not show him any sort of disrespect. Two guardian spirits, fear and reverence, will be enough to restrain him—reverence forbidding him to lay hands on a parent, and fear of all those others who as sons or brothers or fathers would come to the rescue.

Yes, that will be the result.

So our laws will secure that these men will live in complete peace with one

another; and if they never quarrel among themselves, there is no fear of the rest of the community being divided either against them or against itself.

No.

There are other evils they will escape, so mean and petty that I hardly like to mention them: the poor man's flattery of the rich, and all the embarrassments and vexations of rearing a family and earning just enough to maintain a household; now borrowing and now refusing to repay, and by any and every means scraping together money to be handed over to wife and servants to spend. These sordid troubles are familiar and not worth describing.

Only too familiar.

Rid of all these cares, they will live a more enviable life than the Olympic victor, who is counted happy on the strength of far fewer blessings than our Guardians will enjoy. Their victory is the nobler, since by their success the whole commonwealth is preserved; and their reward of maintenance at the public cost is more complete, since their prize is to have every need of life supplied for themselves and for their children; their country honours them while they live, and when they die they receive a worthy burial.

Yes, they will be nobly rewarded.

Do you remember, then, how someone who shall be nameless reproached us for not making our Guardians happy: they were to possess nothing, though all the wealth of their fellow citizens was within their grasp? We replied, I believe, that we would consider that objection later, if it came in our way: for the moment we were bent on making our Guardians real guardians, and moulding our commonwealth with a view to the greatest happiness, not of one section of it, but of the whole.

Yes, I remember.

Well, it appears now that these protectors of our state will have a life better and more honourable than that of any Olympic victor; and we can hardly rank it on a level with the life of a shoemaker or other artisan or of a farmer.

I should think not.

However, it is right to repeat what I said at the time: if ever a Guardian tries to make himself happy in such a way that he will be a guardian no longer; if, not content with the moderation and security of this way of living which we think the best, he becomes possessed with some silly and childish notion of happiness, impelling him to make his power a means to appropriate all the citizens' wealth, then he will learn the wisdom of Hesiod's saying that the half is more than the whole.

My advice would certainly be that he should keep to his own way of living.

You do agree, then, that women are to take their full share with men in education, in the care of children, and in the guardianship of the other citizens; whether they stay at home or go out to war, they will be like watch-dogs which take their part either in guarding the fold or in hunting and share in every task so far as their strength allows. Such conduct will not be unwomanly, but all for the best and in accordance with the natural partnership of the sexes.

Yes, I agree.

THE PARADOX: PHILOSOPHERS MUST BE KINGS

But really, Socrates, Glaucon continued, if you are allowed to go on like this, I am afraid you will forget all about the question you thrust aside some time ago: whether a society so constituted can ever come into existence, and if so, how. No doubt, if it did exist, all manner of good things would come about. I can even add some that you have passed over. Men who acknowledged one another as fathers, sons, or brothers and always used those names among themselves would never desert one another; so they would fight with unequalled bravery. And if their womenfolk went out with them to war, either in the ranks or drawn up in the rear to intimidate the enemy

and act as a reserve in case of need, I am sure all this would make them invincible. At home, too, I can see many advantages you have not mentioned. But, since I admit that our commonwealth would have all these merits and any number more, if once it came into existence, you need not describe it in further detail. All we have now to do is to convince ourselves that it can be brought into being and how.

This is a very sudden onslaught, said I; you have no mercy on my shilly-shallying. Perhaps you do not realize that, after I have barely escaped the first two waves, the third, which you are now bringing down upon me, is the most formidable of all. When you have seen what it is like and heard my reply, you will be ready to excuse the very natural fears which made me shrink from putting forward such a paradox for discussion.

The more you talk like that, he said, the less we shall be willing to let you off from telling us how this constitution can come into existence; so you had better waste no more time.

Well, said I, let me begin by reminding you that what brought us to this point was our inquiry into the nature of justice and injustice.

True; but what of that?

Merely this: suppose we do find out what justice is, are we going to demand that a man who is just shall have a character which exactly corresponds in every respect to the ideal of justice? Or shall we be satisfied if he comes as near to the ideal as possible and has in him a larger measure of that quality than the rest of the world?

That will satisfy me.

If so, when we set out to discover the essential nature of justice and injustice and what a perfectly just and a perfectly unjust man would be like, supposing them to exist, our purpose was to use them as ideal patterns: we were to observe the degree of happiness or unhappiness that each exhibited, and to draw the necessary inference that our

own destiny would be like that of the one we most resembled. We did not set out to show that these ideals could exist in fact.

That is true.

Then suppose a painter had drawn an ideally beautiful figure complete to the last touch, would you think any the worse of him, if he could not show that a person as beautiful as that could exist?

No, I should not.

Well, we have been constructing in discourse the pattern of an ideal state. Is our theory any the worse, if we cannot prove it possible that a state so organized should be actually founded?

Surely not.

That, then, is the truth of the matter. But if, for your satisfaction, I am to do my best to show under what conditions our ideal would have the best chance of being realized, I must ask you once more to admit that the same principle applies here. Can theory ever be fully realized in practice? Is it not in the nature of things that action should come less close to truth than thought? People may not think so; but do you agree or not?

I do.

Then you must not insist upon my showing that this construction we have traced in thought could be reproduced in fact down to the last detail. You must admit that we shall have found a way to meet your demand for realization, if we can discover how a state might be constituted in the closest accordance with our description. Will not that content you? It would be enough for me.

And for me too.

Then our next attempt, it seems, must be to point out what defect in the working of existing states prevents them from being so organized, and what is the least change that would effect a transformation into this type of government—a single change if possible, or perhaps two; at any rate let us make the changes as few and insignificant as may be.

By all means.

Well, there is one change which, as I believe we can show, would bring about

this revolution—not a small change, certainly, nor an easy one, but possible.

What is it?

I have now to confront what we called the third and greatest wave. But I must state my paradox, even though the wave should break in laughter over my head and drown me in ignominy. Now mark what I am going to say.

Go on.

Unless either philosophers become kings in their countries or those who are now called kings and rulers come to be sufficiently inspired with a genuine desire for wisdom; unless, that is to say, political power and philosophy meet together, while the many natures who now go their several ways in the one or the other direction are forcibly debarred from doing so, there can be no rest from troubles, my dear Glaucon, for states, nor yet, as I believe, for all mankind; nor can this commonwealth which we have imagined ever till then see the light of day and grow to its full stature. This it was that I have so long hung back from saying; I knew what a paradox it would be, because it is hard to see that there is no other way of happiness either for the state or for the individual.

Socrates, exclaimed Glaucon, after delivering yourself of such a pronouncement as that, you must expect a whole multitude of by no means contemptible assailants to fling off their coats, snatch up the handiest weapon, and make a rush at you, breathing fire and slaughter. If you cannot find arguments to beat them off and make your escape, you will learn what it means to be the target of scorn and derision.

Well, it was you who got me into this trouble.

Yes, and a good thing too. However, I will not leave you in the lurch. You shall have my friendly encouragement for what it is worth; and perhaps you may find me more complaisant than some would be in answering your questions. With such backing you must try to convince the unbelievers.

I will, now that I have such a powerful ally.

THE ALLEGORY OF THE CAVE

Next, said I, here is a parable to illustrate the degrees in which our nature may be enlightened or unenlightened. Imagine the condition of men living in a sort of cavernous chamber underground, with an entrance open to the light and a long passage all down the cave.²⁵ Here they have been from childhood chained by the leg and also by the neck, so that they cannot move and can see only what is in front of them, because the chains will not let them turn their heads. At some distance higher up is the light of a fire burning behind them; and between the prisoners and the fire is a track²⁶ with a parapet built along it, like the screen at a puppet-show, which hides the performers while they show their puppets over the top.

I see, said he.

Now behind this parapet imagine persons carrying along various artificial objects, including figures of men and animals in wood or stone or other materials, which project above the parapet. Naturally, some of these persons will be talking, others silent.²⁷

It is a strange picture, he said, and a strange sort of prisoners.

²⁵ The length of the "way in" (*eisodos*) to the chamber where the prisoners sit is an essential feature, explaining why no daylight reaches them.

²⁶ The track crosses the passage into the cave at right angles, and is *above* the parapet built along it.

²⁷ A modern Plato would compare his Cave to an underground cinema, where the audience watch the play of shadows thrown by the film passing before a light at their backs. The film itself is only an image of "real" things and events in the world outside the cinema. For the film Plato has to substitute the clumsier apparatus of a procession of artificial objects carried on their heads by persons who are merely part of the machinery, providing for the movement of the objects and the sounds whose echo the prisoners hear. The parapet prevents these persons' shadows from being cast on the wall of the Cave.

Like ourselves, I replied; for in the first place prisoners so confined would have seen nothing of themselves or of one another, except the shadows thrown by the fire-light on the wall of the Cave facing them, would they?

Not if all their lives they had been prevented from moving their heads.

And they would have seen as little of the objects carried past.

Of course.

Now, if they could talk to one another, would they not suppose that their words referred only to those passing shadows which they saw?²⁸

Necessarily.

And suppose their prison had an echo from the wall facing them? When one of the people crossing behind them spoke, they could only suppose that the sound came from the shadow passing before their eyes.

No doubt.

In every way, then, such prisoners would recognize as reality nothing but the shadows of those artificial objects.

Inevitably.

Now consider what would happen if their release from the chains and the healing of their unwisdom should come about in this way. Suppose one of them set free and forced suddenly to stand up, turn his head, and walk with eyes lifted to the light; all these movements would be painful, and he would be too dazzled to make out the objects whose shadows he had been used to see. What do you think he would say, if someone told him that what he had formerly seen was meaningless illusion, but now, being somewhat nearer to reality and turned towards more real objects, he was getting a truer view? Suppose further that he were shown the various objects being carried by and were made to say, in reply to questions, what each of them was.

²⁸ Adam's text and interpretation. The prisoners, having seen nothing but shadows, cannot think their words refer to the objects carried past behind their backs. For them shadows (images) are the only realities.

Would he not be perplexed and believe the objects now shown him to be not so real as what he formerly saw?

Yes, not nearly so real.

And if he were forced to look at the fire-light itself, would not his eyes ache, so that he would try to escape and turn back to the things which he could see distinctly, convinced that they really were clearer than these other objects now being shown to him?

Yes.

And suppose someone were to drag him away forcibly up the steep and rugged ascent and not let him go until he had hauled him out into the sunlight, would he not suffer pain and vexation at such treatment, and, when he had come out into the light, find his eyes so full of its radiance that he could not see a single one of the things that he was now told were real?

Certainly he would not see them all at once.

He would need, then, to grow accustomed before he could see things in that upper world. At first it would be easiest to make out shadows, and then the images of men and things reflected in water, and later on the things themselves. After that, it would be easier to watch the heavenly bodies and the sky itself by night, looking at the light of the moon and stars rather than the Sun and the Sun's light in the day-time.

Yes, surely.

Last of all, he would be able to look at the Sun and contemplate its nature, not as it appears when reflected in water or any alien medium, but as it is in itself in its own domain.

No doubt.

And now he would begin to draw the conclusion that it is the Sun that produces the seasons and the course of the year and controls everything in the visible world, and moreover is in a way the cause of all that he and his companions used to see.

Clearly he would come at last to that conclusion.

Then if he called to mind his fellow

prisoners and what passed for wisdom in his former dwelling-place, he would surely think himself happy in the change and be sorry for them. They may have had a practice of honouring and commending one another, with prizes for the man who had the keenest eye for the passing shadows and the best memory for the order in which they followed or accompanied one another, so that he could make a good guess as to which was going to come next.²⁹ Would our released prisoner be likely to covet those prizes or to envy the men exalted to honour and power in the Cave? Would he not feel like Homer's Achilles, that he would far sooner "be on earth as a hired servant in the house of a landless man" or endure anything rather than go back to his old beliefs and live in the old way?

Yes, he would prefer any fate to such a life.

Now imagine what would happen if he went down again to take his former seat in the Cave. Coming suddenly out of the sunlight, his eyes would be filled with darkness. He might be required once more to deliver his opinion on those shadows, in competition with the prisoners who had never been released, while his eyesight was still dim and unsteady; and it might take some time to become used to the darkness. They would laugh at him and say that he had gone up only to come back with his sight ruined; it was worth no one's while even to attempt the ascent. If they could lay hands on the man who was trying to set them free and lead them up, they would kill him.³⁰

Yes, they would.

Every feature in this parable, my dear Glaucon, is meant to fit our earlier analysis. The prison dwelling corresponds to the region revealed to us through the

²⁹ The empiricist politician, with no philosophic insight, but only a "knack of remembering what usually happens" (*Gorg.* 501 A). He has *eikasia* = conjecture as to what is likely (*eikos*).

³⁰ An allusion to the fate of Socrates.

sense of sight, and the fire-light within it to the power of the Sun. The ascent to see the things in the upper world you may take as standing for the upward journey of the soul into the region of the intelligible; then you will be in possession of what I surmise, since that is what you wish to be told. Heaven knows whether it is true; but this, at any rate, is how it appears to me. In the world of knowledge, the last thing to be perceived and only with great difficulty is the essential Form of Goodness. Once it is perceived, the conclusion must follow that, for all things, this is the cause of whatever is right and good; in the visible world it gives birth to light and to the lord of light, while it is itself sovereign in the intelligible world and the parent of intelligence and truth. Without having had a vision of this Form no one can act with wisdom, either in his own life or in matters of state.

So far as I can understand, I share your belief.

Then you may also agree that it is no wonder if those who have reached this height are reluctant to manage the affairs of men. Their souls long to spend all their time in that upper world—naturally enough, if here once more our parable holds true. Nor, again, is it at all strange that one who comes from the contemplation of divine things to the miseries of human life should appear awkward and ridiculous when, with eyes still dazed and not yet accustomed to the darkness, he is compelled, in a law-court or elsewhere, to dispute about the shadows of justice or the images that cast those shadows, and to wrangle over the notions of what is right in the minds of men who have never beheld Justice itself.

It is not at all strange.

No; a sensible man will remember that the eyes may be confused in two ways—by a change from light to darkness or from darkness to light; and he will recognize that the same thing happens to the soul. When he sees it troubled and unable to discern anything clearly, instead of laughing thoughtlessly, he will

ask whether, coming from a brighter existence, its unaccustomed vision is obscured by the darkness, in which case he will think its condition enviable and its life a happy one; or whether, emerging from the depths of ignorance, it is dazzled by excess of light. If so, he will rather feel sorry for it; or, if he were inclined to laugh, that would be less ridiculous than to laugh at the soul which has come down from the light.

That is a fair statement.

If this is true, then, we must conclude that education is not what it is said to be by some, who profess to put knowledge into a soul which does not possess it, as if they could put sight into blind eyes. On the contrary, our own account signifies that the soul of every man does possess the power of learning the truth and the organ to see it with; and that, just as one might have to turn the whole body round in order that the eye should see light instead of darkness, so the entire soul must be turned away from this changing world, until its eye can bear to contemplate reality and that supreme splendour which we have called the Good. Hence there may well be an art whose aim would be to effect this very thing, the conversion of the soul, in the readiest way; not to put the power of sight into the soul's eye, which already has it, but to ensure that, instead of looking in the wrong direction, it is turned the way it ought to be.

Yes, it may well be so.

It looks, then, as though wisdom were different from those ordinary virtues, as they are called, which are not far removed from bodily qualities, in that they can be produced by habituation and exercise in a soul which has not possessed them from the first. Wisdom, it seems, is certainly the virtue of some diviner faculty, which never loses its power, though its use for good or harm depends on the direction towards which it is turned. You must have noticed in dishonest men with a reputation for sagacity the shrewd glance of a narrow intelligence piercing the objects to which

it is directed. There is nothing wrong with their power of vision, but it has been forced into the service of evil, so that the keener its sight, the more harm it works.

Quite true.

And yet if the growth of a nature like this had been pruned from earliest childhood, cleared of those clinging overgrowths which come of gluttony and all luxurious pleasure and, like leaden weights charged with affinity to this mortal world, hang upon the soul, bending its vision downwards; if, freed from these, the soul were turned round towards true reality, then this same power in these very men would see the truth as keenly as the objects it is turned to now.

Yes, very likely.

Is it not also likely, or indeed certain after what has been said, that a state can never be properly governed either by the uneducated who know nothing of truth or by men who are allowed to spend all their days in the pursuit of culture? The ignorant have no single mark before their eyes at which they must aim in all the conduct of their own lives and of affairs of state; and the others will not engage in action if they can help it, dreaming that, while still alive, they have been translated to the Islands of the Blest.

Quite true.

It is for us, then, as founders of a commonwealth, to bring compulsion to bear on the noblest natures. They must be made to climb the ascent to the vision of Goodness, which we called the highest object of knowledge; and, when they have looked upon it long enough, they must not be allowed, as they now are, to remain on the heights, refusing to come down again to the prisoners or to take any part in their labours and rewards, however much or little these may be worth.

Shall we not be doing them an injustice, if we force on them a worse life than they might have?

You have forgotten again, my friend, that the law is not concerned to make

any one class specially happy, but to ensure the welfare of the commonwealth as a whole. By persuasion or constraint it will unite the citizens in harmony, making them share whatever benefits each class can contribute to the common good; and its purpose in forming men of that spirit was not that each should be left to go his own way, but that they should be instrumental in binding the community into one.

True, I had forgotten.

You will see, then, Glaucon, that there will be no real injustice in compelling our philosophers to watch over and care for the other citizens. We can fairly tell them that their compeers in other states may quite reasonably refuse to collaborate: there they have sprung up, like a self-sown plant, in despite of their country's institutions; no one has fostered their growth, and they cannot be expected to show gratitude for a care they have never received. "But," we shall say, "it is not so with you. We have brought you into existence for your country's sake as well as for your own, to be like leaders and king-bees in a hive; you have been better and more thoroughly educated than those others and hence you are more capable of playing your part both as men of thought and as men of action. You must go down, then, each in his turn, to live with the rest and let your eyes grow accustomed to the darkness. You will then see a thousand times better than those who live there always; you will recognize every image for what it is and know what it represents, because you have seen justice, beauty, and goodness in their reality; and so you and we shall find life in our commonwealth no mere dream, as it is in most existing states, where men live fighting one another about shadows and quarrelling for power, as if that were a great prize; whereas in truth government can be at its best and free from dissension only where the destined rulers are least desirous of holding office."

Quite true.

Then will our pupils refuse to listen

and to take their turns at sharing in the work of the community, though they may live together for most of their time in a purer air?

No; it is a fair demand, and they are fair-minded men. No doubt, unlike any ruler of the present day, they will think of holding power as an unavoidable necessity.

Yes, my friend; for the truth is that you can have a well-governed society only if you can discover for your future rulers a better way of life than being in office; then only will power be in the hands of men who are rich, not in gold, but in the wealth that brings happiness, a good and wise life. All goes wrong when, starved for lack of anything good in their own lives, men turn to public affairs hoping to snatch from thence the happiness they hunger for. They set about fighting for power, and this internecine conflict ruins them and their country. The life of true philosophy is the only one that looks down upon offices of state; and access to power must be confined to men who are not in love with it; otherwise rivals will start fighting. So whom else can you compel to undertake the guardianship of the commonwealth, if not those who, besides understanding best the principles of government, enjoy a nobler life than the politician's and look for rewards of a different kind?

There is indeed no other choice.

DEMOCRACY AND THE DEMOCRATIC MAN

Democracy, I suppose, should come next. A study of its rise and character should help us to recognize the democratic type of man and set him beside the others for judgment.

Certainly that course would fit in with our plan.

If the aim of life in an oligarchy is to become as rich as possible, that insatiable craving would bring about the transition to democracy. In this way: since the power of the ruling class is due to its wealth, they will not want to have laws

restraining prodigal young men from ruining themselves by extravagance. They will hope to lend these spendthrifts money on their property and buy it up, so as to become richer and more influential than ever. We can see at once that a society cannot hold wealth in honour and at the same time establish a proper self-control in its citizens. One or the other must be sacrificed.

Yes, that is fairly obvious.

In an oligarchy, then, this neglect to curb riotous living sometimes reduces to poverty men of a not ungenerous nature. They settle down in idleness, some of them burdened with debt, some disfranchised, some both at once; and these drones are armed and can sting. Hating the men who have acquired their property and conspiring against them and the rest of society, they long for a revolution. Meanwhile the usurers, intent upon their own business, seem unaware of their existence; they are too busy planting their own stings into any fresh victim who offers them an opening to inject the poison of their money; and while they multiply their capital by usury, they are also multiplying the drones and the paupers. When the danger threatens to break out, they will do nothing to quench the flames, either in the way we mentioned, by forbidding a man to do what he likes with his own, or by the next best remedy, which would be a law enforcing a respect for right conduct. If it were enacted that, in general, voluntary contracts for a loan should be made at the lender's risk, there would be less of this shameless pursuit of wealth and a scantier crop of those evils I have just described.

Quite true.

But, as things are, this is the plight to which the rulers of an oligarchy, for all these reasons, reduce their subjects. As for themselves, luxurious indolence of body and mind makes their young men too lazy and effeminate to resist pleasure or to endure pain; and the fathers, neglecting everything but money, have no higher ideals in life than the poor. Such

being the condition of rulers and subjects, what will happen when they are thrown together, perhaps as fellow-travellers by sea or land to some festival or on a campaign, and can observe one another's demeanour in a moment of danger? The rich will have no chance to feel superior to the poor. On the contrary, the poor man, lean and sunburnt, may find himself posted in battle beside one who, thanks to his wealth and indoor life, is panting under his burden of fat and showing every mark of distress. "Such men," he will think, "are rich because we are cowards"; and when he and his friends meet in private, the word will go round: "These men are no good: they are at our mercy."

Yes, that is sure to happen.

This state, then, is in the same precarious condition as a person so unhealthy that the least shock from outside will upset the balance or even without that, internal disorder will break out. It falls sick and is at war with itself on the slightest occasion, as soon as one party or the other calls in allies from a neighbouring oligarchy or democracy; and sometimes civil war begins with no help from without.

Quite true.

And when the poor win, the result is a democracy. They kill some of the opposite party, banish others, and grant the rest an equal share in civil rights and government, officials being usually appointed by lot.

Yes, that is how a democracy comes to be established, whether by force of arms or because the other party is terrorized into giving way.

Now what is the character of this new régime? Obviously the way they govern themselves will throw light on the democratic type of man.

No doubt.

First of all, they are free. Liberty and free speech are rife everywhere; anyone is allowed to do what he likes.

Yes, so we are told.

That being so, every man will arrange

his own manner of life to suit his pleasure. The result will be a greater variety of individuals than under any other constitution. So it may be the finest of all, with its variegated pattern of all sorts of characters. Many people may think it the best, just as women and children might admire a mixture of colours of every shade in the pattern of a dress. At any rate if we are in search of a constitution, here is a good place to look for one. A democracy is so free that it contains a sample of every kind; and perhaps anyone who intends to found a state, as we have been doing, ought first to visit this emporium of constitutions and choose the model he likes best.

He will find plenty to choose from.

Here, too, you are not obliged to be in authority, however competent you may be, or to submit to authority, if you do not like it; you need not fight when your fellow citizens are at war, nor remain at peace when they do, unless you want peace; and though you may have no legal right to hold office or sit on juries, you will do so all the same if the fancy takes you. A wonderfully pleasant life, surely, for the moment.

For the moment, no doubt.

There is a charm, too, in the forgiving spirit shown by some who have been sentenced by the courts. In a democracy you must have seen how men condemned to death or exile stay on and go about in public, and no one takes any more notice than he would of a spirit that walked invisible. There is so much tolerance and superiority to petty considerations; such a contempt for all those fine principles we laid down in founding our commonwealth, as when we said that only a very exceptional nature could turn out a good man, if he had not played as a child among things of beauty and given himself only to creditable pursuits. A democracy tramples all such notions under foot; with a magnificent indifference to the sort of life a man has led before he enters politics, it will promote to honour anyone who merely calls himself the people's friend.

Magnificent indeed.

These then, and such as these, are the features of a democracy, an agreeable form of anarchy with plenty of variety and an equality of a peculiar kind for equals and unequals alike.

All that is notoriously true.

Now consider the corresponding individual character. Or shall we take his origin first, as we did in the case of the constitution?

Yes.

I imagine him as the son of our miserly oligarch, brought up under his father's eye and in his father's ways. So he too will enforce a firm control over all such pleasures as lead to expense rather than profit—unnecessary pleasures, as they have been called. But, before going farther, shall we draw the distinction between necessary and unnecessary appetites, so as not to argue in the dark?³¹

Please do so.

There are appetites which cannot be got rid of, and there are all those which it does us good to fulfil. Our nature cannot help seeking to satisfy both these kinds; so they may fairly be described as necessary. On the other hand, "unnecessary" would be the right name for all appetites which can be got rid of by early training and which do us no good and in some cases do harm. Let us take an example of each kind, so as to form a general idea of them. The desire to eat enough plain food—just bread and meat—to keep in health and good condition may be called necessary. In the case of bread the necessity is twofold, since it not only does us good but is indispensable to life; whereas meat is only necessary in so far as it helps to keep us in good condition. Beyond these simple needs the desire for a whole variety of luxuries is unneces-

³¹ A classification of appetites is needed because oligarchy, democracy, and despotism are based on the supremacy of three sorts of appetite: (1) the necessary, (2) the unnecessary and spendthrift, and (3) the lawless.

sary. Most people can get rid of it by early discipline and education; and it is as prejudicial to intelligence and self-control as it is to bodily health. Further, these unnecessary appetites might be called expensive, whereas the necessary ones are rather profitable, as helping a man to do his work. The same distinctions could be drawn in the case of sexual appetite and all the rest.

Yes.

Now, when we were speaking just now of drones, we meant the sort of man who is under the sway of a host of unnecessary pleasures and appetites, in contrast with our miserly oligarch, over whom the necessary desires are in control. Accordingly, we can now go back to describe how the democratic type develops from the oligarchical. I imagine it usually happens in this way. When a young man, bred, as we were saying, in a stingy and uncultivated home, has once tasted the honey of the drones and keeps company with those dangerous and cunning creatures, who know how to purvey pleasures in all their multitudinous variety, then the oligarchical constitution of his soul begins to turn into a democracy. The corresponding revolution was effected in the state by one of the two factions calling in the help of partisans from outside. In the same way one of the conflicting sets of desires in the soul of this youth will be reinforced from without by a group of kindred passions; and if the resistance of the oligarchical faction in him is strengthened by remonstrances and reproaches coming from his father, perhaps, or his friends, the opposing parties will soon be battling within him. In some cases the democratic interest yields to the oligarchical: a sense of shame gains a footing in the young man's soul, and some appetites are crushed, others banished, until order is restored.

Yes, that happens sometimes.

But then again, perhaps, owing to the father's having no idea how to bring up his son, another brood of desires, akin to those which were banished, are secretly nursed up until they become numerous

and strong. These draw the young man back into clandestine commerce with his old associates, and between them they breed a whole multitude. In the end, they seize the citadel of the young man's soul, finding it unguarded by the trusty sentinels which keep watch over the minds of men favoured by heaven. Knowledge, right principles, true thoughts, are not at their post; and the place lies open to the assault of false and presumptuous notions. So he turns again to those lot-eaters and now throws in his lot with them openly. If his family send reinforcements to the support of his thrifty instincts, the impostors who have seized the royal fortress shut the gates upon them, and will not even come to parley with the fatherly counsels of individual friends. In the internal conflict they gain the day; modesty and self-control, dishonoured and insulted as the weaknesses of an unmanly fool, are thrust out into exile; and the whole crew of unprofitable desires take a hand in banishing moderation and frugality, which, as they will have it, are nothing but churlish meanness. So they take possession of the soul which they have swept clean, as if purified for initiation into higher mysteries; and nothing remains but to marshal the great procession bringing home Insolence, Anarchy, Waste, and Impudence, those resplendent divinities crowned with garlands, whose praises they sing under flattering names: Insolence they call good breeding, Anarchy freedom, Waste magnificence, and Impudence a manly spirit. Is not that a fair account of the revolution which gives free rein to unnecessary and harmful pleasures in a young man brought up in the satisfaction only of the necessary desires?

Yes, it is a vivid description.

In his life thenceforward he spends as much time and pains and money on his superfluous pleasures as on the necessary ones. If he is lucky enough not to be

carried beyond all bounds, the tumult may begin to subside as he grows older. Then perhaps he may recall some of the banished virtues and cease to give himself up entirely to the passions which ousted them; and now he will set all his pleasures on a footing of equality, denying to none its equal rights and maintenance, and allowing each in turn, as it presents itself, to succeed, as if by the chance of the lot, to the government of his soul until it is satisfied. When he is told that some pleasures should be sought and valued as arising from desires of a higher order, others chastised and enslaved because the desires are base, he will shut the gates of the citadel against the messengers of truth, shaking his head and declaring that one appetite is as good as another and all must have their equal rights. So he spends his days indulging the pleasure of the moment, now intoxicated with wine and music, and then taking to a spare diet and drinking nothing but water; one day in hard training, the next doing nothing at all, the third apparently immersed in study. Every now and then he takes a part in politics, leaping to his feet to say or do whatever comes into his head. Or he will set out to rival someone he admires, a soldier it may be, or, if the fancy takes him, a man of business. His life is subject to no order or restraint, and he has no wish to change an existence which he calls pleasant, free, and happy.

That well describes the life of one whose motto is liberty and equality.

Yes, and his character contains the same fine variety of pattern that we found in the democratic state; it is as multifarious as that epitome of all types of constitution. Many a man, and many a woman too, will find in it something to envy. So we may see in him the counterpart of democracy, and call him the democratic man.

ARISTOTLE

Plato's strength and weakness lay in his gift to confront social reality with what *ought* to be. If that is utopian, every critic and reformer is a utopian. The *Republic* is not a work of abstract contemplation by an aloof philosopher addressed to no one in particular, but the impassioned plea of an Athenian old-family aristocrat. Opposing popular government, Plato recommended to his fellow citizens a constitution and way of life that in many respects, though not in all, resembled those of Sparta, a military and aristocratic state whose distinctive marks were discipline, unity, and complete subordination of the individual to the state. Deeply concerned about practical affairs as he was, Plato nevertheless often went beyond the analysis of what does happen, or is likely to happen, and let himself be carried off into the realm of the Ought. Looking into what may or ought to develop in the future, one is more likely to think in terms of the absolute and perfect, because the imagination of the future is pure idea, unmodified by that relentless relativist and compromiser—experience.

Plato found the corrective to his thinking in his own student, Aristotle (384–322 B.C.), not an Athenian, but a native of Stagira, a Greek colonial town on the Macedonia coast. Reared on the fringe of Greek civilization, Aristotle early acquired some of the worldly wisdom, detachment, and tolerance that were generally characteristic of colonial Greeks in constant touch with other peoples and cultures. Unlike Plato, Aristotle came from an upper-middle-class family, his father being a physician. At the age of seventeen, Aristotle went to Athens, the intellectual center of Greece, entered Plato's Academy, and studied under Plato for twenty years, until his master's death. During the subsequent twelve years, he traveled widely and spent several years at the Court of Philip of Macedon as tutor to his son, Alexander.

In 335 B.C. Aristotle returned to Athens and set up a school of his own, the Lyceum, whose teaching and research program included every branch of knowledge. In 323 B.C. Alexander suddenly died, and the national-democratic forces in Athens quickly rose against the Macedonian overlordship and its lieutenants and spokesmen in Greece. Aristotle, widely known for his intimate associations with the Macedonian monarchy and Alexander, was suspected of pro-Macedonian sentiments and indicted. However, Aristotle preferred exile

to a court trial and possible sentence; he died the following year (322 B.C.) in Chalcis, a stronghold of Macedonian influence that gave him generous refuge during the last months of his life.

In the history of political philosophy no one has surpassed Aristotle in encyclopedic interest and accomplishment. From his father he inherited a flair for medical and biological subjects, and he may have practiced medicine for a time. This interest drew him into zoology, physics, and the natural sciences in general, and fostered in him the habit of observing and weighing data before expressing any general formulas and hypotheses. In philosophy proper, logic and metaphysics were his two main branches of study and writing; he also contributed to esthetics and rhetoric and wrote the first book on psychology; and his *Ethics* and *Politics* are the first systematic treatises in their respective fields. The *Politics* lacks the fire and poetic imagery of the *Republic*, but it is more systematic and analytical, and after twenty-three hundred years it is still an introductory textbook to the entire field of political science. It cannot easily be surpassed in clarity of thought, sobriety of expression, range of topics, and undogmatic openness of mind, for Aristotle prefers beings occasionally self-contradictory to being always right.

Aristotle opens the *Politics* with two important ideas: (1) that the state is a community, and (2) that it is the highest of all communities, "which embraces all the rest, aims at good in a greater degree than any other, and at the highest good." The first thesis came naturally to a Greek of the classical period: his *polis* was a city-state with a small area and population; lacking the impersonal anonymity of ancient empires or modern national states, it combined within itself the active citizenship of an early New England or modern Swiss community and the warmth and fellowship of a religious congregation, all deepened by a joint sharing in the arts and pleasures of life.

Aristotle may not have been the first to consider the state a community, but he was the first to define it clearly as such, and thus he laid the foundation for the *organic* conception of the state, one of the two major types into which all political theories of the state may roughly be divided. According to him, the state is a natural community, an organism with all the attributes of a living being. The other major type views the state as an instrument, a mechanism, a piece of machinery to be used for purposes and ends higher than itself. This type, called the *instrumentalist* view of the state, is actually older, having been propounded by the Sophists a century before Aristotle; however, it was rejected by Plato and revived only in modern times by Hobbes, Locke, and John Dewey.

Aristotle conceives of the state as "natural" in two ways. First, he briefly delineates the evolution of social institutions from the family through the village to the city-state; in this historical sense, the state is the natural and final stage in the growth of human relations. The state is also considered by Aristotle to be natural in a logical and philosophical sense: "The state is by nature clearly prior to the family and the individual, since the whole is of necessity prior to the part." Similarly, Aristotle says that "man is by nature a political animal," and that only gods or beasts can exist without the confines of the sheltering city.

But Aristotle maintains not only that the state is a community but that it is the *highest community* aiming at the highest good. The family is the first form of association, lowest in the chain of social evolution, and lowest on the rung

of values, because it is established by nature "for the supply of men's everyday wants." The village is the second form of association, genetically more complex than the family, and aiming "at something more than the supply of daily needs," meeting at least some rudimentary and primitive cultural wants that the family cannot satisfy. The third and highest form of association is the city-state, highest in terms of social evolution and highest in terms of value and purpose: whereas family and village exist essentially for the preservation of life and the comforts of companionship, the "state exists for the sake of a good life, and not for the sake of life only," and "political society exists for the sake of noble actions, and not of mere companionship."

Unlike Plato, who conceives of reality in terms of unchanging and unchanging static essences and Ideas, Aristotle identifies the nature of a thing with the end toward which it is developing; at each unfinished stage, the thing is partly realizing its own nature and is fully itself when its end is wholly realized. Aristotle's biological, scientific, and historical interests enabled him to view the philosophical problem of reality from a more dynamic and relative standpoint than Plato's, and Aristotle's conception of the state therefore encompasses a wider range of forms of state, varying blends of idea and circumstance, of the perfect and the imperfect.

The state is the highest form of association, not only in terms of the social and institutional, or objective, values, but in terms of man's own nature. In the family, man reproduces himself; in the village, he satisfies elementary wants of human companionship; in the state alone, he realizes his entire self, and particularly the highest part of himself. Man thus represents a compound of qualities that are reflected in corresponding forms of association: his *material* appetites and biological urges, the lowest on the scale of values, are reflected in the family; his *social* sentiment, his desire for companionship and community, is expressed in the village; his *moral* nature, the quality that makes him most specifically human, is fulfilled in the state.

In modern thought, especially in the social sciences, a sharper distinction is drawn between the individual, social groups and associations, and, finally, the state. Aristotle sees all three as organically connected with one another. Man cannot be conceived as being apart from, or superior to, the state because, as was explained earlier, Aristotle considers that "the whole is of necessity prior to the part." Only a "beast or a god" is unable to live in society, or has no need for it. Man can realize himself, that which is most human in him, in society alone. Similarly, Aristotle recognizes no basic difference between social and political associations. To him, all associations are political, inasmuch as they aim at a common good through joint action; the state differs from other associations in that it aims at the highest good, the general advantage of all.

Since the seventeenth century the state has been sharply distinguished from all other organizations because it alone possesses sovereignty, or the highest authority in a politically organized community, and the legal monopoly of enforcing such authority in its territory. Aristotle knows not of the conceptual distinction, or contrast, between individual and society, nor can he visualize the later conflict between society (conceived as the sphere of unhindered and spontaneous activity) and the state (conceived as the sphere of regulated and compelled behavior). If Aristotle were to think at all of the state as sovereign, he

would think of the *highest purpose* of the state rather than of its supreme authority over its citizens. His is a conception of *moral sovereignty* rather than of *legal sovereignty*. Nurtured in the tradition of the small city-state, Aristotle could still say that "the will to live together is friendship," and he would have abhorred the conception that the state is held together, not by personal bonds of fellowship and friendship, but by impersonal and anonymous rules of law, uniformly applying to vast territories and populations, as in modern states and empires.

In his organic view of the state Aristotle expresses more clearly what is implicit, and to some extent explicit, in Plato, but he is unwilling to go as far as his teacher. Unity became for Plato an ideal to which almost anything else was to be sacrificed, the happiness of the rulers as well as the ruled. By contrast, Aristotle warns against the dangers of excessive unity in the state; even if it could be attained, it ought to be rejected, "for it would be the destruction of the state." Moreover, Aristotle is doubtful whether such perfect unity is attainable, and he likens the guardian-rulers of the *Republic* to a "mere occupying garrison," with the result that Plato's ideally united state actually contains "two states in one, each hostile to the other."

Whereas Plato saw only a few basic differences of individuals, such as the differences between members of the three classes of the ideal state, Aristotle is aware of many more differences, and he expresses a truth that is as provocative today as ever, that "a state is not made up only of so many men, but of different kinds of men," and that "the nature of a state is to be a plurality." The danger of all organic theories of the state is that they tend to stress communal unity over individual differences and to subordinate the individual to the state. Plato's conception of the state carried the idea of unity, implicit in all organic theories, to the excess of self-destruction; Aristotle found the counterweight to such an extreme and perfectionist view in the elements of his thinking that pointed toward relativism and pluralism.

Aristotle's organic conception of the state has been used more eagerly and more frequently by conservatives and antidemocrats than by democratic political writers. Yet as time went on, the awareness grew that the state must be more than an instrument or piece of machinery and that the democratic state in particular should aim at becoming a community, not only of law, but of fellowship. Underlying the modern development of the welfare state is the notion that society must have no outcasts, that its inequalities must be reduced, and that the basic amenities of civilized life must be accessible to all.

The second basic doctrine of Aristotle, that the state is the highest community, is less likely to be accepted by democrats. Two objections can be raised: first, democrats are unwilling to concede that any institution per se is entitled to claim primary and exclusive loyalty. Man feels attached to various, and often conflicting, religious, social, economic, and political groups, and his conscience has to decide in each instance of conflict which loyalty comes first. In one instance he may put his church above his country, in another his country above his economic interest, but there is no way of telling a priori that any institution is entitled to first allegiance under all circumstances. As a Greek, Aristotle would have felt little sympathy for such a conception of the state, which is implicit in all democratic political doctrines, because the small city-state with its intimate social life was church and state at the same time, and no sharp distinction was felt between socioeconomic and political institutions.

The second objection against the conception of the state as the highest community can be made by democrats on the ground, originally stated by the Sophists and later reemphasized by the Stoics, that man's loyalty is to mankind as a whole rather than to any particular fraction. This faith was given added force by the Judeo-Christian religious tradition, in which the oneness of God inspires the belief in the oneness of mankind.

By studying virtually all then-known constitutions and political systems, Aristotle laid the foundations of an important branch of political science: *comparative government and politics*. Of 158 such studies made by him, only one survives, the *Constitution of Athens*, discovered in 1890. The study of comparative political institutions is of interest to the political scientist as well as to the practicing statesman, who must know the varieties of political experience if he is to be able to remedy the defects of existing constitutions.

In considering the general problem of the various forms of government, Aristotle says, in an obvious reference to Plato, that "there are some who would have none but the most perfect." The knowledge of the best state may have some value as a norm and standard, but, on the other hand, "the best is often unattainable, and therefore the true legislator and statesman ought to be acquainted, not only with (1) that which is best in the abstract, but also with (2) that which is best relatively to circumstances." Where the attention to Plato, in the *Republic* at least, is centered on the desirable kind of state, Aristotle holds that we "should consider, not only what form of government is best, but also what is possible and what is easily attainable by all."

In classifying the forms of state, Aristotle distinguishes governments that are carried on "with a view to the common interest" from those that serve private interests, whether of one, of few, or of many. Of true governments, there are three: kingship, aristocracy, and constitutional government. Each form has its perversion, of which there are also three: tyranny, oligarchy, and democracy (the rule of the poor).

Of the three forms, Aristotle holds monarchy to be the most ideal kind of government. If a man "preeminent in virtue" can be found, who surpasses in virtue and political capacity "all the rest," he cannot be regarded as a part of the state, subject to the law like everybody else: "Such an one may truly be deemed a God among men." Since there is no law for men of preeminent virtue, monarchs "are themselves a law." Their superior virtue and political capacity give them the right to "practise compulsion and still live in harmony with their cities, if their own government is for the interest of the state."

Like Plato, Aristotle puts virtue of the rulers above consent of the ruled, although both would prefer to have the ruled submit voluntarily to their rulers, to avoid the necessity of compulsion. If a man of preeminent virtue be the monarch, Aristotle argues, "all should joyfully obey such a ruler, according to what seems to be the order of nature." Monarchy can be justified, however, by another consideration: that "a king is the resource of the better classes against the people," and that "the idea of a king is to be a protector of the rich against unjust treatment, of the people against insult and oppression."

Aristotle's deep sympathy for monarchy, as expressed in the *Politics* in so many passages, is to be understood in the light of his relations with the rising Macedonian monarchy. His father had been the royal physician at the Macedonian court, and Aristotle himself the tutor of Alexander. Both Philip and

Alexander sought to conquer Greece intellectually as well as politically and militarily; just as in the struggle between Sparta and Athens class loyalties often came before patriotism, and each city had its (antidemocratic) Spartan and (prodemocratic) Athenian party, so the Macedonian effort to annex Greece to its rule was accompanied by the growth of pro-Macedonian groups in the major Greek city-states. In Athens, the national and democratic movement was led by Demosthenes, to whom all monarchy, good or bad, was "un-Athenian"; the conservative classes, anxious above all to maintain their privileged social-economic position, received their intellectual support from Aristotle's school of philosophy and Plato's Academy, and they were therefore generally pro-Macedonian.

Aristocracy is nowhere described in the *Politics* systematically, perhaps because the problem of aristocracy and democracy (particularly in relation to Athenian self-government) was not of such practical importance as that of monarchy (particularly in relation to the Macedonian kingdom). Aristotle defines aristocracy as a "government formed of the best men absolutely," and not merely of men who are good relatively, that is, in relation to changing circumstances and constitutions. But Aristotle admits that, in addition to such a pure form of aristocracy, which is based on merit and virtue only, there is a type of aristocracy that also takes into account the elements of wealth. Generally, however, Aristotle speaks of monarchy and aristocracy as "the perfect state," the government of the best, both forms aiming at the general good; the main difference between the two consists in the fact that in monarchy virtue is centered in one "preeminent" man, whereas in aristocracy virtue is diffused among several men. The deteriorated form of aristocracy is oligarchy, in which government by the wealthy is carried on for their own benefit rather than for that of the whole state. Whereas merit and virtue are the distinctive qualities to be considered in selecting the rulers in an aristocracy, wealth is the basis of selection in an oligarchy.

The third of the true forms of state is constitutional government ("polity"). Aristotle defines it as the state that the citizens at large administer for the common interest. Constitutional government is a compromise between the two principles of freedom and wealth, the attempt to "unite the freedom of the poor and the wealth of the rich," without giving either principle exclusive predominance. Aristotle concedes that the doctrine of the multitude being supreme rather than the few best, "though not free from difficulty, yet seems to contain an element of truth." When many ordinary persons meet together, their collective wisdom and experience may be superior to that of the few good, "just as a feast to which many contribute is better than a dinner provided out of a single purse." Aristotle suggests the general analogy of the user of a thing being a better judge than its producer, and that, returning to culinary similes, "the guest will judge better of a feast than the cook."

Thinking realistically of the stability of the state, Aristotle holds that the freedom of the poor must be given some consideration, "for a state in which many poor men are excluded from office will necessarily be full of enemies." Aristotle never abandons the ideal state (monarchy or aristocracy, that is, the rule of the best) as an "aspiration," but he realizes that it assumes a standard of virtue "which is above ordinary persons"; in practice, therefore,

constitutional government, based on limited suffrage, turns out to be "the best constitution for most states, and the best life for most men."

By relating forms of political organization to the social milieu that conditions them, Aristotle anticipated some of the main doctrines of Montesquieu and, still more recently, the sociological approach to the study of politics. He saw the danger that would arise if any principle singly and exclusively dominated the constitution, and he therefore advocated, for reasons of stability and practicability, *mixed constitutions*, such as "polity" (constitutional government), based on the two principles of wealth and numbers. However, he realized that a mixed political system could exist in the long run only if backed by a stable society without extremes of wealth and poverty.

Although many persons in the twentieth century find the cause of revolution in conspiracies of evil men, and its remedy in intimidation by investigatory committees or in repression by antirevolutionary legislation, Aristotle states that "poverty is the parent of revolution and crime," and that "when there is no middle class, and the poor greatly exceed in number, troubles arise, and the state soon comes to an end." Because he realized that political stability depends on an equitable social and economic order, he was opposed to selfish class rule by either an excessively wealthy plutocracy (called by him "oligarchy") or by a propertyless proletariat (called by him "democracy"): "Thus it is manifest that the best political community is formed by citizens of the middle class, and that those states are likely to be well-administered, in which the middle class is large, and stronger if possible than both the other classes, or at any rate than either singly." The middle classes thus provided for Aristotle the balance and equilibrium without which no constitution can endure.

The degenerate form of constitutional government (or "polity") is called by Aristotle "democracy," and defined as a system in which "the poor rule." It is government by the poor, and for the poor only, just as tyranny is government by one for his own benefit, and oligarchy government by the wealthy few for their class benefit. But of the degenerate forms, government of the poor for the benefit of the poor ("democracy") is "the most tolerable of the three." Aristotle names popular sovereignty and individual liberty the two characteristic principles of democracy, and he condemns them, in language similar to that of Plato, as incompatible with the stability of the existing moral and political order: "Men think that what is just is equal; and that equality is the supremacy of the popular will; and that freedom means the doing what a man likes. In such democracies every one lives as he pleases."

Though Aristotle was more appreciative than Plato of the common sense and collective wisdom of the people, he was nevertheless afraid of government in which the democratic principle of popular sovereignty was allowed to operate without the modifying influence of other principles, particularly wealth. In this fear of the sovereignty of the majority, Aristotle is conservative rather than antidemocratic, and the godfather of all conservatives in history who have tried to harmonize respect for constitutional government with social and economic inequality.

Aristotle's conservative viewpoint is also clearly expressed in his conception of *citizenship*. He defines a citizen as follows: "he who has the power to take part in the deliberative or judicial administration of any state." Representative

government was unknown to Aristotle because the Greek city-state was governed directly by its citizens, with but few representative elements. Aristotle could not have foreseen the modern concept of the citizen whose main (and often sole) political act is to vote (and frequently he neglects to do that) every few years in an election, and otherwise to leave the actual functions of government to professional legislators, judges, and civil servants. Within the small city-state, all slaves and the majority of the free were excluded from citizenship; to be a citizen meant to participate directly in the legislative and executive functions of government.

Aristotle's idea of citizenship is that of the economically independent gentleman who has enough experience, education, and leisure to devote himself to *active* citizenship, for "citizens must not lead the life of mechanics or tradesmen, for such life is ignoble, and inimical to virtue. Neither must they be husbandmen, since leisure is necessary both for the development of virtue and the performance of political duties." Stressing even more clearly the relation between property and virtue, Aristotle maintains that "the ruling class should be the owners of property, for they are citizens, and the citizens of a state should be in good circumstances; whereas mechanics or any other class which is not a producer of virtue have no share in the state."

Aristotle makes an important distinction between the "parts" of the state and its "necessary conditions." Only those who actively share, or have the means and leisure to share, in the government of the state are its component or integral parts. All the others are merely the "necessary condition" who provide the material environment within which the active citizens, freed from menial tasks, can function. Aristotle finds it "no more absurd" to exclude "the lower class" from citizenship than to exclude "slaves and freedmen," none of whom are resident aliens or foreigners; what the "lower class" has in common with slaves and freedmen is the fact that all its members are "necessary to the existence of the state" but not parts of the state. Aristotle even notes that in ancient times, the "artisan class *were* slaves or foreigners, and therefore the majority of them are so now." Although mechanics and laborers are not legally aliens, morally and politically they are, because "he who is excluded from the honors of the state is not better than an alien."

In comparing the propertied citizens with the propertyless mechanics and laborers, Aristotle draws the analogy between ends and means, the latter existing for the sake of the former. Aristotle was unaware of the idea, expressed in religious terms by the Judeo-Christian teachings in antiquity, and in philosophical terms by Kant in modern times, that every man is, by virtue of being human, an end in himself, and must not be reduced to a means.

If free artisans and laborers are to be treated as means rather than ends, it is none too difficult for Aristotle to defend the institution of *slavery*. Whereas artisans and laborers are to be viewed as means in relation to the state only, slaves are means in every aspect of their existence; they belong "wholly" to their masters. Aristotle assumes that nature is universally ruled by the contrast of the superior and inferior: man is superior to the animals, the male to the female, the soul to the body, reason to passion. In all these divisions, it is just that the superior rule over the inferior, and such a rule is to the advantage of both. Among men, there are those "whose business is to use their body, and

who can do nothing better," and they are by nature slaves. Just as it is fair to hunt against wild animals, so it is "against men who, though intended by nature to be governed, will not submit." Because the question of who is intended by nature to govern, or to be governed, is likely to be decided by the conquerors of a defeated nation rather than by an impartial, third-party court of appeal, Aristotle—in his doctrine of just wars of conquest and enslavement—anticipates Hegel's dictum that "world history is the world court."

Aristotle concedes to slaves the mental ability of apprehending the rational actions and orders of their masters but denies them the ability of acting rationally on their own initiative. The slave is a possession, a live tool; comparing slaves to tame animals. Aristotle notes the difference that the latter cannot even apprehend reason, whereas slaves do, but "the use made of slaves and of tame animals is not very different; for both with their bodies minister to the needs of life." Untouched by the monotheistic doctrine of the divinity and uniqueness of every human soul, Aristotle expresses the pagan view that "from the hour of their birth, some are marked out for subjection, others for rule."

Aristotle was realistic enough to see that many were slaves by law rather than nature, particularly those who were reduced to slavery by conquest, a custom widely practiced in the wars of antiquity. Feeling strongly about the cultural unity (and superiority) of the Greeks, Aristotle was particularly disturbed by slavery in Greece, and said that "Hellenes do not like to call Hellenes slaves, but confine the term to barbarians." Just as Plato had urged that Greeks conduct war against one another with a higher set of standards than against "barbarians," Aristotle looked on the mastery-slavery relation as not befitting superior Greeks, because "some are slaves everywhere, others nowhere."

This difference, however, was not a fact to be observed, but a wish to be expressed, because Greeks did enslave one another, and some of those who were slaves were by nature (and often, by birth) free. Aristotle did not resolve the dilemma between his general theory of slavery, which was based on moral and rational superiority, and the slavery of his time, which was based on force, custom, and utility, and had little to do with moral superiority.

All in all, Aristotle's view of slavery was not too extreme for his time. By reminding the master that his rule over the slave must be based on moral excellence and that abuse of his authority was injurious to both, by allowing the possibility of friendship between them, by conceding to slaves the faculty of apprehending reason, Aristotle prepared the ground for more searching ideas. Yet, his general acceptance of slavery shows how even a wise and great philosopher is captive of the institutions of his time, and of the prejudices that rationalize them.

Aristotle's views on *property* are developed in direct reference to Plato, but they are of more general bearing and constitute to this day the ablest defense of private property. In his polemic against Plato, Aristotle attributes to him the advocacy of a communist property scheme in the *Republic*. In fact, Plato proposed nothing of the sort: the workers, artisans, and farmers in the *Republic* live in a system of private ownership and management of property; as to the rulers, they own no means of production of any kind, and their only economic activity consists in consuming what they derive from the farming and working population as tribute befitting an austere yet noble style of living. Although

Plato did not advocate economic communism, he nevertheless outlawed private property for the rulers as a possible menace to their sense of unity and their devotion to the state.

By contrast, Aristotle denies that private property is, in itself, a threat to moral perfection, and he defends his view on four grounds. First, he adduces the *incentive and progress* argument: when "every one has a distinct interest, men will not complain of one another, and they will make more progress, because every one will be attending to his own business." Thus, Aristotle links the idea of self-interest with that of social progress through greater individual effort and competence, whereas under a communist system, "those who labor much and get little will necessarily complain to those who labor little and receive or consume much." The collapse of Communist states in 1989 can in large part be traced to their nonrecognition of the profit motive in spurring individual initiative.

Aristotle's second argument in support of private property is the *pleasure* that the ownership of property gives, "for all, or almost all, men love money and other such objects in a measure." Aristotle sharply distinguishes such love of property from selfishness and miserliness, and considers it rather from the viewpoint of self-respect and material self-realization.

The third argument is that of *liberality*. Under common ownership, no one can afford to practice generosity and liberality because of the excessive equalization of property; it takes a system of private property, with at least some wealth and inequality, to "set an example of liberality or do any liberal action; for liberality consists in the use which is made of property."

Aristotle's fourth argument has a distinctly Burkean flavor: there must be something deeply and enduringly human in the idea of private property, if it has *existed* for such a *long time*, and "we should not disregard the experience of ages." As to communist practices, "in the multitude of years these things, if they were good, would certainly not have been unknown."

Aristotle is aware of the evils that befall men in a system of private property, but he says that they "are due to a very different cause—the wickedness of human nature." The cure for social imperfections is not equality of property but the moral improvement of man, and "the beginning of reform is not so much to equalize property as to train the nobler sort of natures not to desire more, and to prevent the lower from getting more; that is to say, they must be kept down, but not ill-treated." As a matter of public policy, the legislator ought to aim at equitable, rather than equal, distribution of property; what seems most important to Aristotle is *not who owns property but how property is used*, and that is an essentially moral question, not one of political economy.

Aristotle nevertheless realizes that excessive inequalities of wealth are dangerous to the balance and harmony of the state, and for this reason he praises with deep feeling the advantages of a society in which the middle classes are strongest. By contrast, where "some possess much, and the others nothing," constitutional government is impossible to maintain, and the state will be ruled by one of two extremes: either a plutocratic regime (oligarchy) for the exclusive benefit of the wealthy, or a proletarian regime (democracy) for the benefit of the urban poor, and "a tyranny may grow out of either extreme."

Unlike Plato, who searched for perfect justice, Aristotle understood that the basic issue is between the *rule of law* and the *rule of men*. Conceding that man-made law can never attain perfect justice, Aristotle nevertheless stresses that "the rule of the law is preferable to that of any individual," and that magistrates should regulate only matters on which the law is silent, because a general rule or principle cannot embrace all particulars. Whereas government based on law cannot be perfectly just, it is at least the lesser evil, when contrasted with the arbitrariness and passion inherent in government based on the rule of men.

The Aristotelian concept of the rule of law became one of the dominant political ideas to come forth from the Middle Ages—when interest in Aristotle revived—though during which political relations were still largely based on custom. In modern times the concept of the rule of law has become one of the pillars of the constitutional edifice of the United States and elsewhere. The constitutional state is perhaps the most important legacy Aristotle has bequeathed to posterity. In nondemocratic political systems still today, the strength or weakness of the rule of law is one of the clearest indications of the direction in which a particular state is moving. Historically, the rule of law has generally preceded democracy rather than been created by it. In ancient Greece, for example, the word "isonomia" (equality before the law) was coined before "demokratia" (rule of the people).

Aristotle's specific ideas, beliefs, and proposals are often conservative, even for his own time. But running through all his works, and implicit in his temper and personality, is a spirit that is wise and gentle, moderate, broad in outlook, open to new ideas, averse to dogmatism, conscious of the intricacy and complexity of human affairs, and imbued with sympathy that illuminates and enriches philosophical enquiry. Though explicitly conservative, Aristotle's thinking was suffused with qualities that characterize the liberal temper and the open mind.

ARISTOTLE

Politics *NATURE AND ORIGIN
OF THE STATE

Every state is a community of some kind, and every community is established with a view to some good; for mankind always act in order to obtain that which they think good. But, if all communities aim at some good, the state or political community, which is the highest of all, and which embraces all the rest, aims at good in a greater degree than any other, and at the highest good.

Some people think that the qualifications of a statesman, king, householder, and master are the same, and that they differ, not in kind, but only in the number of their subjects. For example, the ruler over a few is called a master; over more, the manager of a household; over a still larger number, a statesman or king, as if there were no difference between a great household and a small state. The distinction which is made between the king and the statesman is as follows: When the government is personal, the ruler is a king; when, according to the rules of the political science, the citizens rule and are ruled in turn, then he is called a statesman.

But all this is a mistake; for governments differ in kind, as will be evident to any one who considers the matter according to the method which has hitherto guided us. As in other departments of science, so in politics, the com-

pound should always be resolved into the simple elements or least parts of the whole. We must therefore look at the elements of which the state is composed, in order that we may see in what the different kinds of rule differ from one another, and whether any scientific result can be attained about each one of them.

He who thus considers things in their first growth and origin, whether a state or anything else, will obtain the clearest view of them. In the first place there must be a union of those who cannot exist without each other; namely, of male and female, that the race may continue (and this is a union which is formed, not of deliberate purpose, but because, in common with other animals and with plants, mankind have a natural desire to leave behind them an image of themselves), and of natural ruler and subject, that both may be preserved. For that which can foresee by the exercise of mind is by nature intended to be lord and master, and that which can with its body give effect to such foresight is a subject, and by nature a slave; hence master and slave have the same interest. Now nature has distinguished between the female and the slave. For she is not niggardly, like the smith who fashions the Delphian knife for many uses; she makes each thing for a single use, and every instrument is best made when intended for one and not for many uses. But among barbarians no distinction is made between women and slaves, because there is no natural ruler among them: they are a community of slaves, male and female.

* From Aristotle, *Politics* (trans. Benjamin Jowett, Oxford University Press). By permission.

Wherefore the poets say—

It is meet that Hellenes should rule over
barbarians;

as if they thought that the barbarian and
the slave were by nature one.

Out of these two relationships between
man and woman, master and slave, the
first thing to arise is the family, and
Hesiod is right when he says—

First house and wife and an ox for the
plough,

for the ox is the poor man's slave. The
family is the association established by
nature for the supply of men's everyday
wants, and the members of it are called
by Charondas "companions of the cup-
board," and by Epimenides the Cretan,
"companions of the manger." But when
several families are united, and the asso-
ciation aims at something more than the
supply of daily needs, the first society to
be formed is the village. And the most
natural form of the village appears to be
that of a colony from the family, com-
posed of the children and grandchildren,
who are said to be suckled "with the
same milk." And this is the reason why
Hellenic states were originally governed
by kings; because the Hellenes were
under royal rule before they came to-
gether, as the barbarians still are. Every
family is ruled by the eldest, and there-
fore in the colonies of the family the
kingly form of government prevailed
because they were of the same blood. As
Homer says:

Each one gives law to his children and
to his wives.

For they lived dispersedly, as was the
manner in ancient times. Wherefore men
say that the Gods have a king, because
they themselves either are or were in
ancient times under the rule of a king.
For they imagine, not only the forms of
the Gods, but their ways of life to be like
their own.

When several villages are united in a
single complete community, large enough
to be nearly or quite self-sufficing, the
state comes into existence, originating in
the bare needs of life, and continuing in
existence for the sake of a good life. And
therefore, if the earlier forms of society
are natural, so is the state, for it is the
end of them, and the nature of a thing is
its end. For what each thing is when
fully developed, we call its nature,
whether we are speaking of a man, a
horse, or a family. Besides, the final
cause and end of a thing is the best, and
to be self-sufficing is the end and the
best.

Hence it is evident that the state is a
creation of nature, and that man is by
nature a political animal. And he who by
nature and not by mere accident is with-
out a state, is either a bad man or above
humanity; he is like the

Tribeless, lawless, hearthless one,

whom Homer denounces—the natural
outcast is forthwith a lover of war; he
may be compared to an isolated piece at
draughts.

Now, that man is more of a political
animal than bees or any other gregarious
animals is evident. Nature, as we often
say, makes nothing in vain, and man is
the only animal whom she has endowed
with the gift of speech. And whereas
mere voice is but an indication of plea-
sure or pain, and is therefore found in
other animals (for their nature attains to
the perception of pleasure and pain and
the intimation of them to one another,
and no further), the power of speech is
intended to set forth the expedient and
inexpedient, and therefore likewise the
just and the unjust. And it is a character-
istic of man that he alone has any sense of
good and evil, of just and unjust, and the
like, and the association of living beings
who have this sense makes a family and
a state.

Further, the state is by nature clearly
prior to the family and to the individual,
since the whole is of necessity prior to

the part; for example, if the whole body be destroyed, there will be no foot or hand, except in an equivocal sense, as we might speak of a stone hand; for when destroyed the hand will be no better than that. But things are defined by their working and power; and we ought not to say that they are the same when they no longer have their proper quality, but only that they have the same name. The proof that the state is a creation of nature and prior to the individual is that the individual, when isolated, is not self-sufficing; and therefore he is like a part in relation to the whole. But he who is unable to live in society, or who has no need because he is sufficient for himself, must be either a beast or a god: he is no part of a state. A social instinct is implanted in all men by nature, and yet he who first founded the state was the greatest of benefactors. For man, when perfected, is the best of animals, but, when separated from law and justice, he is the worst of all; since armed injustice is the more dangerous, and he is equipped at birth with arms, meant to be used by intelligence and virtue, which he may use for the worst ends. Wherefore, if he have not virtue, he is the most unholy and the most savage of animals, and the most full of lust and gluttony. But justice is the bond of men in states, for the administration of justice, which is the determination of what is just, is the principle of order in political society.

SLAVERY

But is there any one thus intended by nature to be a slave, and for whom such a condition is expedient and right, or rather is not all slavery a violation of nature?

There is no difficulty in answering this question, on grounds both of reason and of fact. For that some should rule and others be ruled is a thing not only necessary, but expedient; from the hour of their birth, some are marked out for subjection, others for rule.

And there are many kinds both of rulers and subjects (and that rule is the better which is exercised over better subjects—for example, to rule over men is better than to rule over wild beasts; for the work is better which is executed by better workmen, and where one man rules and another is ruled, they may be said to have a work); for in all things which form a composite whole and which are made up of parts, whether continuous or discrete, a distinction between the ruling and the subject element comes to light. Such a duality exists in living creatures, but not in them only; it originates in the constitution of the universe; even in things which have no life there is a ruling principle, as in a musical mode. But we are wandering from the subject. We will therefore restrict ourselves to the living creature, which, in the first place, consists of soul and body: and of these two, the one is by nature the ruler, and the other the subject. But then we must look for the intentions of nature in things which retain their nature, and not in things which are corrupted. And therefore we must study the man who is in the most perfect state both of body and soul, for in him we shall see the true relation of the two; although in bad or corrupted natures the body will often appear to rule over the soul, because they are in an evil and unnatural condition. At all events we may firstly observe in living creatures both a despotical and a constitutional rule; for the soul rules the body with a despotical rule, whereas the intellect rules the appetites with a constitutional and royal rule. And it is clear that the rule of the soul over the body, and of the mind and the rational element over the passionate, is natural and expedient; whereas the equality of the two or the rule of the inferior is always hurtful. The same holds good of animals in relation to men; for tame animals have a better nature than wild, and all tame animals are better off when they are ruled by man; for then they are preserved. Again, the male is by nature

superior, and the female inferior; and the one rules, and the other is ruled; this principle, of necessity, extends to all mankind. Where then there is such a difference as that between soul and body, or between men and animals (as in the case of those whose business is to use their body, and who can do nothing better), the lower sort are by nature slaves, and it is better for them as for all inferiors that they should be under the rule of a master. For he who can be, and therefore is, another's, and he who participates in rational principle enough to apprehend, but not to have, such a principle, is a slave by nature. Whereas the lower animals cannot even apprehend a principle; they obey their instincts. And indeed the use made of slaves and of tame animals is not very different; for both with their bodies minister to the needs of life. Nature would like to distinguish between the bodies of freemen and slaves, making the one strong for servile labour, the other upright, and although useless for such services, useful for political life in the arts both of war and peace. But the opposite often happens—that some have the souls and others have the bodies of freemen. And doubtless if men differed from one another in the mere forms of their bodies as much as the statues of the Gods do from men, all would acknowledge that the inferior class should be slaves of the superior. And if this is true of the body, how much more just that a similar distinction should exist in the soul? but the beauty of the body is seen, whereas the beauty of the soul is not seen. It is clear, then, that some men are by nature free, and others slaves, and that for these latter slavery is both expedient and right.

But that those who take the opposite view have in a certain way right on their side, may be easily seen. For the words slavery and slave are used in two senses. There is a slave or slavery by law as well as by nature. The law of which I speak is a sort of convention—the law by which

whatever is taken in war is supposed to belong to the victors. But this right many jurists impeach, as they would an orator who brought forward an unconstitutional measure: they detest the notion that, because one man has the power of doing violence and is superior in brute strength, another shall be his slave and subject. Even among philosophers there is a difference of opinion. The origin of the dispute, and what makes the views invade each other's territory, is as follows: in some sense virtue, when furnished with means, has actually the greatest power of exercising force: and as superior power is only found where there is superior excellence of some kind, power seems to imply virtue, and the dispute to be simply one about justice (for it is due to one party identifying justice with goodwill, while the other identifies it with the mere rule of the stronger). If these views are thus set out separately, the other views have no force or plausibility against the view that the superior in virtue ought to rule, or be master. Others, clinging, as they think, simply to a principle of justice (for law and custom are a sort of justice), assume that slavery in accordance with the custom of war is justified by law, but at the same moment they deny this. For what if the cause of the war be unjust? And again, no one would ever say that he is a slave who is unworthy to be a slave. Were this the case, men of the highest rank would be slaves and the children of slaves if they or their parents chance to have been taken captive and sold. Wherefore Hellenes do not like to call Hellenes slaves, but confine the term to barbarians. Yet, in using this language, they really mean the natural slave of whom we spoke at first; for it must be admitted that some are slaves everywhere, others nowhere. The same principle applies to nobility. Hellenes regard themselves as noble everywhere, and not only in their own country, but they deem the barbarians noble only when at home, thereby implying that there are two sorts of nobility and free-

dom, the one absolute, the other relative. The Helen of Theodectes says:

Who would presume to call me servant who am on both sides sprung from the stem of the Gods?

What does this mean but that they distinguish freedom and slavery, noble and humble birth, by the two principles of good and evil? They think that as men and animals beget men and animals, so from good men a good man springs. But this is what nature, though she may intend it, cannot always accomplish.

We see then that there is some foundation for this difference of opinion, and that all are not either slaves by nature or freemen by nature, and also that there is in some cases a marked distinction between the two classes, rendering it expedient and right for the one to be slaves and the others to be masters: the one practising obedience, the others exercising the authority and lordship which nature intended them to have. The abuse of this authority is injurious to both; for the interests of part and whole, of body and soul, are the same, and the slave is a part of the master, a living but separated part of his bodily frame. Hence, where the relation of master and slave between them is natural they are friends and have a common interest, but where it rests merely on law and force the reverse is true.

CRITIQUE OF PLATO'S REPUBLIC

Our purpose is to consider what form of political community is best of all for those who are most able to realize their ideal of life. We must therefore examine not only this but other constitutions, both such as actually exist in well-governed states, and any theoretical forms which are held in esteem; that what is good and useful may be brought to light. And let no one suppose that in seeking for something beyond them we

are anxious to make a sophistical display at any cost; we only undertake this inquiry because all the constitutions with which we are acquainted are faulty.

We will begin with the natural beginning of the subject. Three alternatives are conceivable: The members of a state must either have (1) all things or (2) nothing in common, or (3) some things in common and some not. That they should have nothing in common is clearly impossible, for the constitution is a community, and must at any rate have a common place—one city will be in one place, and the citizens are those who share in that one city. But should a well-ordered state have all things, as far as may be, in common, or some only and not others? For the citizens might conceivably have wives and children and property in common, as Socrates proposes in the *Republic* of Plato. Which is better, our present condition, or the proposed new order of society?

There are many difficulties in the community of women. And the principle on which Socrates rests the necessity of such an institution evidently is not established by his arguments. Further, as a means to the end which he ascribes to the state, the scheme, taken literally, is impracticable, and how we are to interpret it is nowhere precisely stated. I am speaking of the premiss from which the argument of Socrates proceeds, "that the greater the unity of the state the better." Is it not obvious that a state may at length attain such a degree of unity as to be no longer a state?—since the nature of a state is to be a plurality, and in tending to greater unity, from being a state, it becomes a family, and from being a family, an individual; for the family may be said to be more than the state, and the individual than the family. So that we ought not to attain this greatest unity even if we could, for it would be the destruction of the state. Again, a state is not made up only of so many men, but of different kinds of men; for similars do not constitute a state. It is not like a mili-

tary alliance. The usefulness of the latter depends upon its quantity even where there is no difference in quality (for mutual protection is the end aimed at), just as a greater weight of anything is more useful than a less (in like manner, a state differs from a nation, when the nation has not its population organized in villages, but lives an Arcadian sort of life); but the elements out of which a unity is to be formed differ in kind. Wherefore the principle of compensation, as I have already remarked in the *Ethics*, is the salvation of states. Even among freemen and equals this is a principle which must be maintained, for they cannot all rule together, but must change at the end of a year or some other period of time or in some order of succession. The result is that upon this plan they all govern; just as if shoemakers and carpenters were to exchange their occupations, and the same persons did not always continue shoemakers and carpenters. And since it is better that this should be so in politics as well, it is clear that while there should be continuance of the same persons in power where this is possible, yet where this is not possible by reason of the natural equality of the citizens, and at the same time it is just that all should share in the government (whether to govern be a good thing or a bad), an approximation to this is that equals should in turn retire from office and should, apart from official position, be treated alike. Thus the one party rule and the others are ruled in turn, as if they were no longer the same persons. In like manner when they hold office there is a variety in the offices held. Hence it is evident that a city is not by nature one in that sense which some persons affirm; and that what is said to be the greatest good of cities is in reality their destruction; but surely the good of things must be that which preserves them. Again, in another point of view, this extreme unification of the state is clearly not good; for a family is more self-sufficing than an individual, and a city than a family, and a city only comes into being when the

community is large enough to be self-sufficing. If then self-sufficiency is to be desired, the lesser degree of unity is more desirable than the greater.

PROPERTY: EQUALITY OR INEQUALITY?

Next let us consider what should be our arrangements about property: should the citizens of the perfect state have their possessions in common or not? This question may be discussed separately from the enactments about women and children. Even supposing that the women and children belong to individuals, according to the custom which is at present universal, may there not be an advantage in having and using possessions in common? Three cases are possible: (1) the soil may be appropriated, but the produce may be thrown for consumption into the common stock; and this is the practice of some nations. Or (2), the soil may be common, and may be cultivated in common, but the produce divided among individuals for their private use; this is a form of common property which is said to exist among certain barbarians. Or (3), the soil and the produce may be alike common.

When the husbandmen are not the owners, the case will be different and easier to deal with; but when they till the ground for themselves the question of ownership will give a world of trouble. If they do not share equally in enjoyments and toils, those who labour much and get little will necessarily complain of those who labour little and receive or consume much. But indeed there is always a difficulty in men living together and having all human relations in common, but especially in their having common property. The partnerships of fellow-travelers are an example to the point; for they generally fall out over everyday matters and quarrel about any trifle which turns up. So with servants: we are most liable to take offense at those with whom we

most frequently come into contact in daily life.

These are only some of the disadvantages which attend the community of property; the present arrangement, if improved as it might be by good customs and laws, would be far better, and would have the advantages of both systems. Property should be in a certain sense common, but, as a general rule, private; for, when every one has a distinct interest, men will not complain of one another, and they will make more progress, because every one will be attending to his own business. And yet by reason of goodness, and in respect of use, "Friends," as the proverb says, "will have all things common." Even now there are traces of such a principle, showing that it is not impracticable, but, in well-ordered states, exists already to a certain extent and may be carried further. For, although every man has his own property, some things he will place at the disposal of his friends, while of others he shares the use with them. The Lacedaemonians, for example, use one another's slaves, and horses, and dogs, as if they were their own; and when they lack provisions on a journey, they appropriate what they find in the fields throughout the country. It is clearly better that property should be private, but the use of it common; and the special business of the legislator is to create in men this benevolent disposition. Again, how immeasurably greater is the pleasure, when a man feels a thing to be his own; for surely the love of self is a feeling implanted by nature and not given in vain, although selfishness is rightly censured; this, however, is not the mere love of self, but the love of self in excess, like the miser's love of money; for all, or almost all, men love money and other such objects in a measure. And further, there is the greatest pleasure in doing a kindness or service to friends or guests or companions, which can only be rendered when a man has private property. These advantages are lost by excessive unification of the state. The exhibition of two virtues, besides, is visibly

annihilated in such a state: first, temperance towards women (for it is an honourable action to abstain from another's wife for temperance sake); secondly, liberality in the matter of property. No one, when men have all things in common, will any longer set an example of liberality or do any liberal action; for liberality consists in the use which is made of property.

Such legislation may have a specious appearance of benevolence; men readily listen to it, and are easily induced to believe that in some wonderful manner everybody will become everybody's friend, especially when some one is heard denouncing the evils now existing in states, suits about contracts, convictions for perjury, flatteries of rich men and the like, which are said to arise out of the possession of private property. These evils, however, are due to a very different cause—the wickedness of human nature. Indeed, we see that there is much more quarrelling among those who have all things in common, though there are not many of them when compared with the vast numbers who have private property.

Again, we ought to reckon, not only the evils from which the citizens will be saved, but also the advantages which they will lose. The life which they are to lead appears to be quite impracticable. The error of Socrates must be attributed to the false notion of unity from which he starts. Unity there should be, both of the family and of the state, but in some respects only. For there is a point at which a state may attain such a degree of unity as to be no longer a state, or at which, without actually ceasing to exist, it will become an inferior state, like harmony passing into unison, or rhythm which has been reduced to a single foot. The state, as I was saying, is a plurality, which should be united and made into a community by education; and it is strange that the author of a system of education which he thinks will make the state virtuous should expect to improve his citizens by regulations of this sort, and not by philosophy or by customs and

laws, like those which prevail at Sparta and Crete respecting common meals, whereby the legislator has made property common. Let us remember that we should not disregard the experience of ages; in the multitude of years these things, if they were good, would certainly not have been unknown; for almost everything has been found out, although sometimes they are not put together; in other cases men do not use the knowledge which they have. Great light would be thrown on this subject if we could see such a form of government in the actual process of construction; for the legislator could not form a state at all without distributing and dividing its constituents into associations for common meals, and into phratries and tribes. But all this legislation ends only in forbidding agriculture to the guardians, a prohibition which the Lacedaemonians try to enforce already.

But, indeed, Socrates has not said, nor is it easy to decide, what in such a community will be the general form of the state. The citizens who are not guardians are the majority, and about them nothing has been determined: are the husbandmen, too, to have their property in common? Or is each individual to have his own? and are the wives and children to be individual or common? If, like the guardians, they are to have all things in common, in what do they differ from them, or what will they gain by submitting to their government? Or, upon what principle would they submit, unless indeed the governing class adopt the ingenious policy of the Cretans, who give their slaves the same institutions as their own, but forbid them gymnastic exercises and the possession of arms. If, on the other hand, the inferior classes are to be like other cities in respect of marriage and property, what will be the form of the community? Must it not contain two states in one, each hostile to the other? He makes the guardians into a mere occupying garrison, while the husbandmen and artisans and the rest are the real citizens. But if so the suits and quarrels,

and all the evils which Socrates affirms to exist in other states, will exist equally among them. He says indeed that, having so good an education, the citizens will not need many laws, for example laws about the city or about the markets; but then he confines his education to the guardians. Again, he makes the husbandmen owners of the property upon condition of their paying a tribute. But in that case they are likely to be much more unmanageable and conceited than the Helots, or Penestae, or slaves in general. And whether community of wives and property be necessary for the lower equally with the higher class or not, and the questions akin to this, what will be the education, form of government, laws of the lower class, Socrates has nowhere determined: neither is it easy to discover this, nor is their character of small importance if the common life of the guardians is to be maintained.

Again, if Socrates makes the women common, and retains private property, the men will see to the fields, but who will see to the house? And who will do so if the agricultural class have both their property and their wives in common? Once more: it is absurd to argue, from the analogy of the animals, that men and women should follow the same pursuits, for animals have not to manage a household. The government, too, as constituted by Socrates, contains elements of danger; for he makes the same persons always rule. And if this is often a cause of disturbance among the meaner sort, how much more among high-spirited warriors? But that the persons whom he makes rulers must be the same is evident; for the gold which the God mingles in the souls of men is not at one time given to one, at another time to another, but always to the same: as he says, "God mingles gold in some, and silver in others, from their very birth; but brass and iron in those who are meant to be artisans and husbandmen." Again, he deprives the guardians even of happiness, and says that the legislator ought to make the whole state happy. But the

whole cannot be happy unless most, or all, or some of its parts enjoy happiness. In this respect happiness is not like the even principle in numbers, which may exist only in the whole, but in neither of the parts; not so happiness. And if the guardians are not happy, who are? Surely not the artisans, or the common people. The Republic of which Socrates discourses has all these difficulties, and others quite as great.

There is another point: Should not the amount of property be defined in some way which differs from this by being clearer? For Socrates says that a man should have so much property as will enable him to live temperately, which is only a way of saying "to live well"; this is too general a conception. Further, a man may live temperately and yet miserably. A better definition would be that a man must have so much property as will enable him to live not only temperately but liberally; if the two are parted, liberality will combine with luxury; temperance will be associated with toil. For liberality and temperance are the only eligible qualities which have to do with the use of property. A man cannot use property with mildness or courage, but temperately and liberally he may; and therefore the practice of these virtues is inseparable from property. There is an inconsistency, too, in equalizing the property and not regulating the number of the citizens; the population is to remain unlimited, and he thinks that it will be sufficiently equalized by a certain number of marriages being unfruitful, however many are born to others, because he finds this to be the case in existing states. But greater care will be required than now; for among ourselves, whatever may be the number of citizens, the property is always distributed among them, and therefore no one is in want; but, if the property were incapable of division as in the *Laws*, the supernumeraries, whether few or many, would get nothing. One would have thought that it

was even more necessary to limit population than property; and that the limit should be fixed by calculating the chances of mortality in the children, and of sterility in married persons. The neglect of this subject, which in existing states is so common, is a never-failing cause of poverty among the citizens; and poverty is the parent of revolution and crime. Pheidon the Corinthian, who was one of the most ancient legislators, thought that the families and the number of citizens ought to remain the same, although originally all the lots may have been of different sizes: but in the *Laws* the opposite principle is maintained. What in our opinion is the right arrangement will have to be explained hereafter.

Other constitutions have been proposed; some by private persons, others by philosophers and statesmen, which all come nearer to established or existing ones than either of Plato's. No one else has introduced such novelties as the community of women and children, or public tables for women: other legislators begin with what is necessary. In the opinion of some, the regulation of property is the chief point of all, that being the question upon which all revolutions turn. This danger was recognized by Phaleas of Chalcedon, who was the first to affirm that the citizens of a state ought to have equal possessions. He thought that in a new colony the equalization might be accomplished without difficulty, not so easily when a state was already established; and that then the shortest way of compassing the desired end would be for the rich to give and not to receive marriage portions, and for the poor not to give but to receive them.

Plato in the *Laws* was of opinion that, to a certain extent, accumulation should be allowed, forbidding, as I have already observed, any citizen to possess more than five times the minimum qualification. But those who make such laws should remember what they are apt to forget—that the legislator who fixes the

amount of property should also fix the number of children; for, if the children are too many for the property, the law must be broken. And, besides the violation of the law, it is a bad thing that many from being rich should become poor; for men of ruined fortunes are sure to stir up revolutions. That the equalization of property exercises an influence on political society was clearly understood even by some of the old legislators. Laws were made by Solon and others prohibiting an individual from possessing as much land as he pleased; and there are other laws in states which forbid the sale of property: among the Locrians, for example, there is a law that a man is not to sell his property unless he can prove unmistakably that some misfortune has befallen him. Again, there have been laws which enjoin the preservation of the original lots. Such a law existed in the island of Leucas, and the abrogation of it made the constitution too democratic, for the rulers no longer had the prescribed qualification. Again, where there is equality of property, the amount may be either too large or too small, and the possessor may be living either in luxury or penury. Clearly, then, the legislator ought not only to aim at the equalization of properties, but at moderation in their amount. Further, if he prescribe this moderate amount equally to all, he will be no nearer the mark; for it is not the possessions but the desires of mankind which require to be equalized, and this is impossible, unless a sufficient education is provided by the laws. But Phaleas will probably reply that this is precisely what he means; and that, in his opinion, there ought to be in states, not only equal property, but equal education. Still he should tell precisely what he means; and what, in his opinion, there ought to be in having one and the same for all, if it is of a sort that predisposes men to avarice, or ambition, or both. Moreover, civil troubles arise, not only out of the inequality of property, but out of the inequality of honour, though in opposite ways. For the

common people quarrel about the inequality of property, the higher class about the equality of honour; as the poet says—

The bad and good alike in honour share.

There are crimes of which the motive is want; and for these Phaleas expects to find a cure in the equalization of property, which will take away from a man the temptation to be a highwayman, because he is hungry or cold. But want is not the sole incentive to crime; men also wish to enjoy themselves and not to be in a state of desire—they wish to cure some desire, going beyond the necessities of life, which preys upon them; nay, this is not the only reason—they may desire superfluities in order to enjoy pleasures unaccompanied with pain, and therefore they commit crimes.

Now what is the cure of these three disorders? Of the first, moderate possessions and occupation; of the second, habits of temperance; as to the third, if any desire pleasures which depend on themselves, they will find the satisfaction of their desires nowhere but in philosophy; for all other pleasures we are dependent on others. The fact is that the greatest crimes are caused by excess and not by necessity. Men do not become tyrants in order that they may not suffer cold; and hence great is the honour bestowed, not on him who kills a thief, but on him who kills a tyrant. Thus we see that the institutions of Phaleas avail only against petty crimes.

There is another objection to them. They are chiefly designed to promote the internal welfare of the state. But the legislator should consider also its relation to neighbouring nations, and to all who are outside of it. The government must be organized with a view to military strength; and of this he has said not a word. And so with respect to property: there should not only be enough to supply the internal wants of the state, but also to meet dangers coming from with-

out. The property of the state should not be so large that more powerful neighbours may be tempted by it, while the owners are unable to repel the invaders; nor yet so small that the state is unable to maintain a war even against states of equal power, and of the same character. Phaleas has not laid down any rule; but we should bear in mind that abundance of wealth is an advantage. The best limit will probably be, that a more powerful neighbour must have no inducement to go to war with you by reason of the excess of your wealth, but only such as he would have had if you had possessed less. There is a story that Eubulus, when Autophradates was going to besiege Atarneus, told him to consider how long the operation would take, and then reckon up the cost which would be incurred in the time. "For," said he, "I am willing for a smaller sum than that to leave Atarneus at once." These words of Eubulus made an impression on Autophradates, and he desisted from the siege.

The equalization of property is one of the things that tend to prevent the citizens from quarrelling. Not that the gain in this direction is very great. For the nobles will be dissatisfied because they think themselves worthy of more than an equal share of honours; and this is often found to be a cause of sedition and revolution. And the avarice of mankind is insatiable; at one time two obols was pay enough; but now, when this sum has become eustomary, men always want more and more without end; for it is of the nature of desire not to be satisfied, and most men live only for the gratification of it. The beginning of reform is not so much to equalize property as to train the nobler sort of natures not to desire more, and to prevent the lower from getting more; that is to say, they must be kept down, but not ill-treated. Besides, the equalization proposed by Phaleas is imperfect; for he only equalizes land, whereas a man may be rich also in slaves, and cattle, and money, and in the abundance of what are called his movables. Now either all these things must be

equalized, or some limit must be imposed on them, or they must all be let alone. It would appear that Phaleas is legislating for a small city only, if, as he supposes, all the artisans are to be public slaves and not to form a supplementary part of the body of citizens. But if there is a law that artisans are to be public slaves, it should only apply to those engaged on public works, as at Epidamnus, or at Athens on the plan which Diophantus once introduced.

From these observations any one may judge how far Phaleas was wrong or right in his ideas.

CITIZENSHIP

He who would inquire into the essence and attributes of various kinds of governments must first of all determine "What is a state?" At present this is a disputed question. Some say that the state has done a certain act; others, no, not the state, but the oligarchy or the tyrant. And the legislator or statesman is concerned entirely with the state; a constitution or government being an arrangement of the inhabitants of a state. But a state is composite, like any other whole made up of many parts;—these are the citizens, who compose it. It is evident, therefore, that we must begin by asking, "Who is the citizen," and what is the meaning of the term? For here again there may be a difference of opinion. He who is a citizen in a democracy will often not be a citizen in an oligarchy. Leaving out of consideration those who have been made citizens, or who have obtained the name of citizen in any other accidental manner, we may say, first that a citizen is not a citizen because he lives in a certain place, for resident aliens and slaves share in the place; nor is he a citizen who has no legal right except that of suing and being sued; for this right may be enjoyed under the provisions of a treaty. Nay, resident aliens in many places do not possess even such rights completely, for they are obliged to have a

patron, so that they do but imperfectly participate in citizenship, and we call them citizens only in a qualified sense, as we might apply the term to children who are too young to be on the register, or to old men who have been relieved from state duties. Of these we do not say quite simply that they are citizens, but add in the one case that they are not of age, and in the other, that they are past the age, or something of that sort; the precise expression is immaterial, for our meaning is clear. Similar difficulties to those which I have mentioned may be raised and answered about deprived citizens and about exiles. But the citizen whom we are seeking to define is a citizen in the strictest sense, against whom no such exception can be taken, and his special characteristic is that he shares in the administration of justice, and in offices. Now of offices some are discontinuous, and the same persons are not allowed to hold them twice, or can only hold them after a fixed interval; others have no limit of time—for example, the office of dicast or ecclesiast.¹ It may, indeed, be argued that these are not magistrates at all, and that their functions give them no share in the government. But surely it is ridiculous to say that those who have the supreme power do not govern. Let us not dwell further upon this, which is a purely verbal question; what we want is a common term including both dicast and ecclesiast. Let us, for the sake of distinction, call it "indefinite office," and we will assume that those who share in such office are citizens. This is the most comprehensive definition of a citizen, and best suits all those who are generally so called.

But we must not forget that things of which the underlying principles differ in kind, one of them being first, another second, another third, have, when regarded in this relation, nothing, or hardly anything, worth mentioning in common.

¹ "Dicast" = juryman and judge in one; "ecclesiast" = member of the ecclesia or assembly of the citizens.

Now we see that governments differ in kind, and that some of them are prior and that others are posterior; those which are faulty or perverted are necessarily posterior to those which are perfect. (What we mean by perversion will be hereafter explained.) The citizen then of necessity differs under each form of government; and our definition is best adapted to the citizen of a democracy; but not necessarily to other states. For in some states the people are not acknowledged, nor have they any regular assembly, but only extraordinary ones; and suits are distributed by sections among the magistrates. At Lacedaemon, for instance, the Ephors determine suits about contracts, which they distribute among themselves, while the elders are judges of homicide, and other causes are decided by other magistrates. A similar principle prevails at Carthage; there certain magistrates decide all causes. We may, indeed, modify our definition of the citizen so as to include these states. In them it is the holder of a definite, not of an indefinite office, who legislates and judges, and to some or all such holders of definite offices is reserved the right of deliberating or judging about some things or about all things. The conception of the citizen now begins to clear up.

He who has the power to take part in the deliberative or judicial administration of any state is said by us to be a citizen of that state; and, speaking generally, a state is a body of citizens sufficing for the purposes of life.

There is a point nearly allied to the preceding: Whether the virtue of a good man and a good citizen is the same or not. But, before entering on this discussion, we must certainly first obtain some general notion of the virtue of the citizen. Like the sailor, the citizen is a member of a community. Now, sailors have different functions, for one of them is a rower, another a pilot, and a third a look-out man, a fourth is described by some similar term; and while the precise definition of each individual's virtue

applies exclusively to him, there is, at the same time, a common definition applicable to them all. For they have all of them a common object, which is safety in navigation. Similarly, one citizen differs from another, but the salvation of the community is the common business of them all. This community is the constitution; the virtue of the citizen must therefore be relative to the constitution of which he is a member. If, then, there are many forms of government, it is evident that there is not one single virtue of the good citizen which is perfect virtue. But we say that the good man is he who has one single virtue which is perfect virtue. Hence it is evident that the good citizen need not of necessity possess the virtue which makes a good man.

The same question may also be approached by another road, from a consideration of the best constitution. If the state cannot be entirely composed of good men, and yet each citizen is expected to do his own business well, and must therefore have virtue, still, inasmuch as all the citizens cannot be alike, the virtue of the citizen and of the good man cannot coincide. All must have the virtue of the good citizen—thus, and thus only, can the state be perfect; but they will not have the virtue of a good man, unless we assume that in the good state all the citizens must be good.

Again, the state, as composed of unlikes, may be compared to the living being: as the first elements into which a living being is resolved are soul and body, as soul is made up of rational principle and appetite, the family of husband and wife, property of master and slave, so of all these, as well as other dissimilar elements, the state is composed; and, therefore, the virtue of all the citizens cannot possibly be the same, any more than the excellence of the leader of a chorus is the same as that of the performer who stands by his side. I have said enough to show why the two kinds of virtue cannot be absolutely and always the same.

But will there then be no case in which

the virtue of the good citizen and the virtue of the good man coincide? To this we answer that the good ruler is a good and wise man, and that he who would be a statesman must be a wise man. And some persons say that even the education of the ruler should be of a special kind; for are not the children of kings instructed in riding and military exercises? As Euripides says:

No subtle arts for me, but what the state requires.

As though there were a special education needed by a ruler. If then the virtue of a good ruler is the same as that of a good man, and we assume further that the subject is a citizen as well as the ruler, the virtue of the good citizen and the virtue of the good man cannot be absolutely the same, although in some cases they may; for the virtue of a ruler differs from that of a citizen. It was the sense of this difference which made Jason say that "he felt hungry when he was not a tyrant," meaning that he could not endure to live in a private station. But, on the other hand, it may be argued that men are praised for knowing both how to rule and how to obey, and he is said to be a citizen of approved virtue who is able to do both. Now if we suppose the virtue of a good man to be that which rules, and the virtue of the citizen to include ruling and obeying, it cannot be said that they are equally worthy of praise. Since, then, it is sometimes thought that the ruler and the ruled must learn different things and not the same, but that the citizen must know and share in them both, the inference is obvious. There is, indeed, the rule of a master, which is concerned with menial offices—the master need not know how to perform these, but may employ others in the execution of them: the other would be degrading; and by the other I mean the power actually to do menial duties, which vary much in character and are executed by various classes of slaves, such, for example, as handicraftsmen,

who, as their name signifies, live by the labour of their hands:—under these the mechanic is included. Hence in ancient times, and among some nations, the working classes had no share in the government—a privilege which they only acquired under the extreme democracy. Certainly the good man and the statesman and the good citizen ought not to learn the crafts of inferiors except for their own occasional use; if they habitually practice them, there will cease to be a distinction between master and slave.

This is not the rule of which we are speaking; but there is a rule of another kind, which is exercised over freemen and equals by birth—a constitutional rule, which the ruler must learn by obeying, as he would learn the duties of a general of cavalry by being under the orders of a general of cavalry, or the duties of a general of infantry by being under the orders of a general of infantry, and by having had the command of a regiment and of a company. It has been well said that "he who has never learned to obey cannot be a good commander." The two are not the same, but the good citizen ought to be capable of both; he should know how to govern like a freeman, and how to obey like a freeman—these are the virtues of a citizen. And, although the temperance and justice of a ruler are distinct from those of a subject, the virtue of a good man will include both; for the virtue of the good man who is free and also a subject, e.g. his justice, will not be one but will comprise distinct kinds, the one qualifying him to rule, the other to obey, and differing as the temperance and courage of men and women differ. For a man would be thought a coward if he had no more courage than a courageous woman, and a woman would be thought loquacious if she imposed no more restraint on her conversation than the good man; and indeed their part in the management of the household is different, for the duty of the one is to acquire, and of the other to preserve. Practical wisdom only is characteristic of the ruler; it would seem that all other

virtues must equally belong to ruler and subject. The virtue of the subject is certainly not wisdom, but only true opinion; he may be compared to the maker of the flute, while his master is like the flute-player or user of the flute.

From these considerations may be gathered the answer to the question, whether the virtue of the good man is the same as that of the good citizen, or different, and how far the same, and how far different.

There still remains one more question about the citizen: Is he only a true citizen who has a share of office, or is the mechanic to be included? If they who hold no office are to be deemed citizens, not every citizen can have this virtue of ruling and obeying; for this man is a citizen. And if none of the lower class are citizens, in which part of the state are they to be placed? For they are not resident aliens, and they are not foreigners. May we not reply, that as far as this objection goes there is no more absurdity in excluding them than in excluding slaves and freedmen from any of the above-mentioned classes? It must be admitted that we cannot consider all those to be citizens who are necessary to the existence of the state; for example, children are not citizens equally with grown-up men, who are citizens absolutely, but children, not being grown up, are only citizens on a certain assumption. Nay, in ancient times, and among some nations, the artisan class were slaves or foreigners, and therefore the majority of them are so now. The best form of state will not admit them to citizenship; but if they are admitted, then our definition of the virtue of a citizen will not apply to every citizen, not to every free man as such, but only to those who are freed from necessary services. The necessary people are either slaves who minister to the wants of individuals, or mechanics and labourers who are the servants of the community. These reflections carried a little further will explain their position; and indeed what has

been said already is of itself, when understood, explanation enough.

Since there are many forms of government there must be many varieties of citizens, and especially of citizens who are subjects; so that under some governments the mechanic and the labourer will be citizens, but not in others, as, for example, in aristocracy or the so-called government of the best (if there be such an one), in which honours are given according to virtue and merit; for no man can practise virtue who is living the life of a mechanic or labourer. In oligarchies the qualification for office is high, and therefore no labourer can ever be a citizen; but a mechanic may, for an actual majority of them are rich. At Thebes there was a law that no man could hold office who had not retired from business for ten years. But in many states the law goes to the length of admitting aliens; for in some democracies a man is a citizen though his mother only be a citizen; and a similar principle is applied to illegitimate children; the law is relaxed when there is a dearth of population. But when the number of citizens increases, first the children of a male or a female slave are excluded; then those whose mothers only are citizens; and at last the right of citizenship is confined to those whose fathers and mothers are both citizens.

Hence, as is evident, there are different kinds of citizens; and he is a citizen in the highest sense who shares in the honours of the state. Compare Homer's words "like some dishonoured stranger"; he who is excluded from the honours of the state is no better than an alien. But when this exclusion is concealed, then the object is that the privileged class may deceive their fellow inhabitants.

As to the question whether the virtue of the good man is the same as that of the good citizen, the considerations already adduced prove that in some states the good man and the good citizen are the same, and in others different. When they are the same it is not every citizen who is a good man, but only the states-

man and those who have or may have, alone or in conjunction with others, the conduct of public affairs.

As in other natural compounds the conditions of a composite whole are not necessarily organic parts of it, so in a state or in any other combination forming a unity not everything is a part, which is a necessary condition. The members of an association have necessarily some one thing the same and common to all, in which they share equally or unequally; for example, food or land or any other thing. But where there are two things of which one is a means and the other an end, they have nothing in common except that the one receives what the other produces. Such, for example, is the relation in which workmen and tools stand to their work; the house and the builder have nothing in common, but the art of the builder is for the sake of the house. And so states require property, but property, even though living beings are included in it, is no part of a state; for a state is not a community of living beings only, but a community of equals, aiming at the best life possible. Now, whereas happiness is the highest good, being a realization and perfect practice of virtue, which some can attain, while others have little or none of it, the various qualities of men are clearly the reason why there are various kinds of states and many forms of government; for different men seek after happiness in different ways and by different means, and so make for themselves different modes of life and forms of government. We must see also how many things are indispensable to the existence of a state, for what we call the parts of a state will be found among the indispensables. Let us then enumerate the functions of a state, and we shall easily elicit what we want:

First, there must be food; secondly, arts, for life requires many instruments; thirdly, there must be arms, for the members of a community have need of them, and in their own hands, too, in

order to maintain authority both against disobedient subjects and against external assailants; fourthly, there must be a certain amount of revenue, both for internal needs, and for the purposes of war; fifthly, or rather first, there must be a care of religion, which is commonly called worship; sixthly, and most necessary of all, there must be a power of deciding what is for the public interest, and what is just in men's dealings with one another.

These are the services which every state may be said to need. For a state is not a mere aggregate of persons, but a union of them sufficing for the purposes of life; and if any of these things be wanting, it is as we maintain impossible that the community can be absolutely self-sufficing. A state then should be framed with a view to the fulfilment of these functions. There must be husbandmen to procure food, and artisans, and a warlike and a wealthy class, and priests, and judges to decide what is necessary and expedient.

Having determined these points, we have in the next place to consider whether all ought to share in every sort of occupation. Shall every man be at once husbandman, artisan, councillor, judge, or shall we suppose the several occupations just mentioned assigned to different persons? or, thirdly, shall some employments be assigned to individuals and others common to all? The same arrangement, however, does not occur in every constitution; as we were saying, all may be shared by all, or not all by all, but only by some; and hence arise the differences of constitutions, for in democracies all share in all, in oligarchies the opposite practice prevails. Now, since we are here speaking of the best form of government, i.e. that under which the state will be most happy (and happiness, as has been already said, cannot exist without virtue), it clearly follows that in the state which is best governed and possesses men who are just absolutely, and not merely relatively to the principle of the constitution, the citi-

zens must not lead the life of mechanics or tradesmen, for such a life is ignoble, and inimical to virtue. Neither must they be husbandmen, since leisure is necessary both for the development of virtue and the performance of political duties.

Again, there is in a state a class of warriors, and another of councillors, who advise about the expedient and determine matters of law, and these seem in an especial manner parts of a state. Now, should these two classes be distinguished, or are both functions to be assigned to the same persons? Here again there is no difficulty in seeing that both functions will in one way belong to the same, in another, to different persons. To different persons in so far as these employments are suited to different primes of life, for the one requires wisdom and the other strength. But on the other hand, since it is an impossible thing that those who are able to use or to resist force should be willing to remain always in subjection, from this point of view the persons are the same; for those who carry arms can always determine the fate of the constitution. It remains therefore that both functions should be entrusted by the ideal constitution to the same persons, not, however, at the same time, but in the order prescribed by nature, who has given to young men strength and to older men wisdom. Such a distribution of duties will be expedient and also just, and is founded upon a principle of conformity to merit. Besides, the ruling class should be the owners of property, for they are citizens, and the citizens of a state should be in good circumstances; whereas mechanics or any other class which is not a producer of virtue have no share in the state. This follows from our first principle, for happiness cannot exist without virtue, and a city is not to be termed happy in regard to a portion of the citizens, but in regard to them all. And clearly property should be in their hands, since the husbandmen will of necessity be slaves or barbarian *Perioeci*.

Of the classes enumerated there remain only the priests, and the manner in

which their office is to be regulated is obvious. No husbandman or mechanic should be appointed to it; for the Gods should receive honour from the citizens only. Now since the body of the citizens is divided into two classes, the warriors and the councillors, and it is beseeching that the worship of the Gods should be duly performed, and also a rest provided in their service for those who from age have given up active life, to the old men of these two classes should be assigned the duties of the priesthood.

We have shown what are the necessary conditions, and what the parts of a state: husbandmen, craftsmen, and labourers of all kinds are necessary to the existence of states, but the parts of the state are the warriors and councillors. And these are distinguished severally from one another, the distinction being in some cases permanent, in others not.

Since every political society is composed of rulers and subjects let us consider whether the relations of one to the other should interchange or be permanent. For the education of the citizens will necessarily vary with the answer given to this question. Now, if some men excelled others in the same degree in which gods and heroes are supposed to excel mankind in general (having in the first place a great advantage even in their bodies, and secondly in their minds), so that the superiority of the governors was undisputed and patent to their subjects, it would clearly be better that once for all the one class should rule and the others serve. But since this is unattainable, and kings have no marked superiority over their subjects, such as Scylax affirms to be found among the Indians, it is obviously necessary on many grounds that all the citizens alike should take their turn of governing and being governed. Equality consists in the same treatment of similar persons, and no government can stand which is not founded upon justice. For if the government be unjust every one in the country unites with the governed in the desire to have a revolution,

and it is an impossibility that the members of the government can be so numerous as to be stronger than all their enemies put together. Yet that governors should excel their subjects is undeniable. How all this is to be effected, and in what way they will respectively share in the government, the legislator has to consider. The subject has been already mentioned. Nature herself has provided the distinction when she made a difference between old and young within the same species, of whom she fitted the one to govern and the other to be governed. No one takes offence at being governed when he is young, nor does he think himself better than his governors, especially if he will enjoy the same privilege when he reaches the required age.

We conclude that from one point of view governors and governed are identical, and from another different. And therefore their education must be the same and also different. For he who would learn to command well must, as men say, first of all learn to obey. As I observed in the first part of this treatise, there is one rule which is for the sake of the rulers and another rule which is for the sake of the ruled; the former is a despotic, the latter a free government. Some commands differ not in the thing commanded, but in the intention with which they are imposed. Wherefore, many apparently menial offices are an honour to the free youth by whom they are performed; for actions do not differ as honourable or dishonourable in themselves so much as in the end and intention of them. But since we say that the virtue of the citizen and ruler is the same as that of the good man, and that the same person must first be a subject and then a ruler, the legislator has to see that they become good men, and by what means this may be accomplished, and what is the end of the perfect life.

Now the soul of man is divided into two parts, one of which has a rational principle in itself, and the other, not having a rational principle in itself, is able to obey such a principle. And we call a man

in any way good because he has the virtues of these two parts. In which of them the end is more likely to be found is no matter of doubt to those who adopt our division; for in the world both of nature and of art the inferior always exists for the sake of the better or superior, and the better or superior is that which has a rational principle. This principle, too, in our ordinary way of speaking, is divided into two kinds, for there is a practical and a speculative principle. This part, then, must evidently be similarly divided. And there must be a corresponding division of actions; the actions of the naturally better part are to be preferred by those who have it in their power to attain to two out of the three or to all, for that is always to every one the most eligible which is the highest attainable by him. The whole of life is further divided into two parts, business and leisure, war and peace, and of actions some aim at what is necessary and useful, and some at what is honourable. And the preference given to one or the other class of actions must necessarily be like the preference given to one or other part of the soul and its actions over the other; there must be war for the sake of peace, business for the sake of leisure, things useful and necessary for the sake of things honourable. All these points the statesman should keep in view when he frames his laws; he should consider the parts of the soul and their functions, and above all the better and the end; he should also remember the diversities of human lives and actions. For men must be able to engage in business and go to war, but leisure and peace are better; they must do what is necessary and indeed what is useful, but what is honourable is better. On such principles children and persons of every age which requires education should be trained. Whereas even the Hellenes of the present day who are reputed to be best governed, and the legislators who gave them their constitutions, do not appear to have framed their governments with a regard to the best end, or to have given

them laws and education with a view to all the virtues, but in a vulgar spirit have fallen back on those which promised to be more useful and profitable. Many modern writers have taken a similar view: they commend the Lacedaemonian constitution, and praise the legislator for making conquest and war his sole aim, a doctrine which may be refuted by argument and has long ago been refuted by facts. For most men desire empire in the hope of accumulating the goods of fortune; and on this ground Thibron and all those who have written about the Lacedaemonian constitution have praised their legislator, because the Lacedaemonians, by being trained to meet dangers, gained great power. But surely they are not a happy people now that their empire has passed away, nor was their legislator right. How ridiculous is the result, if, while they are continuing in the observance of his laws and no one interferes with them, they have lost the better part of life! These writers further err about the sort of government which the legislator should approve, for the government of freemen is nobler and implies more virtue than despotic government. Neither is a city to be deemed happy or a legislator to be praised because he trains his citizens to conquer and obtain dominion over their neighbours, for there is great evil in this. On a similar principle any citizen who could, should obviously try to obtain the power in his own state—the crime which the Lacedaemonians accuse king Pausanias of attempting, although he had so great honour already. No such principle and no law having this object is either statesmanlike or useful or right. For the same things are best both for individuals and for states, and these are the things which the legislator ought to implant in the minds of his citizens. Neither should men study war with a view to the enslavement of those who do not deserve to be enslaved; but first of all they should provide against their own enslavement, and in the second place obtain empire for the good of the governed, and not for the sake of exercising

a general despotism, and in the third place they should seek to be masters only over those who deserve to be slaves. Facts, as well as arguments, prove that the legislator should direct all his military and other measures to the provision of leisure and the establishment of peace. For most of these military states are safe only while they are at war, but fall when they have acquired their empire; like unused iron they lose their temper in time of peace. And for this the legislator is to blame, he never having taught them how to lead the life of peace.

POLITICAL SYSTEMS

Having determined these questions, we have next to consider whether there is only one form of government or many, and if many, what they are, and how many, and what are the differences between them.

A constitution is the arrangement of magistracies in a state, especially of the highest of all. The government is everywhere sovereign in the state, and the constitution is in fact the government. For example, in democracies the people are supreme, but in oligarchies, the few; and, therefore, we say that these two forms of government also are different: and so in other cases.

First, let us consider what is the purpose of a state, and how many forms of government there are by which human society is regulated. We have already said, in the first part of this treatise, when discussing household management and the rule of a master, that man is by nature a political animal. And therefore, men, even when they do not require one another's help, desire to live together; not but that they are also brought together by their common interests in proportion as they severally attain to any measure of well-being. This is certainly the chief end, both of individuals and of states. And also for the sake of mere life (in which there is possibly some noble element so long as the evils of existence

do not greatly overbalance the good) mankind meet together and maintain the political community. And we all see that men cling to life even at the cost of enduring great misfortune, seeming to find in life a natural sweetness and happiness.

There is no difficulty in distinguishing the various kinds of authority; they have been often defined already in discussions outside the school. The rule of a master, although the slave by nature and the master by nature have in reality the same interests, is nevertheless exercised primarily with a view to the interest of the master, but accidentally considers the slave, since, if the slave perish, the rule of the master perishes with him. On the other hand, the government of a wife and children and of a household, which we have called household management, is exercised in the first instance for the good of the governed or for the common good of both parties, but essentially for the good of the governed, as we see to be the case in medicine, gymnastic, and the arts in general, which are only accidentally concerned with the good of the artists themselves. For there is no reason why the trainer may not sometimes practise gymnastics, and the helmsman is always one of the crew. The trainer or the helmsman considers the good of those committed to his care. But, when he is one of the persons taken care of, he accidentally participates in the advantage, for the helmsman is also a sailor, and the trainer becomes one of those in training. And so in politics: when the state is framed upon the principle of equality and likeness, the citizens think that they ought to hold office by turns. Formerly, as is natural, every one would take his turn of service; and then again, somebody else would look after his interest, just as he, while in office, had looked after theirs. But nowadays, for the sake of the advantage which is to be gained from the public revenues and from office, men want to be always in office. One might imagine that the rulers, being sickly, were only kept in health while

they continued in office; in that case we may be sure that they would be hunting after places. The conclusion is evident: that governments which have a regard to the common interest are constituted in accordance with strict principles of justice, and are therefore true forms; but those which regard only the interest of the rulers are all defective and perverted forms, for they are despotic, whereas a state is a community of freemen.

Having determined these points, we have next to consider how many forms of government there are, and what they are; and in the first place what are the true forms, for when they are determined the perversions of them will at once be apparent. The words constitution and government have the same meaning, and the government, which is the supreme authority in states, must be in the hands of one, or of a few, or of the many. The true forms of government, therefore, are those in which the one, or the few, or the many, govern with a view to the common interest; but governments which rule with a view to the private interest, whether of the one, or of the few, or of the many, are perversions. For the members of a state, if they are truly citizens, ought to participate in its advantages. Of forms of government in which one rules, we call that which regards the common interests, kingship or royalty; that in which more than one, but not many, rule, aristocracy; and it is so called, either because the rulers are the best men, or because they have at heart the best interests of the state and of the citizens. But when the citizens at large administer the state for the common interest, the government is called by the generic name—a constitution. And there is a reason for this use of language. One man or a few may excel in virtue; but as the number increases it becomes more difficult for them to attain perfection in every kind of virtue, though they may in military virtue, for this is found in the masses. Hence in a constitutional government the fighting-men have the supreme

power, and those who possess arms are the citizens.

Of the above-mentioned forms, the perversions are as follows:—of royalty, tyranny; of aristocracy, oligarchy; of constitutional government, democracy. For tyranny is a kind of monarchy which has in view the interest of the monarch only; oligarchy has in view the interest of the wealthy; democracy, of the needy; none of them the common good of all.

DEMOCRACY AND OLIGARCHY

Let us begin by considering the common definitions of oligarchy and democracy, and what is justice oligarchical and democratical. For all men cling to justice of some kind, but their conceptions are imperfect and they do not express the whole idea. For example, justice is thought by them to be, and is, equality, not, however, for all, but only for equals. And inequality is thought to be, and is, justice; neither is this for all, but only for unequals. When the persons are omitted, then men judge erroneously. The reason is that they are passing judgment on themselves, and most people are bad judges in their own case. And whereas justice implies a relation to persons as well as to things, and a just distribution, as I have already said in the *Ethics*, implies the same ratio between the persons and between the things, they agree about the equality of the things, but dispute about the equality of the persons, chiefly for the reason which I have just given—because they are bad judges in their own affairs; and secondly, because both the parties to the argument are speaking of a limited and partial justice, but imagine themselves to be speaking of absolute justice. For the one party, if they are unequal in one respect, for example wealth, consider themselves to be unequal in all; and the other party, if they are equal in one respect, for example free birth, consider themselves to be equal in all. But they leave out the capital point. For if men met and associated out of

regard to wealth only, their share in the state would be proportioned to their property, and the oligarchical doctrine would then seem to carry the day. It would not be just that he who paid one mina should have the same share of a hundred minae, whether of the principal or of the profits, as he who paid the remaining ninety-nine. But a state exists for the sake of a good life, and not for the sake of life only: if life only were the object, slaves and brute animals might form a state, but they cannot, for they have no share in happiness or in a life of free choice. Nor does a state exist for the sake of alliance and security from injustice, nor yet for the sake of exchange and mutual intercourse; for then the Tyrrhenians and the Carthaginians, and all who have commercial treaties with one another, would be the citizens of one state. True, they have agreements about imports, and engagements that they will do no wrong to one another, and written articles of alliance. But there are no magistracies common to the contracting parties who will enforce their engagements; different states have each their own magistracies. Nor does one state take care that the citizens of the other are such as they ought to be, nor see that those who come under the terms of the treaty do no wrong or wickedness at all, but only that they do no injustice to one another. Whereas, those who care for good government take into consideration virtue and vice in states. Whence it may be further inferred that virtue must be the care of a state which is truly so called, and not merely enjoys the name: for without this end the community becomes a mere alliance which differs only in place from alliances of which the members live apart; and law is only a convention, "a surety to one another of justice," as the sophist Lycophron says, and has no real power to make the citizens good and just.

This is obvious; for suppose distinct places, such as Corinth and Megara, to be brought together so that their walls touched, still they would not be one city,

not even if the citizens had the right to intermarry, which is one of the rights peculiarly characteristic of states. Again, if men dwelt at a distance from one another, but not so far off as to have no intercourse, and there were laws among them that they should not wrong each other in their exchanges, neither would this be a state. Let us suppose that one man is a carpenter, another a husbandman, another a shoemaker, and so on, and that their number is ten thousand: nevertheless, if they have nothing in common but exchange, alliance, and the like, that would not constitute a state. Why is this? Surely not because they are at a distance from one another: for even supposing that such a community were to meet in one place, but that each man had a house of his own, which was in a manner his state, and that they made alliance with one another, but only against evil-doers; still an accurate thinker would not deem this to be a state, if their intercourse with one another was of the same character after as before their union. It is clear then that a state is not a mere society, having a common place, established for the prevention of mutual crime and for the sake of exchange. These are conditions without which a state cannot exist; but all of them together do not constitute a state, which is a community of families and aggregations of families in well-being, for the sake of a perfect and self-sufficing life. Such a community can only be established among those who live in the same place and intermarry. Hence arise in cities family connexions, brotherhoods, common sacrifices, amusements which draw men together. But these are created by friendship, for the will to live together is friendship. The end of the state is the good life, and these are the means towards it. And the state is the union of families and villages in a perfect and self-sufficing life, by which we mean a happy and honourable life.

Our conclusion, then, is that political society exists for the sake of noble actions, and not of mere companionship.

Hence they who contribute most to such a society have a greater share in it than those who have the same or a greater freedom or nobility of birth but are inferior to them in political virtue; or than those who exceed them in wealth but are surpassed by them in virtue.

From what has been said it will be clearly seen that all the partisans of different forms of government speak of a part of justice only.

There is also a doubt as to what is to be the supreme power in the state:—Is it the multitude? Or the wealthy? Or the good? Or the one best man? Or a tyrant? Any of these alternatives seems to involve disagreeable consequences. If the poor, for example, because they are more in number, divide among themselves the property of the rich—is not this unjust? No, by heaven (will be the reply), for the supreme authority justly willed it. But if this is not injustice, pray what is? Again, when in the first division all has been taken, and the majority divide anew the property of the minority, is it not evident, if this goes on, that they will ruin the state? Yet surely, virtue is not the ruin of those who possess her, nor is justice destructive of a state; and therefore this law of confiscation clearly cannot be just. If it were, all the acts of a tyrant must of necessity be just; for he only coerces other men by superior power, just as the multitude coerce the rich. But is it just then that the few and the wealthy should be the rulers? And what if they, in like manner, rob and plunder the people—is this just? If so, the other case will likewise be just. But there can be no doubt that all these things are wrong and unjust.

Then ought the good to rule and have supreme power? But in that case everybody else, being excluded from power, will be dishonoured. For the offices of a state are posts of honour; and if one set of men always hold them, the rest must be deprived of them. Then will it be well that the one best man should rule? Nay, that is still more oligarchical, for the

number of those who are dishonoured is thereby increased. Some one may say that it is bad in any case for a man, subject as he is to all the accidents of human passion, to have the supreme power, rather than the law. But what if the law itself be democratical or oligarchical, how will that help us out of our difficulties? Not at all; the same consequences will follow.

Most of these questions may be reserved for another occasion. The principle that the multitude ought to be supreme rather than the few best is one that is maintained, and, though not free from difficulty, yet seems to contain an element of truth. For the many, of whom each individual is but an ordinary person, when they meet together may very likely be better than the few good, if regarded not individually but collectively, just as a feast to which many contribute is better than a dinner provided out of a single purse. For each individual among the many has a share of virtue and prudence, and when they meet together, they become in a manner one man, who has many feet, and hands, and senses; that is a figure of their mind and disposition. Hence the many are better judges than a single man of music and poetry; for some understand one part, and some another, and among them they understand the whole. There is a similar combination of qualities in good men, who differ from any individual of the many, as the beautiful are said to differ from those who are not beautiful, and works of art from realities, because in them the scattered elements are combined, although, if taken separately, the eye of one person or some other feature in another person would be fairer than in the picture. Whether this principle can apply to every democracy, and to all bodies of men, is not clear. Or rather, by heaven, in some cases it is impossible of application; for the argument would equally hold about brutes; and wherein, it will be asked, do some men differ from brutes? But there may be bodies of men

about whom our statement is nevertheless true. And if so, the difficulty which has been already raised, and also another which is akin to it—viz. what power should be assigned to the mass of free-men and citizens, who are not rich and have no personal merit—are both solved. There is still a danger in allowing them to share the great offices of state, for their folly will lead them into error, and their dishonesty into crime. But there is a danger also in not letting them share, for a state in which many poor men are excluded from office will necessarily be full of enemies. The only way of escape is to assign to them some deliberative and judicial functions. For this reason Solon and certain other legislators give them the power of electing to offices, and of calling the magistrates to account, but they do not allow them to hold office singly. When they meet together their perceptions are quite good enough, and combined with the better class they are useful to the state (just as impure food when mixed with what is pure sometimes makes the entire mass more wholesome than a small quantity of the pure would be), but each individual, left to himself, forms an imperfect judgment. On the other hand, the popular form of government involves certain difficulties. In the first place, it might be objected that he who can judge of the healing of a sick man would be one who could himself heal his disease, and make him whole—that is, in other words, the physician; and so in all professions and arts. As, then, the physician ought to be called to account by physicians, so ought men in general to be called to account by their peers. But physicians are of three kinds:—there is the ordinary practitioner, and there is the physician of the higher class, and thirdly the intelligent man who has studied the art: in all arts there is such a class; and we attribute the power of judging to them quite as much as to professors of the art. Secondly, does not the same principle apply to elections? For a right election can only be made by those who have knowledge; those who know

geometry, for example, will choose a geometrician rightly, and those who know how to steer, a pilot; and, even if there be some occupations and arts in which private persons share in the ability to choose, they certainly cannot choose better than those who know. So that, according to this argument, neither the election of magistrates, nor the calling of them to account, should be entrusted to the many. Yet possibly these objections are to a great extent met by our old answer, that if the people are not utterly degraded, although individually they may be worse judges than those who have special knowledge—as a body they are as good or better. Moreover, there are some arts whose products are not judged of solely, or best, by the artists themselves, namely those arts whose products are recognized even by those who do not possess the art; for example, the knowledge of the house is not limited to the builder only; the user, or, in other words, the master, of the house will be even a better judge than the builder, just as the pilot will judge better of a rudder than the carpenter, and the guest will judge better of a feast than the cook.

This difficulty seems now to be sufficiently answered, but there is another akin to it. That inferior persons should have authority in greater matters than the good would appear to be a strange thing, yet the election and calling to account of the magistrates is the greatest of all. And these, as I was saying, are functions which in some states are assigned to the people, for the assembly is supreme in all such matters. Yet persons of any age, and having but a small property qualification, sit in the assembly and deliberate and judge, although for the great officers of state, such as treasurers and generals, a high qualification is required. This difficulty may be solved in the same manner as the preceding, and the present practice of democracies may be really defensible. For the power does not reside in the dicast, or senator, or ecclesiast, but in the court, and the senate, and the assembly, of which individual senators,

or ecclesiasts, or dicasts, are only parts or members. And for this reason the many may claim to have a higher authority than the few; for the people, and the senate, and the courts consist of many persons, and their property collectively is greater than the property of one or of a few individuals holding great offices. But enough of this.

The discussion of the first question shows nothing so clearly as that laws, when good, should be supreme; and that the magistrate or magistrates should regulate those matters only on which the laws are unable to speak with precision owing to the difficulty of any general principle embracing all particulars. But what are good laws has not yet been clearly explained; the old difficulty remains. The goodness or badness, justice or injustice, of laws varies of necessity with the constitutions of states. This, however, is clear, that the laws must be adapted to the constitutions. But if so, true forms of government will of necessity have just laws, and perverted forms of government will have unjust laws.

MONARCHY

If, however, there be some one person, or more than one, although not enough to make up the full complement of a state, whose virtue is so preeminent that the virtues or the political capacity of all the rest admit of no comparison with his or theirs, he or they can be no longer regarded as part of a state; for justice will not be done to the superior, if he is reckoned only as the equal of those who are so far inferior to him in virtue and in political capacity. Such an one may truly be deemed a God among men. Hence we see that legislation is necessarily concerned only with those who are equal in birth and in capacity; and that for men of preeminent virtue there is no law—they are themselves a law. Any one would be ridiculous who attempted to make laws for them: they would probably retort what, in the fable of Antisthe-

nes, the lions said to the hares, when in the council of the beasts the latter began haranguing and claiming equality for all. And for this reason democratic states have instituted ostracism; equality is above all things their aim, and therefore they ostracized and banished from the city for a time those who seemed to predominate too much through their wealth, or the number of their friends, or through any other political influence. Mythology tells us that the Argonauts left Heracles behind for a similar reason; the ship Argo would not take him because she feared that he would have been too much for the rest of the crew. Wherefore those who denounce tyranny and blame the counsel which Periander gave to Thrasybulus cannot be held altogether just in their censure. The story is that Periander, when the herald was sent to ask counsel of him, said nothing, but only cut off the tallest ears of corn till he had brought the field to a level. The herald did not know the meaning of the action, but came and reported what he had seen to Thrasybulus, who understood that he was to cut off the principal men in the state; and this is a policy not only expedient for tyrants or in practice confined to them, but equally necessary in oligarchies and democracies. Ostracism is a measure of the same kind, which acts by disabling and banishing the most prominent citizens. Great powers do the same to whole cities and nations, as the Athenians did to the Samians, Chians, and Lesbians; no sooner had they obtained a firm grasp of the empire, than they humbled their allies contrary to treaty; and the Persian king has repeatedly crushed the Medes, Babylonians, and other nations, when their spirit has been stirred by the recollection of their former greatness.

The problem is a universal one, and equally concerns all forms of government, true as well as false; for, although perverted forms with a view to their own interests may adopt this policy, those which seek the common interest do so likewise. The same thing may be ob-

served in the arts and sciences; for the painter will not allow the figure to have a foot which, however beautiful, is not in proportion, nor will the ship-builder allow the stern or any other part of the vessel to be unduly large, any more than the chorus-master will allow any one who sings louder or better than all the rest to sing in the choir. Monarchs, too, may practise compulsion and still live in harmony with their cities, if their own government is for the interest of the state. Hence where there is an acknowledged superiority the argument in favor of ostracism is based upon a kind of political justice. It would certainly be better that the legislator should from the first so order his state as to have no need of such a remedy. But if the need arises, the next best thing is that he should endeavour to correct the evil by this or some similar measure. The principle, however, has not been fairly applied in states; for, instead of looking to the good of their own constitution, they have used ostracism for factious purposes. It is true that under perverted forms of government, and from their special point of view, such a measure is just and expedient, but it is also clear that it is not absolutely just. In the perfect state there would be great doubts about the use of it, not when applied to excess in strength, wealth, popularity, or the like, but when used against some one who is pre-eminent in virtue—what is to be done with him? Mankind will not say that such an one is to be expelled and exiled; on the other hand, he ought not to be a subject—that would be as if mankind should claim to rule over Zeus, dividing his offices among them. The only alternative is that all should joyfully obey such a ruler, according to what seems to be the order of nature, and that men like him should be kings in their state for life.

LIBERTY AND EQUALITY

The basis of a democratic state is liberty; which, according to the common opinion of men, can only be enjoyed in such a

state;—this they affirm to be the great end of every democracy. One principle of liberty is for all to rule and be ruled in turn, and indeed democratic justice is the application of numerical not proportionate equality; whence it follows that the majority must be supreme, and that whatever the majority approve must be the end and the just. Every citizen, it is said, must have equality, and therefore in a democracy the poor have more power than the rich, because there are more of them, and the will of the majority is supreme. This, then, is one note of liberty which all democrats affirm to be the principle of their state. Another is that a man should live as he likes. This, they say, is the privilege of a freeman, since, on the other hand, not to live as a man likes is the mark of a slave. This is the second characteristic of democracy, whence has arisen the claim of men to be ruled by none, if possible, or, if this is impossible, to rule and be ruled in turns; and so it contributes to the freedom based upon equality.

Such being our foundation and such the principle from which we start, the characteristics of democracy are as follows:—the election of officers by all out of all; and that all should rule over each, and each in his turn over all; that the appointment to all offices, or to all but those which require experience and skill, should be made by lot; that no property qualification should be required for offices, or only a very low one; that a man should not hold the same office twice, or not often, or in the case of few except military offices: that the tenure of all offices, or of as many as possible, should be brief; that all men should sit in judgment, or that judges selected out of all should judge, in all matters, or in most and in the greatest and most important—such as the scrutiny of accounts, the constitution, and private contracts; that the assembly should be supreme over all causes, or at any rate over the most important, and the magistrates over none or only over a very few. Of all magistracies, a council is the most democratic when there is not the means of paying all

the citizens, but when they are paid even this is robbed of its power; for the people then draw all cases to themselves, as I said in the previous discussion. The next characteristic of democracy is payment for services; assembly, law-courts, magistrates, everybody receives pay, when it is to be had; or when it is not to be had for all, then it is given to the law-courts and to the stated assemblies, to the council and to the magistrates, or at least to any of them who are compelled to have their meals together. And whereas oligarchy is characterized by birth, wealth, and education, the notes of democracy appear to be the opposite of these—low birth, poverty, mean employment. Another note is that no magistracy is perpetual, but if any such have survived some ancient change in the constitution it should be stripped of its power, and the holders should be elected by lot and no longer by vote. These are the points common to all democracies; but democracy and demos in their truest form are based upon the recognized principle of democratic justice, that all should count equally; for equality implies that the poor should have no more share in the government than the rich, and should not be the only rulers, but that all should rule equally according to their numbers. And in this way men think that they will secure equality and freedom in their state.

Next comes the question, how is this equality to be obtained? Are we to assign to a thousand poor men the property qualifications of five hundred rich men? and shall we give the thousand a power equal to that of the five hundred? or, if this is not to be the mode, ought we, still retaining the same ratio, to take equal numbers from each and give them the control of the elections and of the courts?—Which, according to the democratic notion, is the juster form of the constitution—this or one based on numbers only? Democrats say that justice is that to which the majority agree, oligarchs that to which the wealthier class; in their opinion the decision should

be given according to the amount of property. In both principles there is some inequality and injustice. For if justice is the will of the few, any one person who has more wealth than all the rest of the rich put together, ought, upon the oligarchical principle, to have the sole power—but this would be tyranny; or if justice is the will of the majority, as I was before saying, they will unjustly confiscate the property of the wealthy minority. To find a principle of equality in which they both agree we must inquire into their respective ideas of justice.

Now they agree in saying that whatever is decided by the majority of the citizens is to be deemed law. Granted:—but not without some reserve; since there are two classes out of which a state is composed—the poor and the rich—that is to be deemed law, on which both or the greater part of both agree; and if they disagree, that which is approved by the greater number, and by those who have the higher qualification. For example, suppose that there are ten rich and twenty poor, and some measure is approved by six of the rich and is disapproved by fifteen of the poor, and the remaining four of the rich join with the party of the poor, and the remaining five of the poor with that of the rich; in such a case the will of those whose qualifications, when both sides are added up, are the greatest, should prevail. If they turn out to be equal, there is no greater difficulty than at present, when, if the assembly or the courts are divided, recourse is had to the lot, or to some similar expedient. But, although it may be difficult in theory to know what is just and equal, the practical difficulty of inducing those to forbear who can, if they like, encroach, is far greater, for the weaker are always asking for equality and justice, but the stronger care for none of these things.

THE RULE OF LAW

At this place in the discussion there impends the inquiry respecting the king who acts solely according to his own

will; he has now to be considered. The so-called limited monarchy, or kingship according to law, as I have already remarked, is not a distinct form of government, for under all governments, as, for example, in a democracy or aristocracy, there may be a general holding office for life, and one person is often made supreme over the administration of a state. A magistracy of this kind exists at Epidamnus, and also at Opus, but in the latter city has a more limited power. Now, absolute monarchy, or the arbitrary rule of a sovereign over all the citizens, in a city which consists of equals, is thought by some to be quite contrary to nature; it is argued that those who are by nature equals must have the same natural right and worth, and that for unequals to have an equal share, or for equals to have an uneven share, in the offices of state, is as bad as for different bodily constitutions to have the same food and clothing. Wherefore it is thought to be just that among equals every one be ruled as well as rule, and therefore that all should have their turn. We thus arrive at law; for an order of succession implies law. And the rule of the law, it is argued, is preferable to that of any individual. On the same principle, even if it be better for certain individuals to govern, they should be made only guardians and ministers of the law. For magistrates there must be—this is admitted; but then men say that to give authority to any one man when all are equal is unjust. Nay, there may indeed be cases which the law seems unable to determine, but in such cases can a man? Nay, it will be replied, the law trains officers for this express purpose, and appoints them to determine matters which are left undecided by it, to the best of their judgment. Further, it permits them to make any amendment of the existing laws which experience suggests. Therefore he who bids the law rule may be deemed to bid God and Reason alone rule, but he who bids man rule adds an element of the beast; for desire is a wild beast, and passion perverts the minds of rulers, even when they

are the best of men. The law is reason unaffected by desire. We are told that a patient should call in a physician; he will not get better if he is doctored out of a book. But the parallel of the arts is clearly not in point; for the physician does nothing contrary to rule from motives of friendship; he only cures a patient and takes a fee; whereas magistrates do many things from spite and partiality. And, indeed, if a man suspected the physician of being in league with his enemies to destroy him for a bribe, he would rather have recourse to the book. But certainly physicians, when they are sick, call in other physicians, and training-masters, when they are in training, other training-masters, as if they could not judge truly about their own case and might be influenced by their feelings. Hence it is evident that in seeking for justice men seek for the mean or neutral, for the law is the mean. Again, customary laws have more weight, and relate to more important matters, than written laws, and a man may be a safer ruler than the written law, but not safer than the customary law.

Again, it is by no means easy for one man to superintend many things; he will have to appoint a number of subordinates, and what difference does it make whether these subordinates always existed or were appointed by him because he needed them? If, as I said before, the good man has a right to rule because he is better, still two good men are better than one: this is the old saying—

two going together,

and the prayer of Agamemnon—

would that I had ten such counsellors!

And at this day there are magistrates, for example judges, who have authority to decide some matters which the law is unable to determine, since no one doubts that the law would command and decide in the best manner whatever it could. But some things can, and other things can-

not, be comprehended under the law, and this is the origin of the vexed question whether the best law or the best man should rule. For matters of detail about which men deliberate cannot be included in legislation. Nor does any one deny that the decision of such matters must be left to man, but it is argued that there should be many judges, and not one only. For every ruler who has been trained by the law judges well; and it would surely seem strange that a person should see better with two eyes, or hear better with two ears, or act better with two hands or feet, than many with many; indeed, it is already the practice of kings to make to themselves many eyes and ears and hands and feet. For they make colleagues of those who are the friends of themselves and their governments. They must be friends of the monarch and of his government; if not his friends, they will not do what he wants; but friendship implies likeness and equality; and, therefore, if he thinks that his friends ought to rule, he must think that those who are equal to himself and like himself ought to rule equally with himself. These are the principal controversies relating to monarchy.

CONSTITUTIONAL GOVERNMENT

Polity or constitutional government may be described generally as a fusion of oligarchy and democracy; but the term is usually applied to those forms of government which incline towards democracy, and the term aristocracy to those which incline towards oligarchy, because birth and education are commonly the accompaniments of wealth. Moreover, the rich already possess the external advantages the want of which is a temptation to crime, and hence they are called noblemen and gentlemen. And inasmuch as aristocracy seeks to give predominance to the best of the citizens, people say also of oligarchies that they are composed of noblemen and gentlemen. Now it appears

to be an impossible thing that the state which is governed not by the best citizens but by the worst should be well-governed, and equally impossible that the state which is ill-governed should be governed by the best. But we must remember that good laws, if they are not obeyed, do not constitute good government. Hence there are two parts of good government; one is the actual obedience of citizens to the laws, the other part is the goodness of the laws which they obey; they may obey bad laws as well as good. And there may be a further subdivision; they may obey either the best laws which are attainable to them, or the best absolutely.

The distribution of offices according to merit is a special characteristic of aristocracy, for the principle of an aristocracy is virtue, as wealth is of an oligarchy, and freedom of a democracy. In all of them there of course exists the right of the majority, and whatever seems good to the majority of those who share in the government has authority. Now in most states the form called polity exists, for the fusion goes no further than the attempt to unite the freedom of the poor and the wealth of the rich, who commonly take the place of the noble. But as there are three grounds on which men claim an equal share in the government, freedom, wealth, and virtue (for the fourth or good birth is the result of the two last, being only ancient wealth and virtue), it is clear that the admixture of the two elements, that is to say, of the rich and poor, is to be called a polity or constitutional government; and the union of the three is to be called aristocracy or the government of the best, and more than any other form of government, except the true and ideal, has a right to this name.

Thus far I have shown the existence of forms of states other than monarchy, democracy, and oligarchy, and what they are, and in what aristocracies differ from one another, and polities from aristocracies—that the two latter are not very unlike is obvious.

Next we have to consider how by the

side of oligarchy and democracy the so-called polity or constitutional government springs up, and how it should be organized. The nature of it will be at once understood from a comparison of oligarchy and democracy; we must ascertain their different characteristics, and taking a portion from each, put the two together, like the parts of an indenture. Now there are three modes in which fusions of government may be affected. In the first mode we must combine the laws made by both governments, say concerning the administration of justice. In oligarchies they impose a fine on the rich if they do not serve as judges, and to the poor they give no pay; but in democracies they give pay to the poor and do not fine the rich. Now (1) the union of these two modes is a common or middle term between them, and is therefore characteristic of a constitutional government, for it is a combination of both. This is one mode of uniting the two elements. Or (2) a mean may be taken between the enactments of the two: thus democracies require no property qualification, or only a small one, from members of the assembly, oligarchies a high one; here neither of these is the common term, but a mean between them. (3) There is a third mode, in which something is borrowed from the oligarchical and something from the democratical principle. For example, the appointment of magistrates by lot is thought to be democratical, and the election of them oligarchical; democratical again when there is no property qualification, oligarchical when there is. In the aristocratical or constitutional state, one element will be taken from each—from oligarchy the principle of electing to offices, from democracy the disregard of qualification. Such are the various modes of combination.

There is a true union of oligarchy and democracy when the same state may be termed either a democracy or an oligarchy; those who use both names evidently feel that the fusion is complete. Such a fusion there is also in the mean; for both extremes appear in it. The Lacedae-

monian constitution, for example, is often described as a democracy, because it has many democratical features. In the first place the youth receive a democratical education. For the sons of the poor are brought up with the sons of the rich, who are educated in such a manner as to make it possible for the sons of the poor to be educated like them. A similar equality prevails in the following period of life, and when the citizens are grown up to manhood the same rule is observed; there is no distinction between the rich and poor. In like manner they all have the same food at their public tables, and the rich wear only such clothing as any poor man can afford. Again, the people elect to one of the two greatest offices of state, and in the other they share; for they elect the Senators and share in the Ephoralty. By others the Spartan constitution is said to be an oligarchy, because it has many oligarchical elements. That all offices are filled by election and none by lot, is one of these oligarchical characteristics; that the power of inflicting death or banishment rests with a few persons is another; and there are others. In a well tempered polity there should appear to be both elements and yet neither; also the government should rely on itself, and not on foreign aid, and on itself not through the good will of a majority—they might be equally well-disposed when there is a vicious form of government—but through the general willingness of all classes in the state to maintain the constitution.

Enough of the manner in which a constitutional government, and in which the so-called aristocracies ought to be framed.

THE BEST STATE

In all arts and sciences which embrace the whole of any subject, and do not come into being in a fragmentary way, it is the province of a single art or science to consider all that appertains to a single subject. For example, the art of gymnastic considers not only the suitability of different modes of training to different

bodies (2) but what sort is absolutely the best (1); (for the absolutely best must suit that which is by nature best and best furnished with the means of life), and also what common form of training is adapted to the great majority of men (4). And if a man does not desire the best habit of body, or the greatest skill in gymnastics, which might be attained by him, still the trainer or the teacher of gymnastic should be able to impart any lower degree of either (3). The same principle equally holds in medicine and ship-building, and the making of clothes, and in the arts generally.

Hence it is obvious that government too is the subject of a single science, which has to consider what government is best and of what sort it must be, to be most in accordance with our aspirations, if there were no external impediment, and also what kind of government is adapted to particular states. For the best is often unattainable, and therefore the true legislator and statesman ought to be acquainted, not only with (1) that which is best in the abstract, but also with (2) that which is best relatively to circumstances. We should be able further to say how a state may be constituted under any given conditions (3); both how it is originally formed and, when formed, how it may be longest preserved; the supposed state being so far from having the best constitution that it is unprovided even with the conditions necessary for the best; neither is it the best under the circumstances, but of an inferior type.

He ought, moreover, to know (4) the form of government which is best suited to states in general; for political writers, although they have excellent ideas, are often unpractical. We should consider, not only what form of government is best, but also what is possible and what is easily attainable by all. There are some who would have none but the most perfect; for this many natural advantages are required. Others, again, speak of a more attainable form, and, although they reject the constitution under which they are living, they extol some one in particu-

lar, for example the Lacedaemonian. Any change of government which has to be introduced should be one which men, starting from their existing constitutions, will be both willing and able to adopt, since there is quite as much trouble in the reformation of an old constitution as in the establishment of a new one, just as to unlearn is as hard as to learn. And therefore, in addition to the qualifications of the statesman already mentioned, he should be able to find remedies for the defects of existing constitutions, as has been said before. This he cannot do unless he knows how many forms of government there are. It is often supposed that there is only one kind of democracy and one of oligarchy. But this is a mistake; and, in order to avoid such mistakes, we must ascertain what differences there are in the constitutions of states, and in how many ways they are combined. The same political insight will enable a man to know which laws are the best, and which are suited to different constitutions; for the laws are, and ought to be, relative to the constitution, and not the constitution to the laws. A constitution is the organization of offices in a state, and determines what is to be the governing body, and what is the end of each community. But laws are not to be confounded with the principles of the constitution; they are the rules according to which the magistrates should administer the state, and proceed against offenders. So that we must know the varieties, and the number of varieties, of each form of government, if only with a view to making laws. For the same laws cannot be equally suited to all oligarchies or to all democracies, since there is certainly more than one form both of democracy and of oligarchy.

POLITICAL MODERATION AND STABILITY: THE MIDDLE CLASSES

We have now to inquire what is the best constitution for most states, and the best life for most men, neither assuming a

standard of virtue which is above ordinary persons, nor an education which is exceptionally favoured by nature and circumstances, nor yet an ideal state which is an aspiration only, but having regard to the life in which the majority are able to share, and to the form of government which states in general can attain. As to those aristocracies, as they are called, of which we were just now speaking, they either lie beyond the possibilities of the greater number of states, or they approximate to the so-called constitutional government, and therefore need no separate discussion. And in fact the conclusion at which we arrive respecting all these forms rests upon the same grounds. For if what was said in the *Ethics* is true, that the happy life is the life according to virtue lived without impediment, and that virtue is a mean, then the life which is in a mean, and in a mean attainable by every one, must be the best. And the same principles of virtue and vice are characteristic of cities and of constitutions; for the constitution is in a figure the life of the city.

Now in all states there are three elements: one class is very rich, another very poor, and a third in a mean. It is admitted that moderation and the mean are best, and therefore it will clearly be best to possess the gifts of fortune in moderation; for in that condition of life men are most ready to follow rational principle. But he who greatly excels in beauty, strength, birth, or wealth, or on the other hand who is very poor, or very weak, or very much disgraced, finds it difficult to follow rational principle. Of these two the one sort grow into violent and great criminals, the others into rogues and petty rascals. And two sorts of offences correspond to them, the one committed from violence, the other from roguery. Again, the middle class is least likely to shrink from rule, or to be over-ambitious for it; both of which are injuries to the state. Again, those who have too much of the goods of fortune, strength, wealth, friends, and the like, are neither willing nor able to submit to

authority. The evil begins at home; for when they are boys, by reason of the luxury in which they are brought up, they never learn, even at school, the habit of obedience. On the other hand, the very poor, who are in the opposite extreme, are too degraded. So that the one class cannot obey, and can only rule despotically; the other knows not how to command and must be ruled like slaves. Thus arises a city, not of freemen, but of masters and slaves, the one despising, the other envying; and nothing can be more fatal to friendship and good fellowship in states than this: for good fellowship springs from friendship; when men are at enmity with one another, they would rather not even share the same path. But a city ought to be composed, as far as possible, of equals and similars; and these are generally the middle classes. Wherefore the city which is composed of middle-class citizens is necessarily best constituted in respect of the elements of which we say the fabric of the state naturally consists. And this is the class of citizens which is most secure in a state, for they do not, like the poor, covet their neighbours' goods; nor do others covet theirs, as the poor covet the goods of the rich; and as they neither plot against others, nor are themselves plotted against, they pass through life safely. Wisely then did Phocylides pray—"Many things are best in the mean; I desire to be of a middle condition in my city."

Thus it is manifest that the best political community is formed by citizens of the middle class, and that those states are likely to be well-administered, in which the middle class is large, and stronger if possible than both the other classes, or at any rate than either singly; for the addition of the middle class turns the scale, and prevents either of the extremes from being dominant. Great then is the good fortune of a state in which the citizens have a moderate and sufficient property; for where some possess much, and the others nothing, there may arise an extreme democracy, or a pure oligarchy; or a tyranny may grow out of either ex-

treme—either out of the most rampant democracy, or out of an oligarchy; but it is not so likely to arise out of the middle constitutions and those akin to them. I will explain the reason of this hereafter, when I speak of the revolutions of states. The mean condition of states is clearly best, for no other is free from faction; and where the middle class is large, there are least likely to be factions and dissensions. For a similar reason large states are less liable to faction than small ones, because in them the middle class is large; whereas in small states it is easy to divide all the citizens into two classes who are either rich or poor, and to leave nothing in the middle. And democracies are safer and more permanent than oligarchies, because they have a middle class which is more numerous and has a greater share in the government; for when there is no middle class, and the poor greatly exceed in number, troubles arise, and the state soon comes to an end. A proof of the superiority of the middle class is that the best legislators have been of a middle condition; for example, Solon, as his own verses testify; and Lycurgus, for he was not a king; and Charondas, and almost all legislators.

These considerations will help us to understand why most governments are either democratical or oligarchical. The reason is that the middle class is seldom numerous in them, and whichever party, whether the rich or the common people, transgresses the mean and predominates, draws the constitution its own way, and thus arises either oligarchy or democracy. There is another reason—the poor and the rich quarrel with one another, and whichever side gets the better, instead of establishing a just or popular government, regards political supremacy as the prize of victory, and the one party sets up a democracy and the other an oligarchy. Further, both the parties which had the supremacy in Hellas looked only to the interest of their own form of government, and established in states, the one, democracies, and the

other, oligarchies; they thought of their own advantage, of the public not at all. For these reasons the middle form of government has rarely, if ever, existed, and among a very few only. One man alone of all who ever ruled in Hellas was induced to give this middle constitution to states. But it has now become a habit among the citizens of states, not even to care about equality; all men are seeking for dominion, or, if conquered, are willing to submit.

What then is the best form of government and what makes it the best, is evident; and of other constitutions, since we say that there are many kinds of democracy and many of oligarchy, it is not difficult to see which has the first and which the second or any other place in the order of excellence, now that we have determined which is the best. For that which is nearest to the best must of necessity be better, and that which is furthest from it worse, if we are judging absolutely and not relatively to given conditions: I say "relatively to given conditions," since a particular government may be preferable, but another form may be better for some people.

CAUSES OF REVOLUTION

In considering how dissensions and political revolutions arise, we must first of all ascertain the beginnings and causes of them which affect constitutions generally. They may be said to be three in number; and we have now to give an outline of each. We want to know (1) what is the feeling? (2) what are the motives of those who make them? (3) whence arise political disturbances and quarrels? The universal and chief cause of this revolutionary feeling has been already mentioned; viz. the desire of equality, when men think that they are equal to others who have more than themselves; or, again, the desire of inequality and superiority, when conceiving themselves to be superior they think that they have not more but the same or less than their inferiors; pretensions which may and may not

be just. Inferiors revolt in order that they may be equal, and equals that they may be superior. Such is the state of mind which creates revolutions. The motives for making them are the desire of gain and honour, or the fear of dishonour and loss; the authors of them want to divert punishment or dishonour from themselves or their friends. The causes and reasons of revolutions, whereby men are themselves affected in the way described, and about the things which I have mentioned, viewed in one way may be regarded as seven, and in another as more than seven. Two of them have been already noticed; but they act in a different manner, for men are excited against one another by the love of gain and honour—not, as in the case which I have just supposed, in order to obtain them for themselves, but at seeing others, justly or unjustly, engrossing them. Other causes are insolence, fear, excessive predominance, contempt, disproportionate increase in some part of the state; causes of another sort are election intrigues, carelessness, neglect about trifles, dissimilarity of elements.

HOW TO PREVENT REVOLUTION

We have next to consider what means there are of preserving constitutions in general, and in particular cases. In the first place it is evident that if we know the causes which destroy constitutions, we also know the causes which preserve them; for opposites produce opposites, and destruction is the opposite of preservation.

In all well-tempered governments there is nothing which should be more jealously maintained than the spirit of obedience to law, more especially in small matters; for transgression creeps in unperceived and at last ruins the state, just as the constant recurrence of small expenses in time eats up a fortune. The expense does not take place all at once, and therefore is not observed; the mind is deceived, as in the fallacy which says

that "if each part is little, then the whole is little." And this is true in one way, but not in another, for the whole and the all are not little, although they are made up of littles.

In the first place, then, men should guard against the beginnings of change, and in the second place they should not rely upon the political devices of which I have already spoken invented only to deceive the people, for they are proved by experience to be useless. Further, we note that oligarchies as well as aristocracies may last, not from any inherent stability in such forms of government, but because the rulers are on good terms both with the unenfranchised and with the governing classes, not maltreating any who are excluded from the government, but introducing into it the leading spirits among them. They should never wrong the ambitious in a matter of honour, or the common people in a matter of money; and they should treat one another and their fellow-citizens in a spirit of equality. The equality which the friends of democracy seek to establish for the multitude is not only just but likewise expedient among equals. Hence, if the governing class are numerous, many democratic institutions are useful; for example, the restriction of the tenure of offices to six months, that all those who are of equal rank may share in them. Indeed, equals or peers when they are numerous become a kind of democracy, and therefore demagogues are very likely to arise among them, as I have already remarked. The short tenure of office prevents oligarchies and aristocracies from falling into the hands of families; it is not easy for a person to do any great harm when his tenure of office is short, whereas long possession begets tyranny in oligarchies and democracies. For the aspirants to tyranny are either the principal men of the state, who in democracies are demagogues and in oligarchies members of ruling houses, or those who hold great offices, and have a long tenure of them.

Constitutions are preserved when their destroyers are at a distance, and some-

times also because they are near, for the fear of them makes the government keep in hand the constitution. Wherefore the ruler who has a care of the constitution should invent terrors, and bring distant dangers near, in order that the citizens may be on their guard, and, like sentinels in a night-watch, never relax their attention. He should endeavour too by help of the laws to control the contentions and quarrels of the notables, and to prevent those who have not hitherto taken part in them from catching the spirit of contention. No ordinary man can discern the beginning of evil, but only the true statesman.

As to the change produced in oligarchies and constitutional governments by the alteration of the qualification, when this arises, not out of any variation in the qualification but only out of the increase of money, it is well to compare the general valuation of property with that of past years, annually in those cities in which the census is taken annually, and in larger cities every third or fifth year. If the whole is many times greater or many times less than when the ratings recognized by the constitution were fixed, there should be power given by law to raise or lower the qualification as the amount is greater or less. Where this is not done a constitutional government passes into an oligarchy, and an oligarchy is narrowed to a rule of families; or in the opposite case constitutional government becomes democracy, and oligarchy either constitutional government or democracy.

It is a principle common to democracy, oligarchy, and every other form of government not to allow the disproportionate increase of any citizen, but to give moderate honour for a long time rather than great honour for a short time. For men are easily spoiled; not every one can bear prosperity. But if this rule is not observed, at any rate the honours which are given all at once should be taken away by degrees and not all at once. Especially should the laws provide against any one having too much power,

whether derived from friends or money; if he has, he should be sent clean out of the country. And since innovations creep in through the private life of individuals also, there ought to be a magistracy which will have an eye to those whose life is not in harmony with the government, whether oligarchy or democracy or any other. And for a like reason an increase of prosperity in any part of the state should be carefully watched. The proper remedy for this evil is always to give the management of affairs and offices of state to opposite elements; such opposites are the virtuous and the many, or the rich and the poor. Another way is to combine the poor and the rich in one body, or to increase the middle class: thus an end will be put to the revolutions which arise from inequality.

But above all every state should be so administered and so regulated by law that its magistrates cannot possibly make money. In oligarchies special precautions should be used against this evil. For the people do not take any great offence at being kept out of the government—indeed they are rather pleased than otherwise at having leisure for their private business—but what irritates them is to think that their rulers are stealing the public money; then they are doubly annoyed; for they lose both honour and profit. If office brought no profit, then and then only could democracy and aristocracy be combined; for both notables and people might have their wishes gratified. All would be able to hold office, which is the aim of democracy, and the notables would be magistrates, which is the aim of aristocracy. And this result may be accomplished when there is no possibility of making money out of the offices; for the poor will not want to have them when there is nothing to be gained from them—they would rather be attending to their own concerns; and the rich, who do not want money from the public treasury, will be able to take them; and so the poor will keep to their work and grow rich, and the notables will not be governed by the lower class. In order

to avoid peculation of the public money, the transfer of the revenue should be made at a general assembly of the citizens, and duplicates of the accounts deposited with the different brotherhoods, companies, and tribes. And honours should be given by law to magistrates who have the reputation of being incorruptible. In democracies the rich should be spared; not only should their property not be divided, but their incomes also, which in some states are taken from them imperceptibly, should be protected. It is a good thing to prevent the wealthy citizens, even if they are willing, from undertaking expensive and useless public services, such as the giving of choruses, torch-races, and the like. In an oligarchy, on the other hand, great care should be

taken of the poor, and lucrative offices should go to them; if any of the wealthy classes insult them, the offender should be punished more severely than if he had wronged one of his own class. Provision should be made that estates pass by inheritance and not by gift, and no person should have more than one inheritance; for in this way properties will be equalized, and more of the poor rise to competency. It is also expedient both in a democracy and in an oligarchy to assign to those who have less share in the government (i.e. to the rich in a democracy and to the poor in an oligarchy) an equality or preference in all but the principal offices of state. The latter should be entrusted chiefly or only to members of the governing class.

POLYBIUS

When Greece was politically and militarily subjugated by the Macedonian monarchy, Greek civilization continued to dominate the new and larger horizons of empire; Aristotle's tutoring of Alexander symbolically represented the fact that Greece was still the mistress of the world in the realm of thought, though deprived of independence in the realm of political action. But so difficult was the adaptation of Greeks to the new dimensions of political organization that Aristotle still discussed the city-state as the only imaginable form of state at the very time when it was rapidly becoming a thing of the past. The Greek city-state was never to recover its vitality; the only change during the two centuries following Aristotle was the substitution of Rome for Macedon.

Some Greek statesmen tried to maintain a precarious neutrality in the struggle of Rome and Macedon, but with no success. Shortly after the conquest of Macedon by Rome, one thousand distinguished Greeks were deported to Rome as political prisoners, to await trial against them; no trial was ever held, and after seventeen years the surviving three hundred exiles were finally released.

Among the deported was Polybius (204–122 B.C.), a promising young statesman who had rendered illustrious public service to the Achaean League, a confederation of city-states, and the chief political power in Greece at that time. In Rome, Polybius became acquainted with the leading families; in this and other ways he was able to observe the inner workings of Roman politics at home and abroad. Personal ties of friendship with top political figures, intellectual curiosity concerning the growth of Rome from a small city to the dominant world power, and admiration for Roman civil and military statesmanship turned him into a friend and ally of Rome. He traveled widely on military and diplomatic missions, in Europe as well as in Asia and Africa. His rich practical and scholarly experience is reflected in his *Histories*, written in forty books, of which the first five are fully preserved, and the remaining thirty-five in fragments.

Next to Herodotus and Thucydides, Polybius is recognized as the greatest Greek historian. His work is the first universal history written by a student of politics, for he had the Greek intellectual background of keen observation and philosophical analysis, as well as firsthand experience of world affairs which at that time only long and intimate association with Roman politics and

statesmanship could give. His work centers on a relatively short period, the fifty-three years from the Second Punic War (219 B.C.) to the conquest of Macedon by Rome (167 B.C.), but it is the critical period of the rise of Rome from a small state to world hegemony.

Polybius was the first to apply the institutional method to the study of politics and, more particularly, to relate foreign policy to domestic policies and practices. The more he studied the nature and evolution of Roman political institutions, the more he became convinced that Rome's rise to world supremacy was the work, not of a few heroic individuals or of great military leaders, but of the less visible and less dramatic force of high political standards and practices. Whereas Plato and Aristotle had studied political institutions in relation to the good life of the community and the individual—assuming a Greek world in which small, self-sufficient city-states existed side by side without a great deal of mutual interference—Polybius was the first to examine the institutional fabric of a state as the chief determining factor in the formation of national strength.

Polybius thought that the secret of Roman political health lay in the principle of the *mixed constitution*. Aristotle had clearly suggested this principle, but in a more social and economic sense: the mixture was one of social and economic groups and classes, and not of branches of government, and his system of constitutional government (polity) was based on the principles of the wealth of the few and freedom of the many (poor). By contrast, Polybius' idea of the mixed constitution implies a blend of different principles of government authority. Following Aristotle, Polybius saw in monarchy, aristocracy, and democracy the three chief forms of government, and, even more keenly than Aristotle, he was aware that each form carried within itself the seed of its own degeneration, if it were allowed to operate without checks and balances provided by its opposing principles. Monarchy could easily become tyranny, aristocracy sink into oligarchy, and democracy turn into mob rule of force and violence. In the Roman constitution, Polybius believed he found the near-perfect balance between these three principles: the consuls represented the monarchical principle; the senate, the aristocratic one; and the popular assemblies, the democratic.

Polybius describes in detail how the natural tendency of each of the three basic powers of government is to check and balance the two others, so that "none of the three is absolute, but the purpose of one can be counterworked and thwarted by the others," and "any aggressive impulse is sure to be checked."

This system of checks and balances must have appeared to many contemporaries of Polybius—friends and enemies of Roman power—to have an inevitably divisive effect on the internal unity of the state and its capacity to act. Polybius says that, on the contrary, the method of checks and balances "is adequate to all emergencies, so that it is impossible to find a better political system than this." Whenever the menace of a common danger from abroad compels the various branches of government "to act in concord and support each other, so great does the strength of the state become, that nothing which is requisite can be neglected, as all are zealously competing in devising means of meeting the need of the hour, nor can any decision arrived at fail to be executed promptly, as all are cooperating both in public and in private to the accomplishment of the task they have set themselves; and consequently this peculiar form of constitution possesses an irresistible power of attaining every object upon which it is resolved."

Despots have lost many wars against constitutionally governed states because they find it difficult, accustomed as they are to the fetish of unity and uniformity, to comprehend the inner reservoirs of strength that lie behind the apparent divisions and quarrels of free peoples.

Polybius knows, however, that no political system can in itself guarantee the growth and vitality of the state, and that ultimately the quality of the people, particularly its leaders and officials, will determine the issue of strength and survival. He compares the lax standards of value in Carthage, where "nothing which results in profit is regarded as disgraceful," with Roman standards, which condemn "unscrupulous gain from forbidden sources." More specifically, "at Carthage candidates for office practise open bribery, whereas at Rome death is the penalty for it." Polybius idealizes perhaps the political morals of his Roman conquerors, but the general principle he states is as valid today as in his own time.

Polybius' influence on Cicero assured him of a popular audience in antiquity, and later on, too, because Cicero was for a long time one of the most widely read ancient authors. In the Middle Ages, Polybius' main ideas are traceable in thinkers as diverse as Marsilio of Padua and St. Thomas of Aquinas, and in the modern era Locke and Montesquieu added new weight to the doctrine of the balance of powers. In the history of the United States, in particular, Polybius played an important intellectual role in the drafting of the Constitution. The political leaders of that formative era, Jefferson, Adams, and many others, were thoroughly familiar with Polybius, and they used his ideas in framing a constitution based on the principle of checks and balances, of liberty through limited government.

POLYBIUS

The Histories *

THE FORMS OF STATE

In the case of those Greek states which have often risen to greatness and have often experienced a complete change of fortune, it is an easy matter both to describe their past and to pronounce as to their future. For there is no difficulty in reporting the known facts, and it is not hard to foretell the future by inference from the past. But about the Roman state it is neither at all easy to explain the present situation owing to the complicated character of the constitution, nor to foretell the future owing to our ignorance of the peculiar features of public and private life at Rome in the past. Particular attention and study are therefore required if one wishes to attain a clear general view of the distinctive qualities of their constitution.

Most of those whose object it has been to instruct us methodically concerning such matters, distinguish three kinds of constitutions, which they call kingship, aristocracy, and democracy. Now we should, I think, be quite justified in asking them to enlighten us as to whether they represent these three to be the sole varieties or rather to be the best; for in either case my opinion is that they are wrong. For it is evident that we must regard as the best constitution a combination of all these three varieties, since

we have had proof of this not only theoretically but by actual experience, Lycurgus having been the first to draw up a constitution—that of Sparta—on this principle. Nor on the other hand can we admit that these are the only three varieties; for we have witnessed monarchical and tyrannical governments, which while they differ very widely from kingship, yet bear a certain resemblance to it, this being the reason why monarchs in general falsely assume and use, as far as they can, the regal title. There have also been several oligarchical constitutions which seem to bear some likeness to aristocratic ones, though the divergence is, generally, as wide as possible. The same holds good about democracies. The truth of what I say is evident from the following considerations. It is by no means every monarchy which we can call straight off a kingship, but only that which is voluntarily accepted by the subjects and where they are governed rather by an appeal to their reason than by fear and force. Nor again can we style every oligarchy an aristocracy, but only that where the government is in the hands of a selected body of the justest and wisest men. Similarly that is no true democracy in which the whole crowd of citizens is free to do whatever they wish or purpose, but when, in a community where it is traditional and customary to reverence the gods, to honour our parents, to respect our elders, and to obey the laws, the will of the greater number prevails, this is to be called a democracy. We should therefore assert that there are six kinds of governments, the three above mentioned

* From Polybius, *The Histories* (trans. W. R. Paton, Loeb Classical Library, Harvard University Press, 1923), Vol. III. By permission.

which are in everyone's mouth and the three which are naturally allied to them, I mean monarchy, oligarchy, and mob-rule. Now the first of these to come into being is monarchy, its growth being natural and unaided; and next arises kingship derived from monarchy by the aid of art and by the correction of defects. Monarchy first changes into its vicious allied form, tyranny; and next, the abolishment of both gives birth to aristocracy. Aristocracy by its very nature degenerates into oligarchy; and when the commons inflamed by anger take vengeance on this government for its unjust rule, democracy comes into being; and in due course the licence and lawlessness of this form of government produces mob-rule to complete the series. The truth of what I have just said will be quite clear to anyone who pays due attention to such beginnings, origins, and changes as are in each case natural. For he alone who has seen how each form naturally arises and develops, will be able to see when, how, and where the growth, perfection, change and end of each are likely to occur again. And it is to the Roman constitution above all that this method, I think, may be successfully applied, since from the outset its formation and growth have been due to natural causes.

THE CAUSES OF POLITICAL CHANGE

Perhaps this theory of the natural transformations into each other of the different forms of government is more elaborately set forth by Plato and certain other philosophers; but as the arguments are subtle and are stated at great length, they are beyond the reach of all but a few. I therefore will attempt to give a short summary of the theory, as far as I consider it to apply to the actual history of facts and to appeal to the common intelligence of mankind. For if there appear to be certain omissions in my general exposition of it, the detailed discussion which follows will afford the reader

ample compensation for any difficulties now left unsolved.

What then are the beginnings I speak of and what is the first origin of political societies? When owing to floods, famines, failure of crops or other such causes there occurs such a destruction of the human race as tradition tells us has more than once happened, and as we must believe will often happen again, all arts and crafts perishing at the same time, then in the course of time, when springing from the survivors as from seeds men have again increased in numbers and just like other animals form herds—it being a matter of course that they too should herd together with those of their kind owing to their natural weakness—it is a necessary consequence that the man who excels in bodily strength and in courage will lead and rule over the rest. We observe and should regard as a most genuine work of nature this very phenomenon in the case of the other animals which act purely by instinct and among whom the strongest are always indisputably the masters—I speak of bulls, boars, cocks, and the like. It is probable then that at the beginning men lived thus, herding together like animals and following the lead of the strongest and bravest, the ruler's strength being here the sole limit to his power and the name we should give his rule being monarchy.

But when in time feelings of sociability and companionship begin to grow in such gatherings of men, then kingship has struck root; and the notions of goodness, justice, and their opposites begin to arise in men. The manner in which these notions come into being is as follows. Men being all naturally inclined to sexual intercourse, and the consequence of this being the birth of children, whenever one of those who have been reared does not on growing up show gratitude to those who reared him or defend them, but on the contrary takes to speaking ill of them or ill treating them, it is evident that he will displease and offend those who have been familiar with his parents and have witnessed the care and pains they

spent on attending to and feeding their children. For seeing that men are distinguished from the other animals by possessing the faculty of reason, it is obviously improbable that such a difference of conduct should escape them, as it escapes the other animals: they will notice the thing and be displeased at what is going on, looking to the future and reflecting that they may all meet with the same treatment. Again when a man who has been helped or succoured when in danger by another does not show gratitude to his preserver, but even goes to the length of attempting to do him injury, it is clear that those who become aware of it will naturally be displeased and offended by such conduct, sharing the resentment of their injured neighbour and imagining themselves in the same situation. From all this there arises in everyone a notion of the meaning and theory of duty, which is the beginning and end of justice. Similarly, again, when any man is foremost in defending his fellows from danger, and braves and awaits the onslaught of the most powerful beasts, it is natural that he should receive marks of favour and honour from the people, while the man who acts in the opposite manner will meet with reprobation and dislike. From this again some idea of what is base and what is noble and of what constitutes the difference is likely to arise among the people; and noble conduct will be admired and imitated because it is advantageous, while base conduct will be avoided. Now when the leading and most powerful man among the people always throws the weight of his authority on the side of the notions on such matters which generally prevail, and when in the opinion of his subjects he apportions rewards and penalties according to desert, they yield obedience to him no longer because they fear his force, but rather because their judgement approves him; and they join in maintaining his rule even if he is quite enfeebled by age, defending him with one consent and battling against those who conspire to overthrow his rule. Thus by insensible degrees

the monarch becomes a king, ferocity and force having yielded the supremacy to reason.

Thus is formed naturally among men the first notion of goodness and justice, and their opposites; this is the beginning and birth of true kingship. For the people maintain the supreme power not only in the hands of these men themselves, but in those of their descendants, from the conviction that those born from and reared by such men will also have principles like to theirs. And if they ever are displeased with the descendants, they now choose their kings and rulers no longer for their bodily strength and brute courage, but for the excellency of their judgement and reasoning powers, as they have gained experience from actual facts of the difference between the one class of qualities and the other. In old times, then, those who had once been chosen to the royal office continued to hold it until they grew old, fortifying and enclosing fine strongholds with walls and acquiring lands, in the one case for the sake of the security of their subjects and in the other to provide them with abundance of the necessities of life. And while pursuing these aims, they were exempt from all vituperation or jealousy, as neither in their dress nor in their food and drink did they make any great distinction, but lived very much like everyone else, not keeping apart from the people. But when they received the office by hereditary succession and found their safety now provided for, and more than sufficient provision of food, they gave way to their appetites owing to this superabundance, and came to think that the rulers must be distinguished from their subjects by a peculiar dress, that there should be a peculiar luxury and variety in the dressing and serving of their viands, and that they should meet with no denial in the pursuit of their amours, however lawless. These habits having given rise in the one case to envy and offence and in the other to an outburst of hatred and passionate resentment, the kingship changed into a tyranny; the first steps towards its over-

throw were taken by the subjects, and conspiracies began to be formed. These conspiracies were not the work of the worst men, but of the noblest, most high-spirited, and most courageous, because such men are least able to brook the insolence of princes. The people now having got leaders, would combine with them against the ruling powers for the reasons I stated above; kingship and monarchy would be utterly abolished, and in their place aristocracy would begin to grow. For the commons, as if bound to pay at once their debt of gratitude to the abolishers of monarchy, would make them their leaders and entrust their destinies to them. At first these chiefs gladly assumed this charge and regarded nothing as of greater importance than the common interest, administering the private and public affairs of the people with paternal solicitude. But here again when children inherited this position of authority from their fathers, having no experience of misfortune and none at all of civil equality and liberty of speech, and having been brought up from the cradle amid the evidences of the power and high position of their fathers, they abandoned themselves some to greed of gain and unscrupulous money-making, others to indulgence in wine and the convivial excess which accompanies it, and others again to the violation of women and the rape of boys; and thus converting the aristocracy into an oligarchy aroused in the people feelings similar to those of which I just spoke, and in consequence met with the same disastrous end as the tyrant. For whenever anyone who has noticed the jealousy and hatred with which they are regarded by the citizens, has the courage to speak or act against the chiefs of the state he has the whole mass of the people ready to back him. Next, when they have either killed or banished the oligarchs, they no longer venture to set a king over them, as they still remember with terror the injustice they suffered from the former ones, nor can they entrust the government with confidence to a select few, with the evi-

dence before them of their recent error in doing so. Thus the only hope still surviving unimpaired is in themselves, and to this they resort, making the state a democracy instead of an oligarchy and assuming the responsibility for the conduct of affairs. Then as long as some of those survive who experienced the evils of oligarchical dominion, they are well pleased with the present form of government, and set a high value on equality and freedom of speech. But when a new generation arises and the democracy falls into the hands of the grandchildren of its founders, they have become so accustomed to freedom and equality that they no longer value them, and begin to aim at pre-eminence; and it is chiefly those of ample fortune who fall into this error. So when they begin to lust for power and cannot attain it through themselves or their own good qualities, they ruin their estates, tempting and corrupting the people in every possible way. And hence when by their foolish thirst for reputation they have created among the masses an appetite for gifts and the habit of receiving them, democracy in its turn is abolished and changes into a rule of force and violence. For the people, having grown accustomed to feed at the expense of others and to depend for their livelihood on the property of others, as soon as they find a leader who is enterprising but is excluded from the honours of office by his penury, institute the rule of violence; and now uniting their forces massacre, banish, and plunder, until they degenerate again into perfect savages and find once more a master and monarch.

Such is the cycle of political revolution, the course appointed by nature in which constitutions change, disappear, and finally return to the point from which they started. Anyone who clearly perceives this may indeed in speaking of the future of any state be wrong in his estimate of the time the process will take, but if his judgement is not tainted by animosity or jealousy, he will very seldom be mistaken as to the stage of growth or decline it has reached, and as

to the form into which it will change. And especially in the case of the Roman state will this method enable us to arrive at a knowledge of its formation, growth and greatest perfection, and likewise of the change for the worse which is sure to follow some day. For, as I said, this state more than any other, has been formed and has grown naturally, and will undergo a natural decline and change to its contrary.

At present I will give a brief account of the legislation of Lycurgus, a matter not alien to my present purpose. Lycurgus had perfectly well understood that all the above changes take place necessarily and naturally, and had taken into consideration that every variety of constitution which is simple and formed on one principle is precarious, as it is soon perverted into the corrupt form which is proper to it and naturally follows on it. For just as rust in the case of iron and wood-worms and ship-worms in the case of timber are inbred pests, and these substances, even though they escape all external injury, fall a prey to the evils engendered in them, so each constitution has a vice engendered in it and inseparable from it. In kingship it is despotism, in aristocracy oligarchy, and in democracy the savage rule of violence; and it is impossible, as I said above, that each of these should not in course of time change into this vicious form. Lycurgus, then, foreseeing this, did not make his constitution simple and uniform, but united in it all the good and distinctive features of the best governments, so that none of the principles should grow unduly and be perverted into its allied evil, but that, the force of each being neutralized by that of the others, neither of them should prevail and outbalance another, but that the constitution should remain for long in a state of equilibrium like a well-trimmed boat, kingship being guarded from arrogance by the fear of the commons, who were given a sufficient share in the government, and the commons on the other hand not venturing to treat the kings with contempt from fear of the elders,

who being selected from the best citizens would be sure all of them to be always on the side of justice; so that that part of the state which was weakest owing to its subservience to traditional custom, acquired power and weight by the support and influence of the elders. The consequence was that by drawing up his constitution thus he preserved liberty at Sparta for a longer period than is recorded elsewhere.

Lycurgus then, foreseeing, by a process of reasoning, whence and how events naturally happen, constructed his constitution untaught by adversity, but the Romans while they have arrived at the same final result as regards their form of government, have not reached it by any process of reasoning, but by the discipline of many struggles and troubles, and always choosing the best by the light of the experience gained in disaster have thus reached the same result as Lycurgus, that is to say, the best of all existing constitutions.

ADVANTAGES OF A MIXED CONSTITUTION

The three kinds of government that I spoke of above all shared in the control of the Roman state. And such fairness and propriety in all respects was shown in the use of these three elements for drawing up the constitution and in its subsequent administration that it was impossible even for a native to pronounce with certainty whether the whole system was aristocratic, democratic, or monarchical. This was indeed only natural. For if one fixed one's eyes on the power of the consuls, the constitution seemed completely monarchical and royal; if on that of the senate, it seemed again to be aristocratic; and when one looked at the power of the masses, it seemed clearly to be a democracy. The parts of the state falling under the control of each element were and with a few modifications still are as follows.

The consuls, previous to leading out their legions, exercise authority in Rome

over all public affairs, since all the other magistrates except the tribunes are under them and bound to obey them, and it is they who introduce embassies to the senate. Besides this it is they who consult the senate on matters of urgency, they who carry out in detail the provisions of its decrees. Again as concerns all affairs of state administered by the people it is their duty to take these under their charge, to summon assemblies, to introduce measures, and to preside over the execution of the popular decrees. As for preparation for war and the general conduct of operations in the field, here their power is almost uncontrolled; for they are empowered to make what demands they choose on the allies, to appoint military tribunes, to levy soldiers and select those who are fittest for service. They also have the right of inflicting, when on active service, punishment on anyone under their command; and they are authorized to spend any sum they decide upon from the public funds, being accompanied by a quaestor who faithfully executes their instructions. So that if one looks at this part of the administration alone, one may reasonably pronounce the constitution to be a pure monarchy or kingship. I may remark that any changes in these matters or in others of which I am about to speak that may be made in present or future times do not in any way affect the truth of the views I here state.

To pass to the senate. In the first place it has the control of the treasury, all revenue and expenditure being regulated by it. For with the exception of payments made to the consuls, the quaestors are not allowed to disburse for any particular object without a decree of the senate. And even the item of expenditure which is far heavier and more important than any other—the outlay every five years by the censors on public works, whether constructions or repairs—is under the control of the senate, which makes a grant to the censors for the purpose. Similarly crimes committed in Italy which require a public investigation, such as treason, conspiracy, poisoning, and assas-

sination, are under the jurisdiction of the senate. Also if any private person or community in Italy is in need of arbitration or indeed claims damages or requires succour or protection, the senate attends to all such matters. It also occupies itself with the dispatch of all embassies sent to countries outside of Italy for the purpose either of settling differences, or of offering friendly advice, or indeed of imposing demands, or of receiving submission, or of declaring war; and in like manner with respect to embassies arriving in Rome it decides what reception and what answer should be given to them. All these matters are in the hands of the senate, nor have the people anything whatever to do with them. So that again to one residing in Rome during the absence of the consuls the constitution appears to be entirely aristocratic; and this is the conviction of many Greek states and many of the kings, as the senate manages all business connected with them.

After this we are naturally inclined to ask what part in the constitution is left for the people, considering that the senate controls all the particular matters I mentioned, and, what is most important, manages all matters of revenue and expenditure, and considering that the consuls again have uncontrolled authority as regards armaments and operations in the field. But nevertheless there is a part and a very important part left for the people. For it is the people which alone has the right to confer honours and inflict punishment, the only bonds by which kingdoms and states and in a word human society in general are held together. For where the distinction between these is overlooked or is observed but ill applied, no affairs can be properly administered. How indeed is this possible when good and evil men are held in equal estimation? It is by the people, then, in many cases that offences punishable by a fine are tried when the accused have held the highest office; and they are the only court which may try on capital charges. As regards the latter they have a practice which is praiseworthy and should be

mentioned. Their usage allows those on trial for their lives when found guilty liberty to depart openly, thus inflicting voluntary exile on themselves, if even only one of the tribes that pronounce the verdict has not yet voted. Such exiles enjoy safety in the territories of Naples, Praeneste, Tibur, and other *civitates foederatae*. Again it is the people who bestow office on the deserving, the noblest reward of virtue in a state; the people have the power of approving or rejecting laws, and what is most important of all, they deliberate on the question of war and peace. Further in the case of alliances, terms of peace, and treaties, it is the people who ratify all these or the reverse. Thus here again one might plausibly say that the people's share in the government is the greatest, and that the constitution is a democratic one.

Having stated how political power is distributed among the different parts of the state, I will now explain how each of the three parts is enabled, if they wish, to counteract or co-operate with the others. The consul, when he leaves with his army invested with the powers I mentioned, appears indeed to have absolute authority in all matters necessary for carrying out his purpose; but in fact he requires the support of the people and the senate, and is not able to bring his operations to a conclusion without them. For it is obvious that the legions require constant supplies, and without the consent of the senate, neither corn, clothing, nor pay can be provided; so that the commander's plans come to nothing, if the senate chooses to be deliberately negligent and obstructive. It also depends on the senate whether or not a general can carry out completely his conceptions and designs, since it has the right of either superseding him when his year's term of office has expired or of retaining him in command. Again it is in its power to celebrate with pomp and to magnify the successes of a general or on the other hand to obscure and belittle them. For the processions

they call triumphs, in which the generals bring the actual spectacle of their achievements before the eyes of their fellow-citizens, cannot be properly organized and sometimes even cannot be held at all, unless the senate consents and provides the requisite funds. As for the people it is most indispensable for the consuls to conciliate them, however far away from home they may be; for, as I said, it is the people which ratifies or annuls terms of peace and treaties, and what is most important, on laying down office the consuls are obliged to account for their actions to the people. So that in no respect is it safe for the consuls to neglect keeping in favour with both the senate and the people.

The senate again, which possesses such great power, is obliged in the first place to pay attention to the commons in public affairs and respect the wishes of the people, and it cannot carry out inquiries into the most grave and important offences against the state, punishable with death, and their correction, unless the *senatus consultum* is confirmed by the people. The same is the case in matters which directly affect the senate itself. For if anyone introduces a law meant to deprive the senate of some of its traditional authority, or to abolish the precedence and other distinctions of the senators or even to curtail them of their private fortunes, it is the people alone which has the power of passing or rejecting any such measure. And what is most important is that if a single one of the tribunes interposes, the senate is unable to decide finally about any matter, and cannot even meet and hold sittings; and here it is to be observed that the tribunes are always obliged to act as the people decree and to pay every attention to their wishes. Therefore for all these reasons the senate is afraid of the masses and must pay due attention to the popular will.

Similarly, again, the people must be submissive to the senate and respect its members both in public and in private.

Through the whole of Italy a vast number of contracts; which it would not be easy to enumerate, are given out by the censors for the construction and repair of public buildings, and besides this there are many things which are farmed, such as navigable rivers, harbours, gardens, mines, lands, in fact everything that forms part of the Roman dominion. Now all these matters are undertaken by the people, and one may almost say that everyone is interested in these contracts and the work they involve. For certain people are the actual purchasers from the censors of the contracts, others are the partners of these first, others stand surety for them, others pledge their own fortunes to the state for this purpose. Now in all these matters the senate is supreme. It can grant extension of time; it can relieve the contractor if any accident occurs; and if the work proves to be absolutely impossible to carry out it can liberate him from his contract. There are in fact many ways in which the senate can either benefit or injure those who manage public property, as all these matters are referred to it. What is even more important is that the judges in most civil trials, whether public or private, are appointed from its members, where the action involves large interests. So that all citizens being at the mercy of the senate, and looking forward with alarm to the uncertainty of litigation, are very shy of obstructing or resisting its decisions. Similarly everyone is reluctant to oppose the projects of the consuls as all are generally and individually under their authority when in the field.

Such being the power that each part has of hampering the others or co-operating with them, their union is adequate to all emergencies, so that it is impossible to find a better political system than this. For whenever the menace of some common danger from abroad compels them to act in concord and support each other, so great does the strength of the state become, that nothing which is requisite can be neglected, as all are zealously

competing in devising means of meeting the need of the hour, nor can any decision arrived at fail to be executed promptly, as all are co-operating both in public and in private to the accomplishment of the task they have set themselves; and consequently this peculiar form of constitution possesses an irresistible power of attaining every object upon which it is resolved. When again they are freed from external menace, and reap the harvest of good fortune and affluence which is the result of their success, and in the enjoyment of this prosperity are corrupted by flattery and idleness and wax insolent and overbearing, as indeed happens often enough, it is then especially that we see the state providing itself a remedy for the evil from which it suffers. For when one part having grown out of proportion to the others aims at supremacy and tends to become too predominant, it is evident that, as for the reasons above given none of the three is absolute, but the purpose of the one can be counterworked and thwarted by the others, none of them will excessively outgrow the others or treat them with contempt. All in fact remains *in statu quo*, on the one hand, because any aggressive impulse is sure to be checked and from the outset each estate stands in dread of being interfered with by the others.

INTEGRITY IN PUBLIC AFFAIRS

The laws and customs relating to the acquisition of wealth are better in Rome than at Carthage. At Carthage nothing which results in profit is regarded as disgraceful; at Rome nothing is considered more so than to accept bribes and seek gain from improper channels. For no less strong than their approval of money-making by respectable means is their condemnation of unscrupulous gain from forbidden sources. A proof of this is that at Carthage candidates for office practise

THE DECAY OF POLITICAL GLORY

That all existing things are subject to decay and change is a truth that scarcely needs proof; for the course of nature is sufficient to force this conviction on us. There being two agencies by which every kind of state is liable to decay, the one external and the other a growth of the state itself, we can lay down no fixed rule about the former, but the latter is a regular process. I have already stated what kind of state is the first to come into being, and what the next, and how the one is transformed into the other; so that those who are capable of connecting the opening propositions of this inquiry with its conclusion will now be able to foretell the future unaided. And what will happen is, I think, evident. When a state has weathered many great perils and subsequently attains to supremacy and uncontested sovereignty, it is evident that under the influence of long established prosperity, life will become more extravagant and the citizens more fierce in their rivalry regarding office and other objects than they ought to be. As these defects go on increasing, the beginning of the change for the worse will be due to love of office and the disgrace entailed by obscurity, as well as to extravagance and purse-proud display; and for this change the populace will be responsible when on the one hand they think they have a grievance against certain people who have shown themselves grasping, and when, on the other hand, they are puffed up by the flattery of others who aspire to office. For now, stirred to fury and swayed by passion in all their counsels, they will no longer consent to obey or even to be the equals of the ruling caste, but will demand the lion's share for themselves. When this happens, the state will change its name to the finest sounding of all, freedom and democracy, but will change its nature to the worst thing of all, mob-rule.

open bribery, whereas at Rome death is the penalty for it. Therefore as the rewards offered to merit are the opposite in the two cases, it is natural that the steps taken to gain them should also be dissimilar.

But the quality in which the Roman commonwealth is most distinctly superior is in my opinion the nature of their religious convictions. I believe that it is the very thing which among other peoples is an object of reproach, I mean superstition, which maintains the cohesion of the Roman State. These matters are clothed in such pomp and introduced to such an extent into their public and private life that nothing could exceed it, a fact which will surprise many. My own opinion at least is that they have adopted this course for the sake of the common people. It is a course which perhaps would not have been necessary had it been possible to form a state composed of wise men, but as every multitude is fickle, full of lawless desires, unreasoned passion, and violent anger, the multitude must be held in by invisible terrors and suchlike pageantry. For this reason I think, not that the ancients acted rashly and at haphazard in introducing among the people notions concerning the gods and beliefs in the terrors of hell, but that the moderns are most rash and foolish in banishing such beliefs. The consequence is that among the Greeks, apart from other things, members of the government, if they are entrusted with no more than a talent, though they have ten copyists and as many seals and twice as many witnesses, cannot keep their faith; whereas among the Romans those who as magistrates and legates are dealing with large sums of money maintain correct conduct just because they have pledged their faith by oath. Whereas elsewhere it is a rare thing to find a man who keeps his hands off public money, and whose record is clean in this respect, among the Romans one rarely comes across a man who has been detected in such conduct.

CICERO

Because Roman political thought was not expressed in systematic philosophical works, it has been wrongly assumed by many not to have existed at all. Of political *theory*, expressed in formal treatises by professional thinkers and publicists, there is not much in Roman literature that compares with the brilliant masterpieces of Greek philosophers. But political theory is only one of the sources of political *thought*, its obvious and most directly accessible expression, but not necessarily its most creative one. The political ideas of a nation or an era may, in some instances, have to be culled from less formal and direct sources than systematic treatises by philosophers and political writers. Law, lore, and literature may be important sources for the study of political thinking, though one will find in them more its indirect reflection than its direct statement. But what such sources lack in easy availability and overt presentation, they gain in variety, authenticity, and richness.

This approach to Roman political thought is perhaps not quite so unique as may appear at first sight. If one were to look for some of the most enduring expressions of American political thought in the twentieth century, one could profit as much from an examination of the judicial opinions of jurists like Holmes, Brandeis, Warren, and Rehnquist as from much of formal theory produced by professional political writers and publicists.

Law and administration are the two great contributions of Rome to the conceptions and practices of government and politics in the western world. The Roman law, constantly adapting itself to changing environments, is still the law of a goodly portion of the globe; its existence to this day as the predominant system on the European Continent, in Latin America, in parts of North America, and in Asia and Africa is proof of a vitality that, enduring for over two thousand years, has been nourished by sources more spiritual than those imposition by armed conquest could have supplied. The flexibility of Roman law, its capacity to adjust itself to changing social and economic conditions, its ability to grow from the law of a city into that of a world empire, its willingness to admit the stranger different in speech and religion into the world-wide community in which the *pax romana* reigned supreme—all this could hardly have been the result of “muddling through”; it was, in fact, the reflection of political wisdom of the highest order. Rome eagerly accepted the universalistic heritage

of Hellenistic civilization and passed it on to the western world through institutions rather than through ideas. The marriage between Greek speculative and Roman institutional genius has brought forth much that has become an integral part of the political inheritance of the world.

The only Roman political writer who has exercised enduring influence throughout the ages is Cicero (106–43 B.C.). Characteristically, he was not a professional philosopher and leader of a school or academy of his own, but a lawyer and statesman whose works are reflections on politics rather than on political theory. Like other educated Romans of his class, he owed his philosophical outlook as much to Plato and Aristotle as to Stoicism.

Cicero studied law in Rome, and philosophy in Athens and other Greek centers of learning, and he early acquired wide contacts with other peoples and civilizations. He became the leading lawyer of his time and also rose to the highest offices of state, both in Rome and in the provinces. Yet, his life was not free from sadness; only five years after he had held the highest office in Rome, the consulate, he found himself in exile for a year, and his political fortunes never reached their previous summit.

Rome, unable to solve the growing social and imperial problems in the framework of the traditional institutions of the Republic, incessantly moved toward monarchical government. Cicero thought primarily of political and administrative remedies for the decay of the ancient republican spirit, and he had little understanding of the profound economic issues and cleavages that the rise of a propertyless proletariat in Rome and the other large cities had produced. Instead of looking into the future and accepting as permanent the new social and economic forces in Roman life, he looked back into a past in which these forces had not existed. When confronted with a sweeping popular movement of the poorer classes against the rich, led by Catiline, Cicero suppressed it ruthlessly, and had its leaders executed under circumstances that were hardly legal. Because the aristocrats and wealthy businessmen, Cicero's political friends, understood the revolutionary implications of these social and economic transformations no better than he did, monarchical government, based on considerable popular support, supplanted the proud Republic in which freedom had been nursed to greatness in so many generations.

Cicero fervently believed in moderation, concord, and constitutionalism; such a political faith flourishes best in a time of social stability. When this stability has become seriously undermined by intolerable rifts in society, constitutionalism as a purely political faith offers no solution, unless supplemented by basic social and economic reforms. And when men of moderation and good will fail, demagogues and dictators will take their place and often carry through, albeit in a perverted and distorted fashion, the reforms that, if applied by the conservatives in time, might have saved the traditional fabric of the state.

Realizing the danger too late, Cicero nevertheless showed considerable personal courage in opposing the drift toward dictatorship based on popular support. Caesar was assassinated in 44 B.C., and a year later, in 43 B.C., Cicero was murdered by the henchmen of Antony, a member of the triumvirate set up after Caesar's death. In an age of social revolution, the plea for honest government is not enough.

Cicero's two main works on government are his *Republic* and *Laws*, written in obvious reference to Plato's two works of the same titles. Superficially there is a great deal in Cicero's two works that appears to be a close imitation of Plato and Aristotle. Yet, when it comes to the inner meaning of Cicero's political views, his temper and outlook, there is a remarkable freshness and difference. Most important of all, perhaps, Cicero had a *sense of the world*, whereas Plato and Aristotle were never able to go beyond the conception of the *city-state* as the ultimate in political organization. Both Plato and Aristotle had no place for mankind in their political theories; the world was divided in Greeks and others, who were barbarians and—as Aristotle clearly avowed—inferior to cultured Greeks, who had the right to enslave them. By contrast, Cicero had a more universal outlook, fostered by his political and administrative experience in Rome and the empire, and also fed by the springs of Hellenic Stoicism, which had spread throughout the Mediterranean basin.

Cicero believed in the mission of the Roman empire, but he understood that imperial unity could be attained only through liberty and self-government of the constituent parts, and there was an element of truth in his statement that the Romans “by defending their allies have gained dominion over the whole world.” Though every empire profits, in the last analysis, its founders more than its dependent beneficiaries, the Roman empire spread throughout the then-known world and lasted for centuries because the gap between promise and fulfillment was rarely felt to be offensive and intolerable. Cicero believed that the whole universe is “one commonwealth of which both gods and men are members,” and that there is a law “valid for all nations and all times.” Whereas the general Greek view, as typically expressed by Aristotle, held that some people were superior to others, Cicero said that “there is no human being of any race who, if he finds a guide, cannot attain to virtue.”

One of the characteristic assumptions of both Plato's *Republic* and Aristotle's *Politics* is the implicit faith that, once general principles of government are laid down, the process of government can be safely entrusted to the rulers. Philosophy, not law, is the queen of both Plato's and Aristotle's masterpieces. By contrast, Cicero—the Roman, the practicing lawyer, the experienced administrator, the fighting statesman—always speaks of law whenever he discusses the state: in one of his briefest definitions, the state is a “community of law” (*iuris societas*). The *rule of law* is important to him, and he says that although “we cannot agree to equalize men's wealth, and equality of innate ability is impossible, the legal rights at least of those who are citizens of the same commonwealth ought to be equal.”

Cicero derived his faith in law as the basis of civilized life not only from his Roman background and legal training but from his personal creed. The very idea of existence was linked to that of law and government, “without which existence is impossible for a household, a city, a nation, the human race, physical nature, and the universe itself.” But Cicero refused to think of law only in terms of formal authority and compulsion: “True law is right reason in agreement with nature.” The task of justice is therefore to discover the “nature of things” in a given situation rather than to impose upon it a preconceived solution, supplied either by revelatory insights or logical deductions. By maintaining that man is

the only living creature endowed with the faculty of thinking and reasoning, Cicero emphasizes again the oneness of mankind. All men have this faculty in common, and "those who have reason in common must also have right reason in common," that is, common conceptions of law and justice.

There is another note, too, in Cicero that points forward, toward Christianity, rather than backward, to Plato and Aristotle: Cicero's *consciousness of love* as a mighty social bond. Both Plato and Aristotle were more than pure rationalists, and the *Republic* as well as the *Politics* starts out with the hypothesis that man is by nature a social animal, and that the state is the ultimate development of man's need of society. Plato and Aristotle agree that man's social needs and sympathies are the source and starting point of political associations culminating in the state. But the sentiments and instincts of man are, for Plato and Aristotle, no more than the raw material out of which creative reason molds social and political institutions, and it is by their concordance with reason that these institutions can be measured. Affection was, for Plato and Aristotle, a genetic source of the growth of political association, the state, but not a standard by which it could be tested. Cicero sees, by contrast, the foundation of law in "our natural inclination to love our fellow-men."

This aspect of Cicero exercised a profound influence on the early fathers of the church. At the beginning of the Middle Ages he was perhaps more widely read and quoted than any other ancient political writer, as he seemed to pass on a great deal of the best in classical Greek thinking, combined with a new attitude that harmonized with the teachings of Christianity.

In his reflections on the various forms of state, Cicero follows the Aristotelian principle that the distinguishing criterion is the *end* of the state; when its purpose is justice, it makes little difference whether the form is kingship, aristocracy, or democracy. More skeptical than Aristotle, however, Cicero did not advocate any of the three desirable forms of state, because he feared that kingship might develop too easily into tyranny, aristocracy into plutocracy, and democracy into anarchical mob rule. Cicero therefore considered a "balanced combination" between kingship, aristocracy, and democracy the best constitution; his belief in the virtues of the mixed constitution went back to Aristotle, but it was also a lesson of Roman political history that an astute observer like Cicero could hardly have missed.

Where Cicero goes further than Aristotle is in his stress on popular consent as the foundation of legitimate government, and on liberty: "Liberty has no dwelling-place in any State except that in which the people's power is the greatest, and surely nothing can be sweeter than liberty; but if it is not the same for all, it does not deserve the name of liberty." The principle of popular consent as a source of the law was a commonplace to a Roman lawyer; the conception of the people (*populus*) as a political and legal force in the process of government acquired in Roman constitutional history connotations and undertones similar to those the word "people" has acquired again in modern times in the world-wide struggles for democracy and popular self-government. Plato and Aristotle knew of the *polis*, the city-state, and of social classes, but not of the people. The conception of the "people" in western political thinking is a contribution, not of Roman philosophy, but of Roman public law.

Cicero's influence has been particularly strong in the United States, above all at the time of framing the Constitution. Not only his concept of the mixed constitution appealed to the framers. More fundamentally, his view of the state as a "community of law" seemed to provide the answer for the dilemma the framers had to face: to create one nation out of people who had come to the New World from all parts of the old world, people with very different backgrounds, languages, religions, and customs. The opening words of the brief Preamble to the Constitution read: "We the people of the United States, in order to form a more perfect union, establish justice. . . ." This close linking of national selfhood and unity with justice clearly shows that the framers felt the new nation could not be based on common descent, language, or religion, but on the rule of law.

CICERO

The Republic and The Laws *

CIVIC RESPONSIBILITY: ITS DUTIES AND REWARDS

[Without active patriotism]¹ . . . we could [never] have delivered [our native land] from attack; nor could Gaius Duellius, Aulus Atilius, or Lucius Metellus have freed [Rome] from her fear of Carthage; nor could the two Scipios² have extinguished with their blood the rising flames of the Second Punic War; nor, when it broke forth again with greater fury, could Quintus Maximus³ have reduced it to impotence or Marcus Marcellus have crushed it; nor could Publius Africanus⁴ have torn it from the gates of this city and driven it within the enemy's walls.

Marcus Cato again, unknown and of obscure birth—by whom, as by a pattern for our emulation, all of us who are devoted to the same pursuits are drawn to diligence and valour—might surely have remained at Tusculum in the enjoyment of the leisurely life of that healthful spot so near to Rome. But he, a madman as

our friends⁵ maintain, preferred, though no necessity constrained him, to be tossed by the billows and storms of our public life even to an extreme old age, rather than to live a life of complete happiness in the calm and ease of such retirement. I will not speak of the men, countless in number, who have each been the salvation of this republic; and as their lives do not much antedate the remembrance of the present generation, I will refrain from mentioning their names, lest someone complain of the omission of himself or some member of his family. I will content myself with asserting that Nature has implanted in the human race so great a need of virtue and so great a desire to defend the common safety that the strength thereof has conquered all the allurements of pleasure and ease.

But it is not enough to possess virtue, as if it were an art of some sort, unless you make use of it. Though it is true that an art, even if you never use it, can still remain in your possession by the very fact of your knowledge of it, yet the existence of virtue depends entirely upon its use; and its noblest use is the government of the State, and the realization in fact, not in words, of those very things that the philosophers, in their corners, are continually dinning in our ears. For there is no principle enunciated by the philosophers—at least none that is just and honourable—that has not been dis-

⁵ The Epicureans, whose ideal of a quiet life free from pain made them discountenance participation in politics.

The Republic and The Laws

covered and established by those who have drawn up codes of law for States. For whence comes our sense of duty? From whom do we obtain the principles of religion? Whence comes the law of nations, or even that law of ours which is called "civil"? Whence justice, honour, fair-dealing? Whence decency, self-restraint, fear of disgrace, eagerness for praise and honour? Whence comes endurance amid toils and dangers? I say, from those men who, when these things had been inculcated by a system of training, either confirmed them by custom or else enforced them by statutes. Indeed Xenocrates, one of the most eminent of philosophers, when asked what his disciples learned, is said to have replied: "To do of their own accord what they are compelled to do by the law." Therefore the citizen who compels all men, by the authority of magistrates and the penalties imposed by law, to follow rules of whose validity philosophers find it hard to convince even a few by their admonitions, must be considered superior even to the teachers who enunciate these principles. For what speech of theirs is excellent enough to be preferred to a State well provided with law and custom? Indeed, just as I think that "cities great and dominant," as Ennius calls them, are to be ranked above small villages and strongholds, so I believe that those who rule such cities by wise counsel and authority are to be deemed far superior, even in wisdom, to those who take no part at all in the business of government. And since we feel a mighty urge to increase the resources of mankind, since we desire to make human life safer and richer by our thought and effort, and are goaded on to the fulfilment of this desire by Nature herself, let us hold to the course which has ever been that of all excellent men, turning deaf ears to those who, in the hope of even recalling those who have already gone ahead, are sounding the retreat.

As their first objection to these arguments, so well founded and so obviously sound, those who attack them plead the

severity of the labour that must be performed in the defence of the State—surely a trifling obstacle to the watchful and diligent man, and one that merits only scorn, not merely with reference to matters of such moment, but even in the case of things of only moderate importance, such as a man's studies, or duties, or even his business affairs. Then too they allege the danger to which life is exposed, and confront brave men with a dishonourable fear of death; yet such men are wont to regard it a greater misfortune to be consumed by the processes of Nature and old age, than to be granted the opportunity of surrendering for their country's sake, in preference to all else, that life which in any event must be surrendered to Nature. On this point, however, the objectors wax wordy and, as they imagine, eloquent, going on to cite the misfortunes of eminent men and the wrongs they have suffered at the hands of their ungrateful fellow-citizens. For at this point they enumerate, first the famous illustrations taken from Greek history—the story of Miltiades, vanquisher and conqueror of the Persians, who, before the wounds had yet healed which he had received full in the front on the occasion of his glorious victory, was cast into chains by his own fellow-countrymen, and at their hands lost the life which the enemy's weapons had spared; and that of Themistocles, who when driven in terror from his country, the land which he had set free, took refuge, not in the harbours of Greece, saved by his prowess, but in the recesses of the barbarian land which he had laid prostrate. Indeed there is no lack of instances of the fickleness and cruelty of Athens toward her most eminent citizens; and this vice, originating and spreading there, has, they say, overflowed even into our own powerful republic. For we are reminded of the exile of Camillus, the disgrace suffered by Ahala, the hatred directed against Nasica, the exile of Laenas, the condemnation of Opimius, the flight of Metellus, the bitter disaster to Gaius Marius, and, a little later, the slaughter and ruin of so

many eminent men. In fact they now include my name also, and presumably because they think it was through my counsel and at my risk that their own peaceful life has been preserved to them, they complain even more bitterly and with greater kindness of the treatment I have received. But I find it difficult to say why, when these very men cross the seas merely to gain knowledge and to visit other countries, [they should expect us to be deterred by considerations of danger from the much more important task of defending our native land. For if the philosophers are repaid for the dangers of travel by the knowledge they gain thereby, statesmen surely win a much greater reward in the gratitude of their fellow-citizens. Few may have imagined, in view of all I had suffered, that when,] as I retired from the consulship, I took my oath before an assembly of the people, and the Roman people took the same oath, that the republic was safe [as a result of my efforts alone.] I was amply repaid thereby for all the anxiety and vexation that resulted from the injustice done to me. And yet my sufferings brought me more honour than trouble, more glory than vexation, and the joy I found in the affectionate longing felt for me by good citizens was greater than my grief at the exultation of the wicked. But, as I said before, if it had happened otherwise, how could I complain? For none of the misfortunes that fell to my lot in consequence of my great services was unexpected by me or more serious than I had foreseen. For such was my nature that, although, on account of the manifold pleasures I found in the studies which had engaged me from boyhood, it would have been possible for me, on the one hand, to reap greater profit from a quiet life than other men, or, on the other hand, if any disaster should happen to us all, to suffer no more than my fair share of the common misfortune, yet I could not hesitate to expose myself to the severest storms, and, I might almost say, even to thunderbolts, for the sake of the safety of my fellow-citizens, and to se-

cure, at the cost of my own personal danger, a quiet life for all the rest. For, in truth, our country has not given us birth and education without expecting to receive some sustenance, as it were, from us in return; nor has it been merely to serve our convenience that she has granted to our leisure a safe refuge and for our moments of repose a calm retreat; on the contrary, she has given us these advantages so that she may appropriate to her own use the greater and more important part of our courage, our talents, and our wisdom, leaving to us for our own private uses only so much as may be left after her needs have been satisfied.

Moreover we ought certainly not to listen to the other excuses to which these men resort, that they may be more free to enjoy the quiet life. They say, for example, that it is mostly worthless men who take part in politics, men with whom it is degrading to be compared, while to have conflict with them, especially when the mob is aroused, is a wretched and dangerous task. Therefore, they maintain, a wise man should not attempt to take the reins, as he cannot restrain the insane and untamed fury of the common herd; nor is it proper for a freeman, by contending with vile and wicked opponents, to submit to the scourgings of abuse or expose himself to wrongs which are intolerable to the wise—as if, in the view of good, brave, and high-minded men, there could be any nobler motive for entering public life than the resolution not to be ruled by wicked men and not to allow the republic to be destroyed by them, seeing that the philosophers themselves, even if they should desire to help, would be impotent.

And who in the world can approve of the single exception they make, when they say that no wise man will take any part in public affairs unless some emergency compels him to do so? As if any greater emergency could come upon anyone than that with which I was confronted; and what could I have done in that crisis unless I had been consul at the

time? And how could I have been consul unless I had held to a manner of life from my boyhood which led me to the highest office of State in spite of my equestrian birth? Hence it is clear that the opportunity of serving the State, however great the dangers with which it is threatened, does not come suddenly, or when we wish it, unless we are in such a position that it is possible for us to take action. It has always seemed to me that the most amazing of the teachings of learned men is that they deny their own ability to steer when the sea is calm, having never learned the art nor cared to know it, while at the same time they assure us that, when the waves dash highest, they will take the helm. For it is their habit to proclaim openly, and even to make it their great boast, that they have neither learned nor do they teach anything about the principles of the State, either to establish it or to safeguard it, and that they consider the knowledge of such things unsuited to learned or wise men, but better to be left to those who have trained themselves in that business. How can it be reasonable, therefore, for them to promise to aid the State in case they are compelled by an emergency to do so, when they do not know how to rule the State when no emergency threatens it, though this is a much easier task than the other? Indeed, if it be true that the wise man does not, as a general thing, willingly descend from his lofty heights to statecraft, but does not decline the duty if conditions force him to assume it, yet I should think he ought by no means to neglect this science of politics, because it is his duty to acquire in advance all the knowledge that, for aught he knows, it may be necessary for him to use at some future time.

I have treated these matters at considerable length because I have planned and undertaken in this work a discussion of the State; hence, in order that this discussion might not be valueless, I had, in the first place, to remove all grounds for hesitation about taking part in public affairs. Yet if there be any who are influ-

enced by the authority of philosophers, let them for a few moments listen and attend to those whose authority and reputation stand highest among learned men; for even if these have not governed the State themselves, nevertheless, since they have dealt with the State in many investigations and treatises, I consider that they have performed a certain function of their own in the State. And in fact I note that nearly every one of those Seven whom the Greeks called "wise" took an important part in the affairs of government. For there is really no other occupation in which human virtue approaches more closely the august function of the gods than that of founding new States or preserving those already in existence.

THE MAIN TYPES OF STATE

Scipio Well, then, a commonwealth is the property of a people.⁶ But a people is not any collection of human beings brought together in any sort of way, but an assemblage of people in large numbers associated in an agreement with respect to justice and a partnership for the common good. The first cause of such an association is not so much the weakness of the individual as a certain social spirit which nature has implanted in man. For man is not a solitary or unsocial creature, but born with such a nature that not even under conditions of great prosperity of every sort [is he willing to be isolated from his fellow men.] . . .

[About fifteen lines are lost. The following fragment may be part of the missing passage.]

. . . In a short time a scattered and wandering multitude had become a body of citizens by mutual agreement. . . .

. . . certain seeds, as we may call them, for [otherwise] no source for the other virtues nor for the State itself could be discovered. Such an assemblage of

⁶ *I.e.*, *res publica* (public thing or property) is the same as *res populi* (thing or property of a people).

men, therefore, originating for the reason I have mentioned, established itself in a definite place, at first in order to provide dwellings; and this place being fortified by its natural situation and by their labours, they called such a collection of dwellings a town or city, and provided it with shrines and gathering places which were common property. Therefore every people, which is such a gathering of large numbers as I have described, every city, which is an orderly settlement of a people, every commonwealth, which, as I said, is "the property of a people," must be governed by some deliberative body if it is to be permanent. And this deliberative body must, in the first place, always owe its beginning to the same cause as that which produced the State itself. In the second place, this function must either be granted to one man, or to certain selected citizens, or must be assumed by the whole body of citizens. And so when the supreme authority is in the hands of one man, we call him a king, and the form of this State a kingship. When selected citizens hold this power, we say that the State is ruled by an aristocracy. But a popular government (for so it is called) exists when all the power is in the hands of the people. And any one of these three forms of government (if only the bond which originally joined the citizens together in the partnership of the State holds fast), though not perfect or in my opinion the best, is tolerable, though one of them may be superior to another. For either a just and wise king, or a select number of leading citizens, or even the people itself, though this is the least commendable type, can nevertheless, as it seems, form a government that is not unstable, provided that no elements of injustice or greed are mingled with it.

But in kingships the subjects have too small a share in the administration of justice and in deliberation; and in aristocracies the masses can hardly have their share of liberty, since they are entirely excluded from deliberation for the common weal and from power; and when all

the power is in the people's hands, even though they exercise it with justice and moderation, yet the resulting equality itself is inequitable, since it allows no distinctions in rank. Therefore, even though the Persian Cyrus was the most just and wisest of kings, that form of government does not seem to me the most desirable, since "the property of the people" (for that is what a commonwealth is, as I have said) is administered at the nod and caprice of one man; even though the Massilians, now under our protection, are ruled with the greatest justice by a select number of their leading citizens, such a situation is nevertheless to some extent like slavery for a people; and even though the Athenians at certain periods, after they had deprived the Areopagus of its power, succeeded in carrying on all their public business by the resolutions and decrees of the people, their State, because it had no definite distinctions in rank, could not maintain its fair renown.

I am now speaking of these three forms of government, not when they are confused and mingled with one another, but when they retain their appropriate character. All of them are, in the first place, subject each to the faults I have mentioned, and they suffer from other dangerous faults in addition: for before every one of them lies a slippery and precipitous path leading to a certain depraved form that is a close neighbour to it. For underneath the tolerable, or, if you like, the lovable King Cyrus (to cite him as a pre-eminent example) lies the utterly cruel Phalaris, impelling him to an arbitrary change of character; for the absolute rule of one man will easily and quickly degenerate into a tyranny like his. And a close neighbour to the excellent Massilian government, conducted by a few leading citizens, is such a partisan combination of thirty men as once ruled Athens. And as for the absolute power of the Athenian people—not to seek other examples of popular government—when it changed into the fury and licence of a mob . . .

[About fifteen lines are lost. The first

two lines of what follows appear to be corrupt, and cannot be translated.]

. . . and likewise some other form usually arises from those I have mentioned, and remarkable indeed are the periodical revolutions and circular courses followed by the constant changes and sequences in governmental forms. A wise man should be acquainted with these changes, but it calls for great citizens and for a man of almost divine powers to foresee them when they threaten, and, while holding the reins of government, to direct their courses and keep them under his control. Therefore I consider a fourth form of government the most commendable—that form which is a well-regulated mixture of the three which I mentioned at first.

Laelius I know that is your opinion, Africanus, for I have often heard you say so. Nevertheless, if it will not give you too much trouble, I should like to know which you consider the best of the three forms of government of which you have been speaking. For it might help us somewhat to understand . . .

[About fifteen lines are lost. In what follows Scipio is evidently stating the common opinion that liberty is impossible in a monarchy or an aristocracy.]

Scipio . . . and every State is such as its ruler's character and will make it. Hence liberty has no dwelling-place in any State except that in which the people's power is the greatest, and surely nothing can be sweeter than liberty; but if it is not the same for all, it does not deserve the name of liberty. And how can it be the same for all, I will not say in a kingdom, where there is no obscurity or doubt about the slavery of the subject, but even in States where everyone is ostensibly free? I mean States in which the people vote, elect commanders and officials, are canvassed for their votes, and have bills proposed to them, but really grant only what they would have to grant even if they were unwilling to do so, and are asked to give to others what they do not possess themselves. For they have no share in the governing power, in the de-

liberative function, or in the courts, over which selected judges preside, for those privileges are granted on the basis of birth or wealth. But in a free nation, such as the Rhodians or the Athenians, there is not one of the citizens who [may not hold the offices of State and take an active part in the government.] . . .

[About fifteen lines are lost. In what follows Scipio evidently continues his summing up of the common arguments in favour of democratic government.]

. . . [Our authorities] say [that] when one person or a few stand out from the crowd as richer and more prosperous, then, as a result of the haughty and arrogant behaviour of these, there arises [a government of one or a few], the cowardly and weak giving way and bowing down to the pride of wealth. But if the people would maintain their rights, they say that no form of government would be superior, either in liberty or happiness, for they themselves would be masters of the laws and the courts, of war and peace, of international agreements, and of every citizen's life and property; this government alone, they believe, can rightly be called a commonwealth, that is, "the property of the people." And it is for that reason, they say, that "the property of the people" is often liberated from the domination of kings or senators, while free peoples do not seek kings or the power and wealth of aristocracies. And indeed they claim that this free popular government ought not to be entirely rejected on account of the excesses of an unbridled mob, for, according to them, when a sovereign people is pervaded by a spirit of harmony and tests every measure by the standard of their own safety and liberty, no form of government is less subject to change or more stable. And they insist that harmony is very easily obtainable in a State where the interests of all are the same, for discord arises from conflicting interests, where different measures are advantageous to different citizens. Therefore they maintain that when a senate has been supreme, the State has never had a stable

government, and that such stability is less attainable by far in kingdoms, in which, as Ennius says,

No sacred partnership of honour is.

Therefore, since law is the bond which unites the civic association, and the justice enforced by law is the same for all, by what justice can an association of citizens be held together when there is no equality among the citizens? For if we cannot agree to equalize men's wealth, and equality of innate ability is impossible, the legal rights at least of those who are citizens of the same commonwealth ought to be equal. For what is a State except an association or partnership in justice? . . .

[About fifteen lines are lost. There is no change of topic.]

. . . Indeed they think that States of the other kinds have no right at all to the names which they arrogate to themselves. For why should I give the name of king, the title of Jupiter the Best, to a man who is greedy for personal power and absolute authority, a man who lords it over an oppressed people? Should I not rather call him tyrant? For tyrants may be merciful as well as oppressive; so that the only difference between the nations governed by these rulers is that between the slaves of a kind and those of a cruel master; for in any case the subjects must be slaves. And how could Sparta, at the time when the mode of life inculcated by her constitution was considered so excellent, be assured of always having good and just kings, when a person of any sort, if he was born of the royal family, had to be accepted as king? As to aristocrats, who could tolerate men that have claimed the title without the people's acquiescence, but merely by their own will? For how is a man adjudged to be "the best"? On the basis of knowledge, skill, learning, [and similar qualities surely, not because of his own desire to possess the title] . . .

[About thirty lines are lost. At the end of the gap, Scipio is criticizing the argu-

ments for democracy, and stating those for aristocracy.]

. . . If [the State] leaves [the selection of its rulers] to chance,⁷ it will be as quickly overturned as a ship whose pilot should be chosen by lot from among the passengers. But if a free people chooses the men to whom it is to entrust its fortunes, and, since it desires its own safety, chooses the best men, then certainly the safety of the State depends upon the wisdom of its best men, especially since Nature has provided not only that those men who are superior in virtue and in spirit should rule the weaker, but also that the weaker should be willing to obey the stronger.

But they claim that this ideal form of State has been rejected on account of the false notions of men, who, through their ignorance of virtue—for just as virtue is possessed by only a few, so it can be distinguished and perceived by only a few—think that the best men are those who are rich, prosperous, or born of famous families. For when, on account of this mistaken notion of the common people, the State begins to be ruled by the riches, instead of the virtue, of a few men, these rulers tenaciously retain the title, though they do not possess the character, of the "best." For riches, names, and power, when they lack wisdom and the knowledge of how to live and to rule over others, are full of dishonour and insolent pride, nor is there any more depraved type of State than that in which the richest are accounted the best. But what can be nobler than the government of the State by virtue? For then the man who rules others is not himself a slave to any passion, but has already acquired for himself all those qualities to which he is training and summoning his fellows. Such a man imposes no laws upon the people that he does not obey himself, but puts his own life before his fellow-citizens as their law. If a single individual of this character could order

⁷ *I.e.*, chooses its rulers by lot, as had been done in Athens.

all things properly in a State, there would be no need of more than one ruler; or if the citizens as a body could see what was best and agree upon it, no one would desire a selected group of rulers. It has been the difficulty of formulating policies that has transferred the power from a king to a larger number; and the perversity and rashness of popular assemblies that have transferred it from the many to the few. Thus, between the weakness of a single ruler and the rashness of the many, aristocracies have occupied that intermediate position which represents the utmost moderation; and in a State ruled by its best men, the citizens must necessarily enjoy the greatest happiness, being freed from all cares and worries, when once they have entrusted the preservation of their tranquillity to others, whose duty it is to guard it vigilantly and never to allow the people to think that their interests are being neglected by their rulers. For that equality of legal rights of which free peoples are so fond cannot be maintained (for the people themselves, though free and unrestrained, give very many special powers to many individuals, and create great distinctions among men and the honours granted to them), and what is called equality is really most inequitable. For when equal honour is given to the highest and the lowest—for men of both types must exist in every nation—then this very "fairness" is most unfair; but this cannot happen in States ruled by their best citizens. These arguments and others like them, Laelius, are approximately those which are advanced by men who consider this form of government the best.

Laelius But what about yourself, Scipio? Which of these three forms do you consider the best?

Scipio You are right to ask which I consider the best of the three, for I do not approve of any of them when employed by itself, and consider the form which is a combination of all them superior to any single one of them. But if I were compelled to approve one single un-mixed form, [I might choose] the king-

ship . . . the name of king seems like that of father to us, since the king provides for the citizens as if they were his own children, and is more eager to protect them than . . . to be sustained by the care of one man who is the most virtuous and most eminent. But here are the aristocrats, with the claim that they can do this more effectively, and that there will be more wisdom in the counsels of several than in those of one man, and an equal amount of fairness and scrupulousness. And here also are the people, shouting with a loud voice that they are willing to obey neither one nor a few, that nothing is sweeter than liberty even to wild beasts, and that all who are slaves, whether to a king or to an aristocracy, are deprived of liberty. Thus kings attract us by our affection for them, aristocracies by their wisdom, and popular governments by their freedom, so that in comparing them it is difficult to say which one prefers.

THE BEST CONSTITUTION

. . . [I consider] the best constitution for a State to be that which is a balanced combination of the three forms mentioned, kingship, aristocracy, and democracy, and does not irritate by punishment a rude and savage heart. . . .

. . . sixty-five years older, for it was founded in the thirty-ninth year before the first Olympiad. And Lycurgus, who lived in very ancient times, had almost the same idea. This equalized system, this combination of three constitutions, is in my opinion common to those nations and to ours. But the unique characteristic of our own commonwealth—the most splendid conceivable—I shall describe more completely and accurately, if I can, because nothing like it is to be found in any other State. For those elements which I have mentioned were combined in our State as it was then, and in those of the Spartans and Carthaginians, in such a way that there was no balance among them whatever. For in a State where there is one official who holds

office for life, particularly if he be a king, even if there is a senate, such as existed at Rome under the monarchy and at Sparta under the code of Lycurgus, and even if the people possess some power, as they did under our kings—in spite of these facts the royal power is bound to be supreme, and such a government is inevitably a monarchy and will inevitably be so called. And this form of government is the most liable of all to change, because one man's vices can overthrow it and turn it easily toward utter destruction. For not only is the kingship in itself not at all reprehensible, but I am inclined to consider it by far the best of the simple forms of government—if I could approve any of the simple forms—but only so long as it retains its true character. But it does that only when the safety, equal rights, and tranquillity of the citizens are guarded by the life-long authority, the justice, and the perfect wisdom of a single ruler. To be sure a nation ruled by a king is deprived of many things, and particularly of liberty, which does not consist in serving a just master, but in [serving] no [master at all]. . . .

NATURAL LAW AND THE UNITY OF MANKIND

True law is right reason in agreement with nature; it is of universal application, unchanging and everlasting; it summons to duty by its commands, and averts from wrongdoing by its prohibitions. And it does not lay its commands or prohibitions upon good men in vain, though neither have any effect on the wicked. It is a sin to try to alter this law, nor is it allowable to attempt to repeal any part of it, and it is impossible to abolish it entirely. We cannot be freed from its obligations by senate or people, and we need not look outside ourselves for an expounder or interpreter of it. And there will not be different laws at Rome and at Athens, or different laws now and in the future, but one eternal and unchangeable law will be valid for all nations and all times, and there will be one master and

ruler, that is, God, over us all, for he is the author of this law, its promulgator, and its enforcing judge. Whoever is disobedient is fleeing from himself and denying his human nature, and by reason of this very fact he will suffer the worst penalties, even if he escapes what is commonly considered punishment.

That animal which we call man, endowed with foresight and quick intelligence, complex, keen, possessing memory, full of reason and prudence, has been given a certain distinguished status by the supreme God who created him; for he is the only one among so many different kinds and varieties of living beings who has a share in reason and thought, while all the rest are deprived of it. But what is more divine, I will not say in man only, but in all heaven and earth, than reason? And reason, when it is full grown and perfected, is rightly called wisdom. Therefore, since there is nothing better than reason, and since it exists both in man and God, the first common possession of man and God is reason. But those who have reason in common must also have right reason in common. And since right reason is Law, we must believe that men have Law also in common with the gods. Further, those who share Law must also share Justice; and those who share these are to be regarded as members of the same commonwealth. If indeed they obey the same authorities and powers, this is true in a far greater degree; but as a matter of fact they do obey this celestial system, the divine mind, and the God of transcendent power. Hence we must now conceive of this whole universe as one commonwealth of which both gods and men are members.

Out of all the material of the philosophers' discussions, surely there comes nothing more valuable than the full realization that we are born for Justice, and that right is based, not upon men's opinions, but upon Nature. This fact will immediately be plain if you once get a clear conception of man's fellowship and

union with his fellow-men. For no single thing is so like another, so exactly its counterpart, as all of us are to one another. Nay, if bad habits and false beliefs did not twist the weaker minds and turn them in whatever direction they are inclined, no one would be so like his own self as all men would be like all others. And so, however we may define man, a single definition will apply to all. This is a sufficient proof that there is no difference in kind between man and man; for if there were, one definition could not be applicable to all men; and indeed reason, which alone raises us above the level of the beasts and enables us to draw inferences, to prove and disprove, to discuss and solve problems, and to come to conclusions, is certainly common to us all, and, though varying in what it learns, at least in the capacity to learn it is invariable. For the same things are invariably perceived by the senses, and those things which stimulate the senses, stimulate them in the same way in all men; and those rudimentary beginnings of intelligence to which I have referred, which are imprinted on our minds, are imprinted on all minds alike; and speech, the mind's interpreter, though differing in the choice of words, agrees in the sentiments expressed. In fact, there is no human being of any race who, if he finds a guide, cannot attain to virtue.

But the most foolish notion of all is the belief that everything is just which is found in the customs or laws of nations. Would that be true, even if these laws had been enacted by tyrants? If the well-known Thirty had desired to enact a set of laws at Athens, or if the Athenians without exception were delighted by the tyrants' laws, that would not entitle such laws to be regarded as just, would it? No more, in my opinion, should that law be considered just which a Roman interrex proposed, to the effect that a dictator might put to death with impunity any citizen he wished, even without a trial. For Justice is one; it binds all human society, and is based on one Law, which

is right reason applied to command and prohibition. Whoever knows not this Law, whether it has been recorded in writing anywhere or not, is without Justice.

But if Justice is conformity to written laws and national customs, and if, as the same persons claim, everything is to be tested by the standard of utility, then anyone who thinks it will be profitable to him will, if he is able, disregard and violate the laws. It follows that Justice does not exist at all, if it does not exist in Nature, and if that form of it which is based on utility can be overthrown by that very utility itself. And if Nature is not to be considered the foundation of Justice, that will mean the destruction [of the virtues on which human society depends]. For where then will there be a place for generosity, or love of country, or loyalty, or the inclination to be of service to others or to show gratitude for favours received? For these virtues originate in our natural inclination to love our fellow-men, and this is the foundation of Justice. Otherwise not merely consideration for men but also rites and pious observances in honour of the gods are done away with; for I think that these ought to be maintained, not through fear, but on account of the close relationship which exists between man and God. But if the principles of Justice were founded on the decrees of peoples, the edicts of princes, or the decisions of judges, then Justice would sanction robbery and adultery and forgery of wills, in case these acts were approved by the votes or decrees of the populace. But if so great a power belongs to the decisions and decrees of fools that the laws of Nature can be changed by their votes, then why do they not ordain that what is bad and haneful shall be considered good and salutary? Or, if a law can make Justice out of Injustice, can it not also make good out of bad? But in fact we can perceive the difference between good laws and bad by referring them to no other standard than Nature; indeed, it is not merely Justice and Injustice which are

distinguished by Nature, but also and without exception things which are honourable and dishonourable. For since an intelligence common to us all makes things known to us and formulates them in our minds, honourable actions are ascribed by us to virtue, and dishonourable actions to vice; and only a madman would conclude that these judgments are matters of opinion, and not fixed by Nature.

What of the many deadly, the many pestilential statutes which nations put in force? These no more deserve to be called laws than the rules a band of robbers might pass in their assembly. For if ignorant and unskilful men have prescribed deadly poisons instead of healing drugs, these cannot possibly be called physicians' prescriptions; neither in a nation can a statute of any sort be called a law, even though the nation, in spite of its being a ruinous regulation, has accepted it. Therefore Law is the distinction between things just and unjust, made in agreement with that primal and most ancient of all things, Nature; and in conformity to Nature's standard are framed those human laws which inflict punishment upon the wicked but defend and protect the good.

The function of a magistrate is to govern, and to give commands which are just and beneficial and in conformity with the law. For as the laws govern the magistrate, so the magistrate governs the people, and it can truly be said that the magistrate is a speaking law, and the law a silent magistrate. Nothing, moreover, is so completely in accordance with the principles of justice and the demands of Nature (and when I use these expressions, I wish it understood that I mean Law) as is government, without which existence is impossible for a household, a city, a nation, the human race, physical nature, and the universe itself. For the universe obeys God; seas and lands obey the universe, and human life is subject to the decrees of supreme Law.

As one and the same Nature holds together and supports the universe, all of whose parts are in harmony with one another, so men are united by Nature; but by reason of their depravity they quarrel, not realizing that they are of one blood and subject to one and the same protecting power. If this fact were understood, surely man would live the life of the gods!

STOICISM AND EPICUREANISM

Plato and Aristotle failed in one vital point: Neither clearly perceived that the division of Greece into independent sovereign city-states would finally lead to its political end. Both philosophers took the city-state of their age as much for granted as twentieth-century political writers tend to consider the national state the ultimate in political wisdom. When the Greeks were subjugated, first by Macedon and later by Rome, the teachings of Plato and Aristotle, based on their belief that the Greek city-state was superior to the outside "barbarians," seemed inadequate for the new age of empire. The citizen of formerly self-governing small political communities was reduced from an active citizen-ruler to a passive imperial subject.

What were now needed were philosophies of man as an individual in relation to himself and to the world at large. In the small and highly integrated society of the city-state, human relations were essentially aspects of citizenship, as there was no sharp delineation between individual and community. On the one hand, the individual was rarely faced with fundamental challenges affecting him as a person, and, on the other, he was seldom drawn into a collectivity so large as to make his individuality disappear altogether. The fall of the city-state and the rise of the Macedonian and Roman empires were political revolutions that called for new outlooks expressing changed psychological realities. In the new world of empire the old traditional ties of intimate fellowship of the city-state were dissolved; an impersonal and anonymous machinery of government whose object was smooth administrative functioning, and not the good life, took their place.

Deprived of the city-state, the spiritual habitat that had nourished him so long, the individual now found himself tossed between two extremes of existence to which he had to adapt himself. First, he was thrown back on his own inner resources as a person who somehow had to survive in the collapse of traditional political forms and organizations. As his habitual sources of collective support and comfort dwindled, he had to stand on his own feet, derive

strength from himself, and learn the lesson that social and political organizations come and go but that individual human beings have to keep on living. This painful discovery of loneliness after centuries of rich communal life must have been a deep shock to the inhabitant of the former city-state, whose traditional values and goals did not seem to fit into the new world.

If the vastness and anonymity of empire forced the citizen to become more consciously aware of himself as an individual, depriving him as they did of the traditional sources of satisfaction that are to be derived from a small society, he was also forced to broaden immensely the range of his outlook and to think in terms of the world. In the new political reality of world empire, the city-state was little more than a small unit of local administration, and the individual had to grow accustomed to the fact that he was part of a motley realm, full of strange and unknown peoples, customs, and ideas. Compared with the citizen of the old city-state, the subject of the new empires had to undergo the double strain of being more intensely *individual* and at the same time more *universal* in outlook than he had ever been before.

Such was the intellectual vitality of Greece even after the loss of her political independence that she continued to lead the world in the realm of intellect and philosophy, as she had done in the heyday of Plato and Aristotle; Alexander himself, when he conquered the ancient empires and states of the East, spread the Greek language throughout the new Greco-oriental, or "Hellenistic," world. Although from the viewpoint of narrow Greek patriotism, the Hellenization of "barbarians" might have appeared a falsification and dilution of "pure" Greek culture, from the broader vantage point of world history, Hellenization was the process of transmitting basic values of Greek life and thought to universal civilization. The dilution of tribal purity in the larger stream of hybrid humanity was a relatively small price.

The five centuries from about 300 B.C. to A.D. 200 were predominantly centuries of Hellenistic cultural influence, with Greece proper never failing to play an important part of her own. Even at the peak of Roman political and economic power there was more Hellenization of the Latin world than Romanization of the Hellenistic world. Romanization and Latinization became permanent successes only in areas in which they did not compete with Hellenistic culture. History has never witnessed again such a long hegemony of one civilization; the nearest parallel to it, French cultural leadership in the seventeenth and eighteenth centuries, lasted for about two hundred years, but it was not nearly so expansive and creative, in the sense of entirely transforming existing national societies into an alien pattern of language, art, philosophy, science, and thought.

The Hellenistic period was characterized, however, not only by the impact of Greece on the outside world but also by the continuous entry of non-Greeks into Greek life. Gradually Greece ceased to be the source and instead became the universal clearinghouse of new ideas. In the garb of Greek language and forms, non-Greeks thought, new ideas would be more likely to receive a universal hearing and perhaps acceptance; consequently individual persons and entire families Hellenized their names, adopted the Greek language, studied in Greece or one of the new centers of learning, such as Alexandria, and identified themselves with Hellenistic culture.

The most influential philosophical school of the five centuries from about 300 B.C. to A.D. 200 was *Stoicism*. It was founded by Zeno around 300 B.C., and derived its name from the Painted Porch (or "Stoa") in Athens, in which Zeno used to teach. Zeno was a native of Cyprus, of Hellenized Phoenician origin, and a stranger to Athens. Similarly, nearly all the early leaders of Stoic thought were non-Greeks who came from the fringe of Greek settlements or well beyond them. The geographic variety of Stoicism was matched by its social latitude; it is perhaps symbolic of the personal and universal message of Stoicism that its two most representative figures were a Greek slave from Asia Minor and a Roman emperor.

Epictetus (about A.D. 50–120) was a Phrygian slave who came to Rome at an early age. His master permitted him to study philosophy and later freed him. Epictetus then set up his own school in Rome; in A.D. 89 Emperor Domitian banished philosophers from Rome, and Epictetus went to Greece to teach philosophy there. Like Socrates, Epictetus never wrote a book; a disciple of his, Flavius Arrian, who was a Roman official, recorded Epictetus' lectures and informal conversations in the *Discourses* and a brief *Manual*, or summary, of his basic ideas.

Epictetus was of poor health and became lame early in life. His master, a freedman at Nero's court, once twisted Epictetus' leg. Epictetus serenely smiled: "You will break it." His master continued, and when the leg was broken, Epictetus merely said: "I told you so." This anecdote vividly reflects one of the qualities that popular imagination has come to regard as particularly characteristic of Stoicism: fortitude of mind under all circumstances, the triumph of mind and will over matter and pain.

The most illustrious philosophical successor to Epictetus was Marcus Aurelius (A.D. 121–180), Roman emperor from A.D. 161–180. Marcus Aurelius was born in Rome of a family that was originally Spanish; he was the nephew of his predecessor on the throne and thus acquainted with public affairs from an early age. He is one of the half-dozen philosopher-kings in history, like those of whom Plato had dreamed in the *Republic*, and he was perhaps more in his element as a philosopher than as the ruler of the Roman empire. Like Epictetus, Marcus Aurelius wrote no books. His *Meditations* are not a book, and were not planned as such by him, but are more in the nature of a journal (as the title has often been rendered), informal notes and observations addressed to himself rather than to the public.

The author, though a Roman emperor, wrote in Greek, which he mastered from early youth. The only other famous ruler who wrote in a foreign language was Frederick the Great of Prussia, who preferred French to German, declaring his own tongue only "fit for horses." During the period of Marcus Aurelius it was not uncommon for non-Greeks to write in Greek, the language of prestige and universal currency, just as during the seventeenth and eighteenth centuries French had no rival among the educated.

Marcus Aurelius was well aware of his general debt to Stoic predecessors in philosophy, but he felt himself under a particular obligation to Epictetus, whom he deeply venerated and whose sayings he often quoted word by word. By identifying himself so closely with a lowly slave, Marcus Aurelius thus practiced the Stoic faith in the equality of all men, regardless of their nationality and station in life.

The Stoics did not think of themselves primarily as political theorists, and Stoicism is not a theory of the state. This fact, however, did not preclude Stoic thought from exercising a considerable influence on government and politics, partly because so many kings and high officials of the Hellenistic and Roman periods were professing, though not always practicing, Stoics. Stoicism appeals to the individual as an individual rather than as a member of an organized community, and in this characteristic lies its strength and weakness. The moral appeal to the individual is not, as in the closely knit city-state of Plato and Aristotle, to idolize and worship the laws and morals of one's community but to live in accordance with nature.

The Stoic concept of nature was different from the earlier view, which presented numerous demons and gods reveling in unpredictable adventures, as it was distinct from the later view, which conceived of nature as a machine, operating according to physical laws. The Stoic conception of nature was less demonistic and less mechanistic than either: nature includes both the process of growth and the goal and principle toward which this process is moving and to which it seeks to give life. Nature, the whole cosmos, is thus pervaded by goal and purpose, and to live according to nature means to work with it toward the harmony and orderliness that is inherent in it. The "one principle of action that governs all things" is to be *at one with oneself*, to know oneself, and to act in conformity with one's purposes and rational principles.

Like nature, human beings also are subject to an all-pervading harmonious and rational ordering, and just as cosmic peace is the expression of such law and harmony, so tranquillity of the individual "is nothing else than the good ordering of the mind." According to this Stoic view, man and nature are not opposites; both partake of reason and harmony, which are more important than accidental differences. The "*true self*" of man is therefore, not his "flesh or bones or sinews, but the faculty which uses them," that is, *reason*, the part of man that characterizes him as human, through which he shares in what gives life and purpose to the world as a whole. A person who attains a good ordering of his mind and is at one with himself, also acts and feels responsibly, without blaming others or himself for whatever happens to him. This process of mental health is tersely summed up by Epictetus in three short phrases: "To accuse others for one's own misfortunes is a sign of want of education; to accuse oneself shows that one's education has begun; to accuse neither oneself nor others shows that one's education is complete."

Once he has recognized his rational faculty as his true nature, man can attain complete *selfhood*, in other words, if he learns to guide his life in accordance with what is essential, his reason, and if he is not overly impressed by external events that in themselves are neither good nor bad, productive of neither pain nor pleasure, because what "disturbs men's minds is not events, but their judgments on events." If man can preserve the inner freedom that he possesses as a rational being, no external evil or threat of evil, not even death, can be potent enough to break his freedom, his self, his quality as a rational being. External things, then, are not good or evil in themselves; they are merely "materials for the will, in dealing with which it will find its own good or evil."

Epictetus, in particular, deals with the question of how the isolated individual can preserve himself against the tyrant who is surrounded by sycophantic

adulation and who commands irresistible force. The tyrant has power over individuals only to the extent that they fear him, that is, to the extent that they treasure their accidental possessions of property and health, their life, more than their inner freedom, their reason, over which no one else can have authority. What maintains a tyrant, therefore, is not his command over external means of compulsion, police and prisons, but the failure of men to preserve their true natures in the face of such external pressures. In other words, it is the control over men's minds rather than their bodies that gives a tyrant his parasitical power; if men began to live in accordance with their natures, their reason and freedom of will, tyrannical power could not long persist. Baruch Spinoza, the seventeenth-century philosopher, expresses this Stoic idea in an even broader form, when he says, "obedience makes the king." Events in 1989 in Eastern Europe show the validity of this Stoic doctrine, although the revolutions there were also made possible only by the collapse of Soviet control.

Epictetus and Marcus Aurelius express an important idea in saying that "no man can rob us of our free will," and that even death is not frightening, as it involves only the return of the material parts of the body to the elements of which it was made up. Moreover, they say, one should be content with death, because it is one of the things that nature wills; one should wait for it as "one of the operations of nature." The Stoic therefore learns to detach himself from events that are beyond his control, because whatever is "beyond the control of my will, is nothing to me."

Epictetus was aware of the charge that his doctrine of an inalienable rational self, which no tyrant could subjugate, might teach men to "despise the laws." His argument in reply to this charge is ingenious. Stoicism, far from teaching political disobedience, actually makes us obedient to the laws, he says, because it teaches us to give way in regard to "our poor body," property, parents, and children, to "give up everything, resign everything; only our judgments it reserves, and these Zeus willed should be each man's special property."

To the interjection that a man's judgments are "the greatest matters of all," Epictetus retorts in this way: as long as the main concern of rulers is how to live in palaces, enjoy the services of slaves and freedmen, the pleasure of feasts and plays, the power supplied by armies and police forces, and other external matters, men of reason and integrity will cheerfully acknowledge the superiority of their rulers. But how insignificant are such matters when compared with moral selfhood, which cannot be conquered by external force. To influence men's judgment and reason, the rulers ought to busy themselves less with external things, Epictetus says; they should concern themselves more with their own rational selves, if they want to understand those of others. The Stoic is thus willing to give way to the king or tyrant in matters of external force, because there the ruler is superior; "where, on the other hand, I am the better man, it is for you to give way to me, for I have made this my concern, and you have not."

The Stoic doctrine is not free from self-contradiction. If the value of life, property, family, offices, health, and freedom is denigrated, the citizen is more readily inclined to obey the ruler's commands, as long as the latter has the physical means to enforce their compliance. In this sense, Stoicism has had a *conservative* influence throughout the ages, encouraging the individual to submit completely to the powers that be and to realize himself as a person in other

realms of thought and action. On the other hand, there is no doubt that the Stoic doctrine of complete individual *moral integrity*, which must not be compromised even at the price of death, has *revolutionary* implications. Some rulers may be satisfied with external, formal obedience. Others will insist on inner adherence and voluntary acceptance, and here Stoicism, fully aware that these are "the greatest matters of all" in human relations, has a distinctly revolutionary flavor. What opposes tyrants and dictators, after all, is not this or that party program but the moral courage of individual human beings, whose integrity and faith in themselves and others, in reason and justice, cannot be broken by any external pressure.

No philosophy before Stoicism, and perhaps none after, has centered its teachings so emphatically on individual responsibility and integrity, and done so without threatening penalties or promising rewards, as some religions are wont to do. The Stoics did not even hold out the immortality of the soul as an ultimate goal to which mortals could hopefully look forward. A philosophical or moral creed has rarely demanded so much of men, and promised so little; as a consequence, Stoicism has never appealed to masses and groups but to individuals in whom the "categorical imperative" (as Kant later puts it) is a living and indomitable force.

Stoicism thus attracted two opposing types of men: *First, the more reflective, saintly ascetic, who attains full peace of mind and soul by withdrawing from the world completely, to whom love and friendship, pain and pleasure, property and office, mean nothing. He finds his self-realization in contemplation and meditation, which bring him closer to that merging with the Whole of which he is an infinitesimally small part. The second type of Stoic, by contrast, is more active; he seeks his communion with the Whole, not by contemplating it, but by working toward its high purposes and goals, which also encompass his own life.*

Epictetus himself, usually considered the more reflective kind of Stoic, nevertheless observes that "it is not arguments that are wanting nowadays," but "the man who will apply his arguments, and bear witness to them by action." Similarly, Marcus Aurelius, who spent a lifetime of hard work in governing a far-flung empire, said: "Not in passivity, but in activity lie the evil and the good of the rational social animal, just as his virtue and his vice lie not in passivity, but in activity." In the beginning of the *Meditations*, in which he analyzes the sources of his moral heritage, Marcus Aurelius also expresses gratitude to his brother who had early taught him a "disposition to do good, and to give to others readily, and to cherish good hopes, and to believe that I am loved by my friends." The ethical ideal of Stoicism was most vividly expressed in a Latin phrase, translated by Pliny from a Greek Stoic: "God is man's helping of man" (*Deus est mortali iuvare mortalem*).

There is a degree of contradiction between the two main Stoic types, based as they are on two not fully reconcilable philosophical conceptions. On the one hand, the world is thought of in terms of Reason, Law, and Harmony, and things and events are predetermined within this realm of cosmic necessity. On the other hand, there are freedom of will and the moral duty to work for that rational ordering of the world toward which it is perpetually moving, and moving more rapidly with the aid of human goodness and reason. This contradiction

between the two main types of Stoics is characteristic of most philosophies and religions that try to combine natural law with individual freedom, or the predetermined harmony of the world with its manifest phenomena of discord.

The refusal to promise absolutes prevented Stoicism from becoming a popularly accepted creed; unable to satisfy the quest for certainty that gives mass movements their emotional appeal, Stoicism was taken up by strong personalities who felt themselves equal to its austere demands. According to the Stoic view, no human activity can claim ultimate validity. All that human beings can do is to live and work in accordance with nature, that is, being every activity and thing to the highest level of perfection of which it is capable.

Viewed from the outside, such activities may perhaps appear unimportant in relation to eternal and absolute values. Stoics therefore often compare life to a play: "Remember that you are an actor in a play, and the Playwright chooses the manner of it: if he wants it short, it is short; if long, it is long. If he wants you to act a poor man you must act the part with all your powers; and so if your part be a cripple or a magistrate or a plain man. For your business is to act the character that is given you and act it well; the choice of the cast is Another's." The important thing is therefore, as for an actor in a play, to perform one's task well, regardless of its ultimate value and purpose. Without the promise of heaven and the threat of hell, the Stoic is satisfied with having tried hard, having played his role well, just as the actor is concerned more about the acting of his part than about the character he personifies, or about the success or failure of his doings in the play. The Stoic symbolism of life as a play reflects the contradiction between the two strands in Stoicism that alternatively stress reflection and action, necessity and freedom, predetermined perfection and striving toward perfection. Yet these contradictions in Stoicism possibly reflect, not avoidable imperfections of faulty logic or philosophy, but life itself.

As was pointed out earlier, the decline of the city-state and the rise of empire not only made the individual more conscious of himself as an individual but enlarged his horizon. Here, again, the Stoic philosophy attempted to provide philosophical answers to needs and challenges of restless and changing societies. Zeno, the Hellenized Phoenician, founder of Stoicism, wrote an anti-Platonic *Republic* in which he taught that the ideal state must be a world-state, and that an end should be put to the many individual states, each with its own laws and conceptions of justice. Citizenship would be universal for all men, and there would be one system of law, based on universally accepted reason rather than on local customs and conventions. Zeno also opposed institutions that seemed to him artificial, such as temples, law courts, money, and marriage, and he vigorously condemned the inequality of women, not, as Plato had done, of women who belonged to the ruling class, but of all women. Unlike Aristotle, who assumed that some human beings are by nature slaves, Zeno and the early Stoics insisted that slavery was contrary to natural law, that it was no more than an arbitrary convention based on force and expediency, and that there were no nations or ethnic groups naturally inferior, fit only to serve those who claimed to be superior.

Because the earlier Stoics were Hellenized non-Greeks, they were able to appraise Greek life with a fresh eye. They took nothing for granted, bowed to no

sacrosanct taboos, and exposed even the most solidly entrenched practices and prejudices to critical examination. Later on, such radical attacks were toned down, particularly when Rome became the center of Stoicism.

Practical-minded, the Roman Stoics abandoned some of the early denunciations of all conventions and institutions, but they retained the basic Stoic doctrine of *one world*. According to the pantheistic and panrationalistic view of Stoicism, the universe is God, and God is Reason. In this "frame of things," governed by universal reason, "men and God are united," and from this unity, Epictetus says, "come the seeds from which are begotten not only my own father or grandfather, but all things that are begotten and that grow upon earth, and rational creatures in particular—for these alone are by nature fitted to share in the society of God, being connected with Him by the bond of reason—why should he not call himself a citizen of the universe and a son of God?" Epictetus also expresses, in an amazing parallel to Judeo-Christian monotheism, the doctrine of the brotherhood of mankind, inasmuch as all men have "God as maker and father and kinsman."

Marcus Aurelius formulates the idea of universal political and legal unity even more clearly. Because all human beings have mind in common, "the reason also, in respect of which we are rational beings, is common: if this is so, common also is the reason which commands us what to do, and what not to do; if this is so, there is a common law also; if this is so, we are fellow-citizens; if this is so, we are members of some political community; if this is so, the world is in a manner of a state." Marcus Aurelius sees himself both as the emperor of Rome and as a man, a citizen of the world: "But my nature is rational and social; and my city and country, so far as I am Antoninus,¹ is Rome, but so far as I am a man, it is the world. The things then which are useful to these cities are alone useful to me."

The Stoics thus consider the faculty to reason the most human quality, one that is shared by all men. The laws of reason prevail independently of, and are above, legal and political rules that owe their acceptance to convenience and expediency rather than to inherent truth. Stressing what unites men rather than what separates them, the Stoics not only attacked narrow tribalism and chauvinism but also pleaded for greater equality of woman and slaves, a revolutionary doctrine at that time, and far from complete realization today.

Once the Stoics clearly understood the unity of mankind (and they were among the first in history to attain this conception on a rational, secular basis), differences of sex, class, social status, and political constitution seemed relatively insignificant. The unity of man was in itself part of a larger world held together by the law of nature, a law whose validity rested on its intrinsic rationality rather than on the fiat of kings and emperors. The Stoic concept of natural law found its practical application in the Roman philosophical idea of *ius naturale* (natural law), as well as in the Roman legal system of *ius gentium* (law of nations); thus it laid the foundations for the later development of international law.

In theory, there was a sharp distinction between the law of nations and natural law; for example, slavery was considered by Roman lawyers to be contrary to natural law but a recognized institution of the law of nations. Yet the sharp

theoretical distinction between the law of nations as a set of *rules of positive law* and the law of nature as a philosophical system of what the law ought to be was gradually abandoned under the impact of Stoic ideas, and the two were increasingly identified. Because, as explained earlier, Stoicism stresses what human institutions have in common rather than what separates them—the first being their essence and the second what is accidental, local, and arbitrary in them—natural law and the law of nations became merged into one philosophical conception, according to which, as defined in the *Institutes of Emperor Justinian's Corpus Juris Civilis*, "the law that natural reason has prescribed for all men, is equally observed by all nations, and is called the law of nations, because all nations make use of it" (1.2.1). Thus, wherever the Roman law expanded—and it usually stayed once it had taken root—it carried with it an openness and universality that it owed to the Stoic sense of all men living in "one world."

The Stoic influence on Christianity was no less profound than that on Roman law. When St. Paul stated that there was "neither Jew nor Greek, neither bond nor free," he voiced an ideal that was in complete harmony with the Stoic legacy.

Thrice in modern times have Stoic doctrines played a vitalizing part. First, the development of a new international law from the sixteenth century on was strengthened by the revival of natural law, based on secular or religious foundations. The process is not yet finished, and the Stoic vision of universal government through universal law and justice still awaits its realization. The second impact of Stoic ideas occurred in eighteenth-century France, when the makers of the French Revolution, fired by ideals of liberty, equality, and fraternity, sought to build a new world on purely rational principles, without the burdensome conventions of traditional religion, privilege, or class. Finally, the Stoic idea of a "law above the law" became the fundamental principle of the American constitutional system, jealously guarded by the judiciary and profoundly revered by the American people, who have been unwilling to accept the view that laws of fallible men, exposed to the temptations of passion and interest, are binding under all circumstances.

Every revolution appeals to natural law for justification. Every country, therefore, that has experienced popular revolutions has incorporated some natural law into its heritage. Unlike most other countries, the United States remembers its major revolution, not as one among many phases of its historical experience, but as the source and origin of its very existence. As a result, the tradition of thinking according to natural law, a tradition that goes back directly to Stoic principles, is particularly strong in the United States.

In Epicureanism, another major modern philosophical/political tradition is found—utilitarianism. Epicurus (c. 342–270 B.C.) and Zeno, the founder of Stoicism, were contemporaries, and both settled in Athens within a few years of each other and began their schools. Unlike Stoicism, Epicureanism never really developed beyond the teachings of its founder. Regrettably, few of his works survive. Enough is left, however, along with various other ancient sources—including the *Life of Epicurus* by Diogenes Laertius and *On the Nature of Things* by Lucretius—to be able to tell the spirit of his outlook.

Epicurus is most commonly associated with sensual enjoyment. But this association—which both Stoics and many Christians furthered, and which

¹ The full name of the emperor was Marcus Aelius Aurelius Antoninus.

thus came down to modernity as the correct view—does no justice to the man at all. While Epicurus states in his *Principal Doctrines* (which does survive), “No pleasure is a bad thing in itself,” his view of pleasure is such as to render this philosophy benign. Like later utilitarians, he does not consider coarse pleasures of bodily indulgence to particularly be pleasures at all. For him, *freedom from pain* is the principal pleasure. This conception may have been founded on his own ill health, which frequently confined him to bed, hence the image of him draped on a couch.

Like so many Greeks, Epicurus was interested in both nature (*physis*) and convention (*nomos*); he lived, wrote, and thought before the split between science and philosophy. His orientation, therefore, is more integrated and comprehensive than that of most modern writers and thinkers. Although he is a materialist, he is not a determinist. That is, he accepts the atomic theory that reality can be reduced to material atoms (and not some sort of spiritual essence), but does not hold that all of atoms’ motions are necessary or programmed. Humans can exercise some control over their actions—that is, will.

Epicurus’ hedonism grows out of his materialism. He considers even the soul material, and thus perishable, and largely for this reason was later vilified by Christians (in the *Inferno*, Dante devises a special punishment for Epicureans; because they deny the survival of the soul apart from the body, their souls are to be imprisoned in sealed coffins along with their bodies). Whenever life is held to be transitory in an ultimate sense—that is, there is no afterlife—then a tendency emerges for philosophies to emphasize the worldly, almost *ipso facto*. Epicurus’ view of divinity in his day scarcely won him more admiration than it did subsequently. “The impious man,” he writes, “is not he who denies the gods of the many, but he who attaches to the gods the beliefs of the many.” He believes there are immortal gods, but they do not trouble themselves with the affairs of the world. This, however, is a reason for praising them, not despising them, for at least they do not terrorize (as well as reward) men and women, as many of his contemporaries thought. Humans may also be inspired by the gods through contemplation of them and the world they have created.

In his “Letter to Herodotus,” Epicurus comments that one should refer “always to the sensations and feelings, for in this way you will obtain the most trustworthy ground of belief.” He disapproves of superstitious practices, and resolves all knowledge into that which is derived from the senses. He only values knowledge based on sensory data—a most empirical outlook, very similar to his utilitarian successors two-thousand years later—because this allows peace of mind (as it is free of superstitions) and provides contemplative pleasures. His view of death is that it is nothing: Death simply is “deprivation of sensation.” When one is deprived of sensation, one is not; therefore, there is nothing to worry about in death. The only aspect of Benthamite utilitarianism that is not present in Epicurus is a mathematical valuation of pleasures and pains.

Although believing that all pleasures and pains are ultimately grounded in the senses, Epicurus also feels that non-physical forms of happiness and unhappiness have more worth to individuals than strictly sensory ones. As Diogenes Laertius recorded in the *Life*, in disagreeing with another ancient Greek school—the Cyrenaics—who “thought that bodily pains were worse than those of the soul, . . . Epicurus held that the pains of the soul are worse: for the

flesh is only troubled for the moment, but the soul for past, present, and future.” Epicurus considers philosophy and friendship to be two chief pleasures, and, regarding the physical, he advocates a simple diet partially because then when one does consume a luxurious item, it will give one all the more pleasure. Regarding sex, he counsels, “Sexual intercourse has never done a man good, and he is lucky if it has not harmed him.” In short, Epicurus is no Epicurean, at least not as the term is presently understood.

Epicurus advises withdrawal from the political and active life—there is too great a chance this will lead to personal unhappiness and pain. His was an appropriate response to a changing social order in which residents of city-states had lost control of their destinies. Instead, his followers formed their own communities that lasted throughout the European world for seven centuries. Indeed, of all the Greek philosophies, his is the only one that achieved such a popular scope. He himself became considered an ethical progenitor—followers carved likenesses of him in marble, carried his doctrines about in handbooks (pledging to live according to his teachings), and gathered in assemblies on the twentieth of each month to remember him. Some indication of the esteem in which his followers held him is indicated by Lucretius: “Thee [Epicurus] who first was able amid such thick darkness to raise on high a beacon and shed light on the true interests of life, thee I follow, glory of the Greek race.” In formal observances, and through their founder’s emphases on altruistic hedonism and equality both among individuals and between the sexes, ancient Epicureanism, as well as Stoicism, demonstrated portions of a social order and philosophy that would soon be met by a much greater way of life: Christianity.

I EPICTETUS

The Discourses and The Manual *

WE ARE ALL GOD'S KINSMEN

If these statements of the philosophers are true, that God and men are akin, there is but one course open to men, to do as Socrates did: never to reply to one who asks his country, "I am an Athenian," or "I am a Corinthian," but "I am a citizen of the universe." For why do you say that you are an Athenian, instead of merely a native of the little spot on which your bit of a body was cast forth at birth? Plainly you call yourself Athenian or Corinthian after that more sovereign region which includes not only the very spot where you were born, and all your household, but also generally that region from which the race of your forbears has come down to you. When a man therefore has learnt to understand the government of the universe and has realized that there is nothing so great or sovereign or all-inclusive as this frame of things wherein men and God are united, and that from it come the seeds from which are sprung not only my own father or grandfather, but all things that are begotten and that grow upon earth, and rational creatures in particular—for these alone are by nature fitted to share in the society of God, being connected with Him by the bond of reason—why should he not call himself a citizen of the universe and a son of God? Why should he fear anything that can happen to him among men? When kinship with Caesar

or any other of those who are powerful in Rome is sufficient to make men live in security, above all scorn and free from every fear, shall not the fact that we have God as maker and father and kinsman relieve us from pains and fears?

"And where am I to find food to eat, if I have nothing?" says one.

Well, what do slaves do when they leave their masters, or what do they rely on? Do they rely on fields, or servants, or silver plate? No, on nothing but themselves; nevertheless sustenance does not fail them. And shall our philosopher in his wanderings have to rest his confidence in others, instead of taking care of himself? Is he to be baser and more cowardly than the unreasoning beasts? For each one of them is content with itself, and lacks not its proper sustenance nor the way of life that is naturally suited to it.

I think that the old man who sits here to teach you ought to devote his skill not to save you from being low-minded, and from reasoning about yourselves in a low and ignoble spirit, but rather to prevent young men from arising of the type who, discovering their kinship with the gods, and seeing that we have these fetters attached to us in the shape of the body and its possessions and all that we find necessary for the course and management of our life by reason of the body, may desire to fling all these away as vexatious and useless burdens and so depart to the gods their kindred.

And so your teacher and instructor, if he were a true teacher, should engage in this conflict of argument:

You come saying, "Epictetus, we can bear no longer to be bound with the fetters of this wretched body, giving it meat and drink and rest and purgation, and by reason of the body having to adapt ourselves to this or that set of circumstances. Are not these things indifferent and as nothing to us, and death no evil thing? Are we not kinsmen of the gods, from whom we have come hither? Suffer us to depart to the place whence we have come, suffer us to be released from these bonds that are fastened to us and weigh us down. Here are robbers and thieves and law-courts and so-called kings, who by reason of our poor body and its possessions are accounted to have authority over us. Suffer us to show them that they have authority over nothing."

Hereupon I answer: "Men as you are, wait upon God. When He gives the signal and releases you from this service, then you shall depart to Him; but for the present be content to dwell in this country wherein He appointed you to dwell. Short indeed is the time of your dwelling here, and easy for them whose spirit is thus disposed. What manner of tyrant or what thief or what law-courts have any fears for those who have thus set at naught the body and its possessions? Stay where you are, and depart not without reason." Such should be the answer of the teacher to his gifted pupils. How different is what we see! There is no life in your master, and no life in you. When you have had your fill to-day, you sit groaning about the morrow, and how you are to find food. Slave, if you get food, you will have it; if not, you will depart: the door is open. Why do you whine? What room is there for tears any more? What occasion for flattery any more? Why should one envy another? Why should he gaze with wonder on them that are rich or powerful, especially if they be strong and quick to anger? For what will they do with us? We will pay no heed to what they have power to do, what we really care for they cannot touch. Who, I ask you, will be master over one who is of this spirit?

How did Socrates approach these matters? Surely as one should who is convinced of his kinship with the gods. "If you tell me," he says, "We acquit you on condition that you discourse no longer as you have done hitherto, and that you do not annoy young or old among us," I shall answer, "It is absurd for you to suppose that, while I am bound to maintain and guard any post to which your general appointed me, and should rather die ten thousand times than abandon it, yet if God has appointed us to a certain place and way of life we ought to abandon that." [Plato, *Apology*, 29c, 28e] Here you see a man who is a kinsman of the gods in very truth. But as for us—we think of ourselves as if we were all belly and flesh and animal desire; such are our fears, such our passions; those that can help us to these ends we flatter, and at the same time fear.

Some one has asked me to write for him to Rome, one who, as the world thought, had had misfortunes; he had once been famous and rich, and had now lost everything and was living here. So I wrote for him in a humble tone. And he read my letter and gave it back to me and said, "I wanted your help, not your pity." So, too, Rufus, to try me, used to say, "Your master will do this or that to you"; and when I answered him, "This is the lot of man," "Why then," said he, "do I appeal to your master when I can get everything from you?" for, indeed, it is true that what a man has of himself it is idle and futile for him to receive from another. Am I then, who can get from myself the gift of a noble and lofty spirit, to get from you a field or money or office? Heaven forbid! I will not be so blind to my true possessions. But when a man is mean and cowardly, for him one must needs write letters as for one that is dead. "Make us a present of the corpse of so and so and his miserable quart of blood." For indeed such a one is a mere corpse and a quart of blood and nothing more. If he were anything more, he would have realized that one man cannot make another miserable.

* From Epictetus, *The Discourses and Manual* (trans. P. E. Matheson, Oxford University Press, 1916). By permission.

HOW TO BEHAVE TOWARD TYRANTS

If a man possesses some advantage, or thinks he does though he does not, he is bound, if he be uneducated, to be puffed up because of it. The tyrant, for instance, says, "I am mightiest of all men."

Well, and what can you give me? Can you enable me to get what I will to get? How can you? Can you avoid what you will to avoid, independent of circumstances? Is your impulse free from error? How can you claim any such power?

Tell me, on shipboard, do you put confidence in yourself or in the man who knows? And in a chariot? Surely in him who knows. How is it in other arts? Exactly the same. What does your power come to then?

"All men pay me attention."

Yes, and I pay attention to my platter and work it and polish it and I fix up a peg for my oil-flask. Does that mean that these are superior to me? No, but they do me some service, and for this reason I pay them attention. Again: do I not pay attention to my ass? Do I not wash his feet? Do I not curry him? Do you not know that every man pays regard to himself, and to you only as to his ass? For who pays regard to you as a man? Show me. Who wishes to become like you? Who regards you as one like Socrates to admire and follow?

"But I can behead you."

Well said. I forgot, of course, one ought to pay you worship as if you were fever or cholera, and raise an altar to you, like the altar to Fever in Rome.

What is it then which disturbs and confounds the multitude? Is it the tyrant and his guards? Nay, God forbid! It is impossible for that which is free by nature to be disturbed or hindered by anything but itself. It is as a man's own judgements which disturb him. For when the tyrant says to a man, "I will chain your leg," he that values his leg says, "Nay, have mercy," but he that values his will says, "If it seems more profitable to you, chain it."

"Do you pay no heed?"

No, I pay no heed.

"I will show you that I am master."

How can you? Zeus gave me my freedom. Or do you think that he was likely to let his own son be enslaved? You are master of my dead body, take it.

"Do you mean that when you approach me, you pay no respect to me?"

No, I only pay respect to myself: if you wish me to say that I pay respect to you too, I tell you that I do so, but only as I pay respect to my water-pot.

This is not mere self-love: for it is natural to man, as to other creatures, to do everything for his own sake; for even the sun does everything for its own sake, and in a word so does Zeus himself. But when he would be called "The Rain-giver" and "Fruit-giver" and "Father of men and gods," you see that he cannot win these names or do these works unless he does some good to the world at large: and in general he has so created the nature of the rational animal, that he can attain nothing good for himself, unless he contributes some service to the community. So it turns out that to do everything for his own sake is not unsocial. For what do you expect? Do you expect a man to hold aloof from himself and his own interest? No: we cannot ignore the one principle of action which governs all things—to be at unity with themselves.

What follows? When men's minds harbour wrong opinions on things beyond the will, counting them good and evil, they are bound to pay regard to tyrants. Would that it were only tyrants, and not chamberlains too! How can a man possibly grow wise of a sudden, when Caesar appoints him to the charge of the privy? How is it we straightway say, "Felicio has spoken wisely to me"? I would fain have him deposed from the dung-heap, that he may seem foolish to you again. Epaphroditus had a shoemaker, whom he sold because he was useless: then by some chance he was bought by one of Caesar's officials, and became Caesar's shoemaker. If you could have seen how Epaphroditus honoured him. "How is my good Felicio, I pray you?" Then if some

one asked us, "What is your master doing?" the answer was, "He is consulting Felicio about something." What, had he not sold him for useless? Who has suddenly made a wise man of him? This is what comes of honouring anything outside one's will.

He has been honoured with a tribuneship. All who meet him congratulate him; one kisses his eyes, another his neck, his slaves kiss his hands. He comes into his house and finds lamps being lighted. He goes up to the Capitol and offers sacrifice. Who, I ask you, ever offered sacrifice in gratitude for right direction of the will or for impulse in accordance with nature? For we give thanks to the gods for what we think our good!

To-day one spoke to me about the priesthood of Augustus. I told him, "Fellow, leave the thing alone; you will spend a great deal on nothing."

"Well, but those who draw up contracts will record my name."

Can you be there when men read it and say to them, "That is my name," and even supposing you can be there now, what will you do if you die?

"My name will remain."

Write it in a stone and it will remain. But who will remember you outside Nicopolis?

"But I shall wear a golden crown."

If you desire a crown at all, take a crown of roses and wear that: you will look smarter in that.

ON CONSTANCY

The essence of good and of evil lies in an attitude of the will.

What are external things then?

They are materials for the will, in dealing with which it will find its own good or evil.

How will it find its good?

If it does not value over much the things that it deals with. For its judgements on matters presented to it, if they be right, make the will good, and if crooked and perverse make it bad. This law God has ordained and says, "If you

want anything good, get it from yourself."

You say, "Not so, but from another."

I say, No, from yourself. So when the tyrant threatens and does not invite me, I say, "What does he threaten?" If he says, "I will bind you," I say, "He threatens my hands and my feet." If he says, "I will behead you," I say, "He threatens my neck." If he says, "I will put you in prison," I say, "He threatens all my poor flesh," and if he threatens banishment, the same.

"Does he then not threaten you at all?"

Not at all, if I feel that these things are nothing to me: but if I fear any of them, he does threaten me. Who is there left for me to fear, and over what has he control? Over what is in my power? No one controls that. Over what is not in my power? I have no concern in that.

"Do you philosophers then teach us to despise kings?"

Heaven forbid! Which of us teaches men to resist them in the matters over which they have authority? Take my bit of a body, take my property, take my good name, take my companions. If I try to persuade any of them to resist, I give him leave to accuse me indeed.

"Yes, but I want to command your judgements."

Who has given you this authority? How can you conquer another's judgement?

"I will conquer him," he says, "by bringing fear to bear on him."

You are not aware that it was the judgement that conquered itself, it was not conquered by another. The will may conquer itself, but nothing else can conquer it. That is the reason too why the noblest and most just law of God is this: "Let the better always be victorious over the worse."

"Ten," you say, "are better than one."

Better for what? To bind, to slay, to carry off where they will, to take away property. Ten conquer one therefore only in so far as they are better.

"In what then are they worse?"

They are worse if the one has right

judgements, and the ten have not. I ask you, can they conquer him in this? How can they? If we weigh them in the balance, must not the heavier pull down the scale?

"This is your outcome then, that Socrates should suffer the fate he did at the hands of the Athenians?"

Slave, why do you say, "Socrates"? State the fact as it really is, That Socrates' vile body should be arrested and haled to prison by those who are stronger, and that some one should give hemlock to Socrates' vile body and it should die of chill—does this seem to you marvellous, does this seem unjust, is it for this you accuse God? Did Socrates then get nothing in exchange? In what did his true good consist? Which are we to attend to? To you or to him? Nay, what does Socrates say? "Anytus or Meletus can slay me, but they cannot harm me" [Plato, *Apology*, 30c]: and again, "If God so will, so be it." [Plato, *Crito*, 43d] Prove, I say, that one who has worse judgements gains the mastery over him who is his superior in judgements. You will not prove it: far from it. For the law of nature and of God is this, "Let the better always come out victor over the worse." Victorious in what? In that wherein it is better. One body is stronger than another, the majority are stronger than one, the thief stronger than he who is not a thief. That is why I too lost my lamp, because in the matter of vigilance the thief was a stronger man than I. But he bought his lamp for this price: for a lamp he became a thief, for a lamp he broke his faith, for a lamp he became a brute. This seemed to his judgement to be profitable.

Very well: but now some one has laid hold on my cloak, and drags me into the market, then others raise a clamour against me, "Philosopher, what good have your judgements done you? for, see, you are haled to prison, see, you are about to be beheaded."

And what sort of introduction to philosophy could I have studied, that would save me from being haled off, if a

stronger man seizes my cloak, or, if ten men drag me about and cast me into prison, will save me from being cast there? Have I then learnt nothing else? I have learnt to see that everything that happens, if it is beyond the control of my will, is nothing to me. Have you not gained benefit then in this respect? Why do you seek benefit elsewhere than where you learnt that it is to be found?

I sit on then in prison and say, "This person who clamours at me has no ear for the true meaning of things, he does not understand what is said, in a word he has taken no pains to know what philosophers do or say. Let him be."

But the answer comes, "Come out of your prison."

If you have no more need of me in prison, I come out: if you need me again, I will come in. For how long? For as long as reason requires that I should abide by my vile body; but when reason demands it no longer, take it from me and good health to you! Only let me not cast it off without reason or from a faint heart, or for a casual pretext. For again God wills it not: for He has need of a world like this, and of such creatures as ourselves to move upon the earth. But if He give the signal of retreat, as He gave it to Socrates, one must obey His signal as that of the general in command.

"What then? must I say these things to the multitude?"

Why should you? Is it not sufficient to believe them yourself? For when children come up to us and clap their hands and say, "A good Saturnalia to you to-day!" do we say "These things are not good"? Not at all, we clap with them ourselves. So, when you cannot change a man's opinion, recognize that he is a child, clap with him, and if you do not wish to do this, you have only to hold your peace.

These things we must remember, and when called to face a crisis that is to test us we must realize that the moment is come to show whether we have learnt our lesson. For a young man going straight from his studies to face a crisis may be compared to one who has prac-

tised the analysis of syllogisms. If some one offers him one that is easy to analyse, he says, "Nay, propound me one which is cunningly involved, that I may get proper exercise." And so wrestlers are discontented if put to wrestle with young men of light weight: "He cannot lift me," one says. Here is a young man of parts, yet when the crisis calls he must needs weep and say, "I would fain go on learning."

Learning what? If you did not learn your lesson to display it in action, what did you learn it for?

I imagine one of those who are sitting here crying out in the travail of his heart, "Why does not a crisis come to me such as has come to him? Am I to wear my life out idly in a corner, when I might win a crown at Olympia? When will some one bring me news of a contest like that?" Such ought to be the attitude of you all. Why, among Caesar's gladiators there are some who are vexed that no one brings them out or matches them in fight, and they pray to God and go to the managers and implore them to let them fight; and shall no one of you display a like spirit? That is exactly why I should like to take ship for Rome to see how my wrestler puts his lesson into practice.

"I do not want," says he, "an exercise of this sort."

What? is it in your power to take the task you choose? No, a body is given you of such a kind, parents of such a kind, brothers of such a kind, a country of such a kind, a position in it of such a kind: and yet you come to me and say, "Change the task set me." What! have you not resources to deal with what is given you? Instead of saying, "It is yours to set the task, and mine to study it well," you say, "Do not put before me such a syllogism, but such an one: do not impose on me such a conclusion, but such an one." A time will soon come when tragic actors will imagine that they are merely mask and shoes and robe, and nothing else. Man, you have these things given you as your subject and task. Speak your part, that we may know whether

you are a tragic actor or a buffoon: for except their speech they have all else in common. Does the tragic actor disappear, if you take away his shoes and mask and bring him on the stage in the bare guise of a ghost, or is he there still? If he has a voice he is there still.

So it is in life: "Take a post of command"; I take it, and taking it show how a philosopher behaves.

"Lay aside the senator's dress, and put on rags and appear in that character." Very well: is it not given me still to display a noble voice?

In what part then do you appear now?

As a witness called by God: "Come and bear witness for me, for I count you worthy to come forward as my witness. Is anything good or evil which lies outside the range of the will? Do I harm any one? Do I put each man's advantage elsewhere than in himself?"

What is the witness you now bear to God?

"I am in danger, O Lord, and in misfortune; no man heeds me, no man gives me anything, all blame me and speak evil of me."

Is this the witness you are going to bear, and so dishonour the calling that he has given you, in that he honoured you thus and counted you worthy to be brought forward to bear such weighty witness?

But suppose that he who has authority pronounces, "I judge you to be godless and unholy," how does this affect you?

"I am judged to be godless and unholy."

Nothing more?

"Nothing."

If he had been giving judgement on a hypothetical proposition and had declared, "I judge the proposition 'if it be day, there is light' to be false," how would it have affected the proposition? Who is judged here? Who is condemned? The proposition or the man who is deluded about it? Who in the world then is this who has authority to pronounce upon you? Does he know what godliness or ungodliness is? Has he made a study

of it? Has he learnt it? Where and with what master?

If a musician pays no heed to him when he pronounces that the lowest note is the highest, nor a geometrician when he decides that the lines from the centre of a circle to the circumference are not equal, shall he who is educated in true philosophy pay any heed to an uneducated man when he gives judgement on what is holy and unholy, just and unjust? What a great wrong for philosophers to be guilty of! Is this what you have learnt by coming to school?

Leave other people, persons of no endurance, to argue on these matters to little purpose. Let them sit in a corner and take their paltry fees, or murmur that no one offers them anything, and come forward yourself and practise what you have learnt. For it is not arguments that are wanting nowadays: no, the books of the Stoics are full of them. What then is the one thing wanting? We want the man who will apply his arguments, and bear witness to them by action. This is the character I would have you take up, that we may no longer make use of old examples in the school, but may be able to show an example from our own day.

Whose business then is it to take cognizance of these questions? It is for him that has studied at school; for man is a creature with a faculty of taking cognizance, but it is shameful for him to exercise it in the spirit of runaway slaves. No: one must sit undistracted and listen in turn to tragic actor or harp-player, and not do as the runaways do. At the very

moment one of them is attending and praising the actor, he gives a glance all round, and then if some one utters the word "master" he is fluttered and confounded in a moment. It is shameful that philosophers should take cognizance of the works of nature in this spirit. For what does "master" mean? No man is master of another man; his masters are only death and life, pleasure and pain. For, apart from them, you may bring me face to face with Caesar and you shall see what constancy I show. But when he comes in thunder and lightning with these in his train, and I show fear of them, I am only recognizing my master as the runaway does. But so long as I have respite from them I am just like the runaway watching in the theatre: I wash, drink, sing, but do everything in fear and misery. But if I once free myself from my masters, that is from those feelings which make masters formidable, my trouble is past, and I have a master no more.

"Should I then proclaim this to all men?"

No! One should study the weakness of the uninstructed and say to them, "This man advises me what he thinks good for himself, and I excuse him." For Socrates too excused the gaoler who wept when he was going to drink the poison, and said, "How nobly he has wept for us!" Does he say to the gaoler, "That is why we dismissed the women"? No, he says that to his intimate friends, who were fit to hear it, but the gaoler he treats considerately like a child. [Plato, *Phaedo*, 116d]

II MARCUS AURELIUS

Meditations *

MY SPIRITUAL HERITAGE

1. From my grandfather Verus I learned good morals and the government of my temper.

2. From the reputation and remembrance of my father, modesty and a manly character.

3. From my mother, piety and beneficence, and abstinence, not only from evil deeds, but even from evil thoughts; and further, simplicity in my way of living, far removed from the habits of the rich.

4. From my great-grandfather, not to have frequented public schools, and to have had good teachers at home, and to know that on such things a man should spend liberally.

5. From my governor, to be neither of the green nor of the blue party at the games in the circus, nor a partizan either of the Parmularius or the Scutarius at the gladiators' fights; from him too I learned endurance of labour, and to want little, and to work with my own hands, and not to meddle with other people's affairs, and not to be ready to listen to slander.

6. From Diogenetus, not to busy myself about trifling things, and not to give credit to what was said by miracle-workers and jugglers about incantations and the driving away of daemons and such things; and not to breed quails for fighting, nor to give myself up passionately to such things; and to endure freedom of speech; and to have become

intimate with philosophy; and to have been a hearer, first of Bacchius, then of Tandasis and Marcianus; and to have written dialogues in my youth; and to have desired a plank bed and skin, and whatever else of the kind belongs to the Grecian discipline.

7. From Rusticus I received the impression that my character required improvement and discipline; and from him I learned not to be led astray to sophistic emulation, nor to writing on speculative matters, nor to delivering little hortatory orations, nor to showing myself off as a man who practises much discipline, or does benevolent acts in order to make a display; and to abstain from rhetoric, and poetry, and fine writing; and not to walk about in the house in my outdoor dress, nor to do other things of the kind; and to write my letters with simplicity, like the letter which Rusticus wrote from Sinuessa to my mother; and with respect to those who have offended me by words, or done me wrong, to be easily disposed to be pacified and reconciled, as soon as they have shown a readiness to be reconciled; and to read carefully, and not to be satisfied with a superficial understanding of a book; nor hastily to give my assent to those who talk overmuch; and I am indebted to him for being acquainted with the discourses of Epictetus, which he communicated to me out of his own collection.

8. From Apollonius I learned freedom of will and undeviating steadiness of purpose; and to look to nothing else, not even for a moment, except to reason;

* From Marcus Aurelius Antoninus, *Meditations* (trans. George Long, 1862).

and to be always the same, in sharp pains, on the occasion of the loss of a child, and in long illness; and to see clearly in a living example that the same man can be both most resolute and yielding, and not peevish in giving his instruction; and to have had before my eyes a man who clearly considered his experience and his skill in expounding philosophical principles as the smallest of his merits; and from him I learned how to receive from friends what are esteemed favours, without being either humbled by them or letting them pass unnoticed.

9. From Sextus, a benevolent disposition, and the example of a family governed in a fatherly manner, and the idea of living conformably to nature; and gravity without affectation, and to look carefully after the interests of friends, and to tolerate ignorant persons, and those who form opinions without consideration: he had the power of readily accommodating himself to all, so that intercourse with him was more agreeable than any flattery; and at the same time he was most highly venerated by those who associated with him: and he had the faculty both of discovering and ordering, in an intelligent and methodical way, the principles necessary for life; and he never showed anger or any other passion, but was entirely free from passion, and also most affectionate; and he could express approbation without noisy display, and he possessed much knowledge without ostentation.

10. From Alexander the grammarian, to refrain from fault-finding, and not in a reproachful way to chide those who uttered any barbarous or solecistic or strange-sounding expression; but dexterously to introduce the very expression which ought to have been used, and in the way of answer or giving confirmation, or joining in an inquiry about the thing itself, not about the word, or by some other fit suggestion.

11. From Fronto I learned to observe what envy, and duplicity, and hypocrisy are in a tyrant, and that generally those among us who are called Patricians are rather deficient in paternal affection.

12. From Alexander the Platonic, not frequently nor without necessity to say to any one, or to write in a letter, that I have no leisure; nor continually to excuse the neglect of duties required by our relation to those with whom we live, by alleging urgent occupations.

13. From Catulus, not to be indifferent when a friend finds fault, even if he should find fault without reason, but to try to restore him to his usual disposition; and to be ready to speak well of teachers, as it is reported of Domitius and Athenodotus; and to love my children truly.

14. From my brother Severus, to love my kin, and to love truth, and to love justice; and through him I learned to know Thræsea, Helvidius, Cato, Dion, Brutus; and from him I received the idea of a polity in which there is the same law for all, a polity administered with regard to equal rights and equal freedom of speech, and the idea of a kingly government which respects most of all the freedom of the governed; I learned from him also consistency and undeviating steadiness in my regard for philosophy; and a disposition to do good, and to give to others readily, and to cherish good hopes, and to believe that I am loved by my friends; and in him I observed no concealment of his opinions with respect to those whom he condemned, and that his friends had no need to conjecture what he wished or did not wish, but it was quite plain.

15. From Maximus I learned self-government, and not to be led aside by anything; and cheerfulness in all circumstances, as well as in illness; and a just admixture in the moral character of sweetness and dignity, and to do what was set before me without complaining. I observed that everybody believed that he thought as he spoke, and that in all that he did he never had any bad intention; and he never showed amazement and surprise, and was never in a hurry, and never put off doing a thing, nor was perplexed nor dejected, nor did he ever laugh to disguise his vexation, nor, on the other hand, was he ever passionate or

suspicious. He was accustomed to do acts of beneficence, and was ready to forgive, and was free from all falsehood; and he presented the appearance of a man who could not be diverted from right rather than of a man who had been improved. I observed, too, that no man could ever think that he was despised by Maximus, or ever venture to think himself a better man. He had also the art of being humorous in an agreeable way.

16. In my father I observed mildness of temper, and unchangeable resolution in the things which he had determined after due deliberation; and no vainglory in those things which men call honours; and a love of labour and perseverance; and a readiness to listen to those who had anything to propose for the common weal; and undeviating firmness in giving to every man according to his deserts; and a knowledge derived from experience of the occasions for vigorous action and for remission. And I observed that he had overcome all passion for boys; and he considered himself no more than any other citizen; and he released his friends from all obligation to sup with him or to attend him of necessity when he went abroad, and those who had failed to accompany him, by reason of any urgent circumstances, always found him the same. I observed too his habit of careful inquiry in all matters of deliberation, and his persistency, and that he never stopped his investigation through being satisfied with appearances which first present themselves; and that his disposition was to keep his friends, and not be soon tired of them, nor yet to be extravagant in his affection; and to be satisfied on all occasions, and cheerful; and to foresee things a long way off, and to provide for the smallest without display; and to check immediately popular applause and all flattery; and to be ever watchful over the things which were necessary for the administration of the empire, and to be a good manager of the expenditure, and patiently to endure the blame which he got for such conduct; and he was neither superstitious with respect to the gods, nor did he court men by gifts or by trying to

please them, or by flattering the populace; but he showed sobriety in all things and firmness, and never any mean thoughts or action, nor love of novelty. And the things which conduce in any way to the commodity of life, and of which fortune gives an abundant supply, he used without arrogance and without excusing himself; so that when he had them, he enjoyed them without affectation, and when he had them not, he did not want them. No one could ever say of him that he was either a sophist or a home-bred flippant slave or a pedant; but every one acknowledged him to be a man ripe, perfect, above flattery, able to manage his own and other men's affairs. Besides this, he honoured those who were true philosophers, and he did not reproach those who pretended to be philosophers, nor yet was he easily led by them. He was also easy in conversation, and he made himself agreeable without any offensive affection. He took a reasonable care of his body's health, not as one who was greatly attached to life, nor out of regard to personal appearance, nor yet in a careless way, but so that, through his own attention, he very seldom stood in need of the physician's art or of medicine or external applications. He was most ready to give way without envy to those who possessed any particular faculty, such as that of eloquence or knowledge of the law or of morals, or of anything else; and he gave them his help, that each might enjoy reputation according to his deserts; and he always acted conformably to the institutions of his country, without showing any affectation of doing so. Further, he was not fond of change nor unsteady, but he loved to stay in the same places, and to employ himself about the same things; and after his paroxysms of headache he came immediately fresh and vigorous to his usual occupations. His secrets were not many, but very few and very rare, and these only about public matters; and he showed prudence and economy in the exhibition of the public spectacles and the construction of public buildings, his donations to the people, and in such things,

for he was a man who looked to what ought to be done, not to the reputation which is got by a man's acts. He did not take the bath at unseasonable hours; he was not fond of building houses, nor curious about what he ate, nor about the texture and colour of his clothes, nor about the beauty of his slaves. His dress came from Lorium, his villa on the coast, and from Lanuvium generally. We know how he behaved to the toll-collector at Tusculum who asked his pardon; and such was all his behaviour. There was in him nothing harsh, nor implacable, nor violent, nor, as one may say, anything carried to the sweating point; but he examined all things severally, as if he had abundance of time, and without confusion, in an orderly way, vigorously and consistently. And that might be applied to him which is recorded of Socrates, that he was able to abstain from, and to enjoy, those things which many are too weak to abstain from, and cannot enjoy without excess. But to be strong enough both to bear the one and to be sober in the other is the mark of a man who has a perfect and invincible soul, such as he showed in the illness of Maximus.

17. To the gods I am indebted for having good grandfathers, good parents, a good sister, good teachers, good associates, good kinsmen and friends, nearly everything good. Further, I owe it to the gods that I was not hurried into any offence against any of them, though I had a disposition which, if opportunity had offered, might have led me to do something of this kind; but, through their favour, there never was such a concurrence of circumstances as put me to the trial. Further, I am thankful to the gods that I was no longer brought up with my grandfather's concubine, and that I preserved the flower of my youth, and that I did not make proof of my virility before the proper season, but even deferred the time; that I was subjected to a ruler and a father who was able to take away all pride from me, and to bring me to the knowledge that it is possible for a man to live in a palace without wanting

either guards or embroidered dresses, or torches and statues, and suchlike show; but that it is in such a man's power to bring himself very near to the fashion of a private person, without being for this reason either meaner in thought, or more remiss in action, with respect to the things which must be done for the public interest in a manner that befits a ruler. I thank the gods for giving me such a brother, who was able by his moral character to rouse me to vigilance over myself, and who, at the same time, pleased me by his respect and affection; that my children have not been stupid nor deformed in body; that I did not make more proficiency in rhetoric, poetry, and the other studies, in which I should perhaps have been completely engaged, if I had seen that I was making progress in them; that I made haste to place those who brought me up in the station of honour, which they seemed to desire, without putting them off with hope of my doing it some time after, because they were then still young; that I knew Apollonius, Rusticus, Maximus; that I received clear and frequent impressions about living according to nature, and what kind of a life that is, so that, so far as depended on the gods, and their gifts, and help, and inspirations, nothing hindered me from forthwith living according to nature, though I still fall short of it through my own fault, and through not observing the admonitions of the gods, and, I may almost say, their direct instructions; that my body has held out so long in such a kind of life; that I never touched either *Benedicta* or *Theodotus*, and that, after having fallen into amatory passions, I was cured; and, though I was often out of humour with *Rusticus*, I never did anything of which I had occasion to repent; that, though it was my mother's fate to die young, she spent the last years of her life with me; that, whenever I wished to help any man in his need, or on any other occasion, I was never told that I had not the means of doing it; and that to myself the same necessity never happened, to receive any-

thing from another; that I have such a wife, so obedient, and so affectionate, and so simple; that I had abundance of good masters for my children; and that remedies have been shown to me by dreams, both others, and against blood-spitting and giddiness; and that, when I had an inclination to philosophy, I did not fall into the hands of any sophist, and that I did not waste my time on writers of histories, or in the resolution of syllogisms, or occupy myself about the investigation of appearances in the heavens; for all these things require the help of the gods and fortune.

HUMAN REASON AND ONE WORLD

1. That which rules within, when it is according to nature, is so affected with respect to the events which happen, that it always easily adapts itself to that which is possible and is presented to it. For it requires no definite material, but it moves towards its purpose, under certain conditions however; and it makes a material for itself out of that which opposes it, as fire lays hold of what falls into it, by which a small light would have been extinguished: but when the fire is strong, it soon appropriates to itself the matter which is heaped on it, and consumes it, and rises higher by means of this very material.

2. Let no act be done without a purpose, nor otherwise than according to the perfect principles of art.

3. Men seek retreats for themselves, houses in the country, sea-shores, and mountains; and thou too art wont to desire such things very much. But this is altogether a mark of the most common sort of men, for it is in thy power whenever thou shalt choose to retire into thyself. For nowhere either with more quiet or more freedom from trouble does a man retire than into his own soul, particularly when he has within him such thoughts that by looking into them he is immediately in perfect tranquillity; and I affirm that tranquillity is nothing else

than the good ordering of the mind. Constantly then give to thyself this retreat, and renew thyself; and let thy principles be brief and fundamental, which, as soon as thou shalt recur to them, will be sufficient to cleanse the soul completely, and to send thee back free from all discontent with the things to which thou returnest. For with what art thou discontented? With the badness of men? Recall to thy mind this conclusion, that rational animals exist for one another, and that to endure is a part of justice, and that men do wrong involuntarily; and consider how many already, after mutual enmity, suspicion, hatred, and fighting, have been stretched dead, reduced to ashes; and be quiet at last.—But perhaps thou art dissatisfied with that which is assigned to thee out of the universe.—Recall to thy recollection this alternative; either there is providence or atoms, fortuitous concurrence of things; or remember the arguments by which it has been proved that the world is a kind of political community, and be quiet at last.—But perhaps corporeal things will still fasten upon thee.—Consider then further that the mind mingles not with the breath, whether moving gently or violently, when it has once drawn itself apart and discovered its own power, and think also of all that thou hast heard and assented to about pain and pleasure, and be quiet at last.—But perhaps the desire of the thing called fame will torment thee.—See how soon everything is forgotten, and look at the chaos of infinite time on each side of the present, and the emptiness of applause, and the changeableness and want of judgement in those who pretend to give praise, and the narrowness of the space within which it is circumscribed, and be quiet at last. For the whole earth is a point, and how small a nook in it is this thy dwelling, and how few are there in it, and what kind of people are they who will praise thee.

This then remains: Remember to retire into this little territory of thy own, and above all do not distract or strain thyself, but be free, and look at things as

a man, as a human being, as a citizen, as a mortal. But among the things readiest to thy hand to which thou shalt turn, let there be these, which are two. One is that things do not touch the soul, for they are external and remain immovable; but our perturbations come only from the opinion which is within. The other is that all these things, which thou seest, change immediately and will no longer be; and constantly bear in mind how many of these changes thou hast already witnessed. The universe is transformation: life is opinion.

4. If our intellectual part is common, the reason also, in respect of which we are rational beings, is common: if this is so, common also is the reason which commands us what to do, and what not to do; if this is so, there is a common law also; if this is so, we are fellow-citizens; if this is so, we are members of some political community; if this is so, the world is in a manner a state. For of what other common political community will any one say that the whole human race are members? And from thence, from this common political community comes also our very intellectual faculty and reasoning faculty and our capacity for law; or whence do they come? For as my earthly part is a portion given to me from certain earth, and that which is watery from another element, and that which is hot and fiery from some peculiar source (for nothing comes out of that which is nothing, as nothing also returns to non-existence), so also the intellectual part comes from some source.

5. Death is such as generation is, a mystery of nature; a composition out of the same elements, and a decomposition into the same; and altogether not a thing of which any man should be ashamed, for it is not contrary to the nature of a reasonable animal, and not contrary to the reason of our constitution.

6. It is natural that these things should be done by such persons, it is a matter of necessity; and if a man will not have it so, he will not allow the fig-tree to have juice. But by all means bear this in

mind, that within a very short time both thou and he will be dead; and soon not even your names will be left behind.

7. Take away thy opinion, and then there is taken away the complaint, "I have been harmed." Take away the complaint, "I have been harmed," and the harm is taken away.

8. That which does not make a man worse than he was, also does not make his life worse, nor does it harm him either from without or from within.

9. The nature of that which is universally useful has been compelled to do this.

10. Consider that everything which happens, happens justly, and if thou observe carefully, thou wilt find it to be so. I do not say only with respect to the continuity of the series of things, but with respect to what is just, and as if it were done by one who assigns to each thing its value. Observe then as thou hast begun; and whatever thou doest, do it in conjunction with this, the being good, and in the sense in which a man is properly understood to be good. Keep to this in every action.

11. Do not have such an opinion of things as he has who does thee wrong, or such as he wishes thee to have, but look at them as they are in truth.

12. A man should always have these two rules in readiness; the one, to do only whatever the reason of the ruling and legislating faculty may suggest for the use of men; the other, to change thy opinion, if there is any one at hand who sets thee right and moves thee from any opinion. But this change of opinion must proceed only from a certain persuasion, as of what is just or of common advantage, and the like, not because it appears pleasant or brings reputation.

13. Hast thou reason? I have.—Why then dost not thou use it? For if this does its own work, what else dost thou wish?

ELEMENTS OF STOICISM

1. He who acts unjustly acts impiously. For since the universal nature has

made rational animals for the sake of one another to help one another according to their deserts, but in no way to injure one another, he who transgresses her will, is clearly guilty of impiety towards the highest divinity. And he too who lies is guilty of impiety to the same divinity; for the universal nature is the nature of things that are; and things that are have a relation to all things that come into existence. And further, this universal nature is named truth, and is the prime cause of all things that are true. He then who lies intentionally is guilty of impiety inasmuch as he acts unjustly by deceiving; and he also who lies unintentionally, inasmuch as he is at variance with the universal nature, and inasmuch as he disturbs the order by fighting against the nature of the world; for he fights against it, who is moved of himself to that which is contrary to truth, for he had received powers from nature through the neglect of which he is not able now to distinguish falsehood from truth. And indeed he who pursues pleasure as good, and avoids pain as evil, is guilty of impiety. For of necessity such a man must often find fault with the universal nature, alleging that it assigns things to the bad and the good contrary to their deserts, because frequently the bad are in the enjoyment of pleasure and possess the things which procure pleasure, but the good have pain for their share and the things which cause pain. And further, he who is afraid of pain will sometimes also be afraid of some of the things which will happen in the world, and even this is impiety. And he who pursues pleasure will not abstain from injustice, and this is plainly impiety. Now with respect to the things towards which the universal nature is equally affected—for it would not have made both, unless it was equally affected towards both—towards these they who wish to follow nature should be of the same mind with it, and equally affected. With respect to pain, then, and pleasure, or death and life, or honour and dishonour, which the universal nature employs equally, whoever is not equally affected

is manifestly acting impiously. And I say that the universal nature employs them equally, instead of saying that they happen alike to those who are produced in continuous series and to those who come after them by virtue of a certain original movement of Providence, according to which it moved from a certain beginning to this ordering of things, having conceived certain principles of the things which were to be, and having determined powers productive of beings and of changes and of suchlike successions.

2. It would be a man's happiest lot to depart from mankind without having had any taste of lying and hypocrisy and luxury and pride. However to breathe out one's life when a man has had enough of these things is the next best voyage, as the saying is. Hast thou determined to abide with vice, and has not experience yet induced thee to fly from this pestilence? For the destruction of the understanding is a pestilence, much more indeed than any such corruption and change of this atmosphere which surrounds us. For this corruption is a pestilence of animals so far as they are animals; but the other is a pestilence of men so far as they are men.

3. Do not despise death, but be well content with it, since this too is one of those things which nature wills. For such as it is to be young and to grow old, and to increase and to reach maturity, and to have teeth and beard and grey hairs, and to beget, and to be pregnant and to bring forth, and all the other natural operations which the seasons of thy life bring, such also is dissolution. This, then, is consistent with the character of a reflecting man, to be neither careless nor impatient nor contemptuous with respect to death, but to wait for it as one of the operations of nature. As thou now waitest for the time when the child shall come out of thy wife's womb, so be ready for the time when thy soul shall fall out of this envelope. But if thou requirest also a vulgar kind of comfort which shall reach thy heart, thou wilt be

made best reconciled to death by observing the objects from which thou art going to be removed, and the morals of those with whom thy soul will no longer be mingled. For it is no way right to be offended with men, but it is thy duty to care for them and to bear with them gently; and yet to remember that thy departure will be not from men who have the same principles as thyself. For this is the only thing, if there be any, which could draw us the contrary way and attach us to life, to be permitted to live with those who have the same principles as ourselves. But now thou seest how great is the trouble arising from the discordance of those who live together, so that thou mayest say, Come quick, O death, lest perchance I, too, should forget myself.

4. He who does wrong does wrong against himself. He who acts unjustly acts unjustly to himself, because he makes himself bad.

5. He often acts unjustly who does not do a certain thing; not only he who does a certain thing.

6. Thy present opinion founded on understanding, and thy present conduct directed to social good, and thy present disposition of contentment with everything which happens—that is enough.

7. Wipe out imagination: check desire: extinguish appetite: keep the ruling faculty in its own power.

8. Among the animals which have not reason one life is distributed; but among reasonable animals one intelligent soul is distributed: just as there is one earth of all things which are of an earthy nature, and we see by one light, and breathe one air, all of us that have the faculty of vision and all that have life.

9. All things which participate in anything which is common to them all move towards that which is of the same kind with themselves. Everything which is earthy turns towards the earth, everything which is liquid flows together, and everything which is of an aerial kind does the same, so that they require something to keep them asunder, and the application of force. Fire indeed moves up-

wards on account of the elemental fire, but it is so ready to be kindled together with all the fire which is here, that even every substance which is somewhat dry, is easily ignited, because there is less mingled with it of that which is a hindrance to ignition. Accordingly then everything also which participates in the common intelligent nature moves in like manner towards that which is of the same kind with itself, or moves even more. For so much as it is superior in comparison with all other things, in the same degree also is it more ready to mingle with and to be fused with that which is akin to it. Accordingly among animals devoid of reason we find swarms of bees, and herds of cattle, and the nurture of young birds, and in a manner, loves; for even in animals there are souls, and that power which brings them together is seen to exert itself in the superior degree, and in such a way as never has been observed in plants nor in stones nor in trees. But in rational animals there are political communities and friendships, and families and meetings of people; and in wars, treaties and armistices. But in the things which are still superior, even though they are separated from one another, unity in a manner exists, as in the stars. Thus the ascent to the higher degree is able to produce a sympathy even in things which are separated. See, then, what now takes place. For only intelligent animals have now forgotten this mutual desire and inclination, and in them alone the property of flowing together is not seen. But still though men strive to avoid this union, they are caught and held by it, for their nature is too strong for them; and thou wilt see what I say, if thou only observest. Sooner, then, will one find anything earthy which comes in contact with no earthy thing than a man altogether separated from other men.

10. Both man and God and the universe produce fruit; at the proper seasons each produces it. But if usage has especially fixed these terms to the vine and like things, this is nothing. Reason produces fruit both for all and for itself, and

there are produced from it other things of the same kind as reason itself.

11. If thou art able, correct by teaching those who do wrong; but if thou canst not, remember that indulgence is given to thee for this purpose. And the gods, too, are indulgent to such persons; and for some purposes they even help them to get health, wealth, reputation; so kind they are. And it is in thy power also; or say, who hinders thee?

12. Labour not as one who is wretched, nor yet as one who would be pitied or admired: but direct thy will to one thing only, to put thyself in motion and to check thyself, as the social reason requires.

13. To-day I have got out of all trouble, or rather I have cast out all trouble, for it was not outside, but within and in my opinions.

14. All things are the same, familiar in experience, and ephemeral in time, and worthless in the matter. Everything now is just as it was in the time of those whom we have buried.

15. Things stand outside of us, themselves by themselves, neither knowing aught of themselves, nor expressing any judgement. What is it, then, which does judge about them? The ruling faculty.

16. Not in passivity, but in activity lie the evil and the good of the rational social animal, just as his virtue and his vice lie not in passivity, but in activity.

17. For the stone which has been thrown up it is no evil to come down, nor indeed any good to have been carried up.

18. Penetrate inwards into men's leading principles, and thou wilt see what judges thou art afraid of, and what kind of judges they are of themselves.

19. All things are changing: and thou thyself art in continuous mutation and in a manner in continuous destruction, and the whole universe too.

20. It is thy duty to leave another man's wrongful act there where it is.

21. Termination of activity, cessation from movement and opinion, and in a sense their death, is no evil. Turn thy thoughts now to the consideration of thy life, thy life as a child, as a youth, thy

manhood, thy old age, for in these also every change was a death. Is this anything to fear? Turn thy thoughts now to thy life under thy grandfather, then to thy life under thy mother, then to thy life under thy father; and as thou findest many other differences and changes and terminations, ask thyself, Is this anything to fear? In like manner, then, neither are the termination and cessation and change of thy whole life a thing to be afraid of.

22. Hasten to examine thy own ruling faculty and that of the universe and that of thy neighbour: thy own that thou mayest make it just: and that of the universe, that thou mayest remember of what thou art a part; and that of thy neighbour, that thou mayest know whether he has acted ignorantly or with knowledge, and that thou mayest also consider that his ruling faculty is akin to thine.

23. As thou thyself art a component part of a social system, so let every act of thine be a component part of social life. Whatever act of thine then has no reference either immediately or remotely to a social end, this tears asunder thy life, and does not allow it to be one, and it is of the nature of a mutiny, just as when in a popular assembly a man acting by himself stands apart from the general agreement.

24. Quarrels of little children and their sports, and poor spirits carrying about dead bodies, such is everything; and so what is exhibited in the representation of the mansions of the dead strikes our eyes more clearly.

25. Examine into the quality of the form of an object, and detach it altogether from its material part, and then contemplate it; then determine the time, the longest which a thing of this peculiar form is naturally made to endure.

26. Thou hast endured infinite troubles through not being contented with thy ruling faculty, when it does the things which it is constituted by nature to do. But enough of this.

27. When another blames thee or hates thee, or when men say about thee anything injurious, approach their poor

souls, penetrate within, and see what kind of men they are. Thou wilt discover that there is no reason to take any trouble that these men may have this or that opinion about thee. However thou must be well disposed towards them, for by nature they are friends. And the gods too aid them in all ways, by dreams, by signs, towards the attainment of those things on which they set a value.

28. The periodic movements of the universe are the same, up and down from age to age. And either the universal intelligence puts itself in motion for every separate effect, and if this is so, be thou content with that which is the result of its activity; or it puts itself in motion once, and everything else comes by way of sequence in a manner; or indivisible elements are the origin of all things.—In a word, if there is a god, all is well; and if chance rules, do not thou also be governed by it.

Soon will the earth cover us all: then the earth, too, will change, and the things also which result from change will continue to change for ever, and these again for ever. For if a man reflects on the changes and transformations which follow one another like wave after wave and their rapidity, he will despise everything which is perishable.

29. The universal cause is like a winter torrent: it carries everything along with it. But how worthless are all these poor people who are engaged in matters political, and, as they suppose, are playing the philosopher! All drivellers. Well then, man: do what nature now requires. Set thyself in motion, if it is in thy power, and do not look about thee to see if any one will observe it nor yet expect Plato's *Republic*: but be content if the smallest thing goes on well, and consider such an event to be no small matter. For who can change men's opinions? And without a change of opinions what else is there than the slavery of men who groan while they pretend to obey? Come now and tell me of Alexander and Philip and Demetrius of Phalerum. They themselves shall judge whether they discovered what

the common nature required, and trained themselves accordingly. But if they acted like tragedy heroes, no one has condemned me to imitate them. Simple and modest is the work of philosophy. Draw me not aside to indolence and pride.

30. Look down from above on the countless herds of men and their countless solemnities, and the infinitely varied voyagings in storms and calms, and the differences among those who are born, who live together, and die. And consider, too, the life lived by others in olden time, and the life of those who will live after thee, and the life now lived among barbarous nations, and how many know not even thy name, and how many will soon forget it, and how they who perhaps now are praising thee will very soon blame thee, and that neither a posthumous name is of any value, nor reputation, nor anything else.

31. Let there be freedom from perturbations with respect to the things which come from the external cause; and let there be justice in the things done by virtue of the internal cause, that is, let there be movement and action terminating in this, in social acts, for this is according to thy nature.

32. Thou canst remove out of the way many useless things among those which disturb thee, for they lie entirely in thy opinion; and thou wilt then gain for thyself ample space by comprehending the whole universe in thy mind, and by contemplating the eternity of time, and observing the rapid change of every several thing, how short is the time from birth to dissolution, and the illimitable time before birth as well as the equally boundless time after dissolution.

33. All that thou seest will quickly perish, and those who have been spectators of its dissolution will very soon perish too. And he who dies at the extremest old age will be brought into the same condition with him who died prematurely.

34. What are these men's leading principles, and about what kind of things are they busy, and for what kind of rea-

sons do they love and honour? Imagine that thou seest their poor souls laid bare. When they think that they do harm by their blame or good by their praise, what an idea!

35. Loss is nothing else than change. But the universal nature delights in change, and in obedience to her all things are now done well, and from eternity have been done in like form, and will be such to time without end. What, then, dost thou say? That all things have been and all things always will be bad, and that no power has ever been found in so many gods to rectify these things, but the world has been condemned to be bound in never ceasing evil?

36. The rottenness of the matter which is the foundation of everything! Water, dust, bones, filth: or again, marble rocks, the callosities of the earth; and gold and silver, the sediments; and garments, only bits of hair; and purple dye, blood; and everything else is of the same kind. And that which is of the nature of breath is also another thing of the same kind, changing from this to that.

37. Enough of this wretched life and murmuring and apish tricks. Why art thou disturbed? What is there new in this? What unsettles thee? Is it the form of the thing? Look at it. Or is it the matter? Look at it. But besides these there is nothing. Towards the gods, then, now become at last more simple and better. It is the same whether we examine these things for a hundred years or three.

38. If any man has done wrong, the harm is his own. But perhaps he has not done wrong.

39. Either all things proceed from one intelligent source and come together as in one body, and the part ought not to find fault with what is done for the benefit of the whole; or there are only atoms, and nothing else than mixture and dispersion. Why, then, art thou disturbed? Say to the ruling faculty, Art thou dead, art thou corrupted, art thou playing the hypocrite, art thou become a beast, dost thou herd and feed with the rest?

40. Either the gods have no power or

they have power. If then, they have no power, why dost thou pray to them? But if they have power, why dost thou not pray for them to give thee the faculty of not fearing any of the things which thou fearest, or of not desiring any of the things which thou desirest, or not being pained at anything, rather than pray that any of these things should not happen or happen? for certainly if they can co-operate with men, they can co-operate for these purposes. But perhaps thou wilt say, the gods have placed them in thy power. Well, then, is it not better to use what is in thy power like a free man than to desire in a slavish and abject way what is not in thy power? And who has told thee that the gods do not aid us even in the things which are in our power? Begin, then, to pray for such things, and thou wilt see. One man prays thus: How shall I be able to lie with that woman? Do thou pray thus: How shall I not desire to lie with her? Another prays thus: How shall I be released from this? Another prays: How shall I not desire to be released? Another thus: How shall I not lose my little son? Thou thus: How shall I not be afraid to lose him? In fine, turn thy prayers this way, and see what comes.

41. Epicurus says, In my sickness my conversation was not about my bodily sufferings, nor, says he, did I talk on such subjects to those who visited me; but I continued to discourse on the nature of things as before, keeping to this main point, how the mind, while participating in such movements as go on in the poor flesh, shall be free from perturbations and maintain its proper good. Nor did I, he says, give the physicians an opportunity of putting on solemn looks, as if they were doing something great, but my life went on well and happily. Do, then, the same that he did both in sickness, if thou art sick, and in any other circumstances; for never to desert philosophy in any events that may befall us, nor to hold trifling talk either with an ignorant man or with one unacquainted with nature, is a principle of all schools

of philosophy; but to be intent only on that which thou art now doing and on the instrument by which thou doest it.

42. When thou art offended with any man's shameless conduct, immediately ask thyself, Is it possible, then, that shameless men should not be in the world? It is not possible. Do not, then, require what is impossible. For this man also is one of those shameless men who must of necessity be in the world. Let the same considerations be present to thy mind in the case of the knave, and the faithless man, and of every man who does wrong in any way. For at the same time that thou dost remind thyself that it is impossible that such kind of men should not exist, thou wilt become more kindly disposed towards every one individually. It is useful to perceive this, too, immediately when the occasion arises, what virtue nature has given to man to oppose to every wrongful act. For she has given to man, as an antidote against the stupid man, mildness, and against another kind of man some other power. And in all cases it is possible for thee to correct by teaching the man who is gone astray; for every man who errs misses his object and is gone astray. Besides wherein hast thou been injured? For thou wilt find that no one among those against whom thou art irritated has done anything by which thy mind could be made worse; but that which is evil to thee and harmful has its foundation only in the

mind. And what harm is done or what is there strange, if the man who has not been instructed does the acts of an uninstructed man? Consider whether thou shouldst not rather blame thyself, because thou didst not expect such a man to err in such a way. For thou hadst means given thee by thy reason to suppose that it was likely that he would commit this error, and yet thou hast forgotten and art amazed that he has erred. But most of all when thou blamest a man as faithless or ungrateful, turn to thyself. For the fault is manifestly thy own, whether thou didst trust that a man who had such a disposition would keep his promise, or when conferring thy kindness thou didst not confer it absolutely, nor yet in such way as to have received from thy very act all the profit. For what more dost thou want when thou hast done a man a service? Art thou not content that thou hast done something conformable to thy nature, and dost thou seek to be paid for it? Just as if the eye demanded a recompense for seeing or the feet for walking. For as these members are formed for a particular purpose, and by working according to their several constitutions obtain what is their own; so also as man is formed by nature to acts of benevolence, when he has done anything benevolent or in any other way conducive to the common interest, he has acted conformably to his constitution, and he gets what is his own.

III EPICURUS

Letter to Menoecus and Principal Doctrines

EPICURUS TO MENOECUS

Let no one when young delay to study philosophy, nor when he is old grow weary of his study. For no one can come too early or too late to secure the health of his soul. And the man who says that the age for philosophy has either not yet come or has gone by is like the man who says that the age for happiness is not yet come to him, or has passed away. Wherefore both when young and old a man must study philosophy, that as he grows old he may be young in blessings through the grateful recollection of what has been, and that in youth he may be old as well, since he will know no fear of what is to come. We must then meditate on the things that make our happiness, seeing that when that is with us we have all, but when it is absent we do all to win it.

The things which I used unceasingly to commend to you, these do and practice, considering them to be the first principles of the good life. First of all believe that god is a being immortal and blessed, even as the common idea of a god is engraved on men's minds, and do not assign to him anything alien to his immortality or ill-suited to his blessedness: but believe about him everything that can uphold his blessedness and immortality. For gods there are, since the knowledge of them is by clear vision. But they are not such as the many believe them to be: for indeed they do not consistently represent them as they believe them to be. And the impious man is not he who denies the gods of the many, but he who

attaches to the gods the beliefs of the many. For the statements of the many about the gods are not conceptions derived from sensation, but false suppositions, according to which the greatest misfortunes befall the wicked and the greatest blessings the good by the gift of the gods. For men being accustomed always to their own virtues welcome those like themselves, but regard all that is not of their nature as alien.

Become accustomed to the belief that death is nothing to us. For all good and evil consists in sensation, but death is deprivation of sensation. And therefore a right understanding that death is nothing to us makes the mortality of life enjoyable, not because it adds to it an infinite span of time, but because it takes away the craving for immortality. For there is nothing terrible in life for the man who has truly comprehended that there is nothing terrible in not living. So that the man speaks but idly who says that he fears death not because it will be painful when it comes, but because it is painful in anticipation. For that which gives no trouble when it comes, is but an empty pain in anticipation. So death, the most terrifying of ills, is nothing to us, since so long as we exist, death is not with us; but when death comes, then we do not exist. It does not then concern either the living or the dead, since for the former it is not, and the latter are no more.

But the many at one moment shun death as the greatest of evils, at another yearn for it as a respite from the evils in life. But the wise man neither seeks to escape life nor fears the cessation of life, for neither does life offend him nor does the absence of life seem to be any evil. And just as with food

* From Epicurus, *The Extant Writings of Epicurus* (trans. C. Bailey, Oxford University Press, 1928). By permission.

he does not seek simply the larger share and nothing else, but rather the most pleasant, so he seeks to enjoy not the longest period of time, but the most pleasant.

And he who counsels the young man to live well, but the old man to make a good end, is foolish, not merely because of the desirability of life, but also because it is the same training which teaches to live well and to die well. Yet much worse still is the man who says it is good not to be born, but

'once born make haste to pass the gates of Death.'

[Theognis, 427]

For if he says this from conviction why does he not pass away out of life? For it is open to him to do so, if he had firmly made up his mind to this. But if he speaks in jest, his words are idle among men who cannot receive them.

We must then bear in mind that the future is neither ours, nor yet wholly not ours, so that we may not altogether expect it as sure to come, nor abandon hope of it, as if it will certainly not come.

We must consider that of desires some are natural, others vain, and of the natural some are necessary and others merely natural; and of the necessary some are necessary for happiness, others for the repose of the body, and others for very life. The right understanding of these facts enables us to refer all choice and avoidance to the health of the body and the soul's freedom from disturbance, since this is the aim of the life of blessedness. For it is to obtain this end that we always act, namely, to avoid pain and fear. And when this is once secured for us, all the tempest of the soul is dispersed, since the living creature has not to wander as though in search of something that is missing, and to look for some other thing by which he can fulfil the good of the soul and the good of the body. For it is then that we have need of pleasure, when we feel pain owing to the absence of pleasure; but when we do not feel pain, we no longer need pleasure. And for this cause we call pleasure the beginning and end of the blessed life. For we recognize pleasure as the first good innate in us, and from

pleasure we begin every act of choice and avoidance, and to pleasure we return again, using the feeling as the standard by which we judge every good.

And since pleasure is the first good and natural to us, for this very reason we do not choose every pleasure, but sometimes we pass over many pleasures, when greater discomfort accrues to us as the result of them: And similarly we think many pains better than pleasures, since a greater pleasure comes to us when we have endured pains for a long time. Every pleasure then because of its natural kinship to us is good, yet not every pleasure is to be chosen: Even as every pain also is an evil, yet not all are always of a nature to be avoided. Yet by a scale of comparison and by the consideration of advantages and disadvantages we must form our judgment on all these matters. For the good on certain occasions we treat as bad, and conversely the bad as good.

And again independence of desire we think a great good—not that we may at all times enjoy but a few things, but that, if we do not possess many, we may enjoy the few in the genuine persuasion that those have the sweetest pleasure in luxury who least need it, and that all that is natural is easy to be obtained, but that which is superfluous is hard. And so plain savours bring us a pleasure equal to a luxurious diet, when all the pain due to want is removed; and bread and water produce the highest pleasure, when one who needs them puts them to his lips. To grow accustomed therefore to simple and not luxurious diet gives us health to the full, and makes a man alert for the needful employments of life, and when after long intervals we approach luxuries, disposes us better towards them, and fits us to be fearless of fortune.

When, therefore, we maintain that pleasure is the end, we do not mean the pleasures of profligates and those that consist in sensuality, as is supposed by some who are either ignorant or disagree with us or do not understand, but freedom from pain in the body and from trouble in the mind. For it is not continuous drinkings and revellings, nor the satisfaction of lusts, nor

the enjoyment of fish and other luxuries of the wealthy table, which produce a pleasant life, but sober reasoning, searching out the motives for all choice and avoidance, and banishing mere opinions, to which are due the greatest disturbance of the spirit.

Of all this the beginning and the greatest good is prudence. Wherefore prudence is a more precious thing even than philosophy: for from prudence are sprung all the other virtues, and it teaches us that it is not possible to live pleasantly without living prudently and honorably and justly, nor, again, to live a life of prudence, honor, and justice without living pleasantly. For the virtues are by nature bound up with the pleasant life, and the pleasant life is inseparable from them. For indeed who, think you, is a better man than he who holds reverent opinions concerning the gods, and is at all times free from fear of death, and has reasoned out the end ordained by nature? He understands that the limit of good things is easy to fulfil and easy to attain, whereas the course of ills is either short in time or slight in pain: he laughs at destiny, whom some have introduced as the mistress of all things. He thinks that with us lies the chief power in determining events, some of which happen by necessity and some by chance, and some are within our control; for while necessity cannot be called to account, he sees that chance is inconstant, but that which is in our control is subject to no master, and to it are naturally attached praise and blame. For, indeed, it were better to follow the myths about the gods than to become a slave to the destiny of the natural philosophers: For the former suggests a hope of placating the gods by worship, whereas the latter involves a necessity which knows no placation. As to chance, he does not regard it as a god as most men do (for in a god's acts there is no disorder), nor as an uncertain cause of all things: For he does not believe that good and evil are given by chance to man for the framing of a blessed life, but that opportunities for great good and great evil are afforded by it. He therefore thinks it better to be unfortunate in reasonable action than to prosper in unreason. For it

is better in a man's actions that what is well chosen should fail, rather than that what is ill chosen should be successful owing to chance.

Meditate therefore on these things and things akin to them night and day by yourself, and with a companion like to yourself, and never shall you be disturbed waking or asleep, but you shall live like a god among men. For a man who lives among immortal blessings is not like to a mortal being.

PRINCIPAL DOCTRINES

I. The blessed and immortal nature knows no trouble itself nor causes trouble to any other, so that it is never constrained by anger or favor. For all such things exist only in the weak.

II. Death is nothing to us: For that which is dissolved is without sensation; and that which lacks sensation is nothing to us.

III. The limit of quantity in pleasures is the removal of all that is painful. Wherever pleasure is present, as long as it is there, there is neither pain of body nor of mind, nor of both at once.

IV. Pain does not last continuously in the flesh, but the acutest pain is there for a very short time, and even that which just exceeds the pleasure in the flesh does not continue for many days at once. But chronic illnesses permit a predominance of pain over pleasure in the flesh.

V. It is not possible to live pleasantly without living prudently and honorably and justly, nor again to live a life of prudence, honor, and justice without living pleasantly. And the man who does not possess the pleasant life, is not living prudently and honorably and justly, and the man who does not possess the virtuous life, cannot possibly live pleasantly.

VI. To secure protection from men anything is a natural good, by which you may be able to attain this end.

VII. Some men wished to become famous and conspicuous, thinking that they would thus win for themselves safety from other men. Wherefore if the life of such men is safe, they have obtained the good which nature craves; But if it is not safe,

they do not possess that for which they strove at first by the instinct of nature.

VIII. No pleasure is a bad thing in itself: but the means which produce some pleasures bring with them disturbances many times greater than the pleasures.

IX. If every pleasure could be intensified so that it lasted and influenced the whole organism or the most essential parts of our nature, pleasures would never differ from one another.

X. If the things that produce the pleasures of profligates could dispel the fears of the mind about the phenomena of the sky and death and its pains, and also teach the limits of desires and of pains, we should never have cause to blame them: For they would be filling themselves full with pleasures from every source and never have pain of body or mind, which is the evil of life.

XI. If we were not troubled by our suspicions of the phenomena of the sky and about death, fearing that it concerns us, and also by our failure to grasp the limits of pains and desires, we should have no need of natural science.

XII. A man cannot dispel his fear about the most important matters if he does not know what is the nature of the universe but suspects the truth of some mythical story. So that without natural science it is not possible to attain our pleasures unalloyed.

XIII. There is no profit in securing protection in relation to men, if things above and things beneath the earth and indeed all in the boundless universe remain matters of suspicion.

XIV. The most unalloyed source of protection from men, which is secured to some extent by a certain force of expulsion, is in fact the immunity which results from a quiet life and the retirement from the world.

XV. The wealth demanded by nature is both limited and easily procured; that demanded by idle imaginings stretches on to infinity.

XVI. In but few things chance hinders a wise man, but the greatest and most important matters reason has ordained and throughout the whole period of life does and will ordain.

XVII. The just man is most free from trouble, the unjust most full of trouble.

XVIII. The pleasure in the flesh is not increased, when once the pain due to want is removed, but is only varied: and the limit as regards pleasure in the mind is begotten by the reasoned understanding of these very pleasures and of the emotions akin to them, which used to cause the greatest fear to the mind.

XIX. Infinite time contains no greater pleasure than limited time, if one measures by reason the limits of pleasure.

XX. The flesh perceives the limits of pleasure as unlimited and unlimited time is required to supply it. But the mind, having attained a reasoned understanding of the ultimate good of the flesh and its limits and having dissipated the fears concerning the time to come, supplies us with the complete life, and we have no further need of infinite time: but neither does the mind shun pleasure, nor, when circumstances begin to bring about the departure from life, does it approach its end as though it fell short in any way of the best life.

XXI. He who has learned the limits of life knows that that which removes the pain due to want and makes the whole of life complete is easy to obtain; so that there is no need of actions which involve competition.

XXII. We must consider both the real purpose and all the evidence of direct perception, to which we always refer the conclusions of opinion; otherwise, all will be full of doubt and confusion.

XXIII. If you fight against all sensations, you will have no standard by which to judge even those of them which you say are false.

XXIV. If you reject any single sensation and fail to distinguish between the conclusion of opinion as to the appearance awaiting confirmation and that which is actually given by the sensation or feeling, or each intuitive apprehension of the mind, you will confound all other sensations as well with the same groundless opinion, so that you will reject every standard of judgement. And if among the mental images created by your opinion you affirm both that which awaits

confirmation and that which does not, you will not escape error, since you will have preserved the whole cause of doubt in every judgement between what is right and what is wrong.

XXV. If on each occasion instead of referring your actions to the end of nature, you turn to some other nearer standard when you are making a choice or an avoidance, your actions will not be consistent with your principles.

XXVI. Of desires, all that do not lead to a sense of pain, if they are not satisfied, are not necessary, but involve a craving which is easily dispelled, when the object is hard to procure or they seem likely to produce harm.

XXVII. Of all the things which wisdom acquires to produce the blessedness of the complete life, far the greatest is the possession of friendship.

XXVIII. The same conviction which has given us confidence that there is nothing terrible that lasts for ever or even for long, has also seen the protection of friendship most fully completed in the limited evils of this life.

XXIX. Among desires some are natural and necessary, some natural but not necessary, and others neither natural nor necessary, but due to idle imagination.

XXX. Wherever in the case of desires which are physical, but do not lead to a sense of pain, if they are not fulfilled, the effort is intense, such pleasures are due to idle imagination, and it is not owing to their own nature that they fail to be dispelled, but owing to the empty imaginings of the man.

XXXI. The justice which arises from nature is a pledge of mutual advantage to restrain men from harming one another and save them from being harmed.

XXXII. For all living things which have not been able to make compacts not to harm one another or be harmed, nothing ever is either just or unjust; and likewise too for all tribes of men which have been unable or unwilling to make compacts not to harm or be harmed.

XXXIII. Justice never is anything in itself, but in the dealings of men with one another in any place whatever and at any

time it is a kind of compact not to harm or be harmed.

XXXIV. Injustice is not an evil in itself, but only in consequence of the fear which attaches to the apprehension of being unable to escape those appointed to punish such actions.

XXXV. It is not possible for one who acts in secret contravention of the terms of the compact not to harm or be harmed, to be confident that he will escape detection, even if at present he escapes a thousand times. For up to the time of death it cannot be certain that he will indeed escape.

XXXVI. In its general aspect justice is the same for all, for it is a kind of mutual advantage in the dealings of men with one another: but with reference to the individual peculiarities of a country or any other circumstances the same thing does not turn out to be just for all.

XXXVII. Among actions which are sanctioned as just by law, that which is proved on examination to be of advantage in the requirements of men's dealings with one another, has the guarantee of justice, whether it is the same for all or not. But if a man makes a law and it does not turn out to lead to advantage in men's dealings with each other, then it no longer has the essential nature of justice. And even if the advantage in the matter of justice shifts from one side to the other, but for a while accords with the general concept, it is none the less just for that period in the eyes of those who do not confound themselves with empty sounds but look to the actual facts.

XXXVIII. Where, provided the circumstances have not been altered, actions which were considered just, have been shown not to accord with the general concept in actual practice, then they are not just. But where, when circumstances have changed, the same actions which were sanctioned as just no longer lead to advantage, there they were just at the time when they were of advantage for the dealings of fellow-citizens with one another; but subsequently they are no longer just, when no longer of advantage.

XXXIX. The man who has best ordered the element of disquiet arising from

external circumstances has made those things that he could akin to himself and the rest at least not alien: but with all to which he could not do even this, he has refrained from mixing, and has expelled from his life all which it was of advantage to treat thus.

XL. As many as possess the power to

procure complete immunity from their neighbors, these also live most pleasantly with one another, since they have the most certain pledge of security, and after they have enjoyed the fullest intimacy, they do not lament the previous departure of a dead friend, as though he were to be pitied.

THE JUDEO-CHRISTIAN BACKGROUND

In addition to the Greek element of rationalism, the Judeo-Christian religious and moral heritage is the only other major source of western civilization and political thought. The Jewish and Christian contributions to western civilization are immense. From Judaism, the belief in one God and the existence of a firm moral code infused later generations with precepts that shaped their political, legal, and social structures. Christianity consolidated and transcended the Greek and Jewish contributions: Christianity introduced the concept of love as the basis for men and women's relations with each other and with God into world culture.

It is remarkable that the original major sources of western thought and culture derive from small nations, which were not great political, military, or economic powers. The Greeks had to fight for their lives against Persians, Macedonians, and Romans, and were never able to become even a united small power, much less a great power. The Jews, too, were a small nation, inhabiting a small territory, often politically divided, and always surrounded, and often dominated, by big empires—Assyrians, Babylonians, Egyptians, and Romans.

Rome finished both Greeks and Jews as independent nations. But there was a significant difference in the attitude of the vanquished and, therefore, also the victors. When Rome subdued Greece, the Greeks were willing to make spiritual concession to their political master: If the Roman emperor had to be worshipped as a deity in Greek temples, it did not matter too much. In a polytheistic temple, there is always room for one more god. The Greeks were therefore permitted to live in their native land, albeit as political subordinates of Roman imperial government.

But when Rome conquered Judea in A.D. 70, it drove the Jews away from their soil and dispersed them in many lands. The Jews were unwilling to admit more than political or military defeat: There was no room in the Temple of Jerusalem for the statue of the Roman emperor and his worship as a deity. The difference between twelve gods and thirteen is insignificant; the difference between monotheism and polytheism is immense. In the Temple at Jerusalem

there was no statue of God; much less could there be one for the worship of a pagan emperor. Rather than compromise their belief in God, the Jews fought to the bitter end, resisting for three years the mighty Roman emperor, until they were punished for their defiance with the cruel fate of exile and dispersion. The Romans sought to destroy not only the Jewish state that had dared to resist its might but also the Jewish nation that had stubbornly, illogically, and unreasonably (from the Roman viewpoint) refused to do what every other conquered people had always done—recognize the Roman emperor as divine.

The Romans were not religious fanatics. They did not care what their subject peoples believed or did not believe. All they wanted was an outward admission of spiritual obeisance to the Roman imperial divinity. They were therefore incensed that the Jews refused “a little thing” like emperor-worship that no other conquered people had ever refused to cooperate in before. Later, Christians, too, would refuse to participate in emperor-worship. The Jewish people’s defiance of Rome exemplifies the importance to them of their belief in God.

The Roman era was not the first time that the Jewish people had experienced mass deportations and the end of political independence. In 721 B.C. the Assyrians destroyed the northern kingdom, called Israel, razed its cities, deported the people, and settled the area with outsiders who amalgamated with the few remaining Israelites to form the semi-idolatrous Samaritans. In 586 B.C. the Babylonians conquered the southern kingdom of Judah. After a two-year siege the Babylonians destroyed Jerusalem and many other cities that were never then rebuilt. The Babylonians deported the educated and more well-to-do classes to Babylonia, but many Jews fled to Egypt and Transjordan. Only a small number of “vinedressers and husbandmen” remained in Judah, or Judea, as it became known.

In 540 B.C. Persia defeated Babylonia, and King Cyrus of Persia in 538 B.C. issued the Edict of Liberation, permitting exiled Jews to return to their homeland, rebuild the temple of Jerusalem, and practice their religion freely. Although only a small number returned to Judea, they were active and dedicated individuals. Those who stayed in Babylonia continued to adhere to their faith, and they developed an active Jewish community that eventually became more vigorous—economically, socially, and culturally—than the Jewish community in Palestine itself. In the middle of the 5th century B.C., Ezra moved from Babylonia to Jerusalem. He, more than any other single individual, was instrumental in re-establishing a Jewish commonwealth such as it had existed before the Babylonian captivity.

The Roman conquest of Judea in A.D. 70 had more disastrous effects than either the Assyrian or Babylonian conquests. When the Assyrians destroyed the northern Kingdom of Israel, the southern kingdom of Judah was left. When the Babylonians destroyed Judah and exiled the Jews who were most influential, there was still a Jewish community left behind, although it was leaderless and demoralized.

But when the Romans burned Jerusalem and its temple in A.D. 70, they determined that the Jewish people must never rise again. This goal, however, was not so easy to accomplish. Even before the war was over, the Romans granted permission to establish a center of learning in the coastal town of Yavneh. After the war was over, Yavneh became the religious center of the surviving Jewish

community in Palestine. It had no army, police, or any other means of compulsion. The spiritual and religious leaders at Yavneh decided religious issues, but in the Jewish concept, religion also included education, civil and criminal law, and nearly all other aspects of community life. As long as this religious body did not stir up any political trouble, the Roman authorities left it alone.

Emperor Hadrian decided that even religious autonomy for the Jews was too much, and he ordered the erection of a temple to Jupiter on the site of the ruins of the Hebrew Temple. Under the leadership of Simon bar Kochba (“Son of the Star”), the Jews rose in revolt, and fought for three years, until A.D. 135. Hadrian realized, better than his predecessors, that the strength of the Jewish people was the Bible as their source of ethics, learning, and indomitable resistance. He therefore abolished the academy at Yavneh and decreed that henceforth the study of the Bible or its observance would be punished by death. Many preferred martyrdom to the betrayal of their God. Hadrian renamed Jerusalem *Aelia Capitolina*, and the Jews were barred from it.

Yet, even the failure of bar Kochba did not end Jewish life in Palestine. Hadrian’s successors relaxed the prohibition against Jewish religion and learning. During the next three centuries, the rabbis (or “teachers”) dedicated their main efforts to developing a way of life on the basis of the Bible and the teachings of the prophets that could subsist independently of any outward material or political instrumentalities. This development of Judaism is in many ways the most significant in the religion, because it permitted the existence of the Jewish people without a state for the next eighteen hundred years. This period is, thus, a most important, practical application of the Jewish belief in one God. It also demonstrates the power of this belief and, thus, helps to explain why it has been so influential in the development of western civilization and politics.

In the first five centuries of the Christian era, the rabbis in Palestine and Babylonia developed the *Mishnah* and the *Gemara*, known together as the *Talmud*. The *Mishnah* (“Repetition”) was the first written collection of laws after the Bible. It was a relatively brief compendium of rabbinical oral law and teaching, covering about 250 years (30 B.C. to A.D. 220). This oral teaching of law and ethics was formally compiled around A.D. 220 and was written in Hebrew. The *Gemara* (“Completion”) is a series of commentaries, discussions, and interpretations of the *Mishnah*. The two together are called *Talmud* (“Study”), compiled in a briefer Palestinian version and in a longer Babylonian version around A.D. 500.

The Babylonian *Talmud*, running to about 2.5 million words, is over three times longer than the Palestinian *Talmud*. More importantly, the Babylonian *Talmud* is the more authoritative of the two. If the Bible is the great and imperishable achievement of the Jewish community in Israel, the *Talmud* is the enduring monument of the Jewish community in Babylonia, at the time the most important Jewish community “in exile” (*galuth* in Hebrew, or *diaspora* in Greek). Without the *Talmud*, the religion of the Hebrews based on the Bible and the prophets would very likely have disappeared, as did all other religions which existed at the beginning of the first century of the Christian era in the Roman empire.

Reflecting the work of about two thousand rabbis over a period of eight centuries in Palestine and Babylonia, the *Talmud* became the third pillar—in

addition to the Bible and the prophets—that ensured the survival of the Jewish people as a spiritual and cultural community. Theirs was a nation without the material attribute of a national territory and without the political attribute of national sovereignty. Rabbinical Judaism, which started to evolve even before the destruction of Jerusalem in A.D. 70 and the gradual decimation of Jewish life in Palestine, was not an unconscious anticipatory reaction to threatening disaster: It was a conscious, purposive effort over centuries to make possible the continued existence of the Jewish nation whatever happened in the political world of states and empires. Thus, when the two Jewish wars against the Romans in A.D. 70 and 132–135 ended in catastrophe, rabbinical Judaism had prepared the Jewish communities in Babylonia as well as in the Greco-Roman world to live henceforth without the moral support and inspiration of “the Land of Israel” (*Eretz Yisrael*).

The achievement of the rabbis in ensuring the survival of the Jewish people dispersed in many lands can only be understood if the *Talmud* is understood. The *Talmud* is not “a book” (an English translation runs to 35 volumes). The *Talmud* is also not a legal code, like Justinian’s *Corpus Juris*. Further, it is not the Hebrew equivalent of a Plato or of a Platonic Academy: Since only God is presumed to have ultimate authority, the rabbis frequently contradict one another, and no single individual can possibly represent the *Talmud*. The *Talmud* can best be understood as a collection of discussions by hundreds and hundreds of teacher-scholars over a period of eight hundred years—a series of legal and non-legal discussions and sayings, *obiter dicta*, stories, and allegories as handed down by the rabbis. There is no single, or even primary, focus in the *Talmud*. Virtually every subject is touched on or discussed. From agriculture to zoology, the range of subjects seems limitless—except for one that is hardly dealt with— theology. This is one of the ironies of the *Talmud* as of all Jewish thought. Theology, or the rational study which treats God, his existence and attributes, and his relations to the world and humanity, could only have been first developed by a people such as the Greeks for whom these matters were philosophical problems. But for the Jews, God was no problem: He was simply there. There was no need to philosophize about God’s existence, since the existence of everything in the universe was the direct result of God’s will and creation.

Classical Jewish thought, as expressed in the *Bible* and the *Talmud*, covers about 1,500 years of organized communal life in Palestine (1000 B.C.–A.D. 500). The Hebrew Bible was started in the tenth century B.C. and finally edited around A.D. 100. The Old Testament of the Bible contains three parts: the Five Books of Moses, called *Torah* (or “Teaching” in Hebrew, but often mistranslated as “Law”); *Prophets* (or “Seers”); and *Writings*, such as Proverbs, Psalms, Job, Song of Songs, Ecclesiastes, and Chronicles. The Bible is called the “Written Teaching,” as contrasted with the “Oral Teaching” of the *Talmud*. The three main portions of the Hebrew Bible were not written in consecutive order, but overlap in their dates of original composition. Portions of the five books of Moses date from the ninth century B.C. and were substantially completed within the next five centuries; the books of the prophets were written between the eighth and fourth centuries B.C.; the *Writings* were composed between the fifth and first centuries B.C..

While each statement in the *Talmud* is attributed to a rabbi by name, the Old Testament is an unusual piece of literature that has no known author or authors. There is no Homer, Plato, or Aristotle in the Bible. There is obviously no single author in the five books of Moses, compiled over five centuries. Even in the case of the prophets, the books as we know them today were largely written long after the prophets’ deaths, generally based on oral traditions. Thus, the author of the Bible is not a single man or group of men but unknown writers who were interested in preserving, and thus, helping to constantly recreate, a religious tradition centered in God.

From the viewpoint of the anonymous writers and compilers who put in writing the Bible and *Talmud*, God’s inspiration was the author of these writings, and not this or that man. Even Moses or Samuel or Jeremiah were no more than vessels through which the voice of God spoke. The Bible is not, in the Jewish conception, a compendium of different and opposing schools of philosophy expressed by numerous individuals, but the expression of God’s will. Jews believed that all law comes from God, not man.

The central concept in classical Jewish thought is that of *Torah*. *Torah* is an old and common Hebrew word, meaning “teaching”. After the Jews returned from the Babylonian exile in the sixth century B.C. under the leadership of Ezra, *Torah* increasingly acquired a religious meaning. Ezra understood that the rebuilding of the Second Temple alone would not restore the people of Israel to pre-exilic conditions of normalcy, for the vast majority of Israelites chose to remain in Babylonia. If Israel was to continue to exist, it had to be transformed into a religious community, independent of land, political sovereignty, and even the Temple in Jerusalem. The *Torah* alone could provide the foundation for such a religious community. Tradition credits Ezra with the final decision of determining the text of the Five Books of Moses. In a wider sense, the *Torah* was later understood also to include the *Prophets* and *Writings*, that is, the whole Old Testament. Later still, the *Talmud*, too, was included in the concept of *Torah*. In its widest sense, *Torah* means all teaching relating to Jewish religious (legal or ethical) matters.

Therefore, the common translation of *Torah* as “Law” is much too narrow and misses the much broader meaning of *Torah*—a constant spiritual commitment to a way of life that is centered on God. In the *Septuagint*, the first translation of the Hebrew Bible into Greek in the third century B.C., *Torah* is translated as *Nomos*. Although *Nomos* is broader than Law, it is still narrower than *Torah*, the divinely revealed way of life in its totality, constantly elaborated and interpreted by generations of teachers. The *Torah* helps guide every thought and deed of every individual in each generation who seeks to live by it. The translation of the concept of *Torah* into *Nomos* or *Law* is more than a matter of semantics or literary accuracy or fidelity. The view of Judaism as “arid legalism” became the root of much of the anti-judaic hostility of early Christianity and of later more vehement anti-Jewish attitudes of Christian nations.

It will be helpful to an understanding of Jewish thought to consider some of the differences between it and Greek thought. Such differences also help to underline permanent tensions in western civilization and thought that have imprinted upon them their peculiar vitality and uniqueness. There have been many attempts to reconcile and harmonize these differences, and of such

attempts the movement of Christianity is unquestionably the most important. But after two thousand years, one still wonders whether it is possible to harmonize what is fundamentally contradictory. The difference between Jewish and Greek thought can be briefly summarized in several ways. They are all restatements of the same theme: In the Jewish view, God created man; in the Greek mind, man created God.

The Jewish concept therefore challenges man to rise to the closest possible communion with God by living a life of justice. By contrast, the Greek creation of the gods by man brings the gods down to the level of man, depriving him of any standard of perfection toward which mankind can—and must—strive. While in the original Biblical conception of God there are some anthropomorphic traits—such as jealousy, anger, vindictiveness—the later prophetic and rabbinical concept of God becomes purified of anthropomorphisms. In the Greek polytheistic thinking, this progress is lacking. The progress in Greek religious thought is not, as among Jews, from anthropomorphic religion to a more spiritual conception of God, but from anthropomorphic religion to skepticism and loss of faith. The Greeks transformed God (as in Plato) into the abstract idea of the Good or the Ideal, or (as in the Stoics) identified God with nature (pantheism).

The very background of the Greek supreme god, Zeus, would make a Jew of the classical era shudder. Zeus was, according to Greek legends, the son of Kronos and Rhea; thus, he already differs from the Jewish conception of God as the source of all creation, not the product of some other creating agency. Worse still, from the Jewish viewpoint, was the fact that Zeus' parents were brother and sister. Incest was, in the Jewish view, one of the three most horrendous crimes man could commit (the other two being idolatry and murder). But worse was still to come. Kronos devoured all his children as soon as they were born, because he had been told by his parents that he would be overpowered by his own son. When Rhea bore Zeus, she went to the island of Crete, so that Zeus' father would not know of his birth. The prediction about Kronos' fate came true, when Zeus overcame his father by force and cunning, enchained him, and carried him off to the edge of the earth. In the view of the ancient Jews, this sort of thing simply was not done—not even in a low or middle class family, and certainly not by a divine being. The Commandments taught to "Honor thy father and thy mother."

The fundamental impulse in Greek religions was to bring the gods down from the heavens to earth, and thus feel comfortable in their company. The fundamental religious passion of the Jew was to rise from the earth to heaven, and tremble in awe in the presence of God. Life thus becomes a ceaseless effort to make man, created in God's image, worthy of his creator. Every moment in man's life is therefore precious, and must be utilized in some practical act that kindles the divine spark in man.

Another basic difference between Jewish and Greek thought is that between the Jewish idea of acting justly and the Greek idea of thinking clearly. Socrates best summarized the essence of Greek thought: "Knowledge is virtue" and "Know thyself." The most typically Jewish view is worlds apart from Socrates and Plato: "The beginning of wisdom is the fear of God." This Jewish view is not a one-time obiter dictum in Psalms, but occurs 17 times in the Book of Proverbs,

and numerous times in Job, Ecclesiastes, and other portions of the Bible, not to mention post-Biblical rabbinical literature.

For the Greek, the intellectual activity of reason was the way to perfection. Socrates, Plato, and Aristotle had the certainty that human reason can reach the stage where it can understand and behold reality. The Greek word "theory" derives from the verb *theatai* (to see), which also appears in the word theater. The wise man, the philosopher, contemplates reality with complete detachment, interested—like a theater-goer—in understanding what goes on rather than in molding events.

The Jewish approach is fundamentally different on two scores. First, it denies that human reason and wisdom can ever unlock the riddle of existence. The fear of God is the beginning of wisdom, not wisdom itself. The Hebrew word *yirah* means not only "fear," but also "awe." As used in the Bible in some instances, *yirah* means "fear": the fear of man to be punished by God for his sins. In the majority of cases, however, *yirah* means "awe" rather than "fear". Awe expresses the sense of wonder and mystery which draws man nearer to God, the source of all wonders and mysteries. By contrast, in fear we may seek to retreat from the source that inspires us with fear. Whereas fear may lead humanity to despair, awe is more likely to lead to reverence, and reverence is a source of humility without which there can be no wisdom. While awe is no straight path to wisdom as the answer to all riddles of the world, it can be the "beginning of wisdom," as the Psalmist says. But this wisdom is not the intellectual wisdom of the Greeks.

Since understanding reality is the highest ideal for the Greek, those who are most endowed with reason are the most highly esteemed. Plato's *Republic* finds the philosophers—the lovers of knowledge—the only ones fit to rule: Just as knowledge is tantamount to virtue in the Greek view, it is also the basis of political rule. Jewish thought totally rejects this ideal. Only God can rule over man. No man can rise to such perfection of mind and spirit as to make him fit to rule over his fellow-men. Plato idealizes the philosopher even more than appears from the foregoing remarks. In Plato's view, the philosopher is not only good enough to rule over his fellow-men, he is too good. Ideally, the philosopher would desire, according to Plato, to spend his life contemplating reality. Only the harsh facts of civic disorder and class conflict compel the philosophers to descend from the intellectual altitudes of changeless contemplation of the unchanging reality of the perfect Good to the low level of political and social activity. In the Platonic view, human inequality is inevitable.

In his scheme of education for the philosophers, Plato describes how, at the successful conclusion of their education and training, they finally behold Reality, which is Idea, the Form, the Good. It is quite clear in Plato's scheme of human development that in beholding reality as it is man reaches his highest level of perfection. In the Greek mind, Idea is superior to matter, soul to body, and the highest activity of man is therefore mental—to grasp reality as Idea. The activity of beholding such reality is the only appropriate one since, by definition, Idea is changeless, timeless, and spaceless.

By contrast, striving for justice in Jewish thought involves the commitment to change reality—not the abstract reality of Idea, divorced from time and space, from matter and body, but the reality of historical man, a mixture of

mind and body, of reason and passion, of good and evil. Whereas for the Greek *logos*, or reason, is almost synonymous with God and nature, for the Jew human reason is no better (though no worse) than man himself. The supreme concept for the Jew is not *logos*, but *tsedakah* (righteousness, justice), both in God and man. To act justly is the supreme Jewish goal, while for the Greek it is to think clearly. Whereas for the Greek knowledge is virtue, the Jew asks, "What does God require of thee, but to do justly, to love mercy, and to walk humbly with thy God?" (Micah 6:8).

In Judaism, then, firm monotheism provided undergirding for systems of social organization that emphasized impersonal justice and the here-and-now. The brotherhood of all mankind was suggested by the fatherhood of God, which developed into equality and supra-nationalism. The Jewish people's survival—despite the loss of their homeland—is a testimony of the strength of their perceived covenant with God; the concept of covenant (when fused with various Greco-Roman ideas) became an important contribution to modern political thought centuries later.

The two most influential sources in the evolution of Christianity were Judaism and Hellenism. The former of these was the background from which Christianity emerged; the latter, the dominant worldview that shaped it as it developed. These converged with the precepts of Jesus to become what we call Christianity.

Ethical monotheism and the Messianic expectations of Judaism were the key factors which formed Jesus' teachings. The Jewish people's loss of independence in the sixth century B.C. encouraged the rise of prophets and prophetic rebukes to the Jews for their backslidings in turning away from God. The prophets preached the return of the Jews to the worship of God (in lieu of worship of the varied gods of other tribes and peoples), and the founding of a theocratic state. Their essential message was that the Jews had failed God, and they predicted the coming of a Messiah or Savior to establish the new kingdom of God on earth. This state would proceed according to Mosaic law, bringing about a way of life which would be good in the eyes of God. The state would be just, because the Mosaic law represented a covenant with God which was the epitome of justice.

Justice, righteousness, good will, integrity, and above all, obedience to God's commands as set forth in the Mosaic law and the teachings of the prophets, were preached as the necessary strands in the social bonds that hold a community together. The economic and political order, therefore, should serve religious interests. The prophets were particularly hard on kings, priests, and others in authority, whom they saw as condoning worship of other gods and thereby letting their people suffer the consequences of this unrighteous behavior. A trend toward monotheism and obedience to God thus characterizes the Jewish thought immediately preceding Christianity, combined with a looking forward to the coming of the Messiah, who would establish the theocratic state.

The social and political characteristics of the gospel ethic stem from two basic aspects of Jesus' teachings—individualism and universalism. The former signifies the concept of men and women as infinitely precious children of God whose only task is to do God's will and await the imminent coming of the Kingdom of God. The latter establishes the equality of all in the eyes of God,

and love of one's fellow-man as the highest earthly good. Lack of rank in Christianity is indicative of both of these aspects. Jesus had no regard for worldly social and political theories, and his teachings, as recorded in the gospels, are scanty on specific sociological principles.

Jesus thought very little of the state since he saw no value in anything unconnected to the purely religious life. He did not teach asceticism or poverty *per se* as means of attaining spirituality, but he valued participation in the world only to the extent that it was compatible with the spiritual reign of the Kingdom of God, which was not much. Probably the best known passage giving Jesus' teaching on the extent to which individuals should be concerned with the worldly as it affects the spiritual is, "Render . . . unto Caesar the things which are Caesar's; and unto God the things that are God's." In other words, the spiritual and temporal realms are relatively separate, and there is no comparison between the value of the two. Thus, primitive Christianity had little to do with most important socio-economic trends of its time in the Roman Empire (for example, the disappearance of the peasant class, the reduction of the number of slaves, and the transfer of capital into the hands of large landowners).

Most early Christians belonged to lower classes and lived in towns and villages. Many were slaves, freedmen, and manual laborers, who were attracted by Christianity's deprecation of earthly social and economic distinctions. This was an original social doctrine that broke down relationships between religion and family, clan, nation, and empire, and gave religion a purely personal basis in conscience. Anyone could invoke God anywhere, and no bond of class, race, or nation could draw men and women away from God. In the very long run, this belief led to the deprecation or limitation of such distinctions.

Christianity humanized the family in the areas in which it initially spread. Household gods eventually disappeared, and the emphasis on human individuality as the center of ethical focus elevated the smallest social unit, the family, to a position of greater importance. Jesus' teachings in regard to the family were in complete harmony with his gospel of human brotherly love and equality. He insisted on the sanctity of the marriage vow, at least until the time of the coming of the Kingdom of God when marriage would no longer be necessary. This was in direct contrast to Roman law of the times, which allowed for easy dissolution of marriage by either spouse, and which tolerated the custom of concubinage.

Paul's teachings regarding the family were even more explicit than Jesus'. They were also more conservative and strict, and at greater variance with the practices of the disintegrating social order of the Greco-Roman world. Paul saw marriage as the symbol of the union of Christ with His church. Paul accepted as divinely ordained the element of patriarchy (the husband being the dominant member of the marriage). His attitude toward this and other social matters set the tone of church doctrine until the time of the Reformation. The seeming anomaly of a "radical" doctrine like Christian universalism and individualism exhibiting such a conservative attitude toward social questions can only be explained by a realization of the depth of early Christian belief that the things of this world did not really matter: All would soon give way to the new order of the Heavenly Kingdom. Paul was, of course, also a great "liberal" in the early church, in that he more than anyone else expanded the realm of Christianity beyond Jewish converts.

Jesus' injunction to live day-by-day and trust the Father, who clothes the lilies, to supply one's wants is probably the most famous gospel teaching on the subject of property and poverty. While this can be treated as not very practical advice from a worldly perspective, perhaps the better approach is to consider such passages as Jesus' warnings to put less emphasis on material things and more on spiritual ones, which are truly lasting.

The element of Christian sharing of property and charitable benevolence, alluded to in the Sermon on the Mount, receives strong emphasis in the Pauline epistles. The issue of property in Christian doctrine is not an economic one so much as an ethical and religious one. The Christian position fluctuates between the radicalism of the claims of love expressed in giving and benevolence, and the natural claims of the necessity of earning a living. As the church became organized and grew wealthy—possessing property of its own—this problem became ever more difficult to resolve. The general teaching that evolved was that mere possession of private property is itself not evil, if one is willing to share one's goods with those in need. The practice of stewardship became vital here, and love of wealth and property as ends in themselves remained sinful.

The perspectives of early Christians on property were by no means unanimous, however, just as scholars' views differ on what forms of property early Christians practiced. Some scriptural references seem to imply the concept of "communism," and some early Christian communities did indeed pool their private resources. But this did not prove lasting, and by the end of the second century the practice of communal property died out. Even in those communities that did pool their resources, the members were expected to continue to earn their livings through their private initiative, and surrender of individual property was never a condition of baptism. Moreover, when property was shared jointly, this was not in response to a perceived social, political, or economic need that called for reform, but was a manifestation of perceived spiritual submission to God. Paul does not urge community of goods in his letters.

Not communism but charity became the principle of Christianity, as it had been among the Jews, and as it was instructed by Jesus. One famous Biblical passage that should be clarified is, "It is easier for a camel to go through the eye of a needle, than for a rich man to enter into the kingdom of God." In ancient times, a needle was a small entry way to a walled city that could remain open when the regular city gates were closed. It actually was possible for a camel to pass through these, although only with much effort and shedding of luggage. This may have been Jesus' enduring message to his followers on the place of property.

The early church generally considered private property to be a necessary, although not ultimately desirable (that is, in the Kingdom of God), institution brought about by mankind's fall from grace and inherent sinful nature. The importance to Christian theology of man's natural sinfulness, and the impact of this on political and economic systems that eventually stemmed from Christianity, cannot go unstated. Paul emphasizes humanity's fall from grace more than Jesus, whose emphasis appears to be more humility than self-abasement. Nonetheless, as transmitted by Paul to the early Christian church, humanity's inherent evilness took on great significance. Within the church, it probably led the lay members to be more respectful of authority (because the lay members were so evil), and it led the church as a whole to be

more tolerant of worldly practices that might appear inconsistent with Jesus' teachings. Such practices were inherent, given men and women as they are.

Two such worldly institutions countenanced by the church as the result of man's sinfulness were slavery and coercive government. From the beginning, slavery was regarded as belonging to a sinful world that could not be altered. To hinder any politically minded slaves, the early church taught that those slaves belonging to non-Christian masters could become Christians only with their master's consent. Jesus preached the value of every human soul before God. Paul elaborated on this individualistic doctrine by postulating that an individual's social, racial, or economic status means nothing since all are equal in the sight of God.

Christianity thus left unchallenged laws regarding slavery, although from referenees throughout his writings Paul obviously intended that masters should treat their slaves fairly. The early church attempted to protect slave marriages, and urged the freeing of slaves to Christian and non-Christian alike. Slaves had full religious equality and were permitted to hold office in the early church.

Again, it should be recalled that early Christians thought the establishment of the Kingdom of God on earth would be soon. As time went on, however, and the advent of the heavenly kingdom was pushed further and further into the future, those church Fathers who took an objective look at institutionalized slavery were hard pressed to rationalize its injustices. Some slaves were very good individuals, and therefore not deserving of the "punishment" of their enslaved condition, while some masters were hateful tyrants. Regrettably, rather than taking the position that slavery was inherently unjust, the institutional response was that one's reward for Christian behavior could only be expected in the next life, not this one.

The early trend of Christian teachings had been toward the mitigation of the hardships of slavery. But as the church and state moved closer together, and the church became more conservative in its worldly views, it eventually barred slaves from holding church office. Even their status as equals in the eyes of God was no longer an accepted surety throughout the church. The eventual demise of slavery in Europe came from economic causes, rather than from Christian opposition to slavery on the grounds that brotherly love was not exemplified in a system in which one human being owns another.

The problem faced by the early Christian in his attitude toward civic duties was a very real one (as it remains today for those Christians who, for example, truly believe in "turning the other cheek," and become conscientious objectors to military service in time of war). Regarding occupation and civic duties, Jesus and Paul did not ask that individuals change their daily occupations or become ascetics. Jesus taught that his followers, though not of the world, must be in it. Paul wrote, "Let every man abide in the same calling wherein he was called." The early Christians did, however, avoid jobs that were connected with idol worship, bloodshed, or contact with paganism. These included all state and municipal employment, and jobs in the areas of drama, art, and rhetoric. Except for some craftsmen who worked on (pagan) temples, such avoidance was not too difficult for the early Christians, who were mostly from the poorer classes. As Christianity spread and moved up the social ladder, though, it became harder and harder to forsake such occupations, in particular state employment.

Church attitudes began to soften at this time, and army service, for example, became respectable for Christians during and after the reign of Constantine. Soon, Christians participated in almost all aspects of Roman economic life, except for dramas and pagan arts activities. The process of secularization was in full swing. Resistance to this process by individuals more and more took the form of asceticism, particularly within church monasteries.

The changing relationship between the Christian community and the state is concomitant with the gradual process of secularization that occurred among Christians—as their numbers grew, they became more like the rest of society. Jewish theology had taught the complete coincidence of the state and the Jewish religious community. The prophesied Jewish messiah, therefore, would establish a theocratic kingdom on earth. Jesus tended to reject this ideal. When the devil offered him the kingdoms of the world, he declined. He repeatedly stated that his kingdom was not of this world.

The thirteenth chapter of Romans (by Paul) begins, "Let every soul be subject unto the higher powers. For there is no power but of God; the powers that be are ordained of God." This passage has been interpreted as indicating a Christian belief that civil government is a divine instrument, and that to refuse to submit to it is not merely political but spiritual heresy. Paul saw the civil ruler as God's servant in the things of the world; it is necessary to have such a ruler because of humanity's fall from grace. Paul was very concerned about the anarchic tendencies and excesses of libertarianism of the early church; he sought to check a problem of refusal to submit to authority generally.

Paul's advice turned out to be prudent counsel in the early centuries of the church. Particularly as the church grew, the antipathy of Roman authorities to it grew also, and they attempted to destroy it. Roman officials, correctly, viewed Christianity as a subversive and revolutionary development, in spite of the Christians' outward obedience. Christians sought to replace traditional civic and political gods by a higher authority—individual conscience enlightened by the Spirit. Christianity made a sharp distinction between the worship of God and the honor due a state and its rulers. Rejection of emperor-worship by Christians was to Roman authorities both a sacrilege and high treason. Christianity was therefore seen as a menace to the pagan worldly empire.

Tertullian, an early church Father, states, "Nothing is more alien to us [Christians] than politics," but early Christians inevitably found themselves more and more involved in politics. In the face of an empire that was a politico-religious unity, their beliefs invited attention and repression. It was, therefore, to an extent inevitable that early church teachings emphasized submission, given that the option of revolution was infeasible (if not incompatible with Christian precepts). Submission also was in the tradition of the Old Testament, which saw the ruler of Israel as God's anointed. In later times, this view manifested itself in the doctrine of the divine right of kings.

After the conversion of the emperor Constantine to Christianity and his declaration of it as the Empire's official religion in A.D. 324, the problems of delimiting and defining spheres of action for church and state became more acute. On one side, there were those who advocated the position that the emperor should be supreme in both church and state. Others, including Constantine himself, thought that at least some religious decisions were beyond the

emperor's competence, and should be decided by Councils of Bishops. As the church first began to have a place in the state, it took the position that it was completely sovereign in religious matters, although in practice it depended on the authority of the empire to enforce its decisions. It should be noted that in pre-Christian pagan times, religion was an affair of the state and came under its law. Therefore, it is not surprising that even (early) Christian theology should reflect the concept that in some ways the state was precedent to the church.

The work of St. Augustine reflects the arguments over the relationship of church and state. He characterizes the heavenly and earthly cities as two opposing ways of life—those of love of self and love of God. Though inherently a product of humanity's sinfulness, the earthly city owes allegiance to the heavenly one (symbolically represented on earth by the church) in all religious matters. As the Middle Ages went on, the dispute over whether emperor or pope should rule, and in what areas, shifted at various times. Originally, the church sought merely independence from the state. Later, it sought to dominate the state.

Jesus had little to say on the questions of law and justice as institutions. He saw the world as held together not by legal institutions, but by love, and love was for him the basis of all just and right action. His counsel to love one's enemies and to turn the other cheek is in contrast to the retributive justice of the Old Testament expressed in "an eye for an eye, and a tooth for a tooth." While Christianity was unsuccessful (partially because it did not try) in abolishing slavery, it did moderate other excesses of the Roman Empire, including gladiator fights and human sacrifice.

The centrality of Jesus' message is the principle of love as the basis of individuals' relation with God, and more important still, as the basis of their relations with each other—in contrast to Greek and Jewish thought. In the Greek mind, individuals' relation to God was that of sympathetic understanding and admiration—the Greek gods were generally little more than slightly oversized human-like heroes. They were just like men and women, only more so. Socrates came close to the idea of one divine being, but his attitude was not of love, but of rational and spiritual fusion. In Jewish thought, there is the admonition in the Old Testament (Leviticus 19:18), "Thou shalt love thy neighbor as thyself," but this positive admonition to love one's neighbor is preceded by many "though shalt nots," and even the phrase, "thou shalt love thy neighbor," is immediately followed by the words of God, "I am the Lord." All of this goes to make the commandment to love in Jewish thought sound something like "love your neighbor—or else."

In Matthew, Jesus is asked, "which is the great commandment in the law?" He answers that the love of God is the first commandment, and love of man, the second. He then adds: "On these two commandments hang all the law and the prophets." This is not the Greek message of reason; neither is it the Jewish message. While the fruition of Christianity took many centuries (and many would say it has still not been met), and though many forces (including inherent weaknesses in the human soul) corrupted the Christian message, Jesus—by emphasizing love as the bond between man and God, and man and man—led to a new way of life and thought, different than that of either Jews or Greeks.

ST. AUGUSTINE

The destruction of Roman power in the fifth century was more than a political revolution. The Germanic conquerors from the North swept away an empire that seemed eternal and universal to its inhabitants, and wiped out a civilization and way of life that seemed imperishable. Yet the military helplessness of Rome was not so much the deeper cause of her fall as a symptom of her general decline and disintegration. Military defeat was the end, and not the beginning, of rot and decay.

Rome's decline can be said to have started in the growing betrayal of its pristine civic virtues and in her abandonment of republicanism in favor of despotic, monarchical imperialism. Amid immense material wealth there had been disturbing signs of failure of nerve and loss of faith; above all, unwillingness or inability to solve the social conflicts born of poverty, slavery, and serfdom had contributed to the weakening of the Roman empire and to its final conquest by barbarians emerging from a cultural nowhere—from the dark forests and endless plains beyond the confines of civilization.

The Gothic, Vandal, and Hun warriors could only destroy: they had no civilization of their own that they could substitute for, or mingle with, that of the Roman world. The recorded history of the west knows of no similar catastrophe, when a way of life was so thoroughly destroyed that men forgot what their ancestors had known for centuries, and had to start all over again groping toward a new existence.

It was a long and painful experience, and the process of gradual recovery from a near-mortal illness, the medieval period, fills the ten centuries between the fall of the Roman empire in the fifth century and the revival of ancient thought and learning in the fifteenth. Interest in this period had not been intense until recently, because it was assumed that nothing could henceforth have stopped the march of progress and scientific development, and that history was an unceasing process of liberty unfolding itself all over the world. This optimism, so typical of the eighteenth and nineteenth centuries, was rudely shaken in the twentieth century by World War II, which might have—had the allied nations been defeated—inaugurated a new dark age. The lesson of the fifth century is that an entire civilization can be razed from the earth, and humanity barbarized and decivilized.

When Rome was sacked by the Visigoths in A.D. 410, a popular explanation was that it was the fault of the Christians. Christianity had been officially tolerated in the Roman empire from A.D. 313, and eighty years later it became the official religion of state, paganism being proscribed and prohibited. Because the fall of Rome in A.D. 410 occurred so soon after the triumph of Christianity, many pagans and perhaps even some Christians were inclined to see a connection between the rise of Christianity—so long considered officially a subversive movement—and the weakening of Roman power. From the traditional, pagan, upper-class Roman viewpoint, the Christian qualities of otherworldliness, meekness, pacifism, disregard for public affairs, and contempt for revered national deities had been persistently sapping the strength of Rome. Above all, the Christian refusal to recognize loyalty to Rome as the first loyalty, the dogged perseverance in putting a foreign religion above family, community, and state, must have appeared as a flagrant demonstration of "un-Roman" disloyalty.

Political-minded Romans of the old school were not deeply interested in religions as such, and as long as members of any creed were willing to make a formal gesture of obeisance to the ultimate authority of Rome and its personified imperial divinity, there was no cause for discord and conflict. Few empires and civilizations have, in fact, been as free from religious bigotry and persecution as Rome was, partly because of the moderation and political wisdom of its ruling classes and partly because religion was not taken seriously enough to turn men into tormentors and killers. The very polytheism of paganism ensured a basically tolerant attitude, as all pluralistic viewpoints tend to do. When Rome sought to extirpate Christianity by force in the second half of the third century, the charge was not against Christianity as a religion but against its alleged attempt to build up a state within the state, its boring from within every social class, and its gradual absorption of the Roman empire by infiltration and ideological appeals without overt acts of force.

Neither contempt nor ostracism, nor outright persecution, stopped the march of Christianity. In fact, in the fourth and fifth centuries, when Christianity became the religion of state, the roles were reversed, and paganism was put on the defensive and finally outlawed. The victory of Christianity appeared inevitable and providential to the Christian, because it was the only true religion; but to many pagans the effective extirpation of paganism by Christianity proved only that Christianity was more ruthless than its rival in the contest of persecution, and that the Roman emperors had made the mistake of treating the subversive Christians too leniently, wasting generosity on fanatics who would brook no compromise themselves if put in a position of authority.

When Rome was ravaged in 410, a wave of shock and horror swept through the world. For eight centuries Rome had proudly remained inviolate, growing from a small municipality into the center of a vast empire. The ease and speed with which this empire was broken up took everyone by surprise. The pagans, as we have said, ascribed the catastrophe to the betrayal of the old Roman deities under which Rome had risen to the position of the dominant world power, but Christians, too, were perplexed: it was hard to understand how Rome could be so shamed just after Christianity had become the religion of state, and many Christians began to wonder whether the official alliance of

church and empire was such an advantage after all. If Rome was not strong enough to safeguard its own existence against heathen tribes, how could it be the source of worldly power that the church needed in spreading Christianity?

Some Christians who were particularly perturbed about what seemed the end of the world were recent converts; and yet, the strongest reaffirmation of Christian idealism was the work of a convert, St. Augustine (A.D. 354–430), a native and lifelong inhabitant of Roman North Africa. St. Augustine's parents were North Africans; his mother was a devout Christian, but his father never embraced the Christian faith. St. Augustine was baptized in Italy in A.D. 387, after many years of active and more than gay living, led in complete contradiction to Christian standards of morals and belief. But once he was baptized, he rose quickly in the hierarchy of the church; he was made Bishop of Hippo (the modern port of Buna, in Algeria) in 395, where he stayed until his death in 430.

St. Augustine was moved especially by the pagan attacks that attributed the fall of Rome to the victory of Christianity. He started the *City of God* (*De Civitate Dei*) in 413, and finished the voluminous work, consisting of twenty-two books, in 426. He set out to answer two main questions. The first concerns the pagan challenge to Christianity. Although from a purely theological viewpoint the issue of paganism is not so intense and controversial in the twentieth century as it was in the fifth, St. Augustine's critique is always vital and timely, if one substitutes for paganism the qualities with which he identified it: contempt for spiritual values, smugness, pride, and injustice.

The rebuttal of paganism, however, is only the more negative part of the *City of God*. Having demonstrated the hollowness and inconsistency of paganism, materialism, and worldly success, Augustine proceeds to his more constructive task: the vision of the heavenly city, as contrasted with the earthly city (*civitas terrena*). St. Augustine's use of the word *civitas*, however, should not be interpreted in a political sense; St. Augustine was not a constitutional lawyer or political theorist but a theologian. He was interested in God, Faith, and Salvation, and not so much in the organization of the state and its political-judicial relations to the church. His heavenly city, or City of God, is therefore not identical with the church, and the earthly city is not the state.

As a theologian and passionate Christian who took his faith seriously, St. Augustine was primarily concerned with *ways of life* and *not* with *organizations of life*. The great struggle in the universe is, then, not between church and state (as later writers mistakenly interpreted St. Augustine for sectarian purposes), but between two opposing ways of life: in the earthly city, the love of self, the lust of power predominate, whereas in the heavenly city the love of God, "even to the contempt of self," is the foundation of order. St. Augustine therefore divides the human race into two parts, "the one consisting of those who live according to man, the other of those who live according to God. And these we also mystically call the two cities, or the two communities of men, of which the one is predestined to reign eternally with God, and the other to suffer eternal punishment with the devil." St. Augustine himself thus emphasizes that the two communities of the heavenly and earthly cities can be called cities only in a mystical or allegorical sense.

Even more explicitly, St. Augustine often speaks of the heavenly city as the eternal kingdom of God that includes the angels preceding the creation of man

and the saintly elect (*communio sanctorum*); by contrast, the earthly city is the "society of the impious" (*societas impiorum*), which includes fallen angels as well as human beings who "live after the flesh." Eternal reign with God is the destiny of the heavenly city, whereas eternal punishment with the devil is the doom awaiting the earthly city.

The basic conflict between Good and Evil rages not only in mankind as a whole but in every individual. Just as Plato had stated that the problem of the just society was that of the just individual "writ large," so St. Augustine notes that the struggle between Good and Evil in the world is closely related to, and a reflection of, the conflicts within the individual human being: "For in each individual there is first of all that which is reprobate, that from which we must begin, but in which we need not necessarily remain; afterwards is that which is well approved, to which we may by advancing attain, and in which, when we have reached it, we may abide." In fact, Plato had anticipated the idea of the complex structure of the individual human soul by viewing it as a composite of the three rivaling elements of appetite, courage, and reason, representing three types of men and three ways of living. Justice, or righteousness, is the central concept in Plato's *Republic*: an individual is just if the elements of his own soul are rightly ordered and arranged, and consequently he will also act justly in his relations with others by staying in his own station, by living the kind of life he was meant to live. St. Augustine transforms this secular conception of justice into a religious one: the essence of *justice* is the *relation between man and God*, from which right relations between man and man will inevitably follow.

If man is to become worthy of entry into the eternal kingdom of heaven, the City of God, there must be some agency on earth, St. Augustine realizes, that leads in the right direction. Although the central meaning of "heavenly city" is a way of life dedicated to the service of God, St. Augustine also uses this term "mystically," that is, symbolically, for the *church*. It is the part of the heavenly city that "sojourns on earth and lives by faith," and it "lives like a captive and stranger in the earthly city." In inspiring words that recall the Stoic message of universal unity and brotherhood, St. Augustine says that the heavenly city, "while it sojourns on earth, calls citizens out of all nations, and gathers together a society of pilgrims in all languages, not scrupling about diversities in the manners, laws, and institutions whereby earthly peace is secured and maintained," and that these diversities of men ought to be preserved, as long as men are united in God's service.

Yet St. Augustine nowhere clearly defines the church; in one place he calls it the Invisible Church of God's Elect (including some as yet to be converted),⁵ and in another, the Visible Church, made up of true believers and of those whose Christianity is little more than formal membership in the church. Because he failed to distinguish sharply the Invisible from the Visible Church, he claimed rights for the one that he would not have claimed for the other, particularly in relation to the state. As a result, his arguments were used later by adherents of papalist doctrines as well as by those who affirmed the sovereignty of mundane rulers over the church.

Just as the heavenly city symbolically represents, but is not identical with, the church, so the earthly city is symbolically reflected in the state. Strictly speaking, the *earthly city* is not identical with any empirical social or political

organization but is the *community of the unrighteous*, including sinful members of the church and excluding righteous citizens of the state. Whereas the earthly city, as the incarnation of sin and lust, is the antithesis of any value whatsoever, the state, by contrast, has positive value, through it is not the absolute value inherent in the heavenly city.

The Greco-Roman background of St. Augustine comes out in his assumption that "the life of the wise man must be social," and that there is no man who "does not wish to have peace." The state, therefore, by providing social peace, "has its good in this world"; and St. Augustine recalls Greco-Roman ideas in saying that the state is, "in its own kind, better than all other human good. For it desires earthly peace for the sake of enjoying earthly goods."

At this point St. Augustine parts company with Plato and Cicero, who so strongly influenced him. The peace that the state provides is, according to St. Augustine, not an end in itself, but only a means, a condition that makes the service to God possible. The peace of the state is the temporary tranquillity that enables man to work for the heavenly city, which is "peace never-ending."

Peace is therefore conceived by St. Augustine in terms of justice (that is, the right relation of man and God); it is not merely the absence of social strife and conflict. Without justice there can be no peace, and this moral and religious conception is behind St. Augustine's famous statement: "Justice being taken away, then, what are kingdoms but great robberies?" St. Augustine goes on to say that, viewed from the standpoint of formal, effective authority, robberies (that is, bands of robbers) are but little kingdoms themselves; the difference, therefore, between a state and a band or robbers is qualitative and not quantitative.

St. Augustine thus Christianizes the classical approach to the theory of the state by imbuing the Platonic concept of justice and the Aristotelian notion of the good life with the ideals of Christianity, and his doctrine is firmly anchored in the Greco-Roman and Biblical conceptions of the state in terms of moral purpose rather than formal authority, the monopoly to use force, or sovereignty.

The strong influence of Greco-Roman conceptions and preconceptions on St. Augustine can also be seen in his attitude toward slavery. In essence, it is a Christianized version of Aristotle's rationalization of slavery. Man was created in God's image, to be master of irrational creatures, beasts, but not of fellow men. Slavery is therefore not the result of man's nature, as originally intended by God, but the "result of sin." It is both punishment and remedy for sin, as for Aristotle slavery is the just relation between those who possess virtue and those who do not.

St. Augustine specifically opposes the law of the Old Testament according to which all servitude was to be ended every seventh year, and states that bad slaves are made into good by the example of Christ, and that slaves should not refuse to serve wicked masters. St. Augustine appeals to the slaves to serve their masters "heartily and with good will, so that, if they cannot be freed by their masters, they may themselves make their slavery in some sort free, by serving not in crafty fear, but in faithful love, until all righteousness pass away, and all principality and every human power be brought to nothing, and God be in all." Like Aristotle, St. Augustine also appeals to the masters to act benevolently and responsibly; they "ought to feel their position of authority a greater burden than servants their service."

Yet St. Augustine never examined his theory in the light of empirical evidence: was it really true that slaves were worse sinners than the free? Although he occasionally notes that there are "many wicked masters who have religious men as their slaves," this observation leads him, not to a reexamination of his basic assumption that slavery is the punishment and remedy for sin, but to the more startling conclusion that even such slavery is legitimate because "it is a happier thing to be the slave of a man than of a lust." Weighed carefully, therefore, St. Augustine's theory of slavery, like that of the church in general, probably seemed more reasonable to masters than to slaves, although the institution of slavery was mitigated, in actual use, by the influence of Christianity.

St. Augustine, the greatest of the church Fathers, stood at the turning point of two worlds, that of antiquity and Christianity. The impact of Plato in particular, but also that of Aristotle, Cicero, and the Stoics, is clearly evident in his work, and he helped to transmit the ancient heritage to the new world that was being born. While the Roman empire was breaking up before his eyes, he sought to construe, as a Christian, the vision of a timeless empire in which peace and justice would reign: the City of God.

ST. AUGUSTINE

The City of God *

JUSTICE—THE FOUNDATION OF THE STATE

Justice being taken away, then, what are kingdoms but great robberies? For what are robberies themselves, but little kingdoms? The band itself is made up of men; it is ruled by the authority of a prince, it is knit together by the pact of the confederacy; the booty is divided by the law agreed on. If, by the admittance of abandoned men, this evil increases to such a degree that it holds places, fixes abodes, takes possession of cities, and subdues peoples, it assumes the more plainly the name of a kingdom, because the reality is now manifestly conferred on it, not by the removal of covetousness, but by the addition of impunity. Indeed, that was an apt and true reply which was given to Alexander the Great by a pirate who had been seized. For when that king had asked the man what he meant by keeping hostile possession of the sea, he answered with bold pride, "What thou meanest by seizing the whole earth; but because I do it with a petty ship, I am called a robber, whilst thou who dost it with a great fleet art styled emperor."¹

* From St. Augustine, *The City of God* (trans. Marcus Dods, in Vol. II of *A Select Library of the Nicene and Post-Nicene Fathers of the Christian Church*, ed. Philip Schaff, Buffalo, 1887).

¹ Cicero, *De Republica*, III.

THE TRUE HAPPINESS OF THE RULER

For neither do we say that certain Christian emperors were therefore happy because they ruled a long time, or, dying a peaceful death, left their sons to succeed them in the empire, or subdued the enemies of the republic, or were able both to guard against and to suppress the attempt of hostile citizens rising against them. These and other gifts or comforts of this sorrowful life even certain worshippers of demons have merited to receive, who do not belong to the kingdom of God to which these belong; and this is to be traced to the mercy of God, who would not have those who believe in Him desire such things as the highest good. But we say that they are happy if they rule justly; if they are not lifted up amid the praises of those who pay them sublime honors, and the obsequiousness of those who salute them with an excessive humility, but remember that they are men; if they make their power the handmaid of His majesty by using it for the greatest possible extension of His worship; if they fear, love, worship God; if more than their own they love that kingdom in which they are not afraid to have partners; if they are slow to punish, ready to pardon; if they apply that punishment as necessary to government and defence of the republic, and not in order to gratify their own enmity; if they grant pardon, not that iniquity may go unpunished,

but with the hope that the transgressor may amend his ways; if they compensate with the lenity of mercy and the liberality of benevolence for whatever severity they may be compelled to decree; if their luxury is as much restrained as it might have been unrestrained; if they prefer to govern depraved desires rather than any nation whatever; and if they do all these things, not through ardent desire of empty glory, but through love of eternal felicity, not neglecting to offer to the true God, who is their God, for their sins, the sacrifices of humility, contrition, and prayer. Such Christian emperors, we say, are happy in the present time by hope, and are destined to be so in the enjoyment of the reality itself, when that which we wait for shall have arrived.

THE EARTHLY AND THE HEAVENLY CITY

Accordingly, two cities have been formed by two loves: the earthly by the love of self, even to the contempt of God; the heavenly by the love of God, even to the contempt of self. The former, in a word, glories in itself, the latter in the Lord. For the one seeks glory from men; but the greatest glory of the other is God, the witness of conscience. The one lifts up its head in its own glory; the other says to its God, "Thou art my glory, and the lifter up of mine head."² In the one, the princes and the nations it subdues are ruled by the love of ruling; in the other, the princes and the subjects serve one another in love, the latter obeying, while the former take thought for all. The one delights in its own strength, represented in the persons of its rulers; the other says to its God, "I will love Thee, O Lord, my strength."³ And therefore the wise men of the one city, living according to man, have sought for profit to their own bodies or souls, or both, and those who have known God

² Ps. iii. 3.

³ Ps. xviii. 1.

"glorified Him not as God, neither were thankful, but became vain in their imaginations, and their foolish heart was darkened; professing themselves to be wise"—that is, glorying in their own wisdom, and being possessed by pride—"they became fools, and changed the glory of the incorruptible God into an image made like to corruptible man, and to birds, and four-footed beasts, and creeping things." For they were either leaders or followers of the people in adoring images, "and worshipped and served the creature more than the Creator, who is blessed for ever."⁴ But in the other city there is no human wisdom, but only godliness, which offers due worship to the true God, and looks for its reward in the society of the saints, of holy angels as well as holy men, that God may be all in all.⁵

THE TWO TYPES OF MAN

Of the bliss of Paradise, of Paradise itself, and of the life of our first parents there, and of their sin and punishment, many have thought much, spoken much, written much. We ourselves, too, have spoken of these things in the foregoing books, and have written either what we read in the Holy Scriptures, or what we could reasonably deduce from them. And were we to enter into a more detailed investigation of these matters, an endless number of endless questions would arise, which would involve us in a larger work than the present occasion admits. We cannot be expected to find room for replying to every question that may be started by unoccupied and captious men, who are ever more ready to ask questions than capable of understanding the answer. Yet I trust we have already done justice to these great and difficult questions regarding the beginning of the world, or of the soul, or of the human race itself. This race we have distributed

⁴ Rom. i. 21-25.

⁵ I Cor. xv. 28.

into two parts, the one consisting of those who live according to man, the other of those who live according to God. And these we also mystically call the two cities, or the two communities of men, of which the one is predestined to reign eternally with God, and the other to suffer eternal punishment with the devil. This, however, is their end, and of it we are to speak afterwards. At present, as we have said enough about their origin, whether among the angels, whose numbers we know not, or in the two first human beings, it seems suitable to attempt an account of their career, from the time when our two first parents began to propagate the race until all human generation shall cease. For this whole time or world-age, in which the dying give place and those who are born succeed, is the career of these two cities concerning which we treat.

Of these two first parents of the human race, then, Cain was the first-born, and he belonged to the city of men; after him was born Abel, who belonged to the city of God. For as in the individual the truth of the apostle's statement is discerned, "that is not first which is spiritual, but that which is natural, and afterward that which is spiritual,"⁷ whence it comes to pass that each man, being derived from a condemned stock, is first of all born of Adam evil and carnal, and becomes good and spiritual only afterwards, when he is grafted into Christ by regeneration: so was it in the human race as a whole. When these two cities began to run their course by a series of deaths and births, the citizen of this world was the first-born, and after him the stranger in this world, the citizen of the city of God, predestinated by grace, elected by grace, by grace a stranger below, and by grace a citizen above. By grace—for so far as regards himself he is sprung from the same mass, all of which is condemned in its origin: but God, like a potter (for this comparison is introduced by the apostle judiciously, and not

⁷ I Cor. xv. 46.

without thought), of the same lump made one vessel to honor, another to dishonor.⁷ But first the vessel to dishonor was made, and after it another to honor. For in each individual, as I have already said, there is first of all that which is reprobate, that from which we must begin, but in which we need not necessarily remain; afterwards is that which is well-approved, to which we may by advancing attain, and in which, when we have reached it, we may abide. Not, indeed, that every wicked man shall be good, but that no one will be good who was not first of all wicked; but the sooner any one becomes a good man, the more speedily does he receive this title, and abolish the old name in the new. Accordingly, it is recorded of Cain that he built a city,⁸ but Abel, being a sojourner, built none. For the city of the saints is above, although here below it begets citizens, in whom it sojourns till the time of its reign arrives, when it shall gather together all in the day of the resurrection; and then shall the promised kingdom be given to them, in which they shall reign with their Prince, the King of the ages, time without end.

CONFLICT AND PEACE IN THE EARTHLY CITY

But the earthly city, which shall not be everlasting (for it will no longer be a city when it has been committed to the extreme penalty), has its good in this world, and rejoices in it with such joy as such things can afford. But as this is not a good which can discharge its devotees of all distresses, this city is often divided against itself by litigations, wars, quarrels, and such victories as are either life-destroying or short-lived. For each part of it that arms against another part of it seeks to triumph over the nations though itself in bondage to vice. If, when it has conquered, it is inflated with pride, its victory is life-destroying; but if it turns

⁷ Rom. ix. 21.

⁸ Gen. iv. 17.

its thoughts upon the common casualties of our mortal condition, and is rather anxious concerning the disasters that may befall it than elated with the successes already achieved, this victory, though of a higher kind, is still only short-lived; for it cannot abidingly rule over those whom it has victoriously subdued. But the things which this city desires cannot justly be said to be evil, for it is itself, in its own kind, better than all other human good. For it desires earthly peace for the sake of enjoying earthly goods, and it makes war in order to attain to this peace; since, if it has conquered, and there remains no one to resist it, it enjoys a peace which it had not while there were opposing parties who contested for the enjoyment of those things which were too small to satisfy both. This peace is purchased by toilsome wars; it is obtained by what they style a glorious victory. Now, when victory remains with the party which had the juster cause, who hesitates to congratulate the victor, and style it a desirable peace? These things, then, are good things, and without doubt the gifts of God. But if they neglect the better things of the heavenly city, which are secured by eternal victory and peace never-ending, and so inordinately covet these present good things that they believe them to be the only desirable things, or love them better than those things which are believed to be better—if this be so, then it is necessary that misery follow and ever increase.

THE LUST FOR POWER IN THE EARTHLY CITY

Thus the founder of the earthly city was a fratricide. Overcome with envy, he slew his own brother, a citizen of the eternal city, and a sojourner on earth. So that we cannot be surprised that this first specimen, or, as the Greeks say, archetype of crime, should, long afterwards, find a corresponding crime at the foundation of that city which was destined to reign over so many nations, and be the head of this

earthly city of which we speak. For of that city also, as one of their poets has mentioned, "the first walls were stained with a brother's blood,"⁹ or, as Roman history records, Remus was slain by his brother Romulus. And thus there is no difference between the foundation of this city and of the earthly city, unless it be that Romulus and Remus were both citizens of the earthly city. Both desired to have the glory of founding the Roman republic, but both could not have as much glory as if one only claimed it; for he who wished to have the glory of ruling would certainly rule less if his power were shared by a living consort. In order, therefore, that the whole glory might be enjoyed by one, his consort was removed; and by this crime the empire was made larger indeed, but inferior, while otherwise it would have been less, but better. Now these brothers, Cain and Abel, were not both animated by the same earthly desires, nor did the murderer envy the other because he feared that, by both ruling, his own dominion would be curtailed—for Abel was not solicitous to rule in that city which his brother built—he was moved by that diabolical, envious hatred with which the evil regard the good, for no other reason than because they are good while themselves are evil. For the possession of goodness is by no means diminished by being shared with a partner either permanent or temporarily assumed; on the contrary, the possession of goodness is increased in proportion to the concord and charity of each of those who share it. In short, he who is unwilling to share this possession cannot have it; and he who is most willing to admit others to a share of it will have the greatest abundance to himself. The quarrel, then, between Romulus and Remus shows how the earthly city is divided against itself; that which fell out between Cain and Abel illustrated the hatred that subsists between the two cities, that of God and that of men. The wicked war with the

⁹ Lucan, *Phar.* i. 95.

wicked; the good also war with the wicked. But with the good, good men, or at least perfectly good men, cannot war; though, while only going on towards perfection, they war to this extent, that every good man resists others in those points in which he resists himself. And in each individual "the flesh lusteth against the spirit, and the spirit against the flesh."¹⁰ This spiritual lusting, therefore, can be at war with the carnal lust of another man; or carnal lust may be at war with the spiritual desires of another, in some such way as good and wicked men are at war; or, still more certainly, the carnal lusts of two men, good but not yet perfect, contend together, just as the wicked contend with the wicked, until the health of those who are under the treatment of grace attains final victory.

LIMITATIONS OF SOCIAL LIFE

We give a much more unlimited approval to their idea that the life of the wise man must be social. For how could the city of God either take a beginning or be developed, or attain its proper destiny, if the life of the saints were not a social life? But who can enumerate all the great grievances with which human society abounds in the misery of this mortal state? Who can weigh them? Hear how one of their comic writers makes one of his characters express the common feelings of all men in this matter: "I am married; this is one misery. Children are born to me; they are additional cares."¹¹ What shall I say of the miseries of love which Terence also recounts—"slights, suspicions, quarrels, war to-day, peace to-morrow?"¹² Is not human life full of such things? Do they not often occur even in honorable friendships? On all hands we experience these slights, suspicions, quarrels, war, all of which are undoubted evils; while, on the other hand, peace is a doubtful good, because we do not know

¹⁰ Gal. v. 17.

¹¹ Terent. *Adelph.* v. 4.

¹² *Eunuch*, i. 1.

the heart of our friend, and though we did know it to-day, we should be as ignorant of what it might be to-morrow. Who ought to be, or who are more friendly than those who live in the same family? And yet who can rely even upon this friendship, seeing that secret treachery has often broken it up, and produced enmity as bitter as the amity was sweet, or seemed sweet by the most perfect dissimulation? It is on this account that the words of Cicero so move the heart of every one, and provoke a sigh: "There are no snares more dangerous than those which lurk under the guise of duty or the name of relationship. For the man who is your declared foe you can easily baffle by precaution; but this hidden, intestine, and domestic danger not merely exists, but overwhelms you before you can foresee and examine it."¹³ It is also to this that allusion is made by the divine saying, "A man's foes are those of his own household"¹⁴—words which one cannot hear without pain; for though a man have sufficient fortitude to endure it with equanimity, and sufficient sagacity to baffle the malice of a pretended friend, yet if he himself is a good man, he cannot but be greatly pained at the discovery of the perfidy of wicked men, whether they have always been wicked and merely feigned goodness, or have fallen from a better to a malicious disposition. If, then, home, the natural refuge from the ills of life, is itself not safe, what shall we say of the city, which, as it is larger, is so much the more filled with lawsuits civil and criminal, and is never free from the fear, if sometimes from the actual outbreak, of disturbing and bloody insurrections and civil wars?

SHORTCOMINGS OF HUMAN JUSTICE

What shall I say of these judgments which men pronounce on men, and which are necessary in communities,

¹³ *In Verrem*, ii. i. 15.

¹⁴ Matt. x. 36.

whatever outward peace they enjoy? Melancholy and lamentable judgments they are, since the judges are men who cannot discern the consciences of those at their bar, and are therefore frequently compelled to put innocent witnesses to the torture to ascertain the truth regarding the crimes of other men. What shall I say of torture applied to the accused himself? He is tortured to discover whether he is guilty, so that, though innocent, he suffers most undoubted punishment for crime that is still doubtful, not because it is proved that he committed it, but because it is not ascertained that he did not commit it. Thus the ignorance of the judge frequently involves an innocent person in suffering. And what is still more unendurable—a thing, indeed, to be bewailed, and, if that were possible, watered with fountains of tears—is this, that when the judge puts the accused to the question, that he may not unwittingly put an innocent man to death, the result of this lamentable ignorance is that this very person, whom he tortured that he might not condemn him if innocent, is condemned to death both tortured and innocent. For if he has chosen, in obedience to the philosophical instructions to the wise man, to quit this life rather than endure any longer such tortures, he declares that he has committed the crime which in fact he has not committed. And when he has been condemned and put to death, the judge is still in ignorance whether he has put to death an innocent or a guilty person, though he put the accused to the torture for the very purpose of saving himself from condemning the innocent; and consequently he has both tortured an innocent man to discover his innocence, and has put him to death without discovering it. If such darkness shrouds social life, will a wise judge take his seat on the bench or no? Beyond question he will. For human society, which he thinks it a wickedness to abandon, constrains him and compels him to this duty. And he thinks it no wickedness that innocent witnesses are tortured regarding the

crimes of which other men are accused; or that the accused are put to the torture, so that they are often overcome with anguish, and, though innocent, make false confessions regarding themselves, and are punished; or that, though they be not condemned to die, they often die during, or in consequence of, the torture; or that sometimes the accusers, who perhaps have been prompted by a desire to benefit society by bringing criminals to justice, are themselves condemned through the ignorance of the judge, because they are unable to prove the truth of their accusations though they are true, and because the witnesses lie, and the accused endures the torture without being moved to confession. These numerous and important evils he does not consider sins; for the wise judge does these things, not with any intention of doing harm, but because his ignorance compels him, and because human society claims him as a judge. But though we therefore acquit the judge of malice, we must none the less condemn human life as miserable. And if he is compelled to torture and punish the innocent because his office and his ignorance constrain him, is he a happy as well as a guiltless man? Surely it were proof of more profound considerateness and finer feeling were he to recognize the misery of these necessities, and shrink from his own implication in that misery; and had he any piety about him, he would cry to God "From my necessities deliver Thou me."¹⁵

THE MISERY OF WAR

After the state or city comes the world, the third circle of human society—the first being the house, and the second the city. And the world, as it is larger, so it is fuller of dangers, as the greater sea is the more dangerous. And here, in the first place, man is separated from man by the difference of languages. For if two men, each ignorant of the other's language, meet, and are not compelled to pass, but,

¹⁵ Ps. xxv. 17.

on the contrary, to remain in company, dumb animals, though of different species, would more easily hold intercourse than they, humans though they be. For their common nature is no help to friendliness when they are prevented by diversity of language from conveying their sentiments to one another; so that a man would more readily hold intercourse with his dog than with a foreigner. But the imperial city has endeavored to impose on subject nations not only her yoke, but her language, as a bond of peace, so that interpreters, far from being scarce, are numberless. This is true; but how many great wars, how much slaughter and bloodshed, have provided this unity! And though these are past, the end of these miseries has not yet come. For though there have never been wanting, nor are yet wanting, hostile nations beyond the empire, against whom wars have been and are waged, yet, supposing there were no such nations, the very extent of the empire itself has produced wars of a more obnoxious description—social and civil wars—and with these the whole race has been agitated, either by the actual conflict or the fear of a renewed outbreak. If I attempted to give an adequate description of these manifold disasters, these stern and lasting necessities, though I am quite unequal to the task, what limit could I set? But, say they, the wise man will wage just wars. As if he would not all the rather lament the necessity of just wars, if he remembers that he is a man; for if they were not just he would not wage them, and would therefore be delivered from all wars. For it is the wrong-doing of the opposing party which compels the wise man to wage just wars; and this wrong-doing, even though it gave rise to no war, would still be matter of grief to man because it is man's wrong-doing. Let every one, then, who thinks with pain on all these great evils, so horrible, so ruthless, acknowledge that this is misery. And if any one either endures or thinks of them without mental pain, this is a more mis-

erable plight still, for he thinks himself happy because he has lost human feeling.

THE OBJECTIVE OF WAR: PEACE

Whoever gives even moderate attention to human affairs and to our common nature, will recognize that if there is no man who does not wish to be joyful, neither is there any one who does not wish to have peace. For even they who make war desire nothing but victory—desire, that is to say, to attain to peace with glory. For what else is victory than the conquest of those who resist us? and when this is done there is peace. It is therefore with the desire for peace that wars are waged, even by those who take pleasure in exercising their warlike nature in command and battle. And hence it is obvious that peace is the end sought for by war. For every man seeks peace by waging war, but no man seeks war by making peace. For even they who intentionally interrupt the peace in which they are living have no hatred of peace, but only wish it changed into a peace that suits them better. They do not, therefore, wish to have no peace, but only one more to their mind. And in the case of sedition, when men have separated themselves from the community, they yet do not effect what they wish, unless they maintain some kind of peace with their fellow-conspirators. And therefore even robbers take care to maintain peace with their comrades, that they may with greater effect and greater safety invade the peace of other men. And if an individual happen to be of such unrivalled strength, and to be so jealous of partnership, that he trusts himself with no comrades, but makes his own plots, and commits depredations and murders on his own account, yet he maintains some shadow of peace with such persons as he is unable to kill, and from whom he wishes to conceal his deeds. In his own home, too, he makes it his aim to be at peace with his wife and children, and any other members of his

household; for unquestionably their prompt obedience to his every look is a source of pleasure to him. And if this be not rendered, he is angry, he chides and punishes; and even by this storm he secures the calm peace of his own home, as occasion demands. For he sees that peace cannot be maintained unless all the members of the same domestic circle be subject to one head, such as he himself is in his own house. And therefore if a city or nation offered to submit itself to him, to serve him in the same style as he had made his household serve him, he would no longer lurk in brigand's hiding-places, but lift his head in open day as a king, though the same covetousness and wickedness should remain in him. And thus all men desire to have peace with their own circle whom they wish to govern as suits themselves. For even those whom they make war against they wish to make their own, and impose on them the laws of their own peace.

But let us suppose a man such as poetry and mythology speak of—a man so unsociable and savage as to be called rather a semi-man than a man.¹⁶ Although, then, his kingdom was the solitude of a dreary cave, and he himself was so singularly bad-hearted that he was named *Kaxós*, which is the Greek word for *bad*; though he had no wife to soothe him with endearing talk, no children to play with, no sons to do his bidding, no friend to enliven him with intercourse, not even his father Vulcan (though in one respect he was happier than his father, not having begotten a monster like himself); although he gave to no man, but took as he wished whatever he could, from whomsoever he could, when he could; yet in that solitary den, the floor of which, as Virgil¹⁷ says, was always reeking with recent slaughter, there was nothing else than peace sought, a peace in which no one should molest him, or disquiet him with any assault or alarm.

With his own body he desired to be at peace, and he was satisfied only in proportion as he had this peace. For he ruled his members, and they obeyed him; and for the sake of pacifying his mortal nature, which rebelled when it needed anything, and of allaying the sedition of hunger which threatened to banish the soul from the body, he made forays, slew, and devoured, but used the ferocity and savageness he displayed in these actions only for the preservation of his own life's peace. So that, had he been willing to make with other men the same peace which he made with himself in his own cave, he would neither have been called bad, nor a monster, nor a semi-man. Or if the appearance of his body and his vomiting smoky fires frightened men from having any dealings with him, perhaps his fierce ways arose not from a desire to do mischief, but from the necessity of finding a living. But he may have had no existence, or, at least, he was not such as the poets fancifully describe him, for they had to exalt Hercules, and did so at the expense of Cacus. It is better, then, to believe that such a man or semi-man never existed, and that this, in common with many other fancies of the poets, is mere fiction. For the most savage animals (and he is said to have been almost a wild beast) encompass their own species with a ring of protecting peace. They cohabit, beget, produce, suckle, and bring up their young, though very many of them are not gregarious, but solitary—not like sheep, deer, pigeons, starlings, bees, but such as lions, foxes, eagles, bats. For what tigress does not gently purr over her cubs, and lay aside her ferocity to fondle them? What kite, solitary as he is when circling over his prey, does not seek a mate, build a nest, hatch the eggs, bring up the young birds, and maintain with the mother of his family as peaceful a domestic alliance as he can? How much more powerfully do the laws of man's nature move him to hold fellowship and maintain peace with all men so far as in him lies, since even wicked

¹⁶ He refers to the giant Cacus.

¹⁷ *Aeneid*, viii. 195.

men wage war to maintain the peace of their own circle, and wish that, if possible, all men belonged to them, that all men and things might serve but one head, and might, either through love or fear, yield themselves to peace with him! It is thus that pride in its perversity apes God. It abhors equality with other men under Him; but, instead of His rule, it seeks to impose a rule of its own upon its equals. It abhors, that is to say, the just peace of God, and loves its own unjust peace; but it cannot help loving peace of one kind or other. For there is no vice so clean contrary to nature that it obliterates even the faintest traces of nature.

He, then, who prefers what is right to what is wrong, and what is well-ordered to what is perverted, sees that the peace of unjust men is not worthy to be called peace in comparison with the peace of the just. And yet even what is perverted must of necessity be in harmony with, and in dependence on, and in some part of the order of things, for otherwise it would have no existence at all. Suppose a man hangs with his head downwards, this is certainly a perverted attitude of body and arrangement of its members; for that which nature requires to be above is beneath, and *vice versa*. This perversity disturbs the peace of the body, and is therefore painful. Nevertheless the spirit is at peace with its body, and labors for its preservation, and hence the suffering; but if it is banished from the body by its pains, then, so long as the bodily framework holds together, there is in the remains a kind of peace among the members, and hence the body remains suspended. And inasmuch as the earthly body tends towards the earth, and rests on the bond by which it is suspended, it tends thus to its natural peace, and the voice of its own weight demands a place for it to rest; and though now lifeless and without feeling, it does not fall from the peace that is natural to its place in creation, whether it already has it, or is tending towards it. For if you apply embalming preparations to prevent the bodily frame from mouldering and dissolving, a

kind of peace still unites part to part, and keeps the whole body in a suitable place on the earth—in other words, in a place that is at peace with the body. If, on the other hand, the body receive no such care, but be left to the natural course, it is disturbed by exhalations that do not harmonize with one another, and that offend our senses; for it is this which is perceived in putrefaction until it is assimilated to the elements of the world, and partake by partake enters into peace with them. Yet throughout this process the laws of the most high Creator and Governor are strictly observed, for it is by Him the peace of the universe is administered. For although minute animals are produced from the carcass of a larger animal, all these little atoms, by the law of the same Creator, serve the animals they belong to in peace. And although the flesh of dead animals be eaten by others, no matter where it be carried, nor what it be brought into contact with, nor what it be converted and changed into, it still is ruled by the same laws which pervade all things for the conservation of every mortal race, and which bring things that fit one another into harmony.

THE TRANQUILLITY OF ORDER IN THE UNIVERSE

The peace of the body then consists in the duly proportioned arrangement of its parts. The peace of the irrational soul is the harmonious repose of the appetites, and that of the rational soul the harmony of knowledge and action. The peace of body and soul is the well-ordered and harmonious life and health of the living creature. Peace between man and God is the well-ordered obedience of faith to eternal law. Peace between man and man is well-ordered concord. Domestic peace is the well-ordered concord between those of the family who rule and those who obey. Civil peace is a similar concord among the citizens. The peace of the celestial city is the perfectly ordered and harmonious enjoyment of God, and of one another in God. The peace of all

things is the tranquillity of order. Order is the distribution which allots things equal and unequal, each to its own place. And hence, though the miserable, in so far as they are such, do certainly not enjoy peace, but are severed from that tranquillity of order in which there is no disturbance, nevertheless, inasmuch as they are deservedly and justly miserable, they are by their very misery connected with order. They are not, indeed, conjoined with the blessed, but they are disjoined from them by the law of order. And though they are disquieted, their circumstances are notwithstanding adjusted to them, and consequently they have some tranquillity of order, and therefore some peace. But they are wretched because, although not wholly miserable, they are not in that place where any mixture of misery is impossible. They would, however, be more wretched if they had not that peace which arises from being in harmony with the natural order of things. When they suffer, their peace is in so far disturbed; but their peace continues in so far as they do not suffer, and in so far as their nature continues to exist. As, then, there may be life without pain, while there cannot be pain without some kind of life, so there may be peace without war, but there cannot be war without some kind of peace, because war supposes the existence of some natures to wage it, and these natures cannot exist without peace of one kind or other.

And therefore there is a nature in which evil does not or even cannot exist; but there cannot be a nature in which there is no good. Hence not even the nature of the devil himself is evil, in so far as it is nature, but it was made evil by being perverted. Thus he did not abide in the truth,¹⁸ but could not escape the judgment of the truth; he did not abide in the tranquillity of order, but did not therefore escape the power of the Ordainer. The good imparted by God to his nature did not screen him from the justice of God by which order was pre-

served in his punishment; neither did God punish the good which He had created, but the evil which the devil had committed. God did not take back all He had imparted to his nature, but something He took and something He left, that there might remain enough to be sensible of the loss of what was taken. And this very sensibility to pain is evidence of the good which has been taken away and the good which has been left. For, were nothing good left, there could be no pain on account of the good which had been lost. For he who sins is still worse if he rejoices in his loss of righteousness. But he who is in pain, if he derives no benefit from it, mourns at least the loss of health. And as righteousness and health are both good things, and as the loss of any good thing is matter of grief, not of joy—if, at least, there is no compensation, as spiritual righteousness may compensate for the loss of bodily health—certainly it is more suitable for a wicked man to grieve in punishment than to rejoice in his fault. As, then, the joy of a sinner who has abandoned what is good is evidence of a bad will, so his grief for the good he has lost when he is punished is evidence of a good nature. For he who laments the peace his nature has lost is stirred to do so by some relics of peace which make his nature friendly to itself. And it is very just that in the final punishment the wicked and godless should in anguish bewail the loss of the natural advantages they enjoyed, and should perceive that they were most justly taken from them by that God whose benign liberality they had despised. God, then, the most wise Creator and most just Ordainer of all natures, who placed the human race upon earth as its greatest ornament, imparted to men some good things adapted to this life, to wit, temporal peace, such as we can enjoy in this life from health and safety and human fellowship, and all things needful for the preservation and recovery of this peace, such as the objects which are accommodated to our outward senses, light, night, the air, and waters suitable

¹⁸ John viii. 44.

for us, and everything the body requires to sustain, shelter, heal, or beautify it; and all under this most equitable condition, that every man who made a good use of these advantages suited to the peace of this mortal condition, should receive ampler and better blessings, namely, the peace of immortality, accompanied by glory and honor in an endless life made fit for the enjoyment of God and of one another in God; but that he who used the present blessings badly should both lose them and should not receive the others.

RULERS AS SERVANTS OF THE RULED

The whole use, then, of things temporal has a reference to this result of earthly peace in the earthly community, while in the city of God it is connected with eternal peace. And therefore, if we were irrational animals, we should desire nothing beyond the proper arrangement of the parts of the body and the satisfaction of the appetites—nothing, therefore, but bodily comfort and abundance of pleasures, that the peace of the body might contribute to the peace of the soul. For if bodily peace be wanting, a bar is put to the peace even of the irrational soul, since it cannot obtain the gratification of its appetites. And these two together help out the mutual peace of soul and body, the peace of harmonious life and health. For as animals, by shunning pain, show that they love bodily peace, and, by pursuing pleasure to gratify their appetites, show that they love peace of soul, so their shrinking from death is a sufficient indication of their intense love of that peace which binds soul and body in close alliance. But, as man has a rational soul, he subordinates all this which he has in common with the beasts to the peace of his rational soul, that his intellect may have free play and may regulate his actions, and that he may thus enjoy the well-ordered harmony of knowledge and action which constitutes, as we have said, the peace of the rational soul. And for

this purpose he must desire to be neither molested by pain, nor disturbed by desire, nor extinguished by death, that he may arrive at some useful knowledge by which he may regulate his life and manners. But, owing to the liability of the human mind to fall into mistakes, this very pursuit of knowledge may be a snare to him unless he has a divine Master, whom he may obey without misgiving, and who may at the same time give him such help as to preserve his own freedom. And because, so long as he is in this mortal body, he is stranger to God, he walks by faith, not by sight; and he therefore refers all peace, bodily or spiritual or both, to that peace which mortal man has with the immortal God, so that he exhibits the well-ordered obedience of faith to eternal law. But as this divine Master inculcates two precepts—the love of God and the love of our neighbor—and as in these precepts a man finds three things he has to love—God, himself, and his neighbor—and that he who loves God loves himself thereby, it follows that he must endeavor to get his neighbor to love God, since he is ordered to love his neighbor as himself. He ought to make this endeavor in behalf of his wife, his children, his household, all within his reach, even as he would wish his neighbor to do the same for him if he needed it; and consequently he will be at peace, or in well-ordered concord, with all men, as far as in him lies. And this is the order of this concord, that a man, in the first place, injure no one, and, in the second, do good to every one he can reach. Primarily, therefore, his own household are his care, for the law of nature and of society gives him readier access to them and greater opportunity of serving them. And hence the apostle says, "Now, if any provide not for his own, and specially for those of his own house, he hath denied the faith, and is worse than an infidel."¹⁹ This is the origin of domestic peace, or the well-ordered concord of those in the family who rule and those

¹⁹ I Tim. v. 8.

who obey. For they who care for the rest rule—the husband the wife, the parents the children, the masters the servants; and they who are cared for obey—the women their husbands, the children their parents, the servants their masters. But in the family of the just man who lives by faith and is as yet a pilgrim journeying on to the celestial city, even those who rule serve those whom they seem to command; for they rule not from a love of power, but from a sense of the duty they owe to others—not because they are proud of authority, but because they love mercy.

LIBERTY AND SLAVERY

This is prescribed by the order of nature: it is thus that God has created man. For "let them," He says, "have dominion over the fish of the sea, and over the fowl of the air, and over every creeping thing which creepeth on the earth."²⁰ He did not intend that His rational creature, who was made in His image, should have dominion over anything but the irrational creation—not man over man, but man over the beasts. And hence the righteous men in primitive times were made shepherds of cattle rather than kings of men, God intending thus to teach us what the relative position of the creatures is, and what the desert of sin; for it is with justice, we believe, that the condition of slavery is the result of sin. And this is why we do not find the word "slave" in any part of Scripture until righteous Noah branded the sin of his son with this name. It is a name, therefore, introduced by sin and not by nature. The origin of the Latin word for slave is supposed to be found in the circumstance that those who by the law of war were liable to be killed were sometimes preserved by their victors, and were hence called servants. And these circumstances could never have arisen save through sin. For even when we wage a just war, our adversaries must be sinning; and every victory, even

²⁰ Gen. i. 26.

though gained by wicked men, is a result of the first judgment of God, who humbles the vanquished either for the sake of removing or of punishing their sins. Witness that man of God, Daniel, who, when he was in captivity, confessed to God his own sins and the sins of his people, and declared with pious grief that these were the cause of the captivity.²¹ The prime cause, then, of slavery is sin, which brings man under the dominion of his fellow—that which does not happen save by the judgment of God, with whom is no unrighteousness, and who knows how to award fit punishments to every variety of offence. But our Master in heaven says, "Every one who doeth sin is the servant of sin."²² And thus there are many wicked masters who have religious men as their slaves, and who are yet themselves in bondage; "for of whom a man is overcome, of the same is he brought in bondage."²³ And beyond question it is a happier thing to be the slave of a man than of a lust; for even this very lust of ruling, to mention no others, lays waste men's hearts with the most ruthless dominion. Moreover, when men are subjected to one another in a peaceful order, the lowly position does as much good to the servant as the proud position does harm to the master. But by nature, as God first created us, no one is the slave either of man or of sin. This servitude is, however, penal, and is appointed by that law which enjoins the preservation of the natural order and forbids its disturbance; for if nothing had been done in violation of that law, there would have been nothing to restrain by penal servitude. And therefore the apostle admonishes slaves to be subject to their masters, and to serve them heartily and with good-will, so that, if they cannot be freed by their masters, they may themselves make their slavery in some sort free, by serving not in crafty fear, but in faithful love, until all unrighteous-

²¹ Dan. ix.

²² John viii. 34.

²³ II Pet. ii. 19.

ness pass away, and all principality and every human power be brought to nothing, and God be all in all.

EQUITABLE RULE

And therefore, although our righteous fathers²⁴ had slaves, and administered their domestic affairs so as to distinguish between the condition of slaves and the heirship of sons in regard to the blessings of this life, yet in regard to the worship of God, in whom we hope for eternal blessings, they took an equally loving oversight of all the members of their household. And this is so much in accordance with the natural order, that the head of the household was called *paterfamilias*; and this name has been so generally accepted, that even those whose rule is unrighteous are glad to apply it to themselves. But those who are true fathers of their households desire and endeavor that all the members of their household, equally with their own children, should worship and win God, and should come to that heavenly home in which the duty of ruling men is no longer necessary, because the duty of caring for their everlasting happiness has also ceased; but, until they reach that home, masters ought to feel their position of authority a greater burden than servants their service. And if any member of the family interrupts the domestic peace by disobedience, he is corrected either by word or blow, or some kind of just and legitimate punishment, such as society permits, that he may himself be the better for it, and be readjusted to the family harmony from which he had dislocated himself. For as it is not benevolent to give a man help at the expense of some greater benefit he might receive, so it is not innocent to spare a man at the risk of his falling into graver sin. To be innocent, we must not only do harm to no man, but also restrain him from sin or punish his sin, so that either the man

²⁴ The patriarchs.

himself who is punished may profit by his experience, or others be warned by his example. Since, then, the house ought to be the beginning or element of the city, and every beginning bears reference to some end of its own kind, and every element to the integrity of the whole of which it is an element, it follows plainly enough that domestic peace has a relation to civic peace—in other words, that the well-ordered concord of domestic obedience and domestic rule has a relation to the well-ordered concord of civic obedience and civic rule. And therefore it follows, further, that the father of the family ought to frame his domestic rule in accordance with the law of the city, so that the household may be in harmony with the civic order.

THE SUPRANATIONAL CHARACTER OF THE HEAVENLY CITY ON EARTH

But the families which do not live by faith seek their peace in the earthly advantages of this life; while the families which live by faith look for those eternal blessings which are promised, and use as pilgrims such advantages of time and of earth as do not fascinate and divert them from God, but rather aid them to endure with greater ease, and to keep down the number of those burdens of the corruptible body which weigh upon the soul. Thus the things necessary for this mortal life are used by both kinds of men and families alike, but each has its own peculiar and widely different aim in using them. The earthly city, which does not live by faith, seeks an earthly peace, and the end it proposes, in the well-ordered concord of civic obedience and rule, is the combination of men's wills to attain the things which are helpful to this life. The heavenly city, or rather the part of it which sojourns on earth and lives by faith, makes use of this peace only because it must, until this mortal condition which necessitates it shall pass away.

Consequently, so long as it lives like a captive and a stranger in the earthly city, though it has already received the promise of redemption, and the gift of the Spirit as the earnest of it, it makes no scruple to obey the laws of the earthly city, whereby the things necessary for the maintenance of this mortal life are administered; and thus, as this life is common to both cities, so there is a harmony between them in regard to what belongs to it. But, as the earthly city has had some philosophers whose doctrine is condemned by the divine teaching, and who, being deceived either by their own conjectures or by demons, supposed that many gods must be invited to take an interest in human affairs, and assigned to each a separate function and a separate department—to one the body, to another the soul; and in the body itself, to one the head, to another the neck, and each of the other members to one of the gods; and in like manner, in the soul, to one god the natural capacity was assigned, to another education, to another anger, to another lust; and so the various affairs of life were assigned—cattle to one, corn to another, wine to another, oil to another. the woods to another, money to another. navigation to another, wars and victories to another, marriages to another, births and fecundity to another, and other things to other gods: and as the celestial city, on the other hand, knew that one God only was to be worshipped, and that to Him alone was due that service which the Greeks call *latreia*, and which can be given only to a god, it has come to pass that the two cities could not have common laws of religion, and that the heavenly city has been compelled in this matter to dissent, and to become obnoxious to those who think differently, and to stand the brunt of their anger and hatred

and persecutions, except in so far as the minds of their enemies have been alarmed by the multitude of the Christians, and quelled by the manifest protection of God accorded to them. This heavenly city, then, while it sojourns on earth, calls citizens out of all nations, and gathers together a society of pilgrims of all languages, not scrupling about diversities in the manners, laws, and institutions whereby earthly peace is secured and maintained, but recognizing that, however various these are, they all tend to one and the same end of earthly peace. It therefore is so far from rescinding and abolishing these diversities, that it even preserves and adopts them, so long only as no hindrance to the worship of the one supreme and true God is thus introduced. Even the heavenly city, therefore, while in its state of pilgrimage, avails itself of the peace of earth, and, so far as it can without injuring faith and godliness, desires and maintains a common agreement among men regarding the acquisition of the necessaries of life, and makes this earthly peace bear upon the peace of heaven; for this alone can be truly called and esteemed the peace of the reasonable creatures, consisting as it does in the perfectly ordered and harmonious enjoyment of God and of one another in God. When we shall have reached that peace, this mortal life shall give place to one that is eternal, and our body shall be no more this animal body which by its corruption weighs down the soul, but a spiritual body feeling no want, and in all its members subjected to the will. In its pilgrim state the heavenly city possesses this peace by faith; and by this faith it lives righteously when it refers to the attainment of that peace every good action towards God and man; for the life of the city is a social life.

JOHN OF SALISBURY

Christianity introduced a revolutionary principle into communal life by destroying the previous equation of personality and citizenship, and by postulating autonomy of a spiritual sphere independent of, and even superior to, political authority. For a time Christianity was on the defensive, and the needs of institutional survival naturally overshadowed the need for theoretical formulas. After Christianity became the official religion of state in the fourth century, and the only permitted creed in the fifth, interest in the theory of the relation of church and state developed more rapidly.

St. Augustine was so deeply concerned with the theological defense of Christianity against paganism and heresy that he did not elaborate a political theory clearly defining the boundaries between political and ecclesiastical power, but toward the close of the fifth century, Pope Gelasius defined the relation between the two authorities (or "two swords," as they were later called). Christ himself was king and priest, but knowing the sinfulness and weakness of human nature, he divided, according to Gelasius, the two offices, assigning to ecclesiastical authority the spiritual and religious welfare of men, and to political authority the care and administration of temporal matters. Both ecclesiastical and political powers derive their authority from God; each is independent, and therefore supreme, in its own sphere, the church in religious matters and the state in political affairs. Yet this independence also implies mutual dependence: because the state is supreme only in its own sphere, the political, it must bow to the supremacy of the church in religious issues. Similarly, the church, because it is supreme only in religious matters, must recognize the authority of the state in mundane government and administration.

Gelasius did not raise, or answer, the question of who is to decide whether a specific issue is predominantly religious or political. In his dualistic conception of authority he assumed that church and state would cooperate in practical tasks rather than engage in bitter jurisdictional disputes: the church needs the state for temporal purposes, and the state needs the church for the attainment

of spiritual salvation. The clergy should therefore not interfere with the government's secular business, and the political rulers should keep clear of spiritual matters.

Had Gelasius pressed the issue to its logical conclusions and gone into the question of who is to decide authoritatively, in a given situation, whether the ecclesiastical or temporal interest is predominant, he would have discovered that his dualistic theory was not wholly satisfactory. Under his dualistic doctrine of two coordinate authorities, whoever has the right or power to decide whether a matter at issue is primarily ecclesiastical or temporal, will, in effect, be the first, or, to use a more modern phrase, the sovereign authority. But the formulation of socially significant questions is not a matter of mere logic, and Gelasius may have felt that the cause of peace and the long-term interests of the church would best be served by a doctrine that stressed the possibility of equilibrium rather than of strife. The dualism of ecclesiastical and temporal authority was not conceived to be final: God is the source of both, and in serving God both authorities find their reason for existence.

Nevertheless, Gelasius weighed his doctrine somewhat in favor of the church by mentioning that its burden is heavier than that of the state, because the priest is answerable for the souls of all—subjects, lords, and kings. In Gelasius's own mind, this special position of the church merely involved special responsibilities, inasmuch as the heaviest task of all, spiritual salvation, was assigned to it. Yet the doctrine of the heavier burden—originally a moral ideal of fuller dedication to selfless service—became, from the ninth century on, a positive claim for more dignity and authority in relation to mundane government.

As the conflict between church and empire grew, particularly from the tenth to the twelfth centuries, each side tended to give up the older Gelasian doctrine of two authorities poised in equilibrium. The papalists claimed supreme authority for the church as the representative of the spiritual principle in society and insisted that all authority, ecclesiastical and secular, was originally given to the church; that, retaining the title and exercise of spiritual power, the church then transferred the exercise of secular authority to the state, without, however, abandoning the original title to it. According to the basic papalist theory, the church held its authority directly from God, whereas the state exercised its authority indirectly, having received it from the church as the intermediary between God and society.

In the age of feudalism, social rights and institutions were less well defined and clear-cut than in premedieval or modern times. Thus landed property was not attached to a single owner who had absolute dominion over it, but was broken up into its component elements, so that one person might be the legal owner, whereas many others might share in its uses. Or the owner might retain for himself some forms of the use of his property, and grant other forms of use to his vassals. The papalist doctrine claiming that secular authority was held only as a "fief" (in tenure) by the state, true title resting with the church, was no stranger in construction than was the medieval (and still valid) legal doctrine of "eminent domain" under which the king retains the ultimate title to all property in the land.

In pre- and postfeudal eras the argument of the medieval papalists might logically lead to theocracy, a government in which the priests rule in both

ecclesiastical and secular matters. The specific environment of feudalism permitted the formulation of a theory in which even the papalists merely claimed the original title to secular authority but left its exercise to the state. What the papalists demanded was not so much that the pope actually rule and administer the empire but that he control the emperor's action from the viewpoint of Christian values, that he protect the subjects against rulers who strayed from the path of righteousness, and that he have the right to censure and admonish the emperor, and, if necessary, excommunicate and depose him.

By contrast, the representatives of the imperialist position made, in theory at least, more moderate claims. They were willing to concede that neither power was supreme over the other as far as its source and title were concerned, for both powers were handed down directly from God to church and state. Thus, in essence, the moderate imperialist writers were satisfied to restate the Gelasian doctrine of equality and equilibrium between secular and spiritual authorities. As the contest between the papalists and the imperialists sharpened, particularly from the eleventh century on, extreme antipapalists suggested that the office of the king or emperor was, in itself, higher than that of bishop and pope, and that secular authority was supreme in worldly and spiritual matters.

The struggle between papalist and antipapalist doctrines was not only, or even chiefly, an issue of theological disagreement but the expression of vital conflicts of power and control. In particular, the contest was by no means as universal as the phrase "church and empire" would imply. In the first place, the Holy Roman Empire of the Middle Ages (which originated in the coronation of Charlemagne in Rome in 800 and ended in the abdication of the Hapsburg emperor Francis II in 1806) was little more than a German empire, including a great part of Italy but excluding the all-important political areas of England, France, and Spain. Similarly, the church at this time could not speak in the name of all Christendom, but only of those who, especially in the West, were under the jurisdiction of Rome. In 1054 there occurred the final separation between the Eastern Orthodox and Roman Catholic Churches.

Contestants in any dispute often seek to buttress their case by identifying their partial interest with a more general, and possibly universal, one. It was therefore not unnatural for the Catholic Church to represent itself as the guardian of all Christendom, just as it was in the interest of German expansionist monarchs to hug the cloak of the Holy Roman Empire and thus acquire more respectability and universality. Although the Roman empire had been defeated militarily in the fifth century by Germanic invaders streaming into Italy and her possessions from all directions, Roman popes continued, during the Middle Ages, the struggle with expanding German power—a power that the political and military leaders of the old empire had been unable to stem by force. It is to be noted that the papacy also collided with French and English kings, but the principal adversary was the German monarchy, which threatened Italy and the Roman church most directly.

The second aspect of the conflict between church and state was intimately tied to the feudal system. Bishops were, on the one hand, charged with the administration of the church and the care of souls, but at the same time they were feudal holders of land and as such vassals of the king. The feudal link of authority, unlike that of the modern state, was of a highly personal kind, and

loyalty of the vassal to the lord was more profound and absorbing than is implied in the modern concept of obeying an impersonal law. The church has always been, and still is, an owner of large landed properties, but the modern concept of ownership is more absolute and does not involve a special kind of allegiance to the government, as was the situation in the feudal era in which landed property was the determining element in the machinery of government.

Another source of conflict lay in the fact that, as the clergy in the Middle Ages for a long time enjoyed a monopoly of literacy and learning, they were entrusted with important administrative positions in the courts and chancelleries of Europe. In theory, perhaps, a bishop could be a faithful representative of the church in spiritual matters and a loyal vassal of the king in economic and political affairs; but this theory was based on the assumption that church and state did not disagree on major policies. When there was disagreement, bishops and priests had to choose which was their first loyalty. The papalists advised them that the church was higher in dignity and authority. The antipapalists insisted that, in secular matters at least, and perhaps in spiritual, too, royal authority was supreme.

The first great conflict between church and empire occurred in the latter part of the eleventh century, when, in 1076, Holy Roman Emperor Henry IV deposed Pope Gregory VII; shortly thereafter, the pope not only deposed the emperor but also excommunicated him and relieved his subjects from their oath of allegiance. From that time until the end of the thirteenth century the conflict between ecclesiastical and secular power dominated the theory as well as the practice of politics.

The most incisive presentation of the papalist viewpoint is the work of an Englishman, John of Salisbury (about 1120–1180). He is considered by many to be the most typical medieval political writer before the discovery and spread of Aristotelianism in the thirteenth century, which gave rise to such divergent and towering figures as St. Thomas Aquinas and Marsilio of Padua.

John of Salisbury spent twelve years of his schooling in France, mostly in Paris, then the world center of philosophy and theology, and in Chartres, an important center of humanistic studies. Like other great English political writers later on (Locke, Burke, J.S. Mill), John of Salisbury had wide practical experience in public affairs. At an early age, as the secretary of Archbishop Theobald of Canterbury, he acquired intimate knowledge of government and politics in England, as well as inside penetration into the character and management of the church. He frequently traveled to the papal court in Rome, and was an intimate friend of Adrian IV, the only English pope in history. He also became a friend of Thomas Becket; when the latter succeeded Theobald as Archbishop of Canterbury, John of Salisbury continued as secretary to the new archbishop.

The conflict between ecclesiastical and temporal power in England developed rapidly during this period, and in 1164 John of Salisbury was exiled to France, shortly to be followed by Thomas Becket. Six years later they returned to England, and John of Salisbury was probably with Thomas Becket on the day the latter was murdered in his own cathedral at Canterbury by the henchmen of Henry II, King of England. In 1176 John of Salisbury was asked by the French king, Louis VII, to become bishop of Chartres. John gladly accepted

the invitation to return to the city in which he had been introduced, as a youth, to humanistic learning, and in Chartres, where he felt so much at home, he died in 1180.

John of Salisbury's most important work is *The Statesman's Book* (*Policraticus*). There is perhaps no single doctrine that he can claim to have discovered first; yet his book is one of the most influential medieval political statements because of the originality with which he combines existing isolated ideas into a new pattern, and because of his style, which has freshness, integrity, and a sense of humor—the latter a particularly rare quality in a medieval writer on politics.

John is best known for his championing of the supremacy of the ecclesiastical over the temporal power. From the ninth century on, this struggle between the two powers periodically erupted. The Gelasian doctrine of equilibrium and cooperation between church and state was constantly modified by the conflicts of power between the popes and the German emperors, and the developing interpretations of church-state relations reflected the strains and tensions of the struggle for hegemony. In the twelfth century, an era of increasing strife between ecclesiastical and mundane authority, the papalists were particularly fortunate in finding John of Salisbury for one of their first spokesmen; he was undisputedly their most effective.

There are no *ifs* and *buts* in his argument: he clearly states that both swords, the material and the spiritual, belong to the church, and that the *prince receives his sword*, or authority, *from the church*, that he is a "minister of the priestly power, and one who exercises that side of the sacred offices which seems unworthy of the hands of the priesthood." As the original and true owner of the temporal sword, the church has the right to depose the prince if he violates the law of God and disregards the precepts of the church, for "he who can lawfully bestow can lawfully take away."

The human body is another symbolic analogy that John of Salisbury employs for proving the superiority of the ecclesiastical over the secular power. John compares the commonwealth to a body, each organ, group, and class representing symbolically parts of the body. Thus farmers and workers correspond to the feet, public-finance officers to the stomach and intestines, officials and soldiers to the hands, and the senate to the heart, while the prince occupies the place of the head. But the church and clergy occupy the highest place of all, as they are likened to the soul in the body, and "the soul is, as it were, the prince of the body, and has rulership over the whole thereof." The secular ruler is therefore subject to God and "to those who exercise His office and represent Him on earth." John of Salisbury was not familiar with Aristotle's *Politics* and its organic conception of the political community; for John, in contrast to Aristotle, the organic theory meant that each organ of state and society had its unchangeable place.

John of Salisbury does not propose that the church actually take over the temporal government and administer it through priests, nor does he recommend that a prince submit every law for prior approval to a supreme court of priests. Yet he makes the extreme claim that "a statute or ordinance (*constitutio*) of the prince is a thing of nought if not in conformity with the teaching (*disciplina*) of the Church." Without proposing the administrative absorption of the state into the church, and unable to think—as a medieval writer—in

terms of clearly defined concepts of legal sovereignty, John of Salisbury nevertheless made such an overwhelming case for the moral sovereignty of the church over the secular ruler that later protagonists of the papal cause found it none too difficult to go beyond him and plead for legal supremacy as well.

In his supporting sources, John of Salisbury, like most medieval papalist writers and pamphleteers except St. Augustine, leaned heavily on the Old Testament with its firm bias against temporal rulers, and he quotes frequently from the Hebrew prophets and their struggle against kings and princes. The New Testament emphasized more positively that "the powers that be are ordained of God," and made it possible to interpret the Christian acceptance of mundane power in a manner that would maintain the supremacy of the church. But it was easier to go back to the Old Testament in which the hostility against secular rulers was consistent and unequivocal. Nearly five centuries after John of Salisbury, the English Puritans reverted, in their struggle against secular authority, to the Old Testament as a main source of fighting inspiration.

From the modern secularist viewpoint, the church ought to stay in its place and not contend with the state for temporal power. But John of Salisbury and the papal apologists, in seeking to curb the authoritarian claims of kings and princes, or to gain at least equal authority for the church, were (knowingly or unknowingly) fighting a cause that was larger than their own; the whole issue of human liberty was at stake, and it was a more important issue than the rivalry for power and supremacy that raged between popes and emperors. And though John of Salisbury and the medievalists did not solve this larger issue, neither have the secularists: Is the state, even the democratic state, to have absolute and complete authority, or must there be some competing principles of allegiance that will make it difficult, or impossible, for the state to become an all-absorbing Leviathan? The church can no longer, as in the Middle Ages, play the part of the sole competing source of loyalty and authority, but thus far no other institution or idea is in sight that can be relied on to do the job. The democratic state—precisely because of its popular source of support—has by no means abolished the possibility of tyranny and repression, as was so prophetically foreseen by Tocqueville and J.S. Mill a century ago.

In the liberal orthodoxy of the eighteenth and nineteenth centuries, the struggle for power between state and church in the Middle Ages was unqualifiedly viewed as a struggle between reason and unreason, between progress and reaction. The church was seen to be the main impediment to the development of liberal government, and it was assumed that once the religious influence was eliminated from social and political life, the progress of reason and liberty would be irresistible. Yet this liberal dogma has proved a fallacy to a large extent. It has been disproved by events rather than by argument. The experience of fascist and communist totalitarianism in the twentieth century shows that a community which lacks ideas and institutions that can challenge the state may eventually be devoured by omnipotent despotism.

The conclusion to be drawn from the medieval struggle between state and church is not necessarily that the church alone can be a countervailing or balancing power in limiting the scope of government, but that, unless *some* countervailing ideas and institutions are sufficiently strong in a society, totalitarianism of some sort is that much more likely to develop. In the modern

world, such loyalties competing with the loyalty to government may stem from nonreligious, humanist beliefs, or they may still be based on strongly held religious commitments. In any case, the anxiety of twentieth-century man is not that the state has, or will have, too little power, but the fear of too much governmental power. In this perspective, the contemporary democrat is bound to take a different view of the medieval struggle between state and church than was customary in eighteenth- and nineteenth-century liberalism.

John of Salisbury's second main political doctrine, the distinction between king and tyrant, and the justification of tyrannicide, is as provocative today as it was in his own time. The distinction between king and tyrant goes back to Aristotle: the king rules in the interest of the ruled, the tyrant in his own. John of Salisbury states, by contrast, that the *king rules in accordance with the laws*, whereas the *tyrant rules by force*. This distinction is directly related to the Christian and typically medieval respect for law, and it is closer to the modern distinction between legitimate and illegitimate government than is Aristotle's emphasis on interest.

By violating the rule of law, John of Salisbury says, the tyrant assails the grace of God, and "it is God himself who in a sense is challenged to battle." The prince fights for the laws and liberties of the people, and "as the likeness of the Deity, is to be loved, worshipped and cherished; the tyrant, the likeness of wickedness, is generally to be even killed." In one passage John does qualify his general position on tyrannicide by expressing his hope that the most useful and safest way of destroying tyrants is for the oppressed to pray devoutly "that the scourge wherewith they are afflicted may be turned aside from them." But such occasional qualification does not detract from his general view that *tyrants may be lawfully slain*.

In fact, John of Salisbury goes further and asserts that it is not only lawful but even right and just to kill the tyrant, for he who takes the sword shall perish by the sword. The ruler has a special responsibility to obey the law and protect justice. The tyrant usurps power, oppresses justice, and enslaves the law to his arbitrary whims. Of all forms of treason, "none is more deadly than that which is aimed against the very body of justice." In resisting and killing the tyrant, no violation of the law is being committed, as it is the tyrant "who disarms the laws," and it is therefore fitting that "justice arm herself against him." He who does not prosecute and attack the tyrant, sins against himself and against the whole community.

Thus, completely abandoning the Augustinian tradition, John of Salisbury expressed the doctrine of tyrannicide more forcefully and challengingly than any other writer in the Middle Ages; not until the sixteenth century did resistance to tyrants, and their assassination, become again a major theme of political speculation. John Locke expressed the doctrine of revolution and resistance to tyrants in words that bear a striking resemblance to John of Salisbury's. According to Locke, absolute government "is no form of civil government at all," and the absolute prince is in a state of nature, outside the realm of law and justice. The true rebels are the arbitrary and oppressive rulers who violate the law, and resistance to such rulers is the first step toward restoring the law. John of Salisbury thus was one of the first writers to establish the doctrine that obedience to authority is not absolute but conditional, that political authority is ultimately

based on justice, and that resistance is a right and duty when peaceful change of a tyrannical regime is impossible.

What made John of Salisbury so convincing as a political writer and papal protagonist was his sense of proportion and his ability to see things in gray rather than black and white. One of the most revealing passages of *The Statesman's Book* is his account of a conversation with Pope Adrian IV on what people thought of the church and of the pope. As John explains, he was "entirely frank" with the pope; he recited a scathing catalogue of sins and vices attributed by many persons to the church and the clergy. He stressed particularly the love of money prevalent among the priests: "They give judgment not for the truth but for money. For money you can get anything done today, and without waiting; but you will not get it done even tomorrow if you do not pay a price."

Next to avarice, John charges the church and priesthood with duplicity and the lust for power, and says they have no compassion for the suffering and misery of the afflicted. Though he was speaking to a pope, John said: "Even the Roman pontiff himself is a grievous and almost intolerable burden to all; the complaint is everywhere made that while the churches which were built by the devotion of the fathers are falling into ruin and collapsing, he has built for himself palaces, and walks abroad not merely in purple but in gold. The palaces of priests dazzle the eye, and meanwhile in their hands the Church of Christ is defiled."

The pope—an Englishman, a friend of John, and a person with a sense of humor—laughed after John had finished, congratulated him for having spoken so frankly, and asked him to report in the future anything unfavorable about the church.

Toward the end of his book, John of Salisbury returns to the subject of ecclesiastical vices and abuses, and attacks, above all, the struggle for power and office within the church; he is shocked by the lack of scruples—even when it comes to murder—among contenders for the papal office: "It is alleged by some, and it is indeed the truth, that the office of Roman pontiff has sometimes, nay rather has often, been contested by ambitious men, and not without the shedding of fraternal blood has the pontiff entered the Holy of Holies." One of the concluding observations of John's is therefore that, as between the temporal and ecclesiastical tyrant, the latter is the worse.

It is precisely because of John of Salisbury's capacity to criticize ruthlessly the abuses of his church that his defense of ecclesiastical supremacy over the temporal power proved so effective. *The Statesman's Book* is not only an important medieval political treatise but also a thoroughly enjoyable piece of literature, modern in its wit, urbanity, learning, balance, and perspective. His papalist viewpoint was not commonly accepted by his countrymen in his own day, and it is less well received today. But his thought and personality point to those qualities in English political philosophy that later assured it a unique position of influence in the world.

JOHN OF SALISBURY

The Statesman's Book *

THE NATURE AND SOURCE OF ROYAL AUTHORITY

Between a tyrant and a prince there is this single or chief difference, that the latter obeys the law and rules the people by its dictates, accounting himself as but their servant. It is by virtue of the law that he makes good his claim to the foremost and chief place in the management of the affairs of the commonwealth and in the bearing of its burdens; and his elevation over others consists in this, that whereas private men are held responsible only for their private affairs, on the prince fall the burdens of the whole community. Wherefore deservedly there is conferred on him, and gathered together in his hands, the power of all his subjects, to the end that he may be sufficient unto himself in seeking and bringing about the advantage of each individually, and of all; and to the end that the state of the human commonwealth may be ordered in the best possible manner, seeing that each and all are members one of another. Wherein we indeed but follow nature, the best guide of life; for nature has gathered together all the senses of her microcosm or little world, which is man, into the head, and has subjected all the members in obedience to it in such wise that they will all function properly

so long as they follow the guidance of the head, and the head remains sane. Therefore the prince stands on a pinnacle which is exalted and made splendid with all the great and high privileges which he deems necessary for himself. And rightly so, because nothing is more advantageous to the people than that the needs of the prince should be fully satisfied; since it is impossible that his will should be found opposed to justice. Therefore, according to the usual definition, the prince is the public power, and a kind of likeness on earth of the divine majesty. Beyond doubt a large share of the divine power is shown to be in princes by the fact that at their nod men bow their necks and for the most part offer up their heads to the axe to be struck off, and, as by a divine impulse, the prince is feared by each of those over whom he is set as an object of fear. And this I do not think could be, except as a result of the will of God. For all power is from the Lord God, and has been with Him always, and is from everlasting. The power which the prince has is therefore from God, for the power of God is never lost, nor severed from Him, but He merely exercises it through a subordinate hand, making all things teach His mercy or justice. "Who, therefore, resists the ruling power, resists the ordinance of God,"¹ in whose hand is the authority of conferring that power, and when He so desires, of withdrawing it again, or diminishing it. For it is not the ruler's own act when his will is turned to cruelty against his subjects, but

¹ Rom. xiii, 2.

it is rather the dispensation of God for His good pleasure to punish or chasten them. Thus during the Hunnish persecution, Attila, on being asked by the reverend bishop of a certain city who he was, replied, "I am Attila, the scourge of God." Whereupon it is written that the bishop adored him as representing the divine majesty. "Welcome," he said, "is the minister of God," and "Blessed is he that cometh in the name of the Lord," and with sighs and groans he unfastened the barred doors of the church, and admitted the persecutor through whom he attained straightway to the palm of martyrdom. For he dared not shut out the scourge of God, knowing that His beloved Son was scourged, and that the power of this scourge which had come upon himself was as nought except it came from God. If good men thus regard power as worthy of veneration even when it comes as a plague upon the elect, who should not venerate that power which is instituted by God for the punishment of evil-doers and for the reward of good men, and which is promptest in devotion and obedience to the laws? To quote the words of the Emperor, "it is indeed a saying worthy of the majesty of royalty that the prince acknowledges himself bound by the Laws."² For the authority of the prince depends upon the authority of justice and law; and truly it is a greater thing than imperial power for the prince to place his government under the laws, so as to deem himself entitled to do nought which is at variance with the equity of justice.

THE RELATION OF THE PRINCE TO AUTHORITY

Princes should not deem that it detracts from their princely dignity to believe that the enactments of their own justice are not to be preferred to the justice of God, whose justice is an everlasting justice, and His law is equity. Now equity, as the

² Justin. Cod. 1, 14, § 4.

learned jurists define it, is a certain fitness of things which compares all things rationally, and seeks to apply like rules of right and wrong to like cases, being impartially disposed toward all persons, and allotting to each that which belongs to him. Of this equity the interpreter is the law, to which the will and intention of equity and justice are known. Therefore Crisippus asserted that the power of the law extends over all things, both divine and human, and that it accordingly presides over all goods and ills, and is the ruler and guide of material things as well as of human beings. To which Papinian, a man most learned in the law, and Demosthenes, the great orator, seem to assent, subjecting all men to its obedience because all law is, as it were, a discovery, and a gift from God, a precept of wise men, the corrector of excesses of the will, the bond which knits together the fabric of the state, and the banisher of crime;³ and it is therefore fitting that all men should live according to it who lead their lives in a corporate political body. All are accordingly bound by the necessity of keeping the law, unless perchance there is any who can be thought to have been given the license of wrong-doing. However, it is said that the prince is absolved from the obligations of the law; but this is not true in the sense that it is lawful for him to do unjust acts, but only in the sense that his character should be such as to cause him to practice equity not through fear of the penalties of the law but through love of justice; and should also be such as to cause him from the same motive to promote the advantage of the commonwealth, and in all things to prefer the good of others before his own private will. Who, indeed, in respect of public matters can properly speak of the will of the prince at all, since therein he may not lawfully have any will of his own apart from that which the law or equity enjoins, or the calculation of the common interest requires? For in these matters his will is to

³ Dig. I, 3, §§ 1-2.

have the force of a judgment; and most properly that which pleases him therein has the force of law, because his decision may not be at variance with the intention of equity. "From thy countenance," says the Lord, "let my judgment go forth, let thine eyes look upon equity";⁴ for the uncorrupted judge is one whose decision, from assiduous contemplation of equity, is the very likeness thereof. The prince accordingly is the minister of the common interest and the bond-servant of equity, and he bears the public person in the sense that he punishes the wrongs and injuries of all, and all crimes, with even-handed equity. His rod and staff also, administered with wise moderation, restore irregularities and false departures to the straight path of equity, so that deservedly may the Spirit congratulate the power of the prince with the words, "Thy rod and thy staff, they have comforted me."⁵ His shield, too, is strong, but it is a shield for the protection of the weak, and one which wards off powerfully the darts of the wicked from the innocent. Those who derive the greatest advantage from his performance of the duties of his office are those who can do least for themselves, and his power is chiefly exercised against those who desire to do harm. Therefore not without reason he bears a sword, wherewith he sheds blood blamelessly, without becoming thereby a man of blood, and frequently puts men to death without incurring the name or guilt of homicide. For if we believe the great Augustine, David was called a man of blood not because of his wars, but because of Uria. And Samuel is nowhere described as a man of blood or a homicide, although he slew Agag, the king of Amalech. Truly the sword of princely power is as the sword of a dove, which contends without gall, smites without wrath, and when it fights, yet conceives no bitterness at all. For as the law pursues guilt without any hatred of persons, so the prince most justly pun-

⁴ Ps. xviii, 2.

⁵ Ps. xxiii, 4.

ishes offenders from no motive of wrath but at the behest, and in accordance with the decision, of the passionless law. For although we see that the prince has lictors of his own, we must yet think of him as in reality himself the sole or chief lictor, to whom is granted by the law the privilege of striking by a subordinate hand. If we adopt the opinion of the Stoics, who diligently trace down the reason for particular words, "lictor" means "legis ictor," or "hammer of the law," because the duty of his office is to strike those who the law adjudges shall be struck. Wherefore anciently, when the sword hung over the head of the convicted criminal, the command was wont to be given to the officials by whose hand the judge punishes evil-doers, "Execute the sentence of the law," or "Obey the law," to the end that the misery of the victim might be mitigated by the calm reasonableness of the words.

THE PRINCE SUBORDINATE TO THE PRIESTS

This sword, then, the prince receives from the hand of the Church, although she herself has no sword of blood at all. Nevertheless she has this sword, but she uses it by the hand of the prince, upon whom she confers the power of bodily coercion, retaining to herself authority over spiritual things in the person of the pontiffs. The prince is, then, as it were, a minister of the priestly power, and one who exercises that side of the sacred offices which seems unworthy of the hands of the priesthood. For every office existing under, and concerned with the execution of, the sacred laws is really a religious office, but that is inferior which consists in punishing crimes, and which therefore seems to be typified in the person of the hangman. Wherefore Constantine, most faithful emperor of the Romans, when he had convoked the council of priests at Nicaea, neither dared to take the chief place for himself nor even to sit among the presbyters, but chose the hindmost seat. Moreover, the decrees which he

heard approved by them he revered as if he had seen them emanate from the judgment-seat of the divine majesty. Even the rolls of petitions containing accusations against priests which they brought to him in a steady stream he took and placed in his bosom without opening them. And after recalling them to charity and harmony, he said that it was not permissible for him, as a man, and one who was subject to the judgment of priests, to examine cases touching gods, who cannot be judged save by God alone. And the petitions which he had received he put into the fire without even looking at them, fearing to give publicity to accusations and censures against the fathers, and thereby incur the curse of Cham, the undutiful son, who did not hide his father's shame. Wherefore he said, as is narrated in the writings of Nicholas the Roman pontiff, "Verily if with mine own eyes I had seen a priest of God, or any of those who wear the monastic garb, sinning, I would spread my cloak and hide him, that he might not be seen of any." Also Theodosius, the great emperor, for a merited fault, though not so grave a one, was suspended by the priest of Milan from the exercise of his regal powers and from the insignia of his imperial office, and patiently and solemnly he performed the penance for homicide which was laid upon him. Again, according to the testimony of the teacher of the gentiles, greater is he who blesses man than he who is blessed;⁶ and so he in whose hands is the authority to confer a dignity excels in honor and the privileges of honor him upon whom the dignity itself is conferred. Further, by the reasoning of the law it is his right to refuse who has the power to grant, and he who can lawfully bestow can lawfully take away.⁷ Did not Samuel pass sentence of deposition against Saul by reason of his disobedience, and supersede him on the pinnacle of kingly rule with the lowly son of

⁶ Heb. vii, 7.

⁷ Dig. I. 17, § 3.

Ysai?⁸ But if one who has been appointed prince has performed duly and faithfully the ministry which he has undertaken, as great honor and reverence are to be shown to him as the head excels in honor all the members of the body. Now he performs his ministry faithfully when he is mindful of his true status, and remembers that he bears the person of the *universitas* of those subject to him; and when he is fully conscious that he owes his life not to himself and his own private ends, but to others, and allots it to them accordingly, with duly ordered charity and affection. Therefore he owes the whole of himself to God, most of himself to his country, much to his relatives and friends, very little to foreigners, but still somewhat. He has duties to the very wise and the very foolish, to little children and to the aged. Supervision over these classes of persons is common to all in authority, both those who have care over spiritual things and those who exercise temporal jurisdiction.

JUSTICE AND MERCY

It should hold true of the prince, as it should hold true of all men, that no one should seek his own interest but that of others. Yet the measure of the affection with which he should embrace his subjects like brethren in the arms of charity must be kept within the bounds of moderation. For his love of his brethren should not prevent him from correcting their errors with proper medicine; he acknowledges the ties of flesh and blood to the end that he may subdue these to the rule of the spirit. It is the practice of physicians when they cannot heal a disease with poultices and mild medicines to apply stronger remedies such as fire or steel. But they never employ these unless they despair of restoring health by milder means, and so the ruling power when it cannot avail by mild measures to heal the vices of its subjects, rightly resorts, though with grief, to the infliction of

⁸ I.e., Jesse.

sharp punishments, and with pious cruelty vents its rage against wrong-doers to the end that good men may be preserved uninjured. But who was ever strong enough to amputate the members of his own body without grief and pain? Therefore the prince grieves when called upon to inflict the punishment which guilt demands, and yet administers it with reluctant right hand. For the prince has no left hand, and in subjecting to pain the members of the body of which he is the head, he obeys the law in sadness and with groans. Philip once heard that a certain Phicias, who was a good fighting man, had become alienated from him because in his poverty he found difficulty in supporting his three daughters and yet received no aid from the king. When his friends advised him accordingly to beware of the man, "What," said Philip, "if a part of my body were sick, would I cut it off rather than seek to heal it?" Then he sought out this Phicias privately in a friendly way, and provided him with sufficient money which he accepted for the necessities of his private difficulties. And thereby the king made this man better disposed toward him and more faithful than he had been before he supposed himself offended. Accordingly, as Lucius says: "A prince should have an old man's habit of mind, who follows moderate counsels, and should play the part of a physician, who heals diseases sometimes by reducing the diet of the overfed, and again by increasing that of the under-nourished, who allays pain at times by cautery, and at other times by poultices." In addition, he should be affable of speech, and generous in conferring benefits, and in his manners he should preserve the dignity of his authority unimpaired. A pleasant address and a gracious tongue will win for him the reputation of benignity. Kindness will compel the most faithful and constant love from even the sternest, and will increase and confirm the love which it has produced. And the reverence of subjects is the fit reward of dignity of manners.

Excellently did Trajan, the best of the

pagan emperors, answer his friends when they reproached him with making himself too common toward all men and more so, they thought, than was becoming for an emperor; for he said that he desired to be toward private citizens such an emperor as he had desired to have over him when he was a private citizen himself. And in accordance with this principle, acting on the report of the younger Pliny who at that time with other judges was designated to persecute the Church, he recalled the sword of persecution from the slaughter of the martyrs and moderated his edict. And perchance he would have dealt more gently still with the faithful, had not the laws and examples of his predecessors, and the advice of men who were considered wise counsellors, and the authority of his judges, all urged him to destroy a sect regarded by public opinion as superstitious, and as enemies of true religion. I do not unreservedly and in all respects commend the judgment of a man who knew not Christ, yet I do extenuate the fault of him who broke loose from the pressure of others and followed the instinct of his own natural piety toward kindness and pity, a man whose nature it was to be merciful toward all, though stern toward the few whom it would be sinful to spare; so that in the course of his whole reign only one of the senators or nobles of the city was condemned, although a great number could have been found who had offended grievously against him. And this man was condemned by the Senate without the knowledge of Trajan himself. For it was his habit to say that a man is insane who, having inflamed eyes, prefers to dig them out rather than to cure them. So again he said that the nails, if they are too sharp, should be trimmed and not plucked out. For if a cithern player and other performers on stringed instruments can by diligence find a way to correct the fault of a string which is out of tune and bring it again into accord with the other strings, and so out of discord make the sweetest harmony, not by breaking the

strings but by making them tense or slack in due proportions; with how much care should the prince moderate his acts, now with the strictness of justice, and now with the leniency of mercy, to the end that he may make his subjects all be of one mind in one house, and thus as it were out of discordant dispositions bring to pass one great perfect harmony in the service of peace and in the works of charity? This, however, is certain, that it is safer for the cords to be relaxed than to be stretched too tautly. For the tension of slack cords can be corrected by the skill of the artificer so that they will again give forth the proper sweetness of tone; but a string that has once been broken, no artificer can repair.

THE STATE AS AN ORGANISM

A commonwealth, according to Plutarch, is a certain body which is endowed with life by the benefit of divine favor, which acts at the prompting of the highest equity, and is ruled by what may be called the moderating power of reason. Those things which establish and implant in us the practice of religion, and transmit to us the worship of God (here I do not follow Plutarch, who says "of the Gods") fill the place of the soul in the body of the commonwealth. And therefore those who preside over the practice of religion should be looked up to and venerated as the soul of the body. For who doubts that the ministers of God's holiness are His representatives? Furthermore, since the soul is, as it were, the prince of the body, and has rulership over the whole thereof, so those whom our author calls the prefects of religion preside over the entire body. Augustus Cæsar was to such a degree subject to the priestly power of the pontiffs that in order to set himself free from this subjection and have no one at all over him, he caused himself to be created a pontiff of Vesta, and thereafter had himself promoted to be one of the gods during his own life-time. The place of the head in the body of the commonwealth is filled

by the prince, who is subject only to God and to those who exercise His office and represent Him on earth, even as in the human body the head is quickened and governed by the soul. The place of the heart is filled by the Senate, from which proceeds the initiation of good works and ill. The duties of eyes, ears, and tongue are claimed by the judges and the governors of provinces. Officials and soldiers correspond to the hands. Those who always attend upon the prince are likened to the sides. Financial officers and keepers (I speak now not of those who are in charge of the prisons, but of those who are keepers of the privy chest) may be compared with the stomach and intestines, which, if they become congested through excessive avidity, and retain too tenaciously their accumulations, generate innumerable and incurable diseases, so that through their ailment the whole body is threatened with destruction. The husbandmen correspond to the feet, which always cleave to the soil, and need the more especially the care and foresight of the head, since while they walk upon the earth doing service with their bodies, they meet the more often with stones of stumbling, and therefore deserve aid and protection all the more justly since it is they who raise, sustain, and move forward the weight of the entire body. Take away the support of the feet from the strongest body, and it cannot move forward by its own power, but must creep painfully and shamefully on its hands, or else be moved by means of brute animals.

THE "FEET" OF THE COMMONWEALTH

Those are called the feet who discharge the humbler offices, and by whose services the members of the whole commonwealth walk upon solid earth. Among these are to be counted the husbandmen, who always cleave to the soil, busied about their ploughlands or vineyards or pastures or flower-gardens. To these must be added the many species of

cloth-making, and the mechanic arts, which work in wood, iron, bronze and the different metals; also the menial occupations, and the manifold forms of getting a livelihood and sustaining life, or increasing household property, all of which, while they do not pertain to the authority of the governing power, are yet in the highest degree useful and profitable to the corporate whole of the commonwealth. All these different occupations are so numerous that the commonwealth in the number of its feet exceeds not only the eight-footed crab but even the centipede, and because of their very multitude they cannot be enumerated; for while they are not infinite by nature, they are yet of so many different varieties that no writer on the subject of offices or duties has ever laid down particular precepts for each special variety. But it applies generally to each and all of them that in their exercise they should not transgress the limits of the law, and should in all things observe constant reference to the public utility. For inferiors owe it to their superiors to provide them with service, just as the superiors in their turn owe it to their inferiors to provide them with all things needful for their protection and succor. Therefore Plutarch says that that course is to be pursued in all things which is of advantage to the humbler classes, that is to say to the multitude; for small numbers always yield to great. Indeed the reason for the institution of magistrates was to the end that subjects might be protected from wrongs, and that the commonwealth itself might be "shod," so to speak, by means of their services. For it is as it were "unshod" when it is exposed to wrongs,—than which there can be no more disgraceful pass of affairs to those who fill the magistracies. For an afflicted people is a sign and proof of the goutiness, so to speak, of the prince. Then and then only will the health of the commonwealth be sound and flourishing when the higher members shield the lower, and the lower respond faithfully and fully in like measure to the just demands of their superi-

ors, so that each and all are as it were members one of another by a sort of reciprocity, and each regards his own interest as best served by that which he knows to be most advantageous for the others.

THE LOVE OF LIBERTY AND FREE SPEECH

Liberty means judging everything freely in accordance with one's individual judgment, and does not hesitate to reprove what it sees opposed to good morals. Nothing but virtue is more splendid than liberty, if indeed liberty can ever properly be severed from virtue. For to all right-thinking men it is clear that true liberty issues from no other source. Wherefore, since all agree that virtue is the highest good in life, and that it alone can strike off the heavy and hateful yoke of slavery, it has been the opinion of philosophers that men should die, if need arose, for the sake of virtue, which is the only reason for living. But virtue can never be fully attained without liberty, and the absence of liberty proves that virtue in its full perfection is wanting. Therefore a man is free in proportion to the measure of his virtues, and the extent to which he is free determines what his virtues can accomplish; while, on the other hand, it is the vices alone which bring about slavery, and subject a man to persons and things in unmeet obedience; and though slavery of the person may seem at times the more to be pitied, in reality slavery to the vices is ever far the more wretched. And so what is more lovely than liberty? And what more agreeable to a man who has any reverence for virtue? We read that it has been the impelling motive of all good princes; and that none ever trod liberty under foot save the open foes of virtue. The jurists know what good laws were introduced for the sake of liberty, and the testimony of historians has made famous the great deeds done for love of it. Cato drank poison, pierced himself with his sword, and that no delay might prolong

life on terms which he deemed ignoble, he thrust in his hand to widen the wound, and poured out his noble blood, that he might not see Cæsar reigning. Brutus set on foot civil wars to save the city from slavery; and that seat of empire preferred rather to bear the wretched afflictions of perpetual war than to endure a lord, though of the mildest character. I pass on to the weaker sex. The wives of the Teutons, because of the value they set upon their chastity, besought Marius after his victory that they might be presented as a gift to the Vestal Virgins, promising that they would abstain from all unchastity; and when their prayers were not heeded, on the following night they ended their lives by strangling themselves in order not to become slaves or suffer loss of their chastity. If I wished to recall individual instances of this kind, time would run out before the examples were exhausted. The practice of liberty is a notable thing and displeasing only to those who have the character of slaves.

Things which are done or spoken freely avoid the fault of timidity on the one hand and of rashness on the other, and so long as the straight and narrow path is followed, merit praise and win affection. But when under the pretext of liberty rashness unleashes the violence of its spirit, it properly incurs reproach, although, as a thing more pleasing in the ears of the vulgar than convincing to the mind of the wise man, it often finds in the indulgence of others the safety which it does not owe to its own prudence. Nevertheless, it is the part of a good and wise man to give a free rein to the liberty of others and to accept with patience the words of free speaking, whatever they may be. Nor does he oppose himself to its works so long as these do not involve the casting away of virtue. For since each virtue shines by its own proper light, the merit of tolerance is resplendent with a very special glory.

Once a certain man of Privernum, when asked how the captives from his city would keep the peace if they were

granted amnesty, replied to the Roman consul: "If you grant them an advantageous peace, they will keep it forever; if a disadvantageous one, they will not keep it long." By these bold words, freely spoken, it came to pass that the citizens of Privernum obtained not only pardon for their rebellion, but the benefits of Roman citizenship besides, because one man of them had dared to speak out thus boldly in the Senate.

THE DIFFERENCE BETWEEN A TYRANT AND A TRUE PRINCE

Wherein the prince differs from the tyrant has already been set forth above when we were reviewing Plutarch's "Instruction of Trajan"; and the duties of the prince and of the different members of the commonwealth were also carefully explained at that point. Wherefore it will be easier to make known here, and in fewer words, the opposite characteristics of the tyrant. A tyrant, then, as the philosophers have described him, is one who oppresses the people by rulership based upon force, while he who rules in accordance with the laws is a prince. Law is the gift of God, the model of equity, a standard of justice, a likeness of the divine will, the guardian of well-being, a bond of union and solidarity between peoples, a rule defining duties, a barrier against the vices and the destroyer thereof, a punishment of violence and all wrong-doing. The law is assailed by force or by fraud, and, as it were, either wrecked by the fury of the lion or undermined by the wiles of the serpent. In whatever way this comes to pass, it is plain that it is the grace of God which is being assailed, and that it is God himself who in a sense is challenged to battle. The prince fights for the laws and the liberty of the people; the tyrant thinks nothing done unless he brings the laws to nought and reduces the people to slavery. Hence the prince is a kind of likeness of divinity; and the tyrant, on the contrary, a

likeness of the boldness of the Adversary, even of the wickedness of Lucifer, imitating him that sought to build his throne to the north and make himself like unto the Most High,⁹ with the exception of His goodness. For had he desired to be like unto Him in goodness, he would never have striven to tear from Him the glory of His power and wisdom. What he more likely did aspire to was to be equal with Him in authority to dispense rewards. The prince, as the likeness of the Deity, is to be loved, worshipped and cherished; the tyrant, the likeness of wickedness, is generally to be even killed. The origin of tyranny is iniquity, and springing from a poisonous root, it is a tree which grows and sprouts into a baleful pestilent growth, and to which the axe must by all means be laid.

TYRANNICIDE

It would be a long and tedious task if I wished to bring down to our own times the series of gentile tyrants; a man with only one life will hardly be able to recall the list, for it eludes the mind and overpowers the tongue. My opinions on the subject of tyrants are, however, set forth more fully in my little work entitled "Of the Ends of Tyrants,"¹⁰ a brief manual wherein I have carefully sought to avoid the tedium of prolixity and the obscurity of too great compression. But lest the authority of Roman history be held in small account because it has for the most part been written by infidels concerning infidels, let its lesson be confirmed by examples drawn from sacred and Christian history. For it is everywhere obvious that, in the words of Valerius, only that power is secure in the long run which places bounds to its own exercise. And surely nought is so splendid or so magnificent that it does not need to be tempered by moderation. The earliest tyrant whom the divine page brings before us is

⁹ Isa. xiv, 12-14.

¹⁰ This work of John of Salisbury is not known to be extant.

Nembroth, the mighty hunter before the Lord (who is also called Ninus in some histories, although this does not agree with the proper reckoning of dates) and I have already said above that he was a reprobate. For verily he desired to be lord in his own right and not under God, and it was in his time that the attempt to raise a tower to Heaven was made by frail mortality, destined in their blindness to be overthrown and scattered in confusion. Let us, therefore, advance to him who was set over the people by the divine choice, which deserted him when he gave himself up to a wicked desire of ruling rather than of reigning, and in the end he was so utterly overthrown that in the anguish of his suffering he was compelled to put an end to himself. For a right and wholesome assumption of the royal office is of no avail, or only of very little, if the later life of the ruler is at variance therewith, nor does a judge look wholly to the origin of things, but makes his judgment to depend upon their outcome and ending.

The histories teach, however, that none should undertake the death of a tyrant who is bound to him by an oath or by the obligation of fealty. For we read that Sedechias, because he disregarded the sacred obligation of fealty, was led into captivity; and that in the case of another of the kings of Juda whose name escapes my memory, his eyes were plucked out because, falling into faithlessness, he did not keep before his sight God, to whom the oath is taken; since sureties for good behavior are justly given even to a tyrant.

But as for the use of poison, although I see it sometimes wrongfully adopted by infidels, I do not read that it is ever permitted by any law. Not that I do not believe that tyrants ought to be removed from our midst, but it should be done without loss of religion and honor. For David, the best of all kings that I have read of, and who, save in the incident of Urias Etheus, walked blamelessly in all things, although he had to endure the most grievous tyrant, and although he

often had an opportunity of destroying him, yet preferred to spare him, trusting in the mercy of God, within whose power it was to set him free without sin. He therefore determined to abide in patience until the tyrant should either suffer a change of heart and be visited by God with return of charity, or else should fall in battle, or otherwise meet his end by the just judgment of God. How great was his patience can be discerned from the fact that when he had cut off the edge of Saul's robe in the cave, and again when, having entered the camp by night, he rebuked the negligence of the sentinels, in both cases he compelled the king to confess that David was acting the juster part. And surely the method of destroying tyrants which is the most useful and the safest, is for those who are oppressed to take refuge humbly in the protection of God's mercy, and lifting up undefiled hands to the Lord, to pray devoutly that the scourge wherewith they are afflicted may be turned aside from them. For the sins of transgressors are the strength of tyrants.

Thus the end of tyrants is confusion, leading to destruction if they persist in malice, to pardon if they return into the way of righteousness. For there is prepared a great fire wherewith to consume the scourge after the Father has employed it for the correction of His children. And it is written, "Acab has humbled himself before my face; therefore will I not bring evil in his days."¹¹ But Jezebel, who persisted in cruelty, paid the penalty therefore in the merited cruelty of her end, giving her blood to be lapped up by dogs in the place where dogs had lapped up the blood of innocent Naboth. But if the blood of innocent Naboth was thus required at her hands, will not the blood of so many other innocent victims also be required? Her unrighteousness coveted the vineyard of a just man, and as the price thereof she lost her rights to a whole kingdom. Thus wickedness is al-

¹¹ I Kings xxi, 29.

ways punished by the Lord; but sometimes it is His own, and at others it is a human hand, which He employs as a weapon wherewith to administer punishment to the unrighteous.

The emperor Julian, the vile and filthy apostate, persecuted the Christians rather by guile than by the open use of force, yet he did not refrain from force. For under him arose the most grievous persecution of the Christians, and he sought by his impious attempt to blot out the very name of the Galilean, as he called Him. But while he was leading an ill-fated expedition against the Parthians, and on his return was offering up the slaughter of the Christians as a sacrifice to idols, God took pity upon the prayers of the great Basil and others of the saints, and appointed as his instrument the martyr Mercurius, who, at the command of the Blessed Virgin, pierced the tyrant in his camp with a lance, and compelled the impious wretch as he was dying to confess that the Galilean, namely Christ, whom he persecuted, was victor and had triumphed over him. For when the aforesaid bishop had gathered together the faithful of Cæsarea in the church of the ever Virgin, the Mother of God, to watch out the night in prayer, on that same night the saint recognized the Blessed Virgin herself in a vision and received consolation in this wise: "Call to me," said she, "Mercurius, and he shall depart to slay Julian, who proudly blasphemes against my Son and God."

ECCLESIASTICAL TYRANTS

But grant that it is permissible for men of the flesh to contend for the primacy, still I think that on no account is this ever permissible for churchmen. Yet from the example of men of the flesh, impiety creeps forward under the guise of religion, and priestly power is now not merely contended for, but actually fought for. Of old time men were dragged unwillingly to the seats of honor in the Church although they were eager

for martyrdom; but they fled from the chief seats more earnestly than from the prison and the cross. Today priests speak openly to the opposite effect and say that the proverb is a thing of nought. "We do not wish to be martyrs," they say, "but we will not give to another the glory of our thrones." Verily a poor and miserable speech in the mouth of a priest who thus confesses Christ in such wise that he openly admits his unwillingness to follow Him. Can it be doubted whether one dies a true confessor who is not at all times ready to bow his neck to the persecutor should need arise? For Ciprian says, "If a bishop be afraid, all hope for him is gone." But grant him leave to be afraid even; for him not to stand fast in time of need is a thing which is not permissible. A deserter is noxious, infamous.

Yet there is one thing wherein they seem to imitate the steadfastness of martyrs, namely if it becomes needful to fight for their thrones. It is alleged by some, and it is indeed the truth, that the office of Romau pontiff has sometimes, nay rather has often, been contested by ambitious men, and not without the shedding of fraternal blood has the pontiff entered the Holy of Holies. Once more there have been kindled wars more than civil, and priestly conflict has excused Cæsar and Pompey and all the presumption and impious work at Philippi, Leucas, Mutina, or in Egypt or Spain. Are men Christians who thus procure the shedding of blood to the end that they rather than others may be advanced to the office of laying down their lives for their flock, which is the duty of a shepherd? Do they rend the Church asunder and profane the sanctuary, to the end that there may be somewhat to build again and sanctify? Perhaps they wrack the nations with extortion, harry kingdoms, plunder the resources of churches, only to the end that they may create for themselves the opportunity and means of deserving well, only to the end that they may set all things in order and that they may snatch from their competitors the necessity of ministering to and providing for the poor. But

if, on the contrary, their object is to procure but a wider license and larger impunity for themselves, to heap up money, to favor, aggrandize and corrupt their flesh and blood, to ennoble their family, if in short they seek their own glory in the Church, lording it haughtily over their flocks rather than being an example unto them, then although with their lips they pretend to assume the pastoral office, they are more rightly to be numbered among tyrants than among princes. The philosophers say, and I think truly, that there is nothing in human affairs better nor more useful than man, and among men themselves nothing better nor more useful than a prince, whether ecclesiastical or temporal; on the contrary there is nothing more hurtful to man than man, and among them the temporal or ecclesiastical tyrant is more hurtful than any other. But certainly of the two kinds, the ecclesiastical is worse than the temporal.

I remember that I once journeyed to Apulia to visit the pontiff, Lord Adrian the Fourth, who had admitted me to his closest friendship, and I sojourned with him at Beneventum for almost three months. We often conversed in the way of friends concerning many things, and he asked me confidentially and earnestly how men felt concerning himself and the Roman Church. I was entirely frank with him, and explained without reserve the abuses which I had heard of in the different provinces. For it was said by many that the Roman Church, which is the mother of all the churches, shows herself to be not so much a mother to the rest as a very stepmother. Scribes and Pharisees sit in her seats, and place on the shoulders of men unbearable burdens which they themselves do not deign to touch with even the tip of their finger. They lord it over the clergy instead of making their own lives an example to lead the flock to life by the straight and narrow path; they pile up costly furniture, they load their tables with gold and silver, sparing themselves overmuch even out of

their own avarice. A poor man is seldom or never admitted to their number, and then rather as a result of his own vain-glorious ambition than for the love of Christ. They oppress the churches with extortion, stir up strife, bring the clergy and people into conflict, never take compassion on the sufferings and misery of the afflicted, rejoice in the spoils of churches, and count all gain as godliness. They give judgment not for the truth but for money. For money you can get anything done today, and without waiting; but you will not get it done even tomorrow if you do not pay a price. Too often they commit injury, and imitate the demons in thinking that they are doing good when they merely refrain from doing evil; except a few of them who fulfill the name and duties of a shepherd. Even the Roman pontiff himself is a grievous and almost intolerable burden to all; the complaint is everywhere made that while the churches which were built by the devotion of the fathers are falling into ruin and collapsing, he has built for himself palaces, and walks abroad not merely in purple but in gold. The palaces of priests dazzle the eye, and meanwhile in their hands the Church of Christ is defiled. They rend apart the spoils of the provinces as if they strove to refill the treasuries of Cresus. But the Most High deals justly with them, for they are delivered into the hands of others, and often the vilest of men, to be plundered in their own turn. And while they thus wander in the wilderness, the scourge of God will, I think, never fail to scourge them. Truly the mouth of God has promised that by what judgment they have judged, they shall themselves be judged, and that with their own good measure it shall be meted out to them again. The Ancient of Days cannot lie.

"These are the things, father, which the people are saying," I told him, "since you wish me to bring their opinions to your knowledge." "And you, yourself," he asked, "what do you think?" "There are difficulties," I answered, "about anything that I might say. I fear that I shall

be branded with the reproach of falsehood or flattery if I venture by myself alone to contradict the people; but on the other hand, if I do not, then I fear that I shall be charged with *lèse majesté*, and, like one who has set his mouth against Heaven, shall seem to deserve a cross. Nevertheless, since Guido Dens, the cardinal presbyter of St. Potentiana, adds his testimony to that of the people, I shall not presume so far as to contradict him. For he asserts that in the Roman Church there inheres a certain root of duplicity and stimulant of avarice which is the source and root of all evils. Nor did he speak this in a corner, but, while all his brethren sat round about and Holy Eugenius was presiding, he made this public charge when at Florence he blazed out gratuitously against my own innocence. But one thing I will boldly affirm with my conscience as my witness, and this is that I have never anywhere seen more honest clerics than in the Roman church, or ones who hold avarice in greater abhorrence. Who can help admiring Bernard of Redon, cardinal deacon of Saints Cosmas and Damian, for his self-restraint and utter scorn of lucre? The man is not born from whom he accepted a gift, but what was offered for a pure and honest reason by the fellowship of his brethren he was sometimes persuaded to accept. Who does not marvel at the bishop of Praeneste, who, fearing the scruple of conscience, abstained even from sharing in the common goods? Of many others so great is the modesty, so great the austerity, that they will be found not inferior to Fabricius, whom they excel in all respects for the added reason that they know the way of salvation. But since you urge and press and command me, and since it is certain that it is not lawful to lie to the Holy Spirit, I admit that what you enjoin must be done, although not all of you are to be imitated in all your works. For whoever dissents from the teaching of you of the Roman Church is either a heretic or schismatic. But, thanks to the favor of God, there are some who do not imitate the works

of all of you. For the contamination of a few sullies the pure with a stain, and brings infamy upon the Church Universal; and in my opinion the reason why they die so fast is to prevent their corrupting the entire Church. But sometimes the good are likewise snatched away, to the end that they may not be infected with wickedness and turned to evil, and because corrupt Rome is found unworthy of them in the sight of God. Do you, therefore, since it is a part of the duty of your office, seek out and bring in to you men who are humble and despisers of vainglory and money. But I fear lest if you go on asking what you wish, you will hear from an imprudent friend things which you do not wish. What is it, father, to criticize the life of others and not probe searchingly into your own? All men applaud you, you are called father and lord of all, and upon your head is poured all the oil of the sinner.¹² If, therefore, you are father, why do you extort gifts and payments from your children? If you are lord why do you not strike terror into your Romans, and repressing their insolence, call them back to the way of loyalty? But you may answer that you wish to preserve the city to the Church by means of the gifts which you receive. Did Silvester originally acquire it by means of gifts? Father, you are wandering in the trackless wilderness and have strayed from the true way. It must be preserved by means of the same gifts by which it was acquired. What you received without a price, see that you bestow without a price. Justice is the queen of the virtues and blushes to be bartered for a price. If she is to be gracious, she must be gratuitous. It is vain to seek to prostitute for a price her who cannot be corrupted; for she is pure and ever incorrupt. While you oppress others, you will yourself be even more grievously oppressed."

The pontiff laughed and congratulated

¹² Ps. cxl, 5.

me upon having spoken with such frankness, enjoining me as often as anything unfavorable concerning him came to my ears, to inform him thereof without delay. And, after urging many things in his favor as well as much against himself by way of reply, he finally put before me an apology after this kind: Once upon a time all the members of the body conspired together against the stomach, as against that which by its greediness devoured utterly the labors of all the rest. The eye is never sated with seeing, the ear with hearing, the hands go on laboring, the feet become callous from walking, and the tongue itself alternates advantageously between speech and silence. In fine, all the members provide watchfully for the common advantage of all, and in the midst of such care and toil on the part of all, only the stomach is idle, yet it alone devours and consumes all the fruits of their manifold labors. What remains to be said? They swore to abstain from work and to starve that idle public enemy. Thus passed one day; that which followed was more irksome. The third was so fatal that almost all commenced to be faint. Then, under the pressure of necessity, the brothers again gathered together to take action concerning their own welfare and the state of the public enemy. When all were present, the eyes were found to be dim, the foot failed to sustain the weight of the body, the arms were numb, and the tongue itself, cleaving to the feeble palate, did not make bold to state the common cause. Accordingly all took refuge in the counsel of the heart and after deliberation there, it became plain that these ills were all due to that which had before been denounced as the public enemy. Because the tribute which they paid it was cut off, like a public rationer it withdrew the sustenance of all. And since no one can perform military service without wages, when the wages are no longer forthcoming the soldier becomes faint and weak. Nor could the blame be cast back upon the rationer, since what he had not received he could

not pay out to others. Far more beneficial would it be that he should be supplied with somewhat to distribute than that through his starvation all the other members should go hungry. And so it was done; persuaded by reason, they filled the stomach, the members were revived, and the peace of all was restored. And so the stomach was acquitted, which, although it is voracious and greedy of that which does not belong to it, yet seeks not for itself but for the others, who cannot be nourished if it is empty. "And so it is, brother," he said, "if you will but observe closely, in the body of the commonwealth, wherein, though the magistrates are most grasping, yet they accumulate not so much for themselves as for others. For if they are starved, there is nought to be distributed among the members. For the stomach in the body and the prince in the commonwealth perform the same office, accord-

ing to the well-known passage of Quintus Serenus:

Those who contend that the stomach is king of the whole body,
Seem to have truth and reason with them in their claim;
For upon its soundness depends the strength of all the members
And, contrariwise, all are enfeebled if it be sick;
Nay rather, if care is not taken, it is said to harm
The brain and pervert the senses from their soundness.¹³

Do not therefore seek to measure our oppressiveness or that of temporal princes, but attend rather to the common utility of all."

¹³ Serenus, *Lib. Medecin.* II. 300-305.

ST. THOMAS AQUINAS

One of the most paradoxical aspects of medieval life is the contradiction between the extreme pluralism of its institutions and the deep yearning for unity in its religious and philosophical ideas. The typical institution of the Middle Ages, the feudal system, represents the hallmark of diversity and decentralization that the western world has experienced. By contrast, medieval thinking on religious and secular matters took the *principle of unity* for granted: the oneness of God, of divine law and reason, permeated the whole universe, the heavens, nature, and society. Mankind was conceived as one community, subject to one eternal law and government. Diversities and pluralities were held to exist in the world of fact, but their reason for existence was related to a higher Whole possessing a unity to which they were subordinate.

The duality of man's body and soul was reflected in the two orders of the spiritual and mundane powers, church and empire, each claiming, in theory at least, universal jurisdiction. Both the papalist and imperialist parties were reluctant, in typical medieval fashion, to accept the dualism of church and empire as final. They agreed that there had to be a unifying principle within which the diversity of ecclesiastical and secular powers could be harmonized. The disagreement between papalists and imperialists arose over the nature of the unifying principle and the method of incorporating it into the solution of practical issues. Partisans of the church as well as of the empire also agreed on another major premise: that the *monarchical form of government in church and empire* was the necessary result of the unitary principle, which finds its highest embodiment in God's rule of the universe.

In the realm of thought, the medieval mind drew its nourishment and vitality from two sources: the religious inspiration of Christianity and the intellectual heritage of antiquity. The task of reconciling these two sources, Christian faith and pre-Christian philosophy, was relatively easy in the early medieval period: first, the classical heritage of thought was mainly kept alive in isolated islands of learning in churches and monasteries, and the *major ideological*

conflicts in the early Middle Ages were between church and heresy, and not between theology and philosophy. Second, the relative quietude in this earlier period lay in the fact that, of the great classical philosophers, *Plato* was the *dominant influence*, whereas Aristotle, known only by a few writings on logic, played a minor part.

Plato's doctrine of vision as the ultimate form of knowing the Good, his concept of God, his tendency toward mysticism, his contempt of matter and idealization of spirit, his conception of Ideas as the essence of reality, his scheme of an ideal society in which the spiritual element would rule—all these Platonic strands could be easily woven into the texture of early Christian life and thought. As long as Christianity was still primarily faith and revelation, idea rather than institution, a fraternal community of love rather than an hierarchical organization endowed with the sword of law, Plato seemed to fit the mood and temper of Christian speculation. Of the two giants of the Christian tradition, St. Augustine and St. Thomas Aquinas, the first, St. Augustine, was thoroughly imbued with Platonic ideas; he was a Platonist not only on intellectual grounds, but also in personality, character, and style. And that he was clearly aware of his affinity is evidenced in *The City of God*, where he says that Plato was "justly preferred to all the other philosophers" of paganism, and that "it is evident that none come nearer to us than the Platonists."

But as the church became more and more a political organization struggling for world hegemony, possessing the best-trained bureaucracy of the Great Powers and utilizing diplomacy in peace and armies in war, its entire outlook changed. The original Augustinian conception of the Christian community as a community of the Elect and the conception of the direct participation of the Christian individual in divine grace and salvation were relegated to the background. When papal power reached its peak in the thirteenth century, the intellectual need of the institutionalized church was not so much mystic visions of a highly individual and personal kind but systematic and realistic elaboration of all thought in the light of collective traditions and newly emerging forces pointing to the future.

Particularly as humanistic studies spread in the eleventh and twelfth centuries in Bologna, Paris, Chartres, and Oxford, and classical knowledge became more easily accessible, the labors of publicists, philosophers, and theologians were increasingly devoted to the construction of a unified system of thought in which faith and reason, theology and philosophy, Christianity and pagan antiquity would be reconciled in harmony and lasting accord. The rising universities in Italy, France, England, and Germany—perhaps the most important single contribution of the Middle Ages to western civilization—provided an opportunity for general study and analysis. Originally intended for the training of the young in a single craft (medicine, law, theology), and therein resembling the medieval trade guilds, the universities soon followed the example set by the University of Paris, which was the first to include, early in the thirteenth century, the four faculties of theology, arts, law, and medicine. Henceforth the ideal of unity of knowledge remained the driving force of European universities; the application of the ideal changed with the outlook of the times.

Medieval scholasticism was the first great attempt, after the fall of the Roman empire, to unite in one body knowledge and revelation, philosophy and theology.

The principle of unity was the *primacy of religion over philosophy*, of revelation over empirical verification, of faith over knowledge, of dogma over science. The scholastic philosophers did not invent the doctrine of the primacy of religion over philosophy but refined it in accordance with the needs of the time.

Tertullian (A.D. 160–220), one of the early church Fathers and like St. Augustine, a North African, had stated an extreme position by declaring that Christianity and philosophy were utterly irreconcilable, that heresies are the result of philosophy, and that there was the danger of a “mottled Christianity” of Platonic, Aristotelian, and Stoic elements. Sensing acutely that attempts to buttress religion by philosophy would eventually lead to the decline of faith, Tertullian sought to return to the primitive doctrine that religious belief should be based on simplicity of heart and not on subtlety of intellect.

St. Augustine was less extreme than Tertullian; he was not opposed to philosophy as such. According to St. Augustine, the possibility of reasoning originates in the act of faith. The road to truth begins with faith and revelation: “Seek not to understand that you may believe, but believe that you may understand.” The Augustinian doctrine is thus an advance over the earlier church fathers because it is not hostile to understanding, provided that the basis and starting point of understanding are the acceptance of nonrational premises: faith and dogma. Yet in effect St. Augustine’s method resulted in the enthronement of theology, and both his philosophy and his political thought are essentially theological speculation in content, expression, and symbolism.

From the fifth to the eighth century the main issue confronting western thought was not the struggle of one school against another but the very survival of traditional values and ideas in the aftermath of material and spiritual devastation on an unprecedented scale. Only in monasteries and churches was the connection between the tradition of civilization and the newly emerging medieval world always continued, and the link may have appeared at times to be tenuous indeed. But by the ninth century, physical recovery and consolidation had been attained to a considerable extent, and a more independent and typically medieval intellectual trend began to emerge: *scholasticism*. It was, in fact, as typical of the intellectual character of the Middle Ages as was feudalism of their social and economic system. From the ninth to the thirteenth century, scholasticism was the predominant pattern of thought.

The ecclesiastical domination of scholastic philosophy was assured in more than one way. Most philosophical writers and teachers were clerics, nurtured on church doctrine and subject to church discipline, and the one principle underlying their speculations was that reason should never contradict faith. Thus before the argument starts, the writer knows the answer. It is to be found in faith and belief, as stated by authoritative ecclesiastical sources.

In this respect, in scholastic philosophy the search for truth loses the dynamic and evolutionary quality of Greek philosophy, for among the exciting traits of Greek philosophy is that one never knows at the outset where the argument will lead, what the results of reasoning will be. Less influenced by experimental science than is modern thought, Greek philosophy, unhampered by ecclesiastical discipline, developed into greatness because it refused to take anything for granted. Whatever one may think of the conclusions arrived at by the various schools of Greek philosophy, one is always astounded anew by its exhilarating

and bold spirit that challenges everything, that allows no argument to hide behind the protective cloak of authority, whatever its source may be.

The authoritative sources of the scholastic philosophers were the Bible, on which they relied heavily, the church fathers, and the relatively few known works of Greek and Roman antiquity. Aristotle, for example, was not adopted by the church until the thirteenth century; thereafter it became impious to attack him, although he had not been a Christian, and he was generally referred to as “the philosopher.” Writers in ancient times relied far less on authority, and the literary technique of copious references and quotations in support of one’s argument is largely an invention of these scholastic philosophers of the Middle Ages.

Another link between theology and philosophy in scholasticism was forged in the choice of issues. For example, the problem of free will was discussed in relation to the activities of God and the angels, from the spiritual nature of which deductions were made about analogous human problems. Revealed doctrine was the main source of chosen topics, and dogma was the method of regulation and control of philosophical writing. Finally, the influence of the Inquisition was also a limitation of untrammelled research and inquiry; the prospect of being burned alive probably tended to discourage unorthodox thinkers from going too far in the exploration of new ideas.

Scholastic philosophy reached its “golden age” in the thirteenth century, which was also the peak of papal power. The evolution of the church as an institution of universal aspirations demanded a universal, comprehensive, and systematic philosophy. The synthesis of theological doctrine, as elaborated and refined over a thousand years, provided one cornerstone of the new edifice. The rediscovery of Aristotle provided the other.

In the East the tradition of Aristotelian learning had never been abandoned; Constantinople in particular had long been a center of Greek scholarship. From Constantinople Greek studies spread to the Near East and were then carried by Arab and Jewish scholars to Spain. In the West, however, only a few of Aristotle’s writings on logic were known before the middle of the twelfth century. From then on, and especially in the thirteenth century, the spread of Aristotelian studies was the outstanding intellectual event of the age. It began in Spain with translations of Arab and Hebrew versions of Aristotle into Latin. Toledo was one of the first centers of the Aristotelian revival, and its spread from there to Paris and Oxford, the two liveliest clearinghouses of new philosophical ideas in the thirteenth century. Gradually most of Aristotle’s works were translated directly from Greek into Latin, and his metaphysics, physics, biology, psychology, politics, and ethics, in addition to his writings on logic already known, became the common property of the western world. At first the church was concerned about the spread of the new doctrines and sought to stem the tide of Aristotelianism by prohibition. But gradually the attitude of the church changed, and Aristotle moved from toleration into official acceptance.

The triumph of Aristotle in the thirteenth century was the work of many men, schools, and universities, but above all it was due to the influence of St. Thomas Aquinas (c. 1225–1274). He was born at the family castle at Roccasecca, halfway between Rome and Naples, of a landed family with an old military and political reputation. From an early age he was brought up by the Benedictines at the nearby monastery of Montecassino. At the age of barely eighteen, he joined

the mendicant order of the Dominicans, against the vehement opposition of his family. He studied in Naples, Cologne, and Paris; in Paris he became well known, first as an outstanding student, and then as a teacher of theology and philosophy.

Although St. Thomas Aquinas died before he was fifty, his literary output, about seventy works of all kinds and sizes, was truly encyclopedic. It marks the crowning achievement and summation of scholastic philosophy, his lasting accomplishment being the incorporation of Aristotelianism into Christian thought. With St. Augustine, St. Thomas Aquinas is one of the two leaders in the development of church doctrine. *Augustinianism* is the fusion of *Plato* and *Christianity*. *Thomism* is the synthesis of *Aristotle* and *Christianity*.

In the first few centuries of its existence, the strong mystical and idealistic tendency in Christianity found philosophical kinship and affinity in Plato; as St. Augustine himself said, Plato came near to Christian knowledge and revelation, and in a sense Christianity was Platonic from the beginning. By the thirteenth century, the nature of the Christian idea and church had changed considerably, and Platonism could no longer serve as the philosophical and metaphysical foundation of an institution in which the accent had changed from individual inspiration and illumination to institutional stability and sobriety. By accepting Thomism over Augustinianism as its official doctrinal system, the church signified its preference of Aristotle to Plato. St. Augustine, the North African in whom the fires of faith burned with the intensity of his native sun, sought to reaffirm the spirit of the first Christians, for whom Christianity was faith and love, devoid of philosophy, argument, and law. The victory of Thomism over Augustinianism was the final commitment of the church to the long-term institutional, rational, legal viewpoint.

This victory is remarkable for two reasons. In the first place, it shows that the most decisive issue in the philosophical evolution of the church was in effect a repetition of the dialogue between Plato and Aristotle, adapted to the Christian world and its theology. Until the seventeenth century at least, it seemed that Plato and Aristotle had laid down for all time the two possible basic philosophical systems; with all its hostility to pre-Christian pagan philosophy, medieval scholasticism nevertheless was completely under the spell of Plato and Aristotle.

The second remarkable aspect of the victory of Thomism is the light it throws on the adaptability and high survival capacity of the church. As time went by, particularly from the eleventh century on, it became evident that theology was not enough, and that the challenge of budding humanism and secularism had to be met on its own ground. The adoption of Aristotle by the church, through St. Thomas, indicated its tremendous intellectual vitality and flexibility. In Aristotle the church found a systematic and encyclopedic body of thought, encompassing many disciplines and forming a coherent whole; it was moderate in temper and outlook, adaptable to changing circumstances, full of common sense, and therefore altogether human, supranational, and timeless. Though it lacked the spark and brilliance of Plato's philosophy, it was rich in solidity and endurance, characteristics that are prosaic but that wear well under all conditions. To be born, the church needed Plato. To last, it needed Aristotle.

Aristotle himself, as is true of any great disciple of any great teacher, never ceased to be a Platonist in a profound sense; the victory of Thomism over

Augustinianism did not mean the elimination of the latter, or of Platonism, from the intellectual heritage of the church, but the relative stress of the Aristotelian over the Platonic system. Augustinian mysticism and emphasis on faith and individual illumination and grace, when politely relegated to a subordinate position in the official church theology, fled into the developing sects and creeds that sought to revive the original character of Christianity in the late Middle Ages. Their Augustinianism was later championed by the Protestant reformers, who were generally opposed to Thomism, in which they saw too much cold logic and too little personal inspiration. Martin Luther, himself an Augustinian monk, declared that he had not found any book that taught him as much of the meaning of God, Christ, man, and the world as he had learned from the Bible and St. Augustine, and that Aristotle is to theology what darkness is to light: "Only without Aristotle can we become theologians." Protestantism was thus a return to the beginnings of Christianity not only because of its stress on the earlier religious sources over the later, but because of its preference of St. Augustine to St. Thomas Aquinas, of Plato to Aristotle.

St. Thomas Aquinas' approach to the problem of faith and reason denoted as great a concession to rationalism in relation to the Augustinian solution, as the Augustinian solution had been an advance in relation to the antirationalism of Tertullian. St. Thomas conceived of faith and knowledge as divine in origin; therefore conflict between them could never be real, only apparent. He thought that the previous trouble had been due largely to the fact that theologians introduced theological criteria into philosophy, and philosophers attempted to philosophize in theology. However, once it is assumed that knowledge and faith are not opposing but supplementary modes of understanding God and the world, there is no need to reconcile conflict where there is no conflict.

Faith is not contrary to reason but *above reason*, and the results of faith are no less certain than those of reason; they are, in fact, more certain because faith is based on direct revelation of God and therefore closer to the source of all truth than is philosophy, which is based on human insight. If articles of faith could be rationally proved, they would become philosophy, and theology as a separate branch of thought would become unnecessary and disappear: the articles of faith, because of their very nature, however, cannot be intellectually proved; they have to be accepted by an act of *will*. Rational evidence can only support further rational propositions; it can never lead to the foundations of faith, which have to be accepted, not because they correspond to rational evidence, but because they are revealed by God as true. What man can therefore believe, he cannot know, and what he can know, he cannot believe.

If theological truth cannot be proved true by philosophy, neither can it be disproved. Conflict is thus impossible. Where it seems to arise, St. Thomas categorically states that faith is higher than knowledge in the hierarchy of truth, and that something must be wrong with philosophy if it seems to contradict revelation: philosophy is only relatively certain, whereas theology is absolutely certain, inasmuch as it is based on divine authority. St. Thomas thus conceives of faith and knowledge as autonomous in their respective spheres, yet does not separate them in tight compartments. Although faith does not interfere with the ordinary operations of reason, it keeps an over-all watch over it, and gives it guidance and purpose.

No one in the history of the church has equaled St. Thomas Aquinas in blending the religious and rational motifs in one vast and rich pattern of thought in which there seems to be room, as in the work of Aristotle, for almost all forms of knowledge and insight. St. Thomas represents the high point of equilibrium that was compatible with the long-term interests of the church, and his position is an enormous concession to rationalism, compared with Tertullian's and St. Augustine's. After St. Thomas, and as early as the fourteenth century, the balance begins to move in the direction of rationalism; the fifteenth century, the cradle of the Renaissance, sees the rebirth of classical humanism, in which knowledge breaks with faith and claims supremacy over it.

The method of argument in St. Thomas' main treatise, the *Summa Theologica*, is characteristic of scholasticism. The entire work (three parts in twenty volumes) is arranged uniformly. Each major subject begins with a question and is subdivided into articles. Each article's heading is again a question, for example, "Whether the Angels Exist in Any Great Number?" The text of the article starts out with a series of "objections" presenting the incorrect doctrinal view (in this particular case, that the number of angels is not great). Immediately following the incorrect arguments presented in the objections, the correct doctrine is given, almost invariably in the form of a direct quotation from an authoritative source. Concerning the problem of the number of angels, St. Thomas quotes (Dan. 7:10): "Thousands of thousands ministered to Him, and ten thousand times a hundred thousand stood before Him." After thus establishing the large number of angels as incontrovertible, St. Thomas then adduces a number of reasons in support of the true doctrine stated in the quotation. Finally he replies specifically to each objection, demolishing them one by one.

A sense of complete certainty pervades the work. There is no slow and groping search toward the discovery of truth, and there are no questions (among the many thousand discussed) that must be kept open for further thought and inquiry. An element of dialectical reasoning in the method gives it its strength: the erroneous views are given a fair and full hearing. However, the end of the dialectical process, the truth, is not derived from the process of reasoning itself but from an authoritative source that reveals the true doctrine. After the true position is made known, reason then finds the supporting arguments. The medieval conception of *philosophy* as the *handmaiden of theology* is thus exemplified in the substance of scholasticism as well as in its method of argument.

St. Thomas Aquinas did not think of himself principally as a philosopher, and much less as a political philosopher, but as a theologian, a "catholic doctor" fervently devoted to Holy Doctrine. His political views may be best culled from two of his works, the short fragment, *On Kingship (De regno)*, and *The Sum of Theology (Summa Theologica)*, his chief work.

The pre-Thomistic medieval theory of the state, unfamiliar with Aristotle's *Politics* and *Ethics*, viewed the origin of political association, of government, as the result of sin and evil, of the distortion of man's natural and original impulses. St. Augustine had been a typical exponent of this Christian-Stoic conception of the state: God did not intend that man, "His rational creature, who was made in His image, should have dominion over anything but the irrational creation—not man over man, but man over the beasts." St. Thomas meets the Augustinian argument by interpreting the concept of "dominion" in two ways:

if dominion refers to slavery, St. Thomas is willing to concede (with the Stoics and Roman lawyers) that there is no slavery in the state of nature. But if dominion refers to the "office of governing and directing free men," it is not incompatible with the state of innocence.

St. Thomas suggests two reasons for the necessity of government even in the state of innocence, before the occurrence of sin and evil: first, "Man is naturally a social being and so in the state of innocence he would have led a social life." Because there must be some organization of social life, government emerges as the specific organ of looking after the common good. Second, if one man surpasses others in knowledge and justice, it would be wrong to disregard such superiority for the benefit of all. St. Thomas thus bases the *need for government on man's social nature*, and the *organization of government on the superior wisdom and morality of the ruler for the benefit of the ruled*. In both views, his kinship to Aristotle is evident, and it constitutes a sharp break with the typical conceptions of state that had been prevalent until Aristotle's *Politics* became known again in the thirteenth century.

St. Thomas agrees with Aristotle that man's social impulse is the origin of the state, and the good life its purpose. But from here on, St. Thomas, the Christian theologian, goes beyond Aristotle. For the Greek, bound to this world, the good life of the community—though nowhere clearly defined—included practical and spiritual ends that could be attained by joint communal effort *here and now*. St. Thomas cannot be satisfied with the community as the ultimate point of reference and the creative source of spiritual values. His Christian, *other-worldly* concern leads him to the view that the Aristotelian doctrine of the good life is still one step short of the ultimate purpose of existence, because "through virtuous living man is further ordained to a higher end, which consists in the enjoyment of God." Whereas Aristotle, whose philosophy and ethics were humanistic and this-worldly, saw the end of man in values that exist within himself, St. Thomas sees, in addition to such man-centered values, an "extrinsic" good that does not exist in man himself and that is yet the supreme value, namely, "final beatitude which is looked for after death in the enjoyment of God."

Because society has the same end as the individual, the ultimate purpose of social life is not merely virtuous living, "but through virtuous living to attain to the possession of God." If man and society could attain this supreme end by human power, the king (as the supreme representative of human power) could guide them in the right direction. However, St. Thomas argues, the possession of God can be attained only by divine power, and human government is unable to guide men toward this end. The ministry of the kingdom of God is not in the hands of earthly kings, but of priests, and—above all—"the chief priest, the successor of St. Peter, the Vicar of Christ, the Roman Pontiff," to whom all kings are to be subject as to Christ himself.

St. Thomas always looks on the world in hierarchical terms, and his system of values is hierarchical, too. From the viewpoint of human and practical needs, the purposes of secular government are legitimate ends. But those ends are themselves means if viewed in relation to a still higher end, the highest of all: the possession of God. Applying the Aristotelian principle that "the one to whom it pertains to achieve the final end commands those who execute the things that are ordained to that end," St. Thomas arrives at the conclusion that

secular government is subject to the church because the former is concerned with intermediate ends, whereas the latter is concerned with the ultimate end, the salvation of souls.

The question of toleration of heretics illustrates St. Thomas Aquinas' conception of the relation of state and church and also shows how seriously he took his religion. St. Thomas defines heretics as persons who profess the Christian faith "but corrupt its dogmas." The church treats heretics patiently, because it admonishes them twice before it takes drastic action. If the heretic remains stubborn, his crime is graver than other offenses; if forgers of money and other evildoers are put to death, "much more reason is there for heretics, as soon as they are convicted of heresy, to be not only excommunicated but even put to death." Excommunication separates the heretic from the church. In its mercy, the church, because it abhors the shedding of blood by its own organs, "delivers him to the secular tribunal to be exterminated thereby from the world by death." The church thus uses only spiritual weapons, whereas the state, as a temporal power, uses temporal weapons. Yet this separate of ecclesiastical and secular authorities is not final, because church and state cooperate in the highest task of all—the salvation of souls. The church possesses indirect power over secular authorities, employing them for its purposes whenever the defense of the faith so requires.

The death penalty in this world is mild compared with the punishment that awaits the sinner in hell. Of all crimes, the offenses against God are the most serious, and heresy ranks among them. The punishment for such crimes is eternal: first, the souls are punished by the real fire of hell; after the resurrection of the bodies, they, too, are burned in the fire of hell, but miraculously the bodies are never consumed by the fire. The degree of fire depends on the gravity of the sin committed, and heretics will be assigned to the hottest mansions in hell. Another miraculous provision prevents the dulling of the senses or loss of consciousness of the damned who are exposed to eternal hell-fire. The eternity of the penalty ensures that the degree of suffering is constant throughout and that there is no lessening of the pain through habit. The blessed in heaven will watch the sufferings of the damned in hell, in order that "the happiness of the saints may be more delightful to them"; they will rejoice not out of cruelty and hatred, but because they will recognize in these sufferings "the order of divine justice and their own deliverance which will fill them with joy."

St. Thomas was a man of kindness, charity, humility, moderation, and saintliness. His views on heresy, the treatment to be meted out to heretics in this world, and the eternal damnation awaiting them in the hottest chambers of hell are in stark contrast to St. Thomas the man; they reflect the nature of scholasticism at its peak. That dogmatic certainty is likely to lead to persecution of dissenters and eventually to death has been proved time and again in history, regardless of whether the dogmas are religious or political. Scholasticism must have been particularly certain of its premises and conclusions if a saintly and kindly man like St. Thomas Aquinas could hold such extreme views, however inextricably they were bound up with the theological and philosophical system he accepted as valid. Yet he could not go the whole way. He conceded that under certain circumstances heresy be tolerated: when heretics and unbelievers are numerous, the church may tolerate them in order to avoid disturbances of the peace.

As to the nature and form of political authority, St. Thomas Aquinas starts with the premise that government is related to the divine order. Therefore, because the commandments of God include the duty of obedience to superiors, "disobedience to the commands of a superior is a mortal sin." St. Thomas follows Aristotle in classifying the forms of government into good types, in which the interest of the governed is served, and bad types, in which the interest of the ruler or rulers prevails. But, whereas Aristotle, with some hesitation and only under qualified circumstances, preferred monarchy as the best form of government, St. Thomas is much more unequivocal in his choice of *monarchy*.

Aristotle preferred monarchy because he believed that it was not likely that superior moral and intellectual qualities could be found in more than one man; his hesitation in committing himself absolutely can be attributed to his doubt that the right man can be found. St. Thomas, on the other hand, derives his preference for the monarchical form of government from his religious view of the world. He notices that "in the whole universe there is one God, Maker and Ruler of all things." In the multitude of bodily members, the heart rules all the others; among the bees, there is "one king bee," and generally "every natural government is government by one." The governing element represents, in a multiplicity of things, their purpose and guiding principle. In political society, the main practical task and purpose is the unity of peace. St. Thomas identifies unity with peace; he is therefore led to the conclusion that one ruler is most likely to maintain the peace that goes with complete unity, whereas a government made up of several persons might endanger social peace and stability through disagreement.

But St. Thomas seeks to delimit monarchy so that it will not degenerate into tyranny. First, he prefers elective to hereditary kingship: both papacy and empire were ruled by elective heads, as contrasted with the national dynasties in England and France that tended to become hereditary. Second, he suggests that the king's power "be so tempered that he cannot easily fall into tyranny." Without indicating in detail how this tempering is to be accomplished, St. Thomas in one passage stresses the important concept that "all should take some share in the government," and he also views sympathetically the idea of the *mixed constitution* in which monarchy is supplemented by aristocratic and popular elements of participation in government.

St. Thomas is aware that even a limited, or constitutional, monarchy, is no cure-all in itself and that it, too, may degenerate into tyranny. But he distinguishes minor tyranny from excessive tyranny. Regarding the first, he warns that hasty action against the tyrant may unleash unforeseen consequences worse than the evil to be remedied. He also says that *revolutionary resistance to minor tyranny*, if successful, is likely to lead to *even worse tyranny*, because the leader of the victorious revolution, "fearing to suffer from another what he did to his predecessor, oppresses the subjects with an even more grievous slavery." St. Thomas is perhaps the first writer on the problem of revolution who understands its inner dynamic, which cannot be halted at will once it is set in motion. He feared that revolution is nearly always a higher price than the evil it seeks to remedy; Edmund Burke was later to apply this Thomistic doctrine to the analysis and condemnation of the French Revolution.

Regarding *excessive tyranny* that becomes unbearable, St. Thomas does not endorse John of Salisbury's justification of *tyrannicide*; it is not up to private persons to decide that the king is a tyrant and then slay him. Such assumption of authority by subjects would be dangerous to the rulers as well as to the people, particularly because wicked men find the rule of a good king no less burdensome than that of a tyrant. If any action is to be taken against tyrants, it can be done only through public authority. Thus, if the people have the right to elect their king, they may lawfully depose him or restrict his power should he abuse it. But if the prince has been appointed by a higher sovereign, only that sovereign may depose him. In the event there is no human remedy, God alone can bring relief, for "it lies in his power to turn the cruel heart of the tyrant to mildness." St. Thomas relates the tyranny of the ruler to the sins of the ruled; tyrants rule by divine permission, as a punishment for the sins of the subjects. If God is to help them against the tyrant, the people must desist from sin.

The part of St. Thomas' political theory that is not primarily Aristotelian is his philosophy of law as developed in the *Summa Theologica*. The great contribution of the Middle Ages to the store of civilization is the conception of the *supremacy of law* based on the *custom of the community*. The origins of this conception are partly to be found in the Jewish-Christian doctrine of a divine law above the human law, and partly in the Stoic-Roman consciousness of the rational ordering of the world and its reflection in human society. The feudal system itself was largely a product of custom, and the relations between feudal lord and vassal were determined by custom, or law based on custom. The concept of sovereignty was not alien to the Middle Ages; but it was a sovereignty of the *law*, whereas in antiquity and in modern times the idea of sovereignty is attached to the *lawgiver*—a monarch or an aristocracy in the nondemocratic form of sovereignty, and the people in the democratic application of sovereignty. The medieval preference of communal custom to deliberate decision as the basis of the law was not mere philosophical predilection but the ideological reflection of a social reality in which status rather than contract was predominant, in which mobility was relatively low, and political authority greatly decentralized.

In his analysis of law, St. Thomas distinguishes four forms: eternal law, natural law, divine law, and human law. *Eternal law* is identical with the divine reason that governs the universe, and St. Thomas calls it eternal, because God's reason, God's rule of the world, "is not subject to time but is eternal."

As to *natural law*, St. Thomas says that all things, irrational animals and rational man, are subject to divine reason, to eternal law. But only man, as a rational creature, participates in divine providence and reason in a special way, for he provides for himself and for others, whereas all other creations of God, irrational animals and inanimate things, reflect divine reason only by receiving from it the inclinations to their proper acts and ends. Natural law is therefore man's active and transpersonal rationality, his "participation of the eternal law."

More specifically, St. Thomas divides natural law into three species: first, there is the good that man pursues in accordance with the nature he has in common with all substances, such as self-preservation. Next, there is the inclination he has toward certain forms of conduct that he shares with animals, such as "sexual intercourse, education of offspring and so forth." Third, there

is the inclination in him that is specifically human, such as the desire to know God, live in society, and avoid offending those with whom one lives.

Divine law is related by St. Thomas to the fact that man's reason is neither the sole nor the most reliable guide to his apprehension of truth and justice. Divine law is communicated to man through revelation in the Old and New Testaments, and it is in no way contradictory to natural law apprehended by reason. St. Thomas' general doctrine that "grace does not abolish nature but perfects it" also applies to divine law, which is revealed by God as an act of grace.

The fourth, and lowest, form of law is *human law*; it is defined by St. Thomas as an "ordinance of reason for the common good, made by him who has care of the community, and promulgated." The need for human law arises out of two difficulties: first, the impossibility of perfectly apprehending, through the human mind, the dictates of divine reason; second, the difficulty of properly applying general principles of natural law to specific situations and circumstances.

There is little room for arbitrariness in St. Thomas' conception of human law, because it must meet several critical tests. First, for a command to have the nature of law, "it needs to be in accord with some rule of reason." Imperfect as the connection between a specific rule of law and first principles of reason may be, some link between the two must exist. The second major characteristic of law is, according to St. Thomas, that it be just and in harmony with the common good; otherwise it is "devoid of the nature of law." The third essential characteristic of the law is legitimacy: it must derive either from the people or from someone who has been entrusted by the people with the office of governing them. Though St. Thomas preferred monarchy to other forms of state, he sharply distinguished it from tyranny, which is illegitimate government. Finally, St. Thomas held that law, to be valid, must be duly promulgated. Unlike the precepts of reason and natural law, which can be grasped by logical deduction, human laws are not endowed with unerring finality; they apply to specific circumstances and therefore must be clearly and publicly promulgated. St. Thomas' insistence on publicity in the legal system is an important contribution to a principle that is one of the primary services the law renders to social life: security.

Forty-nine years after his death, St. Thomas Aquinas was canonized. It was officially held by the church that his doctrine could not have come into existence without a miracle of God, and that his doctrine had done more to illuminate the church than the teachings of all other writers, teachers, and doctors together. From then on, the acceptance of Thomism as the official doctrine of the church has been steady. A large number of popes in the Middle Ages and in the modern period have declared Thomism to be the authoritative guide to doctrine and faith. Leo XIII issued the Encyclical *Aeterni Patris* on August 4, 1879, in which he ordered that the doctrines of St. Thomas, "the pre-eminent guardian and glory of the Catholic Church," be henceforth taught in its academies and schools. In later official pronouncements, Pope Leo XIII decreed that if other writers and theologians disagree with St. Thomas, the "former must be sacrificed to the latter."

The *Summa Theologica* was prescribed as the text of theology in Catholic universities and academies authorized to grant academic degrees and doctorates in philosophy, and all Catholic universities, colleges, and schools were put under the patronage of St. Thomas Aquinas. Pope Pius X declared in his

pronouncement of June 29, 1914, that the "capital theses in the philosophy of St. Thomas are not to be placed in the category of opinions capable of being debated one way or another," and he warned all teachers of philosophy and theology that "if they deviated so much as a step, in metaphysics especially, from Aquinas, they exposed themselves to grave risk." The Code of Canon Law, promulgated on May 27, 1917, ordered teachers in Catholic schools to "deal in every particular with the studies of mental philosophy and theology and the education of pupils in such sciences according to the method, doctrine and principles of the Angelic Doctor and religiously to adhere thereto."

Since that time Thomism has been reaffirmed as the official doctrine of the Roman Catholic Church; in addition to conservative Catholic philosophers who are completely committed to the Thomistic line of thought, outstanding liberal Catholic thinkers like Jacques Maritain have also enthusiastically contributed to the renaissance of Thomism. This fact in itself demonstrates the vitality and flexibility of St. Thomas Aquinas' ideas.

How St. Thomas himself would react to the movement of setting him up as the authoritative source of doctrine is difficult to envision. He lived in a turbulent intellectual age that experimented with new sources and materials, and he refashioned the traditional approaches to basic philosophical problems. A profound believer, he nevertheless did not hesitate to reconstruct belief on new foundations. He might have felt that he was not a "Thomist" but a student and teacher seeking to reconcile faith and reason, and he might have doubted, in his modesty and humility, that his views commanded timeless authority.

ST. THOMAS AQUINAS

I *On Kingship* *

DEFINITION OF KINGSHIP

The first step in our undertaking must be to set forth what is to be understood by the term *king*.

In all things which are ordered towards an end, wherein this or that course may be adopted, some directive principle is needed through which the due end may be reached by the most direct route. A ship, for example, which moves in different directions according to the impulse of the changing winds, would never reach its destination were it not brought to port by the skill of the pilot. Now, man has an end to which his whole life and all his actions are ordered; for man is an intelligent agent, and it is clearly the part of an intelligent agent to act in view of an end. Men also adopt different methods in proceeding towards their proposed end, as the diversity of men's pursuits and actions clearly indicates. Consequently man needs some directive principle to guide him towards his end.

To be sure, the light of reason is placed by nature in every man, to guide him in his acts towards his end. Wherefore, if man were intended to live alone, as many animals do, he would require no other guide to his end. Each man would be a king unto himself, under God, the highest King, inasmuch as he would di-

rect himself in his acts by the light of reason given him from on high. Yet it is natural for man, more than for any other animal, to be a social and political animal, to live in a group.

This is clearly a necessity of man's nature. For all other animals, nature has prepared food, hair as a covering, teeth, horns, claws as means of defence or at least speed in flight, while man alone was made without any natural provisions for these things. Instead of all these, man was endowed with reason, by the use of which he could procure all these things for himself by the work of his hands. Now, one man alone is not able to procure them all for himself, for one man could not sufficiently provide for life, unassisted. It is therefore natural that man should live in the society of many.

Moreover, all other animals are able to discern, by inborn skill, what is useful and what is injurious, even as the sheep naturally regards the wolf as his enemy. Some animals also recognize by natural skill certain medicinal herbs and other things necessary for their life. Man, on the contrary, has a natural knowledge of the things which are essential for his life only in a general fashion, inasmuch as he is able to attain knowledge of the particular things necessary for human life by reasoning from natural principles. But it is not possible for one man to arrive at a knowledge of all these things by his own individual reason. It is therefore necessary for man to live in a multitude so that each one may assist his fellows, and different men may be occupied in seek-

* From St. Thomas Aquinas, *On Kingship* (trans. Gerald B. Phelan, rev., with introduction and notes, by I. T. Eschmann; copyright, 1949, by The Pontifical Institute of Medieval Studies, Toronto). By permission.

ing, by their reason, to make different discoveries—one, for example, in medicine, one in this and another in that.

This point is further and most plainly evidenced by the fact that the use of speech is a prerogative proper to man. By this means, one man is able fully to express his conceptions to others. Other animals, it is true, express their feelings to one another in a general way, as a dog may express anger by barking and other animals give vent to other feelings in various fashions. But man communicates with his kind more completely than any other animal known to be gregarious, such as the crane, the ant or the bee.—With this in mind, Solomon says: "It is better that there be two than one; for they have the advantage of their company."

If, then, it is natural for man to live in the society of many, it is necessary that there exist among men some means by which the group may be governed. For where there are many men together and each one is looking after his own interest, the multitude would be broken up and scattered unless there were also an agency to take care of what appertains to the commonweal. In like manner, the body of a man or any other animal would disintegrate unless there were a general ruling force within the body which watches over the common good of all members.—With this in mind, Solomon says: "Where there is no governor, the people shall fall."

Indeed it is reasonable that this should happen, for what is proper and what is common are not identical. Things differ by what is proper to each: they are united by what they have in common. But diversity of effects is due to diversity of causes. Consequently, there must exist something which impels towards the common good of the many, over and above that which impels towards the particular good of each individual. Wherefore also in all things that are ordained towards one end, one thing is found to rule the rest. Thus in the corporeal uni-

verse, by the first body, *i.e.* the celestial body, the other bodies are regulated according to the order of Divine Providence; and all bodies are ruled by a rational creature. So, too, in the individual man, the soul rules the body; and among the parts of the soul, the irascible and the concupiscible parts are ruled by reason. Likewise, among the members of a body, one, such as the heart or the head, is the principal and moves all the others. Therefore in every multitude there must be some governing power.

Now it happens in certain things which are ordained towards an end that one may proceed in a right way and also in a wrong way. So, too, in the government of a multitude there is a distinction between right and wrong. A thing is rightly directed when it is led towards a befitting end; wrongly when it is led towards an unbecoming end. Now the end which befits a multitude of free men is different from that which befits a multitude of slaves, for the free man is one who exists for his own sake, while the slave, as such, exists for the sake of another. If, therefore, a multitude of free men is ordered by the ruler towards the common good of the multitude, that rulership will be right and just, as is suitable to free men. If, on the other hand, a rulership aims, not at the common good of the multitude, but at the private good of the ruler, it will be an unjust and perverted rulership. The Lord, therefore, threatens such rulers, saying by the mouth of Ezechiel: "Woe to the shepherds that feed themselves (seeking, that is, their own interest): should not the flocks be fed by the shepherd?" Shepherds indeed should seek the good of their flocks, and every ruler, the good of the multitude subject to him.

If an unjust government is carried on by one man alone, who seeks his own benefit from his rule and not the good of the multitude subject to him, such a ruler is called a *tyrant*—a word derived from *strength*—because he oppresses by might instead of ruling by justice. Thus among

the ancients all powerful men were called tyrants. If an unjust government is carried on, not by one but by several, and if they be few, it is called an *oligarchy*, that is, the rule of a few. This occurs when a few, who differ from the tyrant only by the fact that they are more than one, oppress the people by means of their wealth. If, finally, the bad government is carried on by the multitude, it is called a *democracy*, *i.e.* control by the populace, which comes about when the plebeian people by force of numbers oppress the rich. In this way the whole people will be as one tyrant.

In like manner we must divide just governments. If the government is administered by many, it is given the name common to all forms of government, *viz. polity*, as for instance when a group of warriors exercise dominion over a city or province. If it is administered by a few men of virtue, this kind of government is called an *aristocracy*, *i.e.* noble governance, or governance by noble men, who for this reason are called the *Optimates*. And if a just government is in the hands of one man alone, he is properly called a *king*. Wherefore the Lord says by the mouth of Ezechiel: "My servant, David, shall be king over them and all of them shall have one shepherd."

From this it is clearly shown that the idea of king implies that he be one man who is chief and that he be a shepherd seeking the common good of the multitude and not his own.

Now since man must live in a group, because he is not sufficient unto himself to procure the necessities of life were he to remain solitary, it follows that a society will be the more perfect the more it is sufficient unto itself to procure the necessities of life. There is, to some extent, sufficiency for life in one *family of one household*, namely, insofar as pertains to the natural acts of nourishment and the begetting of offspring and other things of this kind. Self-sufficiency exists, furthermore, in one *street* with regard to those things which belong to the trade of one

guild. In a *city*, which is the perfect community, it exists with regard to all the necessities of life. Still more self-sufficiency is found in a *province* because of the need of fighting together and of mutual help against enemies. Hence the man ruling a perfect community, *i.e.* a city or a province, is antonomastically called *the king*. The ruler of a household is called father, not king, although he bears a certain resemblance to the king, for which reason kings are sometimes called the fathers of their peoples.

It is plain, therefore, from what has been said, that a king is one who rules the people of one city or province, and rules them for the common good. Wherefore Solomon says: "The king ruleth over all the land subject to him."

RULE BY ONE OR BY MANY?

Having set forth these preliminary points we must now inquire what is better for a province or a city: whether to be ruled by one man or by many.

This question may be considered first from the viewpoint of the purpose of government. The aim of any ruler should be directed towards securing the welfare of that which he undertakes to rule. The duty of the pilot, for instance, is to preserve his ship amidst the perils of the sea and to bring it unharmed to the port of safety. Now the welfare and safety of a multitude formed into a society lies in the preservation of its unity, which is called peace. If this is removed, the benefit of social life is lost and, moreover, the multitude in its disagreement becomes a burden to itself. The chief concern of the ruler of a multitude, therefore, is to procure the unity of peace. It is not even legitimate for him to deliberate whether he shall establish peace in the multitude subject to him, just as a physician does not deliberate whether he shall heal the sick man entrusted to him, for no one should deliberate about an end which he is obliged to seek, but only about the means to attain that end. Wherefore the

Apostle, having commended the unity of the faithful people, says: "Be ye careful to keep the unity of the spirit in the bond of peace." Thus, the more efficacious a government is in keeping the unity of peace, the more useful it will be. For we call that more useful which leads more directly to the end. Now it is manifest that what is itself one can more efficaciously bring about unity than several—just as the most efficacious cause of heat is that which is by its nature hot. Therefore the rule of one man is more useful than the rule of many.

Furthermore, it is evident that several persons could by no means preserve the stability of the community if they totally disagreed. For union is necessary among them if they are to rule at all: several men, for instance, could not pull a ship in one direction unless joined together in some fashion. Now several are said to be united according as they come closer to being one. So one man rules better than several who come near being one.

Again, whatever is in accord with nature is best, for in all things nature does what is best. Now, every natural governance is governance by one. In the multitude of bodily members there is one which is the principal mover, namely, the heart; and among the powers of the soul one power presides as chief, namely, the reason. Among bees there is one king bee and in the whole universe there is One God, Maker and Ruler of all things. And there is a reason for this. Every multitude is derived from unity. Wherefore, if artificial things are an imitation of natural things and a work of art is better according as it attains a closer likeness to what is in nature, it follows that it is best for a human multitude to be ruled by one person.

This is also evident from experience. For provinces or cities which are not ruled by one person are torn with dissensions and tossed about without peace, so that the complaint seems to be fulfilled which the Lord uttered through the Prophet: "Many pastors have destroyed

my vineyard." On the other hand, provinces and cities which are ruled under one king enjoy peace, flourish in justice, and delight in prosperity. Hence, the Lord by His prophets promises to His people as a great reward that He will give them one head and that "one Prince will be in the midst of them."

RESISTANCE TO TYRANTS

Therefore, since the rule of one man, which is the best, is to be preferred, and since it may happen that it be changed into a tyranny, which is the worst (all this is clear from what has been said), a scheme should be carefully worked out which would prevent the multitude ruled by a king from falling into the hands of a tyrant.

First, it is necessary that the man who is raised up to be king by those whom it concerns should be of such condition that it is improbable that he should become a tyrant. Wherefore Daniel, commending the providence of God with respect to the institution of the king says: "The Lord hath sought him a man according to his own heart, and the Lord hath appointed him to be prince over his people." Then, once the king is established, the government of the kingdom must be so arranged that opportunity to tyrannize is removed. At the same time his power should be so tempered that he cannot easily fall into tyranny. How these things may be done we must consider in what follows.

Finally, provision must be made for facing the situation should the king stray into tyranny.

Indeed, if there be not an excess of tyranny it is more expedient to tolerate the milder tyranny for a while than, by acting against the tyrant, to become involved in many perils more grievous than the tyranny itself. For it may happen that those who act against the tyrant are unable to prevail and the tyrant then will rage the more. But should one be able to prevail against the tyrant, from this fact

itself very grave dissensions among the people frequently ensue: the multitude may be broken up into factions either during their revolt against the tyrant, or in process of the organization of the government, after the tyrant has been overthrown. Moreover, it sometimes happens that while the multitude is driving out the tyrant by the help of some man, the latter, having received the power, thereupon seizes the tyranny. Then, fearing to suffer from another what he did to his predecessor, he oppresses his subjects with an even more grievous slavery. This is wont to happen in tyranny, namely, that the second becomes more grievous than the one preceding, inasmuch as, without abandoning the previous oppressions, he himself thinks up fresh ones from the malice of his heart. Whence in Syracuse, at a time when everyone desired the death of Dionysius, a certain old woman kept constantly praying that he might be unharmed and that he might survive her. When the tyrant learned this he asked why she did it. Then she said: "When I was a girl we had a harsh tyrant and I wished for his death; when he was killed, there succeeded him one who was a little harsher. I was very eager to see the end of his dominion also, and we began to have a third ruler still more harsh—that was you. So if you should be taken away, a worse would succeed in your place."

If the excess of tyranny is unbearable, some have been of the opinion that it would be an act of virtue for strong men to slay the tyrant and to expose themselves to the danger of death in order to set the multitude free. An example of this occurs even in the Old Testament, for a certain Aioth slew Eglon, King of Moab, who was oppressing the people of God under harsh slavery, thrusting a dagger into his thigh; and he was made a judge of the people.

But this opinion is not in accord with apostolic teaching. For Peter admonishes us to be reverently subject to our masters, not only to the good and gentle but also the froward: "For if one who suffers

unjustly bear his trouble for conscience's sake, this is grace." Wherefore, when many emperors of the Romans tyrannically persecuted the faith of Christ, a great number both of the nobility and the common people were converted to the faith and were praised for patiently bearing death for Christ. They did not resist although they were armed, and this is plainly manifested in the case of the holy Theban legion. Aioth, then, must be considered rather as having slain a foe than assassinated a ruler, however tyrannical, of the people. Hence in the Old Testament we also read that they who killed Joas, the king of Juda, who had fallen away from the worship of God, were slain and their children spared according to the precept of the law.

Should private persons attempt on their own private presumption to kill the rulers, even though tyrants, this would be dangerous for the multitude as well as for their rulers. This is because the wicked usually expose themselves to dangers of this kind more than the good, for the rule of a king, no less than that of a tyrant, is burdensome to them since, according to the words of Solomon: "A wise king scattereth the wicked." Consequently, by presumption of this kind, danger to the people from the loss of a good king would be more probable than relief through the removal of a tyrant.

Furthermore, it seems that to proceed against the cruelty of tyrants is an action to be undertaken, not through the private presumption of a few, but rather by public authority.

If to provide itself with a king belongs to the right of a given multitude, it is not unjust that the king be deposed or have his power restricted by that same multitude if, becoming a tyrant, he abuses the royal power. It must not be thought that such a multitude is acting unfaithfully in deposing the tyrant, even though it had previously subjected itself to him in perpetuity, because he himself has deserved that the covenant with his subjects should not be kept, since, in ruling the

multitude, he did not act faithfully as the office of a king demands. Thus did the Romans, who had accepted Tarquin the Proud as their king, cast him out from the kingship on account of his tyranny and the tyranny of his sons; and they set up in their place a lesser power, namely, the consular power. Similarly Domitian, who had succeeded those most moderate emperors, Vespasian, his father, and Titus, his brother, was slain by the Roman senate when he exercised tyranny, and all his wicked deeds were justly and profitably declared null and void by a decree of the senate. Thus it came about that Blessed John the Evangelist, the beloved disciple of God, who had been exiled to the island of Patmos by that very Domitian, was sent back to Ephesus by a decree of the senate.

If, on the other hand, it pertains to the right of a higher authority to provide a king for a certain multitude, a remedy against the wickedness of a tyrant is to be looked for from him. Thus when Archelaus, who had already begun to reign in Judaea in the place of Herod his father, was imitating his father's wickedness, a complaint against him having been laid before Caesar Augustus by the Jews, his power was at first diminished by depriving him of his title of king and by dividing one-half of his kingdom between his two brothers. Later, since he was not restrained from tyranny even by this means, Tiberius Caesar sent him into exile to Lugdunum, a city in Gaul.

Should no human aid whatsoever against a tyrant be forthcoming, recourse must be had to God, the King of all, Who is a helper in due time in tribulation. For it lies in His power to turn the cruel heart of the tyrant to mildness. According to Solomon: "The heart of the king is in the hand of the Lord, whithersoever He will He shall turn it." He it was who turned into mildness the cruelty of King Assuerus, who was preparing death for the Jews. He it was who so filled the cruel king Nabuchodonosor with piety that he became a proclaimer of the divine power. "Therefore," he said,

"I, Nabuchodonosor do now praise and magnify and glorify the King of Heaven; because all His works are true and His ways judgments, and they that walk in pride He is able to abase." Those tyrants, however, whom he deems unworthy of conversion, he is able to put out of the way or to degrade, according to the words of the Wise Man: "God hath overturned the thrones of proud princes and hath set up the meek in their stead." He it was who, seeing the affliction of his people in Egypt and hearing their cry, hurled Pharaoh, a tyrant over God's people, with all his army into the sea. He it was who not only banished from his kingly throne the above-mentioned Nabuchodonosor because of his former pride, but also cast him from the fellowship of men and changed him into the likeness of a beast. Indeed, his hand is not shortened that He cannot free His people from tyrants. For by Isaias He promised to give his people rest from their labours and lashings and harsh slavery in which they had formerly served; and by Ezechiel He says: "I will deliver my flock from their mouth," i.e. from the mouth of shepherds who feed themselves.

But to deserve to secure this benefit from God, the people must desist from sin, for it is by divine permission that wicked men receive power to rule as a punishment for sin, as the Lord says by the Prophet Osee: "I will give thee a king in my wrath" and it is said in *Job* that he "maketh a man that is a hypocrite to reign for the sins of the people." Sin must therefore be done away with in order that the scourge of tyrants may cease.

KINGS ARE SUBJECT TO PRIESTS

Just as the founding of a city or kingdom may suitably be learned from the way in which the world was created, so too the way to govern may be learned from the divine government of the world.

Before going into that, however, we

should consider that to govern is to lead the thing governed in a suitable way towards its proper end. Thus a ship is said to be governed when, through the skill of the pilot, it is brought unharmed and by a direct route to harbour. Consequently, if a thing be directed to an end outside itself (as a ship to the harbour), it is the governor's duty, not only to preserve the thing unharmed, but further to guide it towards this end. If, on the contrary, there be a thing whose end is not outside itself, then the governor's endeavours will merely tend to preserve the thing undamaged in its proper perfection.

Nothing of this kind is to be found in reality, except God Himself, Who is the end of all. However, as concerns the thing which is directed to an end outside itself, care is exercised by different providers in different ways. One might have the task of preserving a thing in its being, another of bringing it to a further perfection. Such is clearly the case in the example of the ship; (the first meaning of the word *gubernator* [governor] is *pilot*). It is the carpenter's business to repair anything which might be broken, while the pilot bears the responsibility of bringing the ship to port. It is the same with man. The doctor sees to it that a man's life is preserved; the tradesman supplies the necessities of life; the teacher takes care that man may learn the truth; and the tutor sees that he lives according to reason.

Now if man were not ordained to another end outside himself, the above-mentioned cares would be sufficient for him. But as long as man's mortal life endures there is an extrinsic good for him, namely, final beatitude which is looked for after death in the enjoyment of God, for as the Apostle says: "As long as we are in the body we are far from the Lord." Consequently the Christian man, for whom that beatitude has been purchased by the blood of Christ, and who, in order to attain it, has received the earnest of the Holy Ghost, needs another and spiritual care to direct him to the harbour of eternal salvation, and this

care is provided for the faithful by the ministers of the church of Christ.

Now the same judgment is to be formed about the end of society as a whole as about the end of one man. If, therefore, the ultimate end of man were some good that existed in himself, then the ultimate end of the multitude to be governed would likewise be for the multitude to acquire such good, and persevere in its possession. If such an ultimate end either of an individual man or a multitude were a corporeal one, namely, life and health of body, to govern would then be a physician's charge. If that ultimate end were an abundance of wealth, then knowledge of economics would have the last word in the community's government. If the good of the knowledge of truth were of such a kind that the multitude might attain to it, the king would have to be a teacher. It is, however, clear that the end of a multitude gathered together is to live virtuously. For men form a group for the purpose of *living well* together, a thing which the individual man living alone could not attain, and *good life* is virtuous life. Therefore, virtuous life is the end for which men gather together. The evidence for this lies in the fact that only those who render mutual assistance to one another in living well form a genuine part of an assembled multitude. If men assembled merely to live, then animals and slaves would form a part of the civil community. Or, if men assembled only to accrue wealth, then all those who traded together would belong to one city. Yet we see that only such are regarded as forming one multitude as are directed by the same laws and the same government to live well.

Yet through virtuous living man is further ordained to a higher end, which consists in the enjoyment of God, as we have said above. Consequently, since society must have the same end as the individual man, it is not the ultimate end of an assembled multitude to live virtuously, but through virtuous living to attain to the possession of God.

If this end could be attained by the

power of human nature, then the duty of a king would have to include the direction of men to it. We are supposing, of course, that he is called king to whom the supreme power of governing in human affairs is entrusted. Now the higher the end to which a government is ordained, the loftier that government is. Indeed, we always find that the one to whom it pertains to achieve the final end commands those who execute the things that are ordained to that end. For example, the captain, whose business it is to regulate navigation, tells the ship-builder what kind of ship he must construct to be suitable for navigation; and the ruler of a city, who makes use of arms, tells the blacksmith what kind of arms to make. But because a man does not attain his end, which is the possession of God, by human power but by divine—according to the words of the Apostle: "By the grace of God life everlasting"—, therefore the task of leading him to that last end does not pertain to human but to divine government.

Consequently, government of this kind pertains to that king who is not only a man, but also God, namely, our Lord Jesus Christ, Who by making men sons of God brought them to the glory of Heaven. This then is the government which has been delivered to Him and which "shall not be destroyed," on account of which He is called, in Holy Writ, not Priest only, but King. As Jeremiah says: "The king shall reign and he shall be wise." Hence a royal priesthood is derived from Him, and what is more, all those who believe in Christ, insofar as they are His members, are called kings and priests.

Thus, in order that spiritual things might be distinguished from earthly things, the ministry of this kingdom has been entrusted not to earthly kings but to priests, and most of all to the chief priest, the successor of St. Peter, the Vicar of Christ, the Roman Pontiff. To him all the

kings of the Christian People are to be subject as to our Lord Jesus Christ Himself. For those to whom pertains the care of intermediate ends should be subject to him to whom pertains the care of the ultimate end, and be directed by his rule.

Because the priesthood of the gentiles and the whole worship of their gods existed merely for the acquisition of temporal goods (which were all ordained to the common good of the multitude, whose care devolved upon the king), the priests of the gentiles were very properly subject to the kings. Similarly, since in the old law earthly goods were promised to the religious people (not indeed by demons but by the true God), the priests of the old law, we read, were also subject to the kings. But in the new law there is a higher priesthood by which men are guided to heavenly goods. Consequently, in the law of Christ, kings must be subject to priests.

It was therefore also a marvellous disposition of Divine Providence that, in the city of Rome, which God had foreseen would be the principal seat of the Christian priesthood, the custom was gradually established that the rulers of the city should be subject to the priests, for as Valerius Maximus relates: "Our city has always considered that everything should yield precedence to religion, even those things in which it aimed to display the splendour of supreme majesty. We therefore unhesitatingly made the imperial dignity minister to religion, considering that the empire would thus hold control of human affairs if faithfully and constantly it were submissive to the divine power."

And because it was to come to pass that the religion of the Christian priesthood should especially thrive in France, God provided that among the Gauls too their tribal priests, called Druids, should lay down the law of all Gaul, as Julius Caesar relates in the book which he wrote about the Gallic war.

II Summa Theologica *

WHETHER LAW IS SOMETHING PERTAINING TO REASON?

Objection 1 It seems that law is not something pertaining to reason. For the Apostle says (Rom. vii. 23): *I see another law in my members*, etc. But nothing pertaining to reason is in the members; since the reason does not make use of a hodyly organ. Therefore law is not something pertaining to reason.

Obj. 2 Further, in the reason there is nothing else but power, habit, and act. But law is not the power itself of reason. In like manner, neither is it a habit of reason: because the habits of reason are the intellectual virtues of which we have spoken. Nor again is it an act of reason: because then law would cease, when the act of reason ceases, for instance, while we are asleep. Therefore law is nothing pertaining to reason.

Obj. 3 Further, the law moves those who are subject to it to act aright. But it belongs properly to the will to move to act, as is evident from what has been said. Therefore law pertains, not to the reason, but to the will; according to the words of the Jurist (*Lib. i. ff. De Const. Prin.*): *Whatsoever pleaseth the sovereign, has force of law.*

On the contrary, it belongs to the law to command and to forbid. But it belongs to reason to command. Therefore law is something pertaining to reason.

I answer that, law is a rule and measure of acts, whereby man is induced to act or is restrained from acting: for *lex* (law) is derived from *ligare* (to bind), because it binds one to act. Now the rule

and measure of human acts is the reason, which is the first principle of human acts, as is evident from what has been stated above; since it belongs to the reason to direct to the end, which is the first principle in all matters of action, according to the Philosopher (*Phys. ii.*). Now that which is the principle in any genus, is the rule and measure of that genus: for instance, unity in the genus of numbers, and the first movement in the genus of movements. Consequently it follows that law is something pertaining to reason.

Reply Obj. 1 Since law is a kind of rule and measure, it may be in something in two ways. First, as in that which measures and rules: and since this is proper to reason, it follows that, in this way, law is in the reason alone.—Secondly, as in that which is measured and ruled. In this way, law is in all those things that are inclined to something by reason of some law: so that any inclination arising from a law, may be called a law, not essentially but by participation as it were. And thus the inclination of the members to concupiscence is called *the law of the members*.

Reply Obj. 2 Just as, in external action, we may consider the work and the work done, for instance the work of building and the house built; so in the acts of reason, we may consider the act itself of reason, *i.e.*, to understand and to reason, and something produced by this act. With regard to the speculative reason, this is first of all the definition; secondly, the proposition; thirdly, the syllogism or argument. And since also the practical reason makes use of a syllogism in respect of the work to be done, as stated above and as the Philosopher teaches (*Ethic. vii.*); hence we find in the practical reason something that holds the same position in regard to conclusions. Suchlike universal propositions of the

* From St. Thomas Aquinas, *Summa Theologica* (trans. the Fathers of the English Dominican Province. Copyright by Benziger Bros., Inc., New York, 1947). By permission.

practical intellect that are directed to actions have the nature of law. And these propositions are sometimes under our actual consideration, while sometimes they are retained in the reason by means of a habit.

Reply Obj. 3 Reason has its power of moving from the will: for it is due to the fact that one wills the end, that the reason issues its commands as regards things ordained to the end. But in order that the volition of what is commanded may have the nature of law, it needs to be in accord with some rule of reason. And in this sense is to be understood the saying that the will of the sovereign has the force of law; otherwise the sovereign's will would savour of lawlessness rather than of law.

WHETHER THE LAW IS ALWAYS DIRECTED TO THE COMMON GOOD?

Objection 1 It seems that the law is not always directed to the common good as to its end. For it belongs to law to command and to forbid. But commands are directed to certain individual goods. Therefore the end of the law is not always the common good.

Obj. 2 Further, the law directs man in his actions. But human actions are concerned with particular matters. Therefore the law is directed to some particular good.

Obj. 3 Further, Isidore says (*Etym. ii.*): *If the law is based on reason, whatever is based on reason will be a law.* But reason is the foundation not only of what is ordained to the common good, but also of that which is directed to private good. Therefore the law is not only directed to the good of all, but also to the private good of an individual.

On the contrary, Isidore says (*Etym. v.*) that *laws are enacted for no private profit, but for the common benefit of the citizens.*

I answer that the law belongs to that

which is a principle of human acts, because it is their rule and measure. Now as reason is a principle of human acts, so in reason itself there is something which is the principle in respect of all the rest: wherefore to this principle chiefly and mainly law must needs be referred.—Now the first principle in practical matters, which are the object of the practical reason, is the last end: and the last end of human life is bliss or happiness. Consequently the law must needs regard principally the relationship to happiness. Moreover, since every part is ordained to the whole, as imperfect to perfect; and since one man is a part of the perfect community, the law must needs regard properly the relationship to universal happiness. Wherefore the Philosopher, in the above definition of legal matters mentions both happiness and the body politic: for he says (*Ethic. v.*) that we call those legal matters *just, which are adapted to produce and preserve happiness and its parts for the body politic*: since the state is a perfect community, as he says in *Polit. i.*

Now in every genus, that which belongs to it chiefly is the principle of the others, and the others belong to that genus in subordination to that thing: thus fire, which is chief among hot things, is the cause of heat in mixed bodies, and these are said to be hot in so far as they have a share of fire. Consequently, since the law is chiefly ordained to the common good, any other precept in regard to some individual work, must needs be devoid of the nature of a law, save in so far as it regards the common good. Therefore every law is ordained to the common good.

Reply Obj. 1 A command denotes an application of a law to matters regulated by the law. Now the order to the common good, at which the law aims, is applicable to particular ends. And in this way commands are given even concerning particular matters.

Reply Obj. 2 Actions are indeed concerned with particular matters: but those

particular matters are referable to the common good, not as to a common genus or species, but as to a common final cause, according as the common good is said to be the common end.

Reply Obj. 3 Just as nothing stands firm with regard to the speculative reason except that which is traced back to the first indemonstrable principles, so nothing stands firm with regard to the practical reason, unless it be directed to the last end which is the common good: and whatever stands to reason in this sense, has the nature of a law.

WHETHER THE REASON OF ANY MAN IS COMPETENT TO MAKE LAWS?

Objection 1 It seems that the reason of any man is competent to make laws. For the Apostle says: (*Rom. ii. 14*) that *when the Gentiles, who have not the law, do by nature those things that are of the law, . . . they are a law to themselves.* Now he says this of all in general. Therefore anyone can make a law for himself.

Obj. 2 Further, as the Philosopher says (*Ethic. ii.*), *the intention of the law-giver is to lead men to virtue.* But every man can lead another to virtue. Therefore the reason of any man is competent to make laws.

Obj. 3 Further, just as the sovereign of a state governs the state, so every father of a family governs his household. But the sovereign of a state can make laws for the state. Therefore every father of a family can make laws for his household.

On the contrary, Isidore says (*Etym. v.*; and the passage is quoted in *Decretals, Dist. ii.*): *A law is an ordinance of the people, whereby something is sanctioned by the Elders together with the Commonalty.*

I answer that, a law, properly speaking, regards first and foremost the order to the common good. Now to order any-

thing to the common good, belongs either to the whole people, or to someone who is the vice-gerent of the whole people. And therefore the making of a law belongs either to the whole people or to a public personage who has care of the whole people: since in all other matters the directing of anything to the end concerns him to whom the end belongs.

Reply Obj. 1 As stated above, a law is in a person not only as in one that rules, but also by participation as in one that is ruled. In the latter way each one is a law to himself, in so far as he shares the direction that he receives from one who rules him. Hence the same text goes on: *Who show the work of the law written in their hearts.*

Reply Obj. 2 A private person cannot lead another to virtue efficaciously: for he can only advise, and if his advice be not taken, it has no coercive power, such as the law should have, in order to prove an efficacious inducement to virtue, as the Philosopher says (*Ethic. x.*). But this coercive power is vested in the whole people or in some public personage, to whom it belongs to inflict penalties. Wherefore the framing of laws belongs to him alone.

Reply Obj. 3 As one man is a part of the household, so a household is a part of the state: and the state is a perfect community, according to *Polit. i.* And therefore, as the good of one man is not the last end, but is ordained to the common good, so too the good of one household is ordained to the good of a single state, which is a perfect community. Consequently he that governs a family, can indeed make certain commands or ordinances, but not such as to have properly the force of law.

WHETHER PROMULGATION IS ESSENTIAL TO THE LAW?

Objection 1 It seems that promulgation is not essential to a law. For the natural law above all has the character of law. But the natural law needs no pro-

mulgation. Therefore it is not essential to a law that it be promulgated.

Obj. 2 Further, it belongs properly to a law to bind one to do or not to do something. But the obligation of fulfilling a law touches not only those in whose presence it is promulgated, but also others. Therefore promulgation is not essential to a law.

Obj. 3 Further, the binding force of a law extends even to the future, since laws are binding in matters of the future, as the jurists say (*Cod. i., tit. De lege et constit.*). But promulgation concerns those who are present. Therefore it is not essential to a law.

On the contrary, it is laid down in the *Decretals (Append. Grat.)* that laws are established when they are promulgated.

I answer that a law is imposed on others by way of a rule and measure. Now a rule or measure is imposed by being applied to those who are to be ruled and measured by it. Wherefore, in order that a law obtain the binding force which is proper to a law, it must needs be applied to the men who have to be ruled by it. Such application is made by its being notified to them by promulgation. Wherefore promulgation is necessary for the law to obtain its force.

Thus from the four preceding articles, the definition of law may be gathered; and it is nothing else than an ordinance of reason for the common good, made by him who has care of the community, and promulgated.

Reply Obj. 1 The natural law is promulgated by the very fact that God instilled it into man's mind so as to be known by him naturally.

Reply Obj. 2 Those who are not present when a law is promulgated, are bound to observe the law, in so far as it is notified or can be notified to them by others, after it has been promulgated.

Reply Obj. 3 The promulgation that takes place now, extends to future time by reason of the durability of written characters, by which means it is continually promulgated. Hence Isidore says (*Etym. ii*) that *lex (law) is derived*

from legere (to read) because it is written.

WHETHER THE NATURAL LAW IS THE SAME IN ALL MEN?

Objection 1 It seems that the natural law is not the same in all. For it is stated in the *Decretals (Dist. i)* that the natural law is that which is contained in the Law and the Gospel. But this is not common to all men; because, as it is written (*Rom. x. 16*), all do not obey the Gospel. Therefore the natural law is not the same in all men.

Obj. 2 Further, things which are according to the law are said to be just, as stated in *Ethic. v*. But it is stated in the same book that nothing is so universally just as not to be subject to change in regard to some men. Therefore even the natural law is not the same in all men.

Obj. 3 Further, to the natural law belongs everything to which a man is inclined according to his nature. Now different men are naturally inclined to different things; some to the desire of pleasures, others to the desire of honours, and other men to other things. Therefore there is not one natural law for all.

On the contrary, Isidore says (*Etym. v.*): The natural law is common to all nations.

I answer that to the natural law belong those things to which a man is inclined naturally: and among these it is proper to man to be inclined to act according to reason. Now the process of reason is from the common to the proper, as stated in *Phys. i*. The speculative reason, however, is differently situated in this matter, from the practical reason. For, since the speculative reason is busied chiefly with necessary things, which cannot be otherwise than they are, its proper conclusions, like the universal principles, contain the truth without fail. The practical reason, on the other hand, is busied with contingent matters, about which human actions are concerned: and consequently, although there is necessity in the

general principles, the more we descend to matters of detail, the more frequently we encounter defects. Accordingly then in speculative matters truth is the same in all men, both as to principles and as to conclusions: although the truth is not known to all as regards the conclusions, but only as regards the principles which are called common notions. But in matters of action, truth or practical rectitude is not the same for all, as to matters of detail, but only as to the general principles: and where there is the same rectitude in matters of detail, it is not equally known to all.

It is therefore evident that, as regards the general principles whether of speculative or of practical reason, truth or rectitude is the same for all, and is equally known by all. As to the proper conclusions of the speculative reason, the truth is the same for all, but is not equally known to all: thus it is true for all that the three angles of a triangle are together equal to two right angles, although it is not known to all. But as to the proper conclusions of the practical reason, neither is the truth or rectitude the same for all, nor, where it is the same, is it equally known by all. Thus it is right and true for all to act according to reason: and from this principle it follows as a proper conclusion, that goods entrusted to another should be restored to their owner. Now this is true for the majority of cases: but it may happen in a particular case that it would be injurious, and therefore unreasonable, to restore goods held in trust; for instance if they are claimed for the purpose of fighting against one's country. And this principle will be found to fail the more, according as we descend further into detail, e.g., if one were to say that goods held in trust should be restored with such and such a guarantee, or in such and such a way; because the greater the number of conditions added, the greater the number of ways in which the principle may fail, so that it be not right to restore or not to restore.

Consequently we must say that the natural law, as to general principles, is

the same for all, both as to rectitude and as to knowledge. But as to certain matters of detail, which are conclusions, as it were, of those general principles, it is the same for all in the majority of cases, both as to rectitude and as to knowledge; and yet in some few cases it may fail, both as to rectitude, by reason of certain obstacles (just as natures subject to generation and corruption fail in some few cases on account of some obstacle), and as to knowledge, since in some the reason is perverted by passion, or evil habit, or an evil disposition of nature; thus formerly, theft, although it is expressly contrary to the natural law, was not considered wrong among the Germans, as Julius Caesar relates (*De Bello Gall, vi.*).

Reply Obj. 1 The meaning of the sentence quoted is not that whatever is contained in the Law and the Gospel belongs to the natural law, since they contain many things that are above nature; but that whatever belongs to the natural law is fully contained in them. Wherefore Gratian, after saying that the natural law is what is contained in the Law and the Gospel, adds at once, by way of example, by which everyone is commanded to do to others as he would be done by.

Reply Obj. 2 The saying of the Philosopher is to be understood of things that are naturally just, not as general principles, but as conclusions drawn from them, having rectitude in the majority of cases, but failing in a few.

Reply Obj. 3 As, in man, reason rules and commands the other powers, so all the natural inclinations belonging to the other powers must needs be directed according to reason. Wherefore it is universally right for all men, that all their inclinations should be directed according to reason.

WHETHER EVERY HUMAN LAW IS DERIVED FROM THE NATURAL LAW?

Objection 1 It seems that not every human law is derived from the natural

law. For the Philosopher says (*Ethic. v.*) that *the legal just is that which originally was a matter of indifference*. But those things which arise from the natural law are not matters of indifference. Therefore the enactments of human laws are not all derived from the natural law.

Obj. 2 Further, positive law is contrasted with natural law, as stated by Isidore (*Etym. v.*) and the Philosopher (*Ethic. v.*). But those things which flow as conclusions from the general principles of the natural law belong to the natural law. Therefore that which is established by human law does not belong to the natural law.

Obj. 3 Further, the law of nature is the same for all; since the Philosopher says (*Ethic. v.*) that *the natural just is that which is equally valid everywhere*. If therefore human laws were derived from the natural law, it would follow that they too are the same for all: which is clearly false.

Obj. 4 Further, it is possible to give a reason for things which are derived from the natural law. But *it is not possible to give the reason for all the legal enactments of the lawgivers* (*Pandect. Justin. Lib. I, Tit. III, Art. V, De legibus*, etc.) Therefore not all human laws are derived from the natural law.

On the contrary, Tully says (*Rhetor. ii.*): *Things which emanated from nature and were approved by custom, were sanctioned by fear and reverence for the laws*.

I answer that, as Augustine says (*De Lib. Arb. i.*), *that which is not just seems to be no law at all*: wherefore the force of law depends on the extent of its justice. Now in human affairs a thing is said to be just, from being right, according to the rule of reason. But the first rule of reason is the law of nature, as is clear from what has been stated. Consequently every human law has just so much of the nature of law, as it is derived from the law of nature. But if in any point it deflects from the law of nature, it is no longer a law but a perversion of law.

But it must be noted that something

may be derived from the natural law in two ways: first, as a conclusion from premises; secondly, by way of determination of certain generalities. The first way is like to that by which, in sciences, demonstrated conclusions are drawn from the principles: while the second mode is likened to that whereby, in the arts, general forms are particularized as to details: thus the craftsman needs to determine the general form of a house to some particular shape. Some things are therefore derived from the general principles of the natural law, by way of conclusions: e.g., that *one must not kill* may be derived as a conclusion from the principle that *one should do harm to no man*: while some are derived therefrom by way of determination; e.g., the law of nature has it that the evil-doer should be punished: but that he be punished in this or that way, is a determination of the law of nature.

Accordingly both modes of derivation are found in the human law. But those things which are derived in the first way, are contained in human law not as emanating therefrom exclusively, but have some force from the natural law also. But those things which are derived in the second way, have no other force than that of human law.

Reply Obj. 1 The Philosopher is speaking of those enactments which are by way of determination or specification of the precepts of the natural law.

Reply Obj. 2 This argument avails for those things that are derived from the natural law, by way of conclusions.

Reply Obj. 3 The general principles of the natural law cannot be applied to all men in the same way on account of the great variety of human affairs: and hence arises the diversity of positive laws among various people.

Reply Obj. 4 These words of the Jurist are to be understood as referring to decisions of rulers in determining particular points of the natural law: on which determinations the judgment of expert and prudent men is based as on its principles; in so far, to wit, as they see

at once what is the best thing to decide.

Hence the Philosopher says (*Ethic. vi.*) that in such matters, *we ought to pay as much attention to the undemonstrated sayings and opinions of persons who surpass us in experience, age and prudence, as to their demonstrations*.

WHETHER HUMAN LAW BINDS A MAN IN CONSCIENCE?

Objection 1 It seems that human law does not bind a man in conscience. For an inferior power has no jurisdiction in a court of higher power. But the power of man, which frames human law, is beneath the Divine power. Therefore human law cannot impose its precept in a Divine court, such as is the court of conscience.

Obj. 2 Further, the judgment of conscience depends chiefly on the commandments of God. But sometimes God's commandments are made void by human laws, according to *Matth. xv. 6: You have made void the commandment of God for your tradition*. Therefore human law does not bind a man in conscience.

Obj. 3 Further, human laws often bring loss of character and injury on man, according to *Isa. x. 1 et seq.: Woe to them that make wicked laws, and when they write, write injustice; to oppress the poor in judgment, and do violence to the cause of the humble of My people*. But it is lawful for anyone to avoid oppression and violence. Therefore human laws do not bind man in conscience.

On the contrary, it is written (*I Pet. ii. 19.*): *This is thankworthy, if for conscience . . . a man endure sorrow, suffering wrongfully*.

I answer that, laws framed by man are either just or unjust. If they be just, they have the power of binding in conscience, from the eternal law whence they are derived, according to *Prov. viii. 15: By Me kings reign, and lawgivers decree just things*. Now laws are said to be just, both from the end, when, to wit, they are or-

daind to the common good,—and from their author, that is to say, when the law that is made does not exceed the power of the lawgiver,—and from their form, when, to wit, burdens are laid on the subjects, according to an equality of proportion and with a view to the common good. For, since one man is a part of the community, each man, in all that he is and has, belongs to the community; just as a part, in all that it is, belongs to the whole; wherefore nature inflicts a loss on the part, in order to save the whole: so that on this account, such laws as these, which impose proportionate burdens, are just and binding in conscience, and are legal laws.

On the other hand laws may be unjust in two ways: first, by being contrary to human good, through being opposed to the things mentioned above:—either in respect of the end, as when an authority imposes on his subjects burdensome laws, conducive, not to the common good, but rather to his own cupidity or vainglory;—or in respect of the author, as when a man makes a law that goes beyond the power committed to him;—or in respect of the form, as when burdens are imposed unequally on the community, although with a view to the common good. The like are acts of violence rather than laws; because, as Augustine says (*De Lib. Arb. i.*), *a law that is not just, seems to be no law at all*. Wherefore such laws do not bind in conscience, except perhaps in order to avoid scandal or disturbance, for which cause a man should even yield his right, according to *Matth. v. 40, 41: If a man . . . take away thy coat, let go thy cloak also unto him; and whosoever will force thee one mile, go with him two*.

Secondly, laws may be unjust through being opposed to the Divine good: such are the laws of tyrants inducing to idolatry, or to anything else contrary to the Divine law: and laws of this kind must nowise be observed, because, as stated in *Acts v. 29, we ought to obey God rather than men*.

Reply Obj. 1 As the Apostle says

(Rom. xiii. 1, 2), all human power is from God . . . *therefore he that resisteth the power*, in matters that are within its scope, *resisteth the ordinance of God*: so that he becomes guilty according to his conscience.

Reply Obj. 2 This argument is true of laws that are contrary to the commandments of God, and which go beyond the scope of (human) power. Wherefore in such matters human law should not be obeyed.

Reply Obj. 3 This argument is true of a law that inflicts unjust hurt on its subjects. The power that man holds from God does not extend to this: wherefore neither in such matters is man bound to obey the law, provided he avoid giving scandal or inflicting a more grievous hurt.

WHETHER HUMAN LAW SHOULD ALWAYS BE CHANGED, WHENEVER SOMETHING BETTER OCCURS?

Objection 1 It seems that human law should be changed, whenever something better occurs. Because human laws are devised by human reason, like other arts. But in the other arts, the tenets of former times give place to others, if something better occurs. Therefore the same should apply to human laws.

Obj. 2 Further, by taking note of the past we can provide for the future. Now unless human laws had been changed when it was found possible to improve them, considerable inconvenience would have ensued; because the laws of old were crude in many points. Therefore it seems that laws should be changed, whenever anything better occurs to be enacted.

Obj. 3 Further, human laws are enacted about single acts of man. But we cannot acquire perfect knowledge in singular matters, except by experience, which *requires time*, as stated in *Ethic. ii.*

Therefore it seems that as time goes on it is possible for something better to occur for legislation.

On the contrary, it is stated in the *Decretals (Dist. xii.)*: *It is absurd, and a detestable shame, that we should suffer those traditions to be changed which we have received from the fathers of old.*

I answer that human law is rightly changed, in so far as such change is conducive to the common weal. But, to a certain extent, the mere change of law is of itself prejudicial to the common good: because custom avails much for the observance of laws, seeing that what is done contrary to general custom, even in slight matters, is looked upon as grave. Consequently, when a law is changed, the binding power of the law is diminished, in so far as custom is abolished. Wherefore human law should never be changed, unless, in some way or other, the common weal be compensated according to the extent of the harm done in this respect. Such compensation may arise either from some very great and very evident benefit conferred by the new enactment; or from the extreme urgency of the case, due to the fact that either the existing law is clearly unjust, or its observance extremely harmful. Wherefore the Jurist says (*Pandect. Justin. i.*) that *in establishing new laws, there should be evidence of the benefit to be derived, before departing from a law which has long been considered just.*

Reply Obj. 1 Rules of art derive their force from reason alone: and therefore whenever something better occurs, the rule followed hitherto should be changed. But *laws derive very great force from custom*, as the Philosopher states (*Polit. ii.*): consequently they should not be quickly changed.

Reply Obj. 2 This argument proves that laws ought to be changed: not in view of any improvement, but for the sake of a great benefit or in a case of great urgency. This answer applies also to the Third Objection.

DANTE

Roman civilization reached its fullest flowering in the great urban centers; in fact, "city" and "civilization" come from the same Latin word, *civis*. The countryside, according to the Romans, was good enough as a source of agricultural supplies and a place of occasional refuge and retreat from the cares of the world, but the amenities of civilized living were to be found only in the cities. Unfortunately, many of these amenities were soon to be denied the Romans, for one of the main effects of the invasions that swept over Europe in the early Middle Ages, first of the Germanic tribes, and then of the Arabs and Magyars, was the progressive relapse of Europe into a primitive agrarian way of life. Cities shrank in physical size and, more important, declined as centers of political, economic, and intellectual activity. The city of Rome, which had about a million inhabitants in the first century A.D., dropped to less than half a million in the fourth century and shrank to a small town of seventeen thousand in the census of 1377.

The appearance of feudalism was the outward expression of the disintegration of urban civilization in western Europe. The complex international economy based on trade and transport was replaced, to a considerable extent, by the self-sufficient estate. Actually, the large estates had existed before the coming of medieval feudalism; what was new in the feudal estate was that it no longer produced for an exchange economy but for its own needs. With the decline of the towns and the virtual disappearance of professional merchants, land increasingly defined, from the highest prince and potentate to the lowest serf and slave, a person's wealth, social status, and political position. In politics, too, feudalism connoted a shrinkage of effective range of operation. The prefederal concept of state and empire, of administration on a large scale, was replaced (in practice at least, though not in theory) by the conception that authority was in the hands of those who possessed land.

The church had a favored position in the feudal system both economically and culturally. As a large owner of land, in some countries the single largest landlord, it directly benefited from a way of life in which land was the measure of all social power and prestige. Culturally, the destruction of urban civilization in the barbarian invasions gave the churches and monasteries a unique position of influence: for centuries they were the only centers of intellectual activity and

continuity, saving for posterity the tradition and heritage of art and philosophy that the martial conquerors little understood. Moreover, the general ignorance and illiteracy of laymen compelled emperors and kings to employ clerics in all levels of government, because literacy—not to speak of more advanced accomplishments—was for several centuries confined to priests and ecclesiastics.

The growth of cities from the eleventh century on produced new centers of economic and intellectual life that the church viewed with anxiety and hostility. As a powerful landowner, the church shared the prejudices and fears of all landowners in the face of a new commercial, capitalist economy whose dynamic vitality and immense productivity threatened to overshadow the static, agrarian economy of feudalism. In addition, the church saw in the rise of towns and cities a serious menace to its intellectual predominance. The restless spirit of the urban populations challenged the existing order in which church and aristocracy divided all power between themselves: the existing order recommended itself to church and aristocracy, they argued, not because they were its main beneficiaries, but because it seemed to be in harmony with religion, morals, and custom.

By contrast, the rising bourgeoisie saw in the existing social system unjustifiable privilege and ecclesiastical domination. The legal status of city inhabitants implied freedom and mobility, whereas those who lived and worked on the manorial estates were in complete or partial serfdom. Immigrants from estates into towns shook off the bonds of servitude by mere residence of a year or so, and the medieval saying, "City air makes free," expressed a fact of revolutionary impact in the growth of cities.

The church soon lost its monopoly of learning and technical knowledge in the arts and crafts, and the newly developing cities increasingly assumed the role of intellectual leadership, first apart from the churches and monasteries, and later in direct opposition to them. The accumulation of wealth permitted the growth of a new class of artists, writers, and teachers who were laymen. In nearly every respect the traditional civilization based on church dogma and landed power was challenged, altered, and replaced by a new way of life that was more productive in economics, more equalitarian in government, and more secular in general outlook.

A new elite was thus added to the existing two ruling groups of the clergy and aristocracy: men of wealth, whose claim to greatness ("magnates") and influence was based on financial power. In the beginning this class was primarily concerned about its own privileges in the struggle against the old landed aristocracy and the church, but as time went on, the shared experiences, sorrows, and joys of all townfolk created a new sense of urban solidarity.

The revival of urban life was particularly vigorous in Italy from the twelfth to the fourteenth centuries, and Italian leadership in this rebirth was followed by pre-eminence in the revival of ancient Greek and Roman thought that culminated in the Renaissance. Among Italian cities, Florence, Genoa, and Venice were the most important centers of international trade and finance, not only in Italy but in all Europe. Italians discovered the methods and techniques of banking and credit on domestic and international lines, and Italian terms in banking and finance service to this day.

The capitalist system did not start with the Industrial Revolution in eighteenth-century England but with these bold commercial and financial

enterprises in thirteenth-century Italy; in outlook and impact this early phase of capitalism, which lasted until the middle of the eighteenth century, was perhaps as revolutionary as the later phase of industrial capitalism. The early Italian international traders and financiers clearly exhibited the main impulses and methods of capitalism: pursuit of profit for the sake of accumulating wealth, long-distance operations, and long-term planning. *Contract* and *exchange* became the basic economic patterns in lieu of precapitalist *status* and *servitude*, and competition was condoned as the inevitable result of acquisitiveness. Faith in an all-pervading rationality permeated all activities of life, translated them into market transactions, and infused them with utilitarian standards of business ethics.

The hold of the church was weaker over the towns than over the countryside from the beginning, and the secular, or lay, outlook of the later Middle Ages is the product of the new urban, commercial civilization. The most important antipapalist, imperialist tract of the Middle Ages, *De monarchia* (*On Monarchy*, about 1310), is the work of a Florentine, Dante Alighieri (1265–1321), one of the first learned medieval laymen and the greatest poet of the medieval period. By his use of the vernacular in *The Divine Comedy* and other works he helped to create a national Italian language and at the same time to break the monopoly of Latin as the only means of literary communication. Until very recent years, the Roman Catholic Church did not permit the printing of the Bible, without authorization, in any language except Latin, and the use of the vernacular by Dante was, in more than a literary way, an act of revolt against traditional thought and expression.

As an artist, Dante clearly announces the dawn of the Renaissance; he is "modern"—from the twentieth-century viewpoint, at least. His versatility is also of the classical Renaissance style. As a poet, he belongs to the half-dozen immortals, for he moves away from the stereotypes of feeling and expression of the Middle Ages and discovers the intensely personal and individual qualities of man that transcend nationality, religion, class, and caste. But Dante was also, with varying success, a diplomat, soldier, politician, pamphleteer, philologist, theologian, and philosopher. Although he was forced to spend the last third of his life in exile, forbidden to return to Florence under the threat of being burned alive, he made use of his wanderings to enrich his experience and enlarge his horizon.

As a member of the lower nobility, Dante personally abhorred the new business classes, the *nouveaux riches* and their manner of living, and he felt bitter about what seemed to him the vulgarity and coarseness of the new society. Yet such was the force of his environment that his political philosophy, a curious mixture of backward- and forward-looking ideas, of theological scholasticism and pungent antipapalism, was nevertheless a typical product of his age.

In his chief political work, *De monarchia*, Dante raises three questions. The first is whether a *world government, ruled by a monarch*, is necessary for the welfare of the human race. In actuality, two issues are involved in this question: first, the issue of universal government, and, second, the monarchical form of such a world state. Dante derives the need for world government from a philosophical a priori as well as from his conception of man's nature and goals. Philosophically, Dante relates essence and reality to unity, and holds that true

being is expressed in the greatest unity, and "where Unity is greatest, there Good is also greatest; and in proportion as anything is far from Being in its highest form, it is far from Unity, and therefore from the Good." Because the distinguishing quality of man is faculty of reasoning and understanding, he cannot develop what is most specifically human in isolation, particularly if his speculative faculties are to be extended into action. Just as the individual can become perfect in wisdom and prudence only by rest and quiet, so the entire human race develops most freely and applies itself best to its proper work, which is "almost divine," if it can do so in the calm and tranquillity of peace. Of all things designed to secure blessings to man, individually and collectively, "peace is the best."

Dante also stresses an argument in support of world government that has a distinctly practical and modern flavor: the need for *settlement of disputes between states without war*: "Wherever there is controversy, there ought to be judgment," and there can be judgment only if the decision of some authority is recognized as final. In the most recent and contemporary thinking about the possibilities of world order it is generally recognized, as was realized by Dante over six centuries ago, that the first institutional development toward world government is likely to occur in the field of judicial settlement of specific disputes rather than in the legislative enactment and executive enforcement of universal laws. Judicial decisions deal with *individual* issues of the *past*, legislative acts with *general* issues of the *future*. The acceptance of universal arbitration and adjudication on the part of states therefore involves a lesser commitment than the submission to universal legislation.

Concerning the necessity of *monarchical* world government, Dante starts again with a philosophical a priori: that "when a number of things are arranged to attain an end, it behooves one of them to regulate or govern the others, and the others to submit." Within the individual, reason governs all other faculties in pursuing happiness. Within associations—from the household, the village, the city, to the kingdom—one individual must rule if unity and peace are to be preserved for the benefit of all. The end of the human race is the fullest development of its potential capacities: "There must, therefore, be one to guide and govern, and the proper title for this office is Monarch or Emperor. And so it is plain that Monarchy or the Empire is necessary for the welfare of the world."

Dante also refers, in Thomistic fashion, to the example of God as the monarchical ruler of the universe. Mankind is a part of the universe, and all created things should represent God as much as possible. The human race is most like God when it is one and united, and it is most one "when it is united wholly in one body, and it is evident that this cannot be, except when it is subject to one prince."

Dante is far from advocating universal tyranny, however, and he stresses the values of *justice* and *freedom*. The greatest enemy of justice, he says, is greed and avarice, the inability to be *disinterested* and content. He therefore holds that justice would be strongest in a world government headed by a monarch; there is nothing left for him to desire, "for the passions cannot exist if their objects are destroyed." Even kings are corrupted by the springs of injustice—cupidity and ambition—inasmuch as they seek to enlarge their territory and

wealth. Dante stresses the Aristotelian idea that the *rule of law* is to be preferred to the personal judgment of men, because such judgment is likely to be perverted by personal interests, whereas the monarchical head of a world state would be in the best position to dispense justice in accordance with general rules of law, because, having no personal interests at stake, he would care for all men in the world. Lacking avarice and cupidity, the monarch would even go beyond justice and dispense charity, in order to strengthen the bonds of solidarity and peace among men.

Freedom, too, is best realized, according to Dante, in a world monarchy. Dante calls freedom "the greatest gift bestowed by God on mankind," but the attainment of liberty is difficult in perverted forms of government in which the ruled exist for the sake of the rulers, rather than the rulers for the ruled. By contrast, good states "aim at liberty, that in them men may live for themselves." Because the monarch of the world state is "the servant of all," mankind will be freer under such a government than under any regime of local or national monarchies in which the ruler can at best identify himself with only a part of humanity.

With all his enthusiasm for a universal state under a monarchical ruler, Dante does not believe in uniformity for its own sake. He recognizes that although a world state would unify mankind with respect to law and government, many ethnic, cultural, and linguistic groups and nations would continue to exist, each with its own traditions and needs dictated by history and external circumstances, such as climate. Trifling matters would therefore not be brought to the attention of the monarch of the world state but would be regulated by municipal and national laws and authorities. Only *matters that affect all mankind* require a *common rule of law* and a *common authority*. Dante is thus one of the first writers on the problem of world government to separate the issue of *political sovereignty*, which must be vested in the central organ of world government, from the issue of *cultural autonomy*, which the individual nations and nationalities will fully preserve in a political world community, "for nations and kingdoms and states have, each of them, certain peculiarities which must be regulated by different laws."

The second main question Dante proposes to answer in *De monarchia* is whether the *Roman people* acquired *world domination* by right. One of Dante's chief authorities in this argument is Virgil, "our divine poet"; his completely natural and uninhibited acceptance of pagans as highest authorities marks Dante off and draws him closer to the Renaissance. Dante betrays Italian national pride in his belief that the Roman people were the noblest and therefore the most fitting to be preferred by God for the government of the world. He notices that the record of the Roman achievement is full of miracles, and that the Roman empire was helped "to its perfection by miracles; therefore it was willed by God and consequently was and is by right."

Although Dante was orthodox in his religious faith, it is apparent from the above statements that he has none of the hostility toward pagan Rome that was so typical of the earlier Middle Ages, as expressed by St. Augustine. Dante says that in bringing the whole world into subjection the Romans aimed at the universal good, renouncing all selfishness, and "that sacred, pious, and glorious

people are seen to have neglected their own private interests that they might follow public objects for the good of all mankind." Dante also bases his case on the record of history: Babylonians, Assyrians, Persians, and Egyptians had unsuccessfully tried to subject the whole world, and Alexander the Great came nearest to the prize of world dominion. Only the Romans succeeded in setting up a world empire, and therefore "it was by the judgment of God that it prevailed." In medieval fashion Dante compares the victory of Rome to victory in a duel: according to medieval legal principles what is acquired by duel is "gained by right." Dante anticipates Hegel's famous dictum that "world history is the world court."

Dante never discusses specifically the problem of who the Roman people in the thirteenth century were, because he takes for granted the continuity of the Roman empire and the Holy Roman empire of the German monarchs. Dante was free from political nationalism in the modern sense, and therefore he did not advocate an Italian kingdom on the French or English models. His conception of world monarchy was entirely medieval, though—as an Italian—he thought of Rome as the natural capital of a world monarchy, and of Italy as the preferred "province," which would include the Italian-speaking communes and regions. In this way he hoped that universal monarchy would also bring peace to an Italy whose city-states were rent by civil and foreign wars. But his political thought was focused on world, not nationality, problems, although he was keenly aware of Italy as a cultural and linguistic nation: "To me the world is my country, as the sea is to the fish."

The third main question of *De monarchia* is whether the authority of the emperor derives directly from God or from some minister or vicar of God, that is, the pope. Dante conceives man as dual in nature, his two essential parts being his body and soul. Following the Aristotelian idea that "every nature is ordained to gain some final end," Dante deduces from man's dual nature two ends: the first is the blessedness of *earthly life*, and the second is the blessedness of *heavenly paradise*. The two ends of man being different, the means to their attainment must be different, too. The blessings of earthly life can be ascertained, Dante says, through the lessons of *reason and philosophy*, whereas we can arrive at the blessings of heavenly paradise by the spiritual lessons, transcending human reason, of *theology, faith, hope, and charity*. The truths of philosophy are made manifest by reason and the writings of philosophers, and the supernatural truths of theology are made known in the revelations of the Scriptures. All these considerations lead Dante to this decisive conclusion: "Therefore man had need of two guides for his life, as he had a twofold end in life; whereof one is the Supreme Pontiff, to lead mankind to eternal life, according to the things revealed to us; and the other is the Emperor, to guide mankind to happiness in this world, in accordance with the teaching of philosophy."

Dante's second main argument in support of his antipapalist position is that the Roman empire possessed power and authority before the church even existed. Therefore, Dante holds, the church cannot possibly be the cause of the power or authority of the empire. The authority of the emperor "comes down, with no intermediate will, from the fountain of universal authority; and this fountain, one in its unity, flows through many channels out of the abundance of the goodness of God."

The medieval man in Dante, however, could not be satisfied with a solution under which both church and empire are supreme in their respective spheres of activity. The yearning for ultimate unity, in which the *coordinate powers of pope and emperor* can be brought together again, finds expression in the thought that above the relative superiorities of pope and emperor there is the one absolute superiority in which all others are united: the *unity and supremacy of God*.

Behind Dante's scholastic method of argument, his strictly orthodox religious belief, his use of characteristically medieval symbols, allegories, and quotations, lies considerable originality of thought. The Christian conception of the state appeared in two versions in the Middle Ages: according to the earlier view of St. Augustine and the church fathers the origin of government lies in human frailty and sinfulness, and the state is set up by divine providence as the penalty and remedy of sin. The later Thomistic view, developed under the influence of Aristotle, holds, by contrast, that the state is the natural expression of man's social impulses. Dante is the first writer in the Middle Ages who ingeniously combines Augustinian and Thomistic elements in a new synthesis that surpasses, and is contradictory to, the political theories of both St. Augustine and St. Thomas Aquinas. In approaching the general problem of political life, Dante follows the Aristotelian-Thomistic tradition that man needs collective associations, governmental institutions, the state, for the full development of his natural capacities and the satisfaction of his physical and intellectual wants. However, the natural forms of political organization—communes, city-states, principalities, kingdoms—are particularistic and inadequate because the sins of greed and avarice pervert their natures and purposes. The remedy for these sins—and here Dante skillfully utilizes Augustinian elements for his own theory—is the institution of *universal government* by divine providence, so that man may partake of the blessings of earthly peace, justice, and freedom, just as he may partake of the universal church that God has provided for the attainment of the blessings in heaven.

St. Augustine himself thought of the church as the *only universal community* of mankind; not identical with the City of God, the church nevertheless approximates and "mystically" reflects it on earth. As for the earthly city, St. Augustine says that as a way of life, in which the love of self rather than of God prevails, it is a universal phenomenon, but he speaks nowhere of a symbolical or "mystical" reflection of the earthly city in a universal temporal organization, but only of *states*. Even the Roman empire could hardly appear to St. Augustine as a universal temporal community of mankind, first, because of its predominantly pagan background, and, secondly, because of its ruin and disintegration before his own eyes.

Similarly, St. Thomas Aquinas reserves the concept of a universal community for the church, headed by the *pope*, but speaks of *princes*, and not of the emperor, when discussing the issue of government in its most general aspects. According to its own view, the church was the only universal community, exercising universal spiritual authority directly, and universal temporal authority indirectly through a variety of kings and princes. The church therefore discouraged the concept of "emperor," and encouraged instead the local rulers who defended their independence against the encroachments of the Holy Roman Empire. The latter became in effect a German-Italian empire and lost

all claim to universality because of its internal decay and its humiliation by the papacy in the twelfth and thirteenth centuries. The more independent the small states and local kingdoms were, the easier it was for the church to exercise control over them, and St. Thomas therefore expressed the customary views of the canonists and papalist advocates when he juxtaposed to the church, princes, and not an emperor claiming universal jurisdiction. Dante's concept of a universal temporal community, a world government headed by a monarch with world-wide authority, contradicts and transcends both the Augustinian and Thomistic roots of medieval philosophy.

What makes Dante's secularization of the religious idea of universal community even more revolutionary is his claim that the authority of the monarchical ruler of the world derives directly from God, without any intermediary, minister, vicar, or pope. The concept of man's two "beatitudes," the blessings of earthly life and the blessings of heavenly paradise, was taken over by Dante from traditional Christian doctrines. St. Thomas Aquinas represented the orthodox view in stating that the attainment of earthly blessings, such as peace, was no more than a means to the final end, the blessing of enjoying God after death. Dante's revolutionary break with this medieval conception consists in his refusal to assign a subordinate role to political life, and his insistence that it, too, was a final goal, and that of the two universal orders, church and world-state, each was supreme in its own sphere, equal in relation to the other, and neither subordinate to the other.

Instead of the traditional medieval hierarchy, in which earthly ends are subordinated to heavenly ends, and consequently temporal authority to the church, Dante construes two coordinate authorities, church and universal empire, each reflecting and realizing a different goal of man. Instead of the previous hierarchy, there is a double supremacy, in this world at least. The pope has no superior—as pope; the universal monarch has no superior—as monarch. Both have a point of hierarchical reference, but it is not of this world: God. To him both pope and emperor are subordinate and responsible.

By strictly separating church and empire, and setting them up as virtually "closed systems," Dante does much more than diminish the temporal authority of the church. He notes that the different ends of church and universal government imply different means: reason and philosophy guide the temporal ruler in the attainment of earthly happiness for mankind, whereas theology, faith, and revelation are the means by which the church seeks to secure for its members the blessings of heavenly paradise. By severing the temporal authority of government from the ecclesiastical authority of the church, Dante thus declares the *independence of philosophy from theology*: if their masters are independent of each other, so are they, as the means of the masters.

Dante's separation of philosophy from theology is more important, from the long-term viewpoint, than his separation of church and empire. St. Thomas Aquinas marks the culmination of the scholastic doctrine that philosophy was the "handmaiden" (*ancilla*) of theology. Dante affirms the revolutionary tenet of separation of philosophy and theology on a basis of equality and independence. His challenge is the transition to the next revolutionary transformation, the growing subordination of theology to philosophy in Humanism and Renaissance.

The church was fully aware of the dangerous ideas contained in *De monarchia*. It was burned as heretical by order of Pope John XXII in 1329 and put on the *Index of Forbidden Books* in 1554, before it was printed (it was first printed in Basle in 1559). *De monarchia* stayed on the *Index* for about three-hundred fifty years, until it was finally removed as being no longer dangerous.

DANTE

De Monarchia *

THE END OF POLITICAL ORGANIZATION: UNIVERSAL PEACE

The proper work of the human race, taken as a whole, is to set in action the whole capacity of that understanding which is capable of development: first in the way of speculation, and then, by its extension, in the way of action. And seeing that what is true of a part is true also of the whole, and that it is by rest and quiet that the individual man becomes perfect in wisdom and prudence; so the human race, by living in the calm and tranquillity of peace, applies itself most freely and easily to its proper work; a work which, according to the saying, "Thou has made him a little lower than the angels," is almost divine. Whence it is manifest that of all things that are ordered to secure blessings to men, peace is the best. And hence the word which sounded to the shepherds from above was not riches, nor pleasure, nor honour, nor length of life, nor health, nor strength, nor beauty; but peace. For the heavenly host said: "Glory to God in the highest, and on earth, peace to men of good will." Therefore also, "Peace be with you," was the salutation of the Saviour of mankind. For it behoved Him, who was the greatest of saviours, to utter in His greeting the greatest of saving blessings. And this custom His disciples

* From Dante, *De Monarchia* (trans. F. C. Church, in R. W. Church, *Dante: An Essay*, London, 1878).

too chose to preserve; and Paul also did the same in his greetings, as may appear manifest to all.

Now that we have declared these matters, it is plain what is the better, nay the best, way in which mankind may attain to do its proper work. And consequently we have seen the readiest means by which to arrive at the point, for which all our works are ordered, as their ultimate end; namely, the universal peace, which is to be assumed as the first principle for our deductions. As we said, this assumption was necessary, for it is as a sign-post to us, that into it we may resolve all that has to be proved, as into a most manifest truth.

WORLD PEACE THROUGH WORLD EMPIRE

As therefore we have already said, there are three doubts, and these doubts suggest three questions, concerning temporal Monarchy, which in more common speech is called the Empire; and our purpose is, as we explained, to inquire concerning these questions in their given order, and starting from the first principle which we have just laid down. The first question, then, is whether temporal Monarchy is necessary for the welfare of the world; and that it is necessary can, I think, be shown by the strongest and most manifest arguments; for nothing, either of reason or of authority, opposes me. Let us first take the authority of the Philosopher in his *Politics*. There, on his venerable authority, it is said that where

a number of things are arranged to attain an end, it behoves one of them to regulate or govern the others, and the others to submit. And it is not only the authority of his illustrious name which makes this worthy of belief, but also reason, instancing particulars.

If we take the case of a single man, we shall see the same rule manifested in him: all his powers are ordered to gain happiness; but his understanding is what regulates and governs all the others; and otherwise he would never attain to happiness. Again, take a single household: its end is to fit the members thereof to live well; but there must be one to regulate and rule it, who is called the father of the family, or, it may be, one who holds his office. As the Philosopher says: "Every house is ruled by the oldest." And, as Homer says, it is his duty to make rules and laws for the rest. Hence the proverbial curse: "Mayst thou have an equal at home." Take a single village: its end is suitable assistance as regards persons and goods, but one in it must be the ruler of the rest, either set over them by another, or with their consent, the head man amongst them. If it be not so, not only do its inhabitants fail of this mutual assistance, but the whole neighbourhood is sometimes wholly ruined by the ambition of many, who each of them wish to rule. If, again, we take a single city: its end is to secure a good and sufficient life to the citizens; but one man must be ruler in imperfect as well as in good forms of the state. If it is otherwise, not only is the end of civil life lost, but the city too ceases to be what it was. Lastly, if we take any one kingdom, of which the end is the same as that of a city, only with greater security for its tranquillity, there must be one king to rule and govern. For if this is not so, not only do his subjects miss their end, but the kingdom itself falls to destruction, according to that word of the infallible truth: "Every kingdom divided against itself shall be brought to desolation." If then this holds good in these cases, and in each individual thing which is ordered

to one certain end, what we have laid down is true.

Now it is plain that the whole human race is ordered to gain some end, as has been before shown. There must, therefore, be one to guide and govern, and the proper title for this office is Monarch or Emperor. And so it is plain that Monarchy or the Empire is necessary for the welfare of the world.

MONARCHY AS THE FORM OF WORLD GOVERNMENT

Further, the whole human race is a whole with reference to certain parts, and, with reference to another whole, it is a part. For it is a whole with reference to particular kingdoms and nations, as we have shown; and it is a part with reference to the whole universe, as is manifest without argument. Therefore, as the lower portions of the whole system of humanity are well adapted to that whole, so that whole is said to be well adapted to the whole which is above it. It is only under the rule of one prince that the parts of humanity are well adapted to their whole, as may easily be collected from what we have said; therefore it is only by being under one Princedom, or the rule of a single Prince, that humanity as a whole is well adapted to the Universe, or its Prince, who is the One God. And it therefore follows that Monarchy is necessary for the welfare of the world.

THE ONENESS OF MANKIND AND THE ONENESS OF GOD

And all is well and at its best which exists according to the will of the first agent, who is God. This is self-evident, except to those who deny that the divine goodness attains to absolute perfection. Now, it is the intention of God that all created things should represent the likeness of God, so far as their proper nature will admit. Therefore was it said: "Let us make man in our image, after our likeness." And though it could not be said

that the lower part of creation was made in the image of God, yet all things may be said to be after His likeness, for what is the whole universe but the footprint of the divine goodness? The human race, therefore, is well, nay at its best state, when, so far as can be, it is made like unto God. But the human race is then most made like unto God when most it is one; for the true principle of oneness is in Him alone. Wherefore it is written: "Hear, O Israel; the Lord thy God is one God." But the race of man is most one when it is united wholly in one body, and it is evident that this cannot be, except when it is subject to one prince. Therefore in this subjection mankind is most made like unto God, and, in consequence, such a subjection is in accordance with the divine intention, and it is indeed well and best for man when this is so, as we showed at the beginning of this chapter.

THE NEED FOR AUTHORITATIVE SETTLEMENT OF DISPUTES BETWEEN STATES

Wherever there is controversy, there ought to be judgment, otherwise there would be imperfection without its proper remedy, which is impossible; for God and Nature, in things necessary, do not fail in their provisions. But it is manifest that there may be controversy between any two princes, where the one is not subject to the other, either from the fault of themselves, or even of their subjects. Therefore between them there should be means of judgment. And since, when one is not subject to the other, he cannot be judged by the other (for there is no rule of equals over equals), there must be a third prince of wider jurisdiction, within the circle of whose laws both may come. Either he will or he will not be a Monarch. If he is, we have what we sought; if not, then this one again will have an equal, who is not subject to his jurisdiction, and then again we have need of a

third. And so we must either go on to infinity, which is impossible, or we must come to that judge who is first and highest; by whose judgment all controversies shall be either directly or indirectly decided; and he will be Monarch or Emperor. Monarchy is therefore necessary to the world, and this the Philosopher saw when he said: "The world is not intended to be disposed in evil order; 'in a multitude of rulers there is evil, therefore let there be one prince.'"

FREEDOM UNDER MONARCHY

Again, the human race is ordered best when it is most free. This will be manifest if we see what is the principle of freedom. It must be understood that the first principle of our freedom is freedom of will, which many have in their mouth, but few indeed understand. For they come so far as to say that the freedom of the will means a free judgment concerning will. And this is true. But what is meant by the words is far from them; and they do just as our logicians do all day long with certain propositions which are set as examples in the books of logic, as that, "the three angles of a triangle are equal to two right angles."

Therefore I say that Judgment is between Apprehension and Appetite. First, a man apprehends a thing; then he judges it to be good or bad; then he pursues or avoids it accordingly. If therefore the Judgment guides the Appetite wholly, and in no way is forestalled by the Appetite, then is the Judgment free. But if the Appetite in any way at all forestalls the Judgment and guides it, then the Judgment cannot be free: it is not its own: it is captive to another power. Therefore the brute beasts cannot have freedom of Judgment; for in them the Appetite always forestalls the Judgment. Therefore, too, it is that intellectual beings whose wills are unchangeable, and souls which are separate from the body, which have gone hence in peace, do not lose the freedom of their wills, because their wishes

cannot change; nay, it is in full strength and completeness that their wills are free.

It is therefore again manifest that this liberty, or this principle of all our liberty, is the greatest gift bestowed by God on mankind: by it alone we gain happiness as men: by it alone we gain happiness elsewhere as gods. But if this is so, who will say that human kind is not in its best state, when it can most use this principle? But he who lives under a Monarchy is most free. Therefore let it be understood that he is free who exists not for another's sake but for his own, as the Philosopher, in his Treatise of simple Being, thought. For everything which exists for the sake of some other thing, is necessitated by that other thing, as a road has to run to its ordained end. Men exist for themselves, and not at the pleasure of others, only if a Monarch rules; for then only are the perverted forms of government set right, while democracies, oligarchies, and tyrannies, drive mankind into slavery, as is obvious to any who goes about among them all; and public power is in the hands of kings and aristocracies, which they call the rule of the best, and champions of popular liberty. And because the Monarch loves his subjects much, as we have seen, he wishes all men to be good, which cannot be the case in perverted forms of government: therefore the Philosopher says, in his *Politics*: "In the bad state the good man is a bad citizen, but in a good state the two coincide." Good states in this way aim at liberty, that in them men may live for themselves. The citizens exist not for the good of consuls, nor the nation for the good of its king; but the consuls for the good of the citizens, and the king for the good of his nation. For as the laws are made to suit the state, and not the state to suit the laws, so those who live under the laws are not ordered for the legislator, but he for them; as also the Philosopher holds, in what he has left us on the present subject. Hence, too, it is clear that although the king or the consul rule over the other citizens in respect of the means of government, yet in respect

of the end of government they are the servants of the citizens, and especially the Monarch, who, without doubt, must be held the servant of all. Thus it becomes clear that the Monarch is bound by the end appointed to himself in making his laws. Therefore mankind is best off under a Monarchy, and hence it follows that Monarchy is necessary for the welfare of the world.

THE PAX ROMANA

To all these reasons alleged above, a memorable experience adds its confirmation. I mean that condition of mankind which the Son of God, when, for the salvation of man, He was about to put on man, either waited for, or, at the moment when He willed, Himself so ordered. For it, from the fall of our first parents, which was the turning point at which all our going astray began, we carry our thoughts over the distribution of the human race and the order of its times, we shall find that never but under the divine Augustus, who was sole ruler, and under whom a perfect Monarchy existed, was the world everywhere quiet. And that then the human race was happy in the tranquillity of universal peace, this is the witness of all writers of history; this is the witness of famous poets; this, too, he who wrote the story of the "meekness and gentleness of Christ" has thought fit to attest. And last of all, Paul has called that most blessed condition "the fullness of the times." For then, indeed, time was full, and all of the things of time; because no office belonging to our felicity wanted its minister. But how the world has fared since that "seamless robe" has suffered rending by the talons of ambition, we may read in books; would that we might not see it with our eyes. Oh, race of mankind! what storms must toss thee, what losses must thou endure, what shipwrecks must buffet thee, as long as thou, a beast of many heads, strivest after contrary things. Thou art sick in both thy faculties of understanding; thou art

sick in thine affections. Unanswerable reasons fail to heal thy higher understanding; the very sight of experience convinces not thy lower understanding; not even the sweetness of divine persuasion charms thy affections, when it breathes into thee through the music of the Holy Ghost: "Behold, how good and how pleasant a thing it is, brethren, to dwell together in unity."

THE VOCATION OF THE ROMANS FOR WORLD RULE

What nature has ordained is maintained of right. For nature in its providence does not come short of men's providence; for if it were to come short, the effect would excel the cause in goodness, which is impossible. But we see that when public bodies are founded, not only are the relations of the members to each other considered, but also their capacities for exercising offices; and this is to consider the end of right in the society or order which is founded, for right is not extended beyond what is possible. Nature then, in her ordinances, does not come short in this foresight. Therefore it is clear that nature, in ordaining a thing, has regard to its capacities; and this regard is the fundamental principle of right which nature lays down. From this it follows that the natural order of things cannot be maintained without right; for this fundamental principle of right is inseparably joined to the natural order of things. It is necessary, therefore, that it is of right that this order is preserved.

The Roman people was ordained for empire, by nature, and this may be shown as follows: The man would come short of perfection in his art, who aimed only to produce his ultimate form, and neglected the means of reaching it; in the same way, if nature only aimed at reproducing in the world the universal form of the divine likeness, and neglected the means of doing so, she would be imperfect. But nature, which is the work of

the divine intelligence, is wholly perfect; she therefore aims at all the means by which her final end is arrived at.

Since then mankind has a certain end, and since there is a certain means necessary for the universal end of nature, it necessarily follows that nature aims at obtaining that means. And therefore the Philosopher, in the second book of *Natural Learning*, well shows that nature always acts for the end. And since nature cannot reach this end through one man, because that there are many actions necessary to it, which need many to act, therefore nature must produce many men and set them to act. And besides the higher influence, the powers and properties of inferior spheres contribute much to this. And therefore we see not only that individual men, but also that certain races are born to govern, and certain others to be governed and to serve, as the Philosopher argues in the *Politics*; and for the latter, as he himself says, subjection is not only expedient, but just, even though they be forced into subjection.

And if this is so, it cannot be doubted that nature ordained in the world a country and a nation for universal sovereignty; if this were not so, she would have been untrue to herself, which is impossible. But as to where that country is, and which is that nation, it is sufficiently manifest, both from what we have said and from what we shall say, that it was Rome and her citizens or people; and this our poet very skilfully touches on in the sixth *Aeneid*, where he introduces Anchises prophesying to Aeneas, the ancestor of the Romans: "Others may mould the breathing bronze more delicately—I doubt it not; they may chisel from marble the living countenance; they may surpass thee in pleading causes; they may track the course of the heavens with the rod, and tell when the stars will rise; but thou, Roman, remember to rule the nations with thy sway. These shall be thy endowments—to make peace to be the custom of the world; to spare thy foes when they submit, and to crush the proud." And again, Virgil skilfully notes

the appointment of the *place*, in the fourth *Aeneid*, when he brings in Jupiter speaking to Mercury concerning Aeneas: "His fair mother did not promise him to us to be such as this: it was not for this that twice she rescues him from Grecian arms; but that there should be one to rule over Italy, teeming with empires, tempestuous with wars." It has, therefore, sufficiently been shown that the Roman people was by nature ordained to empire. Therefore it was of right that they gained empire, by subduing to themselves the world.

THE SOURCE OF TEMPORAL POWER

"He hath shut the lions' mouths and they have not hurt me, forasmuch as before Him justice was found in me." At the beginning of this work I proposed to examine into three questions, according as the subject-matter would permit me. Concerning the two first questions our inquiry, as I think, has been sufficiently accomplished in the preceding books. It remains to treat of the third question; and, perchance, it may arouse a certain amount of indignation against me, for the truth of it cannot appear without causing shame to certain men. But seeing that truth from its changeless throne appeals to me—that Solomon too, entering on the forest of his proverbs, teaches me in his own person "to meditate on truth, to hate the wicked"; seeing that the Philosopher, my instructor in morals, bids me, for the sake of truth, to put aside what is dearest; I will, therefore, take confidence from the words of Daniel in which the power of God, the shield of the defenders of truth, is set forth, and, according to the exhortation of St. Paul, "putting on the breastplate of faith," and in the heat of that coal which one of seraphim had taken from off the altar, and laid on the lips of Isaiah, I will enter on the present contest, and, by the arm of Him who delivered us by His blood from the powers of darkness, drive out from the lists the wicked and the liar, in

the sight of all the world. Why should I fear, when the Spirit, which is co-eternal with the Father and the Son, saith by the mouth of David: "The righteous shall be had in everlasting remembrance, he shall not be afraid of evil tidings"?

The present question, then, concerning which we have to inquire, is between two great luminaries, the Roman Pontiff and the Roman Prince; and the question is, does the authority of the Roman Monarch, who, as we have proved, is the monarch of the world, depend immediately on God, or on some minister or vicar of God; by whom I understand the successor of Peter, who truly has the keys of the kingdom of heaven?

THE FOUNDATIONS OF CHURCH AUTHORITY

At the outset we must note in reference to this third question, that the truth of the first question had to be made manifest rather to remove ignorance than to end a dispute. In the second question we sought equally to remove ignorance and to end a dispute. For there are many things of which we are ignorant, but concerning which we do not quarrel. In geometry we know not how to square the circle, but we do not quarrel on that point. The theologian does not know the number of the angels, but he does not quarrel about the number. The Egyptian is ignorant of the political system of the Scythians, but he does not therefore quarrel concerning it. But the truth in this third question provokes so much quarrelling that, whereas in other matters ignorance is commonly the cause of quarrelling, here quarrelling is the cause of ignorance. For this always happens where men are hurried by their wishes past what they see by their reason; in this evil bias they lay aside the light of reason, and being dragged on blindly by their desires, they obstinately deny that they are blind. And, therefore, it often follows not only that falsehood has its own inheritance, but that many men issue forth from their own bounds and

stray through the foreign camp, where they understand nothing, and no man understands them; and so they provoke some to anger, and some to scorn, and not a few to laughter.

Now three classes of men chiefly strive against the truth which we are trying to prove.

First, the Chief Pontiff, Vicar of our Lord Jesus Christ and the successor of Peter, to whom we owe, not indeed all that we owe to Christ, but all that we owe to Peter, contradicts this truth, urged it may be by zeal for the keys; and also other pastors of the Christian sheepfolds, and others whom I believe to be only led by zeal for our mother, the Church. These all, perchance from zeal and not from pride, withstand the truth which I am about to prove.

But there are certain others in whom obstinate greed has extinguished the light of reason, who are of their father the devil, and yet pretend to be sons of the Church. They not only stir up quarrels in this question, but they hate the name of the most sacred office of Prince, and would shamelessly deny the principles which we have laid down for this and the previous questions.

There is also a third class called Decretalists, utterly without knowledge or skill in philosophy or theology, who, relying entirely on their Decretals (which doubtless, I think, should be venerated), and hoping, I believe, that these Decretals will prevail, disparage the power of the Empire. And no wonder, for I have heard one of them, speaking of these Decretals, assert shamelessly that the traditions of the Church are the foundation of the faith. May this wickedness be taken away from the thoughts of men by those who, antecedently to the traditions of the Church, have believed in Christ the Son of God, whether to come, or present, or as having already suffered; and who from their faith have hoped, and from their hope have kindled into love, and who, burning with love, will, the world doubts not, be made co-heirs with Him.

And that such arguers may be excluded once for all from the present debate, it must be noted that part of Scripture was *before* the Church, that part of it came *with* the Church, and part *after* the Church.

Before the Church were the Old and the New Testament—the covenant which the Psalmist says was “commanded for ever,” of which the Church speaks to her Bridegroom, saying: “Draw me after thee.”

With the Church came those venerable chief Councils, with which no faithful Christian doubts but that Christ was present. For we have His own words to His disciples when He was about to ascend into heaven: “Lo, I am with you always, even unto the end of the world,” to which Matthew testifies. There are also the writings of the doctors, Augustine and others, of whom, if any doubt that they were aided by the Holy Spirit, either he has never beheld their fruit, or if he has beheld, he has never tasted thereof.

After the Church are the traditions which they call Decretals, which, although they are to be venerated for their apostolical authority, yet we must not doubt that they are to be held inferior to fundamental Scripture, seeing that Christ rebuked the Pharisees for this very thing; for when they asked: “Why do thy disciples transgress the tradition of the elders?” (for they neglected the washing of hands), He answered them, as Matthew testifies: “Why do ye also transgress the commandment of God by your tradition?” Thus he intimates plainly that tradition was to have a lower place.

But if the traditions of the Church are *after* the Church, it follows that the Church had not its authority from traditions, but rather traditions from the Church; and, therefore, the men of whom we speak, seeing that they have nought but traditions, must be excluded from the debate. For those who seek after this truth must proceed in their inquiry from those things from which flows the authority of the Church.

Further, we must exclude others who boast themselves to be white sheep in the flock of the Lord, when they have the plumage of crows. These are the children of wickedness, who, that they may be able to follow their evil ways, put shame on their mother, drive out their brethren, and when they have done all will allow none to judge them. Why should we seek to reason with these, when they are led astray by their evil desires, and so cannot see even our first principle?

Therefore there remains the controversy only with the other sort of men who are influenced by a certain kind of zeal for their mother the Church, and yet know not the truth which is sought for. With these men, therefore—strong in the reverence which a dutiful son owes to his father, which a dutiful son owes to his mother, dutiful to Christ, dutiful to the Church, dutiful to the Chief Shepherd, dutiful to all who profess the religion of Christ—I begin in this book the contest for the maintenance of the truth.

CHURCH AND EMPIRE

Certain persons say further that the Emperor Constantine, having been cleansed from leprosy by the intercession of Sylvester, then the Supreme Pontiff, gave unto the Church the seat of Empire which was Rome, together with many other dignities belonging to the Empire. Hence they argue that no man can take unto himself these dignities unless he receive them from the Church, whose they are said to be. From this it would rightly follow, that one authority depends on the other, as they maintain.

The arguments which seemed to have their roots in the Divine words, have been stated and disproved. It remains to state and disprove those which are grounded on Roman history and in the reason of mankind. The first of these is the one which we have mentioned, in which the syllogism runs as follows: No one has a right to those things which belong to the Church, unless he has them from the Church; and this we grant. The

government of Rome belongs to the Church; therefore no one has a right to it unless it be given him by the Church. The minor premiss is proved by the facts concerning Constantine, which we have touched on.

This minor premiss then will I destroy; and as for their proof, I say that it proves nothing. For the dignity of the Empire was what Constantine could not alienate, nor the Church receive. And when they insist, I prove my words as follows: No man on the strength of the office which is committed to him, may do aught that is contrary to that office; for so one and the same man, viewed as one man, would be contrary to himself, which is impossible. But to divide the Empire is contrary to the office committed to the Emperor; for his office is to hold mankind in all things subject to one will. Therefore it is not permitted to the Emperor to divide the Empire. If, therefore, as they say, any dignities had been alienated by Constantine, and had passed to the Church, the “coat without seam”—which even they, who pierced Christ, the true God, with a spear, dared not rend—would have been rent.

Further, just as the Church has its foundation, so has the Empire its foundation. The foundation of the Church is Christ, as Paul says in his first Epistle to the Corinthians: “For other foundation can no man lay than that which is laid, which is Jesus Christ.” He is the rock on which the Church is built; but the foundation of the Empire is human right. Now I say that, as the Church may not go contrary to its foundation—but must always rest on its foundation, as the words of the Canticles say: “Who is she that cometh up from the desert, abounding in delights, leaning on her beloved?”—in the same way I say that the Empire may not do aught that transgresses human right. But were the Empire to destroy itself, it would so transgress human right. Therefore the Empire may not destroy itself. Since then to divide the Empire would be to destroy it, because the Empire consists in one single univer-

sal Monarchy, it is manifest that he who exercises the authority of the Empire may not destroy it, and from what we have said before, it is manifest that to destroy the Empire is contrary to human right.

Moreover, all jurisdiction is prior in time to the judge who has it; for it is the judge who is ordained for the jurisdiction, not the jurisdiction for the judge. But the Empire is a jurisdiction, comprehending within itself all temporal jurisdiction: therefore it is prior to the judge who has it, who is the Emperor. For it is the Emperor who is ordained for the Empire, and not contrariwise. Therefore it is clear that the Emperor, in so far as he is Emperor, cannot alter the Empire; for it is to the Empire that he owes his being. I say then that he who is said to have conferred on the Church the authority in question either was Emperor, or he was not. If he was not, it is plain that he had no power to give away any part of the Empire. Nor could he, if he was Emperor, in so far as he was Emperor, for such a gift would be a diminishing of his jurisdiction.

Further, if one Emperor were able to cut off a certain portion of the jurisdiction of the Empire, so could another; and since temporal jurisdiction is finite, and since all that is finite is taken away by finite diminutions, it would follow that it is possible for the first of all jurisdictions to be annihilated, which is absurd.

Further, since he that gives is in the position of an agent, and he to whom a thing is given in that of a patient, as the Philosopher holds in the fourth book to Nicomachus, therefore, that a gift may be given, we require not only the fit qualification of the giver, but also of the receiver; for the acts of the agent are completed in a patient who is qualified. But the Church was altogether unqualified to receive temporal things; for there is an express command, forbidding her so to do, which Matthew gives thus: "Provide neither gold, nor silver, nor brass in your purses." For though we find in

Luke a relaxation of the command in regard to certain matters, yet I have not anywhere been able to find that the Church after that prohibition had license given her to possess gold and silver. If therefore the Church was unable to receive temporal power, even granting that Constantine was able to give it, yet the gift was impossible; for the receiver was disqualified. It is therefore plain that neither could the Church receive in the way of possession, nor could Constantine give in the way of alienation; though it is true that the Emperor, as protector of the Church, could allot to the Church a patrimony and other things, if he did not impair his supreme lordship, the unity of which does not allow division. And the Vicar of God could receive such things, not to possess them, but as a steward to dispense the fruits of them to the poor of Christ, on behalf of the Church, as we know the Apostles did.

THE TRUE RELATIONS BETWEEN TEMPORAL AND ECCLESIASTICAL AUTHORITY

Although it has been proved that the authority of the Empire has not its cause in the authority of the Supreme Pontiff; for we have shown that this argument led to absurd results; yet it has not been entirely shown that the authority of the Empire depends directly upon God, except as a result from our argument. For it is a consequence that, if the authority comes not from the vicar of God, it must come from God Himself. And therefore, for the complete determination of the question proposed, we have to prove directly that the emperor or monarch of the world stands in an immediate relation to the King of the universe, who is God.

For the better comprehending of this, it must be recognized that man alone, of all created things, holds a position midway between things corruptible and

things incorruptible; and therefore philosophers rightly liken him to a dividing line between two hemispheres. For man consists of two essential parts, namely, the soul and the body. If he be considered in relation to his body only, he is corruptible; but if he be considered in relation to his soul only, he is incorruptible. And therefore the Philosopher spoke well concerning the incorruptible soul when he said in the second book "of the Soul:" "It is this alone which may be separated, as being eternal, from the corruptible."

If, therefore, man holds this position midway between the corruptible and the incorruptible, since every middle nature partakes of both extremes, man must share something of each nature. And since every nature is ordained to gain some final end, it follows that for man there is a double end. For as he alone of all beings participates both in the corruptible and the incorruptible, so he alone of all beings is ordained to gain two ends, whereby one is his end in so far as he is corruptible, and the other in so far as he is incorruptible.

Two ends, therefore, have been laid down by the ineffable providence of God for man to aim at: the blessedness of this life, which consists in the exercise of his natural powers, and which is prefigured in the earthly Paradise; and next, the blessedness of the life eternal, which consists in the fruition of the sight of God's countenance, and to which man by his own natural powers cannot rise, if he be not aided by the divine light; and this blessedness is understood by the heavenly Paradise.

But to these different kinds of blessedness, as to different conclusions, we must come by different means. For at the first we may arrive by the lessons of philosophy, if only we will follow them, by acting in accordance with the moral and intellectual virtues. But at the second we can only arrive by spiritual lessons, transcending human reason, so that we follow them in accordance with the theological virtues, faith, hope, and charity. The

truth of the first of these conclusions and of these means is made manifest by human reason, which by the philosophers has been all laid open to us. The other conclusions and means are made manifest by the Holy Spirit, who by the mouth of the Prophets and holy writers, and by Jesus Christ, the co-eternal Son of God, and His disciples, has revealed to us supernatural truth of which we have great need. Nevertheless human passion would cast them all behind its back, unless, that men, going astray like the beasts that perish, were restrained in their course by bit and bridle, like horses and mules.

Therefore man had need of two guides for his life, as he had a twofold end in life; whereof one is the Supreme Pontiff, to lead mankind to eternal life, according to the things revealed to us; and the other is the Emperor, to guide mankind to happiness in this world, in accordance with the teaching of philosophy. And since none, or but a few only, and even they with sore difficulty, could arrive at this harbour of happiness, unless the waves and blandishments of human desires were set at rest, and the human race were free to live in peace and quiet, this therefore is the mark at which he who is to care for the world, and whom we call the Roman Prince, must most chiefly aim at: I mean, that in this little plot of earth belonging to mortal men, life may pass in freedom and with peace. And since the order of this world follows the order of the heavens, as they run their course, it is necessary, to the end that the learning which brings liberty and peace may be duly applied by this guardian of the world in fitting season and place, that this power should be dispensed by Him who is ever present to behold the whole order of the heavens. And this is He who alone has preordained this, that by it in His providence He might bind all things together, each in their own order.

But if this is so, God alone elects, God alone confirms; for there is none higher than God. And hence there is the further conclusion, that neither those who now

are, nor any other who may, in whatsoever way, have been called, "Electors," ought to have that name; rather they are to be held as declarers and announcers of the providence of God. And, therefore, it is that they to whom is granted the privilege of announcing God's will sometimes fall into disagreement; because that, all of them or some of them have been blinded by their evil desires, and have not discerned the face of God's appointment.

It is therefore clear that the authority of temporal Monarchy comes down, with no intermediate will, from the fountain of universal authority; and this fountain, one in its unity, flows through many channels out of the abundance of the goodness of God.

And now, methinks, I have reached the goal which I set before me. I have unravelled the truth of the questions which I asked: whether the office of

Monarchy was necessary to the welfare of the world; whether it was by right that the Roman people assumed to themselves the office of Monarchy; and, further, that last question, whether the authority of the Monarch springs immediately from God, or from some other. Yet the truth of this latter question must not be received so narrowly as to deny that in certain matters the Roman Prince is subject to the Roman Pontiff. For that happiness, which is subject to mortality, in a sense is ordered with a view to the happiness which shall not taste of death. Let, therefore, Caesar be reverent to Peter, as the first-born son should be reverent to his father, that he may be illuminated with the light of his father's grace, and so may be stronger to lighten the world over which he has been placed by Him alone, who is the ruler of all things spiritual as well as temporal.

MARSILIO OF PADUA

The struggle between the papacy and the German emperors seemed to be settled with the victory of the church in the middle of the thirteenth century. The German imperial dynasty, the Hohenstaufen, was destroyed, never to rise again. The authority of the popes was supreme; they made and unmade kings and emperors, their wealth was second to none, and the papalist doctrine of the supremacy of ecclesiastical over temporal power (in contradiction to the older Gelasian doctrine of equilibrium) seemed to have been successfully translated into the reality of a new world order. Yet, as so often happens, absolute and limitless power is its own worst enemy, and less than fifty years after the papacy attained its peak, it was humiliated as never before, and perhaps never since.

Pope Boniface VIII (1294-1303) marks the turning point in the history of church-state relations: he is the last pope to make claims of world rule and the first to descend from the summit of glory to humiliation, even degradation. In defeating the German emperors, the popes had learned to rely heavily on the French monarchs; yet France was the country destined to explode, forever, the papal claim of world hegemony.

The conflict arose over money. The church, like every ambitious Great Power, needed more and more money, and its financial needs came into conflict with those of the new national monarchies, particularly France and England, which were gradually building up an efficient but costly central administrative machine to replace the old feudal system of extreme decentralization. In 1296, Boniface declared (in the bull *Clericis Laicos*) that laymen have no jurisdiction over the clergy, "over both the persons and goods of ecclesiastics," without prior papal permission, and that no mundane authority was permitted to levy taxes on church property, nor the clergy permitted to pay them; the imposition or paying of such taxes without papal approval was put under the sanction of excommunication from the church.

Both England and France, for whom the papal bull was especially meant, refused to recognize a financial state within the state; first, because political

sovereignty without tax sovereignty was meaningless, and second, because church property was so vast that neither monarchy could afford to exempt it from taxation. In England, King Edward I threatened that the king's peace could not be had for nothing and that if the clergy were to refuse taxes he would consider them outcasts and treat them as such. Boniface had to give in, and the basic principle was never raised again. In France, King Philip IV firmly rejected Boniface's interference in French finances, and the pope was powerless to enforce his doctrine.

The year 1300 was celebrated in Rome as the first Christian Jubilee. Hundreds of thousands of visitors journeyed from all over Europe to the Eternal City, where a complete indulgence of their sins, hitherto available only to crusaders, awaited them, as well as magnificent spectacles and public ceremonies. Pope Boniface himself, at the height of his power and prestige, appeared in public in the garb of pope and emperor, wearing the imperial scepter and crown, displaying two swords, and proclaiming himself Pontiff, Caesar, and Emperor. Though the Jubilee added large sums of money to the coffers of the Holy See, it did not allay the conflict between Rome and the new national states.

In 1302 Boniface issued the bull *Unam Sanctam*, one of the two or three most important church documents in history. It affirmed no new doctrine but merely expressed, more clearly and irreconcilably than ever before, the extreme and intransigent papalist viewpoint: there is "neither salvation nor remission of sins" outside the "holy catholic and apostolic church"; this "one and only church" had one body and one head, "not two heads as if it were a monster"; there are two swords, a spiritual and a temporal, and "both swords are in the power of the church, the one by the hand of the priest, the other by the hand of kings and knights, but at the will and sufferance of the priest." The key idea in *Unam Sanctam* is contained in the following sentence: "One sword, moreover, ought to be under the other, and the temporal authority to be subjected to the spiritual." *Unam Sanctam* also decreed that each power be judged by its superior authority; if the highest earthly power, the emperor or king, err, he will be judged by the spiritual authority, the priests. But if the highest priest, the pope, err, he can be judged by God alone, not by man: "A spiritual man judges all things, but he himself is judged by no one," because his authority is divine. The last sentence of the bull runs as follows: "We therefore declare, say, define, and pronounce that it is altogether a necessity of salvation for every human creature to be subject to the Roman Pontiff."

Philip IV accepted the challenge thrust at him by papal diplomacy and decree. Although Boniface excommunicated Philip and freed his subjects from allegiance, Philip planned to bring Boniface before a General Council of the church to be held in France, and to have him deposed for heresy, murder, sexual immorality, trafficking in church offices (simony), magic, idol worship—to mention but a few of the twenty-nine charges of his indictment. Significantly, the royal council that approved of such grave charges against the pope included the higher clergy in France; the national support for Philip was overwhelming, because the attitude of the universities, intellectuals, urban middle classes, royal bureaucracy, and nobility was hardly in doubt from the beginning.

While the fulminations were being hurled from pope to monarch and back, Philip proceeded to solve the issue by a *coup*. One of his closest advisers,

Nogaret (a man of heretical and bourgeois background), went to Italy, where he organized a small force with the intention of capturing the pope and taking him to France before a General Council of the church that would try, condemn, and depose him. Nogaret's men (about sixteen hundred on horse and foot) broke into Anagni, the papal court southeast of Rome, early in September, 1303, overpowered the small papal guard, and seized Boniface. Before the French could bring Boniface to France, however, he was saved by a local revulsion of feeling against the plot and brought back to Rome. There he died within a few weeks as a result of the shock and strain that the outrage at Anagni had caused him.

Scarcely less remarkable than the *coup* of Anagni was the scant attention it attracted. The victory of Philip over Boniface, of France over Roman ecclesiastical imperialism, was not the outcome of a mere daring act of violence. The French were in a better position than the papacy in at least two major respects: first, the feud had manifestly originated in a quarrel over money—hardly an inspiring issue for the side that claims to represent the highest spiritual values on earth; second, the French monarch was in a morally strong position because he asked for supreme jurisdiction only in his own house, France, whereas Boniface asked for authority, spiritual and temporal, over the entire world.

In 1076, Pope Gregory VII and (the German) Emperor Henry IV had been engaged in as dramatic a conflict as Boniface's and Philip's in 1303. The emperor deposed the pope, on which the pope excommunicated and deposed the emperor. In the ensuing struggle the emperor had to surrender unconditionally to the pope in the famous scene at the mountain fortress of Canossa, in northern Italy. Clothed in penitential garb, the emperor stood barefoot at the gate of the snow-bound fortress, to which the pope had come. For three days the emperor had to wait until the pope was willing to see him. The emperor repented, pledged complete submission for the future, and was pardoned. The Holy Roman Empire of the German Nation still lingered on for centuries, but the idea of a universal empire was dead henceforth.

Paradoxically, when the temporal authority (of the German emperors) claimed, like the papacy, universal jurisdiction, it failed; when it sought, with strong domestic support, limited jurisdiction in a national state (as in France) against the papal claims of universal authority, it won. In fighting with the German emperors for supremacy, the popes were colliding with the past; in the struggle with the French monarchy, they were up against the strongest single political institution of the next six centuries: the *sovereign national state*. By destroying the prestige and power of the Holy Roman Empire and its German rulers, the papacy had unknowingly undermined the belief in universal authority as such, and thus had aided in the growth of separatist nationalism. In particular, the papacy had strongly drawn on French support in its conflict with the (German) empire and thereby had contributed to making France the first European power. Having helped the papacy to eliminate the temporal claimant to universal authority, the French monarchy completed the job by eliminating the papacy itself as a pretender to world hegemony in spiritual and secular affairs.

Boniface was succeeded by Pope Benedict XI, also an Italian. Benedict reestablished concord between the Holy See and the Kingdom of France by annulling all excommunications, bulls, and decrees of his predecessor against Philip and his counselors, except Nogaret, the author of the "outrage of Anagni."

Before having further opportunities to serve the French monarchy, Benedict XI died—after only eight months in office (1304).

In the following year, a French subject, the archbishop of Bordeaux, was elected pope, and he assumed the name of Clement V. Nogaret and other antipapalists who were not satisfied with the death of Boniface sought to assassinate his memory, too, by having him tried, *post mortem*, for various crimes, particularly heresy. Clement, who was anxious to avoid the scandal of having one of his predecessors condemned as an heretic, promised to have the issue examined by a commission of cardinals. In the end the pope annulled again all pronouncements of Boniface against Philip and his advisers, and this time he included Nogaret in the general absolution. Moreover, Philip was now praised by Clement for his zeal in defending the faith against Boniface, and Clement also gave orders to erase from Boniface's register the bulls and offensive pronouncements against Philip.

Clement did not go to Rome but set up his court in Avignon, in southern France, where he and his six successors, all French, resided more or less continuously in what has been called the "Babylonian captivity" of the papacy (1305–1378). The French era of the Avignon papacy was followed by the Great Schism (1378–1417), during which there were usually two popes, one at Avignon, one at Rome, and at times a third pretender. After the Great Schism, the Protestant Reformation drastically diminished the range of papal jurisdiction by reducing the Roman Catholic Church to one among many.

In the East, the rivalry between Constantinople and Rome went back to the fifth century. After the fall of Constantinople in 1453, Russia predominated in the eastern church; in 1589 a new patriarch was created with a claim of universal leadership, and Moscow was hailed as the "Third Rome."

The principal revolutionary changes in the late Middle Ages were the growing vehemence of anticlerical feeling and the decisive defeat of the papacy, the secularization of life, the rise of the bourgeoisie, and the formation of national states. These new developments are most systematically reflected in Marsilio of Padua's *Defensor Pacis*, or *The Defender of Peace* (1324). Marsilio (1275–1343) was a physician by occupation, and a student of philosophy, law, and theology. During his lifetime the Italian republican city-states were a unique phenomenon, and Padua was particularly known for its spirit of liberty and independence in defending itself against the local clergy and the Roman Curia.

Marsilio was of middle-class origin, and his mold of thought, skeptical, realistic, and empirical, is characteristic of the inhabitant of a free Italian city-republic with ancient secular traditions. His practice of medicine during many years added to his outlook a more critical and scientific cast. Marsilio quotes Aristotle's *Politics* more than all other classical authors put together, and in this respect he is typically medieval. But to most other medieval writers Aristotle was little more than a source of authority and verbal incantation; the two main assumptions of medieval political speculation—the supremacy of theology over philosophy, and the universality of theological-political rule in papacy and empire—were the exact opposite of Aristotle's two main ideals—empirical observation in philosophy, and the city-state in politics. Marsilio's use of Aristotle is more than verbal: he, too, has the background of an urban, secular civilization, and like Aristotle (who also practiced medicine for some

time) he tries to use common sense and empirical verification rather than abstract speculation and authoritative dogma.

Next in importance in Marsilio's background is his intellectual experience in France. He spent a considerable portion of his formative years as a student and teacher at the University of Paris, of which he was Rector for a short period in 1312. Paris was then the world's leading university, particularly in philosophy, art, and letters, and the defeat of the papacy by France made Paris the center of secularist groups and ideas. In this lively political and intellectual atmosphere Marsilio received his formal education, and part of the authorship of *The Defender of Peace* is attributed by some to John of Jandun, a leading French scholar and Marsilio's close friend and collaborator during many years.

Taken individually, most of Marsilio's ideas can be traced to the flourishing and fertile school of publicists, pamphleteers, and politicians who congregated in Paris and established there a new kind of political literature and journalism soon to be copied all over Europe. Yet Marsilio was the first to develop a full-fledged doctrine from current isolated arguments and to discern in contemporary events the shape of a future world.

Like Dante, Marsilio is a link in the transition from the medieval to the modern age. But, whereas Dante was still essentially medieval in the formulation and solution of his main problems, Marsilio is essentially modern, though still encumbered by medieval forms of thought and argument. In fact, he is regarded by some as the most original medieval political writer, precisely because he seeks so consciously to break the fetters of his age and because he rejects vigorously and unequivocally any clerical control of thought or government.

Marsilio's irony and skepticism contrast with the deadly seriousness and dogmatic certainty of most medieval political writing. He occasionally admits that he is not sure, that a position he defends may be wrong—concessions that are more modern than medieval in spirit. Where there is complete certainty based on divine knowledge and revelation, there is no room for probabilities and possibilities, attributes of human, not divine, knowledge.

In his discussion of the forms of state, Marsilio merely repeats the Aristotelian division of the three good types (monarchy, aristocracy, constitutionalism) and the three diseased kinds (tyranny, oligarchy, mob dictatorship). He also says that the criterion of distinction is, following Aristotle, whether a government serves the rulers or the ruled. So far, Marsilio offers few surprises. But he differs radically from Aristotle (without, perhaps, being fully aware of it) by adding that in the good forms of government the ruler governs for the common benefit *in accordance with the will of the people*. Conversely, the diseased forms of government are for the benefit of the rulers *without the consent of the people*. This is not a minor addition to Aristotle but a fundamental revision and transformation. It could be argued, logically, that the postulate of government for the benefit of the ruled implies some measure of consent, but Aristotle himself did not see this logic in its full implication, perhaps because of his belief that some men are born to rule and others to obey.

In one passage Marsilio departs from Aristotle even more drastically by abandoning entirely the criterion of the *object of government* (the common benefit), and by replacing it with that of the *method of government*, according to which political rule is "over either voluntary or involuntary subjects." Similarly, recent

and contemporary political theory emphasizes that democracy in government is primarily a question of method, the results and consequences of which can be good or bad. It is an assumption of modern democratic thought, as of Marsilio, that the proper method of government, that is, consent, is more likely (though by no means certain) to produce goods ends than are undemocratic methods, though the latter, too, may be employed for the pursuit of the common benefit. The consciousness of the *dynamic relations between means and ends* is one of the main contributions of modern philosophy, and Marsilio points in this direction by stressing that the problem of government is one of means as much as of ends.

Marsilio's break with Aristotle and the Middle Ages becomes especially clear in his conception of law as the manifestation of political authority. The general tendency of medieval writers was to assume that law is intimately related to reason and the common good; because they sincerely believed that such a relation is essential, they often stated, in the words of St. Thomas Aquinas, that law is "an ordinance of reason for the common good." Marsilio defines *law* in a less substantive and more formal way as a *coercive command* of the legislator *enforceable in the courts*. Marsilio hopes that human law will ordinarily be in harmony with divine and natural law, but he concedes the possibility that "sometimes false conceptions of the just and the beneficial become laws, when there is given a command to observe them."

This *positivist conception of law* is a significant deviation from the medieval tradition of natural law, and it reminds one of modern antimetaphysical views. Thus Holmes, perhaps the greatest of many great American jurists, defined the law as "the prophecies of what the courts will do in fact, and nothing more pretentious"; another leading jurist, Hans Kelsen, saw in the threat of coercion an essential element of the law.

Marsilio is aware that human law is, in dignity, below divine and natural law. However, he denudes this concession to his medieval environment of any practical effect by stating that the divine law is binding on the conscience, but that punishment for transgressing it is reserved for the next world. It is also important that Marsilio restricts the divine law to its revelation in the Bible but will have nothing to do with canon law, which to him is a set of statutes and rules of a human organization, the church, and no more. Because of his refusal to identify human law with divine authority or reason, Marsilio is driven to look for another source of validating human law. This source he finds in human society itself. Marsilio did not know the concept of *sovereignty*, although he was groping toward it and clearly described its substance. He says that "the legislator, or the primary and proper efficient cause of the law, is the people or the whole body of citizens, or the weightier part thereof," and that the "weightier part" of the citizens is to be understood in terms of quantity and quality.

Marsilio's use of the Latin word *legislator* is a source of confusion if the translation is simply rendered as "legislator" in English. Marsilio's legislator (whether it be understood as the whole body of citizens, the numerical majority, or the qualitatively weightier part) may mean two different things. The first is the *political sovereign*, the *constituent power* in the state, which alone has the authority to make the constitution; Marsilio comes somewhat closer to the concept of the sovereign, or constituent power, by calling it, in this context, a "primary" or "absolute" legislator.

The second meaning of legislator as used by Marsilio approximates more closely the modern *legislative function*, and here Marsilio distinguishes again two possibilities: either the people in assembly make the laws, are the legislator (as would be possible in small communities), or the people entrust the legislative function to "some person or persons, who are not and cannot be the legislator in the absolute sense, but only in a relative sense and for a particular time and in accordance with the authority of the primary legislator." Even if the political sovereign is made up of the whole people, the concept of citizenship is still not all-inclusive, for children, slaves, women, and foreigners are excluded from active participation in public life.

The people as the source of political authority was a basic conception in Roman jurisprudence and in its revived form during the Middle Ages, and medieval society itself evolved the idea that the community is the source of the law. Marsilio's originality consists, not so much in having discovered the idea of the people as the source of law, but in having shorn the conception of all its encumbrances and ornamentations so that it could evolve from a juridical fiction into a call for action.

As to his complex conception of the "weightier part" of the citizens, which in some instances may take the place of the entire body of citizens as the political sovereign, it should first be noted that Marsilio says that both the quantity and quality should be taken into account. He nowhere holds a brief for the idea of an elite; he merely says that the quantitative element alone is not sufficient, and that the qualitative factor should also be considered. He is undogmatic enough to know that qualitative standards cannot be described in detail in advance; they are the result of varying "honorable customs" in different political communities. In his own day Marsilio undoubtedly saw that even in the free city-republics of northern Italy there was no equality of groups and individuals, and yet there was a strong sense that the assembly of the people, the *arengo* or *parlamento*, was the ultimate source of sovereignty.

Marsilio's concept of a "weightier part" of the citizenry may be seen in a broader perspective with the aid of the British experience. The Glorious Revolution of 1688 and the Settlement of 1689 established in England the principle of *parliamentary supremacy*, rather than *popular sovereignty* in the sense of universal and equal suffrage. The recognition of parliamentary supremacy—under which only the "weightier part" of the citizenry (and a small part in numbers) governed the country—made, however, full democratic sovereignty as developed in the nineteenth and twentieth centuries a practical possibility. It was not until 1948 that the principle of "one man, one vote" was finally attained completely, when the Representation of the People Act abolished extra business and university votes, the last remnants of plural voting.

Similarly, Marsilio's concept of the legislator certainly implied *constitutional supremacy* and, to a considerable extent, legislative parliamentary supremacy, although hardly popular sovereignty in the strictly democratic sense that each man counts for one vote. In the United States, too, the element of quantity in politics is modified, first, by the deliberate overrepresentation of less populous states in the senate; this deviation from arithmetic implies the value judgment that in some instances historical or geographical considerations override the democratic argument of pure numbers. In addition, social power, prestige, and

influence count, in the United States as in other democracies, when it comes to the making of crucial political decisions.

In effect, therefore, the political impact of the individual citizen depends on whether he belongs to the "weightier part" of society, or whether he is a mere quantitative unit whose political influence is confined to the periodic act of voting. Moreover, it should be remembered that Marsilio wrote in the fourteenth century, in which social and economic inequality was taken for granted, and that he cannot be fairly measured by twentieth-century standards.

Whereas Marsilio does not describe in detail how the qualitatively weightier part of the body politic is to be ascertained in practice, he enthusiastically defends the basically democratic doctrine of the *common sense of the people* against the theory that a superior elite alone is possessed of political wisdom. Marsilio argues that a defect in a proposed law can be better detected by a large number than by a small fraction of the community, because every whole "is greater in mass and virtue than any part of it taken separately." From the viewpoint of expediency, too, Marsilio says, the utility of a proposed law will be better judged by the whole people, "because no one knowingly harms himself." By contrast, Marsilio thinks that if the law were made by only one or a few, they would be more likely to consider their own private profit than that of society as a whole.

From a psychological viewpoint, too, popular consent is an advantage: the law has a better chance of being observed by all if everybody has an opportunity to comment freely on its merits. Marsilio introduces again a formal, procedural criterion in discussing freedom and despotism, as he has done in defining the law. Abandoning the substantive definitions of representative medieval writers, Marsilio sees *freedom* primarily as the procedure and method of *self-government*, whereas despotism is the lack of self-government, regardless how good the law of the despot is. Conversely, even if the law is bad, citizens will feel a moral obligation to observe it if they have given their consent to it. Marsilio states the heart of the democratic creed as follows: "Those matters, therefore, which can affect the benefit and harm of all ought to be known and heard by all, who thus may attain the beneficial and repel the opposite."

Marsilio is aware of the argument, made then as now, that the majority of men are vicious, undiscerning, and stupid, and that the few who are wise, learned, and virtuous should therefore rule. Marsilio agrees that the vicious and undiscerning should not make the law, but he denies that most citizens are vicious and undiscerning most of the time: "All or most of them are of sound reason and have a right desire for the polity and for the things necessary for it to endure." A minimum of optimism about human nature is a basic condition, in Marsilio as in other political thinkers, for any faith in democracy, modest and limited as it may be. Marsilio concedes that only few have the ability to make wise laws, yet *every citizen can be a proper judge of the law* because "by induction we can see that many men judge rightly about the quality of a picture, a house, a ship, and other works of art, even though they would have been unable to discover or produce them." Marsilio quotes Aristotle's statement that man is not always the best judge of something he makes himself, and he might have quoted the further Aristotelian dictum that "the guest will judge better of a feast than the cook."

Since the active citizens who form the political sovereign (or *legislator*) cannot themselves carry on the work of legislation, government, and administration, there must be a group of persons who act in the name of the citizenry. Marsilio distinguishes clearly, perhaps more than any writer before him, the *state as the source of sovereignty* from the *personnel and process of government as the instrumentality of sovereignty*. Marsilio calls the instrumentality of sovereignty the ruling part (*pars principans*) of the state, a decidedly different concept from that of the modern executive, and much broader than the latter. The function of the ruling part, Marsilio says, is "to regulate, in accordance with the law, the political or civil acts of men." He stresses that "the elected kind of government is superior to the non-elected," and in monarchy, too, he strongly prefers the elective ruler. Governments established by force or fraud are, by contrast, "diseased."

According to the traditional medieval view, the ruler holds his office by divine sanction, and he is supposed to be superior in virtue and wisdom. Marsilio deals with this question in a more empirical and democratic, and less metaphysical, manner. The authority of the ruler derives its validity and existence from the observable fact of election, and a person becomes a ruler because he is elected, "and not by his knowledge of the laws, his prudence, or moral virtue, although these are qualities of the perfect ruler." Marsilio also mentions that many men may possess these qualities of ruling, yet, lacking the formal and empirical authority by election, they are not rulers.

Just as Marsilio derives the law from an empirical source, the will of the community, rather than from divine providence or natural reason, so he bases the *authority of the rulers* on the *will of the community* as expressed in *election*. He therefore also stresses the nature of political office as an instrumentality of the *legislator*. The rulers must be guided and controlled by respect for the law, and the armed forces at their disposal should be kept at a level that is at once high enough to maintain order and yet not so high that it will give the rulers despotic power.

If the ruler or rulers violate the trust of office, the *legislator*—which sets them up—has the right to correct and punish them. If their offense is serious, they may even be removed from office. The *legislator* suspends the offending ruler while the proceedings against him are on, because there must never be two competing authorities and also "because he is corrected not as a ruler but as a subject who has transgressed the law." Marsilio's conception of the accountability of the ruler to the people is not new and is typical of the Middle Ages; but, whereas most medieval writers looked for divine punishment or, in more extreme instances, for tyrannicide as a remedy, Marsilio gropes toward an institutionalized method of keeping the ruler responsible to the entire community, should he exceed his authority.

Marsilio's conception of law and government as social regulation owing its coercive authority to the will of the politically organized community (*legislator* or *legislator humanus*) was pointed at lay and clerical despotism. Whereas in the past two hundred years interest in Marsilio's political theory has been steadily growing, in his own time and in the subsequent three centuries his views on the church were more influential. His most revolutionary doctrine in his analysis of the church, and one that was to leave its mark on Protestantism,

is the idea of *congregational authority in the church*. The church is a community of believers (*universitas fidelium*), and, as in the political community (*universitas civium*), the only source of authority is the body of its members.

Marsilio does not attack the institution of the papacy as such, but he insists that if the Roman bishop (that is, the pope) has any special authority "it belongs to him through human appointment or election." The papacy started out as a simple headship of prestige and honor in view of the strategic position of Rome, but by a gradual and consistent process of usurpation it finally claimed full and universal jurisdiction over clergy and civil government. Selecting Boniface as one of the chief culprits, Marsilio says that the doctrine of papal plenitude of power was expressed by Boniface "in language as insolent as it is harmful and contrary to the meaning of Scripture, and based upon metaphysical demonstrations."

With regard to the right of appointing bishops and priests, Marsilio holds that it belongs to neither Caesar nor pope, "but rather to the whole body of believers," or to an agency set up by this body for the purpose. As to the rank and status of priests, "all bishops are of equal authority immediately through Christ, nor can it be proved by divine law that there is any superiority or subjection among them in spiritual or temporal affairs." The functions of the priesthood in the church, and it has none outside the church, are administration, teaching, and worship; but—and this is one of the main principles of Marsilio's political theory—the priests, the *church*, have *no coercive authority*, spiritual or temporal, over either clergy or laymen.

Marsilio adds the bold thought that the church has even no coercive authority over heretics. If heresy be a sin, it can—like all violations of divine law—be judged and punished on the day of judgment in the next world; if heresy be a civil offense, it must first be so declared by the secular government, and in this event the purpose is not to save souls but to protect secular interests, such as the unity of the state. If there are to be any penalties for heresy, they are to be fixed by secular authorities and meted out by them. However, Marsilio is not certain that heresy is really a moral offense, but he does not examine the matter in any great detail. He is primarily concerned with destroying the claim of the church to coercive authority, and he deliberately picks an extreme instance to illustrate his argument.

For practical purposes the church becomes, according to Marsilio, a department of the state, and he goes so far as to say that only the civil government has the authority to regulate the number of churches and temples, priests, and ministers. Because teaching has always been claimed by the church as its own domain, Marsilio specifically emphasizes that no license for the public teaching or practice of any art or discipline can be granted by bishops collectively or individually; only the civil government has this authority. Marsilio also recalls that Christ himself had no ambition for secular rule or property, and he therefore admonishes the church, in the Franciscan and Dantean tradition, to return to the original ways of Christianity. Existent church property should be used only for the maintenance of priests and "other gospel ministers," for divine worship, and for the aid of the needy and helpless poor. Whatever church property remains over and above such uses may be appropriated by the state "for the common or public welfare and protection."

Marsilio calls his treatise *The Defender of Peace* because he sees the task of civil government primarily as one of peace. In addition to the older causes of social unrest and discord known to Aristotle and other masters of political thought there is a new element, not known to Aristotle, that produces civil discord and intransquility, and this new cause "is the belief, desire, and undertaking whereby the Roman bishop and his clerical coterie, in particular, are aiming to seize secular rulerships and to possess excessive temporal wealth." The indictment of the church on these two major grounds was to become one of the driving forces that led, first, to reform movements within the church and, later, to schism and separation in the Protestant Reformation.

In matters of religious faith and doctrine generally, Marsilio believes only in the truth of divine Scriptures, not in the additions and accretions of papal decrees and pronouncements. If the divine law is open to different interpretations, such interpretations may be made only by the general council of the believers, and "no partial group or particular individual, whatever his status, has the authority to make such definitions." Marsilio's insistence on the return to the Scriptures as the sole source of religious faith and divine law, his ruthless demolition of the edifice of dogma and power built up by the church over centuries of institutional growth, is one of the early winds that finally gathered in the hurricane of the Protestant Reformation.

Despite his intense concern with church problems, Marsilio is essentially skeptical in matters of faith and religion. His doctrine leads, not to the Protestant state of Luther or Calvin, but to the secular, national, lay state of Machiavelli. Unlike Dante, whose political conceptions centered on the typically medieval image of universal empire, Marsilio shows no great interest in the issue of world government. He briefly notes that mankind is divided into different societies with diverse languages, religions, manners, and customs, and that—in the light of the needs of his time—separate governments suffice for the quiet living together of men in this world. When the conception of the secular national state as the largest sovereign unit displaced the idea of universal papal and imperial authority, the Middle Ages came to a close.

MARSILIO OF PADUA

The Defender of Peace *

FORMS OF GOVERNMENT

There are two genera of ruling parts or governments, one well-tempered, the other diseased. With Aristotle in the *Politics*, Book III, Chapter 5, I call that genus *well-tempered* in which the ruler governs for the common benefit, in accordance with the will of the subjects; while the *diseased* genus is that which is deficient in this respect. Each of these genera, again, is divided into three species: the temperate into kingly monarchy, aristocracy, and polity; the diseased into the three opposite species of tyrannical monarchy, oligarchy, and democracy. And each of these again has subspecies, the detailed discussion of which is not part of our present task.

To obtain a fuller conception of these species of government, which is necessary for the clear understanding of what follows, let us define each species in accordance with the view of Aristotle. A *kingly monarchy* then, is a temperate government wherein there is a single ruler who aims at the common benefit, and in accordance with the will or consent of the subjects. *Tyranny*, its opposite, is a diseased government wherein there is a single ruler who aims at his own benefit apart from the will of his subjects. *Aristocracy* is a temperate government in which the honorable class

[*honorabilitas*] alone rules in accordance with the will or consent of the subjects and for the common benefit. *Oligarchy*, its opposite, is a diseased government in which some of the wealthier or more powerful rule for their own benefit apart from the will of the subjects. A *polity*, although in one sense it is something common to every genus or species of regime or government, means in another sense a certain species of temperate government, in which every citizen participates in some way in the government or in the deliberative function in turn according to his rank and ability or condition, for the common benefit and with the will or consent of the citizens. *Democracy*, its opposite, is a government in which the masses [*vulgus*] or the multitude of the needy establish the government and rule alone, apart from the will or consent of the other citizens and not entirely for the common benefit according to proper proportion.

As to which of the temperate governments is best or which of the diseased governments is worst, and the relative goodness or badness of the other species, the discussion of these points is not part of our present concern. Let it suffice to have said this much about the division of governments into their species and the definition of each.

To make clearer these concepts of Aristotle, and to summarize all the methods of establishing the other kinds of government, we shall say that every government is over either voluntary or invol-

untary subjects. The first is the genus of well-tempered governments, the second of diseased governments. Each of these genera is divided into three species or kinds. And since one of the species of well-tempered government, and perhaps the more perfect, is kingly monarchy, let us resume our previous statements about its various kinds or methods, by saying that the king or monarch either is named by the election of the inhabitants or citizens, or duly obtains the rulership without their election. If without the election of the citizens, this is either because he or his ancestors first inhabited the region, or because he bought the land and jurisdiction, or acquired it by a just war, or by some other lawful method, such as by gift made to him for some great service. Each of these kinds of monarchy participates so much the more in true kingship, the more it is over voluntary subjects and according to law made for the common benefit of the subjects; and it savors so much the more of tyranny the more it departs from these features, i.e., the consent of the subjects and law established for their common benefit. Hence it is written in the *Politics*, Book IV, Chapter 8: "These monarchies were kingly because they were according to law, and ruled voluntary subjects; but they were tyrannical because they ruled despotically and in accordance with their [i.e., the monarchs'] own judgment." These two features, then, distinguish temperate from diseased government, as is apparent from the clear statement of Aristotle, but absolutely or in greater degree it is the consent of the subjects which is the distinguishing criterion. Now if the ruling monarch is elected by the inhabitants, it is either with all his posterity succeeding him or not. If the latter, this may be in several ways, as he is named either for his own lifetime alone, or for his own lifetime and that of one or more of his successors, or not for the whole lifetime either of himself or of any of his successors but only for some determinate period, such as one or two years, more or less. Again, he is named to exercise either

every judicial office, or only one office such as leading the army.

The elected and the non-elected kingly monarchs agree in that each rules voluntary subjects. They differ, however, in that the non-elected kings rule less voluntary subjects, and by laws which are less politic for the common benefit, as we said before in the case of the barbarians. The elected kings, on the other hand, rule more willing subjects, and by laws which are more politic, in that they are made for the common benefit.

From these considerations it is clear, and will be even more apparent in the sequel, that the elected kind of government is superior to the non-elected. This is also the view of Aristotle in that passage of the *Politics*, Book III, Chapter 8, which we cited above with reference to those who were made rulers in the heroic days. Again, this method of establishing governments is more permanent in perfect communities. For at some time or other it becomes necessary to have recourse to this from among all the other methods of establishing governments, but not conversely. For example, if hereditary succession fails, or if for some reason the multitude cannot bear the excessive malice of that family's rule, they must then turn to the method of election, which can never fail so long as the generation of men does not fail. Moreover, by the method of election alone is the best ruler obtained. For it is expedient that the ruler be the best man in the polity, since he must regulate the civil acts of all the rest.

The method of establishing the other species of temperate government is usually election; in some cases the ruler is chosen by lot, without subsequent hereditary succession. Diseased governments, on the other hand, are usually established by fraud or force or both.

AUTHORITY BASED ON ELECTION

We must next discuss that efficient cause of the laws which is capable of being

* From Marsilio of Padua, *The Defender of Peace* (1324; trans. Alan Gewirth, Columbia University Press, 1952). By permission.

demonstrated. For I do not intend to deal here with that method of establishing laws which can be effected by the immediate act or oracle of God apart from the human will, or which has been so effected in the past. It was by this method, as we have said, that the Mosaic law was established; but I shall not deal with it here even insofar as it contains commands with regard to civil acts for the status of the present world. I shall discuss the establishment of only those laws and governments which emerge immediately from the decision of the human mind.

Let us say, to begin with, that it can pertain to any citizen to discover the law taken materially and in its third sense, as the science of civil justice and benefit. Such inquiry, however, can be carried on more appropriately and be completed better by those men who are able to have leisure, who are older and experienced in practical affairs, and who are called "prudent men," than by the mechanics who must bend all their efforts to acquiring the necessities of life. But it must be remembered that the true knowledge or discovery of the just and the beneficial, and of their opposites, is not law taken in its last and most proper sense, whereby it is the measure of human civil acts, unless there is given a coercive command as to its observance, or it is made by way of such a command, by someone through whose authority its transgressors must and can be punished. Hence, we must now say who has the authority to make such a command and to punish its transgressors. This, indeed, is to inquire into the legislator or the maker of the law.

Let us say, then, in accordance with the truth and the counsel of Aristotle in the *Politics*, Book III, Chapter 6, that the legislator, or the primary and proper efficient cause of the law, is the people or the whole body of citizens, or the weightier part thereof, through its election or will expressed by words in the general assembly of the citizens, commanding or determining that something be done or omitted with regard to civil human acts

under threat of temporal punishment. By the *weightier part* I mean to take into consideration the quantity and the quality of the persons in that community over which the law is made. The aforesaid whole body of citizens or the weightier part thereof is the legislator regardless of whether it makes the law directly by itself or entrusts the making of it to some person or persons, who are not and cannot be the legislator in the absolute sense, but only in a relative sense and for a particular time and in accordance with the authority of the primary legislator. And I say further that the laws and anything else established through election must receive their necessary approval by that same primary authority and no other, whatever be the case with regard to certain ceremonies or solemnities, which are required not for the being of the matters elected but for their well-being, since the election would be no less valid even if these ceremonies were not performed. Moreover, by the same authority must the laws and other things established through election undergo addition, subtraction, complete change, interpretation, or suspension, insofar as the exigencies of time or place or other circumstances make any such action opportune for the common benefit. And by the same authority, also, must the laws be promulgated or proclaimed after their enactment, so that no citizen or foreigner who is delinquent in observing them may be excused because of ignorance.

A citizen I define in accordance with Aristotle in the *Politics*, Book III, Chapters 1, 3, and 7, as one who participates in the civil community in the government or the deliberative or judicial function according to his rank. By this definition, children, slaves, foreigners, and women are distinguished from citizens, although in different ways. For the sons of citizens are citizens in proximate potentiality, lacking only in years. The weightier part of the citizens should be viewed in accordance with the honorable custom of politics or else should be determined in

accordance with the doctrine of Aristotle in the *Politics*, Book VI, Chapter 2.

Having thus defined the citizen and the weightier part of the citizens, let us return to our proposed objective, namely, to demonstrate that the human authority to make laws belongs only to the whole body of the citizens or to the weightier part thereof. Our first proof is as follows. The absolutely primary human authority to make or establish human laws belongs only to those men from whom alone the best laws can emerge. But these are the whole body of the citizens, or the weightier part thereof, which represents that whole body; since it is difficult or impossible for all persons to agree upon one decision, because some men have a deformed nature, disagreeing with the common decision through singular malice or ignorance. The common benefit should not, however, be impeded or neglected because of the unreasonable protest or opposition of these men. The authority to make or establish laws, therefore, belongs only to the whole body of the citizens or to the weightier part thereof.

The first proposition of this demonstration is very nearly self-evident, although its force and its ultimate certainty can be grasped from what has been said earlier. The second proposition, that is, that the best law is made only through the hearing and command of the entire multitude, I prove by assuming with Aristotle in the *Politics*, Book III, Chapter 7, that the best law is that which is made for the common benefit of the citizens. As Aristotle said: "That is presumably right [i.e., in the laws] which is for the common benefit of the state and the citizens." But that this is best achieved only by the whole body of the citizens or by the weightier part thereof, which is assumed to be the same thing, I show as follows: that at which the entire body of the citizens aims intellectually and emotionally is more certainly judged as to its truth and more diligently considered as to its common utility. For a defect in some proposed law can be better noted

by the greater number than by any part thereof, since every whole, or at least every corporeal whole, is greater in mass and in virtue than any part of it taken separately. Moreover, the common utility of a law is better considered by the entire multitude, because no one knowingly harms himself. Anyone can look to see whether a proposed law leans toward the benefit of one or a few persons more than of the others or of the community, and can protest against it. Such, however, would not be the case were the law made by one or a few persons, considering their own private benefit rather than that of the community.

Another argument to the principal conclusion is as follows. The authority to make the law belongs only to those men whose making of it will cause the law to be better observed or observed at all. Only the whole body of the citizens are such men. To them, therefore, belongs the authority to make the law. The first proposition of this demonstration is very nearly self-evident, for a law would be useless unless it were observed. Hence Aristotle said in the *Politics*, Book IV, Chapter 6: "Laws are not well ordered when they are well made but not obeyed." He also said in Book VI, Chapter 5: "Nothing is accomplished by forming opinions about justice and not carrying them into effect." The second proposition I prove as follows. That law is better observed by every citizen which each one seems to have imposed upon himself. But such is the law which is made through the hearing and command of the entire multitude of the citizens. The first proposition of this prosyllogism is almost self-evident: "for since the state is a community of free men," as is written in the *Politics*, Book III, Chapter 4, every citizen must be free, and not undergo someone else's despotism, i.e., slavish dominion. But this would not be the case if one or a few of the citizens by their own authority made the law over the whole body of citizens. For those who thus made the law would be despots over the others, and hence such a law,

however good it was, would be endured only with reluctance, or not at all, by the rest of the citizens, the more ample part. Having suffered contempt, they would protest against it, and not having been called upon to make it, they would not observe it. On the other hand, a law made by the hearing or consent of the whole multitude, even though it were less useful, would be willingly observed and endured by every one of the citizens, because then each would seem to have set the law upon himself, and hence would have no protest against it, but would rather tolerate it with equanimity. The second proposition of the first syllogism I also prove in this way: the power to cause the law to be observed belongs only to those men to whom belongs coercive force over the transgressors of the law. But these men are the whole body of citizens, or the weightier part thereof. Therefore, to them alone belongs the authority to make the law.

The principal conclusion is also proved in this way. That practical matter whose proper establishment is of greatest importance for the common sufficiency of the citizens in this life, and whose poor establishment threatens harm for the community, must be established by the whole body of the citizens. But such a matter is the law. Therefore, the establishment of the law pertains to the whole body of the citizens. The major proposition of this demonstration is almost self-evident. For men came together to the civil community in order to attain what was beneficial for sufficiency of life, and to avoid the opposite. Those matters, therefore, which can affect the benefit and harm of all ought to be known and heard by all, in order that they may attain the beneficial and repel the opposite. Such matters are the laws, as was assumed in the minor proposition. For in the laws being rightly made consists a large part of the whole common sufficiency of men, whereas under bad laws there arise unbearable slavery, oppression, and misery of the citizens, the final result of which is that the state is destroyed.

Again, and this is an abbreviation and summary of the previous demonstrations: the authority to make laws belongs only to the whole body of the citizens, as we have said, or else it belongs to one or a few men. But it cannot belong to one man alone, for through ignorance or malice or both, this one man could make a bad law, looking more to his own private benefit than to that of the community, so that the law would be tyrannical. For the same reason, the authority to make laws cannot belong to a few; for they too could sin, as before, in making the law for the benefit of a certain few and not for the common benefit, as can be seen in oligarchies. The authority to make the laws belongs, therefore, to the whole body of citizens or to the weightier part thereof, for precisely the opposite reason. For since all the citizens must be measured by the law in due proportion, and no one knowingly harms or wishes injustice to himself, it follows that all or most wish a law conducing to the common benefit of the citizens.

From these same demonstrations it can also be proved, merely by changing the minor term, that the approval, interpretation, and suspension of the laws pertain to the authority of the legislator alone. And the same must be thought of everything else which is established by election. For the authority to approve or disapprove rests with those who have the primary authority to elect, or with those to whom they have granted this authority of election. For otherwise, if the part could dissolve, by its own authority, what had been established by the whole, the part would be greater than the whole, or at least equal to it.

IS THE MULTITUDE FIT TO RULE?

Objections will be made to our above statements, to the effect that the authority to make or establish laws does not belong to the whole body of the citizens. The first objection is that those who are

vicious and undiscerning in most cases should not make the law. For these two sins, malice and ignorance, must be excluded from the legislator, and it was to avoid them in civil judgments that we upheld the necessity of law. But the people or the whole body of citizens have these sins; for men in most cases seem to be vicious and stupid: "The number of the stupid is infinite," as is said in the first chapter of *Ecclesiastes*. Another objection is that it is very difficult, or impossible, to harmonize the views of many vicious and unintelligent persons; but such is not the case with the few and virtuous. It is more useful, therefore, that the law be made by the few than by the whole body of the citizens or the overwhelming majority of them. Again, in every civil community the wise and learned are few in comparison with the multitude of the unlearned. Since, therefore, the law is more usefully made by the wise and learned than by the unlearned and uncultivated, it seems that the authority to make laws belongs to the few, not to the many or to all. Furthermore, that which can be done by fewer persons is needlessly done by more. Since, therefore, the law can be made by the wise, who are few, as has been said, the entire multitude or the greater part of it would needlessly be occupied therein. The authority to make laws does not belong, therefore, to the whole body of the citizens or the weightier part thereof.

As for the first objection, that the authority to make laws does not belong to those who in most cases are vicious and undiscerning, this we grant. But when it is added that the whole body of citizens is such, this must be denied. For most of the citizens are neither vicious nor undiscerning most of the time; all or most of them are of sound mind and reason and have a right desire for the polity and for the things necessary for it to endure, like laws and other statutes or customs. For although not every citizen nor the greater number of the citizens be discoverers of the laws, yet every citizen can judge of

what has been discovered and proposed to him by someone else, and can discern what must be added, subtracted, or changed. Hence in the major premiss' reference to the *undiscerning*, if what is meant is that those who cannot, in most of their parts or members, discover the law by themselves, ought not to establish the law, this must be denied as manifestly false, as is borne out by sense induction and by Aristotle in the *Politics*, Book III, Chapter 6. By induction we can see that many men judge rightly about the quality of a picture, a house, a ship, and other works of art, even though they would have been unable to discover or produce them. Aristotle also attests to this in the place just cited, answering the proposed objection with these words: "About some things the man who made them is not the only or the best judge." He proves this in many species of arts, and indicates that the same is true for all the others.

Nor is this position invalidated by those who say that *the wise who are few can discern what should be enacted with regard to practical matters better than can the rest of the multitude*. For even if this be true, it still does not follow that the wise can discern what should be enacted better than can the whole multitude, in which the wise are included together with the less learned. For *every whole is greater than its part* both in acting and in discerning.

The second objection carries little weight, for even though it be easier to harmonize the views of fewer persons than of many, it does not follow that the views of the few, or of the part, are superior to those of the whole multitude, of which the few are a part. For the few would not discern or wish the common benefit equally as well as would the entire multitude of the citizens. Indeed, it would be insecure, as we have already shown, to entrust lawmaking to the will of the few. For they would consult therein their own private benefit, as individuals or as a group, rather than the common benefit.

The third objection can be easily refuted from what we have already said: for although the laws can be better made by the wise than by the less learned, it is not therefore to be concluded that they are better made by the wise alone than by the entire multitude of citizens, in which the wise are included. For the assembled multitude of all of these can better discern and desire the common justice and benefit than any part of it taken separately, however prudent that part may be.

Hence those do not speak the truth who hold that the less learned multitude hinders the election and approval of the true or common good; rather, the multitude is of help in this function when it is joined to those who are more learned and more experienced. For although the multitude cannot by itself discover true and useful measures, it can nevertheless discern and judge the measures discovered and proposed to it by others, as to whether they should be added to, or subtracted from, or completely changed, or rejected. For many things which a man would have been unable to initiate or discover by himself, he can comprehend and bring to completion after they have been explained to him by someone else.

It is hence appropriate and highly useful that the whole body of citizens entrust to those who are prudent and experienced the investigation, discovery, and examination of the standards, the future laws or statutes, bearing upon civil justice and benefit, common difficulties or burdens, and other similar matters. Either some of these prudent and experienced men may be elected by each of the primary parts of the state, according to the proportion of each part; or else all these men may be elected by all the citizens assembled together. And this will be an appropriate and useful method whereby to come together to discover the laws without detriment to the rest of the multitude, i.e., the less learned, who would be of little help in the investigation of such standards, and would be dis-

turbed in their performance of the other functions necessary both to themselves and to others, which would be troublesome both to each individual and to the community.

After such standards, the future laws, have been discovered and diligently examined, they must be laid before the assembled whole body of citizens for their approval or disapproval, so that if any citizen thinks that something should be added, subtracted, changed, or completely rejected, he can say so, since in this way the law will be more usefully ordained. For as we have said, the less learned citizens can sometimes perceive something which must be corrected in a proposed law even though they could not have discovered the law itself. Also, the laws thus made by the hearing and consent of the entire multitude will be better observed, nor will anyone have any protest to make against them.

These standards, the future laws, will thus have been made public, and in the general assembly of the citizens those citizens will have been heard who have wanted to make some reasonable statements with regard to them. Then there must again be elected men of the qualities and by the method indicated above, or else the aforesaid men must be confirmed; and they, representing the position and authority of the whole body of the citizens, will approve or disapprove in whole or in part the aforementioned standards which had been investigated and proposed, or else, if it so wishes, the whole body of the citizens or the weightier part thereof will do this same thing. After this approval, the aforesaid standards are laws and deserve to be so called, not before; and after their publication or proclamation, they alone among human commands make transgressors liable to civil guilt and punishment.

We think we have adequately shown, then, that the authority to make or establish laws, and to give a command with regard to their observance, belongs only to the whole body of the citizens or to

the weightier part thereof as efficient cause, or else to the person or persons to whom the aforesaid whole body has granted this authority.

THE ACCOUNTABILITY OF RULERS

We have previously stated that it pertains to the legislator to correct governments or to change them completely, just as to establish them. In this connection, someone may well wonder whether it is expedient that rulers be corrected by coercive judgment and force; and if it is expedient, whether they should be corrected for every kind of excess, or only for some and not for others; also who should make such judgments against the rulers, and execute them by coercive force—for it was said above that it pertains to the rulers alone to issue civil sentences and to punish transgressors of the laws by coercive force.

Let us say that the ruler through his action in accordance with the law and the authority given to him is the standard and measure of every civil act, like the heart in an animal. Now if the ruler received no other form beside the law, and the authority and the desire to act in accordance with it, he would never perform any action which was wrong or corrigible or measurable by someone else. And therefore he and his action would be the measure of every civil act of men other than himself, in such manner that he would never be measured by others, like the well-formed heart in an animal. For since the heart receives no form that inclines it to an action contrary to the action which has to emerge from its natural virtue and heat, it always does naturally the appropriate action and never the contrary. Hence it regulates and measures, through its influence or action, the other parts of the animal, in such manner that it is not regulated by them nor does it receive any influence from them.

But since the ruler is a human being, he has understanding and desire, which

may receive other forms, like false opinion or perverted desire or both, as a result of which he comes to do the contraries of the things determined by the law. Because of these actions, the ruler is rendered measurable by someone else who has the authority to measure or regulate him, or his unlawful actions, in accordance with the law. For otherwise every government would become despotic, and the life of the citizens servile and insufficient. This is an evil to be avoided.

Now the judgment, command, and execution of any correction of the ruler, in accordance with his demerit or transgression, must be done by the legislator, or by a person or persons appointed for this purpose by the authority of the legislator. And it is well to suspend for some time the office of the ruler who is to be corrected, especially in relation to the person or persons who must judge of his transgression, because otherwise there would then be a plurality of governments in the community, from which would result schism, agitation, and fighting; and also because he is corrected not as a ruler but as a subject who has transgressed the law.

Coming now to the questions which were raised above, let us say that the ruler's excess is either grave or slight; it may occur frequently or only rarely; and, it is among the things determined by law or it is not. If the ruler's excess be grave, such as against the commonwealth or against a notable or any other person, from failure to correct which there could likely arise scandal or agitation among the people, then whether the excess be one which occurs frequently or rarely, the ruler must be corrected for it. For if the excess is not avenged, agitation might arise among the people, and upheaval and destruction of the polity. If the excess is determined by law, it must be corrected according to the law; but if not, then it must be corrected according to the sentence of the legislator; and it must be determined by law as much as possible.

If the ruler's excess be small, then its occurrence and its commission by the ruler may be either rare or frequent. If it is rarely committed or rarely capable of being committed by the ruler, then it must be allowed to pass and be glossed over rather than having the ruler corrected for it. For if the ruler is corrected for every small and infrequent excess, he will be made an object of contempt; which will result in no slight harm to the community, since the citizens then exhibit less respect and obedience for the law and the ruler. Again, since the ruler is unwilling to undergo correction for every slight offense, because he will regard this as bringing him into low repute, there will be a possibility of grave scandal. But such a condition must not be stirred up in communities when no evident utility can emerge therefrom, but rather harm.

Such was clearly the view of Aristotle on this question, in the *Politics*, Book II, Chapter 4, where he said: "It is manifest that some errors of both legislators and rulers should be allowed to pass. For he will do less good by making changes than he will do harm by becoming accustomed to rebelling against the rulers." By *legislator* Aristotle meant an established law; and he says that if men have become accustomed to observing it, then it must not be changed in order to make a slight correction in it, but must rather be allowed to pass. For frequent changing of the laws saps their strength, which is the custom of obeying and observing what the laws command. As Aristotle said in the same book and chapter: "The law has no power for persuasion except that of custom," *i.e.*, for the law to be observed by the subjects, the most important factor is custom. And the case is very similar with regard to respecting and obeying the ruler.

But if the ruler's excess, while slight in extent, be capable of frequent occurrence, then it must be determined by law, and the ruler who frequently commits the offense must be given the appropriate punishment. For an offense, however

slight, would be of notable harm to the polity if it were frequently committed, just as small expenses frequently incurred consume a fortune, *i.e.*, in riches. "For the whole sum is not small, although it is made up of small sums" as is written in the *Politics*, Book V, Chapter 4.

Such then are our conclusions concerning the correction of rulers, by whom it should be done, and for what reasons.

THE CHURCH AND COERCIVE AUTHORITY

In this way, then, have the Roman bishops entered upon these affairs: First, under the guise of seeking peace among the Christian believers, they have excommunicated certain men who are unwilling to obey their decree. Then they impose on them penalties both real and personal, more harshly against those who are less able to resist their power, such as communities and individuals among the Italians, whose state, divided and wounded in almost all its parts, can more easily be oppressed, but more mildly against those, like kings and rulers, whose resistance and coercive power they fear. On these latter, however, they are gradually creeping up in the attempt to usurp their jurisdictions, not daring to invade them all at once. Hence their stealthy double-dealing has hitherto been concealed even from the Roman rulers and the peoples subject to them. For the Roman bishops have gradually seized one jurisdiction after another, especially when the imperial seat was vacant; so that now they finally say that they have total coercive temporal jurisdiction over the Roman ruler. Most recently and most obviously, the present bishop has written that he has supreme jurisdiction over the ruler of the Romans, both in the Italian and the German provinces, and also over all the lesser rulers, communities, groups, and individuals of the aforesaid provinces, of whatever dignity and condition they may be, and over all their fiefs and other temporalities. This bishop openly ascribes to himself the power to give and transfer

their governments, as all can clearly see from certain writings of this bishop, which he calls *edicts* or *sentences*.

This wrong opinion of certain Roman bishops, and also perhaps their perverted desire for rulership, which they assert is owed to them because of the plenitude of power given to them, as they say, by Christ—this is that singular cause which we have said produces the intranquillity or discord of the city or state. For it is prone to creep up on all states, as was said in our introductory remarks, and by its hateful action it has for a long time distressed the Italian state, and has kept and still keeps it from tranquillity or peace, by preventing with all its force the appointment or institution of the ruler, the Roman emperor, and his functioning in the said empire. From lack of this function, which is the just regulation of civil acts, there readily emerge injuries and contentions, and these, if not mea-

sured by the standard of justice or law because of the absence of the measurer, cause battles, whence there have resulted the separation of the citizens and finally the destruction of the Italian polities or cities, as we have said. With this opinion, therefore, and perhaps also with what we have called a desire for ruling, the Roman bishop strives to make the Roman ruler subject to him in coercive or temporal jurisdiction, whereas that ruler neither rightly ought to be, nor wishes to be subject to him in such judgment. From this there has arisen so much strife and discord that it cannot be extinguished without great effort of souls and bodies and expenditure of wealth. For the office of coercive rulership over any individual, of whatever condition he may be, or over any community or group, does not belong to the Roman or any other bishop, priest, or spiritual minister, as such.

MACHIAVELLI

Only in fifth-century Athens has the world seen the dazzling artistic brilliance and intellectual vitality that characterized the Renaissance. The rebirth and rediscovery of antiquity were both cause and effect: on the one hand, the Renaissance helped to revive the rational, this-worldly, secular, scientific spirit that had lain dormant through many centuries of medieval encasement; on the other hand, the Renaissance was itself the effect of man's growing restlessness as well as of changing social and technological conditions. In particular, printing destroyed the monopoly of knowledge that the clergy had enjoyed for a thousand years, and gunpowder destroyed the military monopoly of the nobility. Like travelers who return from their journey with their prejudices confirmed and strengthened, the men of the Renaissance, in traveling to the remote centuries of classical Greece and Rome, found what they looked for—an exciting world, the image of which had guided them on their voyage.

The most important discovery of the Renaissance—more significant than any single work of art or any one genius—was the *discovery of man*. In antiquity the sense of tribal kinship had not favored the growth of individualism, of isolation from the community. Stoicism and Christianity had been the first to contribute new and lasting elements to a conception of individuality: Stoicism, by stressing the idea of moral selfhood and responsibility, and Christianity, by insisting that man's innermost reality, his soul, was outside the sphere and jurisdiction of mundane authority, and that his salvation depended ultimately on his own decisions, his own works. But the social system of the Middle Ages, built on status and custom, discouraged the mobility and change that favor individualistic attitudes; it emphasized instead the class or group to which a person belonged. The Renaissance goes beyond the moral selfhood of Stoicism, the spiritual uniqueness of Christianity, the aesthetic individuality of the ancient Greeks, and views man in his totality, in his flesh and blood as well as in his mind and spirit—man in relation to himself, to society, to the world. Displacing God, *man* becomes the *center of the universe*; the values of this new solar system are inevitably different from those of the God-centered universe.

The Renaissance was the confluence of many streams and tributaries, yet the Italian share was predominant from beginning to end. Italy had never lost living contacts with its ancient past: the country was full of splendid cities founded in

antiquity, it abounded in relics and monuments of past glories, and the language was still the language (with some minor changes) of Caesar and Cicero. The dead hand of uniformity had never lain as heavily on Italy as on other European countries in the Middle Ages, and the feudal system never permeated it as it did, for example, France, England, and Germany. Italy remained the only major area in which a vigorous communal life had weathered the storms of wars and invasions, and its city-states were for a long time islands of individualistic republicanism in a sea of European monarchical loyalties. The virtual destruction of the German empire as a world power by the papacy in the thirteenth century, and the later enslavement of the papacy to the French monarchy in the fourteenth century, gave the independent Italian city-states new opportunities for self-affirmation and increased self-confidence. Leadership in international trade, business, and finance made numerous Italian cities wealthy and prosperous, and provided the economic means for the literary, artistic, and scholarly activities of a new elite.

Among the centers of the Renaissance, Florence was always first, reaching its climax in Leonardo da Vinci (1452–1519), who most perfectly represented, and lived, the Renaissance ideal of *universal man*, creative in painting and the arts, inventive in science and engineering, and accomplished in philosophy and letters. In the study of politics, the New Learning finds its clearest expression in Niccolò Machiavelli (1469–1527).

At the age of twenty-nine Machiavelli entered the public service of his city, and there he remained for fourteen years. Although not employed on the highest levels of policy making, he was close enough to the inner circles of the administration to acquire firsthand knowledge of the mechanics of politics. Florence was at that time an independent republic, and Machiavelli was frequently sent on diplomatic missions to other Italian states and to great foreign powers like France and Germany. In 1512 he lost his job when the republican government, based on French support, was replaced by the absolutist regime of the Medici, who had been restored to power with papal help. Machiavelli was accused of serious crimes and tortured, but he was found innocent and banished to his small farm near Florence.

It was in such enforced leisure that he wrote *The Prince* (1513). The book was dedicated to Lorenzo di Medici, and Machiavelli fulsomely praised the dynasty that stood for the exact opposite of his erstwhile republican sentiments. He even hoped to have his political conversion rewarded by an opportunity to serve the new antirepublican regime, but in this expectation he failed. The further imposed idleness gave him enough time to work on his most elaborate political book, *The Discourses on the First Ten Books of Titus Livius* (1521). Taking Roman history as a starting point, *The Discourses* attempts to dissect the anatomy of the body politic, and on a much more philosophical and historical foundation than that of *The Prince*. *The Discourses* is interesting because Machiavelli affirms in it his republican sentiment; yet this personal preference does not alter his basic views on the process of politics, regardless of the form of its constitution, republican or despotic.

For all its breadth and elaborateness, and frequent depth and penetration, *The Discourses* is of interest primarily to students of political philosophy, whereas *The Prince*, pithy, shocking, persuasive, provocative, hard-hitting, is destined to

remain one of the half-dozen political writings that have entered the general body of world literature. It is a reflection not only of man's political ambitions and passions but of man himself. If Machiavelli had painted, in medieval fashion, the devils who inhabit hell, his impact would have been much less intense on his contemporaries and on posterity. What Machiavelli did, however, was to portray something worse, real human beings; the shock of recognition has created around his work an aura of mixed horror and fascination, and it is hard to tell what is the stronger.

The most revolutionary aspect of *The Prince* is not so much what it says as what it ignores. Before Machiavelli, all political writing—from Plato and Aristotle through the Middle Ages to the Renaissance—had one central question: the *end of the state*. Political power was assumed to be a means only—a means in the service of higher ends, such as justice, the good life, freedom, or God. Machiavelli ignores the issue of the end of the state in extrapolitical (ethical, religious, cultural) terms. He assumes that *power is an end in itself*, and he confines his inquiries into the *means* that are best suited to *acquire, retain, and expand power*. Machiavelli thus separates power from morality, ethics, religion, and metaphysics, and sets up the *state* as an *autonomous system of values* independent of any other source.

If he follows the value system of the state, the statesman may violate other value systems, such as religion, ethics, or morality. Machiavelli thus develops the idea of the *reason of state*, under which many acts are permissive, even obligatory, that would be considered heinous crimes if judged in the court of religion or morality. Machiavelli does not assert that ethics and morality as such are inferior to the precepts of power, the reason of state; from a general, theoretical viewpoint, the canons of power and the tenets of morality are independent of each other. When it comes to practical collisions, it depends on who faces the alternatives. The moralist will recognize the supremacy of his moral code over competing systems of values. The ecclesiastic will not admit a rival to his religious code. Similarly, the statesman will be guided solely by the precepts of his code, whose end—the acquisition, retention, and expansion of power—is different from other codes, and whose means are therefore different, too.

In the actions of rulers “the end justifies the means. Let a prince therefore aim at conquering and maintaining the state, and the means will always be judged honourable and praised by every one.” In *The Discourses*, Machiavelli defines the reason of state even more clearly: “For where the very safety of the country depends upon the resolution to be taken, no consideration of justice or injustice, humanity or cruelty, nor of glory or of shame, should be allowed to prevail. But putting all other considerations aside, the only question should be: what course will save the life and liberty of the country?”

Machiavelli never praises immorality for its own sake; his basic attitude is not one of nihilism: he neither assumes that there are no values in this world, nor wishes to create a world in which all values would be destroyed. Machiavelli is aware that civilization implies some sort of values. His *amorality* implies therefore, not the denial of moral values in all situations, but the affirmation that, in the specific situation of the statesman, the rules of power have priority over those of ethics and morality.

Machiavelli did not invent political murder, treachery, and fraud. But before his time such crimes were committed *de facto*, and no attempt was made to

integrate them into a moral world of their own. The traditional reaction to political immorality had been either one of polite neglect, half-hearted excuse, or, at best, severe censure of individual violations of ethics and morality. The sanctity and inviolability of the moral code seemed, before Machiavelli, in no way impaired by the regrettable exceptions to the rule, regardless of how frequent they were. In Machiavelli, the traditional attitude of polite neglect and hypocritical, or sincere, regret is replaced by the positive affirmation that the reason of state is for the statesman the determining code of conduct, and that statecraft constitutes a value system of its own which is different from that of ethics and religion. What is evil from the viewpoint of morality and religion may therefore be good from the viewpoint of the reason of state, if it serves to acquire, retain, or expand power.

Good and evil are thus reduced from absolute to *relative* categories, and it depends on the basic assumption of a system of values whether a particular action is good or bad. If the basic assumption and objective of conduct is friendship, service, fellowship, justice, or God, the individual action will be judged good or bad to the extent that it agrees with, or deviates from, such assumptions and goals. If, as for the ruler, the basic assumption is power, the decision as to whether a particular action is good or bad will depend on the extent to which it furthers the gain, retention, and growth of power. In this sense the use of poison may be called “good” if it does a good job in eliminating a political opponent, perhaps by acting slowly and imperceptibly so that the author of the crime cannot be easily detected. The attribution of “goodness” to poison in a specific case of political necessity does not imply a general justification for the use of poison. Assuming *power as the end of politics, goodness thus coincides with efficiency*: an efficient means of acquiring, consolidating, and expanding power is good; an inefficient means, bad.

Efficiency in politics is thus analogous to virtue in morals or religion, and inefficiency replaces the concept of sin. Machiavelli still uses the term “virtue” (*virtù*), but its meaning is different from, and even antithetical to, the Christian concept of virtue. As in so many other cases, Machiavelli—in typical Renaissance fashion—uses the term *virtù* in its original Roman meaning, and even adds some shades of meaning of his own. In classical, pre-Christian, Rome *virtus* (deriving from *vir*, man) meant “manliness,” that is, military courage and intelligence combined with civic responsibility and personal integrity. In later Christian usage, “virtue” entirely lost its military connotation, and Christian virtue stood for humility and cheerful acceptance of suffering, and even female chastity, rather than for manly self-assertion. But even the classical Roman element of civic integrity in the concept of virtue was transformed by Christianity into religious and moral integrity, concerned above all with limitless faith in God and his commands rather than with the practice of political participation. Machiavelli goes back to the original pagan meaning of Roman virtue, but expands and adapts it to his thought and to the restless and violent world he lives in. Virtue for Machiavelli means *military valor*, and appropriately, therefore, the most comprehensive analysis of *virtù* is to be found in his *Art of War* (1521), although he frequently uses the concept in many of his other works, including *The Prince* and *The Discourses*.

Yet, as Machiavelli sees it, the quality of military valor is required in actual warfare as well as in extreme political crisis situations of acquiring,

consolidating, and expanding of power, for in such conditions the boundary between conflict and peace, between chaos and stability is largely blurred. In such crisis situations, whether of actual warfare or of decisive political conflict, the concept of virtue implies the ability to understand reality and to adapt action to reality in a flexible and non-ideological, nondogmatic manner. This is the element of *prudence* in Machiavelli's concept of virtue, replacing the Roman quality of civic integrity and the Christian element of religious and moral loyalty in the pre-Renaissance and pre-Machiavellian meaning of virtue.

As in so many other areas of his thought, Machiavelli is more interested in means than in ends; in politics, for example, the end—the acquiring, consolidating, and expanding of power—is presumed to be naturally inherent in the ruler or would-be ruler, and need not be further argued. What captures Machiavelli's intellectual curiosity and literary imagination is the problem of technical skill of ruling, the ability of the leader to fight his way into political power by forcible or other means, coupled with the ability to “stay in business” and to expand his power. Consequently, when Machiavelli applies the term “virtue” (*virtù*) to the successful ruler, he means the ambitious, ruthless, crafty, successful ruler, and not the ruler who is a regular churchgoer, mindful of other men's wives, and generally a practicing moralist. In typical Renaissance style, Machiavelli even sees “grandeur” in elegant and magnificent crimes; this concept of an elegant or beautiful crime would have been unthinkable before a collapse of traditional standards of ethics.

Machiavelli's attitude to the Borgias is a revealing illustration of his more abstract concepts. Cardinal Rodrigo Borgia had four living children, three sons and one daughter, when he became pope in 1492 and assumed the name of Alexander VI. He appointed two of his sons as cardinals, and when he was away from Rome in 1501, he left his daughter, Lucrezia, in charge of the Vatican. Alexander VI had his personal hangman and poisoner. The latter, in particular, was constantly busy, and his victims included several cardinals. Alexander VI was one of the men whom Machiavelli most admired, and he writes of him as follows: “Alexander VI did nothing else but deceive men, he thought of nothing else, and found the occasion for it; no man was ever more able to give assurances, or affirmed things with stronger oaths, and no man observed them less; however, he always succeeded in his deceptions, as he well knew this aspect of things.”

If Machiavelli admired Alexander VI, then he idolized his son, Caesar Borgia, Caesar assassinated his older brother and murdered the husband of his sister Lucrezia—hardly a typical family idyll of the Renaissance. The number of his other assassinations is legion, and his cruelty was matched only by his treachery and debauchery. Machiavelli knew Caesar Borgia personally and was fully aware of his criminal record. Yet it is generally believed that Caesar Borgia was Machiavelli's model in writing *The Prince*; certainly he is held up “as an example to be imitated by all who by fortune and with the arms of others have risen to power,” and “one can find no better example than the actions of this man.” Machiavelli had only one fault to find with Caesar Borgia: that he allowed, after the death of his father, Alexander VI, the election of Julian II as pope, because Julian was an enemy of the Borgias. What Machiavelli criticized in the career of his most admired hero was his one failure and not his life of crime.

Machiavelli's views on morals and religion illustrate his belief in the supremacy of power over other social values. He has no sense of religion as a deep personal experience, and the mystical element in religion—its supranatural and suprarational character—is alien to his outlook. Yet he has a positive attitude toward religion; albeit his *religion* becomes a *tool of influence and control* in the hands of the ruler over the ruled. Machiavelli sees in religion the poor man's reason, ethics, and morality put together, and “where religion exists it is easy to introduce armies and discipline.” From his reading of history, however, Machiavelli is led to the generalization that “as the observance of divine institutions is the cause of the greatness of republics, so the disregard of them produces their ruin.” The fear of the prince, Machiavelli adds, may temporarily supplant the fear of God, but the life of even an efficient ruler is short.

The role of religion as a mere instrument of political domination, cohesion, and unity becomes even clearer in Machiavelli's advice that the ruler support and spread religious doctrines and beliefs in miracles *that he knows to be false*. The main value of religion to the ruler lies in the fact that it helps him to keep the people “well conducted and united,” and from this viewpoint of utility it makes no difference whether he spreads among them true or false religious ideas and beliefs.

Machiavelli's interest in Christianity is not philosophical or theological, but purely pragmatic and political. He is critical of Christianity because “it glorifies more the humble and contemplative men than the men of action,” whereas the Roman pagan religion “deified only men who had achieved great glory, such as commanders of republics and chiefs of republics.” Christianity idealizes, Machiavelli charges, “humility, lowliness, and a contempt for worldly objects,” as contrasted with the pagan qualities of grandeur of soul, strength of body, and other qualities that “render men formidable.” The only kind of strength that Christianity teaches is fortitude of soul in suffering; it does not teach the strength that goes into the achievement of great deeds.

Concerning the church, Machiavelli preferred two main charges. First, he states that the Italians have become “irreligious and bad” because of the “evil example of the court of Rome.” The second and more serious accusation is that the church “has kept and still keeps our country divided.” He goes on to say that the sole cause of Italian political disunity is the church. Having acquired jurisdiction over a considerable portion of Italy, “she has never had sufficient power or courage to enable her to make herself sole sovereign of all Italy.” Though Machiavelli hated the papacy, he nevertheless would have been happy to see the papacy govern all Italy if her unity could not be attained by any other means. What Machiavelli primarily reproaches the papacy for is not its record of crime and iniquity but its political failure to rule the whole country.

The clue to Machiavelli is his *pessimism*. The pessimist sees mankind as essentially unchangeable, incapable of progressive improvability, and he denies that reason can cope with the hard and limiting facts of nature and history. By contrast, the optimist believes that man is improvable, that progress is possible, and that the chains of nature and history can be relaxed by the liberating and uplifting force of reason. Whereas the pessimist tends to look into the *past* and is primarily conscious of what *has* happened, the optimist looks into the *future* and wonders what *might* happen.

Machiavelli's pessimism is reflected in his conviction that moral considerations may be laudable in themselves (and in this he is less of a nihilist than the later nihilists and Machiavellians), but that the statesman cannot afford the luxury of practicing morality: "For how we live is so far removed from how we ought to live, that he who abandons what is done for what ought to be done, will rather learn to bring about his own ruin than his preservation." In the struggle between rulers, Machiavelli says, "there are two methods of fighting, the one by law, the other by force: the first method is that of men, the second of beasts; but as the first method is often insufficient, one must have recourse to the second. It is therefore necessary for a prince to know well how to use both the beast and the man."

Specifically, the ruler must imitate the fox and the lion, "for the lion cannot protect himself from the traps, and the fox cannot defend himself from wolves."

Should a ruler keep faith? This is Machiavelli's most famous question, and his answer to it is the best-known passage in *The Prince*. He admits that everybody knows how "laudable" it is for a ruler to keep faith. However, in the world of actual politics such laudable intentions may be irreconcilable with expediency and interest: "Therefore, a prudent ruler ought not to keep faith when by doing so it would be against his interest, and when the reasons which made him bind himself no longer exist. If men were all good, this precept would not be a good one; but as they are bad, and would not observe their faith with you, so you are not bound to keep faith with them."

Machiavelli thus takes a radically pessimistic view of human nature, and his psychological outlook is intimately related to his political philosophy. The theological conception of man's depravity, one of the central doctrines of the Reformation, must also have influenced Machiavelli and his contemporaries. Indeed, the political methods of the Renaissance were not known for their humanitarian mellowness. Death by poison and the silent dagger was a mere technical detail in the efficient execution of a political program, and there was little difference between kings and popes, princes and bishops. As a result, it was perhaps not unnatural for Machiavelli, as for many of his contemporaries, to take a dim view of human nature in general, and of human nature in the struggle for power in particular. Such skepticism easily developed into pessimism and outright cynicism.

Unlike later Machiavellians, Machiavelli himself was saved from extremism by prudence and moderation. In both *The Prince* and *The Discourses* there are numerous passages in which Machiavelli counsels rulers to be temperate, not to be uselessly cruel or arrogant, "for to incur hatred without any advantage is the greatest temerity and imprudence." The ruler should not use threats or insults, because neither diminishes the strength of the enemy but makes him only more cautious and disposed to hate. Machiavelli's rational skepticism, his horror of panaceas and cure-alls, his moderation and relativism, are apparent in his warning that no state should believe "that it can always follow a safe policy, rather let it think that all are doubtful. This is found in the nature of things, that one never tries to avoid one difficulty without running into another, but prudence consists in being able to know the nature of the difficulties, and taking the least harmful as good."

Machiavelli's sense of the complexity of human affairs, his realization that no policy can ever assure absolute safety, and his understanding that in practical

politics the choice is often between a larger and a lesser evil rather than between evil and good—all these insights are intimately linked to the absence of ideological passion and fanaticism in his thought and feeling. What in some respects is the least satisfactory element in Machiavelli's thought—his scant concern for ends—is in other respects a source of strength which saves him from the excesses of ideological passion, in which hypocrisy easily mixes with cruelty. *Ideology* is essentially *idea* (or ideas) *in the service of interest*, and to cover up this simple relation, ideologists rationalize, justify, obfuscate, and in extreme cases prevaricate and lie. Machiavelli's lack of commitment to ideological simplification and passionate abstraction is a built-in stabilizing and moderating force in his outlook. By contrast, this stabilizing element was lacking in some later self-styled Machiavellians who combined Machiavellian means with un-Machiavellian ends.

Machiavelli's fine *sense of the possible* makes his thought utilitarian, experimental, and relativistic. This basic quality—if not scientific in a strict sense—nevertheless partakes of one important aspect of science: empiricism, or the refusal to accept any solution as final.

Where Machiavelli is least scientific is where he thinks himself most scientific: in his belief that his analysis of power is based on solid facts of historical experience, that the record of man's behavior proves him a depraved and wily creature, and that a realistic theory of power must be based on such a pessimistic view of man. If Machiavelli's pessimism is the clue to his political philosophy, the weakness of his theory must be sought in his psychological conceptions. In detail a moderate, Machiavelli is an extremist when it comes to the whole. His doctrine of the badness of man is just as much an unscientific oversimplification as is the opposite extreme of the goodness of man. Man is somewhere between *angel and beast*; but Machiavelli says that the ruler is somewhere between *man and beast*, and that he "must know how to use both natures, and that the one without the other is not durable."

It would not be difficult to prove that human history has as much evidence of human goodness as of wickedness. It is a matter of ultimate—unprovable—personal philosophy of history whether one is more impressed by man's goodness than by his badness. But it is not sound philosophy of history, and still less is it sound science of politics, to reduce all history to one common denominator, be it goodness or badness.

Like other "realists" after him, Machiavelli identifies all too readily naked power politics with the whole of political reality, and he thus fails to grasp that ideas and ideals, if properly mobilized, can become potent facts, even decisive weapons, in the struggle for political survival. History is a vast graveyard filled with self-styled "realists" like Napoleon, Hitler, and Mussolini. They all underestimated the important imponderables in the equation of power and missed, in particular, the one component that in the end proved decisive: the will of man to be free, to put freedom above all other goods, even above life itself.

Machiavellian "realists" are usually realistic and rational in the choice of means with which they carry out their schemes of aggrandizement and expansion. But of what use is realism of means, if the ends themselves are utterly megalomaniac and unrealistic? Because Machiavelli was interested only in the means of acquiring, retaining, and expanding power, and not in the end of the state, he remained unaware of the *relations between means and ends*. Ends lead

no existence apart from means but are continuously shaped by them. In the short run this inner connection may be concealed, but in the long run no great end can be accomplished by small means. The question, therefore, whether the political techniques and methods in *The Prince* are realistic even from the viewpoint of power cannot be separated from the still more basic issue of the end of power, inasmuch as the nature of the end determines the means most suited to it.

As one examines the references to rulers in *The Prince* more closely, one finds that Machiavelli was not interested in all forms of state, nor in all forms of power. What fascinated him above all was the *dynamics of illegitimate power*; he was little interested in states whose authority was legitimate, as in hereditary monarchies, but was primarily concerned with "new dominions both as to prince and state." He realized that "there is nothing more difficult to carry out, nor more doubtful of success, nor more dangerous to handle, than to initiate a new order of things." His primary concern with founders of new governments and states illuminates his attitude on the use of unethical means in politics. The "founders" of new states are, in effect, revolutionaries, and it is inevitable that in *reducing politics to war and revolution*, one arrives at an outlook in which the extraordinary becomes the ordinary, the abnormal the normal.

Because of his admiration for the outstanding man (and only outstanding men can successfully found "new dominions"), Machiavelli was little interested in the *institutional* framework of politics. He realized that in a period of institutional stability there is less need for the adventurer. In fact, as Machiavelli clearly sees, democrats hate war and revolution: the normal restraints and deficiencies are then imperiled by the necessity for sheer physical survival, and the habits of institutional stability are more easily subverted than in normal peacetime. The democratic theory of politics therefore tends to stress more the institutional framework of power than unique leader personalities, peace rather than war and revolution. Democrats have learned from long and painful experience that kindness and decency flourish best in peaceful societies in which stable and just institutions make it difficult for lawless adventurers to thrive.

To the extent that democracies succeed in creating such societies, Machiavelli is wrong. To the extent that they fail, he is right. The ultimate commentary on *The Prince* is not in logic or morality, but in experience and history. Machiavelli laid bare the springs of human motivation with consummate and ruthless insight. It is hard to tell, in reading him, whether we shudder more when he tells the truth about human conduct, or more when he distorts the truth. He has, unwittingly perhaps, rendered a service to mankind by pointing out the abysmal depth of demoralization and bestiality into which men will sink for the sake of power. The twentieth century, in particular, has witnessed crimes of mass murder and genocide on a scale of which even Machiavelli, with all his interest in necessary, skillful, even elegant crimes, could never have dreamed. Our age is not one of facile optimism, and a balance will have to be struck between Machiavelli's pessimism about human nature and overconfident optimism, if an adequate approach to the theory and practice of politics is to be discovered.

MACHIAVELLI

The Prince *

CONSTANT READINESS FOR WAR

A prince should therefore have no other aim or thought, nor take up any other thing for his study, but war and its organization and discipline, for that is the only art that is necessary to one who commands, and it is of such virtue that it not only maintains those who are born princes, but often enables men of private fortune to attain to that rank. And one sees, on the other hand, that when princes think more of luxury than of arms, they lose their state. The chief cause of the loss of states, is the contempt of this art, and the way to acquire them is to be well versed in the same.

Francesco Sforza, through being well armed, became, from private status, Duke of Milan; his sons, through wishing to avoid the fatigue and hardship of war, from dukes became private persons. For among other evils caused by being disarmed, it renders you contemptible; which is one of those disgraceful things which a prince must guard against, as will be explained later. Because there is no comparison whatever between an armed and a disarmed man, it is not reasonable to suppose that one who is armed will obey willingly one who is unarmed; or that any unarmed man will remain safe among armed servants. For one being disdainful and the other suspicious, it is not possible for them to act well

together. And therefore a prince who is ignorant of military matters, besides the other misfortunes already mentioned, cannot be esteemed by his soldiers, nor have confidence in them.

He ought, therefore, never to let his thoughts stray from the exercise of war; and in peace he ought to practise it more than in war, which he can do in two ways: by action and by study. As to action, he must, besides keeping his men well disciplined and exercised, engage continually in hunting, and thus accustom his body to hardships; and meanwhile learn the nature of the land, how steep the mountains are, how the valleys debouch, where the plains lie, and understand the nature of rivers and swamps. To all this he should devote great attention. This knowledge is useful in two ways. In the first place, one learns to know one's country, and can the better see how to defend it. Then by means of the knowledge and experience gained in one locality, one can easily understand any other that it may be necessary to observe; for the hills and valleys, plains and rivers of Tuscany, for instance, have a certain resemblance to those of other provinces, so that from a knowledge of the country in one province one can easily arrive at a knowledge of others. And that prince who is lacking in this skill is wanting in the first essentials of a leader; for it is this which teaches how to find the enemy, take up quarters, lead armies, plan battles and lay siege to towns with advantage.

Philopœmen, prince of the Achaei, among other praises bestowed on him by

* From Niccolò Machiavelli, *The Prince* (1513). Modern Library Edition. By permission of Random House, Inc.

writers, is lauded because in times of peace he thought of nothing but the methods of warfare, and when he was in the country with his friends, he often stopped and asked them: If the enemy were on that hill and we found ourselves here with our army, which of us would have the advantage? How could we safely approach him maintaining our order? If we wished to retire, what ought we to do? If they retired, how should we follow them? And he put before them as they went along all the contingencies that might happen to an army, heard their opinion, gave his own, fortifying it by argument; so that thanks to these constant reflections there could never happen any incident when actually leading his armies for which he was not prepared.

But as to exercise for the mind, the prince ought to read history and study the actions of eminent men, see how they acted in warfare, examine the causes of their victories and defeats in order to imitate the former and avoid the latter, and above all, do as some men have done in the past, who have imitated some one, who has been much praised and glorified, and have always kept his deeds and actions before them, as they say Alexander the Great imitated Achilles, Cæsar Alexander, and Scipio Cyrus. And whoever reads the life of Cyrus written by Xenophon, will perceive in the life of Scipio how gloriously he imitated the former, and how, in chastity, affability, humanity, and liberality Scipio conformed to those qualities of Cyrus as described by Xenophon.

A wise prince should follow similar methods and never remain idle in peaceful times, but industriously make good use of them, so that when fortune changes she may find him prepared to resist her blows, and to prevail in adversity.

WHY PRINCES ARE PRAISED OR BLAMED

It now remains to be seen what are the methods and rules for a prince as regards

his subjects and friends. And as I know that many have written of this, I fear that my writing about it may be deemed presumptuous, differing as I do, especially in this matter, from the opinions of others. But my intention being to write something of use to those who understand, it appears to me more proper to go to the real truth of the matter than to its imagination; and many have imagined republics and principalities which have never been seen or known to exist in reality; for how we live is so far removed from how we ought to live, that he who abandons what is done for what ought to be done, will rather learn to bring about his own ruin than his preservation. A man who wishes to make a profession of goodness in everything must necessarily come to grief among so many who are not good. Therefore it is necessary for a prince, who wishes to maintain himself, to learn how not to be good, and to use this knowledge and not use it, according to the necessity of the case.

Leaving on one side, then, those things which concern only an imaginary prince, and speaking of those that are real, I state that all men, and especially princes, who are placed at a greater height, are reputed for certain qualities which bring them either praise or blame. Thus one is considered liberal, another *miser* or miserly (using a Tuscan term, seeing that *avaro* with us still means one who is rapaciously acquisitive and *miser* one who makes grudging use of his own); one a free giver, another rapacious; one cruel, another merciful; one a breaker of his word, another trustworthy; one effeminate and pusillanimous, another fierce and high-spirited; one humane, another haughty; one lascivious, another chaste; one frank, another astute; one hard, another easy; one serious, another frivolous; one religious, another an unbeliever, and so on. I know that every one will admit that it would be highly praiseworthy in a prince to possess all the above-named qualities that are reputed good, but as they cannot all be possessed or observed, human conditions not per-

mitting of it, it is necessary that he should be prudent enough to avoid scandal of those vices which would lose him the state, and guard himself if possible against those which will not lose it him, but if not able to, he can indulge them with less scruple. And yet he must not mind incurring the scandal of those vices, without which it would be difficult to save the state, for if one considers well, it will be found that some things which seem virtues would, if followed, lead to one's ruin, and some others which appear vices result in one's greater security and well-being.

LIBERALITY AND NIGGARDLINESS

Beginning now with the first qualities above named, say that it would be well to be considered liberal; nevertheless liberality such as the world understands it will injure you, because if used virtuously and in the proper way, it will not be known, and you will incur the disgrace of the contrary vice. But one who wishes to obtain the reputation of liberality among men, must not omit every kind of sumptuous display, and to such an extent that a prince of this character will consume by such means all his resources, and will be compelled, if he wishes to maintain his name for liberality, to impose heavy taxes on his people, become extortionate, and do everything possible to obtain money. This will make his subjects begin to hate him, and he will be little esteemed being poor, so that having by this liberality injured many and benefited but few, he will feel the first little disturbance and be endangered by every peril. If he recognises this and wishes to change his system, he incurs at once the charge of niggardliness.

A prince, therefore, not being able to exercise this virtue of liberality without risk if it be known, must not, if he be prudent, object to be called miserly. In course of time he will be thought more liberal, when it is seen that by his parsimony his revenue is sufficient, that he

can defend himself against those who make war on him, and undertake enterprises without burdening his people, so that he is really liberal to all those from whom he does not take, who are infinite in number, and niggardly to all to whom he does not give, who are few. In our times we have seen nothing great done except by those who have been esteemed niggardly; the others have all been ruined. Pope Julius II, although he had made use of a reputation for liberality in order to attain the papacy, did not seek to retain it afterwards, so that he might be able to wage war. The present King of France has carried on so many wars without imposing an extraordinary tax, because his extra expenses were covered by the parsimony he had so long practised. The present King of Spain, if he had been thought liberal, would not have engaged in and been successful in so many enterprises.

For these reasons a prince must care little for the reputation of being a miser, if he wishes to avoid robbing his subjects, if he wishes to be able to defend himself, to avoid becoming poor and contemptible, and not to be forced to become rapacious; this niggardliness is one of those vices which enable him to reign. If it is said that Cæsar attained the empire through liberality, and that many others have reached the highest positions through being liberal or being thought so, I would reply that you are either a prince already or else on the way to become one. In the first case, this liberality is harmful; in the second, it is certainly necessary to be considered liberal. Cæsar was one of those who wished to attain the mastery over Rome, but if after attaining it he had lived and had not moderated his expenses, he would have destroyed that empire. And should any one reply that there have been many princes, who have done great things with their armies, who have been thought extremely liberal, I would answer by saying that the prince may either spend his own wealth and that of his subjects or the wealth of others. In the first case he must

be sparing, but for the rest he must not neglect to be very liberal. The liberality is very necessary to a prince who marches with his armies, and lives by plunder, sack and ransom, and is dealing with the wealth of others, for without it he would not be followed by his soldiers. And you may be very generous indeed with what is not the property of yourself or your subjects, as were Cyrus, Cæsar, and Alexander, for spending the wealth of others will not diminish your reputation, but increase it, only spending your own resources will injure you. There is nothing which destroys itself so much as liberality, for by using it you lose the power of using it, and become either poor and despicable, or, to escape poverty, rapacious and hated. And of all things that a prince must guard against, the most important are being despicable or hated, and liberality will lead you to one or other of these conditions. It is, therefore, wiser to have the name of a miser, which produces disgrace without hatred, than to incur of necessity the name of being rapacious, which produces both disgrace and hatred.

CRUELTY AND CLEMENCY: IS IT BETTER TO BE LOVED OR FEARED?

Proceeding to the other qualities before named, I say that every prince must desire to be considered merciful and not cruel. He must, however, take care not to misuse this mercifulness. Cesare Borgia was considered cruel, but his cruelty had brought order to the Romagna, united it, and reduced it to peace and fealty. If this is considered well, it will be seen that he was really much more merciful than the Florentine people, who, to avoid the name of cruelty, allowed Pistoia to be destroyed. A prince, therefore, must not mind incurring the charge of cruelty for the purpose of keeping his subjects united and faithful; for, with a very few examples, he will be more merciful than those who, from excess of tenderness, allow disorders to arise, from whence

spring bloodshed and rapine; for these as a rule injure the whole community, while the executions carried out by the prince injure only individuals. And of all princes, it is impossible for a new prince to escape the reputation of cruelty, new states being always full of dangers. Wherefore Virgil through the mouth of Dido says:

*Res dura, et regni novitas me talia cogunt
Moliri, et late fines custode tueri.*

Nevertheless, he must be cautious in believing and acting, and must not be afraid of his own shadow, and must proceed in a temperate manner with prudence and humanity, so that too much confidence does not render him incautious, and too much diffidence does not render him intolerant.

From this arises the question whether it is better to be loved more than feared, or feared more than loved. The reply is, that one ought to be both feared and loved, but as it is difficult for the two to go together, it is much safer to be feared than loved if one of the two has to be wanting. For it may be said of men in general that they are ungrateful, voluble, dissemblers, anxious to avoid danger, and covetous of gain; as long as you benefit them, they are entirely yours; they offer you their blood, their goods, their life, and their children, as I have before said, when the necessity is remote; but when it approaches, they revolt. And the prince who has relied solely on their words, without making other preparations, is ruined; for the friendship which is gained by purchase and not through grandeur and nobility of spirit is bought but not secured, and in a pinch is not to be expended in your service. And men have less scruple in offending one who makes himself loved than one who makes himself feared; for love is held by a chain of obligation which, men being selfish, is broken whenever it serves their purpose; but fear is maintained by a dread of punishment which never fails.

Still, a prince should make himself feared in such a way that if he does not

gain love, he at any rate avoids hatred; for fear and the absence of hatred may well go together, and will be always attained by one who abstains from interfering with the property of his citizens and subjects or with their women. And when he is obliged to take the life of any one, let him do so when there is a proper justification and manifest reason for it; but above all he must abstain from taking the property of others, for men forget more easily the death of their father than the loss of their patrimony. Then also pretexts for seizing property are never wanting, and one who begins to live by rapine will always find some reason for taking the goods of others, whereas causes for taking life are rarer and more fleeting.

But when the prince is with his army and has a large number of soldiers under his control, then it is extremely necessary that he should not mind being thought cruel; for without this reputation he could not keep an army united or disposed to any duty. Among the noteworthy actions of Hannibal is numbered this, that although he had an enormous army, composed of men of all nations and fighting in foreign countries, there never arose any dissension either among them or against the prince, either in good fortune or in bad. This could not be due to anything but his inhuman cruelty, which together with his infinite other virtues, made him always venerated and terrible in the sight of his soldiers, and without it his other virtues would not have sufficed to produce that effect. Thoughtless writers admire on the one hand his actions, and on the other blame the principal cause of them.

And that it is true that his other virtues would not have sufficed may be seen from the case of Scipio (famous not only in regard to his own times, but all times of which memory remains), whose armies rebelled against him in Spain, which arose from nothing but his excessive kindness, which allowed more licence to the soldiers than was consonant with military discipline. He was re-

proached with this in the senate by Fabius Maximus, who called him a corrupter of the Roman militia. Locri having been destroyed by one of Scipio's officers was not revenged by him, nor was the insolence of that officer punished, simply by reason of his easy nature; so much so, that some one wishing to excuse him in the senate, said that there were many men who knew rather how not to err, than how to correct the errors of others. This disposition would in time have tarnished the fame and glory of Scipio had he persevered in it under the empire, but living under the rule of the senate this harmful quality was not only concealed but became a glory to him.

I conclude, therefore, with regard to being feared and loved, that men love at their own free will, but fear at the will of the prince, and that a wise prince must rely on what is in his power and not on what is in the power of others, and he must only contrive to avoid incurring hatred, as has been explained.

IN WHAT WAY PRINCES MUST KEEP FAITH

How laudable is it for a prince to keep good faith and live with integrity, and not with astuteness, every one knows. Still the experience of our times shows those princes to have done great things who have had little regard for good faith, and have been able by astuteness to confuse men's brains, and who have ultimately overcome those who have made loyalty their foundation.

You must know, then, that there are two methods of fighting, the one by law, the other by force: the first method is that of men, the second of beasts; but as the first method is often insufficient, one must have recourse to the second. It is therefore necessary for a prince to know well how to use both the beast and the man. This was covertly taught to rulers by ancient writers, who relate how Achilles and many others of those ancient princes were given to Chiron the

centaur to be brought up and educated under his discipline. The parable of this semi-animal, semi-human teacher is meant to indicate that a prince must know how to use both natures, and that the one without the other is not durable.

A prince being thus obliged to know well how to act as a beast must imitate the fox and the lion, for the lion cannot protect himself from traps, and the fox cannot defend himself from wolves. One must therefore be a fox to recognise traps, and a lion to frighten wolves. Those that wish to be only lions do not understand this. Therefore, a prudent ruler ought not to keep faith when by so doing it would be against his interest, and when the reasons which made him bind himself no longer exist. If men were all good, this precept would not be a good one; but as they are bad, and would not observe their faith with you, so you are not bound to keep faith with them. Nor have legitimate grounds ever failed a prince who wished to show colourable excuse for the nonfulfilment of his promise. Of this one could furnish an infinite number of modern examples, and show how many times peace has been broken, and how many promises rendered worthless, by the faithlessness of princes, and those that have been best able to imitate the fox have succeeded best. But it is necessary to be able to disguise this character well, and to be a great feigner and dissemler; and men are so simple and so ready to obey present necessities, that one who deceives will always find those who allow themselves to be deceived.

I will only mention one modern instance. Alexander VI did nothing else but deceive men, he thought of nothing else, and found the occasion for it; no man was ever more able to give assurances, or affirmed things with stronger oaths, and no man observed them less; however, he always succeeded in his deceptions, as he well knew this aspect of things.

It is not, therefore, necessary for a prince to have all the above-named qualities, but it is very necessary to seem to have them. I would even be bold to say that to possess them and always to ob-

serve them is dangerous, but to appear to possess them is useful. Thus it is well to seem merciful, faithful, humane, sincere, religious, and also to be so; but you must have the mind disposed that when it is needful to be otherwise you may be able to change to the opposite qualities. And it must be understood that a prince, and especially a new prince, cannot observe all those things which are considered good in men, being often obliged, in order to maintain the state, to act against faith, against charity, against humanity, and against religion. And, therefore, he must have a mind disposed to adapt itself according to the wind, and as the variations of fortune dictate, and, as I said before, not deviate from what is good, if possible, but be able to do evil if constrained.

A prince must take great care that nothing goes out of his mouth which is not full of the above-named five qualities, and, to see and hear him, he should seem to be all mercy, faith, integrity, humanity, and religion. And nothing is more necessary than to seem to have this last quality, for men in general judge more by the eyes than by the hands, for every one can see, but very few have to feel. Everybody sees what you appear to be, few feel what you are, and those few will not dare to oppose themselves to the many, who have the majesty of the state to defend them; and in the actions of men, and especially of princes, from which there is no appeal, the end justifies the means. Let a prince therefore aim at conquering and maintaining the state, and the means will always be judged honourable and praised by every one, for the vulgar is always taken by appearances and the issue of the event; and the world consists only of the vulgar, and the few who are not vulgar are isolated when the many have a rallying point in the prince. A certain prince of the present time, whom it is well not to name, never does anything but preach peace and good faith, but he is really a great enemy to both, and either of them, had he observed them, would have lost him state or reputation on many occasions.

PRINCES MUST AVOID BEING DESPISED OR HATED

But as I have now spoken of the most important of the qualities in question, I will now deal briefly and generally with the rest. The prince must, as already stated, avoid those things which will make him hated or despised; and whenever he succeeds in this, he will have done his part, and will find no danger in other vices. He will chiefly become hated, as I said, by being rapacious, and usurping the property and women of his subjects, which he must abstain from doing, and whenever one does not attack the property or honour of the generality of men, they will live contented; and one will only have to combat the ambition of a few, who can be easily held in check in many ways. He is rendered despicable by being thought changeable, frivolous, effeminate, timid, and irresolute; which a prince must guard against as a rock of danger, and so contrive that his actions show grandeur, spirit, gravity, and fortitude; and as to the government of his subjects, let his sentence be irrevocable, and let him adhere to his decisions so that no one may think of deceiving or cozening him.

The prince who creates such an opinion of himself gets a great reputation, and it is very difficult to conspire against one who has a great reputation, and he will not easily be attacked, so long as it is known that he is capable and revered by his subjects. For a prince must have two kinds of fear: one internal as regards his subjects, one external as regards foreign powers. From the latter he can defend himself with good arms and a good friends if he has good arms; and internal matters will always remain quiet, if they are not perturbed by conspiracy and there is no disturbance from without; and even if external powers sought to attack him, if he has ruled and lived as I have described, he will always if he stands firm, be able to sustain every shock, as I have shown that Nabis the Spartan did. But with regard to the sub-

jects, if not acted on from outside, it is still to be feared lest they conspire in secret, from which the prince may guard himself well by avoiding hatred and contempt, and keeping the people satisfied with him, which it is necessary to accomplish, as has been related at length. And one of the most potent remedies that a prince has against conspiracies, is that of not being hated by the mass of the people; for whoever conspires always believes that he will satisfy the people by the death of their prince; but if he thought to offend them by doing this, he would fear to engage in such an undertaking, for the difficulties that conspirators have to meet are infinite. Experience shows that there have been very many conspiracies, but few have turned out well, for whoever conspires cannot act alone, and cannot find companions except among those who are discontented; and as soon as you have disclosed your intention to a malcontent, you give him the means of satisfying himself, for by revealing it he can hope to secure everything he wants; to such an extent that seeing a certain gain by doing this, and seeing on the other hand only a doubtful one and full of danger, he must either be a rare friend to you or else a very bitter enemy to the prince if he keeps faith with you. And to express the matter in a few words, I say, that on the side of the conspirator there is nothing but fear, jealousy, suspicion, and dread of punishment which frightens him; and on the side of the prince there is the majesty of government, the laws, the protection of friends and of the state which guard him. When to these things is added the goodwill of the people, it is impossible that any one should have the temerity to conspire. For whereas generally a conspirator has to fear before the execution of his plot, in this case, having the people for an enemy, he must also fear after his crime is accomplished, and thus he is not able to hope for any refuge.

Numberless instances might be given of this, but I will content myself with one which took place within the memory of our fathers. Messer Annibale Bentivogli,

Prince of Bologna, ancestor of the present Messer Annibale, was killed by the Canneschi, who conspired against him. He left no relations but Messer Giovanni, who was then an infant, but after the murder the people rose up and killed all the Canneschi. This arose from the popular goodwill that the house of Bentivogli enjoyed at that time, which was so great that, as there was nobody left after the death of Annibale who could govern the state, the Bolognese hearing that there was one of the Bentivogli family in Florence, who had till then been thought the son of a blacksmith, came to fetch him and gave him the government of the city, and it was governed by him until Messer Giovanni was old enough to assume the government.

I conclude, therefore, that a prince need trouble little about conspiracies when the people are well disposed, but when they are hostile and hold him in hatred, then he must fear everything and everybody. Well-ordered states and wise princes have studied diligently not to drive the nobles to desperation, and to satisfy the populace and keep it contented, for this is one of the most important matters that a prince has to deal with.

Among the kingdoms that are well ordered and governed in our time is France, and there we find numberless good institutions on which depend the liberty and security of the king; of these the chief is the parliament and its authority, because he who established that kingdom, knowing the ambition and insolence of the great nobles, deemed it necessary to have a bit in their mouths to check them. And knowing on the other hand the hatred of the mass of the people against the great, based on fear, and wishing to secure them, he did not wish to make this the special care of the king, to relieve him of the dissatisfaction that he might incur among the nobles by favouring the people, and among the people by favouring the nobles. He therefore established a third judge that, with-

out direct charge of the king, kept in check the great and favoured the lesser people. Nor could any better or more prudent measure have been adopted, nor better precaution for the safety of the king and the kingdom. From which another notable rule can be drawn, that princes should let the carrying out of unpopular duties devolve on others, and bestow favours themselves. I conclude again by saying that a prince must esteem his nobles, but not make himself hated by the populace.

THE USEFULNESS OF FORTRESSES

Some princes, in order to hold their possessions securely, have disarmed their citizens, some others have kept their subject lands divided into parts, others have fomented enmities against themselves, others have endeavoured to win over those whom they suspected at the commencement of their rule: some have constructed fortresses, others have cast them down and destroyed them. And although one cannot pronounce a definite judgment as to these things without going into the particulars of the state to which such a deliberation is to be applied, still I will speak in such a general way as the matter will permit.

A new prince has never been known to disarm his subjects, on the contrary, when he has found them disarmed he has always armed them, for by arming them these arms become your own, those that you suspected become faithful and those that were faithful remain so, and from being merely subjects become your partisans. And since all the subjects cannot be armed, when you give the privilege of arms to some, you can deal more safely with the others; and this different treatment that they recognise renders your men more obliged to you. The others will excuse you, judging that those have necessarily greater merit who have greater danger and heavier duties. But when you disarm them, you commence to offend them and show that you distrust

them either through cowardice or lack of confidence, and both of these opinions generate hatred against you. And as you cannot remain unarmed, you are obliged to resort to a mercenary militia, of which we have already stated the value; and even if it were good it cannot be sufficient in number to defend you against powerful enemies and suspected subjects. Therefore, as I have said, a new prince in a new dominion always has his subjects armed. History is full of such examples.

But when a prince acquires a new state as an addition to his old one, then it is necessary to disarm that state, except those who in acquiring it have sided with you; and even these one must, when time and opportunity serve, render weak and effeminate, and arrange things so that all the arms of the new state are in the hands of your soldiers who live near you in your old state.

Our forefathers and those who were esteemed wise used to say that it was necessary to hold Pistoia by means of factions and Pisa with fortresses, and for this purpose they fomented differences in some of their subject towns in order to possess them more easily. In those days when there was a balance of power in Italy, this was doubtless well done, but does not seem to me to be a good precept for the present time, for I do not believe that the divisions thus created ever do any good; on the contrary it is certain that when the enemy approaches, the cities thus divided will be at once lost, for the weaker faction will always side with the enemy and the other will not be able to stand.

The Venetians, actuated, I believe, by the aforesaid motives, fomented the Guelf and Ghibelline factions in the cities subject to them, and although they never allowed them to come to bloodshed, they yet encouraged these differences among them, so that the citizens, being occupied in their own quarrels, might not act against them. This, however, did not avail them anything, as was seen when, after the defeat of Vailà, a part of those subjects immediately took

courage and seized the whole state. Such methods, besides, argue weakness in a prince, for in a strong government such dissensions will never be permitted. They are profitable only in time of peace, as by such means it is easy to manage one's subjects, but when it comes to war, the fallacy of such a policy is at once shown.

Without doubt princes become great when they overcome difficulties and opposition, and therefore fortune, especially when it wants to render a new prince great, who has greater need of gaining a great reputation than a hereditary prince, raises up enemies and compels him to undertake wars against them, so that he may have cause to overcome them, and thus climb up higher by means of that ladder which his enemies have brought him. There are many who think therefore that a wise prince ought, when he has the chance, to foment astutely some enmity, so that by suppressing it he will augment his greatness.

Princes, and especially new ones, have found more faith and more usefulness in those men, whom at the beginning of their power they regarded with suspicion, than in those they at first confided in. Pandolfo Petrucci, Prince of Siena, governed his state more by those whom he suspected than by others. But of this we cannot speak at large, as it strays from the subject; I will merely say that these men who at the beginning of a new government were enemies, if they are of a kind to need support to maintain their position, can be very easily gained by the prince, and they are the more compelled to serve him faithfully as they know they must by their deeds cancel the bad opinion previously held of them, and thus the prince will always derive greater help from them than from those who, serving him with greater security, neglect his interests.

And as the matter requires it, I will not omit to remind a prince who has newly taken a state with the secret help of its inhabitants, that he must consider well the motives that have induced those

who have favoured him to do so, and if it is not natural affection for him, but only because they were not contented with the state as it was, he will have great trouble and difficulty in maintaining their friendship, because it will be impossible for him to content them. And on well examining the cause of this in the examples drawn from ancient and modern times it will be seen that it is much easier to gain the friendship of those men who were contented with the previous condition and were therefore at first enemies, than that those who not being contented, became his friends and helped him to occupy it.

It has been the custom of princes in order to be able to hold their state securely, to erect fortresses, as a bridle and bit to those who have designs against them, and in order to have a secure refuge against a sudden assault. I approve this method, because it was anciently used. Nevertheless, Messer Niccolò Vitelli has been seen in our own time to destroy two fortresses in Città di Castello in order to keep that state. Guid'Ubaldo, Duke of Urhino, on returning to his dominions from which he had been driven by Cesare Borgia, razed to their foundations all the fortresses of that province, and considered that without them it would be more difficult for him to lose the state again. The Bentivogli, on returning to Bologna, took similar measures. Therefore fortresses may or may not be useful according to the times; if they do good in one way, they do harm in another. The question may be discussed thus: a prince who fears his own people more than foreigners ought to build fortresses, but he who has greater fear of foreigners than of his own people ought to do without them. The castle of Milan built by Francesco Sforza has given and will give more trouble to the house of Sforza than any other disorder in that state. Therefore the best fortress is to be found in the love of the people, for although you may have fortresses they will not save you if you are hated by the people. When once the people have taken arms against you,

there will never be lacking foreigners to assist them. In our times we do not see that they have profited any ruler, except the Countess of Forlì on the death of her consort Count Girolamo, for she was thus enabled to escape the popular rising and await help from Milan and recover the state; the circumstances being then such that no foreigner could assist the people. But afterwards they were of little use to her when Cesare Borgia attacked her and the people being hostile to her allied themselves with the foreigner. So that then and before it would have been safer for her not to have been hated by the people than to have had the fortresses. Having considered these things I would therefore praise the one who erects fortresses and the one who does not, and would blame any one who, trusting in them, reckes little of being hated by his people.

HOW PRINCES GAIN REPUTATION

Nothing causes a prince to be so much esteemed as great enterprises and giving proof of prowess. We have in our own day Ferdinand, King of Aragon, the present King of Spain. He may almost be termed a new prince, because from a weak king he has become for fame and glory the first king in Christendom, and if you regard his actions you will find them all very great and some of them extraordinary. At the beginning of his reign he assailed Granada, and that enterprise was the foundation of his state. At first he did it at his leisure and without fear of being interfered with; he kept the minds of the barons of Castile occupied in this enterprise, so that thinking only of that war they did not think of making innovations, and he thus acquired reputation and power over them without their being aware of it. He was able with the money of the Church and the people to maintain his armies, and by that long war to lay the foundations of his military power, which afterwards has made him famous. Besides this, to be

able to undertake greater enterprises, and always under the pretext of religion, he had recourse to a pious cruelty, driving out the Moors from his kingdom and despoiling them. No more miserable or unusual example can be found. He also attacked Africa under the same pretext, undertook his Italian enterprise, and has lately attacked France; so that he has continually contrived great things, which have kept his subjects' minds uncertain and astonished, and occupied in watching their result. And these actions have arisen one out of the other, so that they have left no time for men to settle down and act against him.

It is also very profitable for a prince to give some outstanding example of his greatness in the internal administration, like those related of Messer Bernabò of Milan. When it happens that some one does something extraordinary, either good or evil, in civil life, he must find such means of rewarding or punishing him which will be much talked about. And above all a prince must endeavour in every action to obtain fame for being great and excellent.

A prince is further esteemed when he is a true friend or a true enemy, when, that is, he declares himself without reserve in favour of some one or against another. This policy is always more useful than remaining neutral. For if two neighbouring powers come to blows, they are either such that if one wins, you will have to fear the victor, or else not. In either of these two cases it will be better for you to declare yourself openly and make war, because in the first case if you do not declare yourself, you will fall a prey to the victor, to the pleasure and satisfaction of the one who has been defeated, and you will have no reason nor anything to defend you and nobody to receive you. For, whoever wins will not desire friends whom he suspects and who do not help him when in trouble, and whoever loses will not receive you as you did not take up arms to venture yourself in his cause.

Antiochus went to Greece, being sent

by the Ætolians to expel the Romans. He sent orators to the Achæians who were friends of the Romans to encourage them to remain neutral; on the other hand the Romans persuaded them to take up arms on their side. The matter was brought before the council of the Achæians for deliberation, where the ambassador of Antiochus sought to persuade them to remain neutral, to which the Roman ambassador replied: "As to what is said that it is best and most useful for your state not to meddle in our war, nothing is further from the truth; for if you do not meddle in it you will become, without any favour or any reputation, the prize of the victor."

And it will always happen that the one who is not your friend will want you to remain neutral, and the one who is your friend will require you to declare yourself by taking arms. Irresolute princes, to avoid present dangers, usually follow the way of neutrality and are mostly ruined by it. But when the prince declares himself frankly in favour of one side, if the one to whom you adhere conquers, even if he is powerful and you remain at his discretion, he is under an obligation to you and friendship has been established, and men are never so dishonest as to oppress you with such a patent ingratitude. Moreover, victories are never so prosperous that the victor does not need to have some scruples, especially as to justice. But if your ally loses, you are sheltered by him, and so long as he can, he will assist you; you become the companion of a fortune which may rise again. In the second case, when those who fight are such that you have nothing to fear from the victor, it is still more prudent on your part to adhere to one; for you go to the ruin of one with the help of him who ought to save him if he were wise, and if he conquers he rests at your discretion, and it is impossible that he should not conquer with your help.

And here it should be noted that a prince ought never to make common cause with one more powerful than himself to injure another, unless neces-

sity forces him to it, as before said; for if he wins you rest in his power, and princes must avoid as much as possible being under the will and pleasure of others. The Venetians united with France against the Duke of Milan, although they could have avoided that alliance, and from it resulted their own ruin. But when one cannot avoid it, as happened in the case of the Florentines when the Pope and Spain went with their armies to attack Lombardy, then the prince ought to join for the above reasons. Let no state believe that it can always follow a safe policy, rather let it think that all are doubtful. This is found in the nature of things, that one never tries to avoid one difficulty without running into another, but prudence consists in being able to know the nature of the difficulties, and taking the least harmful as good.

A prince must also show himself a lover of merit, give preferment to the able, and honour those who excel in

every art. Moreover he must encourage his citizens to follow their callings quietly, whether in commerce, or agriculture, or any other trade that men follow, so that this one shall not refrain from improving his possessions through fear that they may be taken from him, and that one from starting a trade for fear of taxes; but he should offer rewards to whoever does these things, and to whoever seeks in any way to improve his city or state. Besides this, he ought, at convenient seasons of the year, to keep the people occupied with festivals and shows; and as every city is divided either into guilds or into classes, he ought to pay attention to all these groups, mingle with them from time to time, and give them an example of his humanity and munificence, always upholding, however, the majesty of his dignity, which must never be allowed to fail in anything whatever.

CHAPTER FIFTEEN

THE PROTESTANT REFORMATION

Renaissance and Reformation are inextricably interwoven with the birth and growth of the modern national state. In the field of secular thought and experience, the Renaissance brought about the rediscovery of the ancient world and witnessed the immense broadening of man's horizon through the discovery of the New World of the Americas. In the field of religious thought and experience, the Renaissance opened the gates to a new religious world through the Protestant Reformation.

The first leaders of the Reformation denied any revolutionary intentions and merely claimed to return to the early sources of Christianity, faith and the Scriptures. In this sense, Protestantism was a part of the general process of rebirth, the religious aspect of the Renaissance. In the fifteenth century, the conciliar movement had attempted to reform the church from within by transferring supreme power from the pope to general councils meeting periodically for the specific purpose of reforming the church and invigorating its administration by making its authority more representative of the whole Christian community. Two councils were convened (Constance, 1414-1418, and Basel, 1431-1439), but both failed. Yet, despite its failure the conciliar movement had revived the important conception of the congregational character of church authority, with its corollary that office was in the nature of a trusteeship rather than an inalienable power. When reform from within failed, revolution from without took its place.

Prior to the thirteenth century, as long as the church had to withstand the attacks of critics who did not take any religion seriously, it was able to win easily, either by disregarding its critics, by trying to persuade them, or by burning them alive on the stake. The strength of reform movements from the thirteenth century on lay in the fact that the critics of Rome were passionately religious. They assailed the papacy for having lost the original ideals of the Christian faith and

for having become corrupted by the worldly ambitions of lust, wealth, and power. Some of these reformers believed that the hope lay in reforming Christians as individuals rather than in attempting basic institutional change of the church as an organization. The best known example is that of Savonarola, a Dominican friar and preacher in Florence, who managed to exercise complete control over Florence for four years (1494–1498). Yet, in the end, Pope Alexander VI excommunicated him, and he was tried and burned. Finally, there were men who hoped that the church could be reformed through an enlightened fusion of the ethics of early Christianity with the humanism of classical culture. The “Christian Humanists” included some of the leading scholars in Europe, such as Luis Vives in Spain, Pico della Mirandola in Italy, Sir Thomas More in England, and—the greatest of them all—Erasmus of Rotterdam. While undoubtedly contributing to a significant change in the moral and intellectual climate of Europe, the Christian Humanists failed in the immediate goal of reforming the church from within through peaceful appeals to reason and faith.

In the sixteenth century, however, the reformist tendencies—now driven into revolution by the obstinacy of the church—were more successful because they were allied with other social forces of the time. In particular, wherever Protestant Reform, as in Northern Germany, England, Scandinavia, was associated with monarchy, the strongest power of the age, its victory was never in question. Where, on the other hand, Protestantism was not favored by royal encouragement, as in France, it did not succeed. Nowhere was the issue purely religious; in all countries it was mixed with political, dynastic, economic, and diplomatic considerations. Although the age of the Reformation itself was truly religious, religion was readily used to cloak less lofty aspirations.

From the viewpoint of the expansion of political liberty, the first Protestant church, Lutheranism, had little effect, either in Germany or elsewhere. Martin Luther (1483–1546) stressed the inner aspects of religious experience, faith rather than good works: “Faith alone is the righteousness of a Christian and the fulfilling of all the commandments” (*Treatise on Christian Liberty*, 1520). Luther argued that liberty is in the conscience and spirit of man, and has no relation to his political or social condition, for “that is making Christian liberty an utterly carnal thing.” His ideas on government and the relations of rulers and ruled were most clearly and systematically expressed in his *Secular Authority: To What Extent It Should Be Obeyed* (1523). Luther emphasized that government is ordained by God, and that the subjects must obey their rulers, even though their rule be unjust or cruel. His profound pessimism about men in all stations—rulers or ruled—was reflected in his statement that “the world is too wicked, and does not deserve to have many wise and pious princes. Frogs need storks.”

In his assertion of the equality of all Christians as Christians he was of revolutionary import, and his doctrine of the priesthood of all Christians contained possibilities that were more fully exploited later on in England, Scotland, and North America. Though he defended the highly unorthodox view that belief or unbelief is a matter of one’s conscience, that faith is an act and expression of freedom, and that it cannot be imposed by force, the bold break with Rome was not accompanied in Luther or Lutheranism by any parallel social or political

philosophy. On the contrary, Luther’s religious radicalism was matched by extreme conservatism in social and political affairs. Supported by the absolutist princes of Northern Germany, Luther stressed the duty of the subject to obey the commands of his king.

Shortly after Luther published his revolutionary religious theses, German peasants—driven by social and political oppression, and translating too quickly the Lutheran ideals of Christian equality from theological into practical terms—began to rebel. This rebellion of 1525 was the only genuine popular revolution in German history, and the subsequent history of the German people might have been different if the rebellion had succeeded at least in part. Luther instigated the princes to take the sternest measures, including wholesale bloodshed, against the “mad dogs,” “scoundrels,” and “swine”—as he called the rebelling peasants.

Thus for practical purposes Lutheranism evolved into a faithful ally of political absolutism. Its most serious effect on the German people was to strengthen their fatal habit of nourishing ideals of freedom in the realm of the spirit but of submitting without question to the authority of the state in practical affairs. Luther himself was fully aware that princes are “usually the greatest fools or scoundrels on earth”; yet he insisted on the duty of subjects to obey such impious princes, because, he said, the rest of the world is wicked, too, and does not deserve virtuous rulers. Luther added to his strong respect for the state an equally passionate feeling of German nationalism and even racialism; thus he became—the only Protestant leader to have such progeny—one of the spiritual ancestors of Prussian statism and German Nazism.

After Luther’s death, the Religious Peace of Augsburg (1555) settled the problem of religious division in the German states by the principle of *cuius regio eius religio*, according to which the ruler of the country determined the religion of its inhabitants. This principle was more liberal than the medieval method of imposing uniformity of belief from which there was no escape, because under the policy of the Peace of Augsburg, religious dissidents were free to adhere to their religion, provided they emigrated.

No doubt emigration was less harsh than the stake; yet by accepting such a principle Germany lost a vital opportunity of learning toleration. In Holland, England, and North America toleration of religious minorities preceded that of political opposition, and the tradition of liberalism in the English-speaking countries in particular cannot be understood apart from the tradition of religious non-conformity. Frederick the Great referred to himself in his *Political Testament* as the “Pope of the Lutherans,” and until 1918 the rulers of Protestant states in Germany were simultaneously the supreme bishops of their state churches. Thus, instead of one religious authoritarianism, Germany had two after the Reformation. Yet by the fact of establishing itself as the first Reform church independent of Rome, Lutheranism encouraged the formation of independent churches elsewhere. As more churches came into existence, increased mutual toleration was inevitable; the relative power of each religion or sect declined in proportion to the growing number of all.

As long as Protestantism was mainly Lutheran, it made little headway in France. But there was a vigorous tradition of anticlericalism and antipapalism in

France from the Middle Ages on, and the sense of urgent change grew stronger in the sixteenth century. Protestantism became a national force in France, with an intellectual character of its own, after the appearance of a French leader, John Calvin (1509–1564). In 1534 Calvin, forced to leave France for religious reasons, went to Switzerland, where Protestantism had spread rapidly. In 1536 he wrote the *Institutes of the Christian Religion*, his principal work and still the chief source of Calvinist doctrine. With only a few short interruptions, he stayed in Switzerland for the rest of his life; he governed Geneva from 1536 to 1538, and again from 1541 to 1564, the year of his death. His regime was one of ruthless terror. Though Calvin's theological doctrines did not differ substantially from those of Luther, his impact on history did. Calvinism spread to France, Holland, Scotland, and the English colonies in North America.

Unlike Luther, Calvin admitted—in exceptional cases only, to be sure—the right of resistance to tyrannical rulers, provided that resistance was in the hands of magistrates and organized estates, rather than lawless mobs, or in the hands of a secular savior selected by God to deliver the people from tyranny. In the total doctrine of Calvin, the stress was more on obedience than on resistance. Yet the circumstances of persecution in France and Holland in particular drove Calvinists into active resistance. In Holland, Calvinism was allied with the national movement of liberation from Spain, and in the end it won over the majority of the nation. In France, the monarchy needed the friendship of the papacy against the Habsburgs in the struggle for Italy, and, domestically, the strongly centralizing tendencies of the newly developing national state were opposed to the Calvinist demands for local autonomy. Calvinism was thus put in a position in which it could be easily attacked by its opponents as antinational. A considerable proportion of the French aristocracy, perhaps one-third, sympathized with the Protestant cause, and regional, provincial issues were also dragged into the religious controversy.

Passion ran high on both sides. Shortly after the “War of Religion” had broken out in France (it lasted, with interruptions, from 1562 to 1593), the Huguenots invited German and English troops to aid them in the civil war. Foreign intervention in civil war is particularly odious if unsuccessful—and the Huguenots lost. On its side, the royalist, nationalist, Catholic party acted with more ruthlessness against its opponents than was customary in French life, and it is doubtful whether the Revolution of 1789, another “war of religion,” witnessed as much brutality as the War of Religion in the sixteenth century.

The anti-Protestant frenzy, carefully nursed, with the blessing of Rome, by the royalist-Catholic party, came to a climax in the Massacre of St. Bartholomew (August 24, 1572), in which thirty thousand Huguenots lost their lives. The head of Admiral Coligny, the military and political leader of the Huguenots, was sent to Pope Gregory XIII in Rome, who had also received Coligny's assassin. The happy outcome of the massacre was celebrated by the pope in a public procession and solemn mass of thanksgiving, attended by thirty-three cardinals and many other high ecclesiastic dignitaries. On September 11, 1572, Gregory praised the French king for his punishment of heretics and expressed the hope

that the enterprise of suppressing Protestantism, so auspiciously begun on St. Bartholomew's day, would be carried on to the end.

Deprived of their leaders, hacked into a small minority, the Huguenots produced, in the decade following the massacre, a mass of tracts that belong to the most provocative political literature inspired by the Reformation. The best known of these Huguenot pamphlets and books is *A Defense of Liberty against Tyrants* (*Vindiciae contra tyrannos*), published in Latin under the pseudonym Stephen Junius Brutus in 1579 and translated into French in 1581. Both editions were printed in Switzerland, then—as earlier and later—an island of freedom in Europe. Many of the Huguenot pamphlets were published anonymously, for obvious reasons, and their authors were generally exiles; Switzerland, Holland, England, and Germany were among the favorite places of refuge.

The authorship of the *Vindiciae* is not completely certain; according to the longest tradition and best modern judgment, the author was Hubert Languet (1519–1581), a French scholar, lawyer, traveler, and diplomat, who spent many years in Germany. Those who dispute Languet's authorship attribute the book partly or wholly to Philippe Duplessis-Mornay (1549–1623), a young friend of Languet who probably had some connection with the *Vindiciae*, either in aiding Languet in the preparation of the original Latin manuscript or in translating the Latin text into French.

The *Vindiciae* proposes to deal with four main questions: first, whether subjects are bound to obey princes if they command what is against the law of God; second, whether it is lawful to resist a prince who infringes the law of God or ruins the church, and by whom resistance is to be offered, how, and to what extent; third, whether it is lawful to resist a prince who oppresses or ruins the commonwealth, by whom and how far such resistance is to be offered, and by what right it is permitted; fourth, whether neighboring princes or states may lawfully help, or are bound to help, the subjects of other princes who are afflicted for the cause of true religion or oppressed by manifest tyranny. As can be seen from these four questions, the purpose of the *Vindiciae* is not to give a general theory of the state but to inquire into one of its pivotal issues: the problem of *obedience*.

The substance of the answers to the four chief questions raised in the *Vindiciae* lies in the notion of contract. In fact, the argument is based on the theory of *two contracts*: the first is made between God on the one side, and the king and people jointly on the other, “that the people might be the people of God.” The second contract is between the king and the people, in which the people promise to obey the king faithfully, provided that he rule justly. Both covenants in the *Vindiciae* are derived from the Old Testament; the Calvinists, like the Puritans a century later, lean heavily on the Old Testament for the idea of the covenant as the foundation of all authority.

The importance of the first covenant, that between God on one side, and king and people on the other, lies in the fact that the king's responsibility does not come to an end if he violates his promises, because the people are bound to see that the covenant, which they, too, have entered into, is fulfilled. If the king violates his share of the joint obligation, the people are entitled, nay, bound, to

resist or depose him for the sake of the obligation to God. Similarly, from the second covenant between king and people follows the right of the people to resist or depose the king if he violates his obligations.

The second key idea in the *Vindiciae* is that of *trusteeship*. Speaking in terms of the Bible and Roman law, the *Vindiciae* refers to the king as a "guardian" or "tutor." The nature of trusteeship lies in the fact that whatever authority is given to the trustee, he holds, not for his own benefit, but for that of the person or persons in whose behalf he acts. Kings are made by the people, and they "hold their power and sovereignty from the people." Although God elects the king, the people establish him. No one is ever born with a crown on his head and a scepter in his hand, and no man can be a king without people, whereas people can get along without a king; kings are therefore the creations of the people, even in hereditary monarchies. The right of free election "seems in a sort buried" in hereditary monarchies, but actually it is not dead in them, because new kings receive afresh the symbols of their authority from the hands of the peers and officers of the crown, who represent the people.

The author of the *Vindiciae* anticipates one of the chief ideas of Locke by emphasizing that the purpose of setting up government is to decide civil disputes by *third-party judgments*, particularly disputes about *property*. The king is conceived as a judge rather than a legislator, and the superiority of the law over the king is asserted throughout the *Vindiciae*. The king is but an organ of the law, and it is "more profitable and convenient to obey the law, than the king who is but one man." Taking over the Calvinistic concept of the "priesthood" of all believers, the *Vindiciae* denies that the king's subjects are his "slaves or bondmen," because, considered in one body, "they are lords," and the king should therefore govern his subjects as brethren.

The third key idea of the *Vindiciae* is *resistance to tyranny*. Two kinds of tyranny are distinguished: first, that of the ruler who gains a kingdom by violence; and second, that of the ruler who, lawfully invested with his office, violates his promises and duties by the practice of tyranny. The usurper who rules justly is preferable to the legitimate monarch who rules unjustly: "Certainly I had rather that a thief should feed me, than a shepherd devour me: I had rather receive justice from a robber, than outrage from a judge: I had better be healed by an empiric, than poisoned by a doctor in physic." As to the ruler who is doubly a tyrant, because he had illegally usurped power and because he exercises it unjustly, "the meanest private man may resist and lawfully oppose such an intruding tyrant." Even tyrannicide is lawful when the ruler is a "double" tyrant. When tyrants hold office by law but exercise it unjustly, it is the right and duty of the magistrates and Estates to resist the king and, if necessary, depose and kill him.

Because the tyrant with a legitimate title to rule has been established in his office by the community as a whole, private individuals "may not unsheath the sword against tyrants by practice." The *Vindiciae* makes it clear in numerous passages that the term "the people" is not to be taken too literally; it means the magistrates and assembly of the Estates. The presbyterian character of early Calvinist church government was aristocratic rather than democratic, and though the position of the *Vindiciae* on the right of resistance is antiauthoritarian and liberal, the liberalism is of the predemocratic age, as it existed from

the sixteenth to the eighteenth centuries. The main purpose of the *Vindiciae* was to vindicate the right of conscience in religious matters, yet the general principle involved holds good for any issue of conscience.

The *Vindiciae* quickly established itself as a widely read book and inspired religious, political, and national movements of liberation. Although it was considered dangerous enough to be publicly burned by Cambridge University in 1620 (and by Oxford University, too, but much later, in 1683), an English translation appeared in 1648 under the Cromwellian regime, shortly before Charles I was executed; it was reprinted in 1689, another eventful date in the history of English liberty, when parliamentary supremacy and the right to religious nonconformity became firmly established. The main concepts of the *Vindiciae*, the contractual nature of government, popular sovereignty, political rule as trusteeship, protection of property, and, finally, the right of resistance against unjust rulers, dominated political thought until the appearance of Rousseau in the eighteenth century.

The most powerful impact of the *Vindiciae* has been on Dutch and English thought. Locke's *Two Treatises of Government* was begun in Holland, where Locke, like the author of the *Vindiciae*, lived as a refugee; it was published in 1690 in England, one year after the reprinting of the English translation of the *Vindiciae*. Locke's work had more prestige and influence not only because it was a more systematic treatment of the general theory of the state but also because the *Two Treatises of Government* was published with the self-confidence that is born of victory, whereas the *Vindiciae* showed the marks of bitterness born of defeat. What the Huguenots wanted for France, the Bloodless Revolution achieved for England in 1688.

Democracy is more than a system of government, and the democratic conception of man is based on the hypothesis that there is some area in man's conscience that cannot be subdued from the outside but must be won from within by free assent. The *Vindiciae* belongs to the family of books—not too numerous in the history of thought—that stress freedom rather than authority, consent rather than compulsion, and obedience to the inner voice of conscience rather than to the external force of the state.

I LUTHER

*Secular Authority: To What Extent It Should Be Obeyed**

SECULAR AUTHORITY DERIVES FROM GOD

We must firmly establish secular law and the sword, that no one may doubt that it is in the world by God's will and ordinance. The passages which establish this are the following: Romans xiii, "Let every soul be subject to power and authority, for there is no power but from God. The power that is everywhere is ordained of God. He then who resists the power resists God's ordinance. But he who resists God's ordinance shall bring himself under condemnation." Likewise, I Peter ii, "Be subject to every kind of human ordinance, whether to the king as supreme, or to the governors, as to those sent of Him for the punishing of the evil and for the reward of the good."

This penal law existed from the beginning of the world. For when Cain slew his brother he was in such great terror of being in turn killed that God specially forbade it and suspended the sword for his sake,—and no one was to slay him. He would not have had this fear if he had not seen and heard from Adam that murderers should be slain. Moreover God re-established and confirmed it after the Flood in unmistakable terms when He said, "Whoso sheds man's blood, his blood shall be shed again by man." This

cannot be understood as a plague and punishment of God upon murderers; for many murderers who repent or are pardoned continue to live, and die by other means than the sword. But it is said of the right of the sword, that a murderer is guilty of death and should in justice be slain by the sword. Though justice be hindered or the sword be tardy, so that the murderer dies a natural death, the Scripture is not on that account false when it says, "Whoso sheddeth man's blood, by man shall his blood be shed." For it is men's fault or merit that this law commanded of God is not carried out; even as other commandments of God are broken.

Afterward it was also confirmed by the law of Moses, Exodus xxi, "If a man presumptuously kill thou shalt take him from My altar that he may die." And again, in the same place, "A life for a life, an eye for an eye, a tooth for a tooth, a foot for a foot, a hand for a hand, a wound for a wound, a bruise for a bruise." Christ also confirms it when He says to Peter in the garden, "He that taketh the sword shall perish by the sword," which is to be interpreted like Genesis ix, "Whoso sheddeth man's blood," etc. Doubtless Christ refers in these words to that passage and incorporates and confirms it in them. John the Baptist teaches the same. When the soldiers asked him what they should do, he answered, "Do injustice or violence to no one, and be content with your wages." If the sword were not divinely appointed he

* From Martin Luther, *Secular Authority: To What Extent It Should Be Obeyed* (1523, trans. J. J. Schindel), from *Works*, Vol. 45, 1930. By permission of Fortress Press.

should have commanded them to cease being soldiers, since he was to perfect the people and direct them in a proper Christian way. Hence it is sufficiently clear and certain that it is God's will that the sword and secular law be used for the punishment of the wicked and the protection of the upright.

NON-RESISTANCE

There seems to be a powerful argument on the other side. Christ says, Matthew v, "Ye have heard that it was said to them of old: An eye for an eye, a tooth for a tooth. But I say unto you, That a man shall not resist evil, but if any one strikes thee upon the right cheek, turn to him the other also; and whoever will go to law with thee to take thy coat, let him have the cloak also, and whoever forces thee a mile, with him go two miles." Likewise Paul, Romans xii, "Dearly beloved, defend not yourselves, but give place to God's wrath, for it is written, Vengeance is mine, I will repay saith the Lord." Likewise Matthew v, "Love your enemies, do good to them that hate you." And I Peter iii, "Let no one repay evil with evil, nor railing with railing," etc. These and the like passages truly would make it appear as though in the New Testament there should be no secular sword among Christians.

Hence the sophists also say that Christ has abolished Moses' law; of such commandments they make counsels for the perfect, and divide Christian teaching and Christians into two classes. One part they call the perfect, and assign to it such counsels. To the other, the imperfect, they assign the commandments. This they do out of sheer perversity and caprice, without any scriptural basis. They do not see that in the same passage Christ lays such stress on His teaching that He is unwilling to have the least word of it set aside, and condemns to hell those who do not love their enemies. Therefore we must interpret these passages differently, so that Christ's words may apply to all alike whether they be

"perfect" or "imperfect." For perfection and imperfection consist not in works and do not establish a distinct external order among Christians; but they exist in the heart, in faith and love, so that they who believe and love the most are the perfect ones, whether outwardly they be male or female, prince or peasant, monk or layman. For love and faith produce no sects or outward differences.

THE TWO KINGDOMS

We must divide all the children of Adam into two classes; the first belong to the kingdom of God, the second to the kingdom of the world. Those belonging to the kingdom of God are all true believers in Christ and are subject to Christ. For Christ is the King and Lord in the kingdom of God, as the second Psalm and all the Scriptures say. For this reason He came into the world, that He might begin God's kingdom and establish it in the world. Therefore He says before Pilate, "My kingdom is not of the world, but whoever is of the truth hears My voice"; and continually in the Gospel He refers to the kingdom of God and says, "Amend your ways, the kingdom of God is at hand." Likewise, "Seek first the kingdom of God and His righteousness." He also calls the Gospel, a Gospel of the kingdom, for the reason that it teaches, governs, and contains God's kingdom.

Now observe, these people need no secular sword or law. And if all the world were composed of real Christians, that is, true believers, no prince, king, lord, sword, or law would be needed. For what were the use of them, since Christians have in their hearts the Holy Spirit, who instructs them and causes them to wrong no one, to love every one, willingly and cheerfully to suffer injustice and even death from every one. Where every wrong is suffered and every right is done, no quarrel, strife, trial, judge, penalty, law or sword is needed. Therefore, it is not possible for the secular sword and law to find any work to do among Christians, since of themselves

they do much more than its laws and doctrines can demand. Just as Paul says in I Timothy i, "The law is not given for the righteous, but for the unrighteous."

Why is this? Because the righteous does of himself all and more than all that all the laws demand. But the unrighteous do nothing that the law demands, therefore they need the law to instruct, constrain, and compel them to do what is good. A good tree does not need any teaching or law to bear good fruit, its nature causes it to bear according to its kind without any law and teaching. A man would be a fool to make a book of laws and statutes telling an apple tree how to bear apples and not thorns, when it is able by its own nature to do this better than man with all his books can define and direct. Just so, by the Spirit and by faith all Christians are throughout inclined to do well and keep the law, much more than any one can teach them with all the laws, and need so far as they are concerned no commandments nor law.

You ask, Why then did God give to all men so many commandments, and why did Christ teach in the Gospel so many things to be done? To put it as briefly as possible here, Paul says that the law is given for the sake of the unrighteous, that is, that those who are not Christians may through the law be externally restrained from evil deeds, as we shall hear later. Since, however, no one is by nature Christian or pious, but every one sinful and evil, God places the restraints of the law upon them all, so that they may not dare give rein to their desires and commit outward, wicked deeds. In addition, St. Paul gives the law another function in Romans vii and Galatians iii. It is to teach men to recognize sin, that they may be made humble unto grace and unto faith in Christ. Christ also does this here, when He teaches in Matthew v that we should not resist evil, and thereby glorifies the law and teaches how a real Christian ought to be and must be disposed, as we shall hear further on.

All who are not Christians belong to

the kingdom of the world and are under the law. Since few believe and still fewer live a Christian life, do not resist the evil, and themselves do no evil, God has provided for non-Christians a different government outside the Christian estate and God's kingdom, and has subjected them to the sword, so that, even though they would do so, they cannot practice their wickedness, and that, if they do, they may not do it without fear nor in peace and prosperity. Even so a wild, savage beast is fastened with chains and bands, so that it cannot bite and tear as is its wont, although it gladly would do so; whereas a tame and gentle beast does not require this, but without any chains and bands is nevertheless harmless. If it were not so, seeing that the whole world is evil and that among thousands there is scarcely one true Christian, men would devour one another, and no one could preserve wife and child, support himself and serve God; and thus the world would be reduced to chaos. For this reason God has ordained the two governments; the spiritual, which by the Holy Spirit under Christ makes Christians and pious people, and the secular, which restrains the unchristian and wicked so that they must needs keep the peace outwardly, even against their will. So Paul interprets the secular sword, Romans xiii, and says it is not a terror to good works, but to the evil. And Peter says it is for the punishment of evil doers.

If any one attempted to rule the world by the Gospel, and put aside all secular law and the secular sword, on the plea that all are baptised and Christian, and that according to the Gospel, there is to be among them neither law nor sword, nor necessity for either, pray, what would happen? He would loose the bands and chains of the wild and savage beasts, and let them tear and mangle every one, and at the same time say they were quite tame and gentle creatures; but I would have the proof in my wounds. Just so would the wicked under the name of Christian abuse this freedom of the Gospel, carry on their knavery, and say that

they were Christians subject neither to law nor sword, as some are already raving and ranting.

To such a one we must say, It is indeed true that Christians, so far as they themselves are concerned, are subject to neither law nor sword and need neither; but first take heed and fill the world with real Christians before ruling it in a Christian and evangelical manner. This you will never accomplish; for the world and the masses are and always will be unchristian, although they are all baptised and are nominally Christian. Christians, however, are few and far between, as the saying is. Therefore it is out of the question that there should be a common Christian government over the whole world, nay even over one land or company of people, since the wicked always outnumber the good. Hence a man who would venture to govern an entire country or the world with the Gospel would be like a shepherd who should place in one fold wolves, lions, eagles, and sheep together and let them freely mingle with one another and say, Help yourselves, and be good and peaceful among yourselves; the fold is open, there is plenty of food; have no fear of dogs and clubs. The sheep, forsooth, would keep the peace and would allow themselves to be fed and governed in peace, but they would not live long; nor would any beast keep from molesting another.

For this reason these two kingdoms must be sharply distinguished, and both be permitted to remain; the one to produce piety, the other to bring about external peace and prevent evil deeds; neither is sufficient in the world without the other. For no one can become pious before God by means of the secular government, without Christ's spiritual rule. Hence Christ's rule does not extend over all, but Christians are always in the minority and are in the midst of non-Christians. Where there is only secular rule or law, there, of necessity, is sheer hypocrisy, though the commandments be God's very own. Without the Holy Spirit in the heart no one becomes really pious,

he may do as fine works as he will. Where, on the other hand, the spiritual government rules alone over land and people, there evil is given free rein and the door is opened for every kind of knavery; for the natural world cannot receive or comprehend spiritual things.

You see the purpose of Christ's words which we quoted above from Matthew v. They mean that Christians shall not go to law nor use the secular sword among themselves. In reality He says it only to His dear Christians. They alone also accept it and act accordingly, nor do they make counsels of it, as the sophists do, but are so inclined in their heart, through the Spirit, that they do evil to no one and willingly endure evil at every one's hands. If the whole world were Christian, all these words would apply to it and it would keep them. Since, however, it is unchristian the words do not apply to it, nor does it keep them, but is under another rule in which those who are not Christians are under external constraint and are forced to keep the peace and do what is good.

For this reason Christ did not wield the sword nor give it a place in His kingdom; for He is a King over Christians and rules by His Holy Spirit alone, without law. And although He acknowledged the sword, He nevertheless did not use it; for it is of no use in His kingdom, in which are none but the pious. Hence David of old dared not build the temple, because he had shed much blood and had borne the sword; not that he had done wrong thereby, but because he could not be a type of Christ, who without the sword was to have a kingdom of peace. It must be huilt by Solomon, whose name means "Frederick" or "peaceful," who had a peaceful kingdom, by which the truly peaceful kingdom of Christ, the real Frederick and Solomon, could be represented. In like manner, during the entire building of the temple not the sound of a tool was heard, as the text says; all for this reason, that Christ, without constraint and force, without law and the sword, was to have a people who serve Him freely.

This is what the prophets mean in Psalm cx, "Thy people shall be willing"; and in Isaiah xi, "They shall not hurt nor destroy in all my holy mountain"; and in Isaiah ii, "They shall beat their swords into plowshares and their spears into pruning hooks, and no one shall lift up the sword against another, neither shall they busy themselves in war anymore," etc. Whoever would apply these and similar passages wherever Christ's name is professed, would entirely pervert the Scriptures; for they are spoken only of true Christians, who really do this among themselves.

OBEDIENCE TO SECULAR AUTHORITY

But perhaps you will say, Since Christians do not need the secular sword and the law, why does Paul say to all Christians, in Romans xiii, "Let all souls be subject to power and authority"? And St. Peter says, "Be subject to every human ordinance," etc., as quoted above. I answer, as I have said, that Christians, among themselves and by and for themselves, need no law or sword, since it is neither necessary nor profitable for them. Since, however, a true Christian lives and labors on earth not for himself, but for his neighbor, therefore the whole spirit of his life impels him to do even that which he need not do, but which is profitable and necessary for his neighbor. Because the sword is a very great benefit and necessary to the whole world, to preserve peace, to punish sin and to prevent evil, he submits most willingly to the rule of the sword, pays tax, honors those in authority, serves, helps, and does all he can to further the government, that it may be sustained and held in honor and fear. Although he needs none of these things for himself and it is not necessary for him to do them, yet he considers what is for the good and profit of others, as Paul teaches in Ephesians v.

He serves the State as he performs all other works of love, which he himself

does not need. He visits the sick, not that he may be made well; feeds no one because he himself needs food: so he also serves the State not because he needs it, but because others need it,—that they may be protected and that the wicked may not become worse. He loses nothing by this, and such service in no way harms him, and yet it is of great profit to the world. If he did not do it, he would be acting not as a Christian but contrary even to love, and would also be setting a bad example to others, who like him would not submit to authority, though they were no Christians. In this way the Gospel would be brought into disrepute, as though it taught rebellion and made self-willed people, unwilling to benefit or serve any one, when in reality it makes a Christian the servant of every one. Thus in Matthew xviii, Christ gave the tribute money that He might not offend them, although He did not need to do it.

Thus you observe in the words of Christ quoted above from Matthew v that He indeed teaches that Christians among themselves should have no secular sword nor law. He does not, however, forbid one to serve and obey those who have the secular sword and the law; much rather, since you have no need of them and are not to have them, are you to serve those who have not progressed so far as you and still need them. Although you do not need to have your enemy punished, your weak neighbor does. You should help him, that he may have peace and that his enemy may be curbed; which is not possible unless power and authority are honored and feared. Christ does not say, "Thou shalt not serve the State or be subject to it," but "Thou shalt not resist evil." As though He said, "Take heed that you bear everything, so that you may not need the State to help and serve you and be of profit to you, but that you may, on the other hand, help, serve, and be of profit and use to it. I would have you to be far too exalted and noble to have any need of it, but it should have need of you."

CHRISTIANS MAY BEAR THE SWORD

You ask whether a Christian, also, may bear the secular sword and punish the wicked, since Christ's words, "Thou shalt not resist the evil," are so clear and definite that the sophists have had to make a counsel of them. I answer, You have now heard two propositions. The one is, that the sword can have no place among Christians, therefore you cannot bear it among and against Christians, who do not need it. The question, therefore, must be directed to the other side, to the non-Christians, whether as a Christian you may there bear it. Here the other proposition applies, that you are under obligation to serve and further the sword by whatever means you can, with body, soul, honor or goods. For it is nothing that you need, but something quite useful and profitable for the whole world and for your neighbor. Therefore, should you see that there is a lack of hangmen, beadles, judges, lords, or princes, and find that you are qualified, you should offer your services and seek the place, that necessary government may by no means be despised and become inefficient or perish. For the world cannot and dare not dispense with it.

You ask, Why did not Christ and the apostles bear the sword? Tell me, Why did He not also take a wife, or become a cobbler or a tailor? If an occupation or office is not good because Christ Himself did not occupy it, what would become of all occupations and offices, with the exception of the ministry which alone He exercised? Christ fulfilled His own office and vocation, but thereby did not reject any other. It was not meet that He should bear the sword, for He was to bear only that office by which His kingdom is governed and which properly serves His kingdom. Now it does not concern His kingdom that He should be a married man, a cobbler, a tailor, a farmer, a prince, a hangman or a beadle, neither is the sword or secular law of any concern, but only God's Word and Spirit,

by which His people are inwardly governed. This office which He exercised then, and still exercises, always bestows God's Word and Spirit; and in this office the apostles and all spiritual rulers must needs follow Him. For they are kept so busily employed with the spiritual sword, the Word of God, in fulfilling this their calling, that they must indeed neglect the worldly sword, and leave it to those who do not have to preach; although it is not contrary to their calling to use it, as I have said. For every one must attend to his own calling and work.

Therefore, even though Christ did not bear the sword nor prescribe it, it is sufficient that He did not forbid or abolish it, but rather endorsed it; just as it is sufficient that He did not abolish the state of matrimony, but endorsed it, though He Himself took no wife and gave no commandment concerning it. He had to identify Himself throughout with the occupation and work which properly and entirely served the furtherance of His kingdom, so that no occasion and binding example might be made of it, to teach and believe that the kingdom of God cannot exist without matrimony and the sword and such externals (since Christ's examples are binding), when it is only by God's Word and Spirit that it does exist. This was and had to be Christ's peculiar work as the supreme King in this kingdom. Since, however, not all Christians have this same office, though innately it belongs to them, it is meet that they should have some other, external one, by which God may also be served.

From all this we see what is the true meaning of Christ's words in Matthew v, "Resist not evil," etc. It is this, that a Christian should be so disposed that he will suffer every evil and injustice, not avenge himself nor bring suit in court, and in nothing make use of secular power and law for himself. For others, however, he may and should seek vengeance, justice, protection and help, and do what he can toward this. Likewise, the State should, either of itself or through

the instigation of others, help and protect him without complaint, application or instigation on his part. When the State does not do this, he ought to permit himself to be robbed and despoiled, and not resist the evil, as Christ's words say.

THE EXTENT OF SECULAR AUTHORITY

We come now to the main part of this treatise. For as we have learned that there must be temporal authority on earth, and how it is to be employed in a Christian and salutary way, we must now learn how far its arm extends and how far its hand reaches, lest it extend too far and encroach upon God's kingdom and rule. And it is very necessary to know this, since where it is given too wide a scope, intolerable and terrible injury follows; and, on the other hand, it cannot be too much restricted without working injury. In the latter case the punishment is too light; in the former, too severe. It is more tolerable, however, to err on the latter side and punish too little; since it always is better to let a knave live than to kill a good man, for the world will still have knaves, and must have them, but of good men there are few.

In the first place, it must be noted that the two classes of Adam's children, the one in God's kingdom under Christ, the other in the kingdom of the world under the State, have two kinds of laws, as was said above. Every kingdom must have its own laws and regulations, and without law no kingdom or government can exist, as daily experience sufficiently proves. Worldly government has laws which extend no farther than to life and property and what is external upon earth. For over the soul God can and will let no one rule but Himself. Therefore, where temporal power presumes to prescribe laws for the soul, it encroaches upon God's government and only misleads and destroys the soul. We desire to make this so clear that every one shall grasp it, and that our junkers, the princes and bishops, may see what fools they are when they seek to coerce the people with their laws

and commandments into believing one thing or another.

When a man-made law is imposed upon the soul, in order to make it believe this or that, as that man prescribes, there is certainly no word of God for it. If there is no word of God for it, it is uncertain whether God will have it so, for we cannot be certain that what He does not command pleases Him. Nay, we are sure that it does not please Him, for He desires that our faith be grounded simply and entirely on His divine Word, as He says in Matthew xvi, "On this rock will I build my church"; and in John x, "My sheep hear my voice and know me; but the voice of strangers they hear not, but flee from them." It follows from this that the secular power forces souls to eternal death with such an outrageous law, for it compels them to believe as right and certainly pleasing to God what is nevertheless uncertain, nay, what is certainly displeasing to Him, since there is no clear word of God for it. For whoever believes that to be right which is wrong or uncertain denies the truth, which is God Himself, and believes in lies and errors and counts that right which is wrong.

Hence it is the height of folly when they command that one shall believe the Church, the fathers, the councils, though there be no word of God for it. The devil's apostles command such things, not the Church; for the Church commands nothing unless it is sure it is God's Word, as St. Peter says, "If any man speak let him speak as the oracles of God." It will be a very long time, however, before they prove that the statements of the councils are God's Word. Still more foolish is it when they assert that kings and princes and the mass of men believe thus and so. If you please, we are not baptised unto kings, princes, or even unto the mass of men, but unto Christ and unto God Himself; neither are we called kings, princes or common folk, but Christians. No one shall and can command the soul, unless he can show it the way to heaven; but this no man can do, only God. Therefore in matters which concern the salvation of souls

nothing but God's Word shall be taught and accepted.

Again, consummate fools though they are, they must confess that they have no power over souls. For no human being can kill a soul or make it alive, conduct it to heaven or hell. And if they will not believe us in this, Christ indeed will certify strongly enough to it, since He says in Matthew x, "Fear not them which kill the body and after that have power to do naught; but rather fear Him Who after He has killed the body has power to condemn to hell." I consider that here it is sufficiently clear that the soul is taken out of human hands and is placed under the power of God alone. Now tell me, how much wit is there in the head of him who imposes commandments where he has no power at all? Who would not regard one as insane if he commanded the moon to shine when he desired it? How fitting it would be if the Leipzigers would impose laws on us Wittenbergers, or again, if we in Wittenberg would lay laws on those in Leipzig. They would certainly send the law-makers a thank-offering of hellebore to clear the brain and cure the snuffles. Nevertheless, our emperors and wise princes continue to permit pope, bishops and sophists to lead them on, one blind man leading the other, to command their subjects to believe, without God's Word, whatever they please, and still would be known as Christian princes. God help us!

Besides, we can understand how any authority shall and may act only where it can see, know, judge, change and convert. For what kind of judge would he be who should blindly judge matters which he neither heard nor saw? Tell me, how can a man see, know, judge, condemn and change hearts? This is reserved for God alone, as Psalm vii says, "God trieth the heart and reins"; likewise, "The Lord shall judge the people"; and Acts xv, "God knoweth the hearts"; and, Jeremiah xvii, "Wicked and unsearchable is the human heart; who can know it? I the Lord, who search the heart and reins." A court ought and must be quite certain and clear about everything, if it is to pass

sentence. But the thoughts and intents of the heart can be known to no one but God; therefore it is useless and impossible to command or compel any one by force to believe one thing or another. It must be taken hold of in a different way; force cannot accomplish it. And I am surprised at the great fools, since they themselves all say, *De occultis non iudicat ecclesia*,—the Church does not judge secret things. If the spiritual rule of the Church governs only public matters, how dare the senseless secular power judge and control such a secret, spiritual, hidden matter as faith?

Furthermore, every man is responsible for his own faith, and he must see to it for himself that he believes rightly. As little as another can go to hell or heaven for me, so little can he believe or disbelieve for me; and as little as he can open or shut heaven or hell for me, so little can he drive me to faith or unbelief. Since, then, belief or unbelief is a matter of every one's conscience, and since this is no lessening of the secular power, the latter should be content and attend to its own affairs and permit men to believe one thing or another, as they are able and willing, and constrain no one by force. For faith is a free work, to which no one can be forced. Nay, it is a divine work, done in the Spirit, certainly not a matter which outward authority should compel or create. Hence arises the well-known saying, found also in Augustine, "No one can or ought to be constrained to believe."

Besides, the blind, wretched folk do not see how utterly hopeless and impossible a thing they are attempting. For no matter how much they fret and fume, they cannot do more than make the people obey them by word and deed; the heart they cannot constrain, though they wear themselves out trying. For the proverb is true, "Thoughts are free." Why then would they constrain people to believe from the heart, when they see that it is impossible? In this way they compel weak consciences to lie, to deny, and to say what they do not believe in their hearts, and they load themselves

down with dreadful alien sins. For all the lies and false confessions which such weak consciences utter fall back upon him who compels them. It were far better, if their subjects erred, simply to let them err, than that they should constrain them to lie and to say what is not in their hearts; neither is it right to defend evil with what is worse.

Would you like to know why God ordains that the temporal princes must offend so frightfully? I will tell you. God has given them over to a perverse mind and will make an end of them, as well as of the spiritual nobles. For my ungracious lords, the pope and the bishops, should be bishops and preach God's Word; this they leave undone and are become temporal princes, and govern with laws which concern only life and property. How thoroughly they have turned things upside down! Inwardly they ought to be ruling souls by God's Word; hence outwardly they rule castles, cities, land and people and torture souls with unspeakable outrages. Similarly, the temporal lords should rule land and people outwardly; this they do not do. All they can do is to flay and scrape, put tax on tax, tribute on tribute, let loose now a bear, now a wolf. Besides this, there is no justice, fidelity or truth to be found among them; what they do would be beneath robbers and knaves, and their temporal rule has sunk quite as low as that of the spiritual tyrants. Hence God also perverts their minds, that they rush on in their senselessness and would establish a spiritual rule over souls, as the others would establish a temporal rule, in order that they may contentedly burden themselves with alien sins, and with God's and all men's hate, until they go under with bishops, priests and monks, one knave with the other. Then they lay all the blame on the Gospel, and instead of doing penance, blaspheme God and say that our preaching has brought about what their perverse wickedness has merited and still unceasingly merits, as the Romans did when they were destroyed. Here then you have God's decree regarding the high and mighty. But they are not

to believe it, lest this severe decree of God be hindered by their repentance.

You reply, But Paul said in Romans xiii, "Every soul shall be subject to power and authority," and Peter says, "We should be subject to every ordinance of man." I answer, That is just what I want! These sayings are in my favor. St. Paul speaks of authority and power. Now, you have just heard that no one but God can have authority over souls. Hence Paul cannot be speaking of any obedience except where there can be corresponding authority. From this it follows that he does not speak of faith, and does not say that secular authority should have the right to command faith, but he is speaking of external goods, and that these are to be set in order and controlled on earth. This his words also clearly indicate, when he prescribes the limits to both authority and obedience, and says, "Render to every one his dues, tribute to whom tribute is due, custom to whom custom; honor to whom honor; fear to whom fear." You see, temporal obedience and power apply only externally to tribute, custom, honor and fear. Likewise when he says, "The power is not a terror to good, but to evil works," he again limits the power, so that it is to have the mastery not over faith or the Word of God, but over evil works.

This is what St. Peter also desires, when he says, "Ordinance of man." Human ordinance cannot possibly extend its authority to heaven and over souls, but belongs only to earth, to the external intercourse of men with each other, where men can see, know, judge, sentence, punish and acquit. Christ Himself made this nice distinction and summed it all up briefly when He said, "Give unto Cæsar the things that are Cæsar's, and unto God the things that are God's." If, then, imperial power extended to God's kingdom and power, and were not something by itself, He would not thus have made it a separate thing. For, as was said, the soul is not under Cæsar's power; he can neither teach nor guide it, neither kill it nor make it alive, neither bind it nor loose it, neither judge it nor

condemn it, neither hold it nor release it, which he must do had he power to command it and impose laws upon it; but over life, goods and honor he indeed has this right, for such things are under his authority.

David, too, stated this long ago in one of his short sayings when he says in Psalm cxv, "The heavens hath he given to the Lord of heaven; but the earth hath he given to the children of men." That is, over what is on earth and belongs to the temporal, earthly kingdom, man has authority from God, but that which belongs to the heavenly eternal kingdom is entirely under the heavenly Lord. Nor does Moses forget this when he says in Genesis i, "God said, Let us make man to rule over the beasts of the earth, over the fish in the waters, over the birds in the air." There only external rule is ascribed to men. And, in short, this is the meaning, as St. Peter says, Acts v, "We must obey God rather than men." Thereby he clearly sets a limit to worldly government, for if we had to do all that worldly government demands it would be to no purpose to say, "We must obey God rather than men."

If then your prince or temporal lord commands you to hold with the pope, to believe this or that, or commands you to give up certain books, you should say, It does not befit Lucifer to sit by the side of God. Dear Lord, I owe you obedience with life and goods; command me within the limits of your power on earth, and I will obey. But if you command me to believe, and to put away books, I will not obey; for in this case you are a tyrant and overreach yourself, and command where you have neither right nor power, etc. Should he take your property for this, and punish such disobedience, blessed are you. Thank God that you are worthy to suffer for the sake of the divine Word, and let him rave, fool that he is. He will meet his judge. For I tell you, if you do not resist him but give him his way, and let him take your faith or your books, you have really denied God.

Let me illustrate. In Meissen, Bavaria, in the Mark, and other places, the tyrants

have issued an order that the New Testament be delivered to the courts everywhere. In this case their subjects ought not deliver a page or a letter, at risk of their salvation. For whoever does so, delivers Christ into Herod's hands, since they act as murderers of Christ, like Herod. But if their houses are ordered searched and books or goods taken by force, they should suffer it to be done. Outrage is not to be resisted, but endured, yet they should not sanction it, nor serve or obey or follow by moving foot or finger. For such tyrants act as worldly princes should act,—"worldly" princes they are; but the world is God's enemy. Therefore they must also do what is opposed to God, and in accord with the world, that they may by no means lose all honor, but remain worldly princes. Hence do not wonder that they rage and mock at the Gospel; they must live up to their name and title.

You must know that from the beginning of the world a wise prince is a rare bird indeed; still more so a pious prince. They are usually the greatest fools or the worst knaves on earth; therefore one must constantly expect the worst from them and look for little good from them, especially in divine matters, which concern the salvation of souls. They are God's jailers and hangmen, and His divine wrath needs them to punish the wicked and preserve outward peace. Our God is a great Lord, and therefore must have such noble, honorable and rich hangmen and beadles, and desires that they shall have riches, honor and fear, in full and plenty, from every one. It pleases His divine will that we call His hangmen gracious lords, fall at their feet and be subject to them in all humility, so long as they do not ply their trade too far and desire to become shepherds instead of hangmen. If a prince becomes wise, pious or a Christian, it is one of the great wonders, and one of the most precious tokens of divine grace upon that land. For the usual course is according to the saying in Isaiah iii, "I will give children to be their princes and babes shall rule over them," and in Hosea xiii, "I will

give thee a king in my anger and take him away in my wrath." The world is too wicked, and does not deserve to have many wise and pious princes. Frogs need storks.

Again you say, Temporal power does not force men to believe, but simply prevents them from being misled by false doctrine; otherwise how could heretics be prevented from preaching? I answer, This the bishops should do, to whom, and not to the princes, such duty is entrusted. Heresy can never be prevented by force. That must be taken hold of in a different way, and must be opposed and dealt with otherwise than with the sword. Here God's Word must strive; if that does not accomplish the end it will remain unaccomplished through secular power, though it fill the world with blood. Heresy is a spiritual matter, which no iron can strike, no fire burn, no water drown. God's Word alone avails here, as Paul says, II Corinthians x, "Our weapons are not carnal, but mighty through God to destroy every counsel and high thing that exalteth itself against the knowledge of God, and to bring into captivity every thought to the obedience of Christ."

Moreover, faith and heresy are never so strong as when men oppose them by sheer force, without God's Word. For men count it certain that such force is for a wrong cause and is directed against the right, since it proceeds without God's Word, and does not know how to further its cause except by force, just as the brute beasts do. For even in secular affairs force can be used only after the wrong has been legally condemned. How much less possible is it to act with force, without justice and God's Word, in these high, spiritual matters! See, therefore what fine, shrewd nobles they are. They would drive out heresy, and set about it in such a way that they only strengthen the opposition, make themselves suspected, and justify the heretics. Friend, would you drive out heresy, then you must find a plan to tear it first of all from the heart and altogether to turn

men's wills away from it; force will not accomplish this, but only strengthen the heresy. What avails it to strengthen heresy in the heart and to weaken only its outward expression, and to force the tongue to lie? God's Word, however, enlightens the heart; and so all heresies and errors perish of themselves from the heart.

Such overpowering of heresy the prophet Isaiah proclaimed in his eleventh chapter when he said, "He shall smite the earth with the rod of His mouth, and slay the wicked with the breath of His lips." You see, if the wicked is to be smitten and converted, it is accomplished by the mouth. In short, such princes and tyrants do not know that to fight against heresy is to fight against the devil, who fills men's hearts with error, as Paul says in Ephesians vi, "We fight not with flesh and blood, but with spiritual wickedness, with the rulers of the darkness of this world." Therefore, as long as the devil is not repelled and driven from the heart, it matters as little to him that I destroy his vessels with fire or sword, as it would if I fought lightning with a straw. Job bore abundant witness to this, when in his forty-first chapter he said that the devil esteemeth iron as straw and fears no power on earth. We learn it also from experience, for although all the Jews and heretics were burned, yet no one has been or will be convinced and converted thereby.

Nevertheless such a world as this deserves such princes, none of whom do their duty. The bishops are to leave the Word of God alone and not rule souls by it, but command the worldly princes to rule them with the sword. The worldly princes, in their turn, are to permit usury, theft, adultery, murder, and other evil works, and themselves do them; and then allow the bishops to punish with the ban. Thus they turn things topsy-turvy, and rule souls with iron and the body with bans, so that worldly princes rule in a spiritual, and spiritual princes in a worldly way. What else does the devil have to do on earth than thus to play the

fool and hold carnival with his folk? These are our Christian princes, who defend the faith and devour the Turk. Fine fellows, to be sure, whom we may well trust to accomplish something by such refined wisdom, namely, break their necks and plunge land and people into suffering and want.

I would, however, in all fidelity advise the blinded folk to take heed to the short saying is Psalm cvii. "*Effundit contemptum super principes*" ("He poureth contempt upon princes"). I swear unto you by God that, if through your fault this little text becomes effective against you, you are lost, though every one of you be as mighty as the Turk; and your snorting and raving will help you nothing. A large part has already come true. For there are very few princes that are not reckoned fools or knaves. That is because they show themselves to be such; the common man is learning to think, and the prince's scourge, which God calls *contemptum*, is gathering force among the mob and with the common man. I fear there is no way to stop it, unless the princes conduct themselves in a princely manner and begin again to rule reasonably and thoroughly. Men ought not, men cannot, men will not suffer your tyranny and presumption much longer. Dear princes and lords, be wise and guide yourselves accordingly. God will no longer tolerate it. The world is no longer what it was when you hunted and drove the people like so much game. Therefore drop your outrage and force, and remember to deal justly and let God's Word have its course, as it will and must and shall, nor will you prevent it. If there is heresy abroad, let it be overcome, as is proper, with God's Word. But if you will keep on brandishing the sword, take heed lest there come one who shall bid you sheath it, and that not in God's name.

But should you ask, Since there is to be no secular sword among Christians, how are they to be ruled outwardly? There certainly must be authority also

among Christians. I answer, Among Christians there shall and can be no authority; but all are alike subject to one another, as Paul says in Romans xii, "Each shall count the other his superior," and Peter in I Peter v, "All of you be subject one to another." This is also what Christ means in Luke xiv, "When you are bidden to a wedding sit down in the lowest room." There is no superior among Christians, but Christ Himself and Christ alone. And what kind of authority can there be where all are equal and have the same right, power, possession, and honor, and no one desires to be the other's superior, but each the other's inferior? One could not establish authority where there are such people, even if one would, since their character and nature will not permit them to have superiors, for no one is willing or able to be the superior. But when there are no such people, there are no real Christians.

What, then, are the priests and bishops? I answer, Their government is not one of authority or power, but a service and an office; for they are neither higher nor better than other Christians. Therefore they should not impose any law or decree on others without their will and consent; their rule consists in nothing else than in dealing with God's Word, leading Christians by it and overcoming heresy by its means. For, as was said, Christians can be ruled by nothing but by God's Word. For Christians must be ruled in faith, not by outward works. Faith, however, can come through no word of man, but only through the Word of God, as Paul says in Romans x, "Faith cometh by hearing, and hearing by the Word of God." Those who do not believe are not Christians, do not belong to Christ's kingdom, but to the worldly kingdom, and are constrained and ruled by the sword and by outward rule. Christians do of themselves, without constraint, every good thing, and find God's Word alone sufficient for them.

II CALVIN

Institutes of the Christian Religion *

SPIRITUAL AND POLITICAL GOVERNMENT

Man is under two kinds of government: one spiritual, by which the conscience is formed to piety and the service of God; the other political, by which a man is instructed in the duties of humanity and civility, which are to be observed in an intercourse with mankind. They are generally, and not improperly, denominated the spiritual and the temporal jurisdiction, indicating that the former species of government pertains to the life of the soul, and that the latter relates to the concerns of the present state, not only to the provision of food and clothing, but to the enactment of laws to regulate a man's life among his neighbors by the rules of holiness, integrity, and sobriety. For the former has its seat in the interior of the mind, whilst the latter only directs the external conduct: one may be termed a spiritual kingdom, and the other a political one. But these two, as we have distinguished them, always require to be considered separately; and while the one is under discussion, the mind must be abstracted from all consideration of the other. For man contains, as it were, two worlds, capable of being governed by various rulers and various laws. This distinction will prevent what the Gospel inculcates concerning spiritual liberty from being misapplied to political regulations,

* From Jean Calvin, *Institutes of the Christian Religion* (1536, trans. John Allen, 1813).

as though Christians were less subject to the external government of human laws because their consciences have been set at liberty before God, as though their freedom of spirit necessarily exempted them from all carnal servitude. Again, because even in those constitutions which seem to pertain to the spiritual kingdom, there may possibly be some deception, it is necessary to discriminate between these also—which are to be accounted legitimate, as according with the Divine word, and which, on the contrary, ought not to be received among believers.

The question which, as I have observed, is in itself not very obscure or intricate, greatly perplexes many because they do not distinguish with sufficient precision between the external jurisdiction and the court of conscience. The difficulty is increased by Paul's injunction to obey magistrates "not only for wrath, but also for conscience's sake,"¹ from which should follow that the conscience also is bound by political laws. But if this were true, it would supersede all that we have already said, or are now about to say, respecting spiritual government. For the solution of this difficulty it will be of use, first, to know what conscience is. And the definition of it must be derived from the etymology of the word. For as, when men apprehend the knowledge of things in the mind and understanding, they are thence said *scire*, "to know," whence is derived the word *scientia*, "science" or "knowledge," so

¹ Rom. 8:1, 5.

when they have a sense of Divine justice, as an additional witness, which permits them not to conceal their sins or to elude accusation at the tribunal of the supreme Judge, this sense is termed *conscientia*, "conscience." For it is a kind of medium between God and man, because it does not suffer a man to suppress what he knows within himself, but pursues him till it brings him to conviction. This is what Paul means by "their conscience also bearing witness, and their thoughts accusing, or else excusing, one another."² Simple knowledge might remain, as it were, confined within a man. This sentiment, therefore, which places man before the Divine tribunal is appointed, as it were, to watch over man, to observe and examine all his secrets, that nothing may remain enveloped in darkness. Hence the old proverb, "Conscience is as a thousand witnesses." For the same reason Peter speaks of "the answer of a good conscience toward God,"³ to express our tranquillity of mind when, persuaded of the favor of Christ, we present ourselves with boldness in the presence of God. And the author of the Epistle to the Hebrews expresses absolution or freedom from every future charge of sin, by "having no more conscience of sin."⁴

THE DISCIPLINE OF THE CHURCH: NO ONE EXEMPTED

The discipline of the Church depends chiefly on the power of the keys and the spiritual jurisdiction. To make this more easily understood, let us divide the Church into two principal orders—the clergy and the people. I use the word *clergy* as the common, though improper appellation of those who execute the public ministry in the Church. We shall, first, speak of the common discipline to which all ought to be subject; and then we shall proceed to the clergy, who, be-

sides this common discipline, have a discipline peculiar to themselves. But as some have such a hatred of discipline, as to abhor the very name, they should consider the following: that if no society, and even no house, though containing only a small family, can be preserved in a proper state without discipline, this is far more necessary in the Church, the state of which ought to be the most orderly of all. As the saving doctrine of Christ is the soul of the Church, so discipline forms the ligaments which connect the members together, and keep each other in its proper place. Whoever, therefore, either desire the abolition of all discipline, or obstruct its restoration, whether they act from design or inadvertency, they certainly promote the entire dissolution of the Church. For what will be the consequence if every man be at liberty to follow his own inclinations? But such would be the case, unless the preaching of the doctrine were accompanied with private admonitions, reproofs, and other means to enforce the doctrine, and prevent it from being altogether ineffectual. Discipline, therefore, serves as a bridle to curb and restrain the refractory who resist the doctrine of Christ; or as a spur to stimulate the inactive; and sometimes as a father's rod, with which those who have grievously fallen may be chastised in mercy, and with the gentleness of the Spirit of Christ. When we see the approach of certain beginnings of a dreadful desolation in the Church, since there is no solicitude or means to keep the people in obedience to our Lord, necessity itself proclaims the want of a remedy; and this is the only remedy which has been commanded by Christ, or which has ever been adopted among believers.

From this discipline none were exempted; so that princes and plebeians yielded the same submission to it; and that with the greatest propriety, since it is evidently the discipline of Christ, to whom it is reasonable that all the sceptres and diadems of kings should be subject. Thus Theodosius, when Ambrose excluded him from the privilege of com-

² Rom. 2:15.

³ 1 Pet. 3:21.

⁴ Heb. 10:2.

munion on account of a massacre perpetrated at Thessalonica, laid aside the ensigns of royalty with which he was invested, publicly in the Church bewailed his sin, which the deceitful suggestions of others had tempted him to commit, and implored pardon with groans and tears. For great kings ought not to think it any dishonor to prostrate themselves as suppliants before Christ the King of kings, nor ought they be displeased at being judged by the Church. As they hear scarcely anything in their courts but mere flatteries, it is the more highly necessary for them to receive correction from the Lord by the mouth of his *ministers*; they ought even to wish not to be spared by the *pastors*, that they may be spared by the Lord. The legitimate process in excommunicating an offender, as is pointed out by Paul, requires it to be done, not by the elders alone, but with the knowledge and approbation of the Church: in such a manner, however, that the multitude of the people may not direct the proceeding, but may watch over it as witnesses and guardians, that nothing may be done by a few persons from any improper motive. Beside the invocation of the name of God, the whole of the proceeding ought to be conducted with a gravity declarative of the presence of Christ, so that there be no doubt of his presiding over the sentence.

ON CIVIL GOVERNMENT

Having already stated that man is the subject of two kinds of government, and having sufficiently discussed that which is situated in the soul, or the inner man, and relates to eternal life, we shall now say something of the other kind which relates to civil justice and the regulation of the external conduct. For, though the nature of this argument seems to have no connection with the spiritual doctrine of faith which I have undertaken to discuss, the sequel will show that I have sufficient reason for connecting them together, and, indeed, that necessity obliges me to it, especially since, on the one hand, in-

fatuated and barbarous men madly endeavor to subvert this ordinance established by God, and, on the other hand, the flatterers of princes, extolling their power beyond all just bounds, hesitate not to oppose it to the authority of God himself. Unless both these errors be resisted, the purity of the faith will be destroyed. Besides, it is of no small importance for us to know what benevolent provision God has made for mankind in this instance, that we may be stimulated by a greater degree of pious zeal to testify our gratitude. In the first place, before we enter on the subject itself, it is necessary for us to recur to the distinction which we have already established, lest we fall into an error very common in the world, and injudiciously confound together these two things the nature of which is altogether different.

For some men, when they hear that the Gospel promises a liberty which acknowledges no king or magistrate among them, but submits to Christ alone, think they can enjoy no advantage of their liberty while they see any power exalted above them. They imagine, therefore, that nothing will prosper unless the whole world be modeled in a new form, without any tribunals or laws, or magistrates, or anything of a similar kind which they consider injurious to their liberty. But he who knows how to distinguish between the body and the soul, between this present transitory life and the future eternal one, will find no difficulty in understanding that the spiritual kingdom of Christ and civil government are things very different and remote from each other. Since it is a Jewish folly, therefore, to seek and include the kingdom of Christ under the elements of this world, let us, on the contrary, considering what the Scripture clearly inculcates, that the benefit which is received from the grace of Christ is spiritual—let us, I say, remember to confine within its proper limits all this liberty which is promised and offered to us in him. For why is it that the same apostle who, in one place, exhorts to “stand fast in the

liberty wherewith Christ hath made us free and be not entangled again with the yoke of bondage,”⁵ in another enjoins servants to “care not for” their servile condition,⁶ except that spiritual liberty may very well consist with civil servitude? In this sense we are likewise to understand him in these passages: “There is neither Jew nor Greek, there is neither bond nor free, there is neither male nor female.”⁷ Again: “There is neither Greek nor Jew, circumcision nor uncircumcision, Barbarian, Scythian, bond nor free: but Christ is all, and in all,”⁸ in which he signifies that it is of no importance what is our condition among men or under the laws of what nation we live, as the kingdom of Christ consists not in these things.

Yet this distinction does not lead us to consider the whole system of civil government as a polluted thing which has nothing to do with Christian men. Some fanatics who are pleased with nothing but liberty, or rather licentiousness without any restraint, do indeed boast and vociferate, That since we are dead with Christ to the elements of this world and, being translated into the kingdom of God, sit among the celestials, it is a degradation to us and far beneath our dignity to be occupied with those secular and impure cares which relate to things altogether uninteresting to a Christian man. Of what use, they ask, are laws without judgments and tribunals? But what have judgments to do with a Christian man? And if it be unlawful to kill, of what use are laws and judgments to us? But as we have just suggested that this kind of government is distinct from that spiritual and internal reign of Christ, so it ought to be known that they are in no respect at variance with each other. For that spiritual reign, even now upon earth, commences within us some preludes of the heavenly kingdom, and in this mortal

and transitory life affords us some prelibations of immortal and incorruptible blessedness; but this civil government is designed, as long as we live in this world, to cherish and support the external worship of God, to preserve the pure doctrine of religion, to defend the constitution of the Church, to regulate our lives in a manner requisite for the society of men, to form our manners to civil justice, to promote our concord with each other, and to establish general peace and tranquillity—all of which I confess to be superfluous if the kingdom of God, as it now exists in us, extinguishes the present life. But if it is the will of God that while we are aspiring toward our true country, we be pilgrims on the earth, and if such aids are necessary to our pilgrimage, they who take them from man deprive him of his human nature. They plead that there should be so much perfection in the Church of God that its order would suffice to supply the place of all laws; but they foolishly imagine a perfection which can never be found in any community of men. For since the insolence of the wicked is so great, and their iniquity so obstinate, that it can scarcely be restrained by all the severity of the laws, what may we expect they would do if they found themselves at liberty to perpetuate crimes with impunity whose outrages even the arm of power cannot altogether prevent?

But for speaking of the exercise of civil polity, there will be another place more suitable. At present we only wish it to be understood that to entertain a thought of its extermination is inhuman barbarism; it is equally as necessary to mankind as bread and water, light and air, and far more excellent. For it not only tends to secure the accommodations arising from all these things, that men may breathe, eat, drink, and be sustained in life, though it comprehends all these things while it causes them to live together, yet I say this is not its only tendency; its objects also are that idolatry, sacrileges against the name of God, blasphemies against his truth, and other

⁵ Gal. 5:1.

⁶ I Cor. 7:21.

⁷ Gal. 3:28.

⁸ Col. 3:11.

offenses against religion may not openly appear and be disseminated among the people; that the public tranquillity may not be disturbed; that every person may enjoy his property without molestation; that men may transact their business together without fraud or injustice; that integrity and modesty may be cultivated among them; in short, that there may be a public form of religion among Christians, and that humanity may be maintained among men. Nor let anyone think it strange that I now refer to human polity the charge of the due maintenance of religion, which I may appear to have placed beyond the jurisdiction of men. For I do not allow men to make laws respecting religion and the worship of God now any more than I did before, though I approve of civil government which provides that the true religion contained in the law of God be not violated and polluted by public blasphemies with impunity. But the perspicuity of order will assist the readers to attain a clearer understanding of what sentiments ought to be entertained respecting the whole system of civil administration, if we enter on a discussion of each branch of it. These are three: The magistrate, who is the guardian and conservator of the laws; the laws according to which he governs; the people, who are governed by the laws and obey the magistrate. Let us, therefore, examine, first, the function of a magistrate, whether it be a legitimate calling and approved by God, the nature of the duty, and the extent of the power; secondly, by what laws Christian government ought to be regulated; and lastly, what advantage the people derive from the laws, and what obedience they owe to the magistrate.

THE DUTY OF POLITICAL RULERS

Here it is necessary to state in a brief manner the nature of the office of magistracy, as described in the word of God, and wherein it consists. If the Scripture did not teach that this office extends to

both tables of the law, we might learn it from heathen writers; for not one of them has treated of the office of magistrates, of legislation, and civil government, without beginning with religion and Divine worship. And thus they have all confessed that no government can be happily constituted unless its first object be the promotion of piety, and that all laws are preposterous which neglect the claims of God and merely provide for the interests of men. Therefore, as religion holds the first place among all the philosophers, and as this has always been regarded by the universal consent of all nations, Christian princes and magistrates ought to be ashamed of their indolence if they do not make it the object of their most serious care. We have already shown that this duty is particularly enjoined upon them by God; for it is reasonable that they should employ their utmost efforts in asserting and defending the honor of Him whose vicegerents they are and by whose favor they govern. And the principal commendations given in the Scripture to the good kings are for having restored the worship of God when it had been corrupted or abolished, or for having devoted their attention to religion, that it might flourish in purity and safety under their reigns. On the contrary, the sacred history represents it as one of the evils arising from anarchy, or a want of good government, that when "there was no king in Israel, every man did that which was right in his own eyes."⁹ These things evince the folly of those who would wish magistrates to neglect all thoughts of God, and to confine themselves entirely to the administration of justice among men, as though God appointed governors in his name to decide secular controversies, and disregarded that which is of far greater importance—the pure worship of himself according to the rule of his law. But a rage for universal innovation, and a desire to escape with impunity, instigate men of turbulent spirits to wish that all the avengers of

⁹ Judg. 21:25.

violated piety were removed out of the world. With respect to the second table, Jeremiah admonishes kings in the following manner: "Execute ye judgment and righteousness, and deliver the spoiled out of the hand of the oppressor; and do no wrong, do no violence to the stranger, the fatherless, nor the widow, neither shed innocent blood."¹⁰ To the same purpose is the exhortation in the eighty-second psalm: "Defend the poor and fatherless: do justice to the afflicted and needy: deliver the poor and needy: rid them out of the hand of the wicked."¹¹ And Moses "charged the judges" whom he appointed to supply his place, saying—

Hear the causes between your brethren, and judge righteously between every man and his brother, and the stranger that is with him: ye shall not respect persons in judgment; but ye shall hear the small as well as the great; ye shall not be afraid of the face of man; for the judgment is God's.¹²

I forbear to remark the directions given by him in another place respecting their future kings: "He shall not multiply horses to himself; neither shall he greatly multiply to himself silver and gold; his heart shall not be lifted up above his brethren; he shall read in the law all the days of his life";¹³ also that judges show no partiality nor take bribes, with similar injunctions, which abound in the Scriptures; because, in describing the office of magistrates in this treatise, my design is not so much to instruct magistrates themselves, as to show to others what magistrates are and for what end God has appointed them. We see, therefore, that they are constituted the protectors and vindicators of the public innocence, modesty, probity, and tranquillity, whose sole object it ought to be to promote the common peace and security of

all. Of these virtues, David declares that he will be an example when he shall be exalted to the royal throne.

I will set no wicked thing before mine eyes. I will not know a wicked person. Whoso privily slandereth his neighbour, him will I cut off: him that hath a high look and a proud heart will I not suffer. Mine eyes shall be upon the faithful of the land, that they may dwell with me: he that walketh in a perfect way, he shall serve me.¹⁴

But as they cannot do this unless they defend good men from the injuries of the wicked and aid the oppressed by their relief and protection, they are likewise armed with power for the suppression of crimes, and the severe punishment of malefactors whose wickedness disturbs the public peace. For experience fully verifies the observation of Solon: "That all states are supported by reward and punishment; and that when these two things are removed, all the discipline of human societies is broken and destroyed." For the minds of many lose their regard for equity and justice unless virtue be rewarded with due honor; nor can the violence of the wicked be restrained unless crimes are followed by severe punishments. And these two parts are included in the injunction of the prophet to kings and other governors to "execute judgment and righteousness."¹⁵ "Righteousness" means the care, patronage, defense, vindication, and liberation of the innocent; "judgment" imports the repression of the audacity, the coercion of the violence, and the punishment of the crime of the impious.

THE DUTY OF SUBJECTS

The first duty of subjects toward their magistrates is to entertain the most honorable sentiments of their function, which they know to be a jurisdiction delegated to them from God, and on that

¹⁰ Jer. 22:3.

¹¹ Ps. 82:3-4.

¹² Deut. 1:16-17.

¹³ Deut. 17:16-17, 19-20.

¹⁴ Ps. 101:3-6.

¹⁵ Jer. 22:3.

account to esteem and reverence them as God's ministers and vicegerents. For there are some persons to be found who show themselves very obedient to their magistrates and have not the least wish that there were no magistrates for them to obey, because they know them to be so necessary to the public good, but who, nevertheless, consider the magistrates themselves as no other than necessary evils. But something more than this is required of us by Peter when he commands us to "honor the king";¹⁶ and by Solomon, when he says, "Fear thou the Lord and the king";¹⁷ for Peter, under the term "honor," comprehends a sincere and candid esteem; and Solomon, by connecting the king with the Lord, attributes to him a kind of sacred veneration and dignity. It is also a remarkable commendation of magistrates which is given by Paul, when he says that we "must needs be subject, not only for wrath, but also for conscience's sake";¹⁸ by which he means that subjects ought to be induced to submit to princes and governors, not merely from a dread of their power, as persons are accustomed to yield to an armed enemy, who they know will immediately take vengeance upon them if they resist; but because the obedience which is rendered to princes and magistrates is rendered to God, from whom they have received their authority. I am not speaking of the persons as if the mask of dignity ought to palliate or excuse folly, ignorance, or cruelty, and conduct the most nefarious and flagitious, and so to acquire for vices the praise due to virtues; but I affirm that the station itself is worthy of honor and reverence, so that, whoever our governors are, they ought to possess our esteem and veneration on account of the office which they fill.

Now, as we have hitherto described a magistrate who truly answers to his title—who is the father of his country and,

¹⁶ I Pet. 2:17.

¹⁷ Prov. 24:21.

¹⁸ Rom. 13:5.

as the poet calls him, the pastor of his people, the guardian of peace, the protector of justice, the avenger of innocence; he would justly be deemed insane who disapproved of such a government. But, as it has happened, in almost all ages, that some princes, regardless of everything to which they ought to have directed their attention and provision, give themselves up to their pleasures in indolent exemption from every care; others, absorbed in their own interest, expose to sale all laws, privileges, rights, and judgments; others plunder the public wealth which they afterwards lavish in mad prodigality; others commit flagrant outrages, pillaging houses, violating virgins and matrons, and murdering infants; many persons cannot be persuaded that such ought to be acknowledged as princes whom, as far as possible, they ought to obey. For in such enormities and actions so completely incompatible, not only with the office of a magistrate, but with the duty of every man, they discover no appearance of the image of God, which ought to be conspicuous in a magistrate; while they perceive no vestige of that minister of God who is "not a terror to good works, but to the evil," who is sent "for the punishment of evildoers, and for the praise of them that do well"; nor recognize that governor whose dignity and authority the Scripture recommends to us. And certainly the minds of men have always been naturally disposed to hate and execrate tyrants as much as to love and reverence legitimate kings.

But, if we direct our attention to the word of God, it will carry us much farther: even to submit to the government, not only of those princes who discharge their duty to us with becoming integrity and fidelity, but of all who possess the sovereignty, even though they perform none of the duties of their function. For, though the Lord testifies that the magistrate is an eminent gift of his liberality to preserve the safety of men, and prescribes to magistrates themselves the extent of their duty, yet he at the same time

declares that whatever be their characters, they have their government only from him; that those who govern for the public good are true specimens and mirrors of his beneficence; and that those who rule in an unjust and tyrannical manner are raised up by him to punish the iniquity of the people; that all equally possess that sacred majesty with which he has invested legitimate authority. I will not proceed any further till I have subjoined a few testimonies in proof of this point. It is unnecessary, however, to labor much to evince an impious king to be a judgment of God's wrath upon the world, as I have no expectation that anyone will deny it; and in this we say no more of a king than of any other robber who plunders our property, or adulterer who violates our bed, or assassin who attempts to murder us; since the Scripture enumerates all these calamities among the curses inflicted by God. But let us rather insist on the proof of that which the minds of men do not so easily admit—that a man of the worst character, and most undeserving of all honor, who holds the sovereign power, really possesses that eminent and Divine authority which the Lord has given by his word to the ministers of his justice and judgment; and, therefore, that he ought to be regarded by his subjects, as far as pertains to public obedience, with the same reverence and esteem which they would show to the best of kings, if such a one were granted to them.

I request my readers to observe and consider with attention what is so frequently and justly mentioned in the Scriptures—the providence and peculiar dispensation of God in distributing kingdoms and appointing whom he pleases to be kings. Daniel says, "God changes the times and the seasons: he removes kings and sets up kings." Again: "That the living may know that the Most High rules in the kingdom of men, and gives it to whomsoever he will." Passages of this kind abound in the Scriptures, but particularly in this prophecy. Now, the character of Nebuchadnezzar, who conquered

Jerusalem, is sufficiently known, that he was an invader and depopulator of the territories of others. Yet by the mouth of Ezekiel the Lord declares that he had given him the land of Egypt as a reward for the service which he had performed in devastating Tyre. And Daniel said to him: "Thou, O king, art a king of kings; for the God of heaven has given thee a kingdom, power, strength, and glory; and wheresoever the children of men dwell, the beasts of the field, and the fowls of the heaven, has he given into thine hand, and has made thee ruler over all."

In vain will any one object that this was a special command to the Israelites. For we must observe the reason upon which the Lord founds it. He says: "I have given these lands to Nebuchadnezzar; therefore serve him and live." To whomsoever, therefore, a kingdom shall evidently be given, we have no room to doubt that subjection is due to him. And as soon as he exalts any person to royal dignity, he gives us a declaration of his pleasure that he shall reign. The Scripture contains general testimonies on this subject. Solomon says: "For the transgression of a land, many are the princes thereof." Job says, "He looses the bonds of kings," or divests them of their power, "and girds their loin with a girdle," or restores them to their former dignity. This being admitted, nothing remains for us but to serve and live.

We owe these sentiments of affection and reverence to all our rulers, whatever their characters may be; which I the more frequently repeat that we may learn not to scrutinize the persons themselves, but may be satisfied with knowing that they are invested by the will of the Lord with that function, upon which he has impressed an inviolable majesty. But it will be said that rulers owe mutual duties to their subjects. That I have already admitted. But he who infers from this that obedience ought to be rendered to none but just rulers, is a very bad reasoner. For husbands owe mutual duties to their wives, and parents to their children.

Now, if husbands and parents violate their obligations; if parents conduct themselves with discouraging severity and fastidious moroseness towards their children, whom they are forbidden to provoke to wrath; if husbands despise and vex their wives, whom they are commanded to love and to spare as the weaker vessels; does it follow that children should be less obedient to their parents, or wives to their husbands? They are still subject, even to those who are wicked and unkind. As it is incumbent on all not to inquire into the duties of one another, but to confine their attention respectively to their own, this consideration ought particularly to be regarded by those who are subject to the authority of others. Wherefore, if we are inhumanly harassed by a cruel prince; if we are rapaciously plundered by an avaricious or luxurious one; if we are neglected by an indolent one; or if we are persecuted, on account of piety, by an impious and sacrilegious one—let us first call to mind our transgressions against God, which he undoubtedly chastises by these scourges. Thus our impatience will be restrained by humility. Let us, in the next place, consider that it is not in our province to remedy these evils, and that nothing remains for us but to implore the aid of the Lord, in whose hands are the hearts of kings and the revolutions of kingdoms.

RESISTANCE TO TYRANNY

And here is displayed God's wonderful goodness and power and providence; for sometimes he raises up some of his servants as public avengers and arms them with his commission to punish unrighteous domination, and to deliver from their distressing calamities a people who have been unjustly oppressed; sometimes he accomplishes this end by the fury of men who meditate and attempt something altogether different. Thus he liberated the people of Israel from the tyranny of Pharaoh by Moses; from the oppression of Chusan by Othniel; and from other

yokes by other kings and judges. Thus he subdued the pride of Tyre by the Egyptians; the insolence of the Egyptians by the Assyrians; the haughtiness of the Assyrians by the Chaldeans; the confidence of Babylon by the Medes and Persians, after Cyrus had subjugated the Medes. The ingratitude of the kings of Israel and Judah and their impious rebellion, notwithstanding his numerous favors, he repressed and punished sometimes by the Assyrians, sometimes by the Babylonians. These were all the executioners of his vengeance, but not all in the same manner. The former, when they were called forth to the performance of such acts by a legitimate commission from God, in taking arms against kings, were not chargeable with the least violation of that majesty with which kings are invested by the ordination of God; but, being armed with authority from Heaven, they punished an inferior power by a superior one, as it is lawful for kings to punish their inferior officers. The latter, though they were guided by the hand of God in such directions as he pleased, and performed his work without being conscious of it, nevertheless contemplated in their hearts nothing but evil.

But whatever opinion be formed of the acts of men, yet the Lord equally executed his work by them when he broke the sanguinary scepters of insolent kings and overturned tyrannical governments. Let princes hear and fear. But, in the meanwhile, it behooves us to use the greatest caution, that we do not despise or violate that authority of magistrates which is entitled to the greatest veneration, which God has established by the most solemn commands, even though it reside in those who are most unworthy of it, and who, as far as in them lies, pollute it by their iniquity. For though the correction of tyrannical domination is the vengeance of God, we are not, therefore, to conclude that it is committed to us who have received no other command than to obey and suffer. This observation I always apply to private persons. For if there be, in the present day, any magistrates ap-

pointed for the protection of the people and the moderation of the power of kings, such as were, in ancient times, the Ephori, who were a check upon the kings among the Lacedaemonians, or the popular tribunes upon the consuls among the Romans, or the Demarchi upon the senate among the Athenians; or with power such as perhaps is now possessed by the three estates in every kingdom when they are assembled; I am so far from prohibiting them, in the discharge of their duty, to oppose the violence or cruelty of kings that I affirm that if they connive at kings in their oppression of their people, such forbearance involves the most nefarious perfidy because they fraudulently betray the liberty of the people, of which they know that they have been appointed protectors by the ordination of God.

But in the obedience which we have shown to be due to the authority of governors, it is always necessary to make one exception, and that is entitled to our first attention—that it do not seduce us from obedience to him to whose will the desires of all kings ought to be subject, to whose decrees all their commands ought to yield, to whose majesty all their scepters ought to submit. And, indeed, how preposterous it would be for us, with a view to satisfy men, to incur the displeasure of him on whose account we yield obedience to men! The Lord, therefore, is the King of kings; who, when he has opened his sacred mouth, is to be heard alone, above all, for all, and before all; in the next place, we are subject to those men who preside over us, but no otherwise than in him. If they command anything against him, it ought not to have the least attention, nor, in this case, ought we to pay any regard to all that dignity attached to magistrates, to which no injury is done when it is subjected to the unrivaled and supreme power of God. On this principle Daniel denied that he had committed any crime against the king in disobeying his impious decree;¹⁹

because the king had exceeded the limits of his office, and had not only done an injury to men, but, by raising his arm against God, had degraded his own authority. On the other hand, the Israelites are condemned for having been too submissive to the impious edict of their king. For when Jeroboam had made his golden calves, in compliance with his will, they deserted the temple of God and revolted to new superstitions. Their posterity conformed to the decrees of their idolatrous kings with the same facility. The prophet severely condemns them for having "willingly walked after the commandment";²⁰ so far is any praise from being due to the pretext of humility with which courtly flatterers excuse themselves and deceive the unwary, when they deny that it is lawful for them to refuse compliance with any command of their kings, as if God had resigned his right to mortal men when he made them rulers of mankind, or as if earthly power were diminished by being subordinated to its author before whom even the principalities of heaven tremble with awe. I know what great and present danger awaits this constancy, for kings cannot bear to be disregarded without the greatest indignation; and "the wrath of a king," says Solomon, "is as messengers of death."²¹ But since this edict has been proclaimed by that celestial herald, Peter, "We ought to obey God rather than men,"²²—let us console ourselves with this thought, that we truly perform the obedience which God requires of us when we suffer anything rather than deviate from piety. And that our hearts may not fail us, Paul stimulates us with another consideration—that Christ has redeemed us at the immense price which our redemption cost him, that we may not be submissive to the corrupt desires of men, much less be slaves to their impiety.²³

III STEPHEN JUNIUS BRUTUS

A Defense of Liberty against Tyrants *

OBEDIENCE TO PRINCES OR TO GOD?

This question happily may seem at the first view to be altogether superfluous and unprofitable, for that it seems to make a doubt of an axiom always held infallible among Christians, confirmed by many testimonies in Holy Scripture, divers examples of the histories of all ages, and by the death of all the holy martyrs. For it may be well demanded wherefore Christians have endured so many afflictions, but that they were always persuaded that God must be obeyed simply and absolutely, and kings with this exception, that they command not that which is repugnant to the law of God. Otherways wherefore should the apostles have answered, that God must rather be obeyed than men, and also seeing that the only will of God is always just, and that of men may be, and is, oftentimes unjust, who can doubt but that we must always obey God's commandments without any exception, and men's ever with limitation?

There are no estates which ought to be esteemed firm and stable, but those in whom the temple of God is built, and which are indeed the temple itself, and

* From Stephen Junius Brutus, *A Defense of Liberty against Tyrants* (1579; trans. anon., 1648). Spelling and punctuation have been modernized for this selection.

these we may truly call kings, which reign with God, seeing that it is by him only that kings reign: On the contrary, what beastly foolishness it is to think that the state and kingdom cannot subsist if God Almighty be not excluded, and his temple demolished. From hence proceed so many tyrannous enterprises, unhappy and tragic death of kings, and ruins of people. If these sycophants knew what difference there is between God and Caesar, between the King of Kings and a simple king, between the lord and the vassal, and what tributes this lord requires of his subjects, and what authority he gives to kings over those his subjects, certainly so many princes would not strive to trouble the kingdom of God, and we should not see some of them precipitated from their thrones by the just instigation of the Almighty, revenging himself of them, in the midst of their greatest strength, and the people should not be sacked and pillaged and trodden down.

It then belongs to princes to know how far they may extend their authority, and to subjects in what they may obey them, lest the one encroaching on that jurisdiction, which no way belongs to them, and the others obeying him which commands further than he ought, they be both chastised, when they shall give an account thereof before another judge. Now the end and scope of the question propounded, whereof the Holy Scripture shall principally give the resolution, is

that which follows. The question is, if subjects be bound to obey kings, in case they command that which is against the law of God: that is to say, to which of the two (God or king) must we rather obey, when the question shall be resolved concerning the king, to whom is attributed absolute power, that concerning other magistrates shall be also determined.

First, the Holy Scripture does teach that God reigns by his own proper authority, and kings by derivation. God from himself, kings from God, that God has a jurisdiction proper, kings are his delegates. It follows then, that the jurisdiction of God has no limits, that of kings bounded, that the power of God is infinite, that of kings confined, that the kingdom of God extends itself to all places, that of kings is restrained within the confines of certain countries. In like manner God had created of nothing both heaven and earth; wherefore by good right He is lord, and true proprietor, both of the one and the other. All the inhabitants of the earth hold of Him that which they have, and are but His tenants and farmers; all the princes and governors of the world are His stipendiaries and vassals, and are bound to take and acknowledge their investitures from Him. Briefly, God alone is the owner and lord, and all men of what degree or quality soever they be, are His servants, farmers, officers and vassals, and owe account and acknowledgement to Him, according to that which He has committed to their dispensation; the higher their place is, the greater their account must be, and according to the ranks whereunto God has raised them, must they make their reckoning before His divine majesty, which the Holy Scriptures teach in infinite places, and all the faithful, yea, and the wisest among the heathen have ever acknowledged.

Now if we consider what is the duty of vassals, we shall find that what may be said of them, agrees properly to kings. The vassal receives his fee of his lord with right of justice, and charge to serve

him in his wars. The king is established by the Lord God, the King of Kings, to the end he should administer justice to his people and defend them against all their enemies. The vassal receives laws and conditions from his sovereign. God commands the king to observe his laws and to have them always before his eyes, promising that he and his successors shall possess long the kingdom, if they be obedient, and on the contrary, that their reign shall be of small continuance, if they prove rebellious to their sovereign king. The vassal obliges himself by oath unto his lord, and swears that he will be faithful and obedient. In like manner the king promises solemnly to command, according to the express law of God. Briefly, the vassal loses his fee, if he commit a felony, and by law forfeits all his privileges. In the like case the king loses his right, and many times his realm also, if he despise God, if he complot with his enemies, and if he commit felony against that royal majesty. This will appear more clearly by the consideration of the covenant which is contracted between God and the king, for God does that honor to His servants to call them His confederates. Now we read of two sorts of covenants at the inaugurating of kings, the first between God, the king, and the people, that the people might be the people of God. The second, between the king and the people, that the people shall obey faithfully, and the king command justly.

Briefly, even as those rebellious vassals who endeavor to possess themselves of the kingdom, do commit felony by the testimony of all laws, and deserve to be extirpated; in like manner those are as really guilty which will not observe the divine law, whereunto all men without exception owe their obedience, or who persecute those who desire to conform themselves thereunto, without hearing them in their just defenses: now for that we see that God invests kings into their kingdoms, almost in the same manner that vassals are invested into their

fees by their sovereign, we must needs conclude that kings are the vassals of God, and deserve to be deprived of the benefit they receive from their lord if they commit felony, in the same fashion as rebellious vassals are of their estates. These premises being allowed, this question may be easily resolved; for if God hold the place of sovereign Lord, and the king as vassal, who dare deny but that we must rather obey the sovereign than the vassal? If God commands one thing, and the king commands the contrary, what is that proud man that would term him a rebel who refuses to obey the king, when else he must disobey God? But, on the contrary, he should rather be condemned, and held for truly rebellious, who omits to obey God, or who will obey the king, when he forbids him to yield obedience to God.

Briefly, if God calls us on the one side to enrol us in His service, and the king on the other, is any man so void of reason that he will not say we must leave the king, and apply ourselves to God's service: so far be it from us to believe, that we are bound to obey a king, commanding anything contrary to the law of God, that, contrarily, in obeying him we become rebels to God; no more nor less than we would esteem a countryman a rebel who, for the love he bears to some rich and ancient inferior lord, would bear arms against the sovereign prince, or who had rather obey the writs of an inferior judge than of a superior, the commandments of a lieutenant of a province, than of a prince; to be brief, the directions of an officer rather than the express ordinances of the king himself. In doing this we justly incur the malediction of the prophet Micah, who does detest and curse, in the name of God, all those who obey the wicked and perverse ordinances of kings. By the law of God we understand the two tables given to Moses, in the which, as in unremovable bounds, the authority of all princes ought to be fixed. The first comprehends that which we owe to God, the second that which we must do to our neighbors; briefly, they contain piety and justice conjoined with charity,

from which the preaching of the gospel does not derogate, but rather authorize and confirm. The first table is esteemed the principal, as well in order as in dignity. If the prince commands to cut the throat of an innocent, to pillage and commit extortion, there is no man (provided he has some feeling of conscience) who would execute such a commandment.

LAWFUL RESISTANCE TO PRINCES IN DEFENSE OF DIVINE LAW

This question seems at the first view to be of a high and difficult nature, for so much as there being small occasion to speak to princes that fear God. On the contrary, there will be much danger to trouble the ears of those who acknowledge no other sovereign but themselves, for which reason few or none have meddled with it, and if any have at all touched it, it has been but as it were in passing by. The question is, if it be lawful to resist a prince violating the law of God, or ruining the church, or hindering the restoring of it? If we hold ourselves to the tenure of the Holy Scripture it will resolve us. For, if in this case it had been lawful to the Jewish people (which may be easily gathered from the books of the Old Testament), yea, if it had been enjoined them, I believe it will not be denied, that the same must be allowed to the whole people of any Christian kingdom or country whatsoever.

But who may punish the king (for here is question of corporal and temporal punishment) if it be not the whole body of the people to whom the king swears and obliges himself, no more nor less, than the people do to the king? We read also that king Josias, being of the age of twenty-and-five years, together with the whole people, makes a covenant with the Lord, the king and the people promising to keep the laws and ordinances of God; and even then for the better accomplishing of the tenure of this agreement, the idolatry of Baal was presently destroyed.

If any will more exactly turn over the Holy Bible, he may well find other testimonies to this purpose.

But I see well, here will be an objection made. What will you say? That a whole people, that beast of many heads, must they run in a mutinous disorder, to order the business of the commonwealth? What address or direction is there in an unruly and unbridled multitude? What counsel or wisdom, to manage the affairs of state?

When we speak of all the people, we understand by that, only those who hold their authority from the people, to wit, the magistrates, who are inferior to the king, and whom the people have substituted, or established, as it were, consorts in the empire, and with a kind of tribunitial authority, to restrain the encroachments of sovereignty, and to represent the whole body of the people. We understand also, the assembly of the estates, which is nothing else but an epitome, or brief collection of the kingdom, to whom all public affairs have special and absolute reference; such were the seventy ancients in the kingdom of Israel, amongst whom the high priest was as it were president, and they judged all matters of greatest importance, those seventy being first chosen by six out of each tribe, which came out of the land of Egypt, then the heads or governors of provinces. In like manner the judges and provosts of towns, the captains of thousands, the centurions and others who commanded over families, the most valiant, noble, and otherwise notable personages, of whom was composed the body of the states, assembled divers times as it plainly appears by the word of the holy scripture. At the election of the first king, who was Saul, all the ancients of Israel assembled together at Kama. In like manner all Israel was assembled, or all Judah and Benjamin, etc. Now, it is no way probable, that all the people, one by one, met together there. Of this rank there are in every well governed kingdom, the princes, the officers of the crown, the peers, the greatest and most

notable lords, the deputies of provinces, of whom the ordinary body of the estate is composed, or the parliament or the diet, or other assembly, according to the different names used in divers countries of the world; in which assemblies, the principal care is had both for the preventing and reforming either of disorder or detriment in church or commonwealth.

For as the councils of Basle and Constance have decreed (and well decreed) that the universal council is in authority above the bishop of Rome, so in like manner, the whole chapter may overrule the bishop, the University the rector, the court the president. Briefly, he, whosoever he is, who has received authority from a company, is inferior to that whole company, although he be superior to any of the particular members of it.

A combination or conjunction is good or ill, according as the end whereunto it is addressed is good or ill; and perhaps also according as they are affected who are the managers of it. We say then, that the princes of Judah have done well, and that in following any other course they had failed of the right way. For even as the guardian ought to take charge and care that the goods of his pupil fall not into loss and detriment, and if he omits his duty therein, he may be compelled to give an account thereof, in like manner, those to whose custody and tuition the people have committed themselves, and whom they have constituted their tutors and defenders ought to maintain them safe and entire in all their rights and privileges. To be short, as it is lawful for a whole people to resist and oppose tyranny, so likewise the principal persons of the kingdom may as heads, and for the good of the whole body, confederate and associate themselves together; and as in a public state, that which is done by the greatest part is esteemed and taken as the act of all, so in like manner must it be said to be done, which the better part of the most principal have acted, briefly, that all the people had their hand in it.

KINGS MADE BY THE PEOPLE

We have shown before that it is God that does appoint kings, who chooses them, who gives the kingdom to them: now we say that the people establish kings, put the scepter into their hands, and who with their suffrages, approve the election. God would have it done in this manner, to the end that the kings should acknowledge, that after God they hold their power and sovereignty from the people, and that it might the rather induce them to apply and address the utmost of their care and thoughts for the profit of the people, without being puffed with any vain imagination, that they were formed of any matter more excellent than other men, for which they were raised so high above others; as if they were to command our flocks of sheep, or herds of cattle. But let them remember and know, that they are of the same mold and condition as others, raised from the earth by the voice and acclamations, now as it were upon the shoulders of the people unto their thrones, that they might afterward bear on their own shoulders the greatest burdens of the commonwealth. Divers ages before that, the people of Israel demanded a king. God gave and appointed the law of royal government contained in the seventeenth chapter, verse fourteen of Deuteronomy, when says Moses, "thou art come unto the land which the Lord thy God giveth thee, and shall possess it, and shalt dwell therein, and shalt say, I will set a king over me like as all the nations that are about me. thou shalt in any wise set him whom the Lord thy God shall choose from amongst thy brethren, etc." You see here, that the election of the king is attributed to God, the establishment to the people; now when the practice of this law came in use, see in what manner they proceeded.

The elders of Israel, who presented the whole body of the people (under this name of elders are comprehended the captains, the centurions, commanders over fifties and tens, judges, provosts, but

principally the chiefs of tribes) came to meet Samuel in Ramah, and not being willing longer to endure the government of the sons of Samuel, whose ill carriage had justly drawn on them the people's dislike, and withal persuading themselves that they had found the means to make their wars hereafter with more advantage, they demanded a king of Samuel, who asking counsel of the Lord, he made known that He had chosen Saul for the governor of His people. Then Samuel anointed Saul, and performed all those rights which belong to the election of a king required by the people. Now this might, perhaps, have seemed sufficient, if Samuel had presented to the people the king who was chosen by God, and had admonished them all to become good and obedient subjects. Notwithstanding, to the end that the king might know that he was established by the people. Samuel appointed the estates to meet at Mizpah, where being assembled as if the business were but then to begin, and nothing had already been done, to be brief, as if the election of Saul were then only to be treated of, the lot is cast and falls on the tribe of Benjamin, after on the family of Matri, and lastly on Saul, born of that family, who was the same whom God had chosen. Then by the consent of all the people Saul was declared king. Finally, that Saul nor any other might attribute the aforesaid business to chance or lot, after that Saul had made some proof of his valor in raising the siege of the Ammonites in Jabish Gilead, some of the people pressing the business, he was again confirmed king in a full assembly at Gilgal. You see that he whom God had chosen, and the lot had separated from all the rest, is established king by the suffrages of the people.

Briefly, for so much as none were ever born with crowns on their heads, and scepters in their hands, and that no man can be a king by himself, nor reign without people, whereas on the contrary, the people may subsist of themselves, and were, long before they had any kings, it

must of necessity follow that kings were at the first constituted by the people; and although the sons and dependents of such kings, inheriting their fathers' virtues, may in a sort seem to have rendered their kingdoms hereditary to their offsprings, and that in some kingdoms and countries the right of free election seems in a sort buried; yet, notwithstanding, in all well-ordered kingdoms, this custom is yet remaining. The sons do not succeed the fathers, before the people have first, as it were, anew established them by their new approbation: neither were they acknowledged in quality, as inheriting it from the dead; but approved and accounted kings then only, when they were invested with the kingdom, by receiving the scepter and diadem from the hands of those who represent the majesty of the people. One may see most evident marks of this in Christian kingdoms, which are at this day esteemed hereditary; for the French king, he of Spain and England, and others, are commonly sacred, and, as it were, put into possession of their authority by the peers, lords of the kingdom, and officers of the crown, who represent the body of the people.

THE PEOPLE
ABOVE THE KING

Now, seeing that the people choose and establish their kings, it follows that the whole body of the people is above the king; for it is a thing most evident, that he who is established by another, is accounted under him who has established him, and he who receives his authority from another, is less than he from whom he derives his power. Potiphar the Egyptian sets Joseph over all his house; Nebuchadnezzar, Daniel over the province of Babylon; Darius, the six score governors over the kingdom. It is commonly said that masters establish their servants, kings their officers. In like manner, also, the people establish the king as administrator of the commonwealth. Good kings have not disdained this title; yea, the bad ones themselves have affected it; inso-

much, as for the space of divers ages, no Roman emperor (if it were not some absolute tyrant, as Nero, Domitian, Caligula) would suffer himself to be called lord. Furthermore, it must necessarily be that kings were instituted for the people's sake, neither can it be that for the pleasure of some hundreds of men, and without doubt more foolish and worse than many of the other, all the rest were made, but much rather that these hundred were made for the use and service of all the other, and reason requires that he be preferred above the other, who was made only to and for his occasion: so it is, that for the ship's sail, the owner appoints a pilot over her, who sits at the helm, and looks that she keep her course, nor run not upon any dangerous shelf; the pilot doing his duty, is obeyed by the mariners; yea, and of himself who is owner of the vessel, notwithstanding, the pilot is a servant as well as the least in the ship, from whom he only differs in this, that he serves in a better place than they do.

In a commonwealth, commonly compared to a ship, the king holds the place of pilot, the people in general are owners of the vessel, obeying the pilot, while he is careful of the public good; as though this pilot neither is nor ought to be esteemed other than servant to the public; as a judge or general in war differs little from other officers, but that he is bound to bear greater burdens, and expose himself to more dangers. By the same reason also which the king gains by acquist of arms, be it that he possesses himself of frontier places in warring on the enemy, or that which he gets by escheats or confiscations, he gets it to the kingdom, and not to himself, to wit, to the people, of whom the kingdom is composed, no more nor less than the servant does for his master; neither may one contract or oblige themselves to him, but by and with reference to the authority derived from the people. Furthermore, there is an infinite sort of people who live without a king, but we cannot imagine a king without people. And those who have been raised to the

royal dignity were not advanced because they excelled other men in beauty and comeliness, nor in some excellency of nature to govern them as shepherds do their flocks, but rather being made out of the same mass with the rest of the people, they would acknowledge that for them, they, as it were, borrow their power and authority.

The ancient custom of the French represents that exceeding well, for they used to lift up on a buckler, and salute him king whom they had chosen. And wherefore is it said, "I pray you, that kings have an infinite number of eyes, a million of ears, with extreme long hands and feet exceeding swift"? Is it because they are like to Argos, Gerien, Midas, and divers others so celebrated by the poets? No, truly, but it is said in regard to all the people, whom the business principally concerns, who lend to the king for the good of the commonwealth, their eyes, their ears, their means, their faculties. Let the people forsake the king, he presently falls to the ground, although before, his hearing and sight seemed most excellent, and that he was strong and in the best disposition that might be; yea, that he seemed to triumph in all magnificence, yet in an instant he will become most vile and contemptible: to be brief, instead of those divine honours wherewith all men adore him, he shall be compelled to become a pendant, and whip children in the school at Corinth. Take away but the basis to this giant, and like the Rhodian Colossus he presently tumbles on the ground and falls into pieces. Seeing then that the king is established in this degree by the people, and for their sake, and that he cannot subsist without them, who can think it strange, then, for us to conclude that the people are above the king?

Now that which we speak of all the people universally, ought also to be understood of those who in every kingdom or town do lawfully represent the body of the people, and who ordinarily are (or at least should be) called the officers of the kingdom, or crown, and not of the king;

for the officers of the king, it is he who places and displaces them at his pleasure, yea, after his death they have no more power, and are accounted as dead. On the contrary, the officers of the kingdom receive their authority from the people in the general assembly of the states (or, at the least were accustomed so anciently to have done) and cannot be disauthorized but by them, so then the one depends of the king, the other of the kingdom, those of the sovereign officer of the kingdom, who is the king himself, those of the sovereignty itself, that is of the people, of which sovereignty both the king and all his officers of the kingdom ought to depend, the charge of the one has proper relation to the care of the king's person; that of the other, to look that the commonwealth receive no damage; the first ought to serve and assist the king, as all domestic servants are bound to do to their masters; the other to preserve the rights and privileges of the people, and to carefully hinder the prince, that he neither omit the things that may advantage the state, nor commit anything that may damage the public.

Briefly, the one are servants and domestics of the king, and received into their places to obey his person; the other, on the contrary, are as associates to the king, in the administration of justice, participating of the royal power and authority, being bound to the utmost of their power to be assisting in the managing of the affairs of state, as well as the king, who is, as it were, president amongst them, and principal only in order and degree.

WHY KINGS WERE CREATED

Now, seeing that kings have been ever established by the people, and that they have had associates joined with them, to contain them within the limits of their duties, the which associates considered in particular one by one, are under the king, and altogether in one entire body are above him: We must consequently see wherefore first kings were established,

and what is principally their duty. We usually esteem a thing just and good when it attains to the proper end for which it is ordained.

In the first place every one consents, that men by nature loving liberty, and hating servitude, born rather to command, than obey, have not willingly admitted to be governed by another, and renounced as it were the privilege of nature, by submitting themselves to the commands of others, but for some special and great profit that they expected from it. For as Aesop says, "That the horse being before accustomed to wander at his pleasure, would never have received the bit into his mouth, nor the rider on his back, but that he hoped by that means to overmatch the bull." Neither let us imagine, that kings were chosen to apply to their own proper use the goods that are gotten by the sweat of their subjects; for every man loves and cherishes his own. They have not received the power and authority of the people to make it serve as a pander to their pleasures: for ordinarily the inferiors hate, or at least envy, their superiors.

Let us then conclude, that they are established in this place to maintain by justice, and to defend by force of arms, both the public state, and particular persons from all damages and outrages, wherefore Saint Augustine said, "Those are properly called lords and masters who provide for the good and profit of others, as the husband for the wife, fathers for their children." They must therefore obey them who provide for them; although, indeed, to speak truly, those who govern in this manner may in a sort be said to serve those whom they command over.

For, as says the same doctor, they command not for the desire of dominion, but for the duty they owe to provide for the good of those who are subjected to them: not affecting any lordlike domineering, but with charity and singular affection, desiring the welfare of those who are committed to them.

Seneca in the eighty-first epistle says,

"That in the golden age, wise men only governed kingdoms; they kept themselves within the bounds of moderation, and preserved the meanest from the oppression of the greatest. They persuaded and dissuaded, according as it advantaged or disadvantaged the public profit; by their wisdom, they furnished the public with plenty of all necessaries, and by their discretion prevented scarcity, by their valor and courage they expelled dangers, by their many benefits they increased and enriched their subjects; they pleaded not their duty in making pompous shows, but in well governing their people. No man made trial what he was able to do against them, because every one received what he was capable of from them," etc.

Therefore then, to govern is nothing else but to provide for. These proper ends of commanding, being for the people's commodity, the only duty of kings and emperors is to provide for the people's good. The kingly dignity to speak properly, is not a title of honor, but a weighty and burdensome office. It is not a discharge or vacation from affairs to run a licentious course of liberty, but a charge and vocation to all industrious employments, for the service of the commonwealth; the which has some glimpse of honor with it, because in those first and golden ages, no man would have tasted of such continual troubles, if they had not been sweetened with some relish of honor; insomuch as there was nothing more true than that which was commonly said in those times, "If every man knew with what turmoils and troubles the royal wreath was wrapt withal, no man would take it up, although it lay at his feet."

When, therefore, that these words of "mine" and "thine" entered into the world, and that differences fell amongst fellow citizens, touching the propriety of goods, and wars amongst neighboring people about the right of their confines, the people bethought themselves to have recourse to some one who both could and should take order that the poor were not oppressed by the rich, nor the patriots wronged by strangers.

Nor as wars and suits increased, they chose someone, in whose wisdom and valor they reposed most confidence. See, then, wherefore kings were created in the first ages; to wit, to administer justice at home, and to be leaders in the wars abroad, and not only to repulse the incursions of the enemy, but also to repress and hinder the devastation and spoiling of the subjects and their goods at home; but above all, to expel and drive away all devices and debauchments far from their dominions.

ARE KINGS ABOVE THE LAW?

We must here yet proceed a little further: for it is demanded whether the king who presides in the administration of justice has power to resolve and determine business according to his own will and pleasure. Must the kings be subject to the law, or does the law depend upon the king? The law (says an ancient) is respected by those who otherways condemn virtue, for it enforces obedience, and ministers' conduct in warfaring, and gives vigor and luster to justice and equity. Pausanias the Spartan will answer in a word, that it becomes laws to direct, and men to yield obedience to their authority. Agesilaus, king of Sparta, says that all commanders must obey the commandments of the laws. But it shall not be amiss to carry this matter a little higher. When people began to seek for justice to determine their differences, if they met with any private man that did justly appoint them, they were satisfied with it. Now for so much as such men were rarely and with much difficulty met withal, and for that the judgments of kings received as laws were oftentimes found contrary and difficult, then the magistrates and others of great wisdom invented laws, which might speak to all men in one and the same voice.

This being done, it was expressly enjoined to kings that they should be the guardians and administrators, and sometimes also, for so much as the laws could not foresee the particularities of actions

to resolve exactly, it was permitted the king to supply this defect by the same natural equity by which the laws were drawn; and for fear lest they should go against law, the people appointed them from time to time associates, counselors, of whom we have formerly made mention, wherefore there is nothing which exempts the king from obedience which he owes to the law, which he ought to acknowledge as his lady and mistress, esteeming nothing can become him worse than that feminine of which Juvenal speaks: *Sic volo, sic jubeo, sic pro ratione voluntas*. I will, I command, my will shall serve instead of reason. Neither should they think their authority the less because they are confined to laws, for seeing the law is a divine gift coming from above, which human societies are happily governed and addressed to their best and blessedest end; those kings are as ridiculous and worthy of contempt, who repute it a dishonor to conform themselves to law, as those surveyors who think themselves disgraced by using of a rule, a compass, a chain or other instruments, which men understanding the art of surveying are accustomed to do, or a pilot who had rather fail, according to his fantasy and imagination, than steer his course by his needle and sea-card. Who can doubt, but that it is a thing more profitable and convenient to obey the law, than the king who is but one man? The law is the soul of a good king, it gives him motion, sense and life. The king is the organ and as it were the body by which the law displays her forces, exercises her function, and expresses her conceptions. Now it is a thing much more reasonable to obey the soul, than the body; the law is the wisdom of diverse sages, recollected in few words, but many see more clear and further than one alone. It is much better to follow the law than any one man's opinion, be he never so acute. The law is reason and wisdom itself, free from all perturbation, not subject to be moved with choler, ambition, hate, or acceptances of persons.

For, if the welfare of the kingdom depends on the observation of the laws, and the laws are enthralled to the pleasure of one man, is it not most certain, that there can be no permanent stability in that government? Must it not then necessarily come to pass, that if the king (as some have been) be infected with lunacy, either continually, or by intervals, that the whole state fall inevitably to ruin? But if the laws be superior to the king, as we have already proved, and that the king be tied in the same respect of obedience to the laws as the servant is to his master, who will be so senseless, who will not rather obey the law than the king or will not readily yield his best assistance against those who seek to violate or infringe them?

SUBJECTS NOT THE KING'S SLAVES

For truly neither are the subjects, as it is commonly said, the king's slaves, or bondmen: being neither prisoners taken in the wars, nor bought for money. But as considered in one entire body they are lords, as we have formerly proved; so each of them in particular ought to be held as the king's brothers and kinsmen. And to the end that we think not this strange, let us hear what God Himself says when He prescribes a law to kings: That they lift not their heart above their brethren from amongst whom they were chosen. Whereupon Bartolus, a famous lawyer, who lived in an age that bred many tyrants, did yet draw this conclusion from that law, that subjects were to be held and used in the quality and condition of the king's brethren, and not of his slaves. Also king David was not ashamed to call his subjects his brethren. The ancient kings were called Abimelech, an Hebrew word which signifies, my father the king. The almighty and all good God, of whose great gentleness and mercy we are daily partakers, and very seldom feel His severity, although we justly deserve it, yet is it always mercifully mixed with compassion; whereby

He teaches princes, His lieutenants, that subjects ought rather to be held in obedience by love, than by fear.

But, lest they should except against me, as if I sought to entrench too much upon the royal authority, I verily believe it is so much the greater, by how much it is likely to be of longer continuance. For, says one, servile fear is a bad guardian, for that authority we desire should continue; for those in subjection hate them they fear, and whom we hate, we naturally wish their destruction. On the contrary, there is nothing more proper to maintain their authority than the affection of their subjects, on whose love they may safely and with most security lay the foundation of their greatness. And therefore that prince who governs his subjects as brethren, may confidently assure himself to live securely in the midst of dangers: whereas he who uses them like slaves, must needs live in much anxiety and fear, and may well be resembled to the condition of that master who remains alone in some desert in the midst of a great troop of slaves; for look how many slaves any has, he must make account of so many enemies, which almost all tyrants who have been killed by their subjects have experienced. Whereas, on the contrary, the subjects of good kings are ever as solicitously careful of their safety, as of their own welfare.

AUTHORITY BASED ON CONTRACT

We have shown already that in the establishing of the king there were two alliances or covenants contracted: the first between God, the king, and the people, of which we have formerly treated; the second, between the king and the people, of which we must now say somewhat. After that Saul was established king, the royal law was given him, according to which he ought to govern. David made a covenant in Hebron before the Lord, that is to say, taking God for witness, with all the ancients of Israel, who represented the whole body of the people, and even

then he was made king. Joas also by the mouth of Johoiada the high priest, entered into covenant with the whole people of the land in the house of the Lord. And when the crown was set on his head, together with it was the law of the testimony put into his hand, which most expounds to be the law of God; likewise Josias promises to observe and keep the commandments, testimonies, and statutes comprised in the book of the covenant: under which words are contained all which belongs to the duties both of the first and second table of the law of God. In all the before-remembered places of the holy story, it is ever said, "that a covenant was made with all the people, with all the multitude, with all the elders, with all the men of Judah": to the end that we might know, as it is also fully expressed, that not only the principals of the tribes, but also all the milleniers, centuries, and subaltern magistrates should meet together, each of them in the name, and for their towns and communalities, to covenant and contract with the king. In this assembly was the creating of the king determined of, for it was the people who made the king, and not the king the people.

It is certain, then, that the people by way or stipulation require a performance of covenants. The king promises it. Now the condition of a stipulator is in terms of law more worthy than of a promiser. The people ask the king, whether he will govern justly and according to the laws? He promises he will. Then the people answer, and not before, that while he governs uprightly, they will obey faithfully. The king therefore promises simply and absolutely, the people upon condition: the which failing to be accomplished, the people rest according to equity and reason quit from their promise.

In the first covenant or contract there is only an obligation to piety: in the second, to justice. In that, the king promises to serve God religiously: in this, to rule the people justly. By the one he is obliged with the utmost of his endeavors to procure the glory of God: by the other, the profit of the people. In the first, there is a

condition expressed, "if thou keep my commandments": in the second, "if thou distribute justice equally to every man." God is the proper revenger of deficiency in the former, and the whole people the lawful punisher of delinquency in the latter, or the estates, the representative body thereof who have assumed to themselves the protection of the people. This has been always practiced in all well-governed estates.

I would ask here, wherefore a man does swear, if it be not to declare that what he delivers he sincerely intends from his heart? Can anything be judged more near to the law of nature, than to observe that which we approve? Furthermore, what is the reason the king swears first, and at the instance, and required by the people, but to accept a condition either tacit or expressed? Wherefore is there a condition opposed to the contract, if it be not that in failing to perform the condition, the contract, according to law, remains void? And if for want of satisfying the condition by right, the contract is of no force, who shall dare to call that people perjured, which refuses to obey a king who makes no account of his promise, which he might and ought to have kept, and willfully breaks those laws which he did swear to observe? On the contrary, may we not rather esteem such a king perfidious, perjured, and unworthy of his place? For if the law free the vassal from his lord, who dealt feloniously with him, although that to speak properly, the lord swears not fealty to his vassal, but he to him: if the law of the twelve tables does detest and hold in execration the protector who defrauds him that is under his tuition: if the civil law permit an enfranchised servant to bring his action against his patron, for any grievous usage: if in such cases the same law delivers the slave from the power of his master, although the obligation be natural only, and not civil: is it not much more reasonable that the people be loosed from that oath of allegiance which they have taken, if the king (who may be not unfitly resembled by an attorney,

sworn to look to his client's cause) first break his oath solemnly taken? And what if all these ceremonies, solemn oaths, nay, sacramental promises, had never been taken? Does not nature herself sufficiently teach that kings were on this condition ordained by the people, that they should govern well: judges, that they should distribute justice uprightly; captains in the war, that they should lead their armies against their enemies? If, on the contrary, they themselves forage and spoil their subjects, and instead of governors become enemies, as they leave indeed the true and essential qualities of a king, so neither ought the people to acknowledge them for lawful princes. But what if a people (you will reply) subdued by force, be compelled by the king to take an oath of servitude? And what if a robber, pirate, or tyrant (I will answer) with whom no bond of human society can be effectual, holding his dagger to your throat, constrain you presently to become bound in a great sum of money? Is it not an unquestionable maxim in law, that a promise exacted by violence cannot bind, especially if anything be promised against common reason, or the law of nature? Is there anything more repugnant to nature and reason, than that a people should manacle and fetter themselves; and to be obliged by promise to the prince, with their own hands and weapons to be their own executioners? There is, therefore, a mutual obligation between the king and the people, which, whether it be civil or natural only, whether tacit or expressed in words, it cannot by any means be annihilated, or by any law be abrogated, much less by force made void. And this obligation is of such power that the prince who willfully violates it, is a tyrant. And the people who purposely break it, may be justly termed seditious.

RESISTANCE TO TYRANTS

Hitherto we have treated of a king. It now rests we do somewhat more fully describe a tyrant. We have shown that he is a king, who lawfully governs a king-

dom, either derived to him by succession, or committed to him by election. It follows, therefore, that he is reputed a tyrant, which, as opposite to a king, either gains a kingdom by violence or indirect means, or being invested therewith by lawful election, or succession, governs it not according to law and equity, or neglects those contracts and agreements, to the observation whereof he was strictly obliged at his reception. All which may very well occur in one and the same person. The first is commonly called a tyrant without title: the second a tyrant by practice. Now, it may well so come to pass, that he who possesses himself of a kingdom by force, to govern justly, and he on whom it descends by a lawful title, to rule unjustly. But for so much as a kingdom is rather a right than an inheritance, and an office than a possession, he seems rather worthy of the name of a tyrant, who unworthily acquits himself of his charge, than he who entered into his place by a wrong door. In the same sense is the pope called an intruder who entered by indirect means into the papacy: and he an abuser who governs ill in it.

Pythagoras says "that a worthy stranger is to be preferred before an unworthy citizen, yea, though he be a kinsman." Let it be lawful also for us to say, that a prince who gained his principality by indirect courses, provided he govern according to law, and administer justice equally, is much to be preferred before him, who carries himself tyrannously, although he were legally invested into his government with all the ceremonies and rites thereunto appertaining.

For seeing that kings were instituted to feed, to judge, to cure the diseases of the people: Certainly I had rather that a thief should feed me, than a shepherd devour me: I had rather receive justice from a robber, than outrage from a judge: I had better be healed by an empiric, than poisoned by a doctor in physic. It were much more profitable for me to have my estate carefully managed by an intruding guardian, than to have it wasted and dissipated by one legally appointed.

Now, at the last we are come as it were by degrees to the chief and principal point of the question. We have seen how that kings have been chosen by God, either with relation to their families or their persons only, and after installed by the people. In like manner what is the duty of the king, and of the officers of the kingdom, how far the authority, power, and duty both of the one and the other extends, and what and how sacred are the covenants and contracts which are made at the inauguration of kings, and what conditions are intermixed, both tacit and expressed; finally, who is a tyrant without title, and who by practice, seeing it is a thing unquestionable that we are bound to obey a lawful king, which both to God and people carries himself according to those covenants whereunto he stands obliged, as it were to God Himself, seeing in a sort he represents his divine Majesty? It now follows that we treat, how, and by whom a tyrant may be lawfully resisted, and who are the persons who ought to be chiefly actors therein, and what course is to be held, that the action may be managed according to right and reason. We must first speak of him who is commonly called a tyrant without title. Let us suppose then that some Ninus, having neither received outrage nor offense, invades a people over whom he has no color of pretension: that Caesar seeks to oppress his country, and the Roman commonwealth: that Papius endeavors by murders and treasons to make the elective kingdom of Polonia to become hereditary to him and his posterity: or some Bruniehilde draws to herself and her Protadius the absolute government of France, or Ebronius, taking advantage of Theoderick's weakness and idleness, gains the entire administration of the state, and oppresses the people, what shall be our lawful refuge herein?

First, the law of nature teaches and commands us to maintain and defend our lives and liberties, without which life is scant worth the enjoying, against all injury and violence. Nature has im-

printed this by instinct in dogs against wolves, in bulls against lions, betwixt pigeons and sparrow hawks, betwixt pulen and kites, and yet much more in man against man himself, if man become a beast: and therefore he who questions the lawfulness of defending oneself, does, as much as in him lies, question the law of nature. To this must be added the law of nations, which distinguishes possessions and dominions, fixes limits, and makes out confines, which every man is bound to defend against all invaders. And, therefore, it is no less lawful to resist Alexander the Great, if without any right or being justly provoked, he invades a country with a mighty navy, as well as Diomedes the pirate who scours the seas in a small vessel. For in this case Alexander's right is no more than Diomedes' but only he has more power to do wrong, and not so easily to be compelled to reason as the other. Briefly, one may as well oppose Alexander in pillaging a country, as a thief in purloining a cloak; as well him when he seeks to batter down the walls of a city, as a robber who offers to break into a private house.

There is, besides this, the civil law, or municipal laws of several countries which govern the societies of men, by certain rules, some in one manner, some in another; some submit themselves to the government of one man, some to more; others are ruled by a whole commonalty, some absolutely exclude women from the royal throne, others admit them; these here choose their king descended of such a family, those there make election of whom they please, besides other customs practiced among several nations. If, therefore, any offer either by fraud or force to violate this law, we are all bound to resist him, because he wrongs that society to which we owe all that we have, and would ruin our country, to the preservation whereof all men by nature, by law and by solemn oath, are strickly obliged: insomuch that fear or negligence, or bad purposes, make us omit this duty, we may justly be accounted breakers of the laws, betrayers

of our country, and contemners of religion. Now as the laws of nature, of nations, and the Civil commands us to take arms against such tyrants; so, is there not any manner of reason that should persuade us to the contrary; neither is there any oath, covenant, or obligation, public or private, of power justly to restrain us; therefore the meanest private man may resist and lawfully oppose such an intruding tyrant. The law Julia, which condemns to death those who raise rebellion against their country or prince, has here no place; for he is no prince, who, without any lawful title invades the commonwealth or confines of another; nor he a rebel, who by arms defends his country; but rather to this had relation the oath which all the youth of Athens were accustomed to take in the temple of Aglaura, "I will fight for religion, for the laws, for the altars, and for our possessions, either alone, or with others; and will do the utmost of my endeavor to leave to posterity our country, at the least, in as good estate as I found it." To as little purpose can the laws made against seditious persons be alleged here; for he is seditious who undertakes to defend the people, in opposition of order and public discipline; but he is no raiser, but a suppressor of sedition, who restrains within the limits of reason the subverter of his country's welfare, and public discipline.

On the contrary, to this has proper relation the law of tyrannicide, which honors the living with great and memorable recompenses, and the dead with worthy epitaphs, and glorious statues, that have been their country's liberators from tyrants; as Harmodius and Aristogiton at Athens, Brutus and Cassius in Rome, and Aratus of Sycione.

We must remember that all princes are born men, and therefore reason and passion are as hardly to be separated in them, as the soul is from the body while the man lives. We must not then expect princes absolute in perfection, but rather repute ourselves happy if those who gov-

ern us be indifferently good. And therefore, although the prince observe not exact mediocrity in state affairs; if sometimes passion overrule his reason, if some careless omission make him neglect the public utility; or if he do not always carefully execute justice with equality, or repulse not with ready valor an invading enemy; he must not therefore be presently declared a tyrant. And certainly, seeing he rules not as a god over men, nor as men over beasts, but is a man composed of the same matter, and of the same nature with the rest: as we would questionless judge that prince unreasonably insolent, who should insult over and abuse his subjects, as if they were brute beasts; so those people are doubtless as much void of reason, who imagine a prince should be complete in perfection, or expect divine abilities in a nature so frail and subject to imperfections. But if a prince purposely ruin the commonwealth, if he presumptuously pervert and resist legal proceedings or lawful rights, if he make no reckoning of faith, covenants, justice nor piety, if he prosecute his subject as enemies; briefly, if he express all or the chiefest of those wicked practices we have formerly spoken of; then we may certainly declare him a tyrant, who is as much an enemy both to God and men. We do not therefore speak of a prince less good, but of one absolutely bad; not of one less wise, but of one malicious and treacherous; not of one less able judiciously to discuss legal differences, but of one perversely bent to pervert justice and equity; not of an unwarlike, but of one furiously disposed to ruin the people, and ransack the state.

For the wisdom of a senate, the integrity of a judge, the valor of a captain, may peradventure enable a weak prince to govern well. But a tyrant could be content that all the nobility, the counselors of state, the commanders for the wars, had but one head that he might take it off at one blow: those being the proper objects of his distrust and fear, and by consequence the principal subjects on whom he desires to execute his

malice and cruelty. A foolish prince, although (to speak according to right and equity) he ought to be deposed, yet may he perhaps in some sort be borne withal. But a tyrant, the more he is tolerated, the more he becomes intolerable.

Furthermore, as the princes' pleasure is not always law, so many times it is not expedient that the people do all that which may lawfully be done; for it may oftentimes chance that the medicine proves more dangerous than the disease. Therefore it becomes wise men to try all ways before they come to blows, to use all other remedies before they suffer the sword to decide the controversy. If then those who represent the body of the people foresee any innovation or machination against the state, or that it be already embarked into a course of perdition; their duty is, first to admonish the prince, and not to attend that the disease by accession of time and accidents becomes unrecoverable. For tyranny may be properly resembled unto a fever hectic, the which at the first is easy to be cured, but with much difficulty to be known; but after it is sufficiently known, it becomes incurable. Therefore small beginnings are to be carefully observed, and by those whom it concerns diligently prevented.

If the prince therefore persist in his violent courses, and contemn frequent admonitions, addressing his designs only to that end, that he may oppress at his pleasure, and effect his own desires without fear or restraint; he then doubtless makes himself liable to that detested crime of tyranny: and whatsoever either the law, or lawful authority permits against a tyrant, may be lawfully practiced against him. Tyranny is not only a will, but the chief, and as it were the complement and abstract of vices. A tyrant subverts the state, pillages the people, lays stratagems to entrap their lives, breaks promise with all, scoffs at the sacred obligations of a solemn oath, and therefore is he so much more vile than the vilest of usual malefactors. By how much offences committed against a gen-

erality, are worthy of greater punishment than those which concern only particular and private persons. If thieves and those who commit sacrilege be declared infamous; nay, if they justly suffer corporal punishment by death, can we invent any that may be worthily equivalent for so outrageous a crime.

Furthermore, we have already proved that all kings receive their royal authority from the people, that the whole people considered in one body is above and greater than the king; and that the king and emperor are only the prime and supreme governors and ministers of the kingdom and empire; but the people the absolute lord and owner thereof. It therefore necessarily follows that a tyrant is in the same manner guilty of rebellion against the majesty of the people as the lord of a fee, who feloniously transgresses the conditions of his investitures, and is liable to the same punishment, yea, and certainly deserves a much greater one than the equity of those laws inflicts on the delinquents. Therefore as Bartolus says, "He may either be deposed by those who are lords in sovereignty over him, or else justly punished according to the law Julia, which condemns those who offer violence to the public." The body of the people must needs be the sovereign of those who represent it, which in some places are the electors, palatines, peers; in other, the assembly of the general estates. And, if the tyranny have gotten such sure footing, as there is no other means but force to remove him, then it is lawful for them to call the people to arms, to enroll and raise forces, and to employ the utmost of their power, and use against him all advantages and stratagems of war, as against the enemy of the commonwealth, and the disturber of the public peace. Briefly, the same sentence may be justly pronounced against him, as was against Manlius Capitolinus at Rome. "Thou wast to me, Manlius, when thou didst tumble down the Gaules that scaled the capital: but since thou art now become an enemy, like one of them, thou shalt be precipitated down from the

same place from whence thou formerly tumbled those enemies."

The officers of the kingdom cannot for this be rightly taxed of sedition; for in a sedition there must necessarily concur but two parts, or sides, the which preemptorily contest together, so that it is necessary that the one be in the right, and the other in the wrong. That part undoubtedly has the right on their side, which defends the laws, and strives to advance the public profit of the kingdom. And those, on the contrary, are questionless in the wrong, who break the laws, and protect those who violate justice, and oppress the commonwealth. Those are certainly in the right way, as said Bartolus, "who endeavor to suppress tyrannical government, and those in the wrong, who oppose lawful authority." And that must ever be accounted just, which is intended only for the public benefit, and that unjust, which aims chiefly at private commodity. Wherefore Thomas Aquinas says, "That a tyrannical rule, having no proper address for the public welfare, but only to satisfy a private will, with increase of particular profit to the ruler, cannot in any reasonable construction be accounted lawful, and therefore the disturbance of such a government cannot be esteemed seditious, much less traitorous"; for that offense has proper relation only to a lawful prince, who indeed is an inanimated or speaking law; therefore, seeing that he who employs the utmost of his means and power to annihilate the laws, and quell their virtue and vigor, can no ways be justly intituled therewith. So neither, likewise, can those who oppose and take arms against him, be branded with so notorious a crime. Also this offense is committed against the commonwealth; but for so much as the commonwealth is there only where the laws are in force, and not where a tyrant devours the state at his own pleasure and liking, he certainly is quit of that crime which ruins the majesty of the public state, and those questionless are worthily protectors and preservers of the commonwealth, who, confident in the

lawfulness of their authority, and summoned thereunto by their duty, do courageously resist the unjust proceedings of the tyrant.

And in this their action, we must not esteem them as private men and subjects, but as the representative body of the people, yea, and as the sovereignty itself, which demands of his minister an account of his administration. Neither can we in any good reason account the officers of the kingdom disloyal, who in this manner acquit themselves of their charge.

There is ever, and in all places, a mutual and reciprocal obligation between the people and the prince; the one promises to be a good and wise prince, the other to obey faithfully, provided he govern justly. The people therefore are obliged to the prince under condition, the prince to the people simply and purely. Therefore, if the prince fail in his promise, the people are exempt from obedience, the contract is made void, the right of obligation of no force. Then the king if he govern unjustly is perjured, and the people likewise forsworn if they obey not his lawful commands. But that people are truly acquit from all perfidiousness, who publicly renounce the unjust dominion of a tyrant, or he, striving unjustly by strong hand to continue the possession, do constantly endeavor to expulse him by force of arms.

It is therefore permitted the officers of a kingdom, either all, or some good number of them, to suppress a tyrant; and it is not only lawful for them to do it, but their duty expressly requires it; and, if they do it not, they can by no excuse color their baseness. For the electors, palatines, peers, and other officers of state, must not think they were established only to make pompous parades and shows, when they are at the coronation of the king, habited in their robes of state, as if there were some masque or interlude to be represented; or as if they were that day to act the parts of Roland, Oliver, or Renaldo, and such other personages on a stage, or to counterfeit and

revive the memory of the knights of the round table; and after the dismissing of that day's assembly, to suppose they have sufficiently acquitted themselves of their duty, until a recess of the like solemnity. Those solemn rites and ceremonies were not instituted for vain ostentation, nor to pass, as in a dumb show, to please the spectators, nor in children's sports, as it is with Horace, to create a king in jest; but those grantees must know that as well for office and duty, as for honor, they are called to the performance of those rites, and that in them, the commonwealth is committed and recommended to the king, as to her supreme and principal tutor and protector, and to them as coadjutors and assistants to him: and therefore, as the tutors or guardians (yea, even those who are appointed by way of honor) are chosen to have care of and observe the actions and importments of him who holds the principal rank in the tutorship, and to look how he carries himself in the administration of the goods of his pupil. So likewise are the former ordained to have an eye to the courses of the king, for, with an equivalent authority, as the others for the pupil, so are they to hinder and prevent the damage and detriment of the people, the king being properly reputed as the prime guardian, and they his coadjutors.

In like manner, as the faults of the principal tutor who manages the affairs are justly imputed to the coadjoints in the tutorship, if when they ought and might, they did not discover his errors, and cause him to be despoiled, especially failing in the main points of his charge, to wit, in not communicating unto them the affairs of his administration, in dealing unfaithfully in his place, in doing anything to the dishonor or detriment of his pupil, in embezzling of his goods or estate, or if he be an enemy to his pupil: briefly, if either in regard of the worthlessness of his person, or weakness of his judgment, he be unable well to discharge so weighty a charge, so also, are the peers and principal officers of the kingdom accountable for the government

thereof, and must both prevent, and if occasion require, suppress the tyranny of the prince, as also supply with their care and diligence, his inability and weakness.

Princes are chosen by God, and established by the people. As all particulars considered one by one, are inferior to the prince; so the whole body of the people and officers of state, who represent that body, are the princes' superiors. In the receiving and inauguration of a prince, there are covenants and contracts passed between him and the people, which are tacit and expressed, natural or civil; to wit, to obey him faithfully while he commands justly, that he serving the commonwealth, all men shall serve him, that while he governs according to law, all shall be submitted to his government, etc. The officers of the kingdom are the guardians and protectors of these covenants and contracts. He who maliciously or willfully violates these conditions, is questionless a tyrant by practice. And therefore the officers of state may judge him according to the laws. And if he support his tyranny by strong hands, their duty binds them, when by no other means it can be effected by force of arms to suppress him.

Of these officers there be two kinds, those who have generally undertaken the protection of the kingdom; as a constable, marshals, peers, palatines, and the rest, every one of whom, although all the rest do either connive or consort with the tyranny, are bound to oppose and repress the tyrant; and those who have undertaken the government of any province, city, or part of the kingdom, as dukes, marquesses, earls, consuls, mayors, sheriffs, etc., they may according to right expel and drive tyranny and tyrants from their cities, confines, and governments.

But particular and private persons may not unsheathe the sword against tyrants by practice, because they were not established by particulars, but by the whole body of the people. But for tyrants who without title intrude themselves, for so much as there is no contract or agree-

ment between them and the people, it is indifferently permitted all to oppose and depose them; and in this rank of tyrants may those be ranged, who, abusing the weakness and sloth of a lawful prince, tyrannously insult over his subjects.

Finally, as there have ever been tyrants distressed here and there, so also all histories testify that there have been neighboring princes to oppose tyranny, and maintain the people in their right. The princes of these times by imitating so worthy examples, should suppress the tyrants both of bodies and souls, and restrain the oppressors both of the com-

monwealth, and of the church of Christ: otherwise, they themselves, may most deservedly be branded with that infamous title of tyrant.

And to conclude this discourse in a word, piety commands that the law and church of God be maintained. Justice requires that tyrants and destroyers of the commonwealth be compelled to reason. Charity challenges the right of relieving and restoring the oppressed. Those who make no account of these things, do as much as in them lies to drive piety, justice, and charity out of this world, that they may never more be heard of.

BODIN

The national state is the central concept of modern political thought, its tacit assumption, just as the city-state was that of antiquity, and universal empire that of the Middle Ages. Machiavelli came close to the idea of the state; he was the first to coin the term "state" (*lo stato*). However, as he was primarily interested in power and the rulers who struggled for it, but not in institutions, his use of the word "state" is strongly permeated with the meaning of "government," the state being essentially the ruler and his political, military, and administrative machine—all still viewed from a personal angle.

A clear formulation of the concepts of state and state sovereignty could occur only in a nation that was actually developing the appropriate judicial, administrative, and legislative institutions. Such institutions had been evolving in France since the late Middle Ages, and a strong sentiment of nationalism and sense of national sovereignty could be seen in the struggle between King Philip IV and Pope Boniface VIII at the end of the thirteenth century. But the appreciation of these changes was slow, and it is not until the sixteenth century that the first systematic and clear conception of *sovereignty* was worked out in *The Six Books on the State* (*Les six livres de la République*, 1576), by Jean Bodin (1530–1596).

Bodin was a native of Angers, and studied law at Toulouse, where he also taught for some time. Toulouse was an important formative phase in Bodin's life, because its university was outstanding in jurisprudence and also because its population included a considerable number of Protestants. Bodin was of middle-class origin and represented the Third Estate in the Estates-General in 1576. He became closely attached to the brother of King Henry III and served in the legal branch of the royal administration. His vast erudition (of which he put too much into his *Six Books on the State*, thus depriving it of many readers, who find its length forbidding) was aptly supplemented by public experience in both the legislative and administrative parts of government.

Bodin lived at a time when the unity of France, though finally accomplished territorially, was seriously threatened by religious conflict. Calvinist Protestantism made incessant progress in France during the sixteenth century, and the attempt to eradicate it by force was met by resistance. The "War of Religion" started in 1562 and went on intermittently for over a generation. In the Mas-

sacre of St. Bartholomew (August 24, 1572) religious conflict degenerated into murder, and the spirit of intransigence grew on both sides. The religious divisions engendered by the Reformation were intertwined with deep-seated social and economic issues, which made reconciliation even more difficult. What France needed for its preservation was more moderation and compromise, and less fanaticism and radicalism; it needed citizens who preferred the prosaic stability of France in the present to the poetic bliss of heaven in the future.

From the 1560s on, a group of administrators, lawyers, and publicists sought to stem the tide of fanaticism that was ruining the nation. They were called *Politiques*. At first the name was meant to be opprobrious, inasmuch as the *Politiques* were charged with putting practical politics above pure principles, and the charge was true as far as it went. The *Politiques* were Catholic, but they were unwilling to sacrifice the interests of the French state and nation to those of the Roman Catholic Church. Their attitude of toleration was generally not based on philosophy but on expediency. Michel de l'Hôpital, Chancellor of France, and an outstanding leader of the *Politiques*, had urged as early as 1560 to get rid "of these devilish words, these names of party, of faction, of sedition—Lutheran, Huguenot, Papist," and had asserted that "a man does not cease to be a citizen for being excommunicated."

If possible, the *Politiques* preferred religious unity, because they felt that political unity would thereby be furthered. Hence they were not opposed to a little persecution at the beginning of a new religious creed, provided that such dissent could be eliminated quickly and without much violence or bloodshed. But when a new faith has been embraced by a substantial portion of the community, as was true of the Huguenots, the *Politiques* were willing to accept the fact of Protestantism, because they believed that the unity of France could not stand the strain of wholesale massacre and permanent civil war.

Bodin is the best-known theorist of the *Politiques*, and his *Six Books on the State* expresses the desire for strong government that makes contented and secure citizenship possible. Bodin defines sovereignty—he was the first to use this word—as "the absolute and perpetual power of the state, that is, the greatest power to command." Bodin distinguishes the government from the state, in other words, the exercise of sovereign functions, which may be for a limited time, from sovereignty itself, which is unlimited in time—*perpetual*. Sovereignty exists as long as the state, regardless of its changing forms of government. The *absolute* quality of sovereignty consists in the fact that the sovereign state tolerates no rival legal authority above it: "Only he is absolutely sovereign who, after God, acknowledges no one greater than himself."

Sovereignty is here markedly pointed at two sources that threatened it: universal church and empire. Both were henceforth denied any interference in the ecclesiastical and temporal affairs of the developing national states. Politically the kings looked on themselves as "emperors" in their realms, and ecclesiastically they either became the official heads of their national churches, as in Protestant states, or controlled, according to the theory of "Gallicanism," the clergy in predominantly Catholic states.

The doctrine of sovereignty, however, is directed above all against forces threatening the state from within. Bodin saw more clearly than anyone before him that the essence of sovereignty consists in the *making of general laws*. Dur-

ing the Middle Ages the law was something that was found by judges, not made by legislators; the process of the creation of law was thought of as a slow and imperceptible synthesis of the immemorial custom of the land, the law of nature, and the will of God. The concept of making the law marks a revolutionary break with the medieval tradition, and Bodin specifically refers to local customs and local parliaments; the feudal system of diffusion and decentralization of authority gave way to an authority that was one and indivisible. The nobility, in particular, was the target of the new doctrine of sovereignty. Bodin, like most writers of the *Politiques*, belonged to the Third Estate, and the bourgeoisie also provided the new class of administrators and judges for the constantly expanding activities of the state.

Bodin's attribution of absoluteness to the sovereign is to be understood only in relation to human laws. Still close to the medieval sentiment that the ruler is under a moral obligation to the community and God, Bodin says that the sovereign prince has no authority to violate the laws of God and nature: "In doing so a prince would become guilty of high treason against God." By defining sovereignty at the outset of his treatise as "lawful government," Bodin seeks to distinguish it from the order that bands of robbers and pirates maintain among themselves. Bodin also distinguishes between the sovereign's right to break his laws and his right to break his contracts. The sovereign ruler is not bound by his predecessors' laws or his own, because the authority of lawmaking is unilateral, deriving from the sole authority of the sovereign. But when a contract is made by the prince with his subjects or other rulers, the obligation is mutual and cannot be broken by him at will. Natural law prescribes that agreements be kept (*pacta sunt servanda*), and the prince may not free himself from this obligation by unilateral action any more than the subject may.

Bodin does not discuss in detail how the precepts of divine and natural law limit sovereignty, and in what manner a ruler's violation of divine and natural law is to be ascertained and punished. He cites murder as a case in point. If the sovereign forbids to kill, he is even more bound by it than his subjects, because "such a law is not his, but the law of God and nature."

In addition to divine and natural law, Bodin mentions limitations of sovereignty that derive from human law. First, the sovereign ruler does not have the legal authority to alter the rules of succession to the French crown; second, he has no right to alienate the public domain; third, he may not levy taxes without the consent of the Estates or deprive a subject of his property without "just cause." In the first two instances, Bodin implies that the monarch, though not bound by ordinary statutory law, is bound by the fundamental laws of the realm (*leges imperii*) governing succession and the public domain, because such fundamental laws are the legal basis of the very authority of the sovereign. As for property, Bodin felt that in violating the rights of property without due process the sovereign destroys one of the main purposes of the state, which is the protection of property and the family.

Unlike later protagonists of the doctrine of sovereignty, Bodin was unwilling to deduce limitless *power* of the monarch from his *supreme legal authority*. Parliament is legally supreme as the lawmaking body in Great Britain, yet this fact does not mean that it is able, in actuality, to pass any law whatsoever. Although there are no legal curbs on Parliament as the highest legal authority, there are

extralegal and nonlegal forces, such as the electorate, parties, public opinion, trade-unions, churches, and business organizations, that effectively limit and direct its power. The British monarch is even more illustrative of the difference between sovereign authority and political power. Though he has the legal authority to refuse his assent to bills passed by both Houses of Parliament, he has not done so since 1707.

In the field of external relations, too, Bodin felt that sovereignty must be understood as a concept of legal status, and not of political power. A state is sovereign if it is not legally subject to the authority of another state and if its relations with other states are carried on in accordance with international, rather than municipal, law. This definition does not necessarily imply *factual* independence. Small states are often dependent on large states militarily, economically, and politically, but as long as their dependence is one of fact rather than of law, they are sovereign. Bodin himself occasionally blurred the distinction between the highest legal authority of the sovereign and political omnipotence. Yet his line of thought is, in general, unmistakable, and he is saved from confusing legal sovereignty with political despotism by his acute legal learning as well as by his strong sense of the rule of law, which he conceives as the confluence of constitutional, natural, and divine law.

Bodin prefers monarchy to aristocracy and democracy because the unity and indivisibility of authority seem best safeguarded in one man. But in his account of monarchical government he sharply distinguishes between *legitimate* and *illegitimate* monarchy. Royal descent or conquest in lawful war supplies the title of legitimate monarchy, whereas the tyrant, the illegitimate monarch, sets himself up as sovereign prince without rightful claim of election, descent, or lawful war. If the monarch is legitimate, the subjects have no right to encroach, acting individually or jointly, on "the honor or life of the monarch by judicial or other means, though he may have committed all the wicked, impious and cruel misdeeds one can think of." Even less have subjects the right to proceed against the prince by force. As for the tyrant, it is lawful to kill him without formal proceedings because he has put himself outside the law by seizing power illegally; if the tyrant surrenders himself into the hands of the people, thereby recognizing their sovereignty, he may be tried in court. Bodin adds the important observation that it makes no difference whether the tyrant is virtuous or villainous; he may be put to death, regardless of his personal goodness, because he has invaded sovereignty.

Whereas most of the *Politiques* tolerated religious dissent primarily on grounds of expediency, Bodin accepts religious diversity on philosophical grounds. He advises the ruler of a country divided into various churches and religions not to impose forcibly his own religion, because "the more the will of men is forced, the more it becomes obstinate." In a later book, *Colloquium heptaplomeres* (written in 1588, but not printed before 1841), Bodin, presenting seven spokesmen (therefore the title) of various Christian and non-Christian creeds in the world, arrives at a theistic position of rational belief in God, above any particular church or organized religion. Bodin's view on slavery is in harmony with his liberal outlook. Despite his admiration for Aristotle, he felt that slavery was unjust, and that it was not supported by facts, as Aristotle had said, inasmuch as good men may be kept as slaves by masters who are wicked.

Bodin's bourgeois outlook is clearly expressed in his views on property and war. He held that the prince cannot impose taxation without the consent of the Estates, and that he cannot deprive a subject of his property "without just cause." Although recognizing that no cause of revolution is more important than "excessive wealth of the few and extreme poverty of the many," he is strongly opposed to equality of property; the foundation of the state is good faith, and the equalization of property subverts the state by destroying legitimate expectations and conventions. Bodin's views on war are as different from those of Machiavelli as a sixteenth-century French bourgeois from an Italian *condottiere* of the Renaissance. Bodin abhors war because it is destructive of the very purpose of human associations, be it material ease or spiritual elevation. He justifies war only to repel aggression.

Bodin's state is strong but not aggressive; monarchical but not tyrannical. It became the model for the new national state in which the interests of the monarchy were allied with those of the rising merchant and middle classes against church and aristocracy. In this new state the bourgeoisie was willing to accept a strong government under kingly command, provided that it was allowed to make money and enjoy reasonable legal and political security. This alliance was to last over two hundred years, until the French Revolution raised the fundamental issue whether sovereignty should be vested in the king or in the people.

BODIN

Six Books on the State *

THE STATE

The state is a lawful government, with sovereign power, of different households and their common affairs. We put this definition at the outset because in all things, it is necessary to look first for the chief end, and then for the means of attaining it. A definition is nothing else than the end of a problem that is being considered, and unless it is well founded, whatever is based upon it will soon collapse.

Let us now examine each part of the definition of the state. In the first place, we speak of the state as "lawful government" in order to distinguish it from bands of robbers and pirates, with whom it can have no part, commerce, or alliance. In all well-ordered states, therefore, robbers and pirates have always been excluded from recognition, whether it be a question of making a pledge in negotiating peace, calling off war, setting up offensive or defensive alliances, defining boundaries, or settling disputes between kings and territorial rulers. The law of mankind sharply differentiates between wartime enemies who maintain lawful government in their states, and brigands and pirates who seek to subvert and destroy them.

SOVEREIGNTY

Sovereignty is the absolute and perpetual power of the state, that is, the greatest

power to command. It is necessary to arrive at a definition of sovereignty because neither jurists nor political philosophers have so far defined it, although it is the principal and most urgent point for an understanding of the nature of the state. Having said before that the state is a lawful government, with sovereign power, of many households and their common affairs, the meaning of sovereign power must now be explained. I have said that this power is perpetual, for absolute power may be given to one or several for a certain time only, at the end of which they are subjects again. While they are in authority they still cannot call themselves sovereign rulers, inasmuch as they are only custodians and keepers of sovereign power until it shall please the people or the prince to recall it, just as those who have lent or pawned their goods to others remain the true owners and possessors. Likewise, those who give to others the power and authority to judge and command for a defined period of time, or to be recalled at pleasure, retain power and authority that the others exercise but in the nature of a temporary lease or loan. The governor of a country or the lieutenant of a prince surrenders his power at the expiration of his term, being but the depository and keeper for someone else. It makes no difference whether the official is of high or low rank. If the absolute power granted to the lieutenant of the prince were sovereign, it could be used against the prince himself, who would be left with nothing but an empty title, and the subject would command his lord, the servant his master—which

* From Jean Bodin, *Six Books on the State* (1576; trans. William Ebenstein).

would be absurd. Whatever power and authority the sovereign prince confers upon others, his own person remains excepted. He always retains more authority than he gives away, and he is never divested of his right to command and examine his officials by way of prevention, concurrence, or challenge, to withdraw their authority altogether, or to permit it to go on to the extent, and as long as, it shall please him.

If the people grant annually absolute power to one or several citizens, without control or appeal, shall we say that they possess sovereignty? Only he is absolutely sovereign who, after God, acknowledges no one greater than himself. These citizens elected to highest office therefore do not possess sovereignty, as they are but trustees of the power lent to them for a given time. The people do not deprive themselves of sovereignty when they entrust absolute authority to one or several rulers, either for a limited time set in advance or to be revoked at their pleasure. In both instances the holders of power remain accountable to those from whom they have received the power to command. This is not true of the sovereign prince, who is accountable to God alone.

But suppose such absolute power be given to a king's lieutenant for life. Is that not sovereign and perpetual power? Otherwise, if we should call perpetual power only that which never came to an end, sovereignty could exist only in aristocratic and popular governments that do not die. Or if the word "perpetual" would apply to a monarch and his heirs, there would be few sovereign monarchs, in view of the fact that only very few monarchies are hereditary, and in view of the fact those who arrive on the throne by the right of election would not be sovereign. "Perpetual" therefore means the lifetime of him who has the power. If the sovereign magistrate, elected for a year or for a defined time limit, continues to exercise the power that has been entrusted to him, he must do so either with

the acquiescence of the governed or by force. If by force, the tyrant is sovereign, just as the violent possession of the thief is genuine possession in nature, although contrary to law, and they who had possession before, no longer have it. But if the magistrate continues his sovereign power with the acquiescence of the people, he is not a sovereign prince, as he exercises it only on sufferance; he is even less sovereign if his term is not defined in advance, as he then holds whatever authority is his as a temporary trust and loan to be revoked at pleasure by the people.

Let us now examine the second part of our definition, and ascertain what the words "absolute power" mean. The people or the aristocracy in a commonwealth may purely and simply give someone the sovereign and perpetual power to dispose of their property and persons, and of all the state, as it may please him, and afterward leave all to whomever he may choose; just as an owner may give away his goods purely and simply, without any cause other than his liberality. Such a gift is a true one, with no conditions asked or received, once the donation is transacted and accomplished, whereas gifts that are granted under charges and conditions are not true gifts. Likewise, the transfer of sovereignty to a prince with charges and conditions does not result in true sovereign authority or absolute power, except when the conditions thus attached to the creation of the sovereign are of divine or natural law.

A prince is not bound by the laws of his predecessors, and much less by his own laws and ordinances. It is possible to receive a law from someone else, but it is impossible, in the nature of things, to give to oneself a law that depends on one's own will, as is stated in the legal maxim: *Nulla obligatio consistere potest, quae a voluntate promittentis statum capit* ("There can be no obligation that derives its validity from the will of him who makes the promise"). This necessary rea-

son evidently proves that the prince cannot be subject to his own laws. As the Pope never ties his hands, according to the canonists, so the sovereign prince cannot tie his hands, even if he desires to do so. Therefore we see at the end of laws and ordinances the words "Because it has so pleased Us," in order to indicate that the laws of the sovereign prince, though they may be based on good and valid reasons, depend nevertheless on nothing but his pure and free will.

As for the laws of God and nature, all princes in the world are bound by them, and they have no authority to violate them. In so doing, a prince would become guilty of high treason against God and of making war on him, under whose greatness all the rulers on earth must bear their yoke and bow their heads in fear and reverence. The absolute power of princes and lords in no way extends, therefore, to the laws of God and nature, and the Pope who has best understood the nature of absolute power and who has brought kings and emperors under his control said that a sovereign can abrogate ordinary law but not divine or natural law.

But is a prince not subject to the laws of his country, which he has sworn to keep? A distinction has to be made here between two possible situations: if the prince has sworn to himself that he will abide by his laws, he is no more bound by them than by any oath made to himself, just as private citizens are not bound by oaths and agreements that the law does not consider binding, however honorable and reasonable they be. If the sovereign prince promises, however, to another ruler to keep the laws that he or his predecessors have made, he is obliged to abide by them, if the other prince has an interest therein, although no oath was included in the promise. But when the ruler, to whom the promise has been made, has no interest in the matter, neither the promise nor the oath is binding.

The same holds true if the promise has been made by the prince to his subjects, either before or after ascending the

throne. Not that the prince is bound by his own laws or those of his predecessors, but anyone, ruler or subject, is obliged to keep his just covenants and promises, whether made under oath or not. Similarly, as a private citizen may be relieved of an unjust and unreasonable promise that grieves him too much and into which he has been beguiled by trickery, fraud, error, force, or fear, so as to cause him major damage, the prince too, may be released from promises that affect the diminution of his majesty, if he is a sovereign prince. Our general rule thus remains, that the prince is not bound by his own laws or those of his predecessors but is obliged to keep his just and reasonable agreements, in the observance of which his subjects in general, or a particular private person, may have an interest.

Law and contracts must not be confused. Law depends on him who possesses sovereignty, and who can bind all his subjects but cannot bind himself. By contrast, a contract is a mutual obligation between prince and subjects that binds them reciprocally, and it cannot be altered except by mutual consent. In this situation, the prince is in no way above the subject, except that, when the justice of the law he has sworn to maintain has ceased to exist, he is no longer bound by his word; this the subjects cannot do, in their private agreements, unless they be relieved by the prince.

The sovereignty of the monarch is in no way altered or diminished by the calling together and deliberations of the estates. On the contrary, seeing all his people recognize him as their sovereign, he finds his majesty thereby enhanced and more illustrious. In such representative assemblies the princes are not unwilling to grant their subjects concessions and favors that they would not otherwise yield, as they are overcome by the requests, petitions, and just grievances of the people, suffering most often without the knowledge of the prince, who sees and hears but through the eyes, ears, and

reports of others. We thus conclude that the principal aspect of sovereign rule and absolute power consists in making general laws for the subjects without their consent. Without looking at other countries, we have often seen in our own realm that general customs have been abolished by the edicts of our kings, without hearing the estates, when the injustice of common law and custom was clearly to be seen.

But what if the prince forbids to kill, under the sanction of the death penalty, is he then bound by his own law? I say that such a law is not his, but the law of God and nature. In fact, he is more strictly bound by it than are his subjects, and cannot be freed from its obligation by the people or the senate, being held responsible by the judgment of God, as King Solomon said. Marcus Aurelius said that the magistrates are the judges of private individuals, the princes of magistrates, and God of the princes. Such were the views of two rulers who have been held among the wisest. I shall conclude with that of Antigon, King of Asia, who, on being told by a flatterer that all things were lawful to kings, said: "Yes, to barbarian and tyrannical kings."

The first characteristic of the sovereign prince is the power to make general and special laws, but—and this qualification is important—without the consent of superiors, equals, or inferiors. If the prince requires the consent of superiors, then he is a subject himself; if that of equals, he shares his authority with others; if that of his subjects, senate or people, he is not sovereign. The names of notables that one sees affixed to laws are not put there to endow them with authority but to serve as testimony and additional weight.

LEGITIMATE AND DESPOTIC MONARCHIES

Monarchy is based on conquest, legitimate descent, or tyranny. This diversity

of government does not signify a similar diversity of state, because state and government are different things. Government is actual policy and administration, as distinguished from the framework of the state. The state may be a monarchy, and yet popularly governed, if the representative assemblies, magistrates, offices, and grants are open to all, without distinctions of birth, wealth, or virtue. A monarchy is aristocratically governed if political representation and public offices are reserved by the king to the noble, the virtuous, or the rich. The aristocratic state may also be governed popularly, when honors and offices are distributed equally among all subjects, or aristocratically, if reserved exclusively for the noble and the rich. This variety of government has confused those who have deduced therefrom a like variety of states, overlooking the fact that the basic constitution of a state is different from its government and administration.

The royal, or legitimate, monarchy is that in which the subjects obey the laws of the monarch, and the monarch the laws of nature, the subjects retaining their natural liberty and property. The monarchy based on conquest is that in which the prince has made himself lord over persons and property by the force of arms in lawful war, ruling over his subjects as the head of the family over his slaves. The tyrannical monarchy is that in which the monarch, in contempt of the laws of nature, abuses free citizens as slaves and treats their property as his own. The same difference between legitimate rule and tyranny is also to be found in aristocracies and democracies; specifically, tyranny may also appear in the democratic state of a frenzied people, as Cicero has so well pointed out.

I have said in the definition of monarchy that the subjects owe obedience to the legitimate king, the sole source of sovereign majesty, and that the king must obey the law of nature, that is to say, govern his subjects and guide his actions by natural justice, which can be seen and

perceived as clearly and brightly as the splendor of the sun. It is the true sign of legitimate monarchy when the king obeys and follows the laws of nature as he would like his subjects to do with respect to his own laws. He will accomplish this by fearing God and being merciful toward the afflicted, prudent in his enterprises, bold in his deeds, modest in prosperity, steadfast in adversity, loyal to his given word, wise in counsel, helpful to friends, mindful of his subjects, terrible to enemies, courteous to the good, awe-inspiring to the evil, and just toward all. If the subjects obey the laws of the king, and the king the laws of nature, justice will be mistress or, as Pindar said, queen. Mutual friendship between ruler and people will ensue, as well as harmony of subjects among one another, and of all with the king.

The greatest difference between a king and a tyrant is that the former conducts himself according to the laws of nature, whereas the latter treads them under his feet. The one adheres to piety, justice and faith; the other has no God, no faith, no law. The one does all to serve the public good and the protection of his subjects; the other acts only for his personal profit, vengeance, or pleasure. The one endeavors to enrich his subjects by all means he can think of; the other builds his castle on the ruin of his subjects. The one revenges the injuries inflicted on the people and easily pardons those done to him; the other revenges cruelly the injuries done to him and pardons those of others. The one spares the honor of virtuous women; the other rejoices in their shame. The one takes pleasure in receiving warnings freely expressed and reproof wisely broached; the other hates nothing more than the man who is serious, free, and virtuous. The one endeavors to keep his subjects in peace and unity; the other sows division among them so that they ruin one another, and then enriches himself by confiscating their property. The one takes pleasure in being seen and heard by his subjects; the

other hides from them as from his enemies. The one puts his faith in the love of his people; the other, in their fear. The one fears for nothing more than for his subjects; the other fears nothing more than his subjects. The one imposes upon his subjects as light financial charges as possible, and only for the public good; the other drinks his subjects' blood, gnaws their bones, and sucks the very marrow out of them, in order to weaken them. The one appoints to public office men of integrity; the other employs only thieves and the worst rascals.

JUST TYRANNICIDE AND UNJUST REGICIDE

We have said that he is a tyrant who by his own authority sets himself up as sovereign prince, without election, right to succession, lot, just war, or by special divine summons. Both the ancient writings and laws agree that the tyrant may be put to death and that his assassins even receive rich awards: titles of nobility, prowess, chivalry, statues and crowns, and the property of the tyrant, as is due to real liberators of home and country. The ancients made no distinction between the tyrannical ruler who is good and virtuous or wicked and villainous, because no man has the right to invade sovereignty and set himself up as master over his fellow citizens under the guise of justice and virtue. In law, he is guilty of death who assumes the marks reserved for sovereignty. If therefore the subject attempts, by whatever means, to steal from the king his rank and status, or—in the popular or aristocratic state—seeks to make himself from an equal into a lord, he deserves death.

One may ask the question whether the tyrant may be slain who, having seized sovereignty by force or fraud, has himself elected by the representatives of the people, for it seems that the solemn act of election is a genuine ratification of his tyranny, agreed to by the people. I say nevertheless that it is lawful to kill him

without any trial or formal proceedings, unless the tyrant has surrendered his authority into the hands of the people in order to be judged in court.

Where the prince is a legitimate absolute sovereign, as are the true monarchs of France, Spain, England, Scotland, Ethiopia, Turkey, Persia, Muscovy, his authority is neither shared nor challenged by anyone. In this case, subjects may not, acting individually or jointly, encroach upon the honor or life of the monarch by judicial or other means, though he may have committed all the wicked, impious, and cruel misdeeds one can think of. As to proceeding against the monarch by judicial means, the subjects have no jurisdiction over their prince, upon whom all power and authority to command depend, and who may not only revoke all the power of his magistrates but in whose very presence the power and jurisdiction of magistrates, corporations, colleges, estates, and communities cease to exist. It is not lawful for the subject to bring his prince to trial, for the vassal his lord, nor for the servant his master. In short, if it is not lawful to proceed against the king by judicial means, how could it be lawful to do so by force? The question at issue here is not who is the strongest, but whether the subject has the lawful authority to condemn his sovereign prince.

RELIGION AND SOCIAL PEACE

I do not wish to go into the question of which religion is the best (though there is only one religion, one truth, one divine law revealed by the mouth of God). But the prince who has complete certainty of the true religion and desires to attract to it his subjects divided into sects and factions should not be driven into the use of force, because the more the will of men is forced, the more it becomes obstinate. On the other hand, if the prince follows the true religion without sham or make-believe, he will be able to turn the hearts of his subjects to his religion, without

using violence or punishments. In so doing he will avoid hard feelings, troubles and civil war, while leading the subjects who had gone astray into the haven of salvation.

THE SOCIAL CAUSES OF REVOLUTION

Among all the causes of sedition and basic changes of the state, none is more important than excessive wealth of the few and extreme poverty of the many. The record of history is full of examples. Those who have advanced several causes of discontent against the state have taken advantage of the first opportunity that presented itself to them to despoil the rich of their fortunes. These revolutionary changes were more frequent in ancient times than at present because of the infinite number of slaves, who were thirty or forty times more numerous than those who were free. The greatest reward for their services was to be freed, even though they would obtain no other benefit. Many were able to buy liberty only by sacrificing their life-long savings or by borrowing, apart from the servitudes that they owed to their former masters. Despite these wretched conditions, they had an infinite number of children, as usually happens to those who labor most and live most frugally; being free, but oppressed by poverty, they were forced, in order to subsist, to borrow and pay their creditors in cash, crops, or services. The longer they lived, the more heavily they became indebted and the less able to meet their obligations; the Hebrews called usury a biting, because it gnaws the debtor to the very bone and sucks his blood and the marrow of his bones. Swollen in numbers and starved, the poor finally arose against the rich, drove them out of their houses and mansions, or had to be fed at their expense.

This is why Plato called wealth and poverty the ancient pests of states, not only on the ground of the material want that oppresses the starving, but also because of their abjection, which is a very

evil and dangerous pestilence. To prevent it, men have searched for equality, which has been praised by many as the nourishing source of peace and friendship among citizens, as contrasted with the effects of inequality, namely, enmities, factions, hatreds, and prejudices. For he who possesses more than another and sees himself richer in property also desires more honors, delights, pleasures, food, and clothes. He wishes to be revered by the poor, whom he despises and tramples under his feet. On their part, the poor feel extreme envy and jealousy; though considering themselves as worthy as the rich, or even more so, they find themselves oppressed by poverty, hunger, misery, and disgrace.

For this reason, several ancient legislators divided the goods equally among all subjects; within recent memory, Thomas More, Chancellor of England, said in his book on the state that the public welfare can be attained only if men live in a community of goods, and that public welfare is impossible where private property exists. When Plato had the power, by the consent of the citizens who sent their ambassadors to him, to set up a new commonwealth, the colony of the Thebans and Phocians, he left without accomplishing anything because the rich were unwilling to share any of their wealth with the poor. Lycurgus endangered his life when, having banned the use of gold and silver, he also equally divided all estates. If Solon was unable to do the same, it was not because of lack of will, for he granted an annulment of bonds and a general abolition of debts.

On the other hand, it may be affirmed that equality of property is very harmful to the state, which has no safer support and foundation than good faith, without which neither justice nor any form of society can endure. Faith inheres in promises of legitimate conventions; if obligations are broken, contracts annulled, debt abolished, what can one then expect but the complete subversion of the state? There will be no trust whatsoever in one another. Moreover, such general aboli-

tions of debts often harm and even ruin the poor, because poor widows, orphans, and little people who have nothing but a small annuity are lost when debts are generally abolished. By contrast, the usurers take their precaution in time and profit from such abolitions of debts, as happened under Solon and Agis: the usurers, having had advance information about the cancellation of all debts, borrowed money from all sides to defraud their creditors. In addition, the hope of such general abolition of debts encourages the spendthrifts to borrow at any rate of interest; later they join the ranks of the malcontent and desperate poor, and stir up sedition among them, whereas, had there been no expectation of the cancellation of debts at the time of contracting them, everybody would seek to husband his property wisely and live in peace.

If the evil effects of such abolitions are great, they are still worse in the case of the equal division of land and other goods that had been lawfully acquired and held in possession. With regard to debts, there is the pretense of usury and the sterility of money, arguments that cannot be used with respect to lawful estates, so that one is led to conclude that such division of the property of others is nothing but theft under the cloak of equality. And to say that equality nourishes friendship is to abuse the ignorant; for it is certain that there is no greater hatred, nor fiercer enmity than among equals, and the jealousy among equals is the source of turmoil, sedition, and civil war. By contrast, the poor, small, and weak willingly submit to, and obey, the great, rich, and powerful for the aid and profit that they hope to receive from them.

WAR

Should citizens be prepared and trained in the military arts? Should the state seek war rather than peace? There is no doubt on these issues. We firmly hold that commonwealth to be happy in which the king

obeys the laws of God and nature, in which the magistrates obey the king, the subjects the magistrates, the children their parents, servants their masters, and whose subjects are bound by friendship to one other, and all with the prince, so as to enjoy the sweetness of peace and the true calmness of spirit. War is contrary to all this, and warlike men are the sworn enemies of this kind of life. Also, it is impossible to see a commonwealth flourish in religion, justice, charity, integrity, and, in short, in all the liberal sciences and mechanical arts unless the citizens enjoy a firm and assured peace—which is the ruin of warriors, who, like their equipment, are useless in time of good peace. And who is more hostile to a peaceable man than the furious soldier; to the mild farmer, than the bloodthirsty warrior; to the philosopher, than the captain; to the wise, than fools? For the greatest pleasure of warriors is to forage the open country, rob the peasants, burn the villages, besiege, batter, force, and pillage the towns, massacre the good and bad, the young and old, all ages and sexes, rape the virgins, wash in the blood of their victims, desecrate holy objects, raze temples, blaspheme the name of God, and trample under their feet all divine and human laws. Such are the fruits of war, pleasant and agreeable to warriors, abominable to good men, and detestable to God.

It is unnecessary to amplify in words what one sees happen in so many places,

for the memory of these happenings alone fills one with horror. One must therefore beware of raising a warlike spirit among the subjects, guiding them toward such an execrable life, nor seek war under any circumstances, except when it is a matter of repelling violence in an extreme emergency. For those who make use of the slightest occasion to make war, resemble the flies who cannot stay on a well polished mirror, but prefer rough places. They who seek war to aggrandize themselves out of the ruin of others will be in perpetual torment, leading a life of misery, because greed has no limits, though in appearances one may promise oneself to have enough after the conquest of a kingdom. They resemble a slave who first only demands to be unchained; free of his shackles, he desires freedom; emancipated, he wishes to have the status of a citizen; given citizenship rights, he would like to be a public official; having reached the highest ranks of office, he aspires to be king; being king, he seeks to be the sole monarch; and, finally, he wants to be God.

How much happier then is a small prince or a small commonwealth (though there is nothing small in contentment), enjoying the assurance of tranquillity and peace without enemies, without war or envy? The boundary of a well ordered commonwealth is justice, as Pompey said to the king of the Parthians, and not the point of the sword, as King Agesilaus said.

HOBBS

The modern age, conceived in the Renaissance and Reformation, was born in the crucible of civil and international war in the seventeenth century. A host of old and new issues—social, economic, constitutional—produced intense passions transformed by religion into irreconcilable hatreds. The Thirty Years' War (1618–1648) started with a Protestant revolt in Bohemia. The conflict soon broadened into a major conflagration, until most European states were finally involved; civil wars and revolutions sprang up in half a dozen countries, from Italy to England. Germany, the principal theater of military operations, was depopulated, impoverished, and ruined by the war. Neither Protestantism nor Catholicism won a conclusive victory, and men began to ask themselves whether moral and physical devastation could be justified by theological differences.

Until the age of discovery, that is, as long as the Mediterranean held the pivotal position in commerce and civilization, England lived on the rim of the world's center. But when geographical discovery and overseas expansion shifted the world's focal area from the Mediterranean basin—the “middle of the earth”—to the Atlantic shores of western Europe, England became the center of a new oceanic world largely of her own making, and her rising commercial and industrial wealth quickly put her in the front rank of European nations. Moreover, in the seventeenth century the foundations were laid for the future greatness of England in science, medicine, navigation, philosophy, economics, and politics. The nineteenth is often called the “English century” because England then attained the peak of her visible power and world-wide influence. Yet the seventeenth is probably the most creative century in English history, and the success of the nineteenth century was built on the greatness of the seventeenth.

The turning point was marked by the Puritan Revolution and two civil wars (1642–1649), fought over fundamental issues that could not be resolved peaceably. First, there was the issue of *religious* liberty: the Church of England was criticized for being a state church, and its episcopal organization as well as its liturgy was rejected by many as being too close to Roman Catholicism. A sizable body of respectable Protestants favored presbyterianism as an alternative, and—on the theological left—the independent congregationalist sects began to press their demands. The slogan of King James I, “No Bishop, no King,” made

compromise with the Puritans difficult, and with the congregationalist sectarians impossible. The second main issue of the civil war was *constitutional*: who was sovereign, Parliament or the King? The third issue, cutting across religion and politics, was *social* and *economic*: to what extent should the merchants, financiers, lawyers, and tradesmen be included in the governing classes of the nation?

The class lines were by no means neatly drawn. The most prominent generals on the parliamentary side came from distinguished aristocratic or landowning families. Conversely, many urban elements, particularly in the North and West, supported the royalist side in the war. Yet on the whole the middle classes, tradesmen and yeoman farmers, supported the parliamentary party; and, though they were not agreed on the form of church government they wanted, they all abhorred the High Anglicanism and episcopalianism of the royalists, which seemed little different from Roman Catholicism—and Romanism meant Spain and France, the two national enemies of England. The parliamentary party was the more nationalistic; nationalism was of less import to those who upheld the doctrine of the divine right of kings.

The parliamentary party won because it commanded superior economic and financial resources, because the fleet was on its side, and because the New Model Army fought with invincible faith in its cause. King Charles I was publicly beheaded in London on January 30, 1649. The first middle-class revolution in history thus asserted itself successfully with decisive and unheard-of audacity. With the head of Charles I, the doctrine of the divine rights of kings rolled to the ground. His fate warned all rulers that political authority is closer to the earth and the people than to God and heaven.

The turbulent first half of the seventeenth century in England provides the background for the political philosophy of a lonely and complex figure, Thomas Hobbes (1588–1679). Hobbes' father was an impecunious vicar and something of a "character." Once, after a Saturday night of playing cards, he dozed in the pulpit and surprised the congregation by awakening with the cry of "Clubs is trumps." He got into a brawl with another parson and was forced to get away, abandoning his wife and three children. His brother, a well-to-do glover, who took charge of the deserted children, became particularly interested in young Thomas, who read and wrote at four, learned Greek and Latin at six, and went to Oxford at fifteen. Hobbes stayed at Oxford for five years but was not too happy about the course of studies, which seemed to him arid and old-fashioned.

On receiving his degree, Hobbes was recommended to Lord Cavendish (afterward the first Earl of Devonshire) for the post of companion and tutor of his eldest son, who was about the same age as Hobbes. The association with the Cavendish family lasted, with some interruptions, until Hobbes' death. Through his close connection with this family, one of the most aristocratic in England, he met men of affairs as well as outstanding scientists of the day, such as Bacon, Harvey, Descartes, and Galileo. Hobbes also traveled widely, and spent—in company with his Cavendish charges or on his own—about twenty years on the Continent, mostly in Paris; there he came in touch with the new philosophical and scientific developments of the time.

In 1640, when Parliament began to assert its authority, Hobbes fled to France, "the first of all that fled," as he later said of himself. He feared that his intimate associations with royalist circles might endanger his safety; in addition, his writings up to his flight to France had been clearly antiparliamentarian and antidemocratic. During his stay in Paris he instructed, from 1646 to 1648, Charles II, the son of the executed monarch, in mathematics. In 1651, Hobbes went back to England, because he "would not trust his safety with the French clergy," as he later explained. He declared his submission to the new republican regime and stayed in England until his death in 1679.

Hobbes' greatest work, the *Leviathan*, appeared in 1651, shortly before his return to England. The civil war provided some of the atmosphere of the book but little more. Hobbes' main views were formed long before the actual conflict broke out, although there had been no real peace in England since the ascension to the throne of James I in 1603. The *Leviathan* is not an apology for the Stuart monarchy, nor a grammar of despotic government, but the first general theory of politics in the English language.

Unlike most defenders of absolute government, who start out with the gospel of inequality, Hobbes argues that men are naturally equal in mind and body. As to strength of body, the weakest has enough strength to kill the strongest, either by slaying him secretly or by allying himself with others for the purpose. With regard to mental faculties, Hobbes finds an even greater natural equality. Prudence is a matter of time and experience that can be acquired by everybody. Most persons think that they have more wisdom than their fellow men, but this in itself, Hobbes remarks sardonically, is proof that men are equal rather than unequal.

This *basic equality of men* is a principal source of trouble and misery. Men have, in general, equal faculties; they also cherish like hopes and desires. If two men desire the same thing, which they cannot both obtain, they become enemies and seek to destroy each other. In the *state of nature*, therefore, men are in a *condition of war*, of "every man against every man," and Hobbes adds that the nature of the war consists, not in actual fighting, "but in the known disposition thereto." Force and fraud, the two cardinal virtues of war, flourish in this atmosphere of perpetual fear and strife, fed by three psychological causes: competition, diffidence, and glory. In such a condition, there is no place for industry, agriculture, navigation, trade; there are no arts or letters; no society; no amenities of civilized living, and, worst of all, there is "continual fear and danger of violent death; and the life of man, solitary, poor, nasty, brutish, and short."

Hobbes does not extensively discuss the question whether men have actually ever lived in such a state of nature. He notes that the "savage people in many places of America" have no government and live in the brutish manner described. Yet, even if the state of nature has never existed generally all over the world, one could envisage the kind of life men would lead if there were no government. His argument of the *state of nature* is, in other words, *philosophical* and *not historical*. On the basis of the anthropological data that we possess today but that were not accessible to Hobbes, we know that life is actually more regulated in the so-called primitive group than in the community of the more advanced stage. As a thoroughgoing individualist and rationalist, Hobbes was

unaware that the family or clan, and not the individual, is the basic social unit in primitive society, and custom or social pressure, and not law, its mechanism of enforcing conformity.

Pessimistic as Hobbes may seem, he is not despondent about man's ability to overcome the predicament in which he finds himself in the state of nature. The *fear of death* is the passion that inclines men to peace: the attractions of power and glory give way to the desire for securing, as a minimum, life, and—if possible—the means of a commodious existence. Hobbes is a strong rationalist, but reason is for him not a *deus ex machina* that appears from nowhere to work miracles, but an integral part of man, his essential faculty that distinguishes him from animals. Once man realizes that his fear of death is primarily due to brutal competition, resulting in perpetual war of all against all, reason shows the way out: to accept the principle of not doing that to another "which thou thinkest unreasonable to be done by another to yourself."

However, on the basis of Hobbes' analysis of the nature of man, a contract among men not to do to one another what they would not wish to have done to themselves would not be sufficient. Though man has the capacity to learn prudence and moderation from his fear of death, his desire for power and glory may tempt him to break his pledge unless there is a restraining power strong enough to keep him to his promise, because "covenants, without the sword, are but words, and of no strength to secure a man at all." If men were peaceable enough, Hobbes notes, to observe covenants without a superior authority for their enforcement, there would be no need for government in the first place, because there would be peace without compulsion. To make the counsel of prudence, born of the fear of death, issue in effective peace, a sovereign authority—one man or an assembly of men—must be created to whom all power is transferred.

The *social contract* of Hobbes is made *between subjects and subjects, not between subjects and sovereign*. The sovereign is not a party to the contract, but its creation. In this conception of the social contract, the sovereign cannot commit any breach of covenant, because he is not a party to it. By participating in the creation of the sovereign, the subject is the author of all that the ruler does and must therefore not complain of any of the ruler's actions, because he would then be deliberately doing injury to himself. Hobbes concedes that the sovereign may commit iniquity but not "injustice or injury in the proper signification," because he cannot, by definition, act illegally: he determines what is just and unjust, and his action is law.

The question of the best form of state is not one of logic, according to Hobbes, but of convenience, that is, of the aptitude of the state to produce the security and peace of the people for which a government is instituted. However, on purely practical grounds Hobbes considers monarchy the best form of state because it suffers less from competition for office and power than do aristocracies and democracies; also, it is easier for one than for many to act resolutely and consistently.

Sovereign power is "incommunicable and inseparable," and Hobbes attacks any institution, town or private corporation, that may weaken the omnipotence of the state. He is vehemently opposed to division of powers or mixed government, and he goes so far as to say that there would have been no civil war in England if it had not been for the widespread opinion that sovereignty was

divided between King, Lords, and Commons. There is particular danger in the liberty of the subject to challenge the wisdom of legality of the sovereign's actions, the "poisonous doctrine" that "every private man is judge of good and evil actions," and that "whatsoever a man does against his conscience, is sin." Against such "seditious doctrines" Hobbes demands the unqualified obedience of the subject.

To keep the authority of the state strong, Hobbes advises the sovereign not to allow the growth of groups and institutions that intervene between state and individual. Hobbes is particularly anxious to prevent churches from interfering in any way with the activities of the state, and in his doctrine the church becomes, in effect, a department of the state. He reminds the clergy that it is not essential to the commonwealth, and that the safety of the church depends on the state rather than the state on the safety of the church.

Hobbes had no religion. He defines religion in general, together with true religion and superstition, as follows: "*Fear of power invisible, feigned by the mind, or imagined from tales publicly allowed, religion; not allowed, superstition. And when the power imagined is truly such as we imagine, true religion.*" These definitions are included, not in a discussion of theology or metaphysics, but in a catalogue of human passions and their forms of expression. His approach to religion is by way of psychology and public policy, and not by way of theology or philosophy. His definitions of religion, superstition, and true religion are placed between "curiosity" and "panic terror," which placement suggests itself Hobbes' approach to religion.

From a strictly political viewpoint Hobbes saw in religions and churches the most serious danger of civil disobedience and disunity, and in the conflict of secular and divine commandments the most frequent pretext of sedition and civil war. He is skeptical about the origin of many commands that claim divine provenance, because it is difficult to know whether a command comes from God or from someone who abuses His name for private ends. But if there is a bona fide conflict between secular and divine laws, the subject should obey the civil sovereign, if compliance does not involve forfeiture of life eternal; if it does, the subject may prefer death of the body to eternal damnation of the soul.

Hobbes' advice to subjects to become martyrs for their consciences' sake, or obey the sovereign, is tantamount to establishing—for most people—the duty of unlimited obedience. Not feeling any deep sympathy for religion, Hobbes invites believers to prove their faith by their willingness to die for it. In his personal attitude, Hobbes preferred the "episcopacy" of the Anglican state church because it was the official church, and "the most commodious that a Christian King can use for the governing of Christ's flock." By contrast, Presbyterians and Puritans encroach on civil authority and encourage men to set themselves up as their own judges—a bad habit easily carried over into secular affairs.

Hobbes' heaviest assaults are directed against the Roman Catholic Church. Hobbes remembered—and the memory is maintained in England to this day by annual public ceremonies—the Catholic conspiracy of the Gunpowder Plot in 1605. The conspirators managed to introduce barrels of gunpowder into the cellars of Parliament just before it was to be opened by King James I, with the aim of blowing up King, Lords, and Commons in one big explosion. The plot failed, and the conspirators were executed, including the Provincial of the

Jesuits in England. In 1610, while Hobbes was in Paris with young Cavendish on their first grand tour, King Henry IV of France, at first a Huguenot and later a convert to Catholicism, a conciliatory and temperate ruler, was stabbed to death by François Ravaillac, a Catholic fanatic. The murder made a lifelong impression on Hobbes, and he saw in the Roman Catholic Church the true exemplification of the kingdom of darkness: "For from the time that the Bishop of Rome had gotten to be acknowledged for bishop universal, by pretense of succession to St. Peter, their whole hierarchy, or kingdom of darkness, may be compared not unfitly to the *kingdom of fairies*; that is, to the old wives' *fables* in England concerning *ghosts* and *spirits*, and the feats they play in the night. And if a man consider the original of this ecclesiastical dominion, he will easily perceive that the Papacy is no other than the *ghost* of the deceased *Roman empire*, sitting crowned upon the grave thereof."

Called "father of atheists" even in the entourage of Charles II, Hobbes had to leave France in 1651 because he was afraid of the French clergy, not of politicians. After Charles II returned to England in 1660, Hobbes got into difficulties because of his alleged atheism, and the *Leviathan* could not be reprinted for several years, owing to the opposition of the bishops. In 1666 Hobbes—fearful of official proceedings against him—wrote an essay on heresy to prove why he could not be legally burned for his opinions. The first collected edition of his works in 1688 was published not in England, but in Holland.

In his treatment of the problem of *natural law* Hobbes reveals his novel doctrine. Since the Stoics, the conception has never died out in the West that civil (or positive) law is derived from, and inferior to, a higher law, a "law behind the law"—the law of nature. In the Bible, too, the law of kings and princes is held to be subordinate to the law of God. This Stoic-Jewish-Christian tradition has had a civilizing effect on the western world because it has always reminded rulers that above their edicts and commands there is a higher law, founded on natural reason or divine revelation. Hobbes rejects this approach to the problem of the validity of law on the ground that it places validity beyond the formal source of the legal sovereign. According to Hobbes, there can be no unjust law—the cardinal issue of legal philosophy—because laws are the "rules of just and unjust." As to the relations between civil law and natural law, Hobbes maintains that they "contain each other." In fact, the law of nature is not law at all, but only "qualities that dispose men to peace and obedience."

Hobbes lists equity, justice, gratitude, and "other moral virtues" as the laws of nature. These qualities are not true laws, because, before the state is established, there is no authority to decide finally which idea of the law is binding. In practice, therefore, the law of nature is nothing but a set of general principles of the civil law; the main formal difference lies in the fact that the civil law is written, whereas the natural law is unwritten. Thus Hobbes sought to sweep away the doctrine of natural law from the theory of the state. With penetrating insight he foresaw the revolutionary implications of natural law ideas as they became manifest only a century later in the American and French revolutions. Locke, too, admitted the revolutionary possibilities of the doctrine of natural law, but, unlike Hobbes, he was not overly frightened by the prospect.

Hobbes' hostility to natural law, whether based on reason or religious faith, is not only linked to his conception of sovereignty and government, but is closely

related to his total rejection of values and universally valid ethical ideas. According to Hobbes, "good" and "evil" are not ethical qualities of an object or action, but merely expressions of an individual's feelings about them: "But whatsoever is the object of any man's appetite or desire, that is it which he for his part calls *good*: and the object of his hate and aversion, *evil*; and of his contempt, *vile* and *inconsiderable*. For these words of good, evil, and contemptible are ever used with relation to the person that uses them: there being nothing simply and absolutely so; nor any common rule of good and evil, to be taken from the nature of the objects themselves." This *emotive theory of value*, as the modern philosophical school of logical positivism calls it, thus denies to statements of value any objective validity or even meaning, since such statements—in the eyes of both Hobbes and the logical positivists—merely tell us something about the feelings of a person with respect to some actions, but say nothing meaningful or valid about the actions themselves.

This general rejection by Hobbes of any concept of universal values can also be seen in his treatment of the problem of the *forms of government*. Aristotle divided all forms of government into two broad groups, and the basic criterion of his distinction was entirely ethical: whether a government operates in the interests of the people (monarchy, aristocracy, constitutional government) or of the rulers (tyranny, oligarchy, dictatorship of the poor). Hobbes rejects this ethical distinction completely, and holds that governments can only differ as to their numerical composition, that is, government by one (monarchy), by a few (aristocracy), or by the people (democracy). Terms like "tyranny," "oligarchy," and "anarchy" are not, according to Hobbes, names for ethically deficient forms of government, but simply indicate that a particular person "mislikes" a monarchical, aristocratic, or democratic form of government. Hobbes rejects here again, as in his analysis of natural law and the more general problem of values, the possibility of rational argument and valid ethical conclusions: if he comes out in favor of monarchy against aristocracy and democracy, his preference is not based on any moral position, but solely on his assertion that monarchy is more "convenient," in the sense that it is likely to be more effective than its rivals, and will result in more peace and security for the people.

On the whole, the practical effect of Hobbes has been to strengthen the *doctrine of the absolute state*. Yet the complex character of his ideas has puzzled his political friends and opponents. Conservatives who believe in legitimate monarchy criticize Hobbes first for being little interested in the divine right of monarchs and in monarchy as a moral institution. Hobbes was solely concerned with the pragmatic question of *effective government*, and legitimacy did not interest him at all. Thus, when he returned to England in 1651, he sent his submission to the Council of State. Though he was a lifelong supporter of the royalist cause, he was willing to submit to Cromwell's regime, because at the time it was the effective government that maintained law and order in England. In 1656, Hobbes boasted of the influence of the *Leviathan* on "the minds of a thousand gentlemen to a conscientious obedience to the present government [of Cromwell], which otherwise would have wavered in that point." After King Charles II returned to England in 1660, and the monarchy was restored, Hobbes explained that the "gentlemen" had appeased Cromwell so as to protect their property and influence for serving

the king better later on. This may be realism, but it cannot appeal to a conservative who bases loyalty on moral sentiment.

Moreover, monarchists could never be satisfied with Hobbes' preference for monarchy as the best form of government. No theory of monarchy can be construed without some element of mysticism to make its authority acceptable. Hobbes' preference was entirely devoid of mysticism; his approach was utilitarian and pragmatic. The Hobbesian monarch cannot hide his ineffectiveness behind the cloak of divine or traditional authority. He must "deliver the goods," if he is to retain his regal office. Religious conservatives have charged Hobbes with atheism because he treats the church as he treats other associations, that is, subordinates it to the state, as he subordinates theology to philosophy. For a long time, atheism and agnosticism were branded as Hobbism.

Hobbes' main opponents have been the adherents of parliamentary government and limited powers; because this doctrine has become the dominant tradition in the English-speaking countries, there has been no Hobbesian school in British and American political thought. By contrast, Hobbes has markedly influenced various countries with traditions of absolute, despotic government.

Yet to call Hobbes a spiritual father of modern totalitarianism is more untenable than would appear from a cursory glance at several key phrases in the *Leviathan*. First, government is set up, according to Hobbes, by a covenant that transfers all power and authority to the sovereign. This *contractual foundation of government* is anathema to modern totalitarians who attacked the contractual theory of the state because contract implies mutuality of some sort, and, still more important because there can be no contract without consent. Democracy is government by consent.

Second, Hobbes assigns to the state a prosaic business: to maintain *order and security for the benefit of the citizens*. By contrast, the aim of the modern totalitarian state was anti-individualistic and antihedonistic: the goal of public policy was dictated, not by the longing of citizens for happiness, but by a collective purpose, such as the glory of the master race in Nazi Germany, the revival of the Roman empire in Fascist Italy, and the triumph of the proletariat in Soviet Russia. Race, Empire, and Class are modern totalitarian substitutes for Hobbes' bourgeois ideals of Thrift, Industry, and "Commodious Living."

Third, the Hobbesian state is *authoritarian*, not totalitarian. Above all, Hobbes pleads for equality before the law, so that the "rich and mighty" have no legal advantage over "poor and obscure persons." Hobbes' authoritarianism thus lacks one of the most characteristic features of the modern totalitarian state: inequality before the law, and the resulting sense of personal insecurity. Authority in the Hobbesian state is concentrated in the political sphere, and in it alone. The sovereign will normally permit his subjects "the liberty to buy and sell and otherwise to contract with one another, to choose their own abode, their own diet, their own trade of life, and institute their children as they themselves see fit; and the like." The Hobbesian belief in economic *laissez faire* is the exact opposite of rigid economic planning. Similarly, the Hobbesian freedom of bringing up one's children is antithetical to the regimenting and drilling of children in modern totalitarian regimes.

Fourth, Hobbes holds that the sovereign may be one man or an assembly of men, whereas modern totalitarianism—in fact, if not always in theory—was

addicted to the leadership principle. Hobbes preferred monarchy for practical reasons, but he was free from the mysticism that has endowed totalitarian leaders with alleged charismatic and prophetic gifts. The Hobbesian sovereign is a *supreme administrator and lawgiver* but not a top spellbinder, propagandist, or showman.

Fifth, Hobbes recognizes that war is one of the two main forces (the other being the danger of internal disorder) that drive men to set up a state. But whenever he speaks of war, it is *defensive war*, and there is no glorification of war, let alone of aggressive war, in the *Leviathan*. By contrast, totalitarian fascists looked on war as something highly *desirable*, and on imperialist war as the highest form of national life; communists—while rejecting, in theory, war between nations—accepted the inevitability of war between classes, and the liquidation of the bourgeoisie by violent means.

Sixth, the totalitarian state insisted on outer as well as inner conformity; in fact, it considered ideas more dangerous than actions. By contrast, the Hobbesian sovereign desires merely—for purposes of maintaining the peace—*outer conformity* of the subjects to the law. The subject is bound to obey the law, but "not bound to believe it," and human governors can take no notice of his "belief and interior cogitations." What Hobbes is concerned about is social peace, not Truth, whereas totalitarians of all times are willing to destroy man for the sake of preserving Truth, if a choice has to be made.

Seventh, and finally, the Hobbesian state does not completely swallow the individual: "A man cannot lay down the right of resisting them that assault him by force to take away his life." Since the purpose of civil society is the preservation and protection of man's life, Hobbes recognizes the inalienable *right of the individual to resist* when his life is at stake, because "man by nature chooses the lesser evil, which is danger of death in resisting, rather than the greater, which is certain and present death in not resisting." For a long time this cautionary qualification seemed unimportant, because the sanctity of human life, as a principle at least, was universally accepted. But when, in World War II, millions of people were murdered in gas chambers and concentration camps in pursuance of deliberate state policy, the Hobbesian stress on the inalienability of human life as the irreducible minimum of the state's purpose acquired new meaning.

The fact that Hobbes was not—intellectually or emotionally—of the totalitarian cast should not create the impression that he was a democrat in disguise. He was not. The Hobbesian state finds its realization in neither the modern democratic state nor the totalitarian dictatorship of the fascist or communist brand. In modern times, political Hobbism is to be found in countries that possess social and economic conditions similar to those of seventeenth century England—some nations in Latin America and Asia. Dictatorships in Latin America in the nineteenth and twentieth centuries closely approximated the Hobbesian state: society was still in a precapitalist or, at best, early capitalist stage. Economic *laissez faire* was mingled, in such countries, with strong political authority, usually in the form of an open or concealed dictatorship. But the dictatorship was authoritarian, not totalitarian. In cultural, religious, educational, social, and economic affairs it was often very lenient. Compared with an advanced democracy, the Hobbesian state may appear dismal enough.

Compared with twentieth-century totalitarianism, it is a vision of refined political civilization.

The Hobbesian theory of politics rests largely on a hypothesis—the solitary, combative, competitive character of man—that is only a half-truth. It is difficult to see how the brutes who lead a life of nasty savagery in the Hobbesian state of nature should suddenly display the prudent reasoning and cooperative effort that go into the making of the social contract creating the sovereign. A group that knows the institution of the contract is well beyond the state of nature, and it would perhaps be truer to say that contact is the product of society rather than society the product of contract. Yet these difficulties rest, not on varying sets of historical facts, but on different interpretations of human nature. If one rejects Hobbes' psychological assumptions as too pessimistic and mechanistic, one will be unable to accept, to that extent, the political ideas derived from them.

The truth of Hobbes' psychological tenets will ultimately be tested by the facts of social life rather than by philosophical arguments. In the area of domestic political organization, the state of nature with its horrors and barbarisms has disappeared. In the area of international relations, Hobbes noted in 1651, independent sovereign states live in the state of nature, "are in continual jealousies, and in the state and posture of gladiators; having their weapons pointing, and their eyes fixed, on one another; that is, their forts, garrisons, and guns upon the frontiers of their kingdoms, and continual spies upon their neighbors; which is a posture of war. But because they uphold thereby the industry of their subjects, there does not follow from it that misery which accompanies the liberty of particular men." As long as the sovereign states of the world continue to exist in the state of nature, a condition of brutish savagery, the Hobbesian view of man will continue to be true of the behavior of states toward one another.

Hobbes' observation that the fear of death is an important motive in creating a social order is profound. In the forty-five years after World War II, relative peace between the Soviet Union and the United States was maintained as the result of this fear, which took on new meaning in the atomic age. If humanity cannot find its purpose in the pursuit of more positive goals, then perhaps its best chance of survival may be in the more modest Hobbesian motive.

HOBBS

Leviathan *

THE STATE OF NATURE

Nature has made men so equal in the faculties of the body and mind, as that though there be found one man sometimes manifestly stronger in body, or of quicker mind than another, yet when all is reckoned together, the difference between man and man is not so considerable, as that one man can thereupon claim to himself any benefit to which another man may not pretend as well as he. For as to the strength of body, the weakest has strength enough to kill the strongest, either by secret machinations, or by confederacy with others that are in the same danger with himself.

And as to the faculties of the mind, setting aside the arts grounded upon words, and especially that skill of proceeding upon general and infallible rules, called science, which very few have, and but in few things, as being not a native faculty, born with us, nor attained, as prudence, while we look after somewhat else, I find yet a greater equality among men than that of strength. For prudence is but experience, which equal time equally bestows on all men in those things they equally apply themselves unto. That which may perhaps make such equality incredible is but a vain conceit of one's own wisdom, which almost all men think they have in a greater degree than the vulgar; that is, than all

men but themselves, and a few others, whom by fame, or for concurring with themselves, they approve. For such is the nature of men, that howsoever they may acknowledge many others to be more witty, or more eloquent, or more learned, yet they will hardly believe there be many so wise as themselves; for they see their own wit at hand, and other men's at a distance. But this proves rather that men are in that point equal, than unequal. For there is not ordinarily a greater sign of the equal distribution of anything than that every man is contented with his share.

From this equality or ability arises equality of hope in the attaining of our ends. And therefore if any two men desire the same thing, which nevertheless they cannot both enjoy, they become enemies; and in the way to their end, which is principally their own conservation, and sometimes their delectation only, endeavour to destroy or subdue one another. And from hence it comes to pass that where an invader has no more to fear than another man's single power, if one plant, sow, build, or possess a convenient seat, others may probably be expected to come prepared with forces united, to dispossess and deprive him, not only of the fruit of his labour, but also of his life or liberty. And the invader again is in the like danger of another.

And from this diffidence of one another, there is no way for any man to secure himself, so reasonable, as anticipation; that is, by force, or wiles, to master the persons of all men he can, so long till he see no other power great

* From Thomas Hobbes, *Leviathan* (1651). Spelling and punctuation have been modernized for this selection.

enough to endanger him; and this is no more than his own conservation requires, and is generally allowed. Also because there be some that, taking pleasure in contemplating their own power in the acts of conquest, which they pursue farther than their security requires, if others, that otherwise would be glad to be at ease within modest bounds, should not by invasion increase their power, they would not be able, long time, by standing only on their defence, to subsist. And by consequence, such augmentation of dominion over men being necessary to a man's conservation, it ought to be allowed him.

Again, men have no pleasure, but on the contrary a great deal of grief, in keeping company where there is no power able to over-awe them all. For every man looks that his companion should value him at the same rate he sets upon himself; and upon all signs of contempt, or undervaluing, naturally endeavours, as far as he dares (which, among them that have no common power to keep them in quiet, is far enough to make them destroy each other), to extort a greater value from his contemners, by damage; and from others, by the example.

So that in the nature of man, we find three principal causes of quarrel. First, competition; secondly, diffidence; thirdly, glory.

The first makes men invade for gain; the second, for safety; and the third, for reputation. The first use violence, to make themselves masters of other men's persons, wives, children, and cattle; the second, to defend them; the third, for trifles, as a word, a smile, a different opinion, and any other sign of undervaluation, either direct in their persons, or by reflection in their kindred, their friends, their nation, their profession, or other name.

Hereby it is manifest that, during the time men live without a common power to keep them all in awe, they are in that condition which is called war; and such a war as is of every man against every

man. For war consists not in battle only, or the act of fighting, but in a tract of time, wherein the will to contend by battle is sufficiently known; and therefore the notion of *time* is to be considered in the nature of war, as it is in the nature of weather. For as the nature of foul weather lies not in a shower or two or rain, but in an inclination thereto of many days together, so the nature of war consists not in actual fighting, but in the known disposition thereto, during all the time there is no assurance to the contrary. All other time is *peace*.

Whatsoever therefore is consequent to a time of war, where every man is enemy to every man, the same is consequent to the time wherein men live without other security than what their own strength, and their own invention, shall furnish them withal. In such condition, there is no place for industry, because the fruit thereof is uncertain; and consequently no culture of the earth; no navigation nor use of the commodities that may be imported by sea; no commodious building; no instruments of moving, and removing, such things as require much force; no knowledge of the face of the earth; no account of time; no arts; no letters; no society and, which is the worst of all, continual fear, and danger of violent death; and the life of man, solitary, poor, nasty, brutish, and short.

It may seem strange to some man that has not well weighted these things that nature should thus dissociate, and render men apt to invade and destroy one another; and he may therefore, not trusting to this inference, made from the passions, desire perhaps to have the same confirmed by experience. Let him therefore consider with himself: when taking a journey, he arms himself, and seeks to go well accompanied; when going to sleep, he locks his doors; when even in his house he locks his chests; and this when he knows there be laws, and public officers, armed, to revenge all injuries shall be done him; what opinion he has of his fellow-subjects, when he rides armed; of his fellow citizens, when he locks his

doors; and of his children and servants, when he locks his chests. Does he not there as much accuse mankind by his actions as I do by my words? But neither of us accuse man's nature in it. The desire, and other passions of man, are in themselves no sin. No more are the actions that proceed from those passions, till they know a law that forbids them, which till laws be made they cannot know, nor can any law be made till they have agreed upon the person that shall make it.

It may peradventure be thought there was never such a time, nor condition of war, as this; and I believe it was never generally so over all the world; but there are many places where they live so now. For the savage people in many places of America, except the government of small families, the concord whereof depends on natural lust, have no government at all, and live at this day in that brutish manner, as I said before. Howsoever, it may be perceived what manner of life there would be, where there were no common power to fear, by the manner of life which men that have formerly lived under a peaceful government used to degenerate into in civil war.

But though there had never been any time wherein particular men were in a condition of war one against another, yet in all times kings and persons of sovereign authority, because of their independency, are in continual jealousies and in the state and posture of gladiators, having their weapons pointing and their eyes fixed on one another; that is, their forts, garrisons and guns upon the frontiers of their kingdoms, and continual spies upon their neighbours, which is a posture of war. But because they uphold thereby the industry of their subjects, there does not follow from it that misery which accompanies the liberty of particular men.

To this war of every man against every man this also is consequent: that nothing can be unjust. The notions of right and wrong, justice and injustice, have there no place. Where there is no common

power, there is no law: where no law, no injustice. Force and fraud are in war the two cardinal virtues. Justice and injustice are none of the faculties neither of the body nor mind. If they were, they might be in a man that were alone in the world, as well as his senses and passions. They are qualities that relate to men in society, not in solitude. It is consequent also to the same condition that there be no propriety, no dominion, no *mine* and *thine* distinct, but only that to be every man's that he can get, and for so long as he can keep it. And thus much for the ill condition which man by mere nature is actually placed in, though with a possibility to come out of it, consisting partly in the passions, partly in his reason.

The passions that incline men to peace are fear of death, desire of such things as are necessary to commodious living, and a hope by their industry to obtain them. And reason suggests convenient articles of peace, upon which men may be drawn to agreement. These articles are they which otherwise are called the laws of nature.

THE SOCIAL CONTRACT

The *right of nature*, which writers commonly call *jus naturale*, is the liberty each man has to use his own power, as he will himself, for the preservation of his own nature, that is to say, of his own life, and consequently of doing anything which in his own judgment and reason he shall conceive to be the aptest means thereunto.

By *liberty* is understood, according to the proper signification of the word, the absence of external impediments, which impediments may oft take away part of a man's power to do what he would, but cannot hinder him from using the power left him, according as his judgment and reason shall dictate to him.

A law of nature, *lex naturalis*, is a precept or general rule, found out by reason, by which a man is forbidden to do that which is destructive of his life or takes away the means of preserving the same,

and to omit that by which he thinks it may be best preserved. For though they that speak of this subject use to confound *ius* and *lex*, *right* and *law*, yet they ought to be distinguished, because right consists in liberty to do or to forbear, whereas law determines and binds to one of them, so that law and right differ as much as obligation and liberty, which in one and the same matter are inconsistent.

And because the condition of man, as has been declared in the precedent chapter, is a condition of war of every one against every one, in which case every one is governed by his own reason, and there is nothing he can make use of that may not be a help unto him in preserving his life against his enemies; it follows that in such a condition every man has a right to every thing, even to one another's body. And therefore, as long as this natural right of every man to every thing endures, there can be no security to any man, how strong or wise soever he be, of living out the time which nature ordinarily allows men to live. And consequently it is a precept, or general rule of reason, *that every man ought to endeavour peace as far as he has hope of obtaining it, and when he cannot obtain it, that he may seek, and use, all helps and advantages of war.* The first branch of which rule contains the first, and fundamental, law of nature: which is, *to seek peace and follow it.* The second, the sum of the right of nature: which is, *by all means we can to defend ourselves.*

From this fundamental law of nature, by which men are commanded to endeavour peace, is derived this second law: *that a man be willing, when others are so too, as far-forth as for peace and defence of himself he shall think it necessary, to lay down this right to all things, and be contented with so much liberty against other men as he would allow other men against himself.* For as long as every man holds this right of doing any thing he likes, so long are all men in the condition of war. But if other men will not lay down their right as well as he, then there is no reason for any one to divest himself of his, for that were to expose himself to

prey, which no man is bound to, rather than to dispose himself to peace. This is that law of the Gospel: *whatsoever you require that others should do to you, that do ye to them.* And that law of all men: *quod tibi fieri non vis, alteri ne feceris.*

To lay down a man's right to any thing is to divest himself of the liberty of hindering another of the benefit of his own right to the same. For he that renounces or passes away his right, gives not to any other man a right which he had not before, because there is nothing to which every man had not right by nature, but only stands out of his way that he may enjoy his own original right without hindrance from him, not without hindrance from another. So that the effect which redounds to one man by another man's defect of right, is but so much diminution of impediments to the use of his own right original. Right is laid aside either by simply renouncing it or by transferring it to another. By simply renouncing: when he cares not to whom the benefit thereof redounds. By transferring: when he intends the benefit thereof to some certain person or persons. And when a man has in either manner abandoned or granted away his right, then he is said to be obliged, or bound, not to hinder those to whom such right is granted or abandoned from the benefit of it, and that he *ought*, and it is his duty, not to make void that voluntary act of his own, and that such hindrance is injustice and injury, as being *sine jure*, the right being before being renounced or transferred. So that *injury*, or *injustice*, in the controversies of the world is somewhat like to that which in the disputations of scholars is called *absurdity*. For as it is there called an absurdity to contradict what one maintained in the beginning, so in the world it is called injustice and injury voluntarily to undo that which from the beginning he had voluntarily done. The way by which a man either simply renounces or transfers his right, is a declaration, or signification, by some voluntary and sufficient sign, or signs, that he does so renounce or transfer, or has so renounced or transferred

the same to him that accepts it. And these signs are either words only, or actions only, or—as it happens most often—both words and actions. And the same are the bonds by which men are bound and obliged: bonds that have their strength, not from their own nature, for nothing is more easily broken than a man's word, but from fear of some evil consequence upon the rupture.

Whensoever a man transfers his right or renounces it, it is either in consideration of some right reciprocally transferred to himself, or for some other good he hopes for thereby. For it is a voluntary act: and of the voluntary acts of every man the object is some *good to himself*. And therefore there be some rights which no man can be understood by any words, or other signs, to have abandoned or transferred. As first a man cannot lay down the right of resisting them that assault him by force to take away his life, because he cannot be understood to aim thereby at any good to himself. The same may be said of wounds, and chains, and imprisonment: both because there is no benefit consequent to such patience, as there is to the patience of suffering another to be wounded or imprisoned, as also because a man cannot tell, when he sees men proceed against him by violence, whether they intend his death or not. And lastly, the motive and end for which this renouncing and transferring of right is introduced, is nothing else but the security of a man's person in his life and in the means of so preserving life as not to be weary of it. And therefore if a man by words, or other signs, seems to despoil himself of the end for which those signs were intended, he is not to be understood as if he meant it or that it was his will, but that he was ignorant of how such words and actions were to be interpreted. The mutual transferring of right is that which men call *contract*.

A covenant not to defend myself from force, by force, is always void. For, as I have showed before, no man can transfer, or lay down, his right to save himself

from death, wounds, and imprisonment, the avoiding whereof is the only end of laying down any right; and therefore the promise of not resisting force in no covenant transfers any right nor is obliging. For though a man may covenant thus, *unless I do so or so, kill me*, he cannot covenant thus, *unless I do so or so, I will not resist you when you come to kill me.* For man by nature chooses the lesser evil, which is danger of death in resisting, rather than the greater, which is certain and present death in not resisting. And this is granted to be true by all men, in that they lead criminals to execution and prison with armed men, notwithstanding that such criminals have consented to the law by which they are condemned.

A covenant to accuse oneself, without assurance of pardon, is likewise invalid. For in the condition of nature, where every man is judge, there is no place for accusation, and in the civil state the accusation is followed with punishment which, being force, a man is not obliged not to resist. The same is also true of the accusation of those, by whose condemnation a man falls into misery, as of a father, wife, or benefactor. For the testimony of such an accuser, if it be not willingly given, is presumed to be corrupted by nature, and therefore not to be received: and where a man's testimony is not to be credited, he is not bound to give it. Also accusations upon torture are not to be reputed as testimonies. For torture is to be used but as means of conjecture and light in the further examination and search of truth; and what is in that case confessed, tends to the ease of him that is tortured, not to the informing of the torturers, and therefore ought not to have the credit of a sufficient testimony: for whether he deliver himself by true or false accusation, he does it by the right of preserving his own life.

THE COMMONWEALTH

The final cause, end, or design of men who naturally love liberty and dominion over others, in the introduction of that restraint upon themselves in which we

see them live in commonwealths, is the foresight of their own preservation and of a more contented life thereby; that is to say, of getting themselves out from that miserable condition of war which is necessarily consequent, as has been shown, to the natural passions of men, when there is no visible power to keep them in awe, and tie them by fear of punishment to the performance of their covenants and observation of the laws of nature.

For the laws of nature, as *justice, equity, modesty, mercy*, and, in sum, *doing to others, as we would be done to*, of themselves, without the terror of some power to cause them to be observed, are contrary to our natural passions that carry us to partiality, pride, revenge, and the like. And covenants, without the sword, are but words, and of no strength to secure a man at all. Therefore notwithstanding the laws of nature (which everyone has then kept, when he has the will to keep them, when he can do it safely), if there be no power erected, or not great enough for our security, every man will, and may, lawfully rely on his own strength and art for caution against all other men. And in all places where men have lived by small families, to rob and spoil one another has been a trade, and so far from being reputed against the law of nature, that the greater spoils they gained, the greater was their honour; and men observed no other laws therein, but the laws of honour, that is, to abstain from cruelty, leaving to men their lives and instruments of husbandry.

The only way to erect such a common power, as may be able to defend them from the invasion of foreigners and the injuries of one another, and thereby to secure them in such sort as that by their own industry and by the fruits of the earth they may nourish themselves and live contentedly, is to confer all their power and strength upon one man, or upon one assembly of men, that may reduce all their wills, by plurality of voices, unto one will: which is as much as to say, to appoint one man, or assembly of

men, to bear their persons, and every one to own and acknowledge himself to be author of whatsoever he that so bears their person shall act, or cause to be acted, in those things which concern the common peace and safety, and therein to submit their wills, every one to his will, and their judgments to his judgment. This is more than consent, or concord; it is a real unity of them all, in one and the same person, made by covenant of every man with every man, in such manner as if every man should say to every man, *I authorize and give up my right of governing myself, to this man, or to this assembly of men, on this condition, that thou give up thy right to him, and authorize all his actions in like manner.* This done, the multitude so united in one person is called a Commonwealth, in Latin, *civitas*. This is the generation of that great *Leviathan*, or rather, to speak more reverently, of that *mortal god* to which we owe, under the *immortal God*, our peace and defence. For by this authority, given him by every particular man in the commonwealth, he has the use of so much power and strength conferred on him that by terror thereof he is enabled to form the wills of them all, to peace at home, and mutual aid against their enemies abroad. And in him consists the essence of the commonwealth; which, to define it, is *one person, of whose acts a great multitude, by mutual covenants one with another, have made themselves every one the author, to the end he may use the strength and means of them all, as he shall think expedient, for their peace and common defence.*

And he that carries this person is called Sovereign, and said to have *sovereign power*; and every one besides, his subject.

The attaining to this sovereign power is by two ways. One, by natural force, as when a man makes his children to submit themselves and their children to his government, as being able to destroy them if they refuse, or by war subdues his enemies to his will, giving them their lives on that condition. The other is when men agree among themselves to submit to

some man, or assembly of men, voluntarily, on confidence to be protected by him against all others. This latter may be called a political commonwealth, or commonwealth by *institution*; and the former, a commonwealth by *acquisition*.

RIGHTS OF THE SOVEREIGN

A *commonwealth* is said to be *instituted* when a *multitude* of men do agree and *covenant, every one with every one*, that to whatsoever *man, or assembly of men*, shall be given by the major part the *right to present* the person of them all, that is to say, to be their *representative*, every one—as well he that *voted for it*, as he that *voted against it*, shall *authorize* all the actions and judgments of that man, or assembly of men, in the same manner as if they were his own, to the end, to live peaceably amongst themselves, and be protected against other men.

From this institution of a commonwealth are derived all the *rights* and *faculties* of him, or them, on whom the sovereign power is conferred by the consent of the people assembled.

First, because they covenant, it is to be understood, they are not obliged by former covenant to any thing repugnant hereunto. And consequently they that have already instituted a commonwealth, being thereby bound by covenant to own the actions and judgments of one, cannot lawfully make a new covenant, among themselves, to be obedient to any other, in any thing whatsoever, without his permission. And therefore, they that are subjects to a monarch cannot without his leave cast off monarchy, and return to the confusion of a disunited multitude, nor transfer their person from him that bears it to another man, or other assembly of men: for they are bound, every man to every man, to own and be reputed author of all that he that already is their sovereign, shall do and judge fit to be done; so that any one man dissenting, all the rest should break their covenant made to that man, which is injustice, and they have also every man given the sovereignty to him that bears their person,

and therefore if they depose him, they take from him that which is his own, and so again it is injustice. Besides, if he that attempts to depose his sovereign be killed, or punished by him for such attempt, he is author of his own punishment, as being by the institution author of all his sovereign shall do; and because it is injustice for a man to do any thing for which he may be punished by his own authority, he is also, upon that title, unjust. And whereas some men have pretended for their disobedience to their sovereign a new covenant made, not with men, but with God, this also is unjust, for there is no covenant with God but by mediation of somebody that represents God's person, which none does but God's lieutenant, who has the sovereignty under God. But this pretence of covenant with God is so evident a lie, even in the pretenders' own consciences, that it is not only an act of an unjust, but also of a vile and unmanly disposition.

Secondly, because the right of bearing the person of them all is given to him they make sovereign, by covenant only of one to another, and not of him to any of them, there can happen no breach of covenant on the part of the sovereign, and consequently none of his subjects, by any pretence of forfeiture, can be freed from his subjection. That he which is made sovereign makes no covenant with his subjects beforehand, is manifest, because either he must make it with the whole multitude, as one party to the covenant, or he must make a several covenant with every man. With the whole, as one party, it is impossible, because as yet they are not one person; and if he make so many covenants as there be men, those covenants after he has the sovereignty are void, because what act soever can be pretended by any one of them for breach thereof, is the act both of himself and of all the rest, because done in the person and by the right of every one of them in particular. Besides, if any one, or more of them, pretend a breach of the covenant made by the sovereign at his institution, and others, or one other of his subjects, or himself alone, pretend

there was no such breach, there is in this case no judge to decide the controversy. It returns therefore to the sword again, and every man recovers the right of protecting himself by his own strength, contrary to the design they had in the institution. It is therefore in vain to grant sovereignty by way of precedent covenant. The opinion that any monarch receives his power by covenant, that is to say, on condition, proceeds from want of understanding this easy truth: that covenants, being but words and breath, have no force to oblige, contain, constrain, or protect any man, but what it has from the public sword, that is, from the united hands of that man, or assembly of men, that has the sovereignty, and whose actions are avouched by them all and performed by the strength of them all, in him united. But when an assembly of men is made sovereign, then no man imagines any such covenant to have passed in the institution, for no man is so dull as to say for example, the people of Rome made a covenant with the Romans to hold the sovereignty on such or such conditions which, not performed, the Romans might lawfully depose the Roman people. That men see not the reason to be alike in a monarchy and in a popular government, proceeds from the ambition of some that are kinder to the government of an assembly, whereof they may hope to participate, than of monarchy, which they despair to enjoy.

Thirdly, because the major part has by consenting voices declared a sovereign, he that dissented must now consent with the rest, that is, be contented to avow all the actions he shall do, or else justly be destroyed by the rest. For if he voluntarily entered into the congregation of them that were assembled, he sufficiently declared thereby his will, and therefore tacitly covenanted, to stand to what the major part should ordain; and therefore if he refuse to stand thereto, or make protestation against any of their decrees, he does contrary to his covenant, and therefore unjustly. And whether he be of the congregation or not, and whether his

consent be asked or not, he must either submit to their decrees, or be left in the condition of war he was in before; wherein he might without injustice be destroyed by any man whatsoever.

Fourthly, because every subject is by this institution author of all the actions and judgments of the sovereign instituted, it follows that whatsoever he does, it can be no injury to any of his subjects, nor ought he to be by any of them accused of injustice. For he that does anything by authority from another, does therein no injury to him by whose authority he acts, but by this institution of a commonwealth every particular man is author of all the sovereign does, and consequently he that complains of injury from his sovereign, complains of that whereof he himself is author, and therefore ought not to accuse any man but himself; no, nor himself of injury, because to do injury to one's self is impossible. It is true that they that have sovereign power may commit iniquity, but not injustice, or injury, in the proper signification.

Fifthly, and consequently to that which was said last, no man that has sovereign power can justly be put to death, or otherwise in any manner by his subjects punished. For seeing every subject is author of the actions of his sovereign, he punishes another for the actions committed by himself.

And because the end of this institution is the peace and defence of them all, and whosoever has right to the end has right to the means, it belongs of right to whatsoever man or assembly that has the sovereignty, to be judge both of the means of peace and defence and also of the hindrances and disturbances of the same, and to do whatsoever he shall think necessary to be done, both beforehand for the preserving of peace and security, by prevention of discord at home and hostility from abroad, and, when peace and security are lost, for the recovery of the same. And therefore:

Sixthly, it is annexed to the sovereignty to be judge of what opinions and

doctrines are averse, and what conducing to peace, and consequently on what occasions, how far, and what men are to be trusted withal, in speaking to multitudes of people, and who shall examine the doctrines of all books before they be published. For the actions of men proceed from their opinions, and in the well-governing of opinions consists the well-governing of men's actions, in order to their peace and concord. And though in matter of doctrine nothing ought to be regarded but the truth, yet this is not repugnant to regulating the same by peace. For doctrine repugnant to peace can no more be true than peace and concord can be against the law of nature. It is true that in a commonwealth where by the negligence or unskilfulness of governors and teachers false doctrines are by time generally received, the contrary truths may be generally offensive. Yet the most sudden and rough bustling in of a new truth that can be, does never break the peace, but only sometimes awake the war. For those men that are so remissly governed that they dare take up arms to defend or introduce an opinion, are still in war, and their condition not peace, but only a cessation of arms for fear of one another; and they live, as it were, in the precincts of battle continually. It belongs therefore to him that has the sovereign power to be judge, or constitute all judges of opinions and doctrines as a thing necessary to peace, thereby to prevent discord and civil war.

Seventhly, is annexed to the sovereignty the whole power of prescribing the rules whereby every man may know what goods he may enjoy, and what actions he may do, without being molested by any of his fellow-subjects; and this is it men call *propriety*. For before constitution of sovereign power, as has already been shown, all men had right to all things, which necessarily causes war: and therefore this propriety, being necessary to peace and depending on sovereign power, is the act of that power, in order to the public peace. These rules of propriety, or *meum* and *tuum*, and of *good*, *evil*, *law*

ful and *unlawful* in the actions of subjects, are the civil laws, that is to say, the laws of each commonwealth in particular, though the name of civil law be now restrained to the ancient civil laws of the city of Rome which being the head of a great part of the world, her laws at that time were in these parts the civil law.

Eighthly, is annexed to the sovereignty the right of judicature, that is to say, of hearing and deciding all controversies which may arise concerning law, either civil or natural, or concerning fact. For without the decision of controversies, there is no protection of one subject against the injuries of another; the laws concerning *meum* and *tuum* are in vain; and to every man remains, from the natural and necessary appetite of his own conservation, the right of protecting himself by his private strength, which is the condition of war and contrary to the end for which every commonwealth is instituted.

These are the rights which make the essence of sovereignty, and which are the marks whereby a man may discern in what man, or assembly of men, the sovereign power is placed and resides. For these are incommunicable and inseparable. The power to coin money, to dispose of the estate and persons of infant heirs, to have preemption in markets, and all other statute prerogatives may be transferred by the sovereign, and yet the power to protect his subjects be retained. But if he transfer the *militia*, he retains the judicature in vain, for want of execution of the laws; or if he grant away the power of raising money, the *militia* is in vain; or if he give away the government of doctrines, men will be frightened into rebellion with the fear of spirits. And so if we consider any one of the said rights, we shall presently see that the holding of all the rest will produce no effect in the conservation of peace and justice, the end for which all commonwealths are instituted. And this division is it, whereof it is said, *a kingdom divided in itself cannot stand*: for unless this division precede,

division into opposite armies can never happen. If there had not first been an opinion received of the greatest part of England that these powers were divided between the King and the Lords and the House of Commons, the people had never been divided and fallen into this civil war; first between those that disagreed in politics; and after between the dissenters about the liberty of religion; which have so instructed men in this point of sovereign right that there be few now in England that do not see that these rights are inseparable, and will be so generally acknowledged at the next return of peace, and so continue till their miseries are forgotten, and no longer, except the vulgar be better taught than they have hitherto been.

But a man may here object that the condition of subjects is very miserable, as being obnoxious to the lusts and other irregular passions of him or them that have so unlimited a power in their hands. And commonly they that live under a monarch, think it the fault of monarchy; and they that live under the government of democracy or other sovereign assembly, attribute all the inconvenience to that form of commonwealth; whereas the power in all forms, if they be perfect enough to protect them, is the same: not considering that the state of man can never be without some incommodity or other, and that the greatest that in any form of government can possibly happen to the people in general is scarce sensible in respect of the miseries and horrible calamities that accompany a civil war or that dissolute condition of masterless men, without subjection to laws and a coercive power to tie their hands from rapine and revenge: nor considering that the greatest pressure of sovereign governors proceeds not from any delight or profit they can expect in the damage or weakening of their subjects, in whose vigour consists their own strength and glory, but in the restiveness of themselves that, unwillingly contributing to their own defence, make it necessary for their

governors to draw from them what they can in time of peace, that they may have means on any emergent occasion, or sudden need, to resist, or take advantage on their enemies. For all men are by nature provided of notable multiplying glasses, that is their passions and self-love, through which every little payment appears a great grievance, but are destitute of those prospective glasses, namely moral and civil science, to see afar off the miseries that hang over them, and cannot without such payments be avoided.

LIBERTY OF THE SUBJECT

But as men, for the attaining of peace and conservation of themselves thereby, have made an artificial man, which we call a commonwealth, so also have they made artificial chains, called *civil laws*, which they themselves, by mutual covenants, have fastened at one end to the lips of that man, or assembly, to whom they have given the sovereign power, and at the other end to their own ears. These bonds, in their own nature but weak, may nevertheless be made to hold by the danger, though not by the difficulty, of breaking them.

In relation to these bonds only it is that I am to speak now of the *liberty of subjects*. For seeing there is no commonwealth in the world, wherein there be rules enough set down for the regulating of all the actions and words of men, as being a thing impossible, it follows necessarily that in all kinds of actions by the laws praetermitted, men have the liberty of doing what their own reasons shall suggest, for the most profitable to themselves. For if we take liberty in the proper sense for corporal liberty, that is to say, freedom from chains and prison, it were very absurd for men to clamour, as they do, for the liberty they so manifestly enjoy. Again, if we take liberty for an exemption from laws, it is no less absurd for men to demand, as they do, that liberty by which all other men may be masters of their lives. And yet, as absurd as it is, this is it they demand, not know-

ing that the laws are of no power to protect them without a sword in the hands of a man, or men, to cause those laws to be put in execution. The liberty of a subject lies therefore only in those things which, in regulating their actions, the sovereign has praetermitted: such as is the liberty to buy, and sell, and otherwise contract with one another; to choose their own abode, their own diet, their own trade of life, and institute their children as they themselves think fit; and the like.

Nevertheless we are not to understand that by such liberty the sovereign power of life and death is either abolished or limited. For it has been already shown that nothing the sovereign representative can do to a subject, on what pretence soever, can properly be called injustice or injury, because every subject is author of every act the sovereign does, so that he never wants right to any thing, otherwise than as he is himself the subject of God, and bound thereby to observe the laws of nature. And therefore it may, and does often, happen in commonwealths that a subject may be put to death by the command of the sovereign power, and yet neither do the other wrong: as when Jephtha caused his daughter to be sacrificed, in which—and the like cases—he that so dies, had liberty to do the action for which he is nevertheless without injury put to death. And the same holds also in a sovereign prince that puts to death an innocent subject. For though the action be against the law of nature as being contrary to equity, as was the killing of Uriah by David, yet it was not an injury to Uriah, but to God. Not to Uriah, because the right to do what he pleased was given him by Uriah himself: and yet to God, because David was God's subject and prohibited all iniquity by the law of nature, which distinction David himself, when he repented the fact, evidently confirmed saying, *To thee only have I sinned*. In the same manner, the people of Athens, when they banished the most potent of their commonwealth for ten years, thought they com-

mitted no injustice; and yet they never questioned what crime he had done, but what hurt he would do: nay, they commanded the banishment of they knew not whom; and every citizen bringing his oyster-shell into the market place, written with the name of him he desired should be banished, without actually accusing him, sometimes banished an Aristides for his reputation of justice, and sometimes a scurrilous jester, as Hyperbolus, to make a jest of it. And yet a man cannot say the sovereign people of Athens wanted right to banish them, or an Athenian the liberty to jest, or to be just.

The liberty whereof there is so frequent and honourable mention in the histories and philosophy of the ancient Greeks and Romans, and in the writings and discourse of those that from them have received all their learning in the politics, is not the liberty of particular men, but the liberty of the commonwealth: which is the same with that which every man then should have if there were no civil laws, nor commonwealth at all. And the effects of it also be the same. For as among masterless men there is perpetual war of every man against his neighbour; no inheritance to transmit to the son, nor to expect from the father; no propriety of goods or lands; no security; but a full and absolute liberty in every particular man: so in states and commonwealths not dependent on one another, every commonwealth, not every man, has an absolute liberty to do what it shall judge, that is to say, what that man, or assembly that represents it, shall judge most conducing to their benefit. But withal, they live in the condition of a perpetual war and upon the confines of battle, with their frontiers armed and cannons planted against their neighbours round about. The Athenians and Romans were free, that is, free commonwealths: not that any particular men had the liberty to resist their own representative, but that their representative had the liberty to resist or invade other people. There is written on the turrets of the city of Lucca in great characters at this day the word

"*Libertas*"; yet no man can thence infer that a particular man has more liberty or immunity from the service of the commonwealth there than in Constantinople. Whether a commonwealth be monarchical, or popular, the freedom is still the same.

But it is an easy thing for men to be deceived by the specious name of liberty, and for want of judgment to distinguish, mistake that for their private inheritance and birth-right which is the right of the public only. And when the same error is confirmed by the authority of men in reputation for their writings on this subject, it is no wonder if it produce sedition and change of government. In these western parts of the world, we are made to receive our opinions concerning the institution and rights of commonwealths from Aristotle, Cicero, and other men, Greeks and Romans, that, living under popular states, derived those rights, not from the principles of nature, but transcribed them into their books out of the practice of their own commonwealths which were popular; as the grammarians describe the rules of language out of the practice of the time, or the rules of poetry out of the poems of Homer and Virgil. And because the Athenians were taught, to keep them from desire of changing their government, that they were freemen, and all that lived under monarchy were slaves, therefore Aristotle puts it down in his *Politics* (*lib. 6, cap. ii*):

"In democracy, liberty is to be supposed: for it is commonly held that no man is free in any other government." And as Aristotle, so Cicero and other writers have grounded their civil doctrine on the opinions of the Romans, who were taught to hate monarchy, at first, by them that, having deposed their sovereign, shared among them the sovereignty of Rome, and afterwards by their successors. And by reading of these Greek and Latin authors, men from their childhood have gotten a habit, under a false show of liberty, of favouring tumults and of licentious controlling the actions of their sovereigns, and again of controlling those

controllers; with the effusion of so much blood, as I think I may truly say, there was never any thing so dearly bought as these western parts have bought the learning of the Greek and Latin tongues.

To come now to the particulars of the true liberty of a subject; that is to say, what are the things which, though commanded by the sovereign, he may nevertheless, without injustice, refuse to do; we are to consider what rights we pass away when we make a commonwealth, or, which is all one, what liberty we deny ourselves by owning all the actions, without exception, of the man, or assembly, we make our sovereign. For in the act of our *submission* consists both our *obligation* and our *liberty*, which must therefore be inferred by arguments taken from thence, there being no obligation on any man which arises not from some act of his own, for all men equally are by nature free. And because such arguments must either be drawn from the express words, *I authorize all his actions*, or from the intention of him that submits himself to his power, which intention is to be understood by the end for which he so submits, the obligation and liberty of the subject is to be derived either from those words or others equivalent, or else from the end of the institution of sovereignty, namely, the peace of the subjects within themselves, and their defence against a common enemy.

First therefore, seeing sovereignty by institution is by covenant of every one to every one, and sovereignty by acquisition, by covenants of the vanquished to the victor, or the child to the parent, it is manifest that every subject has liberty in all those things, the right whereof cannot by covenant be transferred. I have shown before that covenants not to defend a man's own body are void. Therefore, if the sovereign command a man, though justly condemned, to kill, wound, or maim himself, or not to resist those that assault him, or to abstain from the use of food, air, medicine, or any other thing without which he cannot live, yet has that man the liberty to disobey.

If a man be interrogated by the sovereign, or his authority, concerning a crime done by himself, he is not bound, without assurance of pardon, to confess it, because no man can be obliged by covenant to accuse himself.

Again, the consent of a subject to sovereign power is contained in these words, *I authorize, or take upon me, all his actions*; in which there is no restriction at all of his former natural liberty: for by allowing him to *kill me*, I am not bound to kill myself when he commands me. It is one thing to say, *kill me, or my fellow, if you please*; another thing to say, *I will kill myself, or my fellow*. It follows therefore that no man is bound by the words themselves either to kill himself, or any other man, and consequently, that the obligation a man may sometimes have, upon the command of the sovereign to execute any dangerous or dishonourable office, depends not on the words of our submission, but on the intention, which is to be understood by the end thereof. When therefore our refusal to obey frustrates the end for which the sovereignty was ordained, then there is no liberty to refuse: otherwise there is.

The obligation of subjects to the sovereign is understood to last as long, and no longer, than the power lasts by which he is able to protect them. For the right men have by nature to protect themselves when none else can protect them, can by no covenant be relinquished. The sovereignty is the soul of the commonwealth which, once departed from the body, the members do no more receive their motion from it. The end of obedience is protection which, wheresoever a man sees it either in his own or in another's sword, nature applies his obedience to it, and his endeavour to maintain it. And though sovereignty, in the intention of them that make it, be immortal, yet is it in its own nature, not only subject to violent death by foreign war, but also through the ignorance and passions of men, it has in it—from the very institution—many

seeds of a natural mortality by intestine discord.

CIVIL LAW AND NATURAL LAW

By civil laws I understand the laws that men are therefore bound to observe because they are members, not of this or that commonwealth in particular, but of a commonwealth. For the knowledge of particular laws belongs to them that profess the study of the laws of their several countries; but the knowledge of civil law in general, to any man. The ancient law of Rome was called their *civil law*, from the word *civitas*, which signifies a commonwealth: and those countries which, having been under the Roman empire and governed by that law, retain still such part thereof as they think fit, call that part the civil law, to distinguish it from the rest of their own civil laws. But that is not it I intend to speak of here; my design being not to show what is law here and there, but what is law, as Plato. Aristotle, Cicero and divers others have done, without taking upon them the profession of the study of the law.

And first it is manifest that law in general is not counsel, but command; nor a command of any man to any man, but only of him whose command is addressed to one formerly obliged to obey him. And as for civil law, it adds only the name of the person commanding, which is *persona civitatis*, the person of the commonwealth.

Which considered, I define civil law in this manner. Civil law is to every subject those rules which the commonwealth has commanded him, by word, writing, or other sufficient sign of the will, to make use of, for the distinction of right and wrong; that is to say, of what is contrary, and what is not contrary to the rule.

In which definition, there is nothing that is not at first sight evident. For every man sees that some laws are addressed to all the subjects in general, some to particular provinces; some to particular vo-

cations; and some to particular men; and are therefore laws to every of those to whom the command is directed, and to none else. As also, that laws are the rules of just and unjust; nothing being reputed unjust that is not contrary to some law. Likewise, that none can make laws but the commonwealth, because our subjection is to the commonwealth only. and that commands are to be signified by sufficient signs, because a man knows not otherwise how to obey them. And therefore, whatsoever can from this definition by necessary consequence be deduced, ought to be acknowledged for truth. Now I deduce from it this that follows.

The legislator in all commonwealths is only the sovereign, be he one man, as in a monarchy, or one assembly of men, as in a democracy or aristocracy. For the legislator is he that makes the law. And the commonwealth only prescribes and commands the observation of those rules which we call law: therefore the commonwealth is the legislator. But the commonwealth is no person, nor has capacity to do any thing, but by the representative, that is, the sovereign; and therefore the sovereign is the sole legislator. For the same reason, none can abrogate a law made, but the sovereign; because a law is not abrogated, but by another law that forbids it to be put in execution.

The sovereign of a commonwealth, be it an assembly, or one man, is not subject to the civil laws. For having power to make and repeal laws, he may, when he pleases, free himself from that subjection by repealing those laws that trouble him, and making of new; and consequently he was free before. For he is free that can be free when he will: nor is it possible for any person to be bound to himself, because he that can bind can release; and therefore he that is bound to himself only, is not bound.

When long use obtains the authority of a law, it is not the length of time that makes the authority, but the will of the sovereign signified by his silence, for silence is sometimes an argument of consent; and it is no longer law than the

sovereign shall be silent therein. And therefore if the sovereign shall have a question of right grounded, not upon his present will, but upon the laws formerly made, the length of time shall bring no prejudice to his right, but the question shall be judged by equity. For many unjust actions and unjust sentences go uncontrolled a longer time than any man can remember. And our lawyers account no customs law, but such as are reasonable, and that evil customs are to be abolished. But the judgment of what is reasonable, and of what is to be abolished, belongs to him that makes the law, which is the sovereign assembly, or monarch.

The law of nature and the civil law contain each other, and are of equal extent. For the laws of nature, which consist in equity, justice, gratitude and other moral virtues on these depending in the condition of mere nature, as I have said before, are not properly laws, but qualities that dispose men to peace and obedience. When a commonwealth is once settled, then are they actually laws, and not before, as being then the commands of the commonwealth, and therefore also civil laws: for it is the sovereign power that obliges men to obey them. For in the differences of private men to declare what is equity, what is justice, and what is moral virtue, and to make them binding, there is need of the ordinances of sovereign power, and punishments to be ordained for such as shall break them, which ordinances are therefore part of the civil law. The law of nature therefore is a part of the civil law in all commonwealths of the world. Reciprocally also, the civil law is a part of the dictates of nature. For justice, that is to say, performance of covenant, and giving to every man his own, is a dictate of the law of nature. But every subject in a commonwealth has covenanted to obey the civil law, either one with another, as when they assemble to make a common representative, or with the representative itself one by one, when subdued by the sword they promise obedience that they may receive life; and therefore obedience

to the civil law is part also of the law of nature. Civil and natural law are not different kinds, but different parts of law, whereof one part, being written, is called civil, the other, unwritten, natural. But the right of nature, that is, the natural liberty of man, may by the civil law be abridged and restrained: nay, the end of making laws is no other but such restraint, without the which there cannot possibly be any peace. And law was brought into the world for nothing else but to limit the natural liberty of particular men in such manner, as they might not hurt, but assist one another and join together against a common enemy.

That law can never be against reason, our lawyers are agreed; and that not the letter, that is, every construction of it, but that which is according to the intention of the legislator, is the law. And it is true: but the doubt is of whose reason it is that shall be received for law. It is not meant of any private reason; for then there would be as much contradiction in the laws, as there is in the Schools, nor yet, as Sir Edward Coke makes it, *an artificial perfection of reason, gotten by long study, observation, and experience*, as his was. For it is possible long study may increase and confirm erroneous sentences: and when men build on false grounds, the more they build, the greater is the ruin: and of those that study and observe with equal time and diligence, the reasons and resolutions are, and must remain, discordant: and therefore it is not that *juris prudentia*, or wisdom of subordinate judges, but the reason of this our artificial man the commonwealth, and his command, that makes law; and the commonwealth being in their representative but one person, there cannot easily arise any contradiction in the laws; and when there does, the same reason is able, by interpretation, or alteration, to take it away. In all courts of justice, the sovereign, which is the person of the commonwealth, is he that judges: the subordinate judge ought to have regard to the reason which moved his sovereign

to make such law, that his sentence may be according thereunto; which then is his sovereign's sentence; otherwise it is his own, and an unjust one.

The interpretation of the laws of nature, in a commonwealth, depends not on the books of moral philosophy. The authority of writers, without the authority of the commonwealth, makes not their opinions law, be they never so true. That which I have written in this treatise concerning the moral virtues, and of their necessity for the procuring and maintaining peace, though it be evident truth, is not therefore presently law; but because in all commonwealths in the world it is part of the civil law. For though it be naturally reasonable, yet it is by the sovereign power that it is law: otherwise it were a great error to call the laws of nature unwritten laws; whereof we see so many volumes published, and in them so many contradictions of one another, and of themselves.

The interpretation of the law of nature is the sentence of the judge constituted by the sovereign authority, to hear and determine such controversies, as depend thereon, and consists in the application of the law to the present case. For in the act of judicature, the judge does no more but consider whether the demand of the party be consonant to natural reason and equity, and the sentence he gives is therefore the interpretation of the law of nature; which interpretation is authentic, not because it is his private sentence, but because he gives it by authority of the sovereign, whereby it becomes the sovereign's sentence; which is law for that time, to the parties pleading.

SUBVERSIVE POLITICAL DOCTRINES

Though nothing can be immortal which mortals make, yet, if men had the use of reason they pretend to, their commonwealths might be secured at least from perishing by internal diseases. For by the

nature of their institution they are designed to live as long as mankind, or as the laws of nature, or as justice itself which gives them life. Therefore when they come to be dissolved, not by external violence, but intestine disorder, the fault is not in men as they are the *matter*, but as they are the *makers* and orderers of them. For men, as they become at least weary of irregular jostling and hewing one another, and desire with all their hearts to conform themselves into one firm and lasting edifice, so for want both of the art of making fit laws to square their actions by, and also of humility and patience to suffer the rude and cumbersome points of their present greatness to be taken off, they cannot without the help of a very able architect be compiled into any other than a crazy building, such as hardly lasting out their own time, must assuredly fall upon the heads of their posterity.

Among the *infirmities* therefore of a commonwealth, I will reckon in the first place those that arise from an imperfect institution, and resemble the diseases of a natural body which proceed from a defective procreation.

Of which this is one, *that a man, to obtain a kingdom, is sometimes content with less power than to the peace and defence of the commonwealth is necessarily required.* From whence it comes to pass that when the exercise of the power laid by is for the public safety to be resumed, it has the resemblance of an unjust act, which disposes great numbers of men, when occasion is presented, to rebel, in the same manner as the bodies of children, gotten by diseased parents, are subject either to untimely death or, to purge the ill quality derived from their vicious conception, by breaking out into biles and scabs. And when kings deny themselves some such necessary power, it is not always, though sometimes, out of ignorance of what is necessary to the office they undertake, but many times out of a hope to recover the same again at their pleasure. Wherein they reason not well, because such as will hold them to

their promises shall be maintained against them by foreign commonwealths, who in order to the good of their own subjects let slip few occasions to *weaken* the estate of their neighbours. So was Thomas Becket, archbishop of Canterbury, supported against Henry the Second by the Pope, the subjection of ecclesiastics to the commonwealth having been dispensed with by William the Conqueror at his reception, when he took an oath not to infringe the liberty of the church. And so were the barons, whose power was by William Rufus, to have their help in transferring the succession from his elder brother to himself, increased to a degree inconsistent with the sovereign power, maintained in their rebellion against King John, by the French.

Nor does this happen in monarchy only. For whereas the style of the ancient Roman commonwealth was *The Senate and People of Rome*, neither senate nor people pretended to the whole power, which first caused the seditions of Tiberius Gracchus, Caius Gracchus, Lucius Saturninus, and others, and afterwards the wars between the senate and the people, under Marius and Sulla; and again under Pompey and Caesar, to the extinction of their democracy, and the setting up of monarchy.

The people of Athens bound themselves but from one only action, which was that no man on pain of death should propound the renewing of the war for the island of Salamis; and yet thereby, if Solon had not caused to be given out he was mad, and afterwards in gesture and habit of a madman, and in verse, propounded it to the people that flocked about him, they had had an enemy perpetually in readiness, even at the gates of their city; such damage, or shifts, are all commonwealths forced to that have their power never so little limited.

In the second place, I observe the *diseases* of a commonwealth that proceed from the poison of seditious doctrines, whereof one is *that every private man is judge of good and evil actions.* This is true in the condition of mere nature,

where there are no civil laws, and also under civil government in such cases as are not determined by the law. But otherwise, it is manifest that the measure of good and evil actions is the civil law, and the judge the legislator who is always representative of the commonwealth. From this false doctrine, men are disposed to debate with themselves and dispute the commands of the commonwealth, and afterwards to obey or disobey them, as in their private judgments they shall think fit; whereby the commonwealth is distracted and *weakened*.

Another doctrine repugnant to civil society is that *whatsoever a man does against his conscience is sin*, and it depends on the presumption of making himself judge of good and evil. For a man's conscience and his judgment is the same thing, and as the judgment, so also the conscience may be erroneous. Therefore, though he that is subject to no civil law sins in all he does against his conscience, because he has no other rule to follow but his own reason, yet it is not so with him that lives in a commonwealth, because the law is the public conscience, by which he has already undertaken to be guided. Otherwise in such diversity as there is of private consciences, which are but private opinions, the commonwealth must needs be distracted, and no man dare to obey the sovereign power further than it shall seem good in his own eyes.

It has been also commonly taught *that faith and sanctity are not to be attained by study and reason, but by supernatural inspiration or infusion.* Which granted, I see not why any man should render a reason of his faith; or why every Christian should not be also a prophet; or why any man should take the law of his country, rather than his own inspiration, for the rule of his action. And thus we fall again in the fault of taking upon us to judge of good and evil, or to make judges of it such private men as pretend to be supernaturally inspired, to the dissolution of all civil government. Faith comes by hearing, and hearing by those accidents

which guide us into the presence of them that speak to us; which accidents are all contrived by God Almighty, and yet are not supernatural, but only, for the great number of them that concur to every effect, unobservable. Faith and sanctity are indeed not very frequent; but yet they are not miracles, but brought to pass by education, discipline, correction, and other natural ways by which God works them in his elect, at such times as he thinks fit. And these three opinions, pernicious to peace and government, have in this part of the world proceeded chiefly from the tongues and pens of unlearned divines who, joining the words of Holy Scripture together otherwise than is agreeable to reason, do what they can to make men think that sanctity and natural reason cannot stand together.

A fourth opinion, repugnant to the nature of commonwealth, is this, *that he that has the sovereign power is subject to the civil laws.* It is true that sovereigns are all subject to the laws of nature, because such laws be divine and cannot by any man or commonwealth be abrogated. But to those laws which the sovereign himself, that is, which the commonwealth makes, he is not subject. For to be subject to laws is to be subject to the commonwealth, that is, to the sovereign representative, that is, to himself; which is not subjection, but freedom from the laws. Which error, because it sets the laws above the sovereign, sets also a judge above him, and a power to punish him; which is to make a new sovereign; and again for the same reason a third, to punish the second; and so continually without end, to the confusion and dissolution of the commonwealth.

A fifth doctrine, that tends to the dissolution of the commonwealth, is *that every private man has an absolute propriety in his goods, such as excludes the right of the sovereign.* Every man has indeed a propriety that excludes the right of every other subject; and he has it only from the sovereign power, without the protection whereof every other man should have equal right to the same. But

if the right of the sovereign also be excluded, he cannot perform the office they have put him into, which is to defend them both from foreign enemies and from the injuries of one another; and consequently there is no longer a commonwealth.

And if the propriety of subjects exclude not the right of the sovereign representative to their goods, much less to their offices of judicature, or execution, in which they represent the sovereign himself.

There is a sixth doctrine, plainly and directly against the essence of a commonwealth; and it is this, *that the sovereign power may be divided*. For what is it to divide the power of a commonwealth, but to dissolve it; for powers divided mutually destroy each other. And for these doctrines men are chiefly beholding to some of those that, making profession of the laws, endeavour to make them depend upon their own learning and not upon the legislative power.

LOCKE

Revolutionary Puritanism ruled England until 1660 but was unable to establish itself permanently. Cromwell died in 1658, and in less than two years Charles II was restored to the throne. After civil war and dictatorship the return to monarchy seemed the best prospect of peace. In bringing Charles II back no clear delimitation between royal and parliamentary authority was made. It was hoped that a practical equilibrium could be obtained without formal constitutional charters, if the King would avoid the arbitrary government of his executed father, and if Parliament would be satisfied with less than absolute supremacy, such as it had exercised in the years 1642–1649, the period of civil war. Yet Charles II lacked the wisdom, or even desire, to contribute his share to the growth of a balanced constitution. His reign lasted from 1660–1685, during which years he increasingly antagonized his subjects on the two key issues of religion and Parliament. A crypto-Catholic, he sought to strengthen the influence of Catholics and fatally returned to the ways of his father by ruling without summoning Parliament for several years.

Charles II was succeeded by his brother, James II, who was an open Catholic and more authoritarian than Charles. James II sought to convert England to Catholicism by prerogative and force, and he methodically subverted the authority of Parliament either by exempting individuals from the law or by suspending laws altogether. He appointed and dismissed judges arbitrarily and built up a standing army to buttress his autocracy. By identifying despotism with Roman Catholicism he outraged not only his subjects' religion and liberty but their very patriotism.

France and Spain were England's chief opponents in the struggle for hegemony, and James II sealed his position as a traitor to the nation when it became known that he, like Charles II and many politicians, was secretly receiving money from Louis XIV of France. In 1688, Whig and Tory leaders invited Prince William of Orange to come to England and deliver it from Romanism and absolutism. William arrived in England in November, and there was great jubilation and almost no resistance. James II saw himself abandoned by Parliament, church, and army, and on December 22, 1688, stealthily sailed for France, never to return. Royal absolutism in England was dead.

Prince William summoned a "Convention Parliament" that met in January of 1689. The first business was to fill the vacant throne. James II was declared to have subverted the Constitution of the Kingdom by breaking the "original contract" between King and people and to have violated the fundamental laws "by the advice of Jesuits and other wicked persons," and to have, by his flight and misdeeds, abdicated the throne. Parliament then invited Prince William and his wife Mary to become King and Queen of England. But the Crown was not given to them without condition. The "Declaration of Right" (passed later in the year as the Bill of Rights) was the instrument that conferred the Crown on William and Mary.

The Bill of Rights begins with a recital of the iniquities and illegalities of James II. The first of the twelve charges accuses him of having assumed and exercised the power to dispense with and suspend laws, and to execute laws, without consent of Parliament. This was the crux of the "Glorious" or "Bloodless" Revolution of 1688: who is to be supreme, king or Parliament? The clear and unmistakable words of the Bill of Rights settled the question once and for all. By denying the king the right to levy money without grant of Parliament, and by prohibiting the raising or keeping of a standing army in time of peace without the consent of Parliament, the Bill of Rights deprived the king of the fiscal and military means of governing without the active consent of Parliament.

Another important condition was attached by Parliament to the British monarchy: no person who professes the Roman Catholic religion or is married to a Roman Catholic may inherit or hold the throne. The work of the Glorious Revolution went further. Judges were made irremovable during good behavior; they could no longer be removed by the arbitrary will of the king, as James II had removed judges who interpreted the law contrary to his wishes. To make the change of the times even more marked, judges were henceforth to be removable only on the address of both Houses of Parliament. The abolition of censorship made for free expression of thought in religious and political matters, and toleration was legally granted to Protestant dissenters; thus the road was opened for the general principle of separating religious faith from political loyalty.

The Glorious Revolution established the first constitutional monarchy in a major European country, and its general character remained unchanged until the reform of parliamentary representation in 1832. The bloodless revolution of 1832, transferring political power from the gentry to the middle class, would have been impossible without the Bloodless Revolution of 1688. At that time the liberal foundations of British government were judiciously laid, and the British system of today is the direct descendant of the Revolution of 1688. The peaceful revolution of 1945, by which the British working class became one of the principal political elements in the state through the election of a Labour Party majority in Parliament, is the twentieth-century version of the Reform Act of 1832, and both go back to 1688-1689. *Revolution by consent* sounds like a contradiction in itself, yet the examples of 1688, 1832, and 1945 prove that it is possible to effect fundamental political and social change without bloodshed.

The spirit of this rational liberalism is best reflected in the work of John Locke (1632-1704), specifically, in his *Two Treatises of Government* (1690). Locke was born of a middle-class Puritan family; his father had fought in the civil war on the side of the Parliamentary party. He went to Oxford in 1652,

and stayed on after graduation as a senior student and tutor. His connection with the university lasted until 1684, when he was deprived of his appointment for political reasons. His interests were at first concentrated on philosophy, then on science, and he became a fellow of the Royal Society, England's first scientific society, shortly after its incorporation. Locke also studied and, on many occasions, practiced medicine. In 1667, he met Thomas Sydenham, the leading English medical figure in both clinical work and research. The two men became life-long close friends, and Locke worked with Sydenham both in his clinical practice and in his research. Sydenham believed that medical experience was the only "true teacher" and there is no doubt that Sydenham's medical views, then strongly rejected by the more conservative "establishment" of the medical profession, influenced and reinforced Locke's general sympathies toward experience as the source of knowledge.

Locke's knowledge of medicine led to a chance meeting with Lord Ashley in 1666. Lord Ashley was the leader of the Whig party and one of the central figures in public life. Locke, who saved the statesman's life by a skillful operation, became attached to his career and household for the next fifteen years. He assisted him in political and commercial affairs, and helped him draw up the *Fundamental Constitutions of Carolina* (1669), of which colony Lord Ashley was one of the founders and chief owners. The Carolina constitution guaranteed religious toleration but accepted Negro slavery as a form of rightful property. In 1672 Lord Ashley was raised to the peerage as Earl of Shaftesbury, and shortly thereafter he was appointed Lord High Chancellor of England. Locke followed Shaftesbury into the government and retained his position until 1675, when Shaftesbury fell in disgrace.

Locke then went to France, where he spent four years, mostly in Montpellier and Paris. On his return to England in 1679 he found political unrest growing. Shaftesbury became the principal leader of the opposition against the court, and he was finally forced to flee to Holland, where he died in 1683. Later in the same year Locke himself, fearful for his safety in England, fled to Holland, where he stayed until early in 1689. He left Holland on the same boat that carried Princess Mary of Orange to England.

Locke's exile in Holland was not free from harassment and uncertainty; yet he always looked back on it with nostalgia. He was captivated by the spirit of freedom and manliness he saw in Holland, and he envied the country that had become the center of political and religious refugees from all Europe, including the British Isles. Locke's liberalism was formed in its fundamentals before he set foot on Dutch soil, but his experience there showed him that liberalism in religion and politics could work, and it reinforced his determination to help rid England of the illiberal government of Charles II, and—later—the despotic obscurantism of James II. The first of Locke's four *Letters Concerning Toleration* was composed and first published in Holland, and an abstract of Locke's chief philosophical work, the *Essay Concerning Human Understanding*, the foundation of modern empiricism, was also first published there.

On his arrival in England the new government offered Locke an ambassadorship in Vienna or Berlin, but, as he preferred to remain in England, he accepted instead an appointment as Commissioner of Appeals, which enabled him to stay away from London much of the time, his health having begun to fail him. In

1696 he was made Commissioner of Trade and Plantations, the forerunner of the later Board of Trade and Colonial Office. Whereas Hobbes had little or no practical acquaintance with government, Locke had wide administrative and political experience both before and after his exile. Hobbes had spent his years of exile in absolutist France, Locke in liberal Holland.

Locke's *Two Treatises of Government* is often dismissed as a mere apology for the victorious Whigs in the Revolution of 1688–1689. Such dismissal is clearly not borne out by the facts relating to the history and publication of the book. The *Two Treatises* was begun in 1679 and substantially finished in 1681. Its purpose was to provide the intellectual armory for the planned revolutionary overthrow of Charles II by the Earl of Shaftesbury and his Whig friends. After Locke returned to England in February, 1689, he revised the *Two Treatises* to take into account the fact that the revolution had already occurred. Although the first edition of the *Two Treatises* carries the year 1690 as the date of publication, the book was actually on sale in October of 1689, since publishers then—as now—had the habit of putting a later date on publications than the actual date on which they appeared. In the Preface to the *Two Treatises* Locke implies that the text presented to the public is only part of a larger work, written at an earlier date.

Yet Locke seems to lend some weight to the idea of looking at the *Two Treatises* as an apology for the victorious Whigs in the Revolution of 1688–1689, for in the Preface to the *Two Treatises*, obviously written after his return in 1689, he expresses the hope that the pages of the *Two Treatises* as published “are sufficient to establish the throne of our great restorer, our present King William,” and “to justify to the world the people of England whose love of their just and natural rights, with their resolution to preserve them, saved the nation when it was on the very brink of slavery and ruin.” Locke nowhere says or implies that he wrote the *Two Treatises* for the purpose of justifying the Revolution of 1688–1689. He was confident that the book which he composed in 1679–1681 and in which he, in principle, both attacked despotism and justified its overthrow by revolution would also hold good in 1689, although the specific circumstances of English politics had changed in the meantime. The specific issue was no longer a revolution to be carried out by the Liberal political leaders, but a Liberal revolution which had actually taken place.

Every piece of significant political writing is a fragment of the autobiography of its age; yet it becomes great only if, in addition to its vital connection with the period from which it springs, it possesses a universal appeal because of its general human interest. A political treatise that is wholly submerged in the issues of its own age can never rise above the level of a partisan pamphlet. On the other hand, a political work that is isolated from its own age is bound to be arid and abstract. The *Two Treatises* could not have been written by someone without the practical experience and interest of Locke; yet without Locke's philosophical rationalism, luminous common sense, and liberality of spirit it could never have become the Bible of modern liberalism.

Like Hobbes, Locke starts out with the concept of the *state of nature*. Yet from this starting point on, Locke travels a different road and arrives at a different destination. Unlike Hobbes, whose state of nature is little different from the jungle in which force and fraud reign supreme, Locke takes an optimistic view. In Hobbes' state of nature there is no natural law, only natural

right, each individual doing as he sees fit for his preservation and enhancement of power. By contrast, Locke's conception of man in the state of nature is not noticeably different from man in organized society. Locke cannot conceive of human beings living together without some sort of law and order, and in the state of nature it is the *law of nature* that rules: “The state of nature has a law of nature to govern it, which obliges every one; and reason, which is that law, teaches all mankind who will but consult it, that, being all equal and independent, no one ought to harm another in his life, health, liberty, or possessions.”

The law of nature, through the instrument of reason, defines what is right and wrong; if a violation of the law occurs, the execution of the penalty is, in the state of nature, “put into every man's hands, whereby every one has a right to punish the transgressors of that law to such a degree, as may hinder its violation.” Locke penetratingly notes that without some agency of enforcement there can be no law, and that in the law of nature the injured party is authorized to be judge in his own case and to execute the judgment against the culprit.

In actuality, the legal situation that Locke describes as the state of nature still exists (as it did in Locke's time) in two areas. First, within the so-called primitive community there is a body of law that is generally known to its members. In the event of transgression, the injured party (or his family) punishes the malefactor, punishes him, or takes reparation from him. The kin of the murdered victim, who slays the assassin, does not commit murder in the eyes of the primitive community, but reestablishes thereby the sanctity of the law: he is the authorized agent of the law to defend it against the assassin, because as yet there are no third-party judges and specialized law-enforcement agencies. Second, the state of nature still exists between so-called advanced nations. To be sure, there is a body of law, international law, that is binding and recognized as such; yet, when a violation of international law occurs and there is no international judicature and enforcement agency, the injured state is authorized to punish the transgressor. Such penalties or reprisals are not considered contrary to international law but are viewed as acts in behalf of its defense and reestablishment.

The law of the state of nature is thus deficient in three important points. First, it is not sufficiently clear. If all men were guided by pure reason they would all see the same law. But men are biased by their interests and mistake their interest for general rules of law. Second, there is no third-party judge who has no personal stake in disputes. Men who judge their own conflicts are apt to be carried away by passion and revenge. Third, in the state of nature the injured party is not always strong enough to execute the just sentence of the law: “Thus mankind, notwithstanding all the privileges of the state of nature, but being in an ill condition while they remain in it, are quickly driven into society.” The purpose of the social contract is to establish organized law and order so that the uncertainties of the state of nature will be replaced by the predictability of known laws and impartial institutions.

Within a group, men quickly form society, because the advantages of the state of nature seem to them to be outweighed by its disadvantages. After society is set up by contract, government is established, not by a contract, but by a *fiduciary trust*. The legislature is “the supreme power” to which all other powers, particularly the executive, “must be subordinate.” Yet the legislature is only relatively supreme among organs of government. Above the legislature

there is still something higher: the people. Locke conceives of the institution of the legislature as a "fiduciary power." Ordinarily there are three parties to a trust. The trustor, who creates the trust; the trustee, who is charged with the administration of the trust; and the beneficiary, in whose interest the trust is created. According to Locke's view of government, there are only two parties to the trust: the people, who is both trustor and beneficiary, and the legislature, who is trustee.

The principal characteristic of a trust is the fact that the trustee assumes primarily obligations rather than rights. The purpose of the trust is determined by the interest of the beneficiary and not by the will of the trustee. The trustee is little more than a servant of both trustor and beneficiary, and he may be recalled by the trustor in the event of neglect of duty. Because the legislature is no more than a trustee, "there remains still in the people a supreme power to remove or alter the legislative when they find the legislative act contrary to the trust reposed in them; for all power given with trust for the attaining an end, being limited by that end, whenever that end is manifestly neglected or opposed, the trust must necessarily be forfeited, and the power devolve to the hands of those that gave it, who may place it anew where they shall think best for their safety and security."

Locke thus goes further than the makers of the Glorious Revolution who accused James II of having violated the "original contract between King and people." The contractual conception of kingship was a tremendous attack on the theory of kingship by divine right, according to which the king—and the king only—received his right to govern from God. In the doctrine of contract, people and king were put on the same plane as equals. Locke completes this progression by his conception of government as trust: only the people as trustor (and beneficiary) have rights; the government as trustee has only duties, which are defined by the interests of the trustor and beneficiary, and not by those of the trustee. In the theory of divine right, only the ruler has rights; in the theory of contract, both people and government have rights; in Locke's conception of *government as trust, only the people have rights.*

When Hobbes described the establishment of society and government, he carefully confined the act of covenant to the subjects; they set up the sovereign, transferring to him all power. There was no contract between subjects and sovereign, only between subjects and subjects, because Hobbes was anxious to avoid a conception of government that had duties, under a contract, toward the governed. Similarly, Locke confines the act of covenant to the setting up of society but not of government; yet his aim is exactly the opposite of Hobbes's. Locke's government is not a party to any contract with the people, because he does not wish to give the state any rights against the people. Locke's state never becomes the Hobbesian sovereign but always remains an instrument of the purposes that society sets for it. As a strong believer in natural law, Locke assigned to government the task of *finding the law* rather than of making it in the Hobbesian manner. *Law precedes the state* in Locke, but follows it in Hobbes.

Among the rights which precede government Locke stresses that of *property*. The principal purpose of government, the reason why men give up the state of nature for civil society, is "for the mutual preservation of their lives, liberties, and estates, which I call by the general name, property." This broad Lockean

concept of property exceeds man's purely economic needs and interests and encompasses almost the whole orbit of his "life, liberty, and pursuit of happiness." When Locke speaks of property, he thinks of a wider range of action and opportunity that is implied in ordinary language. By linking property with life and liberty, Locke undoubtedly showed how important it seemed to him. Yet by the same token, the link of property with life and liberty also shows that Locke thought of property as liberating its owner rather than as enslaving others. To Locke, property meant, not the exercise of power over others, but the protection against power of others—particularly the power of government or of custom or privilege.

Locke's theory of property starts with the inquiry of how private property can be justified at all. Because every man has a property in his own person, the "labor of his body and the work of his hands we may say are properly his." *Labor creates property*: the human effort that is "mixed" with natural resources is the determining criterion which alone justifies private property. Thus Locke avoids justifying property on the ground that "the law" protects it, and instead goes back to the law behind the law, the law of nature, according to which man's property in his own body also extends to its labor.

But labor does more than create property. It also *determines the value of property*. "It is labor indeed," Locke says, "that puts the difference of value on everything." In fact, he stresses the proportion of labor in value highly enough to say that "of the products of the earth useful to the life of man nine-tenths are the effects of labor."

The Lockean theory of property was later used in defense of capitalism; but in the hands of pre-Marxian socialists it became a powerful weapon of attacking capitalism. When Locke defended property on the ground of individual effort and initiative, he protected the productive capacities of a new system of commercial and industrial capitalism against the restrictive traditions of a repressive state. By making labor the title to property and the source of value, Locke translated the rise of a new class to power into terms of a new political economy. Although himself a mercantilist, Locke's economic philosophy helped to liberate the ingenious and industrious entrepreneur from paralyzing force and custom. The socialists used—a century and a half after Locke—his labor theory of property to demand communal control or ownership of the basic means of production; they did not thereby prove that they were more progressive than Locke, but that economic facts had changed since 1690, resulting in the concentration of property and control in industry and finance.

Locke did not work out a consistently clear theory as to *how much property* a person may fairly claim for himself. In general, he acknowledges that the right to property is limited: "As much as anyone can make use of to any advantage of life before it spoils, so much he may by his labor fix a property in; whatever is beyond this, is more than his share, and belongs to others. Nothing was made by God for man to spoil or destroy." This relative equality of property, based on man's limited capacity to consume, would have lasted forever, "had not the invention of money, and by tacit agreement of men to put a value on it, introduced (by consent) larger possessions and a right to them."

The criterion which Locke here applies is that of waste. Before money was invented, man had no moral right to hoard the products of the earth and allow

them to rot and spoil. His ability to use perishable goods determined the amount of property he could rightfully own. In a later phase, man would exchange perishable fruit (like plums) for durable ones (like nuts). By disposing of the plums he had done his duty toward society, for he had prevented them from wasting in his possession. From durable nuts to even more durable gold, or "a sparkling pebble or diamond," was only a small and logical step. And if he kept on hoarding these durable goods (like gold and diamonds and money) "all his life, he invaded not the right of others."

Thus Locke arrives at defining money "as some lasting thing that men might keep without spoiling, and that, by mutual consent, men would take in exchange for the truly useful but perishable supports of life." In his doctrine of property Locke makes no serious attempt to reconcile the teaching of natural law, which postulates a reasonable equality of property, with the inequality of property that stems, by consent among men, from the use of money.

Property precedes government and is the "great and chief end" for which men unite into political society. It follows that the state "cannot take from any man any part of his property without his own consent." Even if a commonwealth is based on freely elected representative institutions, it cannot "dispose of the estates of the subjects arbitrarily." The Fourteenth Amendment to the Constitution of the United States embodies this Lockean idea, that no State shall "deprive any person of life, liberty, or property, without due process of law."

Locke felt—understandably enough in the light of Stuart despotism—a profound distrust of executive power; he had more confidence in the legislature, as representing the will of the people or at least the majority of the electorate. The executive power "is visibly subordinate and accountable" to the legislature, "and may be at pleasure changed and displaced." The legislature is supreme, but not absolutely; it is supreme only in relation to other organs of government, and the limitations of the legislature are the end of government, that is, the protection of life, liberty and property of men.

Specifically, Locke lists four major limitations on the powers of the legislature: first, the law must apply equally to all, rich and poor, favorite at court and countryman at plough; second, the law must not be arbitrary and oppressive, but must be designed for the good of the people; third, the legislature must not raise taxes without the consent of the people or their representatives; fourth, the legislature must not transfer its lawmaking power to anybody else. In this fourth limitation Locke expresses his opposition to government by administrative decree instead of by legislative assembly. Executive power always harbors the peril of uncertainty and arbitrariness, whereas government by legislature means certainty and the Rule of Law.

This part of Locke's political philosophy has retained more vitality in the United States than in England. There the development of cabinet government since the eighteenth century has controverted some of Locke's misgivings about the inherent evil of a strong and effective executive. Despite Locke's fears, England has not become a despotism, although her legislature has been overshadowed by the executive (itself, however, a committee of the legislature). In the United States, on the other hand, the Lockean sanctification of the legislature as contrasted with the devil theory of the executive has not lost its vote-getting magic.

Hobbes was so strongly impressed with the need for compulsion to maintain social cohesion that he could not envisage society without government. The dissolution of government meant for him the end of all order and restraint, the cessation of civilized living, and the return to the barbarous state of nature. Locke enunciates one of the principal doctrines of classical liberalism by drawing a *sharp distinction between state and society*. Of the two, society is by far the more important and enduring. The dissolution of government does not entail that of society, whereas if society "is dissolved, it is certain that the government of that society cannot remain." Locke mentions that the destruction of society usually occurs by external force, by conquerors' swords that "mangle society to pieces." But when government is dissolved from within, Locke does not anticipate chaos—as did Hobbes—but trusts that society will set up a new government to serve its ends and purposes. In general, government dissolves from within if it violates the trust given to it by the people, who then set up a new government.

Absolute monarchy is, according to Locke, *no form of civil government* at all, and, in fact, worse than the state of nature. In the latter, everybody is judge in his own case, whereas in absolute monarchy there is only one person who has that liberty: the king. In civil society, government approaches dissolution whenever the legislators "endeavor to take away and destroy the property of the people, or to reduce them to slavery under arbitrary power." Similarly, government may be destroyed from within by the chief executive if he overrides the laws of the legislature by his own arbitrary will, hinders the legislative assembly from meeting or acting freely, prevents free elections, or delivers the people into the subjection of a foreign power: "In these, and the like cases, when the government is dissolved, the people are at liberty to provide for themselves by erecting a new legislature differing from the other by the change of persons, or form, or both, as they shall find it most for their safety and good."

Before Locke, theories of disobedience usually contained an element of apology when it came to justifying resistance to authority. Locke reversed the position by declaring the arbitrary ruler an outcast and rebel against the law, whereas the people defined the law by revolting against such despots: "In all states and conditions the true remedy of force without authority is to oppose force to it," and the ruler who uses force without authority should be treated like an aggressor in war. Locke qualifies his theory of resistance in two ways; first, force is to be used by the people only against unjust and unlawful force; second, the right of disobedience may not be exercised by one man or a small group of citizens who feel themselves oppressed, but only by the majority of the people when they have suffered from mischief and oppression.

Locke's insistence that there is a higher law above the law of the state has led to the conception, so deeply ingrained in the traditions of democratic nations, that obedience to the law is a high, but not the highest, civic virtue. Opponents of democratic government have charged that making political rule dependent on consent of the ruled "lays a ferment for frequent rebellion," as Locke puts it. Locke does not deny the charge, but asserts that his hypothesis invites *anarchy and rebellion* no more than any other. First, when the people are made miserable, they will rebel under any form of government, let the governors be "sacred and divine, descended or authorized from heaven, give them out for

whom or what you please, the same will happen." Second, Locke emphasizes that men do not revolt "upon every little mismanagement in public affairs" (or "for light and transient causes," as the Declaration of Independence puts it). Third, and here Locke moves from the defensive to the offensive, government by consent coupled with the right of the people to rebel is "the best fence against rebellion." The more the channels of free communication and consent are maintained in a society, the less the need for revolution.

What was an argument in 1690 has since become a matter of experience. The most effective reply to the charge that democracy contains within itself the seeds of anarchy and rebellion is to be found in the political history of the last three centuries. The British and American systems of government, based on the Lockean recognition of the right to rebel, have proved themselves the strongest and most enduring political societies the world has seen, and the same could be said of smaller countries like Holland, Switzerland, and the Scandinavian nations. By contrast, where the right to revolution has been rejected in the name of order and stability, the political results have been *coups d'état*, blood purges, plots and counterplots, conspiracies, and violent swings from one extreme to another—the political record, specifically, of militaristic dictatorships and totalitarian regimes.

By committing themselves to Locke's theories of government the British supplied the case for the American Revolution and the later peaceful attainment of independence by other colonies, culminating in the virtually complete liquidation of the British Empire in the two decades following World War II. The text of the Declaration is pure Locke, and the main elements of the American constitutional system—limited government, inalienable individual rights, inviolability of property—are all directly traceable to Locke. Writing in the expanding commercial society of his own, his ideas fitted even more the needs of a dynamic pioneering society on the American continent.

Above all, Locke's defense of the right to rebel seemed to the makers of the American Revolution eminently reasonable. Thomas Jefferson, in many respects a Lockean rationalist and lover of freedom and toleration, expressed the American version of Locke's theory of rebellion in the classical phrase that the "tree of liberty must be refreshed from time to time with the blood of patriots and tyrants." Whatever the social or economic system that may exist at a particular time—be it a pioneering frontier country or an old established society, vigorous, self-confident capitalism or mature, skeptical industrialism, welfare statism or experimental democratic socialism—the right to rebel remains the great, perhaps the greatest, tradition of British and American politics. Rebelliousness, too, can, paradoxically, grow into tradition: the tradition of the dignity of man and of his unbreakable spirit.

LOCKE

Two Treatises of Government *

THE STATE OF NATURE

To understand political power aright, and derive it from its original, we must consider, what state all men are naturally in, and that is, a state of perfect freedom to order their actions, and dispose of their possessions and persons, as they think fit, within the bounds of the law of nature, without asking leave, or depending upon the will of any other man.

A state also of equality, wherein all the power and jurisdiction is reciprocal, no one having more than another; there being nothing more evident, than that creatures of the same species and rank, promiscuously born to all the same advantages of nature, and the use of the same faculties, should also be equal one amongst another without subordination or subjection, unless the lord and master of them all should, by any manifest declaration of his will, set one above another, and confer on him, by an evident and clear appointment, an undoubted right to dominion and sovereignty.

This equality of men by nature, the judicious Hooker looks upon as so evident in itself, and beyond all question, that he makes it the foundation of that obligation to mutual love amongst men, on which he builds the duties they owe one another, and from whence he derives the great maxims of justice and charity. His words are:

The like natural inducement hath brought men to know that it is no less their duty, to love others than themselves; for seeing those things which are equal, must needs all have one measure; if I cannot but wish to receive good, even as much at every man's hands, as any man can wish unto his own soul, how should I look to have any part of my desire herein satisfied, unless myself be careful to satisfy the like desire, which is undoubtedly in other men. We all being of one and the same nature; to have any thing offered them repugnant to this desire, must needs in all respects grieve them as much as me; so that if I do harm, I must look to suffer, there being no reason that others should shew greater measure of love to me, than they have by me shewed unto them; my desire therefore to be loved of my equals in nature, as much as possible may be, imposeth upon me a natural duty of bearing to themward fully the like affection; from which relation of equality between ourselves and them that are as ourselves, what several rules and canons natural reason hath drawn, for direction of life, no man is ignorant.

—*Eccl. Pol.*, lib. i.

But though this be a state of liberty, yet it is not a state of licence: though man in that state have an uncontrollable liberty to dispose of his person or possessions, yet he has not liberty to destroy himself, or so much as any creature in his possession, but where some nobler use than its bare preservation calls for it. The state of nature has a law of nature to govern it, which obliges every one, and

* From John Locke, *Two Treatises of Government* (1690).

reason, which is that law, teaches all mankind, who will but consult it, that being all equal and independent, no one ought to harm another in his life, health, liberty, or possessions: for men being all the workmanship of one omnipotent, and infinitely wise maker; all the servants of one sovereign master, sent into the world by his order, and about his business; they are his property, whose workmanship they are, made to last during his, not one another's pleasure: and being furnished with like faculties, sharing all in one community of nature, there cannot be supposed any such subordination among us, that may authorize us to destroy one another, as if we were made for one another's uses, as the inferior ranks of creatures are for ours. Every one, as he is bound to preserve himself, and not to quit his station wilfully, so by the like reason, when his own preservation comes not in competition, ought he as much as he can to preserve the rest of mankind, and not unless it be to do justice on an offender, take away, or impair the life, or what tends to the preservation of the life, the liberty, health, limb or goods of another.

And that all men may be restrained from invading others rights, and from doing hurt to one another, and the law of nature be observed, which willeth the peace and preservation of all mankind, the execution of the law of nature is, in that state, put into every man's hands, whereby every one has a right to punish the transgressors of that law to such a degree, as may hinder its violation. For the law of nature would, as all other laws that concern men in this world, be in vain, if there were nobody that in the state of nature had a power to execute that law, and thereby preserve the innocent and restrain offenders. And if any one in the state of nature may punish another for any evil he has done, every one may do so: for in that state of perfect equality where naturally there is no superiority or jurisdiction of one over another, what any may do in prosecution of that law, every one must needs have a right to do.

And thus, in the state of nature, one man comes by a power over another; but yet no absolute or arbitrary power, to use a criminal, when he has got him in his hands, according to the passionate heats, or boundless extravagancy of his own will; but only to retribute to him, so far as calm reason and conscience dictates, what is proportionate to his transgression, which is so much as may serve for reparation and restraint: for these two are the only reasons why one man may lawfully do harm to another, which is that we call punishment. In transgressing the law of nature, the offender declares himself to live by another rule than that of reason and common equity, which is that measure God has set to the actions of men for their mutual security, and so he becomes dangerous to mankind, the tie, which is to secure them from injury and violence, being slighted and broken by him, which being a trespass against the whole species, and the peace and safety of it, provided for by the law of nature, every man upon this score, by the right he hath to preserve mankind in general, may restrain, or where it is necessary, destroy things noxious to them, and so may bring such evil on any one, who hath transgressed that law, as may make him repent the doing of it, and thereby deter him, and, by his example others, from doing the like mischief. And in this case, and upon this ground, every man hath a right to punish the offender, and be executioner of the law of nature.

I doubt not but this will seem a very strange doctrine to some men; but before they condemn it, I desire them to resolve me, by what right any prince or state can put to death, or punish an alien, for any crime he commits in their country. 'Tis certain their laws, by virtue of any sanction they receive from the promulgated will of the legislative, reach not a stranger: they speak not to him, nor, if they did, is he bound to hearken to them. The legislative authority, by which they are in force over the subjects of that commonwealth, hath no power over him. Those who have the supreme power of making laws in England, France or Holland, are

to an Indian, but like the rest of the world, men without authority: and therefore, if by the law of nature every man hath not a power to punish offences against it, as he soberly judges the case to require, I see not how the magistrates of any community can punish an alien of another country; since, in reference to him, they can have no more power than what every man naturally may have over another.

Besides the crime which consists in violating the law, and varying from the right rule of reason, whereby a man so far becomes degenerate, and declares himself to quit the principles of human nature and to be a noxious creature, there is commonly injury done, and some person or other, some other man receives damage by his transgression; in which case he who hath received any damage, has, besides the right of punishment common to him with other men, a particular right to seek reparation from him that has done it: and any other person, who finds it just, may also join with him that is injured, and assist him in recovering from the offender so much as may make satisfaction for the harm he has suffered.

From these two distinct rights, the one of punishing the crime for restraint, and preventing the like offence, which right of punishing is in everybody; the other of taking reparation, which belongs only to the injured party, comes it to pass that the magistrate, who by being magistrate hath the common right of punishing put into his hands, can often, where the public good demands not the execution of the law, remit the punishment of criminal offences by his own authority, but yet cannot remit the satisfaction due to any private man for the damage he has received. That, he who has suffered the damage has a right to demand in his own name, and he alone can remit: the damaged person has this power of appropriating to himself the goods or service of the offender, by right of self-preservation, as every man has a power to punish the crime, to prevent its being committed again, by the right he has of preserving

all mankind, and doing all reasonable things he can in order to that end: and thus it is, that every man, in the state of nature, has a power to kill a murderer, both to deter others from doing the like injury, which no reparation can compensate, by the example of the punishment that attends it from every body, and also to secure men from the attempts of a criminal, who having renounced reason, the common rule and measure God hath given to mankind, hath, by the unjust violence and slaughter he hath committed upon one, declared war against all mankind, and therefore may be destroyed as a lion or a tiger, one of those wild savage beasts, with whom men can have no society nor security: and upon this is grounded that great law of nature, *Whoso sheddeth man's blood, by man shall his blood be shed.* And Cain was so fully convinced, that every one had a right to destroy such a criminal, that after the murder of his brother, he cries out, *Every one that findeth me shall slay me;* so plain was it writ in the hearts of all mankind.

By the same reason may a man in the state of nature punish the lesser breaches of that law. It will perhaps be demanded, with death? I answer, each transgression may be punished to that degree, and with so much severity, as will suffice to make it an ill bargain to the offender, give him cause to repent, and terrify others from doing the like. Every offence, that can be committed in the state of nature, may in the state of nature be also punished equally, and as far forth as it may, in a commonwealth: for though it would be besides my present purpose, to enter here into the particulars of the law of nature, or its measures of punishment; yet, it is certain there is such a law, and that too as intelligible and plain to a rational creature, and a studier of that law, as the positive laws of commonwealths: nay, possibly plainer; as much as reason is easier to be understood, than the fancies and intricate contrivances of men, following contrary and hidden interests put into words; for so truly are a great part of the municipal laws of countries, which

are only so far right, as they are founded on the law of nature, by which they are to be regulated and interpreted.

To this strange doctrine, *viz.*, that in the state of nature every one has the executive power of the law of nature, I doubt not but it will be objected, that it is unreasonable for men to be judges in their own cases, that self-love will make men partial to themselves and their friends: and on the other side, ill-nature, passion and revenge will carry them too far in punishing others; and hence nothing but confusion and disorder will follow; and that therefore God hath certainly appointed government to restrain the partiality and violence of men. I easily grant that civil government is the proper remedy for the inconveniences of the state of nature, which must certainly be great where men may be judges in their own case, since 'tis easy to be imagined, that he who was so unjust as to do his brother an injury, will scarce be so just as to condemn himself for it; but I shall desire those who make this objection, to remember, that absolute monarchs are but men; and if government is to be the remedy of those evils, which necessarily follow from men's being judges in their own cases, and the state of nature is therefore not to be endured, I desire to know what kind of government that is, and how much better it is than the state of nature, where one man commanding a multitude, has the liberty to be judge in his own case, and may do to all his subjects whatever he pleases, without the least question or control of those who execute his pleasure? and in whatsoever he doth, whether led by reason, mistake or passion, must be submitted to? which men in the state of nature are not bound to do one to another. And if he that judges, judges amiss in his own, or any other case, he is answerable for it to the rest of mankind.

'Tis often asked as a mighty objection, where are, or ever were there any men in such a state of nature? To which it may suffice as an answer at present, that since all princes and rulers of *independent* governments all through the world, are in a state of nature, 'tis plain the world

never was nor never will be, without numbers of men in that state. I have named all governors of *independent* communities, whether they are, or are not, in league with others: for 'tis not every compact that puts an end to the state of nature between men, but only this one of agreeing together mutually to enter into one community, and make one body politic; other promises, and compacts, men may make one with another, and yet still be in the state of nature. The promises and bargains for truck, etc. between the two men in the desert island, mentioned by Garcilasso de la Vega, in his history of Peru; or between a Swiss and an Indian, in the woods of America, are binding to them, though they are perfectly in a state of nature, in reference to one another: for truth and keeping of faith belongs to men as men, and not as members of society.

To those that say, there were never any men in the state of nature, I will not only oppose the authority of the judicious Hooker, *Eccl. Pol. lib. i. sect. 10*, where he says,

the laws which have been hitherto mentioned, *i.e.*, the laws of nature, do bind men absolutely, even as they are men, although they have never any settled fellowship, never any solemn agreement amongst themselves what to do, or not to do: but forasmuch as we are not by ourselves sufficient to furnish ourselves with competent store of things, needful for such a life as our nature doth desire, a life fit for the dignity of man; therefore to supply those defects and imperfections which are in us, as living singly and solely by ourselves, we are naturally induced to seek communion and fellowship with others: this was the cause of men uniting themselves at first in politic societies.

But I moreover affirm, that all men are naturally in that state, and remain so, till by their own consents they make themselves members of some politic society; and I doubt not in the sequel of this discourse, to make it very clear.

THE STATE OF WAR

The state of war is a state of enmity and destruction; and therefore declaring by word or action, not a passionate and hasty, but sedate, settled design upon another man's life, puts him in a state of war with him against whom he has declared such an intention, and so has exposed his life to the other's power to be taken away by him, or any one that joins with him in his defence, and espouses his quarrel, it being reasonable and just I should have a right to destroy that which threatens me with destruction; for by the fundamental law of nature, man being to be preserved, as much as possible, when all cannot be preserved, the safety of the innocent is to be preferred; and one may destroy a man who makes war upon him, or has discovered an enmity to his being, for the same reason that he may kill a wolf or a lion, because such men are not under the ties of the common law of reason, have no other rule but that of force and violence, and so may be treated as beasts of prey, those dangerous and noxious creatures that will be sure to destroy him whenever he falls into their power.

And hence it is that he who attempts to get another man into his absolute power does thereby put himself into a state of war with him; it being to be understood as a declaration of a design upon his life. For I have reason to conclude that he who would get me into his power without my consent would use me as he pleased when he had got me there, and destroy me too when he had a fancy to it, for nobody can desire to have me in his absolute power unless it be to compel me by force to that which is against the right of my freedom—*i.e.*, make me a slave. To be free from such force is the only security of my preservation, and reason bids me look on him as an enemy to my preservation who would take away that freedom which is the fence to it; so that he who makes an attempt to enslave me thereby puts himself into a state of war with me. He that in the state of nature would take away the freedom that belongs to any one in that state must necessarily be supposed to have a design

to take away everything else, that freedom being the foundation of all the rest; as he that in the state of society would take away the freedom belonging to those of that society or commonwealth must be supposed to design to take away from them everything else, and so be looked on as in a state of war.

This makes it lawful for a man to kill a thief who has not in the least hurt him, nor declared any design upon his life, any farther than by the use of force, so to get him in his power as to take away his money, or what he pleases, from him; because using force, where he has no right to get me into his power, let his pretence be what it will, I have no reason to suppose that he who would take away my liberty would not, when he had me in his power, take away everything else. And therefore it is lawful for me to treat him as one who has put himself into a state of war with me—*i.e.*, kill him if I can; for to that hazard does he justly expose himself whoever introduces a state of war, and is aggressor in it.

And here we have the plain difference between the state of nature and the state of war, which however some men have confounded, are as far distant as a state of peace, goodwill, mutual assistance, and preservation; and a state of enmity, malice, violence and mutual destruction are one from another. Men living together according to reason without a common superior on earth, with authority to judge between them, are properly in the state of nature. But force, or a declared design of force upon the person of another, where there is no common superior on earth to appeal to for relief, is the state of war; and 'tis the want of such an appeal gives a man the right of war even against an aggressor, though he be in society and a fellow-subject. Thus, a thief whom I cannot harm, but by appeal to the law, for having stolen all that I am worth, I may kill when he sets on me to rob me but of my horse or coat, because the law, which was made for my preservation, where it cannot interpose to secure my life from present force, which if lost is capable of no reparation, permits me my own defence and the right of

war, a liberty to kill the aggressor, because the aggressor allows not time to appeal to our common judge, nor the decision of the law, for remedy in a case where the mischief may be irreparable. Want of a common judge with authority puts all men in a state of nature; force without right upon a man's person makes a state of war both where there is, and is not, a common judge.

But when the actual force is over, the state of war ceases between those that are in society and are equally on both sides subjected to the fair determination of the law; because then there lies open the remedy of appeal for the past injury, and to prevent future harm; but where no such appeal is, as in the state of nature, for want of positive laws, and judges with authority to appeal to, the state of war, once begun, continues with a right to the innocent party to destroy the other whenever he can, until the aggressor offers peace, and desires reconciliation on such terms as may repair any wrongs he has already done, and secure the innocent for the future; nay, where an appeal to the law and constituted judges lies open, but the remedy is denied by a manifest perverting of justice, and a barefaced wresting of the laws to protect or indemnify the violence or injuries of some men or party of men, there it is hard to imagine any thing but a state of war: for wherever violence is used, and injury done, though by hands appointed to administer justice, it is still violence and injury, however coloured with the name, pretences, or forms of law, the end whereof being to protect and redress the innocent, by an unbiased application of it, to all who are under it; wherever that is not *bona fide* done, war is made upon the sufferers, who having no appeal on earth to right them, they are left to the only remedy in such cases, an appeal to heaven.

To avoid this state of war (wherein there is no appeal but to heaven, and wherein every the least difference is apt to end, where there is no authority to decide between the contenders) is one great reason of men's putting themselves into society, and quitting the state of na-

ture. For where there is an authority, a power on earth from which relief can be had by appeal, there the continuance of the state of war is excluded, and the controversy is decided by that power.

SLAVERY

The natural liberty of man is to be free from any superior power on earth, and not to be under the will or legislative authority of man, but to have only the law of nature for his rule. The liberty of man in society is to be under no other legislative power but that established by consent in the commonwealth, nor under the dominion of any will, or restraint of any law, but what the legislative shall enact according to the trust put in it. Freedom, then, is not what Sir Robert Filmer tells us, *O.A. 55. A liberty for every one to do what he lists, to live as he pleases, and not to be tied by any laws*; but freedom of men under government is to have a standing rule to live by, common to every one of that society, and made by the legislative power erected in it. A liberty to follow my own will in all things where the rule prescribes not, not to be subject to the inconstant, uncertain, unknown, arbitrary will of another man, as freedom of nature is to be under no other restraint but the law of nature.

This freedom from absolute, arbitrary power is so necessary to, and closely joined with, a man's preservation, that he cannot part with it but by what forfeits his preservation and life together. For a man, not having the power of his own life, cannot, by compact or his own consent, enslave himself to any one, nor put himself under the absolute, arbitrary power of another to take away his life when he pleases. Nobody can give more power than he has himself, and he that cannot take away his own life cannot give another power over it. Indeed, having by his fault forfeited his own life by some act that deserves death, he to whom he has forfeited it may, when he has him in his power, delay to take it, and make use of him to his own service; and he does him no injury by it. For, whenever he finds the hardship of his slavery out-

weigh the value of his life, 'tis in his power, by resisting the will of his master, to draw on himself the death he desires.

PROPERTY

God, who hath given the world to men in common, hath also given them reason to make use of it to the best advantage of life and convenience. The earth and all that is therein is given to men for the support and comfort of their being. And though all the fruits it naturally produces, and beasts it feeds, belong to mankind in common, as they are produced by the spontaneous hand of nature, and no body has originally a private dominion exclusive of the rest of mankind in any of them, as they are thus in their natural state, yet being given for the use of men, there must of necessity be a means to appropriate them some way or other before they can be of any use, or at all beneficial, to any particular man. The fruit or venison which nourishes the wild Indian, who knows no enclosure, and is still a tenant in common, must be his, and so his—*i.e.*, a part of him, that another can no longer have any right to it before it can do him any good for the support of his life.

Though the earth and all inferior creatures be common to all men, yet every man has a *property* in his own *person*. This nobody has any right to but himself. The *labour* of his body and the *work* of his hands, we may say, are properly his. Whatsoever, then, he removes out of the state that nature hath provided and left it in, he hath mixed his labour with it, and joined to it something that is his own, and thereby makes it his property. It being by him removed from the common state nature placed it in, it hath by this labour something annexed to it that excludes the common right of other men. For this labour being the unquestionable property of the labourer, no man but he can have a right to what that is once joined to, at least where there is enough, and as good left in common for others.

He that is nourished by the acorns he picked up under an oak, or the apples he gathered from the trees in the wood, has

certainly appropriated them to himself. Nobody can deny but the nourishment is his. I ask, then, when did they begin to be his? when he digested? or when he ate? or when he boiled? or when he brought them home? or when he picked them up? And 'tis plain, if the first gathering made them not his, nothing else could. That labour put a distinction between them and common. That added something to them more than Nature, the common mother of all, had done, and so they became his private right. And will any one say he had no right to those acorns or apples he thus appropriated because he had not the consent of all mankind to make them his? Was it a robbery thus to assume to himself what belonged to all in common? If such a consent as that was necessary, man had starved, notwithstanding the plenty God had given him. We see in commons, which remain so by compact, that 'tis the taking any part of what is common, and removing it out of the state Nature leaves it in, which begins the property, without which the common is of no use. And the taking of this or that part does not depend on the express consent of all the commoners. Thus, the grass my horse has bit, the turfs my servant has cut, and the ore I have digged in any place, where I have a right to them in common with others, become my property without the assignation or consent of any body. The labour that was mine, removing them out of that common state they were in, hath fixed my property in them.

It will perhaps be objected to this, that if gathering the acorns or other fruits of the earth, etc., makes a right to them, then any one may engross as much as he will. To which I answer, Not so. The same law of nature that does by this means give us property, does also bound that property too. *God has given us all things richly*, 1 Tim. vi. 12. Is the voice of reason confirmed by inspiration? But how far has he given it us, *to enjoy*? As much as any one can make use of to any advantage of life before it spoils, so much he may by his labour fix a property in. Whatever is beyond this is more than

his share, and belongs to others. Nothing was made by God for man to spoil or destroy. And thus considering the plenty of natural provisions there was a long time in the world, and the few spenders, and to how small a part of that provision the industry of one man could extend itself and engross it to the prejudice of others, especially keeping within the bonds set by reason of what might serve for his use, there could be then little room for quarrels or contentions about property so established.

But the chief matter of property being now not the fruits of the earth and the beasts that subsist on it, but the earth itself, as that which takes in and carries with it all the rest, I think it is plain that property in that too is acquired as the former. As much land as a man tills, plants, improves, cultivates, and can use the product of, so much is his property. He by his labour does, as it were, enclose it from the common. Nor will it invalidate his right to say, Every body else has an equal title to it, and therefore he cannot appropriate, he cannot enclose, without the consent of all his fellow-commoners, all mankind. God, when he gave the world in common to all mankind, commanded man also to labour, and the penury of his condition required it of him. God and his reason commanded him to subdue the earth—*i.e.*, improve it for the benefit of life and therein lay out something upon it that was his own, his labour. He that, in obedience to this command of God, subdued, tilled, and sowed any part of it, thereby annexed to it something that was his property, which another had no title to, nor could without injury take from him.

Nor was this appropriation of any parcel of land, by improving it, any prejudice to any other man, since there was still enough and as good left, and more than the yet unprovided could use. So that, in effect, there was never the less left for others because of his enclosure for himself. For he that leaves as much as another can make use of does as good as take nothing at all. No body could think himself injured by the drinking of

another man, though he took a good draught, who had a whole river of the same water left him to quench his thirst. And the case of land and water, where there is enough of both, is perfectly the same.

God gave the world to men in common, but since he gave it them for their benefit and the greatest conveniences of life they were capable to draw from it, it cannot be supposed he meant it should always remain common and uncultivated. He gave it to the use of the industrious and rational (and labour was to be his title to it); not to the fancy or covetousness of the quarrelsome and contentious. He that had as good left for his improvement as was already taken up needed not complain, ought not to meddle with what was already improved by another's labour; if he did 'tis plain he desired the benefit of another's pains, which he had no right to, and not the ground which God had given him, in common with others, to labour on, and whereof there was as good left as that already possessed, and more than he knew what to do with, or his industry could reach to.

Nor is it so strange as perhaps before consideration, it may appear, that the property of labour should be able to overbalance the community of land, for 'tis labour indeed that puts the difference of value on every thing; and let any one consider what the difference is between an acre of land planted with tobacco or sugar, sown with wheat or barley, and an acre of the same land lying in common without any husbandry upon it, and he will find that the improvement of labour makes the far greater part of the value. I think it will be but a very modest computation to say, that of the products of the earth useful to the life of man, nine-tenths are the effects of labour: nay, if we will rightly estimate things as they come to our use, and cast up the several expenses about them, what in them is purely owing to nature and what to labour, we shall find that in most of them ninety-nine hundredths are wholly to be put on the account of labour.

There cannot be a clearer demonstration of any thing than several nations of the Americans are of this, who are rich in land and poor in all the comforts of life; whom nature, having furnished as liberally as any other people with the materials of plenty, *i.e.*, a fruitful soil, apt to produce in abundance what might serve for food, raiment, and delight; yet, for want of improving it by labour, have not one hundredth part of the conveniences we enjoy. And a king of a large and fruitful territory there feeds, lodges, and is clad worse than a day labourer in England.

From all which it is evident, that though the things of nature are given in common, man (by being master of himself, and proprietor of his own person, and the actions or labour of it) had still in himself the great foundation of property; and that which made up the great part of what he applied to the support or comfort of his being, when invention and arts had improved the conveniences of life, was perfectly his own, and did not belong in common to others.

Thus labour, in the beginning, gave a right of property, wherever any one was pleased to employ it, upon what was common, which remained a long while, the far greater part, and is yet more than mankind makes use of. Men at first, for the most part, contented themselves with what unassisted nature offered to their necessities, and though afterwards, in some parts of the world, where the increase of people and stock, with the use of money, had made land scarce, and so of some value, the several communities settled the bounds of their distinct territories, and, by laws, within themselves, regulated the properties of the private men of their society, and so, by compact and agreement, settled the property which labour and industry began; and the leagues that have been made between several states and kingdoms, either expressly or tacitly disowning all claim and right to the land in the other's possession, have, by common consent, given up their pretences to their natural common right,

which originally they had to those countries; and so have, by positive agreement, settled a property amongst themselves, in distinct parts of the world; yet there are still great tracts of ground to be found, which the inhabitants thereof, not having joined with the rest of mankind in the consent of the use of their common money, lie waste, and are more than the people who dwell on it, do, or can make use of, and so still lie in common; though this can scarce happen amongst that part of mankind that have consented to the use of money.

The greatest part of things really useful to the life of man, and such as the necessity of subsisting made the first commoners of the world look after, as it doth the Americans now, are generally things of short duration, such as, if they are not consumed by use, will decay and perish of themselves. Gold, silver, and diamonds are things that fancy or agreement hath put the value on, more than real use and the necessary support of life. Now of those good things which nature hath provided in common, every one had a right (as hath been said) to as much as he could use, and had a property in all that he could effect with his labour; all that his industry could extend to, to alter from the state nature had put it in, was his. He that gathered a hundred bushels of acorns or apples had thereby a property in them, they were his goods as soon as gathered. He was only to look that he used them before they spoiled, else he took more than his share, and robbed others. And, indeed, it was a foolish thing, as well as dishonest, to hoard up more than he could make use of. If he gave away a part to any body else, so that it perished not uselessly in his possession, these he also made use of. And if he also bartered away plums that would have rotted in a week, for nuts that would last good for his eating a whole year, he did no injury; he wasted not the common stock; destroyed no part of the portion of goods that belonged to others, so long as nothing perished uselessly in his hands. Again, if he would give his nuts for a piece of metal, pleased with its

colour, or exchange his sheep for shells, or wool for a sparkling pebble or a diamond, and keep those by him all his life, he invaded not the right of others; he might heap up as much of these durable things as he pleased; the exceeding of the bounds of his just property not lying in the largeness of his possession, but the perishing of anything uselessly in it.

And thus came in the use of money, some lasting thing that men might keep without spoiling, and that, by mutual consent, men would take in exchange for the truly useful but perishable supports of life.

And as different degrees of industry were apt to give men possessions in different proportions, so this invention of money gave them the opportunity to continue and enlarge them. For supposing an island, separate from all possible commerce with the rest of the world, wherein there were but a hundred families, but there were sheep, horses, and cows, with other useful animals, wholesome fruits, and land enough for corn for a hundred thousand times as many, but nothing in the island, either because of its commonness or perishableness, fit to supply the place of money. What reason could any one have there to enlarge his possessions beyond the use of his family, and a plentiful supply to its consumption, either in what their own industry produced, or they could barter for like perishable, useful commodities with others? Where there is not something both lasting and scarce, and so valuable to be hoarded up, there men will not be apt to enlarge their possessions of land, were it never so rich, never so free for them to take. For I ask, what would a man value ten thousand or an hundred thousand acres of excellent land, ready cultivated and well stocked, too, with cattle, in the middle of the inland parts of America, where he had no hopes of commerce with other parts of the world, to draw money to him by the sale of the product? It would not be worth the enclosing, and we should see him give up again to the wild common of nature whatever was more than would supply the conveniences of life, to be had there for him and his family.

Thus, in the beginning, all the world was America, and more so than that is now; for no such thing as money was any where known. Find out something that hath the use and value of money amongst his neighbours, you shall see the same man will begin presently to enlarge his possessions.

But since gold and silver, being little useful to the life of man, in proportion to food, raiment, and carriage, has its value only from the consent of men, whereof labour yet makes in great part the measure, it is plain that the consent of men have agreed to a disproportionate and unequal possession of the earth, I mean out of the bounds of society and compact; for in governments the laws regulate it: they having, by consent, found out and agreed in a way how a man may rightfully, and without injury, possess more than he himself can make use of by receiving gold and silver, which may continue long in a man's possession without decaying for the overplus, and agreeing those metals should have a value.

POLITICAL SOCIETY

Man being born, as has been proved, with a title to perfect freedom and an uncontrolled enjoyment of all the rights and privileges of the law of nature, equally with any other man, or number of men in the world, hath by nature a power not only to preserve his property, that is, his life, liberty, and estate, against the injuries and attempts of other men, but to judge of and punish the breaches of that law in others, as he is persuaded the offence deserves, even with death itself, in crimes where the heinousness of the fact, in his opinion, requires it. But because no political society can be, nor subsist, without having in itself the power to preserve the property, and in order thereunto punish the offences of all those of that society: there, and there only, is political society, where every one of the members hath quitted this natural power, resigned it up into the hands of the community in all cases that exclude him not from appealing for protection to the law established by it. And thus all private

judgement of every particular member being excluded, the community comes to be umpire, by settled standing rules; indifferent, and the same to all parties: And by men having authority from the community for the execution of those rules, decides all the differences that may happen between any members of that society concerning any matter of right, and punishes those offences which any member hath committed against the society with such penalties as the law has established; whereby it is easy to discern who are, and who are not, in political society together. Those who are united into one body, and have a common established law and judicature to appeal to, with authority to decide controversies between them and punish offenders, are in civil society one with another; but those who have no such common appeal, I mean on earth, are still in the state of nature, each being, where there is no other, judge for himself and executioner; which is, as I have before showed it, the perfect state of nature.

And thus the commonwealth comes by a power to set down what punishment shall belong to the several transgressions they think worthy of it, committed amongst the members of that society (which is the power of making laws) as well as it has the power to punish any injury done unto any of its members by anyone that is not of it (which is the power of war and peace); and all this for the preservation of the property of all the members of that society, as far as is possible. But though every man entered into society has quitted his power to punish offences against the law of nature in prosecution of his own private judgement, yet with the judgement of offences which he has given up to the legislative in all cases where he can appeal to the magistrate, he has given up a right to the commonwealth to employ his force for the execution of the judgements of the commonwealth whenever he shall be called to it, which, indeed, are his own judgements, they being made by himself or his representative. And herein we have the original of the legislative and executive power of civil society, which is to

judge by standing laws how far offences are to be punished when committed within the commonwealth; and also by occasional judgements founded on the present circumstances of the fact, how far injuries from without are to be vindicated, and in both these to employ all the force of all the members when there shall be need.

Wherever therefore any number of men are so united into one society as to quit every one his executive power of the law of nature, and to resign it to the public, there and there only is a political or civil society. And this is done whenever any number of men, in the state of nature, enter into society to make one people, one body politic under one supreme government: or else when anyone joins himself to and incorporates with any government already made. For hereby he authorizes the society, or which is all one, the legislative thereof, to make laws for him as the public good of the society shall require, to the execution whereof his own assistance (as to his own decrees) is due. And this puts men out of a state of nature into that of a commonwealth, by setting up a judge on earth with authority to determine all the controversies and redress the injuries that may happen to any member of the commonwealth; which judge is the legislative or magistrates appointed by it. And wherever there are any number of men, however associated, that have no such decisive power to appeal to, there they are still in the state of nature.

And hence it is evident that absolute monarchy, which by some men is counted for the only government in the world, is indeed inconsistent with civil society, and so can be no form of civil government at all. For the end of civil society being to avoid and remedy those inconveniences of the state of nature which necessarily follow from every man's being judge in his own case, by setting up a known authority, to which everyone of that society may appeal upon any injury received, or controversy that may arise, and which everyone of the society ought to obey, wherever any persons are who have not such an authority

to appeal to, for the decision of any difference between them there, those persons are still in the state of nature. And so is every absolute prince in respect of those who are under his *dominion*.

For he being supposed to have all, both legislative and executive, power in himself alone, there is no judge to be found, no appeal lies open to anyone, who may fairly and indifferently, and with authority decide, and from whence relief and redress may be expected of any injury or inconveniency that may be suffered from him, or by his order. So that such a man, however entitled, Czar, or Grand Signior, or how you please, is as much in the state of nature, with all under his dominion, as he is with the rest of mankind. For wherever any two men are, who have no standing rule and common judge to appeal to on earth, for the determination of controversies of right betwixt them, there they are still in the state of nature, and under all the inconveniences of it, with only this woeful difference to the subject, or rather slave of an absolute prince. That whereas, in the ordinary state of nature, he has a liberty to judge of his right, and according to the best of his power, to maintain it; but whenever his property is invaded by the will and order of his monarch, he has not only no appeal, as those in society ought to have, but, as if he were degraded from the common state of rational creatures, is denied a liberty to judge of, or defend his right, and so is exposed to all the misery and inconveniences that a man can fear from one, who being in the unrestrained state of nature, is yet corrupted with flattery and armed with power.

THE END OF GOVERNMENT

If man in the state of nature be so free as has been said; if he be absolute lord of his own person and possessions; equal to the greatest and subject to no body, why will he part with his freedom? Why will he give up this empire, and subject himself to the dominion and control of any other power? To which 'tis obvious to answer, that though in the state of nature

he hath such a right, yet the enjoyment of it is very uncertain and constantly exposed to the invasion of others; for all being kings as much as he, every man his equal, and the greater part no strict observers of equity and justice, the enjoyment of the property he has in this state is very unsafe, very unsecure. This makes him willing to quit this condition which, however free, is full of fears and continual dangers; and 'tis not without reason that he seeks out and is willing to join in society with others who are already united, or have a mind to unite for the mutual preservation of their lives, liberties, and estates, which I call by the general name, property.

The great and chief end therefore, of men's uniting into commonwealths, and putting themselves under government, is the preservation of their property; to which in the state of nature there are many things wanting.

First, There wants an established, settled, known law, received and allowed by common consent to be the standard of right and wrong, and the common measure to decide all controversies between them. For though the law of nature be plain and intelligible to all rational creatures, yet men, being biased by their interest, as well as ignorant for want of study of it, are not apt to allow of it as a law binding to them in the application of it to their particular cases.

Secondly, In the state of nature there wants a known and indifferent judge, with authority to determine all differences according to the established law. For everyone in that state being both judge and executioner of the law of nature, men being partial to themselves, passion and revenge is very apt to carry them too far, and with too much heat in their own cases, as well as negligence and unconcernedness, make them too remiss in other men's.

Thirdly, In the state of nature there often wants power to back and support the sentence when right, and to give it due execution. They who by any injustice offended, will seldom fail where they are able by force to make good their injustice. Such resistance many times makes

the punishment dangerous, and frequently destructive to those who attempt it.

Thus mankind, notwithstanding all the privileges of the state of nature, being but in an ill condition while they remain in it, are quickly driven into society. Hence it comes to pass, that we seldom find any number of men live any time together in this state. The inconveniences that they are therein exposed to by the irregular and uncertain exercise of the power every man has of punishing the transgressions of others, make them take sanctuary under the established laws of government, and therein seek the preservation of their property. 'Tis this makes them so willingly give up every one his single power of punishing to be exercised by such alone as shall be appointed to it amongst them, and by such rules as the community, or those authorized by them to that purpose, shall agree on. And in this we have the original right and rise of both the legislative and executive power as well as of the governments and societies themselves.

THE LIMITS OF GOVERNMENT

The great end of men's entering into society being the enjoyment of their properties in peace and safety, and the great instrument and means of that being the laws established in that society, the first and fundamental positive law of all commonwealths is the establishing of the legislative power; as the first and fundamental natural law, which is to govern even the legislative itself, is the preservation of the society, and (as far as will consist with the public good) of every person in it. This legislative is not only the supreme power of the commonwealth, but sacred and unalterable in the hands where the community have once placed it; nor can any edict of anybody else, in what form soever conceived, or by what power soever backed, have the force and obligation of a law which has not its sanction from that legislative which the public has chosen and appointed; for without this the law could not have that which is absolutely necessary to its being a law, the consent of the society, over whom no

body can have a power to make laws but by their own consent and by authority received from them; and therefore all the obedience, which by the most solemn ties anyone can be obliged to pay, ultimately terminates in this supreme power, and is directed by those laws which it enacts. Nor can any oaths to any foreign power whatsoever, or any domestic subordinate power, discharge any member of the society from his obedience to the legislative, acting pursuant to their trust, nor oblige him to any obedience contrary to the laws so enacted or farther than they do allow, it being ridiculous to imagine one can be tied ultimately to obey any power in the society which is not the supreme.

Though the legislative, whether placed in one or more, whether it be always in being or only by intervals, though it be the supreme power in every commonwealth, yet

First, It is not, nor can possibly be, absolutely arbitrary over the lives and fortunes of the people. For it being but the joint power of every member of the society given up to that person or assembly which is legislator, it can be no more than those persons had in a state of nature before they entered into society, and gave it up to the community. For nobody can transfer to another more power than he has in himself, and nobody has an absolute arbitrary power over himself, or over any other, to destroy his own life, or take away the life or property of another. A man, as has been proved, cannot subject himself to the arbitrary power of another; and having, in the state of nature, no arbitrary power over the life, liberty, or possession of another, but only so much as the law of nature gave him for the preservation of himself and the rest of mankind, this is all he doth, or can give up to the commonwealth, and by it to the legislative power, so that the legislative can have no more than this. Their power in the utmost bounds of it is limited to the public good of the society. It is a power that hath no other end but preservation, and therefore can never have a right to destroy, enslave, or designedly to impoverish the subjects; the obligations of the law of nature cease not

in society, but only in many cases are drawn closer, and have, by human laws, known penalties annexed to them to enforce their observation. Thus the law of nature stands as an eternal rule to all men, legislators as well as others. The rules that they make for other men's actions must, as well as their own and other men's actions, be conformable to the law of nature, *i.e.* to the will of God, of which that is a declaration, and the fundamental law of nature being the preservation of mankind, no human sanction can be good or valid against it.

Secondly, The legislative or supreme authority cannot assume to itself a power to rule by extemporary arbitrary decrees, but is bound to dispense justice and decide the rights of the subject by promulgated standing laws, and known authorized judges. For the law of nature being unwritten, and so nowhere to be found but in the minds of men, they who, through passion or interest, shall miscite or misapply it, cannot so easily be convinced of their mistake where there is no established judge; and so it serves not as it ought, to determine the rights and fence the properties of those that live under it, especially where everyone is judge, interpreter, and executioner of it too, and that in his own case; and he that has right on his side, having ordinarily but his own single strength, hath not force enough to defend himself from injuries or to punish delinquents. To avoid these inconveniencies which disorder men's properties in the state of nature, men unite into societies that they may have the united strength of the whole society to secure and defend their properties, and may have standing rules to bound it by which everyone may know what is his. To this end it is that men give up all their natural power to the society they enter into, and the community put the legislative power into such hands as they think fit, with this trust, that they shall be governed by declared laws, or else their peace, quiet, and property will still be at the same uncertainty as it was in the state of nature.

Absolut arbitrary power, or governing

without settled standing laws, can neither of them consist with the ends of society and government, which men would not quit the freedom of the state of nature for, and tie themselves up under, were it not to preserve their lives, liberties, and fortunes, and by stated rules of right and property to secure their peace and quiet. It cannot be supposed that they should intend, had they a power so to do, to give to any one or more an absolute arbitrary power over their persons and estates, and put a force into the magistrate's hand to execute his unlimited will arbitrarily upon them; this were to put themselves into a worse condition than the state of nature, wherein they had a liberty to defend their right against the injuries of others, and were upon equal terms of force to maintain it, whether invaded by a single man or many in combination. Whereas by supposing they have given up themselves to the absolute arbitrary power and will of a legislator, they have disarmed themselves, and armed him to make a prey of them when he pleases; he being in a much worse condition that is exposed to the arbitrary power of one man who has the command of a hundred thousand than he that is exposed to the arbitrary power of a hundred thousand single men, nobody being secure, that his will who has such a command is better than that of other men, though his force be a hundred thousand times stronger. And, therefore, whatever form the commonwealth is under, the ruling power ought to govern by declared and received laws, and not by extemporary dictates and undetermined resolutions, for then mankind will be in a far worse condition than in the state of nature if they shall have armed one or a few men with the joint power of a multitude, to force them to obey at pleasure the exorbitant and unlimited decrees of their sudden thoughts, or unrestrained, and till that moment, unknown wills, without having any measures set down which may guide and justify their actions. For all the power the government has, being only for the good of the society, as it ought not to be arbitrary and at pleasure, so it

ought to be exercised by established and promulgated laws, that both the people may know their duty, and be safe and secure within the limits of the law, and the rulers, too, kept within their due bounds, and not to be tempted by the power they have in their hands to employ it to purposes, and by such measures as they would not have known, and own not willingly.

Thirdly, The supreme power cannot take from any man any part of his property without his own consent. For the preservation of property being the end of government, and that for which men enter into society, it necessarily supposes and requires that the people should have property, without which they must be supposed to lose that by entering into society which was the end for which they entered into it; too gross an absurdity for any man to own. Men therefore in society having property, they have such a right to the goods, which by the law of the community are theirs, that nobody hath a right to their substance, or any part of it, from them without their own consent; without this they have no property at all. For I have truly no property in that which another can by right take from me when he pleases against my consent. Hence it is a mistake to think that the supreme or legislative power of any commonwealth can do what it will, and dispose of the estates of the subject arbitrarily, or take any part of them at pleasure. This is not much to be feared in governments where the legislative consists wholly or in part in assemblies which are variable, whose members upon the dissolution of the assembly are subjects under the common laws of their country, equally with the rest. But in governments where the legislative is in one lasting assembly, always in being, or in one man as in absolute monarchies, there is danger still, that they will think themselves to have a distinct interest from the rest of the community, and so will be apt to increase their own riches and power by taking what they think fit from the people. For a man's property is not at all secure, though there be good

and equitable laws to set the bounds of it between him and his fellow-subjects, if he who commands those subjects have power to take from any private man what part he pleases of his property, and use and dispose of it as he thinks good.

But government, into whatsoever hands it is put, being as I have before showed, entrusted with this condition, and for this end, that men might have and secure their properties, the prince or senate, however it may have power to make laws for the regulating of property between the subjects one amongst another, yet can never have a power to take to themselves the whole, or any part of the subjects' property, without their own consent; for this would be in effect to leave them no property at all. And to let us see that even absolute power, where it is necessary, is not arbitrary by being absolute, but is still limited by that reason, and confined to those ends which required it in some cases to be absolute, we need look no farther than the common practice of martial discipline. For the preservation of the army, and in it of the whole commonwealth, requires an absolute obedience to the command of every superior officer, and it is justly death to disobey or dispute the most dangerous or unreasonable of them; but yet we see that neither the sergeant that could command a soldier to march up to the mouth of a cannon, or stand in a breach where he is almost sure to perish, can command that soldier to give him one penny of his money; nor the general that can condemn him to death for deserting his post, or not obeying the most desperate orders, cannot yet with all his absolute power of life and death dispose of one farthing of that soldier's estate, or seize one jot of his goods; whom yet he can command anything, and hang for the least disobedience. Because such a blind obedience is necessary to that end for which the commander has his power, *viz.* the preservation of the rest, but the disposing of his goods has nothing to do with it.

'Tis true, governments cannot be supported without great charge, and 'tis fit everyone who enjoys his share of the pro-

tection should pay out of his estate his proportion for the maintenance of it. But still it must be with his own consent, *i.e.* the consent of the majority, giving it either by themselves or their representatives chosen by them; for if anyone shall claim a power to lay and levy taxes on the people by his own authority, and without such consent of the people, he thereby invades the fundamental law of property, and subverts the end of government. For what property have I in that which another may by right take when he pleases himself?

Fourthly, The legislative cannot transfer the power of making laws to any other hands, for it being but a delegated power from the people, they who have it cannot pass it over to others. The people alone can appoint the form of the commonwealth, which is by constituting the legislative, and appointing in whose hands that shall be. And when the people have said, We will submit, and be governed by laws made by such men, and in such forms, nobody else can say other men shall make laws for them; nor can they be bound by any laws but such as are enacted by those whom they have chosen and authorized to make laws for them. The power of the legislative being derived from the people by a positive voluntary grant and institution, can be no other than what that positive grant conveyed, which being only to make laws, and not to make legislators, the legislative can have no power to transfer their authority of making laws, and place it in other hands.

These are the bounds which the trust that is put in them by the society and the law of God and nature have set to the legislative power of every commonwealth, in all forms of government.

First, They are to govern by promulgated established laws, not to be varied in particular cases, but to have one rule for rich and poor, for the favourite at Court, and the countryman at plough.

Secondly, These laws also ought to be designed for no other end ultimately but the good of the people.

Thirdly, They must not raise taxes on the property of the people without the

consent of the people given by themselves or their deputies. And this properly concerns only such governments where the legislative is always in being, or at least where the people have not reserved any part of the legislative to deputies, to be from time to time chosen by themselves.

Fourthly, The legislative neither must nor can transfer the power of making laws to anybody else, or place it anywhere but where the people have.

THE RIGHT TO REBEL

The reason why men enter into society is the preservation of their property; and the end why they choose and authorize a legislative is that there may be laws made, and rules set, as guards and fences to the properties of all the members of the society, to limit the power and moderate the dominion of every part and member of the society. For since it can never be supposed to be the will of the society that the legislative should have a power to destroy that which every one designs to secure by entering into society, and for which the people submitted themselves to legislators of their own making: whenever the legislators endeavour to take away and destroy the property of the people, or to reduce them to slavery under arbitrary power, they put themselves into a state of war with the people, who are thereupon absolved from any farther obedience, and are left to the common refuge which God hath provided for all men against force and violence. Whosoever therefore the legislative shall transgress this fundamental rule of society, and either by ambition, fear, folly, or corruption, endeavour to grasp themselves, or put into the hands of any other, an absolute power over the lives, liberties, and estates of the people, by this breach of trust they forfeit the power the people had put into their hands for quite contrary ends, and it devolves to the people; who have a right to resume their original liberty, and by the establishment of a new legislative (such as they shall think fit), provide for their own safety and security, which is the end

for which they are in society. What I have said here concerning the legislative in general holds true also concerning the supreme executor, who having a double trust put in him, both to have a part in the legislative and the supreme execution of the law, acts against both, when he goes about to set up his own arbitrary will as the law of the society. He acts also contrary to his trust when he employs the force, treasure, and offices of the society to corrupt the representatives and gain them to his purposes, when he openly pre-engages the electors, and prescribes, to their choice, such whom he has, by solicitations, threats, promises, or otherwise, won to his designs, and employs them to bring in such who have promised beforehand what to vote and what to enact. Thus to regulate candidates and electors, and new model the ways of election, what is it but to cut up the government by the roots, and poison the very fountain of public security? For the people having reserved to themselves the choice of their representatives as the fence to their properties, could do it for no other end but that they might always be freely chosen, and so chosen, freely act and advise as the necessity of the commonwealth and the public good should, upon examination and mature debate, be judged to require. This, those who give their votes before they hear the debate, and have weighed the reasons on all sides, are not capable of doing. To prepare such an assembly as this, and endeavour to set up the declared abettors of his own will, for the true representatives of the people, and the law-makers of the society, is certainly as great a breach of trust, and as perfect a declaration of a design to subvert the government, as is possible to be met with. To which, if one shall add rewards and punishments visibly employed to the same end, and all the arts of perverted law made use of to take off and destroy all that stand in the way of such a design, and will not comply and consent to betray the liberties of their country, 'twill be past doubt what is doing. What power they ought to have in the society who thus employ it contrary to the trust went

along with it in its first institution, is easy to determine; and one cannot but see that he who has once attempted any such thing as this cannot any longer be trusted.

To this, perhaps, it will be said, that the people being ignorant and always discontented, to lay the foundation of government in the unsteady opinion and uncertain humour of the people, is to expose it to certain ruin; and no government will be able long to subsist if the people may set up a new legislative whenever they take offence at the old one. To this I answer, quite the contrary. People are not so easily got out of their old forms as some are apt to suggest. They are hardly to be prevailed with to amend the acknowledged faults in the frame they have been accustomed to. And if there be any original defects, or adventitious ones introduced by time or corruption, 'tis not an easy thing to get them changed, even when all the world sees there is an opportunity for it. This slowness and aversion in the people to quit their old constitutions has in the many revolutions [that] have been seen in this kingdom, in this and former ages, still kept us to, or after some interval of fruitless attempts, still brought us back again to our old legislative king, lords and commons; and whatever provocations have made the crown be taken from some of our princes' heads, they never carried the people so far as to place it in another line.

But 'twill be said, this hypothesis lays a ferment for frequent rebellion. To which I answer:

First, No more than any other hypothesis. For when the people are made miserable, and find themselves exposed to the ill usage of arbitrary power; cry up their governors as much as you will for sons of *Jupiter*, let them be sacred and divine, descended or authorized from Heaven; give them out for whom or what you please, the same will happen. The people generally ill treated, and contrary to right, will be ready upon any occasion to ease themselves of a burden that sits heavy upon them. They will wish and seek for the opportunity, which in the change, weakness, and accidents of

human affairs, seldom delays long to offer itself. He must have lived but a little while in the world, who has not seen examples of this in his time; and he must have read very little who cannot produce examples of it in all sorts of governments in the world.

Secondly, I answer, such revolutions happen not upon every little mismanagement in public affairs. Great mistakes in the ruling part, many wrong and inconvenient laws, and all the slips of human frailty will be borne by the people without mutiny or murmur. But if a long train of abuses, prevarications, and artifices, all tending the same way, make the design visible to the people, and they cannot but feel what they lie under, and see whither they are going, 'tis not to be wondered that they should then rouse themselves, and endeavour to put the rule into such hands which may secure to them the ends for which government was at first erected, and without which, ancient names and specious forms are so far from being better, that they are much worse than the state of nature or pure anarchy; the inconveniencies being all as great and as near, but the remedy farther off and more difficult.

Thirdly, I answer, That this power in the people of providing for their safety anew by a new legislative when their legislators have acted contrary to their trust by invading their property, is the best fence against rebellion, and the probabest means to hinder it. For rebellion being an opposition, not to persons, but authority, which is founded only in the constitutions and laws of the government; those, whoever they be, who by force break through, and by force justify their violation of them, are truly and properly rebels. For when men, by entering into society and civil government, have excluded force, and introduced laws for the preservation of property, peace, and unity amongst themselves; those who set up force again in opposition to the laws, do *rebellare*—that is, bring back again the state of war, and are properly rebels, which they who are in power, by the pretence they have to authority, the temptation of force they have

in their hands, and the flattery of those about them being likeliest to do, the properest way to prevent the evil is to shew them the danger and injustice of it who are under the greatest temptation to run into it.

In both the forementioned cases, when either the legislative is changed, or the legislators act contrary to the end for which they were constituted, those who are guilty are guilty of rebellion. For if any one by force takes away the established legislative of any society, and the laws by them made, pursuant to their trust, he thereby takes away the umpirage which every one had consented to for a peaceable decision of all their controversies, and a bar to the state of war amongst them. They who remove or change the legislative take away this decisive power, which no body can have but by the appointment and consent of the people; and so destroying the authority which the people did, and no body else can set up, and introducing a power which the people hath not authorized, actually introduce a state of war, which is that of force without authority; and thus by removing the legislative established by the society, in whose decisions the people acquiesced and united as to that of their own will, they untie the knot, and expose the people anew to the state of war. And if those, who by force take away the legislative, are rebels, the legislators themselves, as has been shown, can be no less esteemed so, when they who were set up for the protection and preservation of the people, their liberties and properties shall by force invade and endeavour to take them away; and so they putting themselves into a state of war with those who made them the protectors and guardians of their peace, are properly, and with the greatest aggravation, *rebellantes*, rebels.

But if they who say it lays a foundation for rebellion mean that it may occasion civil wars or intestine broils to tell the people they are absolved from obedience when illegal attempts are made upon their liberties or properties, and may oppose the unlawful violence of those who were their magistrates when they invade their properties, contrary to

the trust put in them; and that, therefore, this doctrine is not to be allowed, being so destructive to the peace of the world; they may as well say, upon the same ground, that honest men may not oppose robbers or pirates, because this may occasion disorder or bloodshed. If any mischief come in such cases, it is not to be charged upon him who defends his own right, but on him that invades his neighbour's. If the innocent honest man must quietly quit all he has for peace sake to him who will lay violent hands upon it, I desire it may be considered what a kind of peace there will be in the world which consists only in violence and rapine, and which is to be maintained only for the benefit of robbers and oppressors. Who would not think it an admirable peace betwixt the mighty and the mean, when the lamb, without resistance, yielded his throat to be torn by the imperious wolf? *Polyphemus's* den gives us a perfect pattern of such a peace. Such a government wherein *Ulysses* and his companions had nothing to do but quietly to suffer themselves to be devoured. And no doubt, *Ulysses*, who was a prudent man, preached up passive obedience, and exhorted them to a quiet submission by representing to them of what concernment peace was to mankind, and by showing the inconveniences might happen if they should offer to resist *Polyphemus*, who had now the power over them.

The end of government is the good of mankind; and which is best for mankind, that the people should be always exposed to the boundless will of tyranny, or that the rulers should be sometimes liable to be opposed when they grow exorbitant in the use of their power, and employ it for the destruction, and not the preservation, of the properties of their people?

Nor let any one say that mischief can arise from hence as often as it shall please a busy head or turbulent spirit to desire the alteration of the government. 'Tis true such men may stir whenever they please, but it will be only to their own just ruin and perdition. For till the mischief be grown general, and the ill designs of the rulers become visible, or their attempts sensible to the greater part,

the people, who are more disposed to suffer than right themselves by resistance, are not apt to stir. The examples of particular injustice or oppression of here and there an unfortunate man moves them not. But if they universally have a persuasion grounded upon manifest evidence that designs are carrying on against their liberties, and the general course and tendency of things cannot but give them strong suspicions of the evil intention of their governors, who is to be blamed for it? Who can help it if they, who might avoid it, bring themselves into this suspicion? Are the people to be blamed if they have the sense of rational creatures, and can think of things no otherwise than as they find and feel them? And is it not rather their fault who put things in such a posture that they would not have them thought as they are? I grant that the pride, ambition, and turbulence of private men have sometimes caused great disorders in commonwealths, and factions have been fatal to states and kingdoms. But whether the mischief has oftener begun in the people's wantonness, and a desire to cast off the lawful authority of their rulers, or in the rulers' insolence and endeavours to get and exercise an arbitrary power over their people, whether oppression or disobedience gave the first rise to the disorder, I leave it to impartial history to determine. This I am sure, whoever, either ruler or subject, by force goes about to invade the rights of either prince or people, and lays the foundation for overturning the constitution and frame of any just government, he is guilty of the greatest crime I think a man is capable of, being to answer for all those mischiefs of blood, rapine, and desolation, which the breaking to pieces of governments bring on a country; and he who does it is justly to be esteemed the common enemy and pest of mankind, and is to be treated accordingly.

That subjects or foreigners attempting by force on the properties of any people may be resisted with force is agreed on all hands; but that magistrates doing the same thing may be resisted, has of late been denied; as if those who had the greatest privileges and advantages by the

law had thereby a power to break those laws by which alone they were set in a better place than their brethren; whereas their offence is thereby the greater, both as being ungrateful for the greater share they have by the law, and breaking also that trust which is put into their hands by their brethren.

Whosoever uses force without right, as every one does in society who does it without law, puts himself into a state of war with those against whom he so uses it, and in that state all former ties are cancelled, all other rights cease, and every one has a right to defend himself, and to resist the aggressor.

Here 'tis like the common question will be made, Who shall be judge whether the prince or legislative act contrary to their trust? This, perhaps, ill-affected and factious men may spread amongst the people, when the prince only makes use of his due prerogative. To this I reply, The people shall be judge; for who shall be judge whether his trustee or deputy acts well and according to the trust reposed in him, but he who deposes him and must, by having deposed him, have still a power to discard him when he fails in his trust? If this be reasonable in particular cases of private men, why should it be otherwise in that of the greatest moment, where the welfare of millions is concerned and also where the civil, if not prevented, is greater, and the redress very difficult, dear, and dangerous?

But, farther, this question, (Who shall be judge?) cannot mean that there is no judge at all. For where there is no jurisdiction on earth to decide controversies amongst men, God in Heaven is judge. He alone, 'tis true, is judge of the right. But every man is judge for himself, as in all other cases so in this, whether another hath put himself into a state of war with him, and whether he should appeal to the supreme Judge, as *Jephtha* did.

If a controversy arise betwixt a prince and some of the people in a matter where the law is silent or doubtful, and the thing be of great consequence, I should

think the proper umpire, in such a case, should be the body of the people. For in such cases where the prince hath a trust reposed in him, and is dispensed from the common, ordinary rules of the law; there, if any men find themselves aggrieved, and think the prince acts contrary to, or beyond that trust, who so proper to judge as the body of the people (who at first lodged that trust in him) how far they meant it should extend? But if the prince, or whoever they be in the administration, decline that way of determination, the appeal then lies nowhere but to Heaven. Force between either persons, who have no known superior on earth, or which permits no appeal to a judge on earth, being properly a state of war, wherein the appeal lies only to Heaven; and in that state the injured party must judge for himself when he will think fit to make use of that appeal and put himself upon it.

To conclude, The power that every individual gave the society when he entered into it, can never revert to the individuals again, as long as the society lasts, but will always remain in the community; because without this there can be no community, no commonwealth, which is contrary to the original agreement; so also when the society hath placed the legislative in any assembly of men, to continue in them and their successors, with direction and authority for providing such successors, the legislative can never revert to the people whilst that government lasts; because, having provided a legislative with power to continue for ever, they have given up their political power to the legislative, and cannot resume it. But if they have set limits to the duration of their legislative, and made this supreme power in any person or assembly only temporary; or else when, by the miscarriages of those in authority, it is forfeited; upon the forfeiture of their rulers or at the determination of the time set, it reverts to the society, and the people have a right to act as supreme, and continue the legislative in themselves or place it in a new form, or new hands, as they think good.

MONTESQUIEU

The seventeenth century was dominated by the struggle for sovereignty between monarchy and parliament. In England, parliamentary supremacy was decisively asserted in the Revolution of 1688. In France, the monarchy was able to overcome all resistance to its power, and after 1614 the Estates General did not meet until 1789—and in 1789 it was too late. The fifty-four years of Louis XIV's personal government (1661–1715) set a standard for royal absolutism in Europe; France was the acknowledged mistress in the arts and letters as well as the first power in population and wealth.

Yet the cost of the glorious rule of *le grand monarque* was immense. In 1685 he revoked the Edict of Nantes, which had granted religious toleration to Protestants a century earlier (1598). Many Protestants were thus forced to leave France. As the Huguenots had been a vigorous element in French trade and industry, their emigration contributed to the growing economic malaise and bankruptcy that threatened France during the latter part of Louis XIV's regime.

Politically, the revocation of the Edict of Nantes was no less disastrous to French clericalism and absolutism, because it was largely through the writings of the Huguenot refugees in England that France—and through the French language the educated classes all over Europe—acquired a direct knowledge of the English Revolution of 1688 and its underlying liberal philosophy. In science, the English influence was left most directly through the work of Newton; in philosophy and political thought, Locke's name dominated eighteenth-century France. Locke's *Essay Concerning Human Understanding* stressed experience as the sole source of knowledge and thus indirectly opposed a scheme of life that emphasized authority rather than reason and observation. More directly, Locke's *Two Treatises of Government* and *Letters Concerning Toleration* showed the outlines of a new social order in which despotic kingship by divine right and clerical control of thought and education were replaced by political liberalism and intellectual individualism.

Voltaire (1694–1778) spent three years in England, from 1726 to 1729, and his *Letters on the English* (1734) showed the French—and European—reading

public a land of freedom and common sense, secular in outlook, tolerant in religion, and respectful of the rule of law. Voltaire was favorably impressed with the rising social prestige of the middle classes in England and with the individual freedom that resulted from wealth earned in trade and commerce. Like most of the French eighteenth-century *philosophes*, Voltaire was satisfied with a political order that secured stability of property and freedom of individual thought and opinion; democratic rule by the people was still an ideal that was not seriously discussed before the latter part of the century.

During the year of Voltaire's return to France, another distinguished French writer, Montesquieu, went to England to see things for himself. Charles-Louis de Secondat, Baron de la Brède et de Montesquieu (1689–1755), came from a noble family of good standing. At one time his family had accepted Protestantism but later abandoned it. Montesquieu received, as was customary at the time, a classical education, and from his Latin studies he derived a deep affection for Stoicism that he retained for the rest of his life. Imbued with the religious tolerance of the Stoics, he wrote, at the age of twenty-two, an essay in which he maintained that the pagan philosophers of antiquity did not deserve eternal damnation. Montesquieu was trained in law and early became associated with the administration of justice in Bordeaux, his parental castle and birthplace being only a few miles from this flourishing city. In 1716 his uncle died and bequeathed to him the office of chief justice. He held that office for only ten years, and then resigned, in order to devote himself entirely to his favorite activity of writing.

By this time Montesquieu had become a European celebrity. In 1721, when he was thirty-two, he had published (anonymously in Geneva) the *Persian Letters*, which had the effect of a literary bombshell in the Parisian *salons*. Through the letters of two imaginary Persian visitors to Paris, Montesquieu showed the reactions of unprejudiced observers to the irrationalities and imperfections of the western world, and the device of two fictional Persians enabled him to comment on taboos that would otherwise be too delicate to handle. The success of the book was increased by the detailed observations of the foreign visitors on the love life of Paris, and the detailed reports that they in turn received from their eunuchs about their harems in Persia. Also, Montesquieu satirized the Roman Catholic Church in a manner that would have been well-nigh impossible without the disguise of the Persians. The pope is described as a magician who makes believe "that three are but one, that the bread one eats is not bread, that the wine one drinks is not wine, and a thousand similar things," and the clergy is characterized as a "society of persons who always take, and never give." In a more serious vein, the statement is made that the "Protestants will become every day richer and stronger, and the Catholics weaker."

The political satire of the *Persian Letters* was thus well couched in the anonymity of the two Persians, the ironical anticlericalism, and the comparative study of erotics in East and West. In 1726 Montesquieu was proposed—at an unusually early age—for membership in the French Academy, but King Louis XV objected. In 1728 he was able to win entry into the ranks of the "immortals" in French letters.

During the same year he set out on his travels, which took him to Austria, Hungary, Italy, Switzerland, Germany, and Holland; from Holland, in the fall of

1729, he went to England, where he stayed until the spring of 1731. As he traveled to England with the Earl of Chesterfield, British Ambassador at the Hague, he was quickly introduced to the most fashionable society in London. He was also presented at court, where he became a favorite of Queen Caroline, who was charmed by his wit and gallantry. Because of his scientific interests (in his younger years Montesquieu had composed papers on natural history, anatomy, and botany) he was elected a member of the Royal Society, then the world's leading scientific society; the close friendships he formed with some of England's foremost scientists he continued throughout the remainder of his life.

Montesquieu made a serious effort to understand English government. He attended both Houses of Parliament, took notes on debates, and met numerous politicians. He also studied the theory of British government and was a great admirer of Locke, whom he called the great instructor of mankind. Montesquieu was fully aware of the corruption of British politics at that time, and he saw other serious shortcomings. Yet his over-all impression was favorable when he compared the social and political conditions of England with those in France.

Like Voltaire, Montesquieu admired the sound common sense of the English aristocracy and middle classes. Political journalism was free and vigorous, and after the cynicism, corruption, and censorship of France the seriousness of English public life captivated him. There was more color and verve in French life, but he believed that the solidity—and often mediocrity—of England was politically more desirable than the dazzling brilliance of the Paris *salons*, in which there was no subject serious enough not to be corroded by cynicism. During his stay in England, Montesquieu made no effort to study the condition of the "lower" classes but confined himself to contacts with the upper classes and distinguished scientists. His picture of England had little relation to her poverty and rotten boroughs, because Montesquieu, like Voltaire, was more interested in political than in social or economic problems.

Montesquieu returned to France in 1731, full of ideas and projects for future books. In 1734 he published his *Considerations on the Greatness and Decline of Rome*. Roman history was a convenient starting point for his favorite theories, soon to be developed more fully. Speaking of the capacity of a state to correct its own mistakes and abuses, Montesquieu mentions Rome, Carthage, Athens, and the Italian city-republics; lamenting their shortcomings in self-analysis and self-correction, he says: "The government of England is wiser, because there is a body which examines it continuously and continuously examines itself; its errors never last long, and are often useful because of the spirit of attention they give to the people. In a word, a free government, that is, one that is always agitated, cannot be maintained if it is not capable of correction through its own laws."

Montesquieu's chief work, on which his reputation is founded, is his *Spirit of the Laws* (*De l'esprit des lois*, 1748). He had been working on it, he said, all his life; in fact, his earlier writings anticipate the main ideas of *The Spirit of the Laws*. The impact of the work was powerful both intellectually and politically. Montesquieu shared with the eighteenth-century French *philosophes*—rational, cosmopolitan humanists—their optimism and faith in human progress through reason; yet the title of the book suggests that Montesquieu, though completely of the Age of Reason, goes beyond it. He is interested in the spirit of the *laws*, not the law.

From the traditional viewpoint, the basic principles of law could be rationally ascertained, and law was characteristically thought of in universal terms. The tendency of the philosophy of natural law was to minimize actual legal differences, treat them as accidental, and as not pertaining to the essence of law. Montesquieu confines, by contrast, the concept of natural law to the state of nature, "before the establishment of society." Once mankind sets up society and government, there are three kinds of law: first, the law of nations, which applies to their mutual intercourse; second, political law, which applies to the relations between government and the governed (constitutional, public, and administrative law); third, civil law, which regulates the relations of citizens among themselves (private law, such as the law of contracts). Montesquieu makes a bow to the traditional viewpoint by saying that "law in general is the human reason, inasmuch as it governs all the inhabitants of the earth; the political and civil laws of each nation ought to be only the particular cases in which human reason is applied." But it is evident that he is interested in the particular applications of law rather than in general law.

Montesquieu outlines his program of combining rationalism (which emphasizes the universal) with the historical method (which emphasizes the uniquely individual) by describing laws as follows: "They should be relative to the climate of each country, to the quality of its soil, to its situation and extent, to the principal occupation of the natives, whether husbandmen, huntsmen, or shepherds: they should have a relation to the degree of liberty which the constitution will bear; to the religion of the inhabitants, to their inclinations, riches, numbers, commerce, manners, and customs." By indicating how laws *ought* to be made, Montesquieu retains his link with the Age of Enlightenment from which he springs. Yet he places his rationalism on the empirical basis of social institutions, history, and environment, in the light of which one cannot produce laws by following mere fancy and imagination, because "laws, in their most general significance, are the necessary relations arising from the nature of things."

This awareness of the toughness of facts gives Montesquieu's work a massive strength that has stood the test of time. Forms of government are therefore, for Montesquieu, complex combinations of physical and environmental factors, on the one hand, and of psychological motivations—ways of life—on the other. His profound remark that the "beautiful system" of the English constitution "was invented first in the woods" showed an amazing historical awareness at a time when constitutions were discussed in the light of first principles of logic and reason. Montesquieu surmised that the origins of English political life had to be searched for in the remote history of the English people rather than in a constitutional charter. Although Montesquieu was anticipated by Aristotle, Polybius, and Bodin (to mention but a few) in the institutional and environmental study of politics, none of his predecessors surpassed him in breadth of interest, detachment of observation, and balance of spirit that sympathetically comprehended the reality of the past as much as the ideal possibilities of the future.

Montesquieu's second key idea is that of the *balanced constitution*, of which the doctrine of the *separation of powers* has become politically the most influential expression. Both concepts are elaborated and illustrated in *The Spirit of the Laws* by references to English government and politics. He characterizes Eng-

land as a nation "passionately fond of liberty, because this liberty is real," willing to sacrifice its wealth, ease, and interest in defense of its freedom. Obviously alluding to the military adventurism of Louis XIV and the high respect for military virtues in the *ancien régime*, Montesquieu (though of a family that had given a number of professional officers to France) enviously notes that in England military men are regarded "as belonging to a profession which may be useful, but is often dangerous," and that civilians are more esteemed than the military.

The eighteenth century was full of colonial quarrels, particularly between France and England, and Montesquieu was attracted by the intricacies of colonial questions. He observes that English settlers introduced in the colonies their own form of government, and "raised great nations in the forests they were sent to inhabit." At the same time, Montesquieu prophetically foresaw that England, having granted a large measure of self-government to its colonies, would be the first nation to lose them. Similarly, in studying the impact of domestic institutions on foreign policy, Montesquieu thought that English statesmen, "being frequently obliged to justify their conduct before a popular council," would be forced to be "a little more honest" than statesmen who were not accountable to either parliament or public opinion.

The secret of England's freedom lay, for Montesquieu, in her system of government; as a liberal aristocrat who favored individual liberty, property, and the ancient privileges of the aristocracy, Montesquieu was impressed by the fact that the English system of government combined within itself the best features of monarchy (in the executive), aristocracy (the House of Lords as the supreme court and as part of the legislative), and democracy (in part of the legislative). Although the forms of state—monarchy, aristocracy, and democracy—were united in English government, the powers of government were separated from one another. There can be no liberty where the executive, legislative, and judicial powers are united in one person or body of persons, because such concentration is bound to result in arbitrary despotism. Montesquieu acutely noted that the English system had an additional check on despotism: the legislative itself was divided into two bodies, the House of Lords, representing the privileges of an hereditary aristocracy, and the House of Commons, representing the popular interests.

Montesquieu holds that the executive power should be in the hands of a monarch, independent of the legislative. He predicted that if the executive power "should be committed to a certain number of persons elected from the legislative body, there would be an end then of liberty." The development of cabinet government was beginning to take place in England when Montesquieu was there, but his picture of the English constitution is more the theory of 1689 than the practice of 1730. Montesquieu's fears were shared, however, by the makers of the Constitution of the United States, and the doctrine of separation of powers has resulted in the exclusion of cabinet ministers from Congress. It has therefore been maintained that the American political system of the twentieth century, in which the independence of executive and legislative from each other is still real, resembles the British constitution of the eighteenth century, in which the Crown, Lords, and Commons were balanced against one another, rather than

that of the twentieth century, in which the House of Commons has become the final arbiter.

Underlying Montesquieu's doctrine of the separation of powers is the unstated premise of the *negative state*, the state that acts primarily as a night watchman maintaining law and order, and protecting the liberty and property of the individual. As long as liberalism was imbued with the philosophy of *laissez faire*, Montesquieu was one of its apostles. As liberalism—since the early twentieth century—became increasingly oriented toward the positive state, the state of broadened scope and enlarged activity, the doctrine of separation of powers as a philosophy of governmental paralysis and do-nothing lost its erstwhile appeal. In the eighteenth century the purpose of the doctrine of separation of powers was to strengthen the popular element of government at the expense of the king. In the nineteenth century Montesquieu's formula was used by conservatives to keep—in the executive branch at least—the power of the monarch intact against demands for full democratic, popular government.

In the final analysis it is not easy to classify Montesquieu's political philosophy. In his explicit beliefs there is a curious mixture of hatred of clericalism and despotism, profound concern for individual liberty, and a strong sense of aristocratic privilege, property, and class. Similarly, the implicit hypotheses of his political theory are complex: his faith in reason, humanity, and progress mark him out as a typical representative of the Age of Enlightenment. At the same time, Montesquieu was institution-minded to the point of venerating the past, and he therefore became suspect with many *philosophes*.

This element in Montesquieu leads straight to Burke, and—by means of some distortion—to the romantic, nationalist school of thought. Montesquieu's belief that "nothing must be changed by laws which can be changed by custom and morality" differed strongly from the optimistic faith of the Age of Reason in the possibility of wholesale social change through proper legislation. Yet the peculiar mixture of history and reason, of awareness of the past and concern for the future, of objective observation and desire for reform, has made Montesquieu one of the most influential political writers of the modern age.

MONTESQUIEU

The Spirit of the Laws *

THE SOCIAL AND PHYSICAL FOUNDATIONS OF GOVERNMENT

As soon as mankind enter into a state of society they lose the sense of their weakness; equality ceases, and then commences the state of war.

Each particular society begins to feel its strength, whence arises a state of war betwixt different nations. The individuals likewise of each society become sensible of their force; hence the principal advantages of this society they endeavour to convert to their own emolument, which constitutes a state of war betwixt individuals.

These two different kinds of states give rise to human laws. Considered as inhabitants of so great a planet, which necessarily contains a variety of nations, they have laws relative to their mutual intercourse, which is what we call the *law of nations*. As members of a society that must be properly supported, they have laws relative to the governors and the governed, and this we distinguish by the name of *politic law*. They have also another sort of laws, as they stand in relation to each other; by which is understood the *civil law*.

The law of nations is naturally founded on this principle, that different nations ought in time of peace to do one

another all the good they can, and in time of war as little injury as possible, without prejudicing their real interests.

The object of war is victory; that of victory is conquest; and that of conquest, preservation. From this and the preceding principle all those rules are derived which constitute the *law of nations*.

All countries have a law of nations, not excepting the Iroquois themselves, though they devour their prisoners; for they send and receive ambassadors, and understand the rights of war and peace. The mischief is, that their law of nations is not founded on true principles.

Besides the law of nations relating to all societies, there is a polity or civil constitution for each particularly considered. No society can subsist without a form of government. "The united strength of individuals," as Gravina well observes, "constitutes what we call the body politic."

The general strength may be in the hands of a single person, or of many. Some think that nature having established paternal authority, the most natural government was that of a single person. But the example of paternal authority proves nothing. For if the power of a father be relative to a single government, that of brothers after the death of a father, and that of cousins german after the decease of brother, refer to a government of many. The political power necessarily comprehends the union of several families.

Better is it to say, that the government most conformable to nature, is that

* From Charles-Louis de Montesquieu, *The Spirit of the Laws* (1748; rev. ed., trans. Thomas Nugent, 1873).

which best agrees with the humour and disposition of the people in whose favour it is established.

The strength of individuals cannot be united without a conjunction of all their wills. "The conjunction of those wills," as Gravina again very justly observes, "is what we call the *civil state*."

Law in general is human reason, inasmuch as it governs all the inhabitants of the earth; the political and civil laws of each nation ought to be only the particular cases in which human reason is applied.

They should be adapted in such a manner to the people for whom they are framed, that it is a great chance if those of one nation suit another.

They should be relative to the nature and principle of each government; whether they form it, as may be said of politic laws; or whether they support it, as in the case of civil institutions.

They should be relative to the climate of each country, to the quality of its soil, to its situation and extent, to the principal occupation of the natives, whether husbandmen, huntsmen, or shepherds; they should have a relation to the degree of liberty which the constitution will bear; to the religion of the inhabitants, to their inclinations, riches, numbers, commerce, manners, and customs. In fine, they have relations to each other, as also to their origin, to the intent of the legislator, and to the order of things on which they are established; in all which different lights they ought to be considered.

This is what I have undertaken to perform in the following work. These relations I shall examine, since all these together constitute what I call the *Spirit of Laws*.

I have not separated the political from the civil institutions: for as I do not pretend to treat of laws, but of their spirit; and as this spirit consists in the various relations which the laws may have to different objects, it is not so much my business to follow the natural order of laws, as that of these relations and objects.

REPUBLICAN GOVERNMENT AND THE LAWS RELATIVE TO DEMOCRACY

When the body of the people is possessed of the supreme power, this is called a *democracy*. When the supreme power is lodged in the hands of a part of the people, it is then an *aristocracy*.

In a democracy the people are in some respects the sovereign, and in others the subject.

There can be no exercise of sovereignty but by their suffrages, which are their own will; now the sovereign's will is the sovereign himself. The laws therefore which establish the right of suffrage, are fundamental to this government. And indeed it is as important to regulate in a republic, in what manner, by whom, to whom, and concerning what, suffrages are to be given, as it is in a monarchy to know who is the prince, and after what manner he ought to govern.

Libanius says that at "Athens a stranger, who intermeddled in the assemblies of the people, was punished with death." This is because such a man usurped the rights of sovereignty.

It is an essential point to fix the number of citizens who are to form the public assemblies; otherwise it would be uncertain whether the whole, or only a part of the people, had given their votes. At Sparta the number was fixed to ten thousand. But Rome, designed by Providence to rise from the weakest beginnings to the highest pitch of grandeur; Rome, doomed to experience all the vicissitudes of fortune; Rome, who had sometimes all her inhabitants without her walls, and sometimes all Italy and a considerable part of the world within them: Rome, I say, never fixed the number; and this was one of the principal causes of her ruin.

The people, in whom the supreme power resides, ought to have the management of every thing within their reach: what exceeds their abilities, must be conducted by their ministers.

But they can not properly be said to have their ministers, without the power

of nominating them: it is, therefore, a fundamental maxim in this government, that the people should choose their ministers, that is, their magistrates.

They have occasion, as well as monarchs, and even more so, to be directed by a council or senate. But to have a proper confidence in these, they should have the choosing of the members; whether the election be made by themselves, as at Athens; or by some magistrate deputed for that purpose, as on certain occasions was customary at Rome.

The people are extremely well qualified for choosing those whom they are to intrust with part of their authority. They have only to be determined by things to which they cannot be strangers, and by facts that are obvious to sense. They can tell when a person has fought many battles, and been crowned with success; they are, therefore, very capable of electing a general. They can tell when a judge is assiduous in his office, gives general satisfaction, and has never been charged with bribery: this is sufficient for choosing a prætor. They are struck with the magnificence or riches of a fellow-citizen; no more is requisite for electing an edile. These are facts of which they can have better information in a public forum, than a monarch in his palace. But are they capable of conducting an intricate affair, of seizing and improving the opportunity and critical amount of action? No; this surpasses their abilities.

Should we doubt of the people's natural capacity, in respect to the discernment of merit, we need only cast an eye on the series of surprising elections made by the Athenians and Romans; which no one surely will attribute to hazard.

We know, that though the people of Rome assumed to themselves the right of raising plebeians to public offices, yet they never would exert this power; and though at Athens the magistrates were allowed, by the law of Aristides, to be elected from all the different classes of inhabitants, there never was a case, says Xenophon, that the common people petitioned for employments which could en-

danger either their security or their glory.

As most citizens have sufficient abilities to choose, though unqualified to be chosen; so the people, though capable of calling others to an account for their administration, are incapable of conducting the administration themselves.

The public business must be carried on with a certain motion, neither too quick nor too slow. But the motion of the people is always either too remiss or too violent. Sometimes with a hundred thousand arms they overturn all before them; and sometimes with a hundred thousand feet they creep like insects.

In a popular state the inhabitants are divided into certain classes. It is in the manner of making this division that great legislators have signalized themselves; and it is on this the duration and prosperity of democracy have ever depended.

Servius Tullius followed the spirit of aristocracy in the distribution of his classes. We find in Livy and in Dionysius Halicarnassus, in what manner he lodged the right of suffrage in the hands of the principal citizens. He had divided the people of Rome into a hundred and ninety-three centuries, which formed six classes; and ranking the rich, who were in smaller numbers, in the first centuries; and those in middling circumstances, who were more numerous, in the next, he flung the indigent multitude into the last; and as each century had but one vote, it was property rather than numbers that decided the elections.

Solon divided the people of Athens into four classes. In this he was directed by the spirit of democracy, his intention not being to fix those who were to choose, but such as were eligible: therefore, leaving to every citizen the right of election, he made the judges eligible from each of those four classes; but the magistrates he ordered to be chosen only out of the first three, consisting of persons of easy fortunes.

As the division of those who have a right of suffrage is a fundamental law in republics, the manner also of giving this suffrage is another fundamental.

The suffrage by *lot* is natural to democracy, as that by *choice* is to aristocracy.

The suffrage by *lot* is a method of electing that offends no one; but animates each citizen with the pleasing hope of serving his country.

Yet as this method is in itself defective, it has been the endeavour of the most eminent legislators to regulate and amend it.

Solon made a law at Athens, that military employments should be conferred by choice; but that senators and judges should be elected by *lot*.

The same legislator ordained that civil magistrates, attended with great expense, should be given by choice; and the others by *lot*.

In order, however, to amend the suffrage by *lot*, he made a rule, that none but those who presented themselves should be elected; that the person elected should be examined by judges, and that every one should have a right to accuse him if he were unworthy of the office: this participated at the same time of the suffrage by *lot*, and of that by choice. When the time of their magistracy was expired, they were obliged to submit to another judgment in regard to their conduct. Persons utterly unqualified, must have been extremely backward in giving in their names to be drawn by *lot*.

The law which determines the manner of giving suffrage, is likewise fundamental in a democracy. It is a question of some importance, whether the suffrages ought to be public or secret. Cicero observes, that the laws which rendered them secret towards the close of the republic, were the cause of its decline. But as this is differently practised in different republics, I shall offer here my thoughts concerning this subject.

The people's suffrages ought doubtless to be public; and this should be considered as a fundamental law of democracy. The lower class ought to be directed by those of higher rank, and restrained within bounds by the gravity of eminent personages. Hence, by rendering the suf-

frages secret in the Roman republic, all was lost; it was no longer possible to direct a populace that sought its own destruction. But when the body of the nobles are to vote in an aristocracy; or in a democracy, the senate; as the business is then only to prevent intrigues, the suffrages cannot be too secret.

Intriguing in a senate is dangerous; dangerous it is also in a body of nobles; but not so in the people, whose nature is to act through passion. In countries where they have no share in the government, we often see them as much inflamed on the account of an actor, as ever they could be for the welfare of the state. The misfortune of a republic is, when intrigues are at an end; which happens when the people are gained by bribery and corruption: in this case they grow indifferent to public affairs, and avarice becomes their predominant passion. Unconcerned about the government, and every thing belonging to it, they quietly wait for their hire.

It is likewise a fundamental law in democracies, that the people should have the sole power to enact laws. And yet there are a thousand occasions on which it is necessary the senate should have a power of decreeing; nay, it is frequently proper to make some trial of a law before it is established. The constitutions of Rome and Athens were excellent. The decrees of the senate had the force of laws for the space of a year; but did not become perpetual till they were ratified by the consent of the people.

THE PRINCIPLE OF DEMOCRACY

There is no great share of probity necessary to support a monarchical or despotic government. The force of laws in one, and the prince's arm in the other, are sufficient to direct and maintain the whole. But in a popular state, one spring more is necessary, namely, *virtue*.

What I have here advanced, is confirmed by the unanimous testimony of historians, and is extremely agreeable to

the nature of things. For it is clear that in a monarchy, where he who commands the execution of the laws, generally thinks himself above them, there is less need of virtue than in a popular government, where the person entrusted with the execution of the laws, is sensible of his being subject to their direction.

Clear it is also, that a monarch, who, through bad advice or indolence, ceases to enforce the execution of the laws, may easily repair the evil; he has only to follow other advice; or to shake off this indolence. But when, in a popular government, there is a suspension of the laws, as this can proceed only from the corruption of the republic, the state is certainly undone.

A very droll spectacle it was in the last century to behold the impotent efforts of the English towards the establishment of democracy. As they who had a share in the direction of public affairs were void of virtue; as their ambition was inflamed by the success of the most daring of their members; as the prevailing parties were successively animated by the spirit of faction, the government was continually changing: the people, amazed at so many revolutions, in vain attempted to erect a commonwealth. At length, when the country had undergone the most violent shocks, they were obliged to have recourse to the very government which they had so wantonly proscribed.

When Sulla thought of restoring Rome to her liberty, this unhappy city was incapable of that blessing. She had only the feeble remains of virtue, which were continually diminishing: instead of being roused out of her lethargy, by Caesar, Tiberius, Caius Claudius, Nero, Domitian, she riveted every day her chains; if she struck some blows, her aim was at the tyrant, but not at the usurpation.

The politic Greeks, who lived under a popular government, knew no other support than virtue. The modern inhabitants of that country are entirely taken up with manufacture, commerce, finances, opulence, and luxury.

When virtue is banished, ambition in-

vades the minds of those who are disposed to receive it, and avarice possesses the whole community. The objects of their desires are changed; what they were fond of before, is become indifferent; they were free, while under the restraint of laws, but they would fain now be free to act against law; and as each citizen is like a slave who has run away from his master, what was a maxim of equity, he calls rigour; what was a rule of action, he styles constraint; and to precaution, he gives the name of fear. Frugality, and not the thirst of gain, now passes for avarice. Formerly the wealth of individuals constituted the public treasure; but now this is become the patrimony of private persons. The members of the commonwealth riot on the public spoils, and its strength is only the power of a few, and the licentiousness of many.

Athens was possessed of the same number of forces, when she triumphed so gloriously, and when with so much infamy she was enslaved. She had twenty thousand citizens, when she defended the Greeks against the Persians, when she contended for empire with Sparta, and invaded Sicily. She had twenty thousand when Demetrius Phalereus numbered them, as slaves are told by the head in a market-place. When Philip attempted to lord it over Greece, and appeared at the gates of Athens, she had even then lost nothing but time. We may see in Demosthenes how difficult it was to awake her: she dreaded Philip, not as the enemy of her liberty, but of her pleasures. This famous city, which had withstood so many defeats, and after having been so often destroyed, had as often risen out of her ashes, was overthrown of Chæronea, and at one blow deprived of all hopes of resource. What does it avail her, that Philip sends back her prisoners, if he does not return her men? It was ever after as easy to triumph over the Athenian forces, as it had been difficult to subdue her virtue.

How was it possible for Carthage to maintain her ground? When Hannibal, upon his being made prætor, endeavoured to hinder the magistrates from

plundering the republic, did not they complain of him to the Romans? Wretches, who would fain be citizens without a city, and beholden for their riches to their very destroyers! Rome soon insisted upon having three hundred of their principal citizens as hostages; she obliged them next to surrender their arms and ships; and then she declared war. From the desperate efforts of this defenceless city, one may judge of what she might have performed in her full vigour, and assisted by virtue.

THE PRINCIPLE OF DESPOTIC GOVERNMENT

As virtue is necessary in a republic, and in a monarchy honour, so fear is necessary in a despotic government: with regard to virtue, there is no occasion for it, and honour would be extremely dangerous.

Here the immense power of the prince is devolved entirely upon those whom he is pleased to intrust with the administration. Persons capable of setting a value upon themselves, would be likely to create disturbances. Fear must therefore depress their spirits, and extinguish even the least sense of ambition.

A moderate government may, whenever it pleases, and without the least danger, relax its springs. It supports itself by the laws, and by its own internal strength. But when a despotic prince ceases one single moment to lift up his arm, when he cannot instantly demolish those whom he has entrusted with the first employments, all is over: for as fear, the spring of this government, no longer subsists, the people are left without a protector.

It is probably in this sense the Cadis maintained that the Grand Seignior was not obliged to keep his word or oath, when he limited thereby his authority.

It is necessary that the people should be judged by laws, and the great men by the caprice of the prince, that the lives of the lowest subjects should be safe, and the bashaw's head ever in danger. We

cannot mention these monstrous governments without horror. The Sophi of Persia, dethroned in our days by Mahomet, the son of Miriveis, saw the constitution subverted before this revolution, because he had been too sparing of blood.

History informs us, that the horrid cruelties of Domitian struck such a terror into the governors, that the people recovered themselves a little under his reign. Thus a torrent overflows one side of a country, and on the other leaves fields untouched, where the eye is refreshed by the prospect of fine meadows.

CORRUPTION OF THE PRINCIPLES OF DEMOCRACY

The principle of democracy is corrupted not only when the spirit of equality is extinct, but likewise when they fall into a spirit of extreme equality, and when each citizen would fain be upon a level with those whom he has chosen to command him. Then the people, incapable of bearing the very power they have delegated, want to manage every thing themselves, to debate for the senate, to execute for the magistrate, and to decide for the judges.

When this is the case, virtue can no longer subsist in the republic. The people are desirous of exercising the functions of the magistrates, who cease to be revered. The deliberations of the senate are slighted; all respect is then laid aside for the senators, and consequently for old age. If there is no more respect for old age, there will be none presently for parents; deference to husbands will be likewise thrown off, and submission to masters. This licentiousness will soon become general; and the trouble of command be as fatiguing as that of obedience. Wives, children, slaves will shake off all subjection. No longer will there be any such things as manners, order or virtue.

We find in Xenophon's banquet a very lively description of a republic in which the people abused their equality. Each guest gives in his turn the reason why he

is satisfied. "Content I am," says Chamides, "because of my poverty. When I was rich, I was obliged to pay my court to informers, knowing I were more liable to be hurt by them, than capable of doing them harm. The republic constantly demanded some new tax of me; and I could not decline paying. Since I am grown poor, I have acquired authority; nobody threatens me; I rather threaten others. I can go or stay where I please. The rich already rise from their seats and give me the way. I am a king, I was before a slave; I paid taxes to the republic, now it maintains me: I am no longer afraid of losing, but I hope to acquire."

The people fall into this misfortune, when those in whom they confide, desirous of concealing their own corruption, endeavour to corrupt them. To disguise their own ambition, they speak to them only of the grandeur of the state; to conceal their own avarice, they incessantly flatter theirs.

The corruption will increase among the corrupters, and likewise among those who are already corrupted. The people will divide the public money among themselves, and having added the administration of affairs to their indolence, will be for blending their poverty with the amusements of luxury. But with their indolence and luxury, nothing but the public treasure will be able to satisfy their demands.

We must not be surprised to see their suffrages given for money. It is impossible to make great largesses to the people without great extortion: and to compass this, the state must be subverted. The greater the advantages they seem to derive from their liberty, the nearer they approach towards the critical moment of losing it. Petty tyrants arise, who have all the vices of a single tyrant. The small remains of liberty soon become unsupportable; a single tyrant starts up, and the people are stripped of every thing, even of the profits of their corruption.

Democracy has, therefore, two excesses to avoid; the spirit of inequality, which leads to aristocracy or monarchy;

and the spirit of extreme equality, which leads to despotic power, as the latter is completed by conquest.

True it is, that those who corrupted the Greek republics, did not always become tyrants. This was because they had a greater passion for eloquence than for the military art. Besides there reigned an implacable hatred in the breasts of the Greeks against those who subverted a republican government; and for this reason anarchy degenerated into annihilation, instead of being changed into tyranny.

But Syracuse being situated in the midst of a great number of petty states, whose government had been changed from oligarchy to tyranny; and being governed by a senate scarce ever mentioned in history, underwent such miseries as are the consequence of a more than ordinary corruption. This city, ever a prey to licentiousness or oppression, equally labouring under the sudden and alternate succession of liberty and servitude, and notwithstanding her external strength, constantly determined to a revolution by the least foreign power: this city, I say, had in her bosom an immense multitude of people, whose fate it was to have always this cruel alternative, either of choosing a tyrant to govern them, or of acting the tyrant themselves.

THE CONFEDERATE REPUBLIC

If a republic be small, it is destroyed by a foreign force; if it be large, it is ruined by an internal imperfection.

To this twofold inconveniency Democracies and Aristocracies are equally liable, whether they be good or bad. The evil is in the very thing itself, and no form can redress it.

It is, therefore, very probable that mankind would have been, at length, obliged to live constantly under the government of a single person, had they not contrived a kind of constitution that has all the internal advantages of a republican, together with the external force of a monarchical, government. I mean a confederate republic.

This form of government is a convention by which several petty states agree to become members of a larger one, which they intend to establish. It is a kind of assemblage of societies, that constitute a new one, capable of increasing by means of farther associations, till they arrive to such a degree of power, as to be able to provide for the security of the whole body.

It was these associations that so long contributed to the prosperity of Greece. By these the Romans attacked the whole globe, and by these alone the whole globe withstood them; for when Rome was arrived to her highest pitch of grandeur, it was the associations beyond the Danube and the Rhine, associations formed by the terror of her arms, that enabled the Barbarians to resist her.

From hence it proceeds that Holland, Germany, and the Swiss Cantons, are considered in Europe as perpetual republics.

The associations of cities were formerly more necessary than in our times. A weak, defenceless town was exposed to greater danger. By conquest it was deprived not only of the executive and legislative power, as at present, but moreover of all human property.

A republic of this kind, able to withstand an external force, may support itself without any internal corruption; the form of this society prevents all manner of inconveniences.

If a single member should attempt to usurp the supreme power, he could not be supposed to have an equal authority and credit in all the confederate states. Were he to have too great an influence over one, this would alarm the rest; were he to subdue a part, that which would still remain free, might oppose him with forces independent of those which he had usurped, and overpower him before he could be settled in his usurpation.

Should a popular insurrection happen in one of the confederate states, the others are able to quell it. Should abuses creep into one part, they are reformed by those that remain sound. The state may

be destroyed on one side, and not on the other; the confederacy may be dissolved, and the confederates preserve their sovereignty.

As this government is composed of petty republics, it enjoys the internal happiness of each, and with regard to its external situation, by means of the association, it possesses all the advantages of large monarchies.

MEANING OF LIBERTY

There is no word that admits of more various significations, and has made more different impressions on the human mind, than that of *Liberty*. Some have taken it for a facility of deposing a person on whom they had conferred a tyrannical authority; others for the power of choosing a superior whom they are obliged to obey; others for the right of bearing arms, and of being thereby enabled to use violence; others, in fine, for the privilege of being governed by a native of their own country, or by their own laws. A certain nation for a long time thought liberty consisted in the privilege of wearing a long beard. Some have annexed this name to one form of government exclusive of others: those who had a republican taste, applied it to this species of policy; those who liked a monarchical state, gave it to monarchy. Thus they have all applied the name of *liberty* to the government most suitable to their own customs and inclinations; and as in republics the people have not so constant and so present a view of the causes of their misery, and as the magistrates seem to act only in conformity to the laws, hence liberty is generally said to reside in republics, and to be banished from monarchies. In fine, as in democracies the people seem to act almost as they please; this sort of government has been deemed the most free; and the power of the people has been confounded with their liberty.

It is true that in democracies the people seem to act as they please; but political liberty does not consist in an unlim-

ited freedom. In governments, that is, in societies directed by laws, liberty can consist only in the power of doing what we ought to will, and in not being constrained to do what we ought not to will.

We must have continually present to our minds the difference between independence and liberty. Liberty is a right of doing whatever the laws permit; and if a citizen could do what they forbid, he would be no longer possessed of liberty, because all his fellow-citizens would have the same power.

Democratic and aristocratic states are not in their own nature free. Political liberty is to be found only in moderate governments; and even in these, it is not always found. It is there only when there is no abuse of power; but constant experience shows us, that every man invested with power is apt to abuse it, and to carry his authority as far as it will go. Is it not strange, though true, to say, that virtue itself has need of limits?

To prevent this abuse, it is necessary from the very nature of things, power should be a check to power. A government may be so constituted as no man shall be compelled to do things to which the law does not oblige him, nor forced to abstain from things which the law permits.

THE CONSTITUTION OF ENGLAND

In every government there are three sorts of power: the legislative; the executive, in respect to things dependent on the law of nations; and the executive, in regard to matters that depend on the civil law.

By virtue of the first, the prince or magistrate enacts temporary or perpetual laws, and amends or abrogates those that have been already enacted. By the second, he makes peace or war, sends or receives embassies, establishes the public security, and provides against invasions. By the third, he punishes criminals, or determines the disputes that arise between individuals. The latter we shall call

the judiciary power, and the other simply the executive power of the state.

The political liberty of the subject is a tranquillity of mind arising from the opinion each person has of his safety. In order to have this liberty, it is requisite the government be so constituted as one man needs not be afraid of another.

When the legislative and executive powers are united in the same person, or in the same body of magistrates, there can be no liberty; because apprehensions may arise, lest the same monarch or senate should enact tyrannical laws, to execute them in a tyrannical manner.

Again there is no liberty, if the judiciary power be not separated from the legislative and executive. Were it joined with the legislative, the life and liberty of the subject would be exposed to arbitrary control; for the judge would be then the legislator. Were it joined to the executive power, the judge might behave with violence and oppression.

There would be an end of everything, were the same man, or the same body, whether of the nobles or of the people, to exercise those three powers, that of enacting laws, that of executing the public resolutions, and of trying the causes of individuals.

Most kingdoms in Europe enjoy a moderate government, because the prince who is invested with the two first powers, leaves the third to his subjects. In Turkey, where these three powers are united in the Sultan's person, the subjects groan under the most dreadful oppression.

THE CRIME OF HIGH TREASON IN REPUBLICS

As soon as a republic has compassed the destruction of those who wanted to subvert it, there should be an end of terrors, punishments, and even of rewards.

Great punishments, and consequently great changes, cannot take place without investing some citizens with an exorbitant power. It is, therefore, more advis-

able in this case to exceed in lenity, than in severity; to banish but few, rather than many; and to leave them their estates, instead of making a vast number of confiscations. Under pretence of avenging the republic's cause, the avengers would establish tyranny. The business is not to destroy the rebel but the rebellion. They ought to return as quick as possible into the usual track of government, in which every one is protected by the laws, and no one injured.

The Greeks set no bounds to the vengeance they took of tyrants, or of those they suspected of tyranny; they put their children to death, nay sometimes five of their nearest relations; and they proscribed an infinite number of families. By such means their republics suffered the most violent shocks; exiles, or the return of the exiled, were always epochs that indicated a change of the constitution.

The Romans had more sense. When Cassius was put to death for having aimed at tyranny, the question was proposed whether his children should undergo the same fate: but they were preserved. "They," says Dionysius Halicarnassus, "who wanted to change this law at the end of the Marsian and civil wars, and to exclude from public offices the children of those who had been proscribed by Sulla, are very much to blame."

RELIGION AND FORMS OF STATE

When a religion is introduced and fixed in a state, it is commonly such as is most suitable to the plan of government there established; for those who receive it, and those who are the cause of its being received, have scarcely any other idea of policy, than that of the state in which they were born.

When the Christian religion, two centuries ago, became unhappily divided into Catholic and Protestant, the people of the north embraced the Protestant, and those of the south adhered still to the Catholic.

The reason is plain: the people of the north have, and will for ever have, a spirit of liberty and independence, which the people of the south have not; and therefore, a religion which has no visible head, is more agreeable to the independency of the climate, than that which has one.

In the countries themselves, where the Protestant religion became established, the revolutions were made pursuant to the several plans of political government. Luther having great princes on his side, would never have been able to make them relish an ecclesiastical authority that had no exterior pre-eminence; while Calvin, having to do with people who lived under republican governments, or with obscure citizens in monarchies, might very well avoid establishing dignities and preferments.

Each of these two religions was believed to be the most perfect; the Calvinist judging his most conformable to what Christ had said, and the Lutheran to what the Apostles had practised.

RELIGIOUS TOLERATION

We are here politicians, and not divines; but the divines themselves must allow that there is a great difference between tolerating and approving a religion.

When the legislator has believed it a duty to permit the exercise of many religions, it is necessary that he should enforce also a toleration amongst these religions themselves. It is a principle that every religion which is persecuted, becomes itself persecuting: for as soon as by some accidental turn it arises from persecution, it attacks the religion which persecuted it; not as a religion, but as a tyranny.

It is necessary, then, that the laws require from the several religions, not only that they shall not embroil the state, but that they shall not raise disturbances amongst themselves. A citizen does not fulfil the laws by not disturbing the government; it is requisite that he should not trouble any citizen whomsoever.

HUME

The eighteenth century experienced one of the greatest bursts of nonscientific philosophical speculation since the days of ancient Greece. George Berkeley, Kant, Rousseau, Adam Smith, and David Hume (1711–76) were all roughly contemporaries. Hume has the distinction of having known Smith and Rousseau, and having influenced Kant.

Hume was a product of, and a major force within, the European Enlightenment, which was particularly strong in his native Scotland. The influence of Isaac Newton on the Enlightenment was fundamental. By making it possible through primary laws of tremendous potency to theoretically determine the properties and movement of every material particle in the universe, Newton not only instructed mankind in physics, but provided an example for others to attempt to follow in the field of human nature. Indeed, Newton himself stated, "If natural philosophy in all its parts by pursuing the inductive method, shall at length be perfected, the bounds of moral philosophy will also be enlarged." Further, by describing the actions of matter precisely, Newton helped finalize the split between natural philosophy (science) and what might be termed pure philosophy, because pure philosophy gave up the hope of attempting to describe its realm as accurately as Newton had described his.

The Scottish Enlightenment had great impact on England and around the world. Three future British prime ministers and Charles Darwin studied at Scottish universities in the eighteenth and early nineteenth centuries under the likes of Francis Hutcheson, professor of moral philosophy at Glasgow University (whom Smith described as "never to be forgotten"), and Smith himself, who held the same position at Edinburgh University. James Mill—a Scot, the father of John Stuart Mill, and a significant utilitarian in his own right—attended lectures given by Dugald Stewart, a successor of Smith's at Edinburgh. The *Edinburgh Review* was a leading British liberal journal. Scotland had united with England in 1707, although it had previously shared the crown.

Hume's fame today rests most upon his philosophy. Indeed, in purely philosophical speculation, he is often considered the greatest thinker who wrote natively in English. Hume pushes the philosophical premises of Locke and Berkeley to their logical conclusion, and in so doing undercuts the basis of what

they were attempting to accomplish. Like Locke, whom Hume looked to as a master, though he did not always agree with him, Hume attempts to ground knowledge in experience. But where Locke sees experience as the basis for certainty, Hume sees it as the basis only for uncertainty.

Hume's essential epistemology (theory of knowledge) consists of what he terms "impressions" and "ideas." By impressions, he means primary sensory experience—what humans see, hear, touch, taste, and smell—together with certain emotions. By ideas, Hume means the mind's subsequent (and less forceful and lively) thinking and reasoning about these impressions. The next step in Hume's logical train is to postulate that in no way can one be sure that what he is experiencing is real. Experience could just be, as it were, a figment of one's imagination. Hume is particularly concerned with rebutting the notion of cause and effect as it is traditionally understood; for him, these are simply juxtaposition in time and/or place.

Hume's philosophy is scepticism. As he states in his earliest work, *A Treatise of Human Nature* (1739–40), "the understanding, when it acts alone . . . entirely subverts itself, and leaves not the lowest degree of evidence in any proposition." He notes that when one closes his eyes, one cannot even be certain that the room he was just in still exists. He defines the self as merely "nothing but a bundle or collection of different perceptions." What saves Hume from solipsism (the theory that the self is the only existent thing) is his scepticism itself. Though "we can never pretend to know body otherwise than by those external properties, which discover themselves to the senses . . . I content myself with knowing perfectly the manner in which objects affect my senses."

Hume's scepticism caused him problems personally. He was unable to obtain certain academic positions because his philosophy was considered incompatible with Christianity, and, at one point, the Church of Scotland attempted to excommunicate him. He did not have his *Dialogues Concerning Natural Religion* published during his lifetime, for fear of the controversy it would engender.

In the history of political theory, Hume's primary significance stems from his role as a predecessor of Benthamite utilitarianism. Bentham first came across the term *utility* in Hume's section "Why Utility Pleases" from *An Enquiry Concerning the Principles of Morals* (1751). Further, Bentham wrote, "When I came out with the principle of utility . . . in the [Fragment on Government], I took it from Hume's Essays," and that, particularly regarding the third book of the *Treatise*, "I felt as if the scales had fallen from my eyes," when originally reading it. In Bentham's "Article on Utilitarianism" (both the long and short versions), he gives the place of honor to Hume as the first in modern times to suggest utility as the cornerstone of a scientific theory of morals, although Bentham also considers that Hume did not work the utilitarian system out fully.

Hume is a sometimes careless—although usually clear—writer. He occasionally uses the same word to denote more than one meaning. Consequently, one must exercise caution in deducing his system. There is, additionally, so much in his thought that it is possible to find systems other than proto-utilitarianism in it. Nevertheless, a careful reading of him reveals the extent to which later utilitarians followed him—a debt they were not always willing to acknowledge—due to his unpopularity, which arose in response to his scepticism.

Hume's philosophical beliefs underpin his moral ones, and this congruence between theory and practice holds true for other utilitarian writers as well. Hume's philosophy is radical subjectivism. All that exists for certain is each person's own impressions and the ideas founded on these (to use Hume's terminology). The relationship between Hume's philosophy and moral system is that philosophical outlooks grounded in subjectivism are much more likely to result in individualist theories of ethics than those which see objective facts as ineluctably existing in an external nature. Plato, under this interpretation, is almost the antithesis of Hume: Plato ultimately sees only objective facts (the "forms"). Moreover, whereas Plato thus finds something moral existing in nature that should be replicated in the ideal city—justice—Hume and other utilitarians are inclined to place the good more modestly in what individuals experience themselves—happiness and unhappiness.

In the *Treatise*, Hume expresses the psychological portion of utilitarianism: "The chief spring or actuating principle of the human mind is pleasure or pain." Pleasure and pain mold the will to pursue certain actions and shun others. Hume is not, however, a believer only in psychological utilitarianism; he also subscribes to ethical utilitarianism. He identifies "Good and evil, or in other words, pain and pleasure." From the subjectivist viewpoint, again, there is little alternative but to ground moral good and evil in what individuals themselves feel.

Quite similarly to J.S. Mill, Hume holds that there are different types of pleasures and pains: "under the term *pleasure*, we comprehend sensations which are very different from each other." Again like Mill, he believes that individuals feel personal pleasure and pain in performing moral acts: "the distinguishing impressions, by which moral good or evil is known, are nothing but particular pains or pleasures." In this view, Hume is able to postulate a consistent psychological-ethical utilitarianism. Individuals are motivated by pleasure and pain; however, because they find pleasure and pain in the pleasures and pains of others, there is no necessary inconsistency between individuals acting according to their own happiness and promoting the happiness of others. Significantly, Hume does not consider that all of an individual's actions are strictly selfish or a convoluted form of self-love, as other philosophers have held. Instead, he believes that humans are able to quite directly experience social pleasures and pains.

At the same time, Hume recognizes the tendency to self-interest remains strong: "Nothing is more certain than that men are, in a great measure, governed by interest." Hume is unclear on the extent to which persons find happiness in others' happiness, or are simply motivated by their own gain more narrowly conceived. For example, he also holds that "sympathy is a very powerful principle in human nature" and "it is rare . . . to meet with one, in whom all the kind affections, taken together, do not overbalance all the selfish."

It is from self-interest and social feelings that society and justice emerge and are sustained. The original motivation to form the first society of any sort arises from "that natural appetite between the sexes." Sexual attraction creates a family-society between men and women which comes to fruition through their children. Gradually, groups of families learn that through a system of cooperation they can each have more than if they individually attempt to go it

alone: This is the self-interest from which society emerges. Society is sustained, however, by mankind's social feelings. Although self-interest is the original motive to form a social order beyond the family-society, "a sympathy with public interest" is what keeps the second stage of society going. By nature, part of the character of men and women is that the sight of an individual exploiting the societal bond, in a way that is disadvantageous to another, displeases them—even when they are not directly affected. Thus, society is the product of a mix of self- and other-interested motives.

Hume's utilitarian sentiments are apparent in his justification of society: "Public utility is the *sole* origin of justice;" "the rules of equity or justice . . . owe their origin and existence to that utility, which results to the public from their strict and regular observance." Following Montesquieu, he believes justice in a society will vary depending on such factors as its religion and stage of economic development.

Similarly to Hobbes, Hume posits that justice is artificial—it is the result of human contrivance only. There is no justice by nature except to the extent that the natural development of human society invariably leads to certain rules. First among these rules is the sanctity of property. Hume identifies three types of goods: "the internal satisfaction of our mind, the external advantages of our body, and the enjoyment of such possessions as we have acquired by our industry and good fortune." Of these, we are "perfectly secure" in our enjoyment of the first, and it is in no one's interest to take away the second. The third class of goods, however, are "exposed to the violence of others," both because they can be transferred without loss, and there are not enough material goods to meet everyone's desires.

Unlike other political theorists who consider the primary value to men and women coming together in a community to be social interaction, Hume considers the advantage to be mostly material. We can economically produce more if we cooperate—this is the fundamental justification of society, not human beings' social nature (after the initial family-society stage). Consequently, above all else, society must protect and promote private property: "As the improvement, therefore, of these goods is the chief advantage of society, so the *instability* of their possession, along with their *scarcity*, is the chief impediment." Although mankind has significant social feelings, self-interest remains and must be guarded against. Society provides the reinforcement mechanisms that make people's social feelings also their self-interest.

The need for justice is based on four circumstances: selfishness, limited generosity, scarcity, and the ability to exchange material objects. In circumstances of unlimited material objects or universal, strong benevolence, justice would be unnecessary. As neither of these conditions holds, however, justice is among the most important of virtues and esteemed as such. Hume takes it as axiomatic that individuals will produce more when they have the exclusive right to what they produce, and this is his reason for private property; in addition, when ownership is unclear, continual societal discord results.

Society arises not through an explicit contract (Hume considers the state of nature to be "a mere philosophical fiction"); rather, in a conception similar to Hayek's, it gradually evolves from what is successful in social organization. Society is founded on private possession, from which spring the notions of

justice and injustice, and also those of right and obligation, and property. Hume speculates that society beyond the family stage possibly happens following a war between groups of families, when a group becomes accustomed to following one leader, and can perceive benefits to remaining in a larger society even after the war is over. The relationship between justice and political society is that justice is the set of rules which political society enforces.

Hume is adamant that justice is based on property. In reasoning that influenced James Madison (*The Federalist*, No. 51, "Ambition must be made to check ambition"), Hume holds, "There is no passion . . . capable of controlling the interested affection [of acquiring goods and possessions], but the very affection itself, by an alteration of its direction." Individuals' acquisitive desires establish society and justice, which are then maintained by the self-interest each has in seeing that society succeeds, together with social inclinations. Like Rawls, Hume notes that humans' sense of justice (artificial though it may be in the latter's conception) gains from the observation that it leads to great good for others: "This sense must certainly acquire new force, when reflecting on itself, it approves of those principles, from whence it is derived, and finds nothing but what is great and good in its rise and origin."

Hume says in his brief autobiography that he composed the *Treatise of Human Nature* before he was 25. It is generally—particularly its first part—considered his greatest work, though he also states in his autobiography that "it fell dead-born from the press" without arousing "a murmur among the zealots." Hume exaggerates in this statement. Particularly for a first work published anonymously, the *Treatise* received a considerable amount of attention. Generally, readers dissented from it as the result of its scepticism.

The *Enquiry Concerning the Principles of Morals* and the *Enquiry Concerning the Human Understanding* (1748), correspond to the first and third parts of the *Treatise*; Hume rewrote these parts of the *Treatise* to broaden their appeal. "Love of literary fame," as he himself says, was his "ruling passion." While Hume considered the *Enquiry Concerning the Principles of Morals*, "of all my writings, . . . incomparably the best," and stated that any discrepancies between the *Treatise* and the *Enquiries* should be resolved in favor of the latter, posterity has judged otherwise. Fortunately, the differences between the *Treatise* and the *Enquiries* are not significant.

Hume states in the *Treatise*, "Morality is a subject that interests us above all others." While he is interested in postulating a philosophical system, he mostly wants it as a foundation for his moral system. In the *Enquiries*, he explicitly uses the word "utility" to describe his ethical goal more than he does in the *Treatise*. Unlike later utilitarians, however, he does not always identify utility with happiness; his most common synonym for "utility" is "useful." He does, though, often define the useful in terms of what produces happiness; thus, there is little functional difference between him and later utilitarians here. The extent to which Hume popularized the term "utility," and his general influence, is indicated by Bentham when, referring to his own original use of the word, he says, "Hume was in all his glory. The phrase [utility] was consequently familiar to everybody."

The *Treatise* contains what is probably Hume's most famous phrase: "Reason is, and ought only to be the slave of the passions, and can never pretend to any

other office than to serve and obey them." By this, he means that, as in his system, good and bad come down to subjective feelings, it is these subjective feelings that must rule humankind. While Hume does not use this example, consider even the extreme case of murder. How does one know this is wrong? Granting Hume's supposition—that right and wrong do not objectively exist in nature—murder is wrong only because human beings feel it is wrong. Many reasons can be advanced as to its wrongness (the harm it does to the victim, to his associates, to society, and so forth), but all of these reasons ultimately also dissolve into feelings. Reason, then, does not—because it cannot—rule our moral actions. Instead, these are determined by our passions. It should be noted that Hume's usage of "passions" is broad, to designate almost all of a person's internal motivations.

This conception of reason's place is completely different than that of ancient political philosophers, who saw in reason the purpose of man's existence, at least the purpose of those men and women who were able to exquisitely experience it. Hume's conception of reason's place is also different than that of some of his philosophical successors, such as Kant, who again see in reason the determinant of humans' passions, not their slave. Hume posits a rigid distinction between facts and values: Values remain subjective, while facts (to the extent they exist in his philosophical system) are strictly limited to technical questions.

Having exiled reason, Hume recalls it. The place of reason in morals is: "judgments may often be false and erroneous. A person may be affected with passion, by supposing a pain or pleasure to lie in an object, which has no tendency to produce either of these sensations, or which produces the contrary to what is imagined." Reason, in this case, truly is only the servant of the passions, but a very important one. It informs human beings of how most effectively to produce pleasure and limit pain. Importantly, government serves a similar sort of regulative function in Hume's conception of society. Government and justice arise partially from humanity's inclination to reason improperly. Hume takes it for granted that individuals will often prefer a lesser near good to a greater good farther away, and thus government and justice compensate for short-sightedness as well as for self-interest.

Hume considers the fundamental laws of society to be stability of property, its transfer by consent, and the performance of promises. Even the third of these ultimately dissolves into property of a certain type; if a promise does not concern property explicitly, then at least it often is connected to some sort of reward for an expenditure of an individual's time. Like Locke, Hume holds that a person's time is his or her own. Taking a person's time, through breaking a promise, is taking something from that person. As was noted earlier, society's three fundamental laws are not actually restraints on people's passions; rather, "they are the real offspring of those passions, and are only a more artful and more refined way of satisfying them." Hume also recognizes government as an instrument for individuals to engage in certain common actions that otherwise would be almost impossible to perform, such as constructing public works and forming armies.

Hume was the first British man of letters to become wealthy through the sale of his works. After the failure, from his perspective, of the *Treatise*, he wrote the *Essays Moral, Political, and Literary* (1742, 1752), which were intended for

a wider audience, and which did achieve greater popular success. The *Essays* were revised several times in Hume's life, and though some were described by even Hume himself as "frivolous," others are important.

In several essays, Hume takes up economic topics, and in so doing anticipates Smith, whose *The Wealth of Nations*, was published a few months before Hume's death. Hume wrote to Smith regarding an advance copy of *The Wealth of Nations*, "I am much pleased with your performance." Hume was completely in favor of free trade and subscribed to monetarist theory. As has been shown, he also favored private property. In the essay "Of Money," he states: "It seems a maxim almost self-evident, that the prices of everything depend on the proportion between commodities and money." It is a tribute to Hume's perspicacity that the arch-monetarist Milton Friedman could two centuries later comment on "Of Money" that it can still be read "with pleasure and profit." In another economic essay, "Of Commerce," Hume writes: "The greatness of a state, and the happiness of its subjects . . . are commonly allowed to be inseparable with regard to commerce . . . the public becomes powerful in proportion to the opulence and extensive commerce of private men."

Hume effectively demolished the myth of an original contract in his essay of this name. He demonstrated that, heretofore, societies had almost never been founded on the basis of consent, and that it was chimerical to claim this. This thought helped pave the way for utilitarian theories of society that see the ties of social union in what is to men and women's interest, and not in divine or natural right. In the essay "Of the Origin of Government," he says that government has "no other object or purpose" than the support of justice (as he defines it).

An attitude of scepticism permeates Hume's writings on all topics, and not just those in philosophy. Somewhat paradoxically, Hume was politically conservative—a Tory, not a Whig. Though an individualist in his philosophy and morals, he questions the ability of men to govern themselves. In his essay "Idea of a Perfect Commonwealth," however, he favors a largely representative form of government. His massive *History of England*, though, which was the major project of his life, was considered a Tory document. Thomas Jefferson, for example, thought that the *History* helped to undermine the principles of free government in Britain, and spread "universal toryism over the land."

Politically conservative but philosophically liberal, a sceptic, and a Scot, Hume was never able to attract a personal following (in terms of a party) in England or anywhere else. His impact was the result not of his popularity, but of the force of his mind.

HUME

*Essays Moral, Political and Literary
and An Enquiry Concerning
The Principles of Morals**

OF THE ORIGIN OF
GOVERNMENT¹

Man, born in a family, is compelled to maintain society, from necessity, from natural inclination, and from habit. The same creature, in his farther progress, is engaged to establish political society, in order to administer justice; without which there can be no peace among them, nor safety, nor mutual intercourse. We are, therefore, to look upon all the vast apparatus of our government, as having ultimately no other object or purpose but the distribution of justice, or, in other words, the support of the twelve judges.¹ Kings and parliaments, fleets and armies, officers of the court and revenue, ambassadors, ministers, and privy-counsellors, are all subordinate in their end to this part of administration. Even the clergy, as their duty leads them to inculcate morality, may justly be thought, so far as regards this world, to have no other useful object of their institution.

All men are sensible of the necessity of justice to maintain peace and order; and all men are sensible of the necessity of peace and order for the maintenance of society. Yet, notwithstanding this strong and obvious necessity, such is the frailty or perverseness of our nature! It is impossible to keep men, faithfully and unerringly, in

*Some spellings and punctuations have been modernized.

¹From David Hume, *Essays Moral, Political, and Literary* (1758).

¹i.e., of Israel, who dispensed justice.

the paths of justice. Some extraordinary circumstances may happen, in which a man finds his interests to be more promoted by fraud or rapine, than hurt by the breach which his injustice makes in the social union. But much more frequently, he is seduced from his great and important, but distant interests, by the allurements of present, though often very frivolous temptations. This great weakness is incurable in human nature.

Men must, therefore, endeavor to palliate what they cannot cure. They must institute some persons, under the appellation of magistrates, whose peculiar office it is, to point out the decrees of equity, to punish transgressors, to correct fraud and violence, and to oblige men, however reluctant, to consult their own real and permanent interests. In a word, OBEDIENCE is a new duty which must be invented to support that of JUSTICE; and the ties of equity must be corroborated by those of allegiance.

But still, viewing matters in an abstract light, it may be thought, that nothing is gained by this alliance, and that the factitious duty of obedience, from its very nature, lays as feeble a hold of the human mind, as the primitive and natural duty of justice. Peculiar interests and present temptations may overcome the one as well as the other. They are equally exposed to the same inconvenience. And the man, who is inclined to be a bad neighbor, must be led by the same motives, well or ill understood, to be a bad citizen and subject.

Not to mention, that the magistrate himself may often be negligent, or partial, or unjust in his administration.

Experience, however, proves, that there is a great difference between the cases. Order in society, we find, is much better maintained by means of government; and our duty to the magistrate is more strictly guarded by the principles of human nature, than our duty to our fellow-citizens. The love of dominion is so strong in the breast of man, that many, not only submit to, but court all the dangers, and fatigues, and cares of government; and men, once raised to that station, though often led astray by private passions, find, in ordinary cases, a visible interest in the impartial administration of justice. The persons, who first attain this distinction by the consent, tacit or express, of the people, must be endowed with superior personal qualities of valor, force, integrity, or prudence, which command respect and confidence: and after government is established, a regard to birth, rank, and station has a mighty influence over men, and enforces the decrees of the magistrate. The prince or leader exclaims against every disorder, which disturbs his society. He summons all his partisans and all men of probity to aid him in correcting and redressing it: and he is readily followed by all indifferent persons in the execution of his office. He soon acquires the power of rewarding these services; and in the progress of society, he establishes subordinate ministers and often a military force, who find an immediate and a visible interest, in supporting his authority. Habit soon consolidates what other principles of human nature had imperfectly founded; and men, once accustomed to obedience, never think of departing from that path, in which they and their ancestors have constantly trod, and to which they are confined by so many urgent and visible motives.

But though this progress of human affairs may appear certain and inevitable, and though the support which allegiance brings to justice, be founded on obvious principles of human nature, it cannot be expected that men should beforehand be able to discover them, or foresee their

operation. Government commences more casually and more imperfectly. It is probable, that the first ascendant of one man over multitudes began during a state of war; where the superiority of courage and of genius discovers itself most visibly, where unanimity and concert are most requisite, and where the pernicious effects of disorder are most sensibly felt. The long continuance of that state, an incident common among savage tribes, inured the people to submission; and if the chieftain possessed as much equity as prudence and valor, he became, even during peace, the arbiter of all differences, and could gradually, by a mixture of force and consent, establish his authority. The benefit sensibly felt from his influence, made it be cherished by the people, at least by the peaceable and well disposed among them; and if his son enjoyed the same good qualities, government advanced the sooner to maturity and perfection; but was still in a feeble state, till the farther progress of improvement procured the magistrate a revenue, and enabled him to bestow rewards on the several instruments of his administration, and to inflict punishments on the refractory and disobedient. Before that period, each exertion of his influence must have been particular, and founded on the peculiar circumstances of the case. After it, submission was no longer a matter of choice in the bulk of the community, but was rigorously exacted by the authority of the supreme magistrate.

In all governments, there is a perpetual intestine struggle, open or secret, between AUTHORITY and LIBERTY; and neither of them can ever absolutely prevail in the contest. A great sacrifice of liberty must necessarily be made in every government; yet even the authority, which confines liberty, can never, and perhaps ought never, in any constitution, to become quite entire and uncontrollable. The sultan is master of the life and fortune of any individual; but will not be permitted to impose new taxes on his subjects: a French monarch can impose taxes at pleasure; but would find it dangerous to attempt the lives and fortunes of individuals. Religion also, in most countries, is commonly found to be a very

intractable principle; and other principles or prejudices frequently resist all the authority of the civil magistrate; whose power, being founded on opinion, can never subvert other opinions, equally rooted with that of his title to dominion. The government, which, in common appellation, receives the appellation of free, is that which admits of a partition of power among several members, whose united authority is no less, or is commonly greater than that of any monarch; but who, in the usual course of administration, must act by general and equal laws, that are previously known to all the members and to all their subjects. In this sense, it must be owned, that liberty is the perfection of civil society; but still authority must be acknowledged essential to its very existence: and in those contests, which so often take place between the one and the other, the latter may, on that account, challenge the preference. Unless perhaps one may say (and it may be said with some reason) that a circumstance, which is essential to the existence of civil society, must always support itself, and needs be guarded with less jealousy, than one that contributes only to its perfection, which the indolence of men is so apt to neglect, or their ignorance to overlook.

OF THE ORIGINAL CONTRACT*

As no party, in the present age, can well support itself, without a philosophical or speculative system of principles, annexed to its political or practical one; we accordingly find, that each of the factions, into which this nation is divided, has reared up a fabric of the former kind, in order to protect and cover that scheme of actions, which it pursues. The people being commonly very rude builders, especially in this speculative way, and more especially still, when actuated by party-zeal; it is natural to imagine, that their workmanship must be a little unshapely, and discover evident marks of that violence and hurry, in which it was raised. The one

* From David Hume, *Essays Moral, Political, and Literary* (1758).

party, by tracing up government to the DEITY, endeavor to render it so sacred and inviolate, that it must be little less than sacrilege, however tyrannical it may become, to touch or invade it, in the smallest article. The other party, by founding government altogether on the consent of the PEOPLE, suppose that there is a kind of *original contract*, by which the subjects have tacitly reserved the power of resisting their sovereign, whenever they find themselves aggrieved by that authority, with which they have, for certain purposes, voluntarily entrusted him. These are the speculative principles of the two parties; and these too are the practical consequences deduced from them.

I shall venture to affirm, *That both these systems of speculative principles are just; though not in the sense, intended by the parties: And, That both the schemes of practical consequences are prudent; though not in the extremes, to which each party, in opposition to the other, has commonly endeavoured to carry them.*

That the DEITY is the ultimate author of all government, will never be denied by any, who admit a general providence, and allow, that all events in the universe are conducted by an uniform plan, and directed to wise purposes. As it is impossible for the human race to subsist, at least in any comfortable or secure state, without the protection of government; this institution must certainly have been intended by that beneficent Being, who means the good of all his creatures. And as it has universally, in fact, taken place, in all countries, and all ages; we may conclude, with still greater certainty, that it was intended by that omniscient Being, who can never be deceived by any event or operation. But since he gave rise to it, not by any particular or miraculous interposition, but by his concealed and universal efficacy; a sovereign cannot, properly speaking, be called his vice-regent, in any other sense than every power or force, being derived from him, may be said to act by his commission. Whatever actually happens is comprehended in the general plan or intention of providence; nor has the greatest and most lawful prince any

more reason, upon that account, to plead a peculiar sacredness or inviolable authority, than an inferior magistrate, or even an usurper, or even a robber and a pirate. The same divine superintendent, who, for wise purposes, invested a TITUS or a TRAJAN with authority, did also, for purposes, no doubt, equally wise, though unknown, bestow power on a BORGIA or an ANGRIA. The same causes, which gave rise to the sovereign power in every state, established likewise every petty jurisdiction in it, and every limited authority. A constable, therefore, no less than a king, acts by a divine commission, and possesses an indefeasible right.

When we consider how nearly equal all men are in their bodily force, and even in their mental powers and faculties, till cultivated by education; we must necessarily allow, that nothing but their own consent could, at first, associate them together, and subject them to any authority. The people, if we trace government to its first origin in the woods and deserts, are the source of all power and jurisdiction, and voluntarily, for the sake of peace and order, abandoned their native liberty, and received laws from their equal and companion. The conditions, upon which they were willing to submit, were either expressed, or were so clear and obvious, that it might well be esteemed superfluous to express them. If this, then, be meant by the *original contract*, it cannot be denied, that all government is, at first, founded on a contract, and that the most ancient rude combinations of mankind were formed chiefly by that principle. In vain, are we asked in what records this charter of our liberties is registered. It was not written on parchment, nor yet on leaves or barks of trees. It preceded the use of writing and all the other civilized arts of life. But we trace it plainly in the nature of man, and in the equality, or something approaching equality, which we find in all the individuals of that species. The force, which now prevails, and which is founded on fleets and armies, is plainly political, and derived from authority, the effect of established government. A man's natural force consists only in the vigor of his

limbs, and the firmness of his courage; which could never subject multitudes to the command of one. Nothing but their own consent, and their sense of the advantages resulting from peace and order, could have had that influence.

Yet even this consent was long very imperfect, and could not be the basis of a regular administration. The chieftain, who had probably acquired his influence during the continuance of war, ruled more by persuasion than command; and till he could employ force to reduce the refractory and disobedient, the society could scarcely be said to have attained a state of civil government. No compact or agreement, it is evident, was expressly formed for general submission; an idea far beyond the comprehension of savages. Each exertion of authority in the chieftain must have been particular, and called forth by the present exigencies of the case. The sensible utility, resulting from his interposition, made these exertions become daily more frequent; and their frequency gradually produced an habitual, and, if you please to call it so, a voluntary, and therefore precarious, acquiescence in the people.

But philosophers, who have embraced a party (if that be not a contradiction in terms) are not contented with these concessions. They assert, not only that government in its earliest infancy arose from consent or rather the voluntary acquiescence of the people; but also, that, even at present, when it has attained full maturity, it rests on no other foundation. They affirm, that all men are still born equal, and owe allegiance to no prince or government, unless bound by the obligation and sanction of a *promise*. And as no man, without some equivalent, would forego the advantages of his native liberty, and subject himself to the will of another; this promise is always understood to be conditional, and imposes on him no obligation, unless he meet with justice and protection from his sovereign. These advantages the sovereign promises him in return; and if he fail in the execution, he has broken, on his part, the articles of engagement, and has thereby freed his subject from all obligations to allegiance. Such, according to these philosophers, is the

foundation of authority in every government; and such the right of resistance, possessed by every subject.

But would these reasoners look abroad into the world, they would meet with nothing that, in the least, corresponds to their ideas, or can warrant so refined and philosophical a system. On the contrary, we find, everywhere, princes, who claim their subjects as their property, and assert their independent right of sovereignty, from conquest or succession. We find also, everywhere, subjects, who acknowledge this right in their prince, and suppose themselves born under obligations of obedience to a certain sovereign, as much as under the ties of reverence and duty to certain parents. These connections are always conceived to be equally independent of our consent, in PERSIA and CHINA; in FRANCE and SPAIN; and even in HOLLAND and ENGLAND, wherever the doctrines above-mentioned have not been carefully inculcated. Obedience or subjection becomes so familiar, that most men never make any inquiry about its origin or cause, more than about the principle of gravity, resistance, or the most universal laws of nature. Or if curiosity ever move them; as soon as they learn, that they themselves and their ancestors have, for several ages, or from time immemorial, been subject to such a form of government or such a family; they immediately acquiesce, and acknowledge their obligation to allegiance. Were you to preach, in most parts of the world, that political connections are founded altogether on voluntary consent or a mutual promise, the magistrate would soon imprison you, as seditious, for loosening the ties of obedience; if your friends did not before shut you up as delirious, for advancing such absurdities. It is strange, that an act of the mind, which every individual is supposed to have formed, and after he came to the use of reason too, otherwise it could have no authority; that this act, I say, should be so much unknown to all of them, that, over the face of the whole earth, there scarcely remain any traces or memory of it.

But the contract, on which government is founded, is said to be the *original contract*; and consequently may be supposed

too old to fall under the knowledge of the present generation. If the agreement, by which savage men first associated and conjoined their force, be here meant, this is acknowledged to be real; but being so ancient, and being obliterated by a thousand changes of government and princes, it cannot now be supposed to retain any authority. If we would say anything to the purpose, we must assert, that every particular government, which is lawful, and which imposes any duty of allegiance on the subject, was, at first, founded on consent and a voluntary compact. But besides that this supposes the consent of the fathers to bind the children, even to the most remote generations (which republican writers will never allow), besides this, I say, it is not justified by history or experience, in any age or country of the world.

Almost all the governments, which exist at present, or of which there remains any record in story, have been founded originally, either on usurpation or conquest, or both, without any pretense of a fair consent, or voluntary subjection of the people. When an artful and bold man is placed at the head of an army or faction, it is often easy for him, by employing, sometimes violence, sometimes false pretenses, to establish his dominion over a people a hundred times more numerous than his partisans. He allows no such open communication, that his enemies can know, with certainty, their number or force. He gives them no leisure to assemble together in a body to oppose him. Even all those, who are the instruments of his usurpation, may wish his fall; but their ignorance of each other's intention keeps them in awe, and is the sole cause of his security. By such arts as these, many governments have been established; and this is all the *original contract*, which they have to boast of.

The face of the earth is continually changing, by the increase of small kingdoms into great empires, by the dissolution of great empires into smaller kingdoms, by the planting of colonies, by the migration of tribes. Is there anything discoverable in all these events, but force and violence? Where is the mutual agreement or voluntary association so much talked of?

Even the smoothest way, by which a nation may receive a foreign master, by marriage or a will, is not extremely honorable for the people; but supposes them to be disposed of, like a dowry or a legacy, according to the pleasure or interest of their rulers.

But where no force interposes, and election takes place; what is this election so highly vaunted? It is either the combination of a few great men, who decide for the whole, and will allow of no opposition, or it is the fury of a multitude, that follow a seditious ringleader, who is not known, perhaps, to a dozen among them, and who owes his advancement merely to his own impudence, or to the momentary caprice of his fellows.

Are these disorderly elections, which are rare too, of such mighty authority, as to be the only lawful foundation of all government and allegiance?

In reality, there is not a more terrible event, than a total dissolution of government, which gives liberty to the multitude, and makes the determination or choice of a new establishment depend upon a number, which nearly approaches to that of the body of the people. For it never comes entirely to the whole body of them. Every wise man, then, wishes to see, at the head of a powerful and obedient army, a general, who may speedily seize the prize, and give to the people a master, which they are so unfit to choose for themselves. So little correspondent is fact and reality to those philosophical notions.

Let not the establishment at the *Revolution* deceive us, or make us so much in love with a philosophical origin to government, as to imagine all others monstrous and irregular. Even that event was far from corresponding to these refined ideas. It was only the succession, and that only in the regal part of the government, which was then changed. And it was only the majority of seven hundred, who determined that change for near ten millions.¹ I doubt not, indeed, but the bulk of those ten millions acquiesced willingly in the determination:

¹ in England, following the Glorious Revolution.

But was the matter left, in the least, to their choice? Was it not justly supposed to be, from that moment, decided, and every man punished, who refused to submit to the new sovereign? How otherwise could the matter have ever been brought to any issue or conclusion?

The republic of ATHENS was, I believe, the most extensive democracy, that we read of in history. Yet if we make the requisite allowances for the women, the slaves, and the strangers, we shall find, that that establishment was not, at first, made, nor any law ever voted, by a tenth part of those who were bound to pay obedience to it. Not to mention the islands and foreign dominions, which the ATHENIANS claimed as theirs by right of conquest. And as it is well known, that popular assemblies in that city were always full of license and disorder, notwithstanding the institutions and laws by which they were checked. How much more disorderly must they prove, where they form not the established constitution, but meet tumultuously on the dissolution of the ancient government, in order to give rise to a new one? How chimerical must it be to talk of a choice in such circumstances?

The ACHAENS enjoyed the freest and most perfect democracy of all antiquity; yet they employed force to oblige some cities to enter into their league, as we learn from POLYBIUS.

HARRY the IVth and HARRY the VIIth of ENGLAND, had really no title to the throne but a parliamentary election; yet they never would acknowledge it, lest they should thereby weaken their authority. Strange, if the only real foundation of all authority be consent and promise!

It is in vain to say, that all governments are or should be, at first, founded on popular consent, as much as the necessity of human affairs will admit. This favors entirely my pretension. I maintain, that human affairs will never admit of this consent; seldom of the appearance of it. But that conquest or usurpation, that is, in plain terms, force, by dissolving the ancient governments, is the origin of almost all the new ones, which were ever established in the world. And that in the few

cases, where consent may seem to have taken place, it was commonly so irregular, so confined, or so much intermixed either with fraud or violence, that it cannot have any great authority.

My intention here is not to exclude the consent of the people from being one just foundation of government where it has place. It is surely the best and most sacred of any. I only pretend, that it has very seldom had place in any degree, and never almost in its full extent. And that therefore some other foundation of government must also be admitted.

Were all men possessed of so inflexible a regard to justice, that, of themselves, they would totally abstain from the properties of others; they had forever remained in a state of absolute liberty, without subjection to any magistrate or political society. But this is a state of perfection, of which human nature is justly deemed incapable. Again, were all men possessed of so perfect an understanding, as always to know their own interests, no form of government had ever been submitted to, but what was established on consent, and was fully canvassed by every member of the society. But this state of perfection is likewise much superior to human nature. Reason, history, and experience show us, that all political societies have had an origin much less accurate and regular; and were one to choose a period of time, when the people's consent was the least regarded in public transactions, it would be precisely on the establishment of a new government. In a settled constitution, their inclinations are often consulted; but during the fury of revolutions, conquests, and public convulsions, military force or political craft usually decides the controversy.

When a new government is established, by whatever means, the people are commonly dissatisfied with it, and pay obedience more from fear and necessity, than from any idea of allegiance or of moral obligation. The prince is watchful and jealous, and must carefully guard against every beginning or appearance of insurrection. Time, by degrees, removes all these difficulties, and accustoms the nation to regard, as their lawful or native princes, that

family, which, at first, they considered as usurpers or foreign conquerors. In order to found this opinion, they have no recourse to any notion of voluntary consent or promise, which, they know, never was, in this case, either expected or demanded. The original establishment was formed by violence, and submitted to from necessity. The subsequent administration is also supported by power, and acquiesced in by the people not as a matter of choice, but of obligation. They imagine not that their consent gives their prince a title. But they willingly consent, because they think, that, from long possession, he has acquired a title, independent of their choice or inclination.

Should it be said, that, by living under the dominion of a prince, which one might leave, every individual has given a *tacit* consent to his authority, and promised him obedience; it may be answered, that such an implied consent can only have place, where a man imagines, that the matter depends on his choice. But where he thinks (as all mankind do who are born under established governments) that by his birth he owes allegiance to a certain prince or certain form of government; it would be absurd to infer a consent or choice, which he expressly, in this case, renounces and disclaims.

Can we seriously say, that a poor peasant or artisan has a free choice to leave his country, when he knows no foreign language or manners, and lives from day to day, by the small wages which he acquires? We may as well assert, that a man, by remaining in a vessel, freely consents to the dominion of the master; though he was carried on board while asleep, and must leap into the ocean, and perish, the moment he leaves her.

What if the prince forbid his subjects to quit his dominions; as in *TIBERIUS'S* time, it was regarded as a crime in a *ROMAN* knight that he had attempted to fly to the *PARTHIANS*, in order to escape the tyranny of that emperor? Or as the ancient *MUSCOVITES* prohibited all travelling under pain of death? And did a prince observe, that many of his subjects were seized with the frenzy of migrating to foreign countries, he would doubtless, with great reason

and justice, restrain them, in order to prevent the depopulation of his own kingdom. Would he forfeit the allegiance of all his subjects, by so wise and reasonable a law? Yet the freedom of their choice is surely, in that case, ravished from them.

A company of men, who should leave their native country, in order to people some uninhabited region, might dream of recovering their native freedom; but they would soon find, that their prince still laid claim to them, and called them his subjects, even in their new settlement. And in this he would but act conformably to the common ideas of mankind.

The truest *tacit* consent of this kind, that is ever observed, is when a foreigner settles in any country, and is beforehand acquainted with the prince, and government, and laws, to which he must submit. Yet is his allegiance, though more voluntary, much less expected or depended on, than that of a natural born subject? On the contrary, his native prince still asserts a claim to him. And if he punish not the renegade, when he seizes him in war with his new prince's commission; this clemency is not founded on the municipal law, which in all countries condemns the prisoner; but on the consent of princes, who have agreed to this indulgence, in order to prevent reprisals.

Did one generation of men go off the stage at once, and another succeed, as is the case with silk-worms and butterflies, the new race, if they had sense enough to choose their government, which surely is never the case with men, might voluntarily, and by general consent, establish their own form of civil polity, without any regard to the laws or precedents, which prevailed among their ancestors. But as human society is in perpetual flux, one man every hour going out of the world, another coming into it, it is necessary, in order to preserve stability in government, that the new brood should conform themselves to the established constitution, and nearly follow the path which their fathers, treading in the footsteps of theirs, had marked out to them. Some innovations must necessarily have place in every human institution, and it is happy where the

enlightened genius of the age give these a direction to the side of reason, liberty, and justice: but violent innovations no individual is entitled to make: they are even dangerous to be attempted by the legislature: more ill than good is ever to be expected from them: and if history affords examples to the contrary, they are not to be drawn into precedent, and are only to be regarded as proofs, that the science of politics affords few rules, which will not admit of some exception, and which may not sometimes be controlled by fortune and accident. The violent innovations in the reign of *HENRY VIII* proceeded from an imperious monarch, seconded by the appearance of legislative authority. Those in the reign of *CHARLES I* were derived from faction and fanaticism; and both of them have proved happy in the issue. But even the former were long the source of many disorders, and still more dangers; and if the measures of allegiance were to be taken from the latter, a total anarchy must have place in human society, and a final period at once be put to every government.

Suppose, that a usurper, after having banished his lawful prince and royal family, should establish his dominion for ten or a dozen years in any country, and should preserve so exact a discipline in his troops, and so regular a disposition in his garrisons, that no insurrection had ever been raised, or even murmur heard, against his administration. Can it be asserted, that the people, who in their hearts abhor his treason, have tacitly consented to his authority, and promised him allegiance, merely because, from necessity, they live under his dominion? Suppose again their native prince restored, by means of an army, which he levies in foreign countries. They receive him with joy and exultation, and show plainly with what reluctance they had submitted to any other yoke. I may now ask, upon what foundation the prince's title stands? Not on popular consent surely. For though the people willingly acquiesce in his authority, they never imagine, that their consent made him sovereign. They consent; because they apprehend him to be already, by birth, their lawful sovereign. And as to that *tacit* consent, which may

now be inferred from their living under his dominion, this is no more than what they formerly gave to the tyrant and usurper.

When we assert, that all lawful government arises from the consent of the people, we certainly do them a great deal more honor than they deserve, or even expect and desire from us. After the ROMAN dominions became too unwieldy for the republic to govern them, the people, over the whole known world, were extremely grateful to AUGUSTUS for that authority, which, by violence, he had established over them; and they showed an equal disposition to submit to the successor, whom he left them, by his last will and testament. It was afterwards their misfortune, that there never was, in one family, any long regular succession; but that their line of princes was continually broken, either by private assassinations or public rebellions. The *praetorian* bands, on the failure of every family, set up one emperor; the legions in the East a second; those in GERMANY, perhaps, a third: And the sword alone could decide the controversy. The condition of the people, in that mighty monarchy, was to be lamented, not because the choice of the emperor was never left to them; for that was impracticable: But because they never fell under any succession of masters, who might regularly follow each other. As to the violence and wars and bloodshed, occasioned by every new settlement; these were not blameable, because they were inevitable.

The house of LANCASTER ruled in this island about sixty years; yet the partisans of the white rose seemed daily to multiply in ENGLAND. The present establishment has taken place during a still longer period. Have all views of right in another family been utterly extinguished; even though scarce any man now alive had arrived at years of discretion, when it was expelled, or could have consented to its dominion, or have promised it allegiance? A sufficient indication surely of the general sentiment of mankind on this head. For we blame not the partisans of the abdicated family, merely on account of the long time, during which they have preserved their imaginary loyalty. We blame them for adhering to a

family, which, we affirm, has been justly expelled, and which, from the moment the new settlement took place, had forfeited all title to authority.

But would we have a more regular, at least a more philosophical, refutation of this principle of an original contract or popular consent; perhaps, the following observations may suffice.

All *moral* duties may be divided into two kinds. The *first* are those, to which men are impelled by a natural instinct or immediate propensity, which operates on them, independent of all ideas of obligation, and of all views, either to public or private utility. Of this nature are, love of children, gratitude to benefactors, pity to the unfortunate. When we reflect on the advantage, which results to society from such humane instincts, we pay them the just tribute of moral approbation and esteem: But the person, actuated by them, feels their power and influence, antecedent to any such reflection.

The *second* kind of moral duties are such as are not supported by any original instinct of nature, but are performed entirely from a sense of obligation, when we consider the necessities of human society, and the impossibility of supporting it, if these duties were neglected. It is thus *justice* or a regard to the property of others, *fidelity* or the observance of promises, become obligatory, and acquire an authority over mankind. For as it is evident, that every man loves himself better than any other person, he is naturally impelled to extend his acquisitions as much as possible; and nothing can restrain him in this propensity, but reflection and experience, by which he learns the pernicious effects of that license, and the total dissolution of society which must ensue from it. His original inclination, therefore, or instinct, is here checked and restrained by a subsequent judgment or observation.

The case is precisely the same with the political or civil duty of *allegiance*, as with the natural duties of justice and fidelity. Our primary instincts lead us either to indulge ourselves in unlimited freedom, or to seek dominion over others. And it is reflection only, which engages us

to sacrifice such strong passions to the interests of peace and public order. A small degree of experience and observation suffices to teach us that society cannot possibly be maintained without the authority of magistrates, and that this authority must soon fall into contempt, where exact obedience is not paid to it. The observation of these general and obvious interests is the source of all allegiance, and of that moral obligation, which we attribute to it.

What necessity, therefore, is there to found the duty of *allegiance* or obedience to magistrates on that of *fidelity* or a regard to promises, and to suppose, that it is the consent of each individual, which subjects him to government; when it appears, that both allegiance and fidelity stand precisely on the same foundation, and are both submitted to by mankind, on account of the apparent interests and necessities of human society? We are bound to obey our sovereign, it is said; because we have given a tacit promise to that purpose. But why are we bound to observe our promise? It must here be asserted, that the commerce and intercourse of mankind, which are of such mighty advantage, can have no security where men pay no regard to their engagements. In like manner, may it be said, that men could not live at all in society, at least in a civilized society, without laws and magistrates and judges, to prevent the encroachments of the strong upon the weak, of the violent upon the just and equitable. The obligation to allegiance being of like force and authority with the obligation to fidelity, we gain nothing by resolving the one into the other. The general interests or necessities of society are sufficient to establish both.

If the reason be asked of that obedience, which we are bound to pay to government, I readily answer, *because society could not otherwise subsist*: And this answer is clear and intelligible to all mankind. Your answer is, *because we should keep our word*. But besides, that no body, till trained in a philosophical system, can either comprehend or relish this answer: Besides this, I say, you find yourself embarrassed, when it is asked, *why we are bound to keep our word?* Nor can you give any answer, but

what would, immediately, without any circuit, have accounted for our obligation to allegiance.

But to whom is *allegiance due?* And who is our *lawful sovereign?* This question is often the most difficult of any, and liable to infinite discussions. When people are so happy, that they can answer, *Our present sovereign, who inherits, in a direct line, from ancestors, that have governed us for many ages*; this answer admits of no reply; even though historians, in tracing up to the remotest antiquity, the origin of that royal family, may find, as commonly happens, that its first authority was derived from usurpation and violence. It is confessed, that private justice, or the abstinence from the properties of others, is a most cardinal virtue. Yet reason tells us, that there is no property in durable objects, such as lands or houses, when carefully examined in passing from hand to hand, but must, in some period, have been founded on fraud and injustice. The necessities of human society, neither in private nor public life, will allow of such an accurate enquiry. And there is no virtue or moral duty, but what may, with facility, be refined away, if we indulge a false philosophy, in sifting and scrutinizing it, by every captious rule of logic, in every light or position, in which it may be placed.

The questions with regard to private property have filled infinite volumes of law and philosophy, if in both we add the commentators to the original text; and in the end, we may safely pronounce, that many of the rules, there established, are uncertain, ambiguous, and arbitrary. The like opinion may be formed with regard to the succession and rights of princes and forms of government. Several cases, no doubt, occur, especially in the infancy of any constitution, which admit of no determination from the laws of justice and equity. . . .

Nor can any thing be more unhappy than a despotic government of this kind; where the succession is disjointed and irregular, and must be determined, on every vacancy, by force or election. In a free government, the matter is often unavoidable, and is also much less dangerous. The

interests of liberty may there frequently lead the people, in their own defense, to alter the succession of the crown. And the constitution, being compounded of parts, may still maintain a sufficient stability, by resting on the aristocratical or democratical members, though the monarchical be altered, from time to time, in order to accommodate it to the former.

In an absolute government, when there is no legal prince, who has a title to the throne, it may safely be determined to belong to the first occupant. Instances of this kind are but too frequent, especially in the eastern monarchies. When any race of princes expires, the will or destination of the last sovereign will be regarded as a title. Thus the edict of LEWIS the XIVth, who called the bastard princes to the succession in case of the failure of all the legitimate princes, would, in such an event, have some authority. Thus the will of CHARLES the Second disposed of the whole SPANISH monarchy. The cession of the ancient proprietor, especially when joined to conquest, is likewise deemed a good title. The general obligation, which binds us to government, is the interest and necessities of society; and this obligation is very strong. The determination of it to this or that particular prince or form of government is frequently more uncertain and dubious. Present possession has considerable authority in these cases, and greater than in private property; because of the disorders which attend all revolutions and changes of government.

We shall only observe, before we conclude, that, though an appeal to general opinion may justly, in the speculative sciences of metaphysics, natural philosophy, or astronomy, be deemed unfair and inconclusive, yet in all questions with regard to morals, as well as criticism, there is really no other standard, by which any controversy can ever be decided. And nothing is a clearer proof, that a theory of this kind is erroneous, than to find, that it leads to paradoxes, repugnant to the common sentiments of mankind, and to the practice and opinion of all nations and all ages. The doctrine, which founds all lawful government on an *original contract*, or consent of

the people, is plainly of this kind; nor has the most noted of its partisans,² in prosecution of it, scrupled to affirm, *that absolute monarchy is inconsistent with civil society, and so can be no form of civil government at all; and that the supreme power in a state cannot take from any man, by taxes and impositions, any part of his property, without his own consent or that of his representatives.* What authority any moral reasoning can have, which leads into opinions so wide of the general practice of mankind, in every place but this single kingdom, it is easy to determine.

The only passage I meet with in antiquity, where the obligation of obedience to government is ascribed to a promise, is in PLATO'S *Crito*: where SOCRATES refuses to escape from prison, because he had tacitly promised to obey the laws. Thus he builds a *Tory* consequence of passive obedience, on a *Whig* foundation of the original contract.

New discoveries are not to be expected in these matters. If scarce any man, till very lately, ever imagined that government was founded on compact, it is certain, that it cannot, in general, have any such foundation.

OF JUSTICE*

That justice is useful to society, and consequently that *part* of its merit, at least, must arise from that consideration, it would be a superfluous undertaking to prove. That public utility is the *sole* origin of Justice, and that reflections on the beneficial consequences of this virtue are the *sole* foundation of its merit; this proposition, being more curious and important, will better deserve our examination and inquiry.

Let us suppose, that nature has bestowed on the human race such profuse *abundance* of all *external* conveniences, that, without any uncertainty in the event, without any care or industry on our part, every individual finds himself fully provided with whatever his most voracious appetites can want, or luxurious imagination wish or desire.

² Locke.

* From David Hume, *An Enquiry Concerning the Principles of Morals* (1751).

His natural beauty, we shall suppose, surpasses all acquired ornaments. The perpetual clemency of the seasons renders useless all clothes or covering. The raw herbage affords him the most delicious fare; the clear fountain, the richest beverage. No laborious occupation required. No tillage. No navigation. Music, poetry, and contemplation, form his sole business. Conversation, mirth, and friendship, his sole amusement.

It seems evident, that, in such a happy state, every other social virtue would flourish, and receive tenfold increase; but the cautious, jealous virtue of justice, would never once have been dreamed of. For what purpose make a partition of goods, where every one has already more than enough? Why give rise to property, where there cannot possibly be any injury? Why call this object *mine*, when, upon the seizing of it by another, I need but stretch out my hand to possess myself of what is equally valuable? Justice, in that case, being totally USELESS, would be an idle ceremonial, and could never possibly have place in the catalogue of virtues.

We see, even in the present necessitous condition of mankind, that, wherever any benefit is bestowed by nature in an unlimited abundance, we leave it always in common among the whole human race, and make no subdivisions of right and property. Water and air, though the most necessary of all objects, are not challenged as the property of individuals; nor can any man commit injustice by the most lavish use and enjoyment of these blessings. In fertile extensive countries, with few inhabitants, land is regarded on the same footing. And no topic is so much insisted on by those who defend the liberty of the seas, as the unexhausted use of them in navigation. Were the advantages procured by navigation as inexhaustible, these reasoners had never had any adversaries to refute; nor had any claims ever been advanced of a separate, exclusive dominion over the ocean.

It may happen, in some countries, at some periods, that there be established a property in water, none in land; if the latter be in greater abundance than can be used by the inhabitants, and the former

be found with difficulty, in very small quantities.

Again: Suppose, that though the necessities of the human race continue the same as at present, yet the mind is so enlarged, and so replete with friendship and generosity, that every man has the utmost tenderness for every man, and feels no more concern for his own interest than for that of his fellows. It seems evident, that the USE of Justice would, in this case, be suspended by such an extensive benevolence, nor would the divisions and barriers of property and obligation have ever been thought of. Why should I bind another, by a deed or promise, to do me any good office, when I know that he is already prompted, by the strongest inclination, to seek my happiness, and would, of himself, perform the desired service; except the hurt he thereby receives be greater than the benefit accruing to me. In which case he knows that, from my innate humanity and friendship, I should be the first to oppose myself to his imprudent generosity. Why raise landmarks between my neighbor's field and mine, when my heart has made no division between our interests; but shares all his joys and sorrows with the same force and vivacity as if originally my own? Every man, upon this supposition, being a second self to another, would trust all his interests to the discretion of every man; without jealousy, without partition, without distinction. And the whole human race would form only one family; where all would lie in common, and be used freely, without regard to property; but cautiously too, with as entire regard to the necessities of each individual, as if our own interests were most intimately concerned.

In the present disposition of the human heart, it would perhaps be difficult to find complete instances of such enlarged affections; but still we may observe, that the case of families approaches towards it; and the stronger the mutual benevolence is among the individuals, the nearer it approaches; till all distinction of property be, in a great measure, lost and confounded among them. Between married persons, the cement of friendship is by the

laws supposed so strong as to abolish all division of possessions, and has often, in reality, the force ascribed to it. And it is observable, that, during the ardor of new enthusiasms, when every principle is inflamed into extravagance, the community of goods has frequently been attempted; and nothing but experience of its inconveniences, from the returning or disguised selfishness of men, could make the imprudent fanatics adopt anew the ideas of justice and of separate property. So true is it that this virtue derives its existence entirely from its necessary use to the intercourse and social state of mankind.

To make this truth more evident, let us reverse the foregoing suppositions; and, carrying every thing to the opposite extreme, consider what would be the effect of these new situations. Suppose a society to fall into such want of all common necessities, that the utmost frugality and industry cannot preserve the greater number from perishing, and the whole from extreme misery. It will readily, I believe, be admitted, that the strict laws of justice are suspended, in such a pressing emergence, and give place to the stronger motives of necessity and self-preservation. Is it any crime, after a shipwreck, to seize whatever means or instrument of safety one can lay hold of, without regard to former limitations of property? Or if a city besieged were perishing with hunger; can we imagine that men will see any means of preservation before them, and lose their lives, from a scrupulous regard to what, in other situations, would be the rules of equity and justice? The USE and TENDENCY of that virtue is to procure happiness and security, by preserving order in society. But where the society is ready to perish from extreme necessity, no greater evil can be dreaded from violence and injustice, and every man may now provide for himself by all the means which prudence can dictate, or humanity permit. The public, even in less urgent necessities, open granaries without the consent of proprietors; as justly supposing, that the authority of magistracy may, consistent with equity, extend so far. But were any number of men to assemble, without the tie of laws or civil jurisdiction; would an equal

partition of bread in a famine, though effected by power and even violence, be regarded as criminal or injurious?

Suppose, likewise, that it should be a virtuous man's fate to fall into the society of ruffians; remote from the protection of laws and government; what conduct must he embrace in that melancholy situation? He sees such a desperate rapaciousness prevail; such a disregard to equity, such contempt of order, such stupid blindness to future consequences, as must immediately have the most tragical conclusion, and must terminate in destruction to the greater number, and in a total dissolution of society to the rest. He meanwhile, can have no other expedient than to arm himself, to whomever the sword he seizes, or the buckler, may belong, to make provision of all means or defence and security. And his particular regard to justice being no longer of USE to his own safety or that of others, he must consult the dictates of self-preservation alone, without concern for those who no longer merit his care and attention.

When any man, even in political society, renders himself by his crimes obnoxious to the public, he is punished by the laws in his goods and person; that is, the ordinary rules of justice are, with regard to him, suspended for a moment; and it becomes equitable to inflict on him, for the benefit of society, what otherwise he could not suffer without wrong or injury.

The rage and violence of public war; what is it but a suspension of justice among the warring parties, who perceive that this virtue is now no longer of any use or advantage to them? The laws of war, which then succeed to those of equity and justice, are rules calculated for the advantage and utility of that particular state in which men are now placed. And were a civilized nation engaged with barbarians, who observed no rules even of war; the former must also suspend their observance of them, where they no longer serve to any purpose; and must render every action or rencounter as bloody and pernicious as possible to the first aggressors.

Thus, the rules of equity or justice depend entirely on the particular state and

condition in which men are placed, and owe their origin and existence to that UTILITY, which results to the public from their strict and regular observance. Reverse, in any considerable circumstance, the condition of men. Produce extreme abundance or extreme necessity. Implant in the human breast perfect moderation and humanity, or perfect rapaciousness and malice. By rendering justice totally useless, you thereby totally destroy its essence, and suspend its obligation upon mankind.

The common situation of society is a medium amidst all these extremes. We are naturally partial to ourselves and to our friends; but are capable of learning the advantage resulting from a more equitable conduct. Few enjoyments are given us from the open and liberal hand of nature; but by art, labor, and industry, we can extract them in great abundance. Hence the ideas of property become necessary in all civil society. Hence justice derives its usefulness to the public. And hence alone arises its merit and moral obligation.

These conclusions are so natural and obvious, that they have not escaped even the poets in their descriptions of the felicity attending the golden age or the reign of Saturn. The seasons, in that first period of nature, were so temperate, if we credit these agreeable fictions, that there was no necessity for men to provide themselves with clothes and houses, as a security against the violence of heat and cold. The rivers flowed with wine and milk. The oaks yielded honey. And Nature spontaneously produced her greatest delicacies. Nor were these the chief advantages of that happy age. Tempests were not alone removed from nature; but those more furious tempests were unknown to human breasts, which now cause such uproar, and engender such confusion. Avarice, ambition, cruelty, selfishness, were never heard of. Cordial affection, compassion, sympathy, were the only movements with which the mind was yet acquainted. Even the punctilious distinction of *mine* and *thine* was banished from among that happy race of mortals, and carried with it the very notion of property and obligation, justice and injustice.

This poetical fiction of the golden age is, in some respects, of a piece with the philosophical fiction of the state of nature; only that the former is represented as the most charming and most peaceable condition which can possibly be imagined; whereas the latter is painted out as a state of mutual war and violence, attended with the most extreme necessity. On the first origin of mankind, we are told, their ignorance and savage nature were so prevalent, that they could give no mutual trust, but must each depend upon himself, and his own force or cunning for protection and security. No law was heard of. No rule of justice known. No distinction of property regarded. Power was the only measure of right; and a perpetual war of all against all was the result of men's untamed selfishness and barbarity.

Whether such a condition of human nature could ever exist, or, if it did, could continue so long as to merit the appellation of a state, may justly be doubted. Men are necessarily born in a family-society at least; and are trained up by their parents to some rule of conduct and behaviour. But this must be admitted, that, if such a state of mutual war and violence was ever real, the suspension of all laws of justice, from their absolute inutility, is a necessary and infallible consequence.

The more we vary our views of human life, and the newer and more unusual the lights are in which we survey it, the more shall we be convinced, that the origin here assigned for the virtue of justice is real and satisfactory.

Were there a species of creatures intermingled with men, which, though rational, were possessed of such inferior strength, both of body and mind, that they were incapable of all resistance, and could never, upon the highest provocation, make us feel the effects of their resentment; the necessary consequence, I think, is, that we should be bound, by the laws of humanity, to give gentle usage to these creatures, but should not, properly speaking, lie under any restraint of justice, with regard to them, nor could they possess any right or property exclusive of such arbitrary lords. Our intercourse with them could not be

called society, which supposes a degree of equality; but absolute command on the one side, and servile obedience on the other. Whatever we covet, they must instantly resign. Our permission is the only tenure by which they hold their possessions. Our compassion and kindness the only check by which they curb our lawless will. And as no inconvenience ever results from the exercise of a power so firmly established in nature, the restraints of justice and property, being totally *useless*, would never have place in so unequal a confederacy.

This is plainly the situation of men with regard to animals; and how far these may be said to possess reason, I leave it to others to determine. The great superiority of civilized Europeans above barbarous Indians, tempted us to imagine ourselves on the same footing with regard to them, and made us throw off all restraints of justice, and even of humanity, in our treatment of them. In many nations, the female sex are reduced to like slavery, and are rendered incapable of all property, in opposition to their lordly masters. But though the males, when united, have in all countries bodily force sufficient to maintain this severe tyranny; yet such are the insinuations, address, and charms of their fair companions, that women are commonly able to break the confederacy, and share with the other sex in all the rights and privileges of society.

Were the human species so framed by nature as that each individual possessed within himself every faculty, requisite both for his own preservation, and for the propagation of his kind: Were all society and intercourse cut off between man and man, by the primary intention of the Supreme Creator: It seems evident, that so

solitary a being would be as much incapable of justice as of social discourse and conversation. Where mutual regards and forbearance serve to no manner of purpose, they would never direct the conduct of any reasonable man. The headlong course of the passions would be checked by no reflection on future consequences. And as each man is here supposed to love himself alone, and to depend only on himself and his own activity for safety and happiness, he would, on every occasion, to the utmost of his power, challenge the preference above every other being, to none of which he is bound by any ties, either of nature or of interest.

But suppose the conjunction of the sexes to be established in nature, a family immediately arises; and particular rules being found requisite for its subsistence, these are immediately embraced, though without comprehending the rest of mankind within their prescriptions. Suppose that several families unite together into one society, which is totally disjoined from all others, the rules which preserve peace and order enlarge themselves to the utmost extent of that society; but becoming then entirely useless, lose their force when carried one step farther. But again, suppose that several distinct societies maintain a kind of intercourse for mutual convenience and advantage, the boundaries of justice still grow larger, in proportion to the largeness of men's views, and the force of their mutual connection. History, experience, reason, sufficiently instruct us in this natural progress of human sentiments, and in the gradual enlargement of our regards to justice, in proportion as we become acquainted with the extensive utility of that virtue.

ROUSSEAU

The French Revolution is the dominating event of the eighteenth century, and its impetus is far from being spent even today. Its intellectual preparation ran through three generations, and all significant issues were subjected to critical inquiry and examination. The impact of the debate was intensified by its being carried on in human rather than in national terms, and the universal recognition of France's intellectual leadership in the Age of Reason was a source of her ultimate political leadership, because progressive and democratic forces throughout the world identified themselves with the cause of French freedom.

If the Age of Reason ended, politically, in the Age of Revolution, the fault was not that of philosophers and publicists but of the traditional forces that, by stubbornly resisting mild reform, made radical revolution inevitable. Voltaire and Montesquieu were liberal conservatives of the upper classes, and their purpose was to prevent revolution rather than to promote it; and social revolution was furthest from their thoughts. The England they adored was dominated by a wealthy and vigorous aristocracy. The suffrage was confined to a small number of persons, and Parliament represented primarily the interests of the landowning classes. The political recognition of the English middle classes came in 1832, a century after Voltaire and Montesquieu had visited England, and the acceptance of popular democracy occurred even later.

The whole eighteenth century in France was a race between time and disaster. During the first half of the century, criticism of existing institutions was directed more openly against the church than against the state, although once the principle of ecclesiastical authority was undermined, the issue of political authority was bound to be raised. The social centers of the era were the elegant Parisian *salons*, in which the sparkling wit of the *philosophes* mingled with the charm of beautiful women and the skeptical nonchalance of leisurely aristocrats. The people were still inarticulate; Voltaire spoke of them as *la canaille*, and not a few of the early leaders of the Enlightenment felt the same sentiment toward the masses, whom they met only as untutored servants, workers, or peasants.

Voltaire was little interested in forms of government; a benevolent despot, enlightened enough to protect intellectual liberty and personal property, would have suited his taste best, as he was more interested in the monarch's enlightenment than in his autocratic government. He would rather, he said, "obey a fine

lion, much stronger than himself, than two hundred rats of his own species." Though completely unaware of the existence of the social question as a chief driving force of revolution, Voltaire nevertheless opened the way for change by his ruthless and ridiculing attacks on intellectual obscurantism and inequality before the law.

In the second half of the eighteenth century, political criticism and philosophical expression became more daring and outspoken. The monument to that era is the *Encyclopédie* (1751–1772), edited by Diderot and containing contributions from the leading men of the time, d'Alembert, Holbach, Helvétius, Turgot, Haller, Morellet, Quesnay, and, at the beginning, also from Voltaire and Montesquieu. The *Encyclopédie* was originally designed to be mainly a translation of Chambers' *Cyclopaedia*, published in London in 1727, but Diderot desired to produce a work of more original and ambitious scope. The *Encyclopédie* was the first large-scale synthesis of all knowledge, and it represented—more than any other encyclopedia before or after—a whole temper and philosophical outlook.

The *encyclopédistes* belonged to varied schools of thought in science, philosophy, theology, and the arts, yet a collective intellectual denominator soon emerged: naturalism and empiricism in philosophy, deism or agnosticism in theology, utilitarianism in social institutions, constitutionalism in government, and support for industry and commerce in economics. The faith of the *encyclopédistes* was humanitarian, rationalist, and scientific: they believed that nature and society are governed, not by an incomprehensible and arbitrary fate or divine providence, but by an intelligible rational order, and that man's increase of knowledge is the best guide to his happiness and progress.

Despite its novel ideas and emphases, the rational outlook of the Enlightenment was traditional—and the tradition that had sprung from Greece was even older than the rivaling dogmas of church and religion. The historical achievement of the Enlightenment consisted not so much in having discovered the possibilities of reason but in having converted such a large part of the ruling classes of the time to its tenets. There was room for feeling and emotion in this age of rationalism, but they were subordinated to the primacy of reason and stylized in form and expression. The first to attack, not this or that idea or philosophy, but the very foundations of traditional civilization, had to be someone who was not a part of it: Jean Jacques Rousseau (1712–1778).

Before Rousseau appeared on the literary scene in Europe, critics of the existing order had slowly been widening their orbit of interest to include the people in their plans of reform. But "the people" meant primarily the discriminated Third Estate of prosperous and respectable merchants, lawyers, and intellectuals. Rousseau is the first modern writer on politics who was of the people: the submerged, inarticulate masses of the *petite bourgeoisie*, the poor artisans and workingmen, the small peasants, the restless and rootless, the *déclassés*, for whom there was no room, and no hope, in the existing order of things.

Rousseau was born of a poor family in Geneva, his French ancestors having migrated there as religious refugees in the sixteenth century. Rousseau's mother died a few days after his birth, and his father, an impecunious watchmaker and more enthusiastic dancing master, was unable to raise Jean Jacques in any coherent fashion. From the age of twelve Rousseau was apprenticed to various masters, but he failed to establish himself in any art or trade. At sixteen

he ran away from Geneva, and for the remainder of his life could claim no permanent abode anywhere.

Voltaire and Montesquieu had traveled through Europe in grand style; Rousseau saw much of the Continent through the eyes of a penniless, and at times hunted, vagabond, who did not always know where his next meal would come from and where he would sleep. Poverty made him commit minor thefts and larcenies, change his religion for temporary material advantage, and accept charity from people he detested. He was valet to an Italian aristocrat, secretary to a French diplomat, and a music teacher (with but few pupils); he often survived by dint of his own ingenuity and the charity of others, particularly women, who played a large part in his life from his early youth. He never ceased to attract women and to be attracted by them.

In 1744 Rousseau went to Paris, having visited it first in 1742. He tried his hand at various schemes, the theater, opera, music, poetry, without making much of a success at anything. Yet his personality opened for him the doors of the best *salons* in Paris, where he met leading Encyclopedists as well as influential women, with several of whom he maintained close ties of friendship. But he never became, not did he wish to become, a part of the fashionable set of Paris. He had love affairs with society women, but of all his associations with women the one that lasted longest was with Thérèse Levasseur, a servant girl who worked in Rousseau's small hotel in Paris. As he said later in his *Confessions*: "At first I sought to give myself amusement, but I saw I had gone further and had given myself a companion."

Though enjoying, out of vanity, the company of the rich and powerful, he resented being admitted to the exalted society as a matter of personal privilege, and he never shed his plebeian, Puritanical background of a low middle-class family in Geneva. His complex feelings of pleasure and resentment regarding his social standing made it difficult for him to establish lasting human relations, except with Thérèse Levasseur, with whom he lived from his early days in Paris to the end of his life.

In 1749 the Academy of Dijon announced a prize for the best essay on the question: "Has the progress of sciences and arts contributed to corrupt or purify morality?" In his *Confessions* Rousseau later describes his immediate reaction: "Instantly I saw another universe, and I become another man." He set to work feverishly on the essay and submitted it to the Academy. In 1750 the Academy rewarded it the first prize, and it was published in 1751 under the title *A Discourse on the Moral Effects of the Arts and Sciences*.

Rousseau's thesis was the exact opposite of what was conventionally thought at that time, and he was bold enough to extol *natural man* at the expense of so-called civilized man, for "our minds have been corrupted in proportion as the arts and sciences have improved." The much vaunted politeness, the glory of civilized refinement, is for Rousseau but a "uniform and perfidious veil" under which he sees "jealousy, suspicion, fear, coolness, reserve, hate, and fraud."

In surveying history in support of his cult of natural simplicity, Rousseau is full of enthusiasm for Sparta, a "republic of demi-gods rather than of men," famous for the happy ignorance of its inhabitants, "eternal proof of the vanity of science." By contrast, he denigrates Athens, the center of vice, doomed to perish because of its elegance, luxury, wealth, art, and science: "From Athens

we derive those astonishing performances which will serve as models to every corrupt age."

Rousseau sees a direct causal relation between luxury, constantly expanding needs, and the rise of art and science, after which true courage flags and the virtues disappear. Roman history, Rousseau holds, supports this view: as long as Rome was poor and simple she was able to command respect and conquer an empire; after having developed luxury and engulfed the riches of the universe, Rome "fell a prey to peoples who knew not even what riches were." Rousseau inveighs against orators and philosophers as guides to superficiality and perversion. Philosophers consecrate themselves to the destruction of "all that men hold sacred," and Rousseau calls them "charlatans" who sow confusion among men and undermine their simple ideas of patriotism and religion.

Anticipating his own later views on education in *Emile* (1762), Rousseau writes in his first *Discourse* that traditional education is too vocational and too highly specialized, that children remain ignorant of their own language while being taught other languages not spoken anywhere, and that the moral virtues are neglected: "But magnanimity, equity, temperance, humanity and courage will be words of which they know not the meaning." Finally, Rousseau makes the charge that is as timely today as in 1749: "We have physicists, geometers, chemists, astronomers, poets, musicians, and painters in plenty; but we have no longer a citizen among us."

In 1753 Rousseau competed again in a contest of the Academy of Dijon; the subject was "What is the origin of inequality among men, and is it authorized by natural law?" His first *Discourse* had brought him immediate fame and sensational success. In writing his *Discourse on the Origin of Inequality* (1755), Rousseau felt he no longer needed to shock and captivate his audience by paradoxes and one-sided arguments, and he composed a much more systematic essay, one of the most influential in the history of democratic and socialist thought. He did not win this time, but the second *Discourse* is more important than the first, particularly in relation to the development of Rousseau's political ideas.

Rousseau distinguishes two kinds of inequality. The first is *natural* and consists in differences of age, health, bodily strength, and the qualities of mind and soul. The second is moral or *political inequality*, which owes its existence to social institutions and consists in privileges of wealth, honor, and power. Rousseau finds that natural inequalities are not substantial, that the problem of inequality arises with the formation of society. Nature destined man to live a healthy, simple life and to satisfy his essential needs ("food, a female, and sleep"). By contrast, man in society, or civilized man, has developed varied and unhealthy habits of eating and sleeping, and his mental and physical exhaustion is the result of the pains, anxieties, and torments of civilized living. *Civilization* is thus a *hopeless race to discover remedies for the evils it produces*. The man of nature knows less medicine than civilized man, but the latter brings upon himself more diseases than medicine can cure. Reflection is contrary to nature, and a thinking man, Rousseau says, is "a depraved animal."

This motif ran through the first *Discourse on the Arts and Sciences*, and Rousseau now announces the idea—so contrary to the commonplaces of his time—that human understanding is not the sole domain of reason but is

"greatly indebted to passions." In the state of nature, man was guided by two sentiments: self-interest and pity, and having no moral obligations with others, he could not be "good or bad, virtuous or vicious." Rousseau specifically rejects Hobbes' view of the state of nature in which man, not knowing goodness, must therefore be wicked, and he asserts that man's sense of compassion is the original sentiment from which all later virtues flow. Reason and thinking come afterward and isolate man from his fellows, whereas compassion unites him with others. Uncivilized man is always "foolishly ready to obey the first promptings of humanity. It is the populace that flocks together at riots and street-brawls, while the wise man prudently makes off. It is the mob and the market-women who part the combatants, and hinder gentle-folks from cutting one another's throats."

Turning to the origin of inequality in society, Rousseau starts out with a passage that has a distinctly socialist and revolutionary flavor: "The first man who, having enclosed a piece of ground, bethought himself of saying *This is mine*, and found people simple enough to believe him, was the real founder of civil society." The natural voice of compassion was stilled by the usurpations of the rich and the robberies of the poor, and the newborn society thus led to a "horrible state of war." The rich then devised a plan by which they would better enjoy their power and possession without the threat of constant war.

The first step was easy, to obtain agreement among the rich themselves to set up a system of law and government for the maintenance of peace. The second step, "the profoundest plan that ever entered the mind of man," was to employ the forces of the poor for the creation of government, under which all would be protected and their possessions safeguarded: "Such was, or may well have been, the origin of society and law, which bound new fetters on the poor, and gave new powers to the rich; which irretrievably destroyed natural liberty, eternally fixed the law of property and inequality, converted clever usurpation into unalterable right, and, for the advantage of a few ambitious individuals, subjected all mankind to perpetual labor, slavery and wretchedness."

In the long run, however, Rousseau foresees that from extreme inequality of fortunes and conditions spring divisions and dissensions that undermine the fabric of society and government. Despotism arises out of these disorders, but despotism is the "last term of inequality." Popular insurrection deposes the despot, or even puts him to death: "As he was maintained by force alone, it is force alone that overthrows him." This was strong language for the middle of the eighteenth century, when revolution was not thought of as yet and when free expression was curbed by both church and state.

The concluding words of the *Discourse on the Origin of Inequality* made it plain that Rousseau was not referring to hypothetical states of nature or society but to the injustices of contemporary France, "since it is plainly contrary to the laws of nature, however defined, that children should command old men, fools wise men, and that the privileged few should gorge themselves with superfluities, while the starving multitude are in want of the bare necessities of life."

At the time of uttering this ringing challenge, Rousseau did not earn enough to rent a house, much less own one, or to provide enough of the bare necessities for himself and the woman who shared his existence. During most of his life Rousseau lived in houses and cottages that his friends gave him rent-free, and

Thérèse Levasseur received more gifts (often rather unashamedly soliciting them from friends) than proud and sensitive Jean Jacques would have cared to know. While he was not of the "starving multitude," he was close enough to its worries, its tragedies and petty cares, to know how poverty could deprave and degrade men and women who were originally good.

In 1755 Rousseau published the *Discourse on Political Economy* in Diderot's *Encyclopédie*. Rousseau's regular assignments for the *Encyclopédie* covered music, and the *Discourse on Political Economy* is less remarkable for its economic observations than for the fact that it is his first constructive approach to a theory of the state, whereas the first two *Discourses* had been mainly critical. The *Discourse on Political Economy* is important in the development of Rousseau's political ideas, inasmuch as it contains the first statement of the concept of the General Will, his most original contribution to political philosophy. Thus, when Rousseau published his most famous work, *The Social Contract*, in 1762, its chief ideas were not the result of a sudden inspiration; they had matured in him over the years and had been partially expressed in his three *Discourses*.

The main concern of *The Social Contract* is the central issue of all political speculation: *political obligation*. "The problem," Rousseau says, "is to find a form of association which will defend and protect with the whole common force the person and goods of each associate, and in which each, while uniting himself with all, may still obey himself alone, and remain as free as before." In the very beginning of the book, Rousseau puts the same question in a more dramatic form: "Man is born free; and everywhere he is in chains."

Like his predecessors, Rousseau uses the conceptions of the state of nature and the social contract that puts an end to it. Rousseau's conception of man's life in the state of nature is not quite so gloomy as that of Hobbes, nor as optimistic as that of Locke. Each man pursues his self-interest in the state of nature until he discovers that his power to preserve himself individually against the threats and hindrances of others is not strong enough. The purpose of the social contract is thus to combine security, which comes from collective association, with liberty, which the individual had before the making of the contract. But the social contract consists in "the total alienation of each associate, together with all his rights, to the whole community."

The total surrender of the individual to the sovereign community is completely contrary to Locke and recalls Hobbes' view of the social contract, in which the individual also surrenders himself completely to the sovereign. But whereas Hobbes' subject is completely submissive to his sovereign, Rousseau reflects this kind of social peace without liberty: "Tranquillity is also found in dungeons; but is that enough to make them desirable places to live in?" To renounce liberty, Rousseau says, is to renounce being a man, for there can be no obligation that is not, to some extent at least, mutual. In Rousseau's social contract man does not surrender completely to a sovereign ruler, but each man gives himself to all, and therefore gives himself to nobody in particular: "As there is no associate over whom he does not acquire the same right as he yields others over himself, he gains an equivalent for everything he loses, and an increase of force for the preservation of what he has."

Rousseau shows in *The Social Contract* a much greater appreciation of civil society, as compared with the state of nature, than he showed in his earlier

writings. In the state of nature, Rousseau now says, man is guided by instinct only, whereas in society he is inspired by justice and morality. Man loses through the social contract his *natural liberty* and an unlimited right to everything he can lay his hands on, but he gains *civil liberty* and property rights in all he possesses. The liberty of the state of nature is no true liberty, because it is merely enslavement to uncontrolled appetites. By contrast, *moral liberty*, which man acquires solely in the civil state, makes him master of himself, because "obedience to a law which we prescribe to ourselves is liberty."

These three forms of liberty progress from the lower to the higher. Natural liberty is devoid of any reflective or rational elements, and its boundary—constantly shifting—is simply the strength of the individual to assert himself. Civil liberty has a firmer and more rational foundation—the laws and rules of the political community which determine what each member may and may not do in relation to other members. However, if the rules and laws of a political community are created by all its members, then civil liberty rises to the level of moral liberty, for in obeying laws we ourselves have made, we remain free. Whereas civil liberty creates individual rights and freedoms in relation to others, moral liberty is the only type of freedom in which the individual is free in relation to himself.

Once men have created society, the alternative is no longer between liberty limited by no rules (or by one's strength only, as in the state of nature) and liberty limited by rules, for the very concept of civil society requires laws. In civil society, the alternative is between obeying laws in the making of which the citizens have not participated, and obeying laws in which we ourselves have participated in making. In the first case, we obey the will of others, which makes us morally unfree. In the second case, we obey the will of ourselves, which condition alone can make us free. If there has to be law—and where there is society, there must be law—self-imposed law is thus the closest approximation to freedom that man can attain in civil society. Rousseau was fully aware of the paradox that law by its very nature limits freedom and that there can be no freedom without law. "By what inconceivable art," he asks, "has a means been found of making men free by making them subject?", and he answers that "these wonders are the work of law. It is to law alone that men owe justice and liberty."

Rousseau's conception of sovereignty differs from both Hobbes' and Locke's. In Hobbes' the people set up a sovereign and transfer all power to him. In Locke's social contract the people set up a limited government for limited purposes, but Locke shuns the conception of sovereignty—popular or monarchical—as a symbol of political absolutism. Rousseau's sovereign is the people, constituted as a political community through the social contract.

Unlike nearly all other major political thinkers, Rousseau considers the *sovereignty of the people inalienable and indivisible*. The people cannot give away, or transfer, to any person or body their ultimate right of self-government, of deciding their own destiny. Whereas Hobbes identified the sovereign with the ruler who exercises sovereignty, Rousseau draws a sharp distinction between sovereignty, which always and wholly resides in the people, and government, which is but a temporary agent (as in Locke's conception) of the sovereign people. Whereas, in Locke, the people transfer the exercise of their supreme authority, legislative, executive, and judicial, to organs of government, Rousseau's concept

of inalienable and indivisible sovereignty does not permit the people to transfer their legislative function, the supreme authority in the state. As to the executive and judicial functions, Rousseau realizes that they have to be exercised by special organs of government, but they are completely subordinated to the sovereign people, and there is no hint or suggestion of separation, or balance, of powers.

Rousseau's system of government is unmitigated popular sovereignty, unmodified by competing or balancing powers; this aspect of Rousseau has always strongly appealed to adherents of radical and uncompromising democracy. Rousseau thought that the people of England were mistaken in thinking themselves free; they were actually free only once every few years when electing Members of Parliament. Sovereignty lies in the General Will of the people, and will cannot be represented.

In the *Discourse on Political Economy* Rousseau had already dealt with the problem of the General Will, the key conception in his political philosophy. He sees the body politic "possessed of a will; and this General Will, which tends always to the preservation and welfare of the whole and of every part, and is the source of the laws, constitutes for all the members of the state, in their relation to one another and to it, the rule of what is just or unjust." By introducing the concept of the *General Will*, Rousseau fundamentally alters the mechanistic concept of the state as an instrument (shared by both Hobbes and Locke), and revives the *organic* theory of the state, which goes back to Plato and Aristotle.

Rousseau is keenly aware of the life of groups, which is more than a charter or articles of incorporation. The state is not the only group with a General Will; particular societies and associations, too, have a General Will in relation to their members, though in relation to the state their will is particular, because the General Will of the state is the most comprehensive of all, embracing all members of the community.

Rousseau himself admits, before his critics and commentators made the discovery, that the distinction between the General Will and particular wills is "always very difficult to make." The General Will is not an empirical fact so much as a *moral fact*, and "it is needful only to act justly, to be certain of following the General Will." By establishing the reign of virtue, all particular wills will be brought in conformity with the General Will. The General Will, therefore, is not something that can be legislated against the people from the outside, but is a moral attitude in the heart of the citizens, and "nothing can take the place of morality in the maintenance of government."

The character of the General Will is determined by two elements: first, it *aims at the general good*, and, second, it *must come from all and apply to all*. The first refers to the object of the will; the second, to its origin. The Will of All must therefore not be confused with the General Will: "The latter considers only the common interest, while the former takes private interest into account, and is no more than a sum of particular wills." The generality of the will is not so much a matter of numbers as of intrinsic quality and goodness. The people always will be good, but they do not always understand it, particularly when factions make it difficult for the independent citizen to pursue the common good. Nor can the General Will be represented, because representative assemblies tend to develop particular interests of their own, forgetting those of the community. Obviously

referring to the direct democracies of Swiss city-republics, Rousseau glowingly describes how "bands of peasants are seen regulating affairs of state under an oak, and always acting wisely," and he prefers the methods of these "happiest people in the world" to the ingenious methods of party government through representation, as practiced in other nations.

Rousseau recognizes that in direct popular government unanimity is, in practice, impossible, and that the vote of the majority binds the minority. The question of how the minority can be free and yet be bound to obey the majority is rejected by Rousseau as wrongly put: when a citizen objects to a proposed law in the popular assembly and finds himself in a minority, he does not thereby lose his freedom, for his minority vote merely proves that he did not recognize the General Will, rather than that the majority, as such, has a right to rule over him. Rousseau cautiously adds that this conception of freedom of the individual "presupposes, indeed, that all the qualities of the General Will still reside in the majority: when they cease to do so, whatever side a man may take, liberty is no longer possible."

Obedying the General Will is thus the expression of the moral freedom of the individual, and if he refuses to obey, he may be compelled to do so: "This means nothing less than that he will be forced to be free." Here Rousseau revives his basic distinction between the apparent liberty of man in the state of nature, which actually is enslavement to selfish appetites, and his moral liberty in civil society, which consists in obeying laws, general in scope and origin, which he, as a member of the body politic, has helped to make.

Yet it takes more than one brief phrase to interpret a thinker as an authoritarian, particularly a thinker who felt drawn to the lowly, the weak, the oppressed, and who proclaimed liberty, justice, and equality as the ends of law and government. Perhaps this famous phrase—that man can be forced to be free—is an extreme case of Rousseau's love of colorful images and verbal fireworks, as exemplified, for example, by the opening words of the *social contract*, "Man is born free; and everywhere he is in chains," which also cannot be accepted literally and which yet try to say something important.

The phrase "forcing man to be free" is obviously self-contradictory, if one looks at the ordinary meaning of these words. It may be safely presumed that Rousseau was fully aware of this contradiction if one interprets the words force and freedom according to everyday usage in which force and freedom are contradictory. The contradiction becomes, however, less obvious and simple if we recall that Rousseau distinguishes civil liberty from moral liberty, and that moral liberty can be attained only through the General Will creating laws which come from all, apply to all, and aim at the general good. When a civil society is in the process of being set up by the social contract, individuals may stay out of the rights and obligations thereby created by either leaving the civil society, that is, by emigrating, or by remaining "as foreigners among citizens." Once the state is set up, "residence constitutes consent; to dwell in its territory to submit to its sovereignty." In the light of many modern totalitarian practices of preventing people from leaving their country for another, Rousseau adds the interesting comment that residence should be construed as consent to the political institutions of a state only if it is free and voluntary, as is the case in a "free state," for in states which are not free, "lack of a refuge, necessity, or

violence may detain a man in a country against his will; and then his residing there no longer by itself implies his consent to the contract or to its violation."

However, the citizen of the free state cannot give his consent selectively to one law but not to another: "The citizen gives his consent to all the laws, including those which are passed in spite of his opposition, and even those which punish him when he dares to break any of them." The concept of the General Will involves the participation of every citizen in the making of laws; by taking part in the process on a free and equal basis with all other citizens, he obliges himself in advance to obey the law even if he has voted against it, since "the vote of the majority always binds the rest." However, Rousseau is no adherent of majoritarian tyranny and caprice, for the obligation of the citizen to obey the law he has opposed or voted against before its being enacted presupposes that "all the qualities of the General Will still reside in the majority," including its quality of aiming at the common good. But if the General Will, as expressed by the majority, meets both its empirical requirement—that it come from all and that it apply to all—and its moral or rational requirement—that it aim at the common good, then liberty—in Rousseau's (and, later, Kant's) sense of *moral liberty*—means no more, *but also no less*, than obeying the laws one has participated in creating. What Rousseau thus tries to convey in the provocative and attention-catching phrase of forcing man to be free if he disobeys the General Will is the notion that one cannot have it both ways, that the very concept of civil society implies the abandonment of natural liberty, in which one's freedom is limited only by his strength. All civilization implies rational self-restraint, and political civilization, too, implies the rational understanding on the part of the citizen in the free state that in the notion of liberty as subjection to self-imposed law the importance of the word "subjection" is equal to that of "self-imposed." In the first draft of the *Social Contract* Rousseau plainly states that the General Will is more than pure will, that, in fact, it is "in each individual a pure act of understanding, which reasons while the passions are silent on what a man may demand of his neighbor and on what his neighbor has a right to demand of him."

Like most democratic theorists of the state, Rousseau was anxious to base political obligation on consent and thus save the idea of individual liberty in the realm of government. Yet he saw beyond the mechanical constructions of liberal political theory, which assumed that the public good would somehow be the final product of all individual private wills and interests. He attributes to the people inalienable sovereignty, but a moral obligation is attached to this precious possession: each citizen must will the general good, because popular sovereignty means the General Will, and self-government is therefore not mere submission to the common good, but its active cultivation: "There can be no patriotism without liberty, no liberty without virtue, no virtue without citizens; create citizens, and you have everything you need; without them, you will have nothing but debased slaves, from the rulers of the state downward."

Some defenders of totalitarian states have sought to claim Rousseau as an intellectual progenitor of unlimited collectivism and oppressive anti-individualism. True, the organic element in Rousseau's doctrine may be abused, and has been abused, for antidemocratic purposes. Yet the master conception of *The Social Contract*—is a community of free men living in a small state in

which democracy can be practiced directly by the people, a community of men who see in freedom not only an invitation to personal enjoyment and advantage but also shared responsibility for the welfare of the whole.

Before Rousseau, the classical doctrine of Plato and Aristotle emphasized good government at the expense of self-government. The aim was the good life, not government of the people by the people. The more modern idea of Locke and the liberal school was concerned principally with self-government; it relegated the problem of good government into the background, or it was assumed that good government would naturally result from a combination of public *laissez faire* and private pursuit of individual advantage. Rousseau is the first modern writer to attempt, not always successfully, to synthesize *good government with self-government* in the key concept of the General Will: the realization of what is best for the community is not enough; it must also be *willed* by the community.

This synthesis explains why Rousseau has been claimed by adherents of the organic theory of the state as well as by followers of liberal democracy, though their conclusions may be antagonistic to each other. The more one is addicted to an extreme view of either the organic or the liberal theory in politics, the easier it is to appropriate only one part of Rousseau. The more one seeks to preserve what is best in the organic theory of the state and to fuse it with liberal democracy, the more one runs into philosophical difficulties that, in the end, resemble those of Rousseau.

Rousseau also saw more clearly than the conventional liberal doctrinaires that the end of government is not confined to the protection of individual liberty but also includes *equality*, because "liberty cannot exist without it." Rousseau reverses in *The Social Contract* the hostility to property that he showed in the first two *Discourses*; here he accepts property as an essential institution of society. But in *The Social Contract* he does not abandon the ideal of economic equality, though the concept of equality should not be taken in a literal sense. No citizen "shall ever be wealthy even to buy another, and none poor enough to be forced to sell himself." Rousseau realizes that in practice it is difficult to maintain the ideal of equitable distribution of property, but it "is precisely because the force of circumstances tends continually to destroy equality that the force of legislation should always tend to its maintenance."

Whereas Locke failed to see property as a relation of domination of man over man, Rousseau clearly recognized *property* as a form of *private domination* that had to be kept under control by the General Will, the public interest of the community. Rousseau's theory of equitable distribution of property was, however, hardly socialist in the modern sense of the term, because he was not thinking of an industrial society, in which the problem of socialized property chiefly arises, but of communities of small peasants and craftsmen (as in Switzerland), in which individual economic independence and an approximation to the ideal of equal property are feasible. Yet indirectly, this part of Rousseau—the stress on equality—has aided the development of socialist sentiment by sharpening the awareness that political liberty and crass economic inequality are ultimately incompatible if democracy is to survive and expand.

Since the eighteenth century the record of free government everywhere has proved that there can be no reliance on contrivances and institutions alone in

the eternal struggle for liberty, and that its survival depends, in the last analysis, on those moral qualities that Rousseau calls the General Will, justice, virtue. The General Will, like individual virtue, cannot be defined in detail; it is an impulse that animates and guides civic action. It receives its ultimate valid definition in the lives of free men rather than in philosophical distinctions.

Rousseau was first vindicated historically by the success of the American Revolution, and the opening words of the Constitution of the United States. "We the people . . .," were of the spirit of Jean Jacques Rousseau. In the French Revolution, only a few years later, the French nation discovered its communal solidarity in a new birth of individual freedom and popular government. Since then, the message of Rousseau has been carried to all corners of the world, and its vitality and persistent timeliness continue to inspire free men and women everywhere.

ROUSSEAU

The Social Contract *

MAN IS BORN FREE

Man is born free; and everywhere he is in chains. One thinks himself the master of others, and still remains a greater slave than they. How did this change come about? I do not know. What can make it legitimate? That question I think I can answer.

If I took into account only force, and the effects derived from it, I should say: "As long as a people is compelled to obey, and obeys, it does well; as soon as it can shake off the yoke, and shakes it off, it does still better; for, regaining its liberty by the same right as took it away, either it is justified in resuming it, or there was no justification for those who took it away." But the social order is a sacred right which is the basis of all other rights. Nevertheless, this right does not come from nature, and must therefore be founded on conventions. Before coming to that, I have to prove what I have just asserted.

THE RIGHT OF THE STRONGEST

The strongest is never strong enough to be always the master, unless he transforms strength into right, and obedience into duty. Hence the right of the strong-

est, which, though to all seeming meant ironically, is really laid down as a fundamental principle. But are we never to have an explanation of this phrase? Force is a physical power, and I fail to see what moral effect it can have. To yield to force is an act of necessity, not of will—at the most, an act of prudence. In what sense can it be a duty?

Suppose for a moment that this so-called "right" exists. I maintain that the sole result is a mass of inexplicable nonsense. For, if force creates right, the effect changes with the cause: every force that is greater than the first succeeds to its right. As soon as it is possible to disobey with impunity, disobedience is legitimate; and, the strongest being always in the right, the only thing that matters is to act so as to become the strongest. But what kind of right is that which perishes when force fails? If we must obey perforce, there is no need to obey because we ought; and if we are not forced to obey, we are under no obligation to do so. Clearly, the word "right" adds nothing to force: in this connection, it means absolutely nothing.

Obey the powers that be. If this means yield to force, it is a good precept, but superfluous: I can answer for its never being violated. All power comes from God, I admit; but so does all sickness: does that mean that we are forbidden to call in the doctor? A brigand surprises me at the edge of a wood: must I not merely surrender my purse on compulsion; but, even if I could withhold it, am I in conscience bound to give it up? For

* From Jean Jacques Rousseau, *The Social Contract and Discourses* (1762, trans. G. D. H. Cole, Everyman's Library Edition, 1947). By permission of E. P. Dutton & Co., and J. M. Dent & Sons, Ltd.

certainly the pistol he holds is also a power.

Let us then admit that force does not create right, and that we are obliged to obey only legitimate powers. In that case, my original question recurs.

SLAVERY

Since no man has a natural authority over his fellow, and force creates no right, we must conclude that conventions form the basis of all legitimate authority among men.

If an individual, says Grotius, can alienate his liberty and make himself the slave of a master, why could not a whole people do the same and make itself subject to a king? There are in this passage plenty of ambiguous words which would need explaining; but let us confine ourselves to the word *alienate*. To alienate is to give or to sell. Now, a man who becomes the slave of another does not give himself; he sells himself, at the least for his subsistence: but for what does a people sell itself? A king is so far from furnishing his subjects with their subsistence that he gets his own only from them; and, according to Rabelais, kings do not live on nothing. Do subjects then give their persons on condition that the king takes their goods also? I fail to see what they have left to preserve.

It will be said that the despot assures his subjects civil tranquillity. Granted; but what do they gain, if the wars his ambition brings down upon them, his insatiable avidity, and the vexatious conduct of his ministers press harder on them than their own dissensions would have done? What do they gain, if the very tranquillity they enjoy is one of their miseries? Tranquillity is found also in dungeons; but is that enough to make them desirable places to live in? The Greeks imprisoned in the cave of the Cyclops lived there very tranquilly, while they were awaiting their turn to be devoured.

To say that a man gives himself gratuitously, is to say what is absurd and in-

conceivable; such an act is null and illegitimate, from the mere fact that he who does it is out of his mind. To say the same of a whole people is to suppose a people of madmen; and madness creates no right.

Even if each man could alienate himself, he could not alienate his children; they are born men and free; their liberty belongs to them, and no one but they has the right to dispose of it. Before they come to years of discretion, the father can, in their name, lay down conditions for their preservation and well-being, but he cannot give them irrevocably and without conditions: such a gift is contrary to the ends of nature, and exceeds the rights of paternity. It would therefore be necessary, in order to legitimize an arbitrary government, that in every generation the people should be in a position to accept or reject it; but, were this so, the government would be no longer arbitrary.

To renounce liberty is to renounce being a man, to surrender the rights of humanity and even its duties. For him who renounces everything no indemnity is possible. Such a renunciation is incompatible with man's nature; to remove all liberty from his will is to remove all morality from his acts. Finally, it is an empty and contradictory convention that sets up, on the one side, absolute authority, and, on the other, unlimited obedience. Is it not clear that we can be under no obligation to a person from whom we have the right to exact everything? Does not this condition alone, in the absence of equivalence or exchange, in itself involve the nullity of the act? For what right can my slave have against me, when all that he has belongs to me, and, his right being mine, this right of mine against myself is a phrase devoid of meaning?

Grotius and the rest find in war another origin for the so-called right of slavery. The victor having, as they hold, the right of killing the vanquished, the latter can buy back his life at the price of his liberty; and this convention is the

more legitimate because it is to the advantage of both parties.

But it is clear that this supposed right to kill the conquered is by no means deducible from the state of war. Men, from the mere fact that, while they are living in their primitive independence, they have no mutual relations stable enough to constitute either the state of peace or the state of war, cannot be naturally enemies. War is constituted by a relation between things, and not between persons; and, as the state of war cannot arise out of simple personal relations, but only out of real relations, private war, or war of man with man, can exist neither in the state of nature, where there is no constant property, nor in the social state, where everything is under the authority of the laws.

Individual combats, duels, and encounters, are acts which cannot constitute a state; while the private wars, authorized by the Establishments of Louis IX, King of France, and suspended by the Peace of God, are abuses of feudalism, in itself an absurd system if ever there was one, and contrary to the principles of natural right and to all good policy.

War then is a relation, not between man and man, but between State and State, and individuals are enemies only accidentally, not as men, nor even as citizens,¹ but as soldiers; not as members of their country, but as its defenders. Finally, each State can have for enemies only other States, and not men; for between things disparate in nature there can be no real relation.

¹The Romans, who understood and respected the right of war more than any other nation on earth, carried their scruples on this head so far that a citizen was not allowed to serve as a volunteer without engaging himself expressly against the enemy, and against such and such an enemy by name. A legion in which the younger Cato was seeing his first service under Popilius having been reconstructed, the elder Cato wrote to Popilius that, if he wished his son to continue serving under

Furthermore, this principle is in conformity with the established rules of all times and the constant practice of all civilized peoples. Declarations of war are intimations less to powers than to their subjects. The foreigner, whether king, individual, or people, who robs, kills, or detains the subjects, without declaring war on the prince, is not an enemy, but a brigand. Even in real war, a just prince, while laying hands, in the enemy's country, on all that belongs to the public, respects the lives and goods of individuals: he respects rights on which his own are founded. The object of the war being the destruction of the hostile State, the other side has a right to kill its defenders, while they are bearing arms; but as soon as they lay them down and surrender, they cease to be enemies or instruments of the enemy, and become once more merely men, whose life no one has any right to take. Sometimes it is possible to kill the State without killing a single one of its members; and war gives no right which is not necessary to the gaining of its object. These principles are not those of Grotius; they are not based on the authority of poets, but derived from the nature of reality and based on reason.

The right of conquest has no foundation other than the right of the strongest. If war does not give the conqueror the right to massacre the conquered peoples, the right to enslave them cannot be based upon a right which does not exist. No one has a right to kill an enemy except when he cannot make him a slave, and the right to enslave him cannot therefore be derived from the right to kill him. It is

him, he must administer to him a new military oath, because, the first having been annulled, he was no longer able to bear arms against the enemy. The same Cato wrote to his son telling him to take great care not to go into battle before taking this new oath. I know that the siege of Clusium and other isolated events can be quoted against me; but I am citing laws and customs. The Romans are the people that least often transgressed its laws; and no other people has had such good ones.

accordingly an unfair exchange to make him buy at the price of his liberty his life, over which the victor holds no right. Is it not clear that there is a vicious circle in founding the right of life and death on the right of slavery, and the right of slavery on the right of life and death?

Even if we assume this terrible right to kill everybody, I maintain that a slave made in war, or a conquered people, is under no obligation to a master, except to obey him as far as he is compelled to do so. By taking an equivalent for his life, the victor has not done him a favour; instead of killing him without profit, he has killed him usefully. So far then is he from acquiring over him any authority in addition to that of force, that the state of war continues to subsist between them: their mutual relation is the effect of it, and the usage of the right of war does not imply a treaty of peace. A convention has indeed been made; but this convention, so far from destroying the state of war, presupposes its continuance.

So, from whatever aspect we regard the question, the right of slavery is null and void, not only as being illegitimate, but also because it is absurd and meaningless. The words *slave* and *right* contradict each other, and are mutually exclusive. It will always be equally foolish for a man to say to a man or to a people: "I make with you a convention wholly at your expense and wholly to my advantage; I shall keep it as long as I like, and you will keep it as long as I like."

THE FIRST CONVENTION OF SOCIETY

Even if I granted all that I have been refuting, the friends of despotism would be no better off. There will always be a great difference between subduing a multitude and ruling a society. Even if scattered individuals were successively enslaved by one man, however numerous they might be, I still see no more than a master and his slaves, and certainly not a people and its ruler; I see what may be termed an aggregation, but not an associ-

ation; there is as yet neither public good nor body politic. The man in question, even if he has enslaved half the world, is still only an individual; his interest, apart from that of others, is still a purely private interest. If this same man comes to die, his empire, after him, remains scattered and without unity, as an oak falls and dissolves into a heap of ashes when the fire has consumed it.

A people, says Grotius, can give itself to a king. Then, according to Grotius, a people is a people before it gives itself. The gift is itself a civil act, and implies public deliberation. It would be better, before examining the act by which a people gives itself to a king, to examine that by which it has become a people; for this act, being necessarily prior to the other, is the true foundation of society.

Indeed, if there were no prior convention, where, unless the election were unanimous, would be the obligation on the minority to submit to the choice of the majority? How have a hundred men who wish for a master the right to vote on behalf of ten who do not? The law of majority voting is itself something established by convention, and presupposes unanimity, on one occasion at least.

THE SOCIAL COMPACT

I suppose men to have reached the point at which the obstacles in the way of their preservation in the state of nature show their power of resistance to be greater than the resources at the disposal of each individual for his maintenance in that state. The primitive condition can then subsist no longer; and the human race would perish unless it changed its manner of existence.

But, as men cannot engender new forces, but only unite and direct existing ones, they have no other means of preserving themselves than the formation, by aggregation, of a sum of forces great enough to overcome the resistance. These they have to bring into play by means of a single motive power, and cause to act in concert.

This sum of forces can arise only where several persons come together: but, as the force and liberty of each man are the chief instruments of his self-preservation, how can he pledge them without harming his own interests, and neglecting the care he owes to himself? This difficulty, in its bearing on my present subject, may be stated in the following terms:

"The problem is to find a form of association which will defend and protect with the whole common force the person and goods of each associate, and in which each, while uniting himself with all, may still obey himself alone, and remain as free as before." This is the fundamental problem of which the *Social Contract* provides the solution.

The clauses of this contract are so determined by the nature of the act that the slightest modification would make them vain and ineffective; so that, although they have perhaps never been formally set forth, they are everywhere the same and everywhere tacitly admitted and recognized, until, on the violation of the social compact, each regains his original rights and resumes his natural liberty, while losing the conventional liberty in favour of which he renounced it.

These clauses, properly understood, may be reduced to one—the total alienation of each associate, together with all his rights, to the whole community; for, in the first place, as each gives himself absolutely, the conditions are the same for all; and, this being so, no one has any interest in making them burdensome to others.

Moreover, the alienation being without reserve, the union is as perfect as it can be, and no associate has anything more to demand: for, if the individuals retained certain rights, as there would be no common superior to decide between them and the public, each, being on one point his own judge, would ask to be so on all; the state of nature would thus continue, and the association would necessarily become inoperative or tyrannical.

Finally, each man, in giving himself to all, gives himself to nobody; and as there is no associate over which he does not acquire the same right as he yields others over himself, he gains an equivalent for everything he loses, and an increase of force for the preservation of what he has.

If then we discard from the social compact what is not of its essence, we shall find that it reduces itself to the following terms:

"Each of us puts his person and all his power in common under the supreme direction of the general will, and, in our corporate capacity, we receive each member as an indivisible part of the whole."

At once, in place of the individual personality of each contracting party, this act of association creates a moral and collective body, composed of as many members as the assembly contains voters, and receiving from this act its unity, its common identity, its life, and its will. This public person, so formed by the union of all other persons, formerly took the name of *city*,² and now takes that

²The real meaning of this word has been almost wholly lost in modern times; most people mistake a town for a city, and a townsman for a citizen. They do not know that houses make a town, but citizens a city. The same mistake long ago cost the Carthaginians dear. I have never read of the title of citizens being given to the subjects of any prince, not even the ancient Macedonians or the English of to-day, though they are nearer liberty than any one else. The French alone everywhere familiarly adopt the name of citizens, because, as can be seen from their dictionaries, they have no idea of its meaning; otherwise they would be guilty in usurping it, of the crime of *lèse-majesté*: among them, the name expresses a virtue, and not a right. When Bodin spoke of our citizens and townsmen, he fell into a bad blunder in taking the one class for the other. M. d'Alembert has avoided the error, and, in his article on Geneva, has clearly distinguished the four orders of men (or even five, counting mere foreigners) who dwell in our town, of which two only compose the Republic. No other French writer, to

of *Republic* or *body politic*; it is called by its members *State* when passive, *Sovereign* when active, and *Power* when compared with others like itself. Those who are associated in it take collectively the name of *people*, and severally are called *citizens*, as sharing in the sovereign power, and *subjects*, as being under the laws of the State. But these terms are often confused and taken one for another: it is enough to know how to distinguish them when they are being used with precision.

THE SOVEREIGN

This formula shows us that the act of association comprises a mutual undertaking between the public and the individuals, and that each individual, in making a contract, as we may say, with himself, is bound in a double capacity; as a member of the Sovereign he is bound to the individuals, and as a member of the State to the Sovereign. But the maxim of civil right, that no one is bound by undertakings made to himself, does not apply in this case; for there is a great difference between incurring an obligation to yourself and incurring one to a whole of which you form a part.

Attention must further be called to the fact that public deliberation, while competent to bind all the subjects to the Sovereign, because of the two different capacities in which each of them may be regarded, cannot, for the opposite reason, bind the Sovereign to itself; and that it is consequently against the nature of the body politic for the Sovereign to impose on itself a law which it cannot infringe. Being able to regard itself in only one capacity, it is in the position of an individual who makes a contract with himself; and this makes it clear that there neither is nor can be any kind of fundamental law binding on the body of the people—not even the social contract itself. This does not mean that the body politic cannot enter into undertakings

my knowledge, has understood the real meaning of the word citizen.

with others, provided the contract is not infringed by them; for in relation to what is external to it, it becomes a simple being, an individual.

But the body politic or the Sovereign, drawing its being wholly from the sanctity of the contract, can never bind itself, even to an outsider, to do anything derogatory to the original act, for instance, to alienate any part of itself, or to submit to another Sovereign. Violation of the act by which it exists would be self-annihilation; and that which is itself nothing can create nothing.

As soon as this multitude is so united in one body, it is impossible to offend against one of the members without attacking the body, and still more to offend against the body without the members resenting it. Duty and interest therefore equally oblige the two contracting parties to give each other help; and the same men should seek to combine, in their double capacity, all the advantages dependent upon that capacity.

Again, the Sovereign, being formed wholly of the individuals who compose it, neither has nor can have any interest contrary to theirs; and consequently the sovereign power need give no guarantee to its subjects, because it is impossible for the body to wish to hurt all its members. We shall also see later on that it cannot hurt any in particular. The Sovereign, merely by virtue of what it is, is always what it should be.

This, however, is not the case with the relation of the subjects to the Sovereign, which, despite the common interest, would have no security that they would fulfil their undertakings, unless it found means to assure itself of their fidelity.

In fact, each individual, as a man, may have a particular will contrary or dissimilar to the general will which he has as a citizen. His particular interest may speak to him quite differently from the common interest: his absolute and naturally independent existence may make him look upon what he owes to the common cause as a gratuitous contribution, the loss of which will do less harm to others than the payment of it is burdensome to

himself; and, regarding the moral person which constitutes the State as a *persona ficta*, because not a man, he may wish to enjoy the rights of citizenship without being ready to fulfil the duties of a subject. The continuance of such an injustice could not but prove the undoing of the body politic.

In order then that the social compact may not be an empty formula, it tacitly includes the undertaking, which alone can give force to the rest, that whoever refuses to obey the general will shall be compelled to do so by the whole body. This means nothing less than that he will be forced to be free; for this is the condition which, by giving each citizen to his country, secures him against all personal dependence. In this lies the key to the working of the political machine; this alone legitimizes civil undertakings, which, without it, would be absurd, tyrannical, and liable to the most frightful abuses.

THE CIVIL STATE

The passage from the state of nature to the civil state produces a very remarkable change in man, by substituting justice for instinct in his conduct, and giving his actions the morality they had formerly lacked. Then only, when the voice of duty takes the place of physical impulses and right of appetite, does man, who so far had considered only himself, find that he is forced to act on different principles, and to consult his reason before listening to his inclinations. Although, in this state, he deprives himself of some advantages which he got from nature, he gains in return others so great, his faculties are so stimulated and developed, his ideas so extended, his feelings so ennobled, and his whole soul so uplifted, that, did not the abuses of this new condition often degrade him below that which he left, he would be bound to bless continually the happy moment which took him from it for ever, and, instead of a stupid and unimaginative animal, made him an intelligent being and a man.

Let us draw up the whole account in

terms easily commensurable. What man loses by the social contract is his natural liberty and an unlimited right to everything he tries to get and succeeds in getting; what he gains is civil liberty and the proprietorship of all he possesses. If we are to avoid mistakes in weighing one against the other, we must clearly distinguish natural liberty, which is bounded only by the strength of the individual, from civil liberty, which is limited by the general will; and possession, which is merely the effect of force or the right of the first occupier, from property, which can be founded only on a positive title.

We might, over and above all this, add, to what man acquires in the civil state, moral liberty, which alone makes him truly master of himself; for the mere impulse of appetite is slavery, while obedience to a law which we prescribe to ourselves is liberty. But I have already said too much on this head, and the philosophical meaning of the word liberty does not now concern us.

THE INALIENABILITY OF SOVEREIGNTY

The first and most important deduction from the principles we have so far laid down is that the general will alone can direct the State according to the object for which it was instituted, i.e. the common good: for if the clashing of particular interests made the establishment of societies necessary, the agreement of these very interests made it possible. The common element in these different interests is what forms the social tie; and, were there no point of agreement between them all, no society could exist. It is solely on the basis of this common interest that every society should be governed.

I hold then that Sovereignty, being nothing less than the exercise of the general will, can never be alienated, and that the Sovereign, who is no less than a collective being, cannot be represented except by himself: the power indeed may be transmitted, but not the will.

In reality, if it is not impossible for a

particular will to agree on some point with the general will, it is at least impossible for the agreement to be lasting and constant; for the particular will tends, by its very nature, to partiality, while the general will tends to equality. It is even more impossible to have any guarantee of this agreement; for even if it should always exist, it would be the effect not of art, but of chance. The Sovereign may indeed say: "I now will actually what this man wills, or at least what he says he wills"; but it cannot say: "What he wills to-morrow, I too shall will" because it is absurd for the will to bind itself for the future, nor is it incumbent on any will to consent to anything that is not for the good of the being who wills. If then the people promises simply to obey, by that very act it dissolves itself and loses what makes it a people; the moment a master exists, there is no longer a Sovereign, and from that moment the body politic has ceased to exist.

This does not mean that the commands of the rulers cannot pass for general wills, so long as the Sovereign, being free to oppose them, offers no opposition. In such a case, universal silence is taken to imply the consent of the people. This will be explained later on.

THE INDIVISIBILITY OF SOVEREIGNTY

Sovereignty, for the same reason as makes it inalienable, is indivisible; for will either is, or is not, general;³ it is the will either of the body of the people, or only of a part of it. In the first case, the will, when declared, is an act of Sovereignty and constitutes law: in the second, it is merely a particular will, or act of magistracy—at the most a decree.

But our political theorists, unable to divide Sovereignty in principle, divide it

³ To be general, a will need not always be unanimous; but every vote must be counted: any exclusion is a breach of generality.

according to its object: into force and will; into legislative power and executive power; into rights of taxation, justice, and war; into internal administration and power of foreign treaty. Sometimes they confuse all these sections, and sometimes they distinguish them; they turn the Sovereign into a fantastic being composed of several connected pieces: it is as if they were making man of several bodies, one with eyes, one with arms, another with feet, and each with nothing besides. We are told that the jugglers of Japan dismember a child before the eyes of the spectators; then they throw all the members into the air one after another, and the child falls down alive and whole. The conjuring tricks of our political theorists are very like that; they first dismember the body politic by an illusion worthy of a fair, and then join it together again we know not how.

This error is due to a lack of exact notions concerning the Sovereign authority, and to taking for parts of it what are only emanations from it. Thus, for example, the acts of declaring war and making peace have been regarded as acts of Sovereignty; but this is not the case, as these acts do not constitute law, but merely the application of a law, a particular act which decides how the law applies, as we shall see clearly when the idea attached to the word "law" has been defined.

If we examined the other divisions in the same manner, we should find that, whenever Sovereignty seems to be divided, there is an illusion: the rights which are taken as being part of Sovereignty are really all subordinate, and always imply supreme wills of which they only sanction the execution.

It would be impossible to estimate the obscurity this lack of exactness has thrown over the decisions of writers who have dealt with political right, when they have used the principles laid down by them to pass judgment on the respective rights of kings and peoples. Every one can see, in Chapters III and IV of the first book of Grotius, how the learned

man and his translator, Barbeyrac, entangle and tie themselves up in their own sophistries, for fear of saying too little or too much of what they think, and so offending the interests they have to conciliate. Grotius, a refugee in France, ill content with his own country, and desirous of paying his court to Louis XIII, to whom his book is dedicated, spares no pains to rob the peoples of all their rights and invest kings with them by every conceivable artifice. This would also have been much to the taste of Barbeyrac, who dedicated his translation to George I of England. But unfortunately the expulsion of James II, which he called his "abdication," compelled him to use all reserve, to shuffle and to tergiversate, in order to avoid making William out a usurper. If these two writers had adopted the true principles, all difficulties would have been removed, and they would have been always consistent; but it would have been a sad truth for them to tell, and would have paid court for them to no one save the people. Moreover, truth is no road to fortune, and the people dispenses neither ambassadorships, nor professorships, nor pensions.

INFALLIBILITY OF THE GENERAL WILL

It follows from what has gone before that the general will is always right and tends to the public advantage; but it does not follow that the deliberations of the people are always equally correct. Our will is always for our own good, but we do not always see what that is; the people is never corrupted, but it is often deceived, and on such occasions only does it seem to will what is bad.

There is often a great deal of difference between the will of all and the general will; the latter considers only the common interest, while the former takes private interest into account, and is no more than a sum of particular wills: but take away from these same wills the pluses and minuses that cancel one an-

other,⁴ and the general will remains as the sum of the differences.

If, when the people, being furnished with adequate information, held its deliberations, the citizens had no communication one with another, the grand total of the small differences would always give the general will, and the decision would always be good. But when factions arise, and partial associations are formed at the expense of the great association, the will of each of these associations becomes general in relation to its members, while it remains particular in relation to the State: it may then be said that there are no longer as many votes as there are men, but only as many as there are associations. The differences become less numerous and give a less general result. Lastly, when one of these associations is so great as to prevail over all the rest, the result is no longer a sum of small differences, but a single difference; in this case there is no longer a general will, and the opinion which prevails is purely particular.

It is therefore essential, if the general will is to be able to express itself, that there should be no partial society within the State, and that each citizen should think only his own thoughts⁵ which was indeed the sublime and unique system es-

⁴ "Every interest," says the Marquis d'Argenson, "has different principles. The agreement of two particular interests is formed by opposition to a third." He might have added that the agreement of all interests is formed by opposition to that of each. If there were no different interests, the common interest would be barely felt, as it would encounter no obstacle; all would go on of its own accord, and politics would cease to be an art.

⁵ "In fact," says Machiavelli, "there are some divisions that are harmful to a Republic and some that are advantageous. Those which stir up sects and parties are harmful; those attended by neither are advantageous. Since, then, the founder of a Republic cannot help enmities arising, he ought at least to prevent them from growing into sects" (*History of Florence*, Book VII).

tablished by the great Lycurgus. But if there are partial societies, it is best to have as many as possible and to prevent them from being unequal, as was done by Solon, Numa, and Servius. These precautions are the only ones that can guarantee that the general will shall be always enlightened, and that the people shall in no way deceive itself.

LIMITS OF THE SOVEREIGN POWER

If the State is a moral person whose life is in the union of its members, and if the most important of its cares is the care for its own preservation, it must have a universal and compelling force, in order to move and dispose each part as may be most advantageous to the whole. As nature gives each man absolute power over all his members, the social compact gives the body politic absolute power over all its members also; and it is this power which, under the direction of the general will, bears, as I have said, the name of Sovereignty.

But, besides the public person, we have to consider the private persons composing it, whose life and liberty are naturally independent of it. We are bound then to distinguish clearly between the respective rights of the citizens and the Sovereign,⁶ and between the duties the former have to fulfil as subjects, and the natural rights they should enjoy as men.

Each man alienates, I admit, by the social compact, only such part of his powers, goods, and liberty as it is important for the community to control; but it must also be granted that the Sovereign is sole judge of what is important.

Every service a citizen can render the State he ought to render as soon as the Sovereign demands it; but the Sovereign,

⁶ Attentive readers, do not, I pray, be in a hurry to charge me with contradicting myself. The terminology made it unavoidable, considering the poverty of the language; but wait and see.

for its part, cannot impose upon its subjects any fetters that are useless to the community, nor can it even wish to do so; for no more by the law of reason than by the law of nature can anything occur without a cause.

The undertakings which bind us to the social body are obligatory only because they are mutual; and their nature is such that in fulfilling them we cannot work for others without working for ourselves. Why is it that the general will is always in the right, and that all continually will the happiness of each one, unless it is because there is not a man who does not think of "each" as meaning him, and consider himself in voting for all? This proves that equality of rights and the idea of justice which such equality creates originate in the preference each man gives to himself, and accordingly in the very nature of man. It proves that the general will, to be really such, must be general in its object as well as its essence; that it must both come from all and apply to all; and that it loses its natural rectitude when it is directed to some particular and determinate object, because in such a case we are judging of something foreign to us, and have no true principle of equity to guide us.

Indeed, as soon as a question of particular fact or right arises on a point not previously regulated by a general convention, the matter becomes contentious. It is a case in which the individuals concerned are one party, and the public the other, but in which I can see neither the law that ought to be followed nor the judge who ought to give the decision. In such a case, it would be absurd to propose to refer the question to an express decision of the general will, which can be only the conclusion reached by one of the parties and in consequence will be, for the other party, merely an external and particular will, inclined on this occasion to injustice and subject to error. Thus, just as a particular will cannot stand for the general will, the general will, in turn, changes its nature, when its object is particular, and, as general, cannot

pronounce on a man or a fact. When, for instance, the people of Athens nominated or displaced its rulers, decreed honours to one, and imposed penalties on another, and, by a multitude of particular decrees, exercised all the functions of government indiscriminately, it had in such cases no longer a general will in the strict sense; it was acting no longer as Sovereign, but as magistrate. This will seem contrary to current views; but I must be given time to expound my own.

It should be seen from the foregoing that what makes the will general is less the number of votes than the common interest uniting them; for, under this system, each necessarily submits to the conditions he imposes on others: and this admirable agreement between interest and justice gives to the common deliberations an equitable character which at once vanishes when any particular question is discussed, in the absence of a common interest to unite and identify the ruling of the judge with that of the party.

From whatever side we approach our principle, we reach the same conclusion, that the social compact sets up among the citizens an equality of such a kind, that they all bind themselves to observe the same conditions and should therefore all enjoy the same rights. Thus, from the very nature of the compact, every act of Sovereignty, i.e. every authentic act of the general will, binds or favours all the citizens equally; so that the Sovereign recognizes only the body of the nation, and draws no distinctions between those of whom it is made up. What, then, strictly speaking, is an act of Sovereignty? It is not a convention between a superior and an inferior, but a conviction between the body and each of its members. It is legitimate, because based on the social contract, and equitable, because common to all; useful, because it can have no other object than the general good, and stable, because guaranteed by the public force and the supreme power. So long as the subjects have to submit only to conventions of this sort, they obey no one but their own will; and to

ask how far the respective rights of the Sovereign and the citizens extend, is to ask up to what point the latter can enter into undertakings with themselves, each with all, and all with each.

We can see from this that the sovereign power, absolute, sacred, and inviolable as it is, does not and cannot exceed the limits of general conventions, and that every man may dispose at will of such goods and liberty as these conventions leave him; so that the Sovereign never has a right to lay more charges on one subject than on another, because, in that case, the question becomes particular, and ceases to be within its competency.

When these distinctions have once been admitted, it is seen to be so untrue that there is, in the social contract, any real renunciation on the part of the individuals, that the position in which they find themselves as a result of the contract is really preferable to that in which they were before. Instead of a renunciation, they have made an advantageous exchange: instead of an uncertain and precarious way of living they have got one that is better and more secure; instead of natural independence they have got liberty, instead of the power to harm others security for themselves, and instead of their strength, which others might overcome, a right which social union makes invincible. Their very life, which they have devoted to the State, is by it constantly protected; and when they risk it in the State's defence, what more are they doing than giving back what they have received from it? What are they doing that they would not do more often and with greater danger in the state of nature, in which they would inevitably have to fight battles at the peril of their lives in defence of that which is the means of their preservation? All have indeed to fight when their country needs them; but then no one has ever to fight for himself. Do we not gain something by running, on behalf of what gives us our security, only some of the risks we should have to run for ourselves, as soon as we lost it?

LAW

By the social compact we have given the body politic existence and life; we have now by legislation to give it movement and will. For the original act by which the body is formed and united still in no respect determines what it ought to do for its preservation.

What is well and in conformity with order is so by the nature of things and independently of human conventions. All justice comes from God, who is its sole source; but if we knew how to receive so high an inspiration, we should need neither government nor laws. Doubtless, there is a universal justice emanating from reason alone; but this justice, to be admitted among us, must be mutual. Humanly speaking, in default of natural sanctions, the laws of justice are ineffective among men: they merely make for the good of the wicked and the undoing of the just, when the just man observes them towards everybody and nobody observes them towards him. Conventions and laws are therefore needed to join rights to duties and refer justice to its object. In the state of nature, where everything is common, I owe nothing to him whom I have promised nothing; I recognize as belonging to others only what is of no use to me. In the state of society all rights are fixed by law, and the case becomes different.

But what, after all, is a law? As long as we remain satisfied with attaching purely metaphysical ideas to the word, we shall go on arguing without arriving at an understanding; and when we have defined a law of nature, we shall be no nearer the definition of a law of the State.

I have already said that there can be no general will directed to a particular object. Such an object must be either within or outside the State. If outside, a will which is alien to it cannot be, in relation to it, general; if within, it is part of the State, and in that case there arises a relation between whole and part which makes them two separate beings, of which the part is one, and the whole

minus the part the other. But the whole minus a part cannot be the whole; and while this relation persists, there can be no whole, but only two unequal parts; and it follows that the will of one is no longer in any respect general in relation to the other.

But when the whole people decrees for the whole people, it is considering only itself; and if a relation is then formed, it is between two aspects of the entire object, without there being any division of the whole. In that case the matter about which the decree is made is, like the decreeing will, general. This act is what I call a law.

When I say that the object of laws is always general, I mean that law considers subjects *en masse* and actions in the abstract, and never a particular person or action. Thus the law may indeed decree that there shall be privileges, but cannot confer them on anybody by name. It may set up several classes of citizens, and even lay down the qualifications for membership of these classes, but it cannot nominate such and such persons as belonging to them; it may establish a monarchical government and hereditary succession, but it cannot choose a king, or nominate a royal family. In a word, no function which has a particular object belongs to the legislative power.

On this view, we at once see that it can no longer be asked whose business it is to make laws, since they are acts of the general will; nor whether the prince is above the law, since he is a member of the State; nor whether the law can be unjust, since no one is unjust to himself; nor how we can be both free and subject to the laws, since they are but registers of our wills.

We see further that, as the law unites universality of will with universality of object, what a man, whoever he be, commands of his own motion cannot be a law; and even what the Sovereign commands with regard to a particular matter is no nearer being a law, but is a decree, an act, not of sovereignty, but of magistracy.

I therefore give the name "Republic"

to every State that is governed by laws, no matter what the form of its administration may be: for only in such a case does the public interest govern, and the *res publica* rank as a reality. Every legitimate government is republican;⁷ what government is I will explain later on.

Laws are, properly speaking, only the conditions of civil association. The people, being subject to the laws, ought to be their author: the conditions of the society ought to be regulated solely by those who come together to form it. But how are they to regulate them? Is it to be by common agreement, by a sudden inspiration? Has the body politic an organ to declare its will? Who can give it the foresight to formulate and announce its acts in advance? Or how is it to announce them in the hour of need? How can a blind multitude, which often does not know what it wills, because it rarely knows what is good for it, carry out for itself so great and difficult an enterprise as a system of legislation? Of itself the people wills always the good, but of itself it by no means always sees it. The general will is always in the right, but the judgment which guides it is not always enlightened. It must be got to see objects as they are, and sometimes as they ought to appear to it; it must be shown the good road it is in search of, secured from the seductive influences of individual wills, taught to see times and spaces as a series, and made to weigh the attractions of present and sensible advantages against the danger of distant and hidden evils. The individuals see the good they reject; the public wills the good it does not see. All stand equally in need of guidance. The former must be compelled to bring their wills into conformity with their reason; the latter must be taught to know what it wills. If that is done, public enlightenment leads

to the union of understanding and will in the social body: the parts are made to work exactly together, and the whole is raised to its highest power. This makes a legislator necessary.

THE LEGISLATOR

In order to discover the rules of society best suited to nations, a superior intelligence beholding all the passions of men without experiencing any of them would be needed. This intelligence would have to be wholly unrelated to our nature, while knowing it through and through; its happiness would have to be independent of us, and yet ready to occupy itself with ours; and lastly, it would have, in the march of time, to look forward to a distant glory, and, working in one century, to be able to enjoy in the next.⁸ It would take gods to give men laws.

What Caligula argued from the facts, Plato, in the dialogue called the *Politicus*, argued in defining the civil or kingly man, on the basis of right. But if great princes are rare, how much more so are great legislators! The former have only to follow the pattern which the latter have to lay down. The legislator is the engineer who invents the machine, the prince merely the mechanic who sets it up and makes it go. "At the birth of societies," says Montesquieu, "the rulers of Republics establish institutions, and afterwards the institutions mould the rulers."⁹

He who dares to undertake the making of a people's institutions ought to feel himself capable, so to speak, of changing human nature, of transforming each individual, who is by himself a complete and solitary whole, into part of a greater whole from which he in a manner receives his life and being; of altering

⁷ I understand by this word, not merely an aristocracy or a democracy, but generally any government directed by the general will, which is the law. To be legitimate, the government must be, not one with the Sovereign, but its minister. In such a case even a monarchy is a Republic.

⁸ A people becomes famous only when its legislation begins to decline. We do not know for how many centuries the system of Lycurgus made the Spartans happy before the rest of Greece took any notice of it.

⁹ Montesquieu, *The Greatness and Decadence of the Romans*, chap. i.

man's constitution for the purpose of strengthening it; and of substituting a partial and moral existence for the physical and independent existence nature has conferred on us all. He must, in a word, take away from man his own resources and give him instead new ones alien to him, and incapable of being made use of without the help of other men. The more completely these natural resources are annihilated, the greater and more lasting are those which he acquires, and the more stable and perfect the new institutions; so that if each citizen is nothing and can do nothing without the rest, and the resources acquired by the whole are equal or superior to the aggregate of the resources of all the individuals, it may be said that legislation is at the highest possible point of perfection.

The legislator occupies in every respect an extraordinary position in the State. If he should do so by reason of his genius, he does so no less by reason of his office, which is neither magistracy, nor Sovereignty. This office, which sets up the Republic, nowhere enters into its constitution; it is an individual and superior function, which has nothing in common with human empire; for if he who holds command over men ought not to have command over the laws, he who has command over the laws ought not any more to have it over men; or else his laws would be the ministers of his passions and would often merely serve to perpetuate his injustices: his private aims would inevitably mar the sanctity of his work.

When Lycurgus gave laws to his country, he began by resigning the throne. It was the custom of most Greek towns to entrust the establishment of their laws to foreigners. The Republics of modern Italy in many cases followed this example; Geneva did the same and profited by it.¹⁰ Rome, when it was most pros-

¹⁰ Those who know Calvin only as a theologian much underestimate the extent of his genius. The codification of our wise edicts, in which he played a large part, does him no less honour than his *Institutes*.

perous, suffered a revival of all the crimes of tyranny, and was brought to the verge of destruction, because it put the legislative authority and the sovereign power into the same hands.

Nevertheless, the decemvirs themselves never claimed the right to pass any law merely on their own authority. "Nothing we propose to you," they said to the people, "can pass into law without your consent. Romans, be yourselves the authors of the laws which are to make you happy."

He, therefore, who draws up the laws has, or should have, no right of legislation, and the people cannot, even if it wishes, deprive itself of this incommunicable right, because, according to the fundamental compact, only the general will can bind the individuals, and there can be no assurance that a particular will is in conformity with the general will, until it has been put to the free vote of the people. This I have said already; but it is worth while to repeat it.

Thus in the task of legislation we find together two things which appear to be incompatible: an enterprise too difficult for human powers, and, for its execution, an authority that is no authority.

There is a further difficulty that deserves attention. Wise men, if they try to speak their language to the common herd instead of its own, cannot possibly make themselves understood. There are a thousand kinds of ideas which it is impossible to translate into popular language. Conceptions that are too general and objects that are too remote are equally out of its range: each individual, having no taste for any other plan of government than that which suits his particular interest, finds it difficult to realize the advantages he might hope to draw from the continual privations good laws impose. For a young people to be able to relish sound principles of political theory and follow

Whatever revolution time may bring in our religion, so long as the spirit of patriotism and liberty still lives among us, the memory of this great man will be for ever blessed.

the fundamental rules of statecraft, the effect would have to become the cause; the social spirit, which should be created by these institutions, would have to preside over their very foundation; and men would have to be before law what they should become by means of law. The legislator therefore, being unable to appeal to either force or reason, must have recourse to an authority of a different order, capable of constraining without violence and persuading without convincing.

This is what has, in all ages, compelled the fathers of nations to have recourse to divine intervention and credit the gods with their own wisdom, in order that the peoples, submitting to the laws of the State as to those of nature, and recognizing the same power in the formation of the city as in that of man, might obey freely, and bear with docility the yoke of the public happiness.

This sublime reason, far above the range of the common herd, is that whose decisions the legislator puts into the mouth of the immortals, in order to constrain by divine authority those whom human prudence could not move.¹¹ But it is not anybody who can make the gods speak, or get himself believed when he proclaims himself their interpreter. The great soul of the legislator is the only miracle that can prove his mission. Any man may grave tablets of stone, or buy an oracle, or feign secret intercourse with some divinity, or train a bird to whisper in his ear, or find other vulgar ways of imposing on the people. He whose knowledge goes no further may perhaps gather round him a band of fools; but he will never found an empire, and his extrava-

¹¹ "In truth," says Machiavelli, "there has never been, in any country, an extraordinary legislator who has not had recourse to God; for otherwise his laws would not have been accepted: there are, in fact, many useful truths of which a wise man may have knowledge without their having in themselves such clear reasons for their being so as to be able to convince others" (*Discourses on Livy*, Bk. V, chap. xi).

gances will quickly perish with him. Idle tricks form a passing tie; only wisdom can make it lasting. The Judaic law, which still subsists, and that of the child of Ishmael, which, for ten centuries, has ruled half the world, still proclaim the great men who laid them down; and, while the pride of philosophy or the blind spirit of faction sees in them no more than lucky impostures, the true political theorist admires, in the institutions they set up, the great and powerful genius which presides over things made to endure.

We should not, with Warburton, conclude from this that politics and religion have among us a common object, but that, in the first periods of nations, the one is used as an instrument for the other.

THE PEOPLE

As nature has set bounds to the stature of a well-made man, and, outside those limits, makes nothing but giants or dwarfs, similarly, for the constitution of a State to be at its best, it is possible to fix limits that will make it neither too large for good government, nor too small for self-maintenance. In every body politic there is a maximum strength which it cannot exceed and which it only loses by increasing in size. Every extension of the social tie means its relaxation; and, generally speaking, a small State is stronger in proportion than a great one.

A thousand arguments could be advanced in favour of this principle. First, long distances make administration more difficult, just as a weight becomes heavier at the end of a longer lever. Administration therefore becomes more and more burdensome as the distance grows greater; for, in the first place, each city has its own, which is paid for by the people: each district its own, still paid for by the people: then comes each province, and then the great governments, satrapies, and viceroalties, always costing more the higher you go, and always at the expense of the unfortunate people. Last of all comes the supreme administration,

which eclipses all the rest. All these overcharges are a continual drain upon the subjects; so far from being better governed by all these different orders, they are worse governed than if there were only a single authority over them. In the meantime, there scarce remain resources enough to meet emergencies; and, when recourse must be had to these, the State is always on the eve of destruction.

This is not all; not only has the government less vigour and promptitude for securing the observance of the laws, preventing nuisances, correcting abuses, and guarding against seditious undertakings begun in distant places; the people has less affection for its rulers, whom it never sees, for its country, which, to its eyes, seems like the world, and for its fellow citizens, most of whom are unknown to it. The same laws cannot suit so many diverse provinces with different customs, situated in the most various climates, and incapable of enduring a uniform government. Different laws lead only to trouble and confusion among peoples which, living under the same rulers and in constant communication one with another, intermingle and intermarry, and, coming under the sway of new customs, never know if they can call their very patrimony their own. Talent is buried, virtue unknown, and vice unpunished, among such a multitude of men who do not know one another, gathered together in one place at the seat of the central administration. The leaders, overwhelmed with business, see nothing for themselves; the State is governed by clerks. Finally, the measures which have to be taken to maintain the general authority, which all these distant officials wish to escape or to impose upon, absorb all the energy of the public, so that there is none left for the happiness of the people. There is hardly enough to defend it when need arises, and thus a body which is too big for its constitution gives way and falls crushed under its own weight.

Again, the State must assure itself a safe foundation, if it is to have stability, and to be able to resist the shocks it cannot help experiencing, as well as the

efforts it will be forced to make for its maintenance; for all peoples have a kind of centrifugal force that makes them continually act one against another, and tend to aggrandize themselves at their neighbours' expense, like the vortices of Descartes. Thus the weak run the risk of being soon swallowed up; and it is almost impossible for any one to preserve itself except by putting itself in a state of equilibrium with all, so that the pressure is on all sides practically equal.

It may therefore be seen that there are reasons for expansion and reasons for contraction; and it is no small part of the statesman's skill to hit between them the mean that is most favourable to the preservation of the State. It may be said that the reason for expansion, being merely external and relative, ought to be subordinate to the reasons for contraction, which are internal and absolute. A strong and healthy constitution is the first thing to look for; and it is better to count on the vigour which comes of good government than on the resources a great territory furnishes.

It may be added that there have been known States so constituted that the necessity of making conquests entered into their very constitution, and that, in order to maintain themselves, they were forced to expand ceaselessly. It may be that they congratulated themselves greatly on this fortunate necessity, which none the less indicated to them, along with the limits of their greatness, the inevitable moment of their fall.

GOVERNMENT IN GENERAL

I warn the reader that this chapter requires careful reading, and that I am unable to make myself clear to those who refuse to be attentive.

Every free action is produced by the concurrence of two causes; one moral, i.e. the will which determines the act; the other physical, i.e. the power which executes it. When I walk towards an object, it is necessary first that I should will to go there, and, in the second place, that my feet should carry me. If a paralytic

wills to run and an active man wills not, they will both stay where they are. The body politic has the same motive powers; here too force and will are distinguished, will under the name of legislative power and force under that of executive power. Without their concurrence, nothing is, or should be, done.

We have seen that the legislative power belongs to the people, and can belong to it alone. It may, on the other hand, readily be seen, from the principles laid down above, that the executive power cannot belong to the generality as legislature or Sovereign, because it consists wholly of particular acts which fall outside the competency of the law, and consequently of the Sovereign, whose acts must always be laws.

The public force therefore needs an agent of its own to bind it together and set it to work under the direction of the general will, to serve as a means of communication between the State and the Sovereign, and to do for the collective person more or less what the union of soul and body does for man. Here we have what is, in the State, the basis of government, often wrongly confused with the Sovereign, whose minister it is.

What then is government? An intermediate body set up between the subjects and the Sovereign, to secure their mutual correspondence, charged with the execution of the laws and the maintenance of liberty, both civil and political.

The members of this body are called magistrates or *kings*, that is to say *governors*, and the whole body bears the name *prince*.¹² Thus those who hold that the act, by which a people puts itself under a prince, is not a contract, are certainly right. It is simply and solely a commission, an employment, in which the rulers, mere officials of the Sovereign, exercise in their own name the power of which it makes them depositaries. This power it can limit, modify, or recover at pleasure;

for the alienation of such a right is incompatible with the nature of the social body, and contrary to the end of association.

I call then *government*, or supreme administration, the legitimate exercise of the executive power, and prince or magistrate the man or the body entrusted with that administration.

In government reside the intermediate forces whose relations make up that of the whole to the whole, or of the Sovereign to the State. This last relation may be represented as that between the extreme terms of the continuous proportion, which has government as its mean proportional. The government gets from the Sovereign the orders it gives the people, and, for the State to be properly balanced, there must, when everything is reckoned in, be equality between the product or power of the government taken in itself, and the product or power of the citizens, who are on the one hand sovereign and on the other subject.

Furthermore, none of these three terms can be altered without the equality being instantly destroyed. If the Sovereign desires to govern, or the magistrate to give laws, or if the subjects refuse to obey, disorder takes the place of regularity, force and will no longer act together, and the State is dissolved and falls into despotism or anarchy. Lastly, as there is only one mean proportional between each relation, there is also only one good government possible for a State. But, as countless events may change the relations of a people, not only may different governments be good for different peoples, but also for the same people at different times.

In attempting to give some idea of the various relations that may hold between these two extreme terms, I shall take as an example the number of a people, which is the most easily expressible.

Suppose the State is composed of ten thousand citizens. The Sovereign can only be considered collectively and as a body; but each member, as being a subject, is regarded as an individual: thus the Sovereign is to the subject as ten thou-

¹² Thus at Venice the College, even in the absence of the Doge, is called "Most Serene Prince."

sand to one, i.e. each member of the State has as his share only a ten-thousandth part of the sovereign authority, although he is wholly under its control. If the people numbers a hundred thousand, the condition of the subject undergoes no change, and each equally is under the whole authority of the laws, while his vote, being reduced to one hundred thousandth part, has ten times less influence in drawing them up. The subject therefore remaining always a unit, the relation between him and the Sovereign increases with the number of citizens. From this it follows that, the larger the State, the less the liberty.

When I say the relation increases, I mean that it grows more unequal. Thus the greater it is in the geometrical sense, the less relation there is in the ordinary sense of the word. In the former sense, the relation, considered according to quantity, is expressed by the quotient; in the latter, considered according to identity, it is reckoned by similarity.

Now, the less relation the particular wills have to the general will, that is, morals and manners to laws, the more should the repressive force be increased. The government, then, to be good, should be proportionately stronger as the people is more numerous.

On the other hand, as the growth of the State gives the depositaries of the public authority more temptations and chances of abusing their power, the greater the force with which the government ought to be endowed for keeping the people in hand, the greater too should be the force at the disposal of the Sovereign for keeping the government in hand. I am speaking, not of absolute force, but of the relative force of the different parts of the state.

It follows from this double relation that the continuous proportion between the Sovereign, the prince, and the people, is by no means an arbitrary idea, but a necessary consequence of the nature of the body politic. It follows further that, one of the extreme terms, viz. the people, as subject, being fixed and represented by

unity, whenever the duplicate ratio increases or diminishes, the simple ratio does the same, and is changed accordingly. From this we see that there is not a single unique and absolute form of government, but as many governments differing in nature as there are States differing in size.

If, ridiculing this system, any one were to say that, in order to find the mean proportional and give form to the body of the government, it is only necessary, according to me, to find the square root of the number of the people, I should answer that I am here taking this number only as an instance; that the relations of which I am speaking are not measured by the number of men alone, but generally by the amount of action, which is a combination of a multitude of causes; and that, further, if, to save words, I borrow for a moment the terms of geometry, I am none the less well aware that moral quantities do not allow of geometrical accuracy.

The government is on a small scale what the body politic which includes it is on a great one. It is a moral person endowed with certain faculties, active like the Sovereign and passive like the State, and capable of being resolved into other similar relations. This accordingly gives rise to a new proportion, within which there is yet another, according to the arrangement of the magistracies, till an indivisible middle term is reached, i.e. a single ruler or supreme magistrate, who may be represented, in the midst of this progression, as the unity between the fractional and the ordinal series.

Without encumbering ourselves with this multiplication of terms, let us rest content with regarding government as a new body within the State, distinct from the people and the Sovereign, and intermediate between them.

There is between these two bodies this essential difference, that the State exists by itself, and the government only through the Sovereign. Thus the dominant will of the prince is, or should be, nothing but the general will or the law;

his force is only the public force concentrated in his hands, and, as soon as he tries to base any absolute and independent act on his own authority, the tie that binds the whole together begins to be loosened. If finally the prince should come to have a particular will more active than the will of the Sovereign, and should employ the public force in his hands in obedience to this particular will, there would be, so to speak, two Sovereigns, one rightful and the other actual, the social union would evaporate instantly, and the body politic would be dissolved.

However, in order that the government may have a true existence and a real life distinguishing it from the body of the State, and in order that all its members may be able to act in concert and fulfil the end for which it was set up, it must have a particular personality, a sensibility common to its members, and a force and will of its own making for its preservation. This particular existence implies assemblies, councils, power of deliberation and decision, rights, titles, and privileges belonging exclusively to the prince and making the office of magistrate more honourable in proportion as it is more troublesome. The difficulties lie in the manner of so ordering this subordinate whole within the whole, that it in no way alters the general constitution by affirmation of its own, and always distinguishes the particular force it possesses, which is destined to aid in its preservation, from the public force, which is destined to the preservation of the State; and, in a word, is always ready to sacrifice the government to the people, and never to sacrifice the people to the government.

Furthermore, although the artificial body of the government is the work of another artificial body, and has, we may say, only a borrowed and subordinate life, this does not prevent it from being able to act with more or less vigour or promptitude, or from being, so to speak, in more or less robust health. Finally, without departing directly from the end for which it was instituted, it may deviate

more or less from it, according to the manner of its constitution.

From all these differences arise the various relations which the government ought to bear to the body of the State, according to the accidental and particular relations by which the State itself is modified, for often the government that is best in itself will become the most pernicious, if the relations in which it stands have altered according to the defects of the body politic to which it belongs.

DEMOCRACY

He who makes the law knows better than any one else how it should be executed and interpreted. It seems then impossible to have a better constitution than that in which the executive and legislative powers are united; but this very fact renders the government in certain respects inadequate, because things which should be distinguished are confounded, and the prince and the Sovereign, being the same person, form, so to speak, no more than a government without government.

It is not good for him who makes the laws to execute them, or for the body of the people to turn its attention away from a general standpoint and devote it to particular objects. Nothing is more dangerous than the influence of private interests in public affairs, and the abuse of the laws by the government is a less evil than the corruption of the legislator, which is the inevitable sequel to a particular standpoint. In such a case, the State being altered in substance, all reformation becomes impossible. A people that would never misuse governmental powers would never misuse independence; a people that would always govern well would not need to be governed.

If we take the term in the strict sense, there never has been a real democracy, and there never will be. It is against the natural order for the many to govern and the few to be governed. It is unimaginable that the people should remain continually assembled to devote their time to public affairs, and it is clear that they

cannot set up commissions for that purpose without the form of administration being changed.

In fact, I can confidently lay down as a principle that, when the functions of government are shared by several tribunals, the less numerous sooner or later acquire the greatest authority, if only because they are in position to expedite affairs, and power thus naturally comes into their hands.

Besides, how many conditions that are difficult to unite does such a government presuppose! First, a very small State, where the people can readily be got together and where each citizen can with ease know all the rest; secondly, great simplicity of manners, to prevent business from multiplying and raising thorny problems; next, a large measure of equality in rank and fortune, without which equality of rights and authority cannot long subsist; lastly, little or no luxury—for luxury either comes of riches or makes them necessary; it corrupts at once rich and poor, the rich by possession and the poor by covetousness; it sells the country to softness and vanity, and takes away from the State all its citizens, to make them slaves one to another, and one and all to public opinion.

This is why a famous writer has made virtue the fundamental principle of Republics; for all these conditions could not exist without virtue. But, for want of the necessary distinctions, that great thinker was often inexact, and sometimes obscure, and did not see that, the sovereign authority being everywhere the same, the same principle should be found in every well-constituted State, in a greater or less degree, it is true, according to the form of the government.

It may be added that there is no government so subject to civil wars and intestine agitations as democratic or popular government, because there is none which has so strong and continual a tendency to change to another form, or which demands more vigilance and courage for its maintenance as it is. Under such a constitution above all, the citizen

should arm himself with strength and constancy, and say, every day of his life, what a virtuous Count Palatine said in the Diet of Poland: "Malo periculosam libertatem quam quietum servitium."

Were there a people of gods, their government would be democratic. So perfect a government is not for men.

DEPUTIES OR REPRESENTATIVES

As soon as public service ceases to be the chief business of the citizens, and they would rather serve with their money than with their persons, the State is not far from its fall. When it is necessary to march out to war, they pay troops and stay at home: when it is necessary to meet in council, they name deputies and stay at home. By reason of idleness and money, they end by having soldiers to enslave their country and representatives to sell it.

It is through the hustle of commerce and the arts, through the greedy self-interest of profit, and through softness and love of amenities that personal services are replaced by money payments. Men surrender a part of their profits in order to have time to increase them at leisure. Make gifts of money, and you will not be long without chains. The word "finance" is a slavish word, unknown in the city-state. In a country that is truly free, the citizens do everything with their own arms and nothing by means of money; so far from paying to be exempted from their duties, they would even pay for the privilege of fulfilling them themselves. I am far from taking the common view: I hold enforced labour to be less opposed to liberty than taxes.

The better the constitution of a State is, the more do public affairs encroach on private in the minds of the citizens. Private affairs are even of much less importance, because the aggregate of the common happiness furnishes a greater proportion of that of each individual, so that there is less for him to seek in particular cares. In a well-ordered city every man

flies to the assemblies: under a bad government no one cares to stir a step to get to them, because no one is interested in what happens there, because it is foreseen that the general will will not prevail, and lastly because domestic cares are all-absorbing. Good laws lead to the making of better ones; bad ones bring about worse. As soon as any man says of the affairs of the State *What does it matter to me?* the State may be given up for lost.

The lukewarmness of patriotism, the activity of private interest, the vastness of States, conquest, and the abuse of government suggested the method of having deputies or representatives of the people in the national assemblies. These are what, in some countries, men have presumed to call the Third Estate. Thus the individual interest of two orders is put first and second; the public interest occupies only the third place.

Sovereignty, for the same reason as makes it inalienable, cannot be represented; it lies essentially in the general will, and will does not admit of representation: it is either the same, or other; there is no intermediate possibility. The deputies of the people, therefore, are not and cannot be its representatives: they are merely its stewards, and can carry through no definitive acts. Every law the people has not ratified in person is null and void—is, in fact, not a law. The people of England regards itself as free; but it is grossly mistaken; it is free only during the election of members of parliament. As soon as they are elected, slavery overtakes it, and it is nothing. The use it makes of the short moments of liberty it enjoys shows indeed that it deserves to lose them.

The idea of representation is modern; it comes to us from feudal government, from that iniquitous and absurd system which degrades humanity and dishonours the name of man. In ancient republics and even in monarchies, the people never had representatives; the word itself was unknown. It is very singular that in Rome, where the tribunes were so sacrosanct, it was never even imagined that

they could usurp the functions of the people, and that in the midst of so great a multitude they never attempted to pass on their own authority a single *plebiscitum*. We can, however, form an idea of the difficulties caused sometimes by the people being so numerous, from what happened in the time of the Gracchi, when some of the citizens had to cast their votes from the roofs of buildings.

Where right and liberty are everything, disadvantages count for nothing. Among this wise people everything was given its just value, its lictors were allowed to do what its tribunes would never have dared to attempt; for it had no fear that its lictors would try to represent it.

To explain, however, in what way the tribunes did sometimes represent it, it is enough to conceive how the government represents the Sovereign. Law being purely the declaration of the general will, it is clear that, in the exercise of the legislative power, the people cannot be represented; but in that of the executive power, which is only the force that is applied to give the law effect, it both can and should be represented. We thus see that if we looked closely into the matter we should find that very few nations have any laws. However that may be, it is certain that the tribunes, possessing no executive power, could never represent the Roman people by right of the powers entrusted to them, but only by usurping those of the senate.

In Greece, all that the people had to do, it did for itself; it was constantly assembled in the public square. The Greeks lived in a mild climate; they had no natural greed; slaves did their work for them; their great concern was with liberty. Lacking the same advantages, how can you preserve the same rights? Your severer climates add to your needs;¹³ for half the year your public squares are

¹³ To adopt in cold countries the luxury and effeminacy of the East is to desire to submit to its chains; it is indeed to bow to them far more inevitably in our case than in theirs.

uninhabitable; the flatness of your languages unfits them for being heard in the open air; you sacrifice more for profit than for liberty, and fear slavery less than poverty.

What then? Is liberty maintained only by the help of slavery? It may be so. Extremes meet. Everything that is not in the course of nature has its disadvantages, civil society most of all. There are some unhappy circumstances in which we can only keep our liberty at others' expense, and where the citizen can be perfectly free only when the slave is most a slave. Such was the case with Sparta. As for you, modern peoples, you have no slaves, but you are slaves yourselves; you pay for their liberty with your own. It is in vain that you boast of this preference; I find in it more cowardice than humanity.

I do not mean by all this that it is necessary to have slaves, or that the right of slavery is legitimate: I am merely giving the reason why modern peoples, believing themselves to be free, have representatives, while ancient peoples had none. In any case, the moment a people allows itself to be represented, it is no longer free: it no longer exists.

All things considered, I do not see that it is possible henceforth for the Sovereign to preserve among us the exercise of its rights, unless the city is very small. But if it is very small, it will be conquered? No. I will show later on how the external strength of a great people may be combined with the convenient polity and good order of a small State.

VOTING

It may be seen that the way in which general business is managed may give a clear enough indication of the actual state of morals and the health of the body politic. The more concert reigns in the assemblies, that is, the nearer opinion approaches unanimity, the greater is the dominance of the general will. On the other hand, long debates, dissensions, and tumult proclaim the ascendancy of

particular interests and the decline of the State.

This seems less clear when two or more orders enter into the constitution, as patricians and plebeians did at Rome; for quarrels between these two orders often disturbed the comitia, even in the best days of the Republic. But the exception is rather apparent than real; for then, through the defect that is inherent in the body politic, there were, so to speak, two States in one, and what is not true of the two together is true of either separately. Indeed, even in the most stormy times, the *plebiscita* of the people, when the senate did not interfere with them, always went through quietly and by large majorities. The citizens having but one interest, the people had but a single will.

At the other extremity of the circle, unanimity recurs; this is the case when the citizens, having fallen into servitude, have lost both liberty and will. Fear and flattery then change votes into acclamation; deliberation ceases, and only worship or malediction is left. Such was the vile manner in which the senate expressed its views under the emperors. It did so sometimes with absurd precautions. Tacitus observes that, under Otho, the senators, while they heaped curses on Vitellius, contrived at the same time to make a deafening noise, in order that, should he ever become their master, he might not know what each of them had said.

On these various considerations depend the rules by which the methods of counting votes and comparing opinions should be regulated, according as the general will is more or less easy to discover, and the State more or less in its decline.

There is but one law which, from its nature, needs unanimous consent. This is the social compact; for civil association is the most voluntary of all acts. Every man being born free and his own master, no one, under any pretext whatsoever, can make any man subject without his consent. To decide that the son of a slave

is born a slave is to decide that he is not born a man.

If then there are opponents when the social compact is made, their opposition does not invalidate the contract, but merely prevents them from being included in it. They are foreigners among citizens. When the State is instituted, residence constitutes consent; to dwell within its territory is to submit to the Sovereign.¹⁴

Apart from this primitive contract, the vote of the majority always binds all the rest. This follows from the contract itself. But it is asked how a man can be both free and forced to conform to wills that are not his own. How are the opponents at once free and subject to laws they have not agreed to?

I retort that the question is wrongly put. The citizen gives his consent to all the laws, including those which are passed in spite of his opposition, and even those which punish him when he dares to break any of them. The constant will of all the members of the State is the general will; by virtue of it they are citizens and free.¹⁵ When in the popular assembly a law is proposed, what the people is asked is not exactly whether it approves or rejects the proposal, but whether it is in conformity with the general will, which is their will. Each man, in

¹⁴ This should of course be understood as applying to a free State; for elsewhere family, goods, lack of a refuge, necessity, or violence may detain a man in a country against his will; and then his dwelling there no longer by itself implies his consent to the contract or to its violation.

¹⁵ At Genoa, the word "Liberty" may be read over the front of the prisons and on the chains of the galley-slaves. This application of the device is good and just. It is indeed only malefactors of all estates who prevent the citizen from being free. In the country in which all such men were in the galleys, the most perfect liberty would be enjoyed.

giving his vote, states his opinion on that point; and the general will is found by counting votes. When therefore the opinion that is contrary to my own prevails, this proves neither more nor less than that I was mistaken, and that what I thought to be the general will was not so. If my particular opinion had carried the day I should have achieved the opposite of what was my will; and it is in that case that I should not have been free.

This presupposes, indeed, that all the qualities of the general will still reside in the majority: when they cease to do so, whatever side a man may take, liberty is no longer possible.

In my earlier demonstration of how particular wills are substituted for the general will in public deliberation, I have adequately pointed out the practicable methods of avoiding this abuse; and I shall have more to say of them later on. I have also given the principles for determining the proportional number of votes for declaring that will. A difference of one vote destroys equality; a single opponent destroys unanimity; but between equality and unanimity, there are several grades of unequal division, at each of which this proportion may be fixed in accordance with the condition and the needs of the body politic.

There are two general rules that may serve to regulate this relation. First, the more grave and important the questions discussed, the nearer should the opinion that is to prevail approach unanimity. Secondly, the more the matter in hand calls for speed, the smaller the prescribed difference in the numbers of votes may be allowed to become: where an instant decision has to be reached, a majority of one vote should be enough. The first of these two rules seems more in harmony with the laws, and the second with practical affairs. In any case, it is the combination of them that gives the best proportions for determining the majority necessary.

KANT

Most political philosophy produced in Germany before the post-World War II era was different than that of Britain, America, and France because of Germany's peculiar national history. Unlike western European nations and the United States, Germany did not attain national unity until late in the nineteenth century, and has only recently reached this. Unlike its major neighbors to the west, Germany's boundaries were not clearly demarcated by rivers, mountain ranges, or seas. During the Thirty Years' War (1618–48), which stemmed from the Reformation, Germany's population was decimated, by three-fourths. Following the Treaty of Westphalia, it became divided into 360 sovereign states, known as the "petty principalities." Germany remained disunited until 1871, when through the effort of the "Iron Chancellor," Otto von Bismarck (and three wars against Denmark, Austria, and France), the German Empire was proclaimed.

Coincident with the rise of Germany was the rise of Prussia. Originally a backward province on the edge of German states, Prussia developed a potent army and began to assert political leadership under Frederick the Great. Ironically, the greatest philosopher Germany has produced, and quite possibly the greatest philosopher of the modern age, Immanuel Kant (1724–1804), lived his entire life in East Prussia. Most of what Kant stood for in his political philosophy was diametrically opposed to the Prussian state, particularly as that state developed. Therefore, Kant, who incidentally was of Scottish descent, is unrepresentative of most German political thought.

Even more so than Hume, Kant was a speculative philosopher rather than a political theorist. His three major works—the *Critique(s) of Pure Reason* (1781), *Practical Reason* (1788), and *Judgment* (1790)—barely consider politics explicitly. His fundamental goal was to effect a "Copernican" revolution in philosophy. Copernicus, failing to explain the movements of heavenly bodies based on the assumption that they revolved around the spectator, revised his thesis to assume instead that the spectator revolved around the heavenly bodies. Similarly, Kant attempted a full-scale reconstruction of the premises on which philosophy stood.

Kant states his primary philosophical problem in the *Critique of Pure Reason* as establishing how what he terms "synthetic *a priori*" judgments can exist.

By *a priori*, Kant means "before experience"—*a priori* knowledge is knowledge that is not based on experience (for example, mathematics). It is distinguished from *a posteriori*, or empirical, knowledge, for which sensory data is necessary. Besides the distinction between *a priori* and *a posteriori* knowledge, Kant also makes a distinction between analytic and synthetic judgments. An analytic judgment is one for which the predicate of the judgment lies in the subject (for example, that a short man is a man). A synthetic judgment, on the other hand, is one in which the predicate of the judgment is not contained in its subject, that is, where something new is added to the subject before reaching the predicate.

In the *Critique of Practical Reason*, Kant moves closer to political topics, though he still does not reach them. Having explored theoretical knowledge in the first critique, he discusses practical knowledge in the second. Kant founds his ethical system on the notion that the moral law demands justice. Obviously, this is not the case in this life. Therefore, he postulates that it is necessary that God exists and there is an afterlife in which the wrongs of this life are righted. If this were not the case, then existence would be amoral.

A great dichotomy in Kant's theoretical conception of the world is between what he terms the "phenomenal" and the "noumenal" (things-in-themselves). Following Newton, Kant holds that the phenomenal world and all that is in it—including humanity—is determined and without will. At the same time, Kant is unable to give up individuals' freedom, on which morality is founded. Humanity, thus, though phenomenally determined, is noumenally free. This is a difficult conception to grasp, though it is not entirely dissimilar to Plato's conception of forms; the influence of Gottfried Wilhelm Leibniz is also evident here. The tension which exists between necessity and freedom in Kant's moral and political thought is grounded in the greater tension in his larger conception of the world.

In the same way that he sought principles before experience to understand the physical world, Kant seeks principles before experience to understand the moral world. In the *Critique of Practical Reason*, following his usage in the first critique, he calls these moral principles, "practical synthetic *a priori* judgments." These underlie all moral acts. Kant's essential moral assumption is that humans are beings who can be free—that is, they are noumenal as well as phenomenal. Morality can only exist where there is freedom (in a metaphysical sense); where individuals are not free, they are unable to exercise the choices which make morality possible. Further, as it is in choice that morality is ultimately revealed, all that matters in ethics is the "good will." What is important about an agent is the reason he intends to do something.

As Kant also explained in *Groundwork of the Metaphysics of Morals* (1785), actions are moral only if they are done for the sake of duty. He is completely un-utilitarian in his rejection of satisfaction of desires as a ground for morals. He is thus in a different ethical constellation than many of his contemporary English and French philosophers. Kant bases his moral system on reason. As stated in the *Groundwork of the Metaphysics of Morals*, reason demands the categorical imperative: "act according to a maxim which can be adopted at the same time as a universal law." This is a radically equalitarian premise, implying that an individual must act as all others should in similar circumstances. The categorical

imperative is distinguished from the hypothetical imperative (this latter being contingent on what a person wants his action to produce in a specific case)—“act according to a maxim which can be adopted at the same time as a particular law.” The categorical imperative holds for entire classes of actions.

Kant does not base his ethics on either self-interest or, again, desires. All moral laws are universal and must also be publicized. The political implications of Kant's ethics are several. First, the emphasis he places on metaphysical freedom clears the way for political freedom. Second, the equality inherent in the categorical imperative leads to political systems that treat humans equally. Third, Kant's admonition to “act always so that you treat humanity whether in your person or in that of another always as an end, but never as a means only” dictates a just social order. Returning to the tension between freedom and necessity, Kant holds that human freedom is living according to self-willed laws. Political freedom, then, is living according to the laws of the community.

In certain respects, Kant represents the end of a line in political thought. Following Hobbes, Locke, and especially Rousseau, he is the last great political thinker in the social contract tradition (with the recent exception of Rawls, who builds on Kantian premises in his theory of justice). From Rousseau, Kant says, he learned respect for the common man, which is evident in the categorical imperative. The social contract theory is based on the notion that the citizens of a state have the collective right to leave the state of nature and form a civil society. Kant is more explicit than some of his predecessors in emphasizing that the departure from the state of nature need not be historical: All that is necessary is that the framework of society would have been agreed to by reasonable men, whether they actually agreed or not (similar to Rawls' contract conception).

Kant recognizes the need for the state in human affairs. He considers a state the “union of a multitude of men under laws.” In Kant, one does not yet see the national idea—the state is not a value in itself, though he does think states will form primarily along linguistic and religious lines. The state is only a basis for the development of the morality of its citizens: Politics grows out of ethics in the Kantian framework and is strictly subordinate to it. Again, utilitarian ideas play no role in this. The emphasis is on acting rightly, not maximizing the satisfaction of desires.

Kant's political writings are relatively few and scattered; some care, therefore, must be exercised in defining his political system. Though in terms of pure philosophy he is quite far from British empiricists, his political views are considerably closer to theirs. Kant calls himself a “republican” and favors a worldwide alliance of states to prevent war. His conception of republicanism is somewhat unusual, in that he defines it mainly as a system wherein makers and executors of law are different people. He is generally in favor of the right to vote, although he would restrict voting to economically independent male citizens. He does not see monarchy as incompatible with republicanism; in fact, passages of his writings appear to indicate a preference for monarchical execution of the law. Essentially, he seems to favor a parliamentary democracy with a monarchical executive.

Kant reinforced the idea of the state as subject to the rule of law. His definition of civil liberty is “That condition in which nobody is obliged to obey

anything else but that which is decreed by law.” He seeks to avoid a situation where individuals may be affected by the particular wills of others; such a situation is not, he thinks, a circumstance of freedom. Following Rousseau, he feels that only a society organized according to the “general will,” “collective will,” or “united will” is compatible with the members of the society's autonomies, *qua* members of the society (although this does not imply that individuals do not, or should not, retain considerable freedom outside of relationships that are societal). He foresees no all-encompassing or all-powerful state. The purpose of the state is to further the mutual freedom of its citizens through their common obedience to the law.

Surprisingly, Kant denies the right of resistance to government, though he sympathized with the American and French Revolutions, and was made an honorary citizen of France following the latter. He considers the most effective means of ensuring political liberty to be freedom of the press, but does not say what the people should do if this, in addition to political participation rights, were taken away. Notwithstanding the duty to obey a standing government, if a revolt succeeds, then the citizenry has the obligation to obey the new government.

Kant's view of the historical development of governments is well-summarized in a paragraph from the *Critique of Pure Reason* (which is almost the only time in the three *Critiques* that he mentions politics explicitly):

A constitution allowing the *greatest possible human freedom* in accordance with laws which ensure *that the freedom of each can co-exist with the freedom of all the others . . .* is at all events a necessary idea which must be made the basis not only of the first outline of a political constitution but of all laws as well. It requires that we should abstract at the outset from present hindrances, which perhaps do not arise inevitably out of human nature, but are rather occasioned by neglect of genuine ideas in the process of legislation.

Thus politics has an important role to play in humankind's development. Kant develops this notion further in the *Idea for a Universal History with a Cosmopolitan Purpose* (1784), wherein he speculates that “the greatest problem for the human species . . . is that of attaining a *civil society* which can administer justice universally,” and that this problem “is both the most difficult and the last to be solved by the human race.”

The *Idea for a Universal History with a Cosmopolitan Purpose* puts forward the thesis that mankind is essentially distinguished by the ability to reason, and that nature destines that the capacities of a creature are to be fully realized. Because no one individual can over the course of his lifetime completely develop his reason, such development must proceed through the species collectively. Humans obtain reason in civil society, wherein individual and collective freedom are realized through “freedom under external laws” through a “just civil constitution.” Kant sees properly regulated antagonism among individuals as necessary to the development of reason.

Perpetual Peace (1795), Kant's most famous specifically political work, begins where the *Idea for a Universal History* finishes. Freedom for one state demands freedom for all, because only republican states, wherein the people

have some say in their own governance, will avoid wars. If some states are un-republican, they will constantly threaten the republican states with war, depriving the latter of their freedom. Kant does not foresee a future world-state; rather, his vision is of a federation of free states.

In *Perpetual Peace*, Kant draws an inspiring picture of a world at peace. An international federation of free states, held together by bonds of law rather than separated by savagery and licentious liberty, will emerge through the full development of reason. Kant makes the important point that a peace treaty finishes only a particular war, whereas a pacific alliance would forever terminate all wars. No state may dominate another. States, as individuals once did, must leave the state of nature.

In economics as in politics, Kant largely follows the thinking of his English and French contemporaries and predecessors. He favors private possession of property and, indeed, sees it as a way in which the autonomous individual expresses his will. He looks forward to the beneficial outcome of private property in international affairs; as he states in *Perpetual Peace*, "the spirit of commerce sooner or later takes hold of every people, and it cannot exist side by side with war." Kant's emphasis on individual autonomy has been held by some an expression of a bourgeois attitude in which society is an agglomeration of individuals whose chief interest is to live in peace and be left in peace.

Kant was a professional philosopher who taught logic and metaphysics at the University of Königsberg in East Prussia. He was known as an excellent instructor. In lecture, he once said to his students: "You will learn from me not philosophy, but how to philosophize." His contribution to philosophy is as much his method as any particular teaching. In political thought, he was the first German thinker to demand liberty, equality, and security of property as fundamental rights. His philosophical methods, particularly the rescue of speculative philosophy from Hume's scepticism, influenced particularly his German successors, whether they agreed or disagreed with him. Hegel was greatly influenced by Kant's treatment of antinomies (mutually contradictory propositions, each of which apparently can be proved), and Marx's *magnum opus*, *Capital*, is subtitled *A Critique of Political Economy* in the tradition of Kant's critiques.

KANT

Idea for a Universal History with a Cosmopolitan Purpose and Perpetual Peace

IDEA FOR A UNIVERSAL HISTORY WITH A COSMOPOLITAN PURPOSE*

Whatever conception of the freedom of the will one may form in terms of metaphysics, the will's manifestations in the world of phenomena, i.e. human actions, are determined in accordance with natural laws, as is every other natural event. History is concerned with giving an account of these phenomena, no matter how deeply concealed their causes may be, and it allows us to hope that, if it examines the free exercise of the human will on a large scale, it will be able to discover a regular progression among freely willed actions. In the same way, we may hope that what strikes us in the actions of individuals as confused and fortuitous may be recognized, in the history of the entire species, as a steadily advancing but slow development of man's original capacities. Thus marriages, births, and deaths do not seem to be subject to any rule by which their numbers could be calculated in advance, since the free human will has such a great influence upon them; and yet the annual statistics for them in large countries prove that they are just as subject to constant natural laws as are the changes in the weather, which in themselves are so inconsistent that their individual occurrence cannot be determined in advance,

but which nevertheless do not fail as a whole to sustain the growth of plants, the flow of rivers, and other natural functions in a uniform and uninterrupted course. Individual men and even entire nations little imagine that, while they are pursuing their own ends, each in his own way and often in opposition to others, they are unwittingly guided in their advance along a course intended by nature. They are unconsciously promoting an end which, even if they knew what it was, would scarcely arouse their interest.

Since men neither pursue their aims purely by instinct, as the animals do, nor act in accordance with any integral, prearranged plan like rational cosmopolitans, it would appear that no law-governed history of mankind is possible (as it would be, for example, with bees or beavers). We can scarcely help feeling a certain distaste on observing their activities as enacted in the great world-drama, for we find that, despite the apparent wisdom of individual actions here and there, everything as a whole is made up of folly and childish vanity, and often of childish malice and destructiveness. The result is that we do not know what sort of opinion we should form of our species, which is so proud of its supposed superiority. The only way out for the philosopher, since he cannot assume that mankind follows any rational purpose of its own in its collective actions, is for him to attempt to discover a purpose in nature behind this senseless course of human events, and decide whether it is after all possible to formulate in terms of a definite plan of nature a history of creatures who act without

* From Immanuel Kant, *Idea for a Universal History with a Cosmopolitan Purpose* (1784, in Hans Reiss, ed., and H. B. Nisbet, trans., *Kant's Political Writings*, Cambridge, 1970). By permission of Cambridge University Press. Footnotes deleted.

a plan of their own.—Let us now see if we can succeed in finding a guiding principle for such a history, and then leave it to nature to produce someone capable of writing it along the lines suggested. Thus nature produced a Kepler who found an unexpected means of reducing the eccentric orbits of the planets to definite laws, and a Newton who explained these laws in terms of a universal natural cause.

FIRST PROPOSITION

All the natural capacities of a creature are destined sooner or later to be developed completely and in conformity with their end. This can be verified in all animals by external and internal or anatomical examination. An organ which is not meant for use or an arrangement which does not fulfill its purpose is a contradiction in the teleological theory of nature. For if we abandon this basic principle, we are faced not with a law-governed nature, but with an aimless, random process, and the dismal reign of chance replaces the guiding principle of reason.

SECOND PROPOSITION

In man (as the only rational creature on earth), those natural capacities which are directed towards the use of his reason are such that they could be fully developed only in the species, but not in the individual. Reason, in a creature, is a faculty which enables that creature to extend far beyond the limits of natural instinct the rules and intentions it follows in using its various powers, and the range of its projects is unbounded. But reason does not itself work instinctively, for it requires trial, practice and instruction to enable it to progress gradually from one stage of insight to the next. Accordingly, every individual man would have to live for a vast length of time if he were to learn how to make complete use of all his natural capacities; or if nature has fixed only a short term for each man's life (as is in fact the case), then it will require a long, perhaps incalculable series of generations, each passing on its enlightenment to the next, before the germs implanted by

nature in our species can be developed to that degree which corresponds to nature's original intention. And the point of time at which this degree of development is reached must be the goal of man's aspirations (at least as an idea in his mind), or else his natural capacities would necessarily appear by and large to be purposeless and wasted. In the latter case, all practical principles would have to be abandoned, and nature, whose wisdom we must take as axiomatic in judging all other situations, would incur the suspicion of indulging in childish play in the case of man alone.

THIRD PROPOSITION

Nature has willed that man should produce entirely by his own initiative everything which goes beyond the mechanical ordering of his animal existence, and that he should not partake of any other happiness or perfection than that which he has procured for himself without instinct and by his own reason. For nature does nothing unnecessarily and is not extravagant in the means employed to reach its ends. Nature gave man reason, and freedom of will based upon reason, and this in itself was a clear indication of nature's intention as regards his endowments. For it showed that man was not meant to be guided by instinct or equipped and instructed by innate knowledge; on the contrary, he was meant to produce everything out of himself. Everything had to be entirely of his own making—the discovery of a suitable diet, of clothing, of external security and defense (for which nature gave him neither the bull's horns, the lion's claws, nor the dog's teeth, but only his hands), as well as all the pleasures that can make life agreeable, and even his insight and circumspection and the goodness of his will. Nature seems here to have taken pleasure in exercising the strictest economy and to have measured out the basic animal equipment so sparingly as to be just enough for the most pressing needs of the beginnings of existence. It seems as if nature had intended that man, once he had finally worked his way up from the uttermost barbarism to the highest degree of

skill, to inner perfection in his manner of thought and thence (as far as is possible on earth) to happiness, should be able to take for himself the entire credit for doing so and have only himself to thank for it. It seems that nature has worked more with a view to man's rational *self-esteem* than to his mere well-being. For in the actual course of human affairs, a whole host of hardships awaits him. Yet nature does not seem to have been concerned with seeing that man should live agreeably, but with seeing that he should work his way onwards to make himself by his own conduct worthy of life and well-being. What remains disconcerting about all this is firstly, that the earlier generations seem to perform their laborious tasks only for the sake of the later ones, so as to prepare for them a further stage from which they can raise still higher the structure intended by nature; and secondly, that only the later generations will in fact have the good fortune to inhabit the building on which a whole series of their forefathers (admittedly, without any conscious intention) had worked without themselves being able to share in the happiness they were preparing. But no matter how puzzling this may be, it will appear as necessary as it is puzzling if we simply assume that one animal species was intended to have reason, and that, as a class of rational beings who are mortal as individuals but immortal as a species, it was still meant to develop its capacities completely.

FOURTH PROPOSITION

The means which nature employs to bring about the development of innate capacities is that of antagonism within society, in so far as this antagonism becomes in the long run the cause of a law-governed social order. By antagonism, I mean in this context the *unsocial sociability* of men, that is, their tendency to come together in society, coupled, however, with a continual resistance which constantly threatens to break this society up. This propensity is obviously rooted in human nature. Man has an inclination to *live in society*, since he feels in this state more like a man, that is, he

feels able to develop his natural capacities. But he also has a great tendency to *live as an individual*, to isolate himself, since he also encounters in himself the unsocial characteristic of wanting to direct everything in accordance with his own ideas. He therefore expects resistance all around, just as he knows of himself that he is in turn inclined to offer resistance to others. It is this very resistance which awakens all man's powers and induces him to overcome his tendency to laziness. Through the desire for honor, power or property, it drives him to seek status among his fellows, whom he cannot bear yet cannot bear to leave. Then the first true steps are taken from barbarism to culture, which in fact consists in the social worthiness of man. All man's talents are now gradually developed, his taste cultivated, and by a continued process of enlightenment, a beginning is made towards establishing a way of thinking which can with time transform the primitive natural capacity for moral discrimination into definite practical principles; and thus a *pathologically* enforced social union is transformed into a *moral* whole. Without these social qualities (far from admirable in themselves) which cause the resistance inevitably encountered by each individual as he furthers his self-seeking pretensions, man would live an Arcadian, pastoral existence of perfect concord, self-sufficiency and mutual love. But all human talents would remain hidden for ever in a dormant state, and men, as good-natured as the sheep they tended, would scarcely render their existence more valuable than that of their animals. The end for which they were created, their rational nature, would be an unfilled void. Nature should thus be thanked for fostering social incompatibility, enviously competitive vanity, and insatiable desires for possession or even power. Without these desires, all man's excellent natural capacities would never be roused to develop. Man wishes concord, but nature, knowing better what is good for his species, wishes discord. Man wishes to live comfortably and pleasantly, but nature intends that he should abandon idleness and inactive self-sufficiency and plunge instead into labor

and hardships, so that he may by his own adroitness find means of liberating himself from them in turn. The natural impulses which make this possible, the sources of the very unsociableness and continual resistance which cause so many evils, at the same time encourage man towards new exertions of his powers and thus towards further development of his natural capacities. They would thus seem to indicate the design of a wise creator—not, as it might seem, the hand of a malicious spirit who had meddled in the creator's glorious work or spoiled it out of envy.

FIFTH PROPOSITION

The greatest problem for the human species, the solution of which nature compels him to seek, is that of attaining a civil society which can administer justice universally.

The highest purpose of nature—i.e. the development of all natural capacities—can be fulfilled for mankind only in society, and nature intends that man should accomplish this, and indeed all his appointed ends, by his own efforts. This purpose can be fulfilled only in a society which has not only the greatest freedom, and therefore a continual antagonism among its members, but also the most precise specification and preservation of the limits of this freedom in order that it can co-exist with the freedom of others. The highest task which nature has set for mankind must therefore be that of establishing a society in which *freedom under external laws* would be combined to the greatest possible extent with irresistible force, in other words of establishing a perfectly just civil constitution. For only through the solution and fulfillment of this task can nature accomplish its other intentions with our species. Man, who is otherwise so enamored with unrestrained freedom, is forced to enter this state of restriction by sheer necessity. And this is indeed the most stringent of all forms of necessity, for it is imposed by men upon themselves, in that their inclinations make it impossible for them to exist side by side for long in a state of wild freedom. But once enclosed within a precinct like that of

civil union, the same inclinations have the most beneficial effect. In the same way, trees in a forest, by seeking to deprive each other of air and sunlight, compel each other to find these by upward growth, so that they grow beautiful and straight—whereas those which put out branches at will, in freedom and in isolation from others, grow stunted, bent and twisted. All the culture and art which adorn mankind and the finest social order man creates are fruits of his unsociability. For it is compelled by its own nature to discipline itself, and thus, by enforced art, to develop completely the germs which nature implanted.

SIXTH PROPOSITION

This problem is both the most difficult and the last to be solved by the human race. The difficulty (which the very idea of this problem clearly presents) is this: if he lives among others of his own species, man is *an animal who needs a master*. For he certainly abuses his freedom in relation to others of his own kind. And even although, as a rational creature, he desires a law to impose limits on the freedom of all, he is still misled by his self-seeking animal inclinations into exempting himself from the law where he can. He thus requires a *master* to break his self-will and force him to obey a universally valid will under which everyone can be free. But where is he to find such a master? Nowhere else but in the human species. But this master will also be an animal who needs a master. Thus while man may try as he will, it is hard to see how he can obtain for public justice a supreme authority which would itself be just, whether he seeks this authority in a single person or in a group of many persons selected for this purpose. For each one of them will always misuse his freedom if he does not have anyone above him to apply force to him as the laws should require it. Yet, the highest authority has to be just *in itself* and yet also a *man*. This is therefore the most difficult of all tasks, and a perfect solution is impossible. Nothing straight can be constructed from such warped wood as that which man is made of. Nature only requires of us that we

should approximate to this idea. A further reason why this task must be the last to be accomplished is that man needs for it a correct conception of the nature of a possible constitution, great experience tested in many affairs of the world, and above all else a good will prepared to accept the findings of this experience. But three factors such as these will not easily be found in conjunction, and if they are, it will happen only at a late stage and after many unsuccessful attempts.

PERPETUAL PEACE: A PHILOSOPHICAL SKETCH*

FIRST SECTION: WHICH CONTAINS THE PRELIMINARY ARTICLES OF A PERPETUAL PEACE BETWEEN STATES

1. 'No conclusion of peace shall be considered valid as such if it was made with a secret reservation of the material for a future war.'

For if this were the case, it would be a mere truce, a suspension of hostilities, not a *peace*. Peace means an end to all hostilities, and to attach the adjective 'perpetual' to it is already suspiciously close to pleonasm [redundancy]. A conclusion of peace nullifies all existing reasons for a future war, even if these are not yet known to the contracting parties, and no matter how acutely and carefully they may later be pieced together out of old documents. It is possible that either party may make a mental reservation with a view to reviving its old pretensions in the future. Such reservations will not be mentioned explicitly, since both parties may simply be too exhausted to continue the war, although they may nonetheless possess sufficient ill will to seize the first favorable opportunity of attaining their end. But if we consider such reservations in themselves, they soon appear as Jesuitical casuistry; they are

beneath the dignity of a ruler, just as it is beneath the dignity of a minister of state to comply with any reasoning of this kind.

2. 'No independently existing state, whether it be large or small, may be acquired by another state by inheritance, exchange, purchase or gift.'

For a state, unlike the ground on which it is based, is not a possession. It is a society of men, which no one other than itself can command or dispose of. Like a tree, it has its own roots, and to graft it on to another state as if it were a shoot is to terminate its existence as a moral personality and make it into a commodity. This contradicts the idea of the original contract, without which the rights of a people are unthinkable.* Everyone knows what danger the supposed right of acquiring states in this way, even in our own times, has brought upon Europe (for this practice is unknown in other continents). It has been thought that states can marry one another, and this has provided a new kind of industry by which power can be increased through family alliances, without expenditure of energy, while landed property can be extended at the same time. It is the same thing when the troops of one state are hired to another to fight an enemy who is not common to both; for the subjects are thereby used and misused as objects to be manipulated at will.

3. 'Standing armies will gradually be abolished altogether.'

For they constantly threaten other states with war by the very fact that they are always prepared for it. They spur on the states to outdo one another in arming unlimited numbers of soldiers, and since the resultant costs eventually make peace

* A hereditary kingdom is not a state which can be inherited by another state. Only the right to rule over it may be bequeathed to another physical person. In this case, the state acquires a ruler, but the ruler as such (i.e. as one who already has another kingdom) does not acquire the state.

more oppressive than a short war, the armies are themselves the cause of wars of aggression which set out to end burdensome military expenditure. Furthermore, the hiring of men to kill or to be killed seems to mean using them as mere machines and instruments in the hands of someone else (the state), which cannot easily be reconciled with the rights of man in one's own person. It is quite a different matter if the citizens undertake voluntary military training from time to time in order to secure themselves and their fatherland against attacks from outside.

4. 'No national debt shall be contracted in connection with the external affairs of the state.'

There is no cause for suspicion if help for the national economy is sought inside or outside the state (e.g. for improvements to roads, new settlements, storage of food-stuffs for years of famine, etc.). But a credit system, if used by the powers as an instrument of aggression against one another, shows the power of money in its most dangerous form. For while the debts thereby incurred are always secure against present demands (because not all the creditors will demand payment at the same time), these debts go on growing indefinitely. This ingenious system, invented by a commercial people in the present century, provides a military fund which may exceed the resources of all the other states put together. . . . This ease in making war, coupled with the warlike inclination of those in power (which seems to be an integral feature of human nature), is thus a great obstacle in the way of perpetual peace. . . .

5. 'No state shall forcibly interfere in the constitution and government of another state.'

For what could justify such interference? Surely not any sense of scandal or offense which a state arouses in the subjects of another state. It should rather serve as a warning to others, as an example of the great evils which a people has incurred by

its lawlessness. And a bad example which one free person gives to another is not the same as an injury to the latter. But it would be a different matter if a state, through internal discord, were to split into two parts, each of which set itself up as a separate state and claimed authority over the whole. For it could not be reckoned as interference in another state's constitution if an external state were to lend support to one of them, because their condition is one of anarchy. But as long as this internal conflict is not yet decided, the interference of external powers would be a violation of the rights of an independent people which is merely struggling with its internal ills. Such interference would be an active offense and would make the autonomy of all other states insecure.

6. 'No state at war with another shall permit such acts of hostility as would make mutual confidence impossible during a future time of peace. Such acts would include the employment of *assassins or poisoners, breach of agreements, the instigation of treason within the enemy state, etc.*'

These are dishonorable stratagems. For it must still remain possible, even in wartime, to have some sort of trust in the attitude of the enemy, otherwise peace could not be concluded and the hostilities would turn into a war of extermination. After all, war is only a regrettable expedient for asserting one's rights by force within a state of nature, where no court of justice is available to judge with legal authority. In such cases, neither party can be declared an unjust enemy, for this would already presuppose a judge's decision; only the *outcome* of the conflict, as in the case of a so-called 'judgment of God,' can decide who is in the right. A war of punishment between states is inconceivable, since there can be no relationship of superior to inferior among them. It thus follows that a war of extermination, in which both parties and right itself might all be simultaneously annihilated, would allow perpetual peace only on the vast graveyard of the human race. A war of this kind and the employment of all means which might bring it about must thus be absolutely prohibited.

But the means listed above would inevitably lead to such a war, because these diabolical arts, besides being intrinsically despicable, would not long be confined to war alone if they were brought into use. This applies, for example, to the employment of spies, for it exploits only the dishonesty of others (which can never be completely eliminated). Such practices will be carried over into peacetime and will thus completely vitiate its purpose.

All of the articles listed above, when regarded objectively or in relation to the intentions of those in power, are *prohibitive laws*. Yet some of them are of the *strictest* sort, being valid irrespective of differing circumstances, and they require that the abuses they prohibit should be abolished *immediately* (Nos. 1, 5, and 6). Others (Nos. 2, 3, and 4), although they are not exceptions to the rule of justice, allow some *subjective* latitude according to the circumstances in which they are applied. The latter need not necessarily be executed at once, so long as their ultimate purpose (e.g. the *restoration* of freedom to certain states in accordance with the second article) is not lost sight of. But their execution may not be *put off* to a non-existent date, for any delay is permitted only as a means of avoiding a premature implementation which might frustrate the whole purpose of the article. For in the case of the second article, the prohibition relates only to the *mode of acquisition*, which is to be forbidden hereforth, but not to the present *state of political possessions*. For although this present state is not backed up by the requisite legal authority, it was considered lawful in the public opinion of every state at the time of the putative acquisition.

SECOND SECTION: WHICH CONTAINS THE DEFINITIVE ARTICLES OF A PERPETUAL PEACE BETWEEN STATES

A state of peace among men living together is not the same as the state of nature, which is rather a state of war. For even if it does not involve active hostilities, it involves a constant threat of their

breaking out. Thus the state of peace must be *formally instituted*, for a suspension of hostilities is not in itself a guarantee of peace. And unless one neighbor gives a guarantee to the other at his request (which can happen only in a *lawful state*), the latter may treat him as an enemy.

FIRST DEFINITIVE ARTICLE OF A PERPETUAL PEACE: THE CIVIL CONSTITUTION OF EVERY STATE SHALL BE REPUBLICAN

A *republican constitution* is founded upon three principles: firstly, the principle of *freedom* for all members of a society (as men);* secondly, the principle of the *dependence* of everyone upon a single common legislation (as subjects); and thirdly, the principle of *legal equality* for everyone (as citizens). It is the only constitution which can be derived from the idea of an original contract, upon which all *rightful* legislation of a people must be founded. Thus as far as right is concerned, republicanism is in itself the original basis of every kind of civil constitution, and it only remains to ask whether it is the only constitution which can lead to a perpetual peace.

The republican constitution is not only pure in its origin (since it springs from the pure concept of right); it also offers a prospect of attaining the desired result, i.e. a perpetual peace, and the reason for this is as follows.—If, as is inevitably the case under this constitution, the consent of the citizens is required to decide whether or not war is to be declared, it is very natural that they will have great hesitation in embarking on so dangerous an enterprise. For this

* My external and rightful *freedom* should be defined as a warrant to obey no external laws except those to which I have been able to give my own consent. Similarly, external and rightful *equality* within a state is that relationship among the citizens whereby no-one can put anyone else under a legal obligation without submitting simultaneously to a law which requires that he can himself be put under the same kind of obligation by the other person. (And we do not need to define the principle of *legal dependence*, since it is always implied in the concept of a political constitution.)

would mean calling down on themselves all the miseries of war, such as doing the fighting themselves, supplying the costs of the war from their own resources, painfully making good the ensuing devastation, and, as the crowning evil, having to take upon themselves a burden of debt which will embitter peace itself and which can never be paid off on account of the constant threat of new wars. But under a constitution where the subject is not a citizen, and which is therefore not republican, it is the simplest thing in the world to go to war. For the head of state is not a fellow citizen, but the owner of the state, and a war will not force him to make the slightest sacrifice so far as his banquets, hunts, pleasure palaces and court festivals are concerned. He can thus decide on war, without any significant reason, as a kind of amusement, and unconcernedly leave it to the diplomatic corps (who are always ready for such purposes) to justify the war for the sake of propriety.

The following remarks are necessary to prevent the republican constitution from being confused with the democratic one, as commonly happens. The various forms of state may be classified either according to the different persons who exercise supreme authority, or according to the way in which the nation is governed by its ruler, whoever he may be. The first classification goes by the form of sovereignty, and only three such forms are possible, depending on whether the ruling power is in the hands of an *individual*, of *several persons* in association, or of *all those* who together constitute civil society (i.e. *autocracy*, *aristocracy* and *democracy*—the power of a prince, the power of a nobility, and the power of the people). The second classification depends on the form of government, and relates to the way in which the state, setting out from its constitution (i.e. an act of the general will whereby the mass becomes a people), makes use of its plenary power. The form of government, in this case, will be either *republican* or *despotic*. *Republicanism* is that political principle whereby the executive power (the government) is separated from the

legislative power. Despotism prevails in a state if the laws are made and arbitrarily executed by one and the same power, and it reflects the will of the people only in so far as the ruler treats the will of the people as his own private will. Of the three forms of *sovereignty*, *democracy*, in the truest sense of the word, is necessarily a *despotism*, because it establishes an executive power through which all the citizens may make decisions about (and indeed against) the single individual without his consent, so that decisions are made by all the people and yet not by all the people; and this means that the general will is in contradiction with itself, and thus also with freedom.

For any form of government which is not *representative* is essentially an *anomaly*, because one and the same person cannot at the same time be both the legislator and the executor of his own will, just as the general proposition in logical reasoning cannot at the same time be a secondary proposition subsuming the particular within the general. And even if the other two political constitutions (i.e. autocracy and aristocracy) are always defective in as much as they leave room for a despotic form of government, it is at least possible that they will be associated with a form of government which accords with the *spirit* of a representative system. Thus Frederick II at least *said* that he was merely the highest servant of the state, while a democratic constitution makes this attitude impossible, because everyone under it wants to be a ruler. We can therefore say that the smaller the number of ruling persons in a state and the greater their powers of representation, the more the constitution will approximate to its republican potentiality, which it may hope to realize eventually by gradual reforms. For this reason, it is more difficult in an aristocracy than in a monarchy to reach this one and only perfectly lawful kind of constitution, while it is possible in a democracy only by means of violent revolution. But the people are immensely more concerned with the mode of government than with the form of the constitution, although a great deal also depends on the degree to which the constitution fits the

purpose of the government. But if the mode of government is to accord with the concept of right, it must be based on the representative system. This system alone makes possible a republican state, and without it, despotism and violence will result, no matter what kind of constitution is in force. None of the so-called 'republics' of antiquity employed such a system, and they thus inevitably ended in despotism, although this is still relatively bearable under the rule of a single individual.

SECOND DEFINITIVE ARTICLE OF A
PERPETUAL PEACE: THE RIGHT OF
NATIONS SHALL BE BASED ON A
FEDERATION OF FREE STATES

Peoples who have grouped themselves into nation states may be judged in the same way as individual men living in a state of nature, independent of external laws; for they are a standing offense to one another by the very fact that they are neighbors. Each nation, for the sake of its own security, can and ought to demand of the others that they should enter along with it into a constitution, similar to the civil one, within which the rights of each could be secured. This would mean establishing a *federation of peoples*. But a federation of this sort would not be the same thing as an international state. For the idea of an international state is contradictory, since every state involves a relationship between a superior (the legislator) and an inferior (the people obeying the laws), whereas a number of nations forming one state would constitute a single nation. And this contradicts our initial assumption, as we are here considering the right of nations in relation to one another in so far as they are a group of separate states which are not to be welded together as a unit.

We look with profound contempt upon the way in which savages cling to their lawless freedom. They would rather engage in incessant strife than submit to a legal constraint which they might impose upon themselves, for they prefer the freedom of folly to the freedom of reason. We regard this as barbarism, coarseness, and brutish debasement of humanity.

We might thus expect that civilized peoples, each united within itself as a state, would hasten to abandon so degrading a condition as soon as possible. But instead of doing so, each *state* sees its own majesty (for it would be absurd to speak of the majesty of a *people*) precisely in not having to submit to any external legal constraint, and the glory of its ruler consists in his power to order thousands of people to immolate themselves for a cause which does not truly concern them, while he need not himself incur any danger whatsoever. And the main difference between the savage nations of Europe and those of America is that while some American tribes have been entirely eaten up by their enemies, the Europeans know how to make better use of those they have defeated than merely by making a meal of them. They would rather use them to increase the number of their own subjects, thereby augmenting their stock of instruments for conducting even more extensive wars.

Although it is largely concealed by governmental constraints in law-governed civil society, the depravity of human nature is displayed without disguise in the unrestricted relations which obtain between the various nations. It is therefore to be wondered at that the word *right* has not been completely banished from military politics as superfluous pedantry, and that no state has been bold enough to declare itself publicly in favor of doing so. For Hugo Grotius, Pufendorf, Vattel and the rest (sorry comforters as they are) are still dutifully quoted in *justification* of military aggression, although their philosophically or diplomatically formulated codes do not and cannot have the slightest *legal* force, since states as such are not subject to a common external constraint. Yet there is no instance of a state ever having been moved to desist from its purpose by arguments supported by the testimonies of such notable men. This homage which every state pays (in words at least) to the concept of right proves that man possesses a greater moral capacity, still dormant at present, to overcome eventually the evil principle within him (for he cannot deny that it exists), and to hope that others will do

likewise. Otherwise the word *right* would never be used by states which intend to make war on one another, unless in a derisory sense, as when a certain Gallic prince declared: 'Nature has given to the strong the prerogative of making the weak obey them.' The way in which states seek their rights can only be by war, since there is no external tribunal to put their claims to trial. But rights cannot be decided by military victory, and a *peace treaty* may put an end to the current war, but not to that general warlike condition within which pretexts can always be found for a new war. And indeed, such a state of affairs cannot be pronounced completely unjust, since it allows each party to act as judge in its own cause. Yet, while natural right allows us to say of men living in a lawless condition that they ought to abandon it, the right of nations does not allow us to say the same of states. For as states, they already have a lawful internal constitution, and have thus outgrown the coercive right of others to subject them to a wider legal constitution in accordance with their conception of right. On the other hand, reason, as the highest legislative moral power, absolutely condemns war as a test of rights and sets up peace as an immediate duty. But peace can neither be inaugurated nor secured without a general agreement between the nations; thus a particular kind of league, which we might call a *pacific federation* is required. It would differ from a *peace treaty* in that the latter terminates *one war*, whereas the former would seek to end *all wars* for good. This federation does not aim to acquire any power like that of a state, but merely to preserve and secure the *freedom* of each state in itself, along with that of the other confederated states, although this does not mean that they need to submit to public laws and to a coercive power which enforces them, as do men in a state of nature. It can be shown that this idea of *federalism*, extending gradually to encompass all states and thus leading to perpetual peace, is practicable and has objective reality. For if by good fortune one powerful and enlightened nation can form a republic (which is by its nature inclined to seek perpetual peace), this will provide

a focal point for federal association among other states. These will join up with the first one, thus securing the freedom of each state in accordance with the idea of international right, and the whole will gradually spread further and further by a series of alliances of this kind.

It would be understandable for a people to say: 'There shall be no war among us; for we will form ourselves into a state, appointing for ourselves a supreme legislative, executive and juridical power to resolve our conflicts by peaceful means.' But if this state says: 'There shall be no war between myself and other states, although I do not recognize any supreme legislative power which could secure my rights and whose rights I should in turn secure,' it is impossible to understand what justification I can have for placing any confidence in my rights, unless I can rely on some substitute for the union of civil society, i.e. on a free federation. If the concept of international right is to retain any meaning at all, reason must necessarily couple it with a federation of this kind.

The concept of international right becomes meaningless if interpreted as a right to go to war. For this would make it a right to determine what is lawful not by means of universally valid external laws, but by means of one-sided maxims backed up by physical force. It could be taken to mean that it is perfectly just for men who adopt this attitude to destroy one another, and thus to find perpetual peace in the vast grave where all the horrors of violence and those responsible for them would be buried. There is only one rational way in which states coexisting with other states can emerge from the lawless condition of pure warfare. Just like individual men, they must renounce their savage and lawless freedom, adapt themselves to public coercive laws, and thus form an *international state*, which would necessarily continue to grow until it embraced all the peoples of the earth. But since this is not the will of the nations, according to their present conception of international right (so that they reject in *hypothesi* what is true in *thesi*), the positive idea of a *world republic* cannot be realized. If all is not to be lost,

this can at best find a negative substitute in the shape of an enduring and gradually expanding *federation* likely to prevent war. The latter may check the current of man's inclination to defy the law and antagonize his fellows, although there will always be a risk of it bursting forth anew.

THIRD DEFINITIVE ARTICLE OF A
PERPETUAL PEACE: COSMOPOLITAN
RIGHT SHALL BE LIMITED TO
CONDITIONS OF UNIVERSAL
HOSPITALITY

As in the foregoing articles, we are here concerned not with philanthropy, but with *right*. In this context, *hospitality* means the right of a stranger not to be treated with hostility when he arrives on someone else's territory. He can indeed be turned away, if this can be done without causing his death, but he must not be treated with hostility, so long as he behaves in a peaceable manner in the place he happens to be in. The stranger cannot claim the *right of a guest* to be entertained, for this would require a special friendly agreement whereby he might become a member of the native household for a certain time. He may only claim a *right of resort*, for all men are entitled to present themselves in the society of others by virtue of their right to communal possession of the earth's surface. Since the earth is a globe, they cannot disperse over an infinite area, but must necessarily tolerate one another's company. And no one originally has any greater right than anyone else to occupy any particular portion of the earth. The community of man is divided by uninhabitable parts of the earth's surface such as oceans and deserts, but even then, the *ship* or the *camel* (the ship of the desert) make it possible for them to approach their fellows over these ownerless tracts, and to utilize as a means of social intercourse that *right to the earth's surface* which the human race shares in common. The inhospitable behavior of coastal dwellers (as on the Barbary coast) in plundering ships on the adjoining seas or enslaving stranded seafarers, or that of inhabitants of the desert (as with the Arab

Bedouins), who regard their proximity to nomadic tribes as a justification for plundering them, is contrary to natural right. But this natural right of hospitality, i.e. the right of strangers, does not extend beyond those conditions which make it possible for them to *attempt* to enter into relations with the native inhabitants. In this way, continents distant from each other can enter into peaceful mutual relations which may eventually be regulated by public laws, thus bringing the human race nearer and nearer to a cosmopolitan constitution.

The peoples of the earth have entered in varying degrees into a universal community, and it has developed to the point where a violation of rights in *one* part of the world is felt *everywhere*. The idea of a cosmopolitan right is therefore not fantastic and overstrained; it is a necessary complement to the unwritten code of political and international right, transforming it into a universal right of humanity. Only under this condition can we flatter ourselves that we are continually advancing towards a perpetual peace.

FIRST SUPPLEMENT: ON THE
GUARANTEE OF A PERPETUAL PEACE

Perpetual peace is *guaranteed* by no less an authority than the great artist *Nature* herself. The mechanical process of nature visibly exhibits the purposive plan of producing concord among men, even against their will and indeed by means of their very discord. This design, if we regard it as a compelling cause whose laws of operation are unknown to us, is called *fate*. But if we consider its purposive function within the world's development, whereby it appears as the underlying wisdom of a higher cause, showing the way towards the objective goal of the human race and predetermining the world's evolution, we call it *providence*. We cannot actually observe such an agency in the artifices of nature, nor can we even *infer* its existence from them. But as with all relations between the form of things and their ultimate purposes,

we can and must *supply it mentally* in order to conceive of its possibility by analogy with human artifices. Its relationship to and conformity with the end which reason directly prescribes to us (i.e. the end of morality) can only be conceived of as an idea. Yet, while this is indeed far-fetched in *theory*, it does possess dogmatic validity and has a very real foundation in *practice*, as with the concept of *perpetual peace*, which makes it our duty to promote it by using the natural mechanism described above. But in contexts such as this, where we are concerned purely with theory and not with religion, we should also note that it is more in keeping with the limitations of human reason to speak of *nature* and not of *providence*, for reason, in dealing with cause and effect relationships, must keep within the bounds of possible experience. *Modesty* forbids us to speak of providence as something we can recognize, for this would mean donning the wings of Icarus and presuming to approach the mystery of its inscrutable intentions.

We now come to the essential question regarding the prospect of perpetual peace. What does nature do in relation to the end which man's own reason prescribes to him as a duty, i.e. how does nature help to promote his *moral purpose*? And how does nature guarantee that what man *ought* to do by the laws of his freedom (but does not do) will in fact be done through nature's compulsion, *without* the free agency of man? This question arises, moreover, in all three areas of public right—in *political, international and cosmopolitan right*. For if I say that nature *wills* that this or that should happen, this does not mean that nature imposes on us a *duty* to do it, for duties can only be imposed by practical reason, acting without any external constraint. On the contrary, nature does it herself, whether we are willing or not.

1. Even if people were not compelled by internal dissent to submit to the coercion of public laws, war would produce the same effect from outside. For in accordance with the natural arrangement

described above, each people would find itself confronted by another neighboring people pressing in upon it, thus forcing it to form itself internally into a *state* in order to encounter the other as an armed *power*. Now the *republican* constitution is the only one which does complete justice to the rights of man. But it is also the most difficult to establish, and even more so to preserve, so that many maintain that it would only be possible within a state of *angels*, since men, with their self-seeking inclinations, would be incapable of adhering to a constitution of so sublime a nature. But in fact, nature comes to the aid of the universal and rational human will, so admirable in itself but so impotent in practice, and makes use of precisely those self-seeking inclinations in order to do so. It only remains for men to create a good organization for the state, a task which is well within their capability, and to arrange it in such a way that their self-seeking energies are opposed to one another, each thereby neutralizing or eliminating the destructive effects of the rest. And as far as reason is concerned, the result is the same as if man's selfish tendencies were non-existent, so that man, even if he is not morally good in himself, is nevertheless compelled to be a good citizen. As hard as it may sound, the problem of setting up a state can be solved even by a nation of devils (so long as they possess understanding). It may be stated as follows: 'In order to organize a group of rational beings who together require universal laws for their survival, but of whom each separate individual is secretly inclined to exempt himself from them, the constitution must be so designed that, although the citizens are opposed to one another in their private attitudes, these opposing views may inhibit one another in such a way that the public conduct of the citizens will be the same as if they did not have such evil attitudes.' A problem of this kind must be soluble. For such a task does not involve the moral improvement of man; it only means finding out how the mechanism of nature can be applied to men in such a manner that the antagonism of their hostile attitudes

will make them compel one another to submit to coercive laws, thereby producing a condition of peace within which the laws can be enforced. We can even see this principle at work among the actually existing (although as yet very imperfectly organized) states. For in their external relations, they have already approached what the idea of right prescribes, although the reason for this is certainly not their internal moral attitudes. In the same way, we cannot expect their moral attitudes to produce a good political constitution; on the contrary, it is only through the latter that the people can be expected to attain a good level of moral culture. Thus that mechanism of nature by which selfish inclinations are naturally opposed to one another in their external relations can be used by reason to facilitate the attainment of its own end, the reign of established right. Internal and external peace are thereby furthered and assured, so far as it lies within the power of the state itself to do so. We may therefore say that nature *irresistibly wills* that right should eventually gain the upper hand. What men have neglected to do will ultimately happen of its own accord, albeit with much inconvenience.
